Finally, in 1914, the forces of Polish patriotism returned to the attack, and after more than a century of oblivion a new Poland rose from the ashes—in the Latin phrase, that "Polonia Restituta," for which is named that distinguished and honored medal with which the Polish Government in 1930 decorated me. In 1918, when Poland came to life again, no one could foresee that she had only 20 years of grace before another frightful war would engulf her. But she went ahead manfully with the rehabilitation and modernization of her country.

You know the story of 1939: The German attack on Czechoslovakia and the Polish alliance with France and England, which were followed by the shock of the Soviet-German pact in August. The last rampart had fallen. Invasion came a week later.

We shall not forget the fury of Polish resistance during those 35 days of siege when the Warsaw radio played Chopin's immortal music and inspired the freedom-loving world. But even when Warsaw fell Polish courage never faltered. Thousands made their way to France and England seeking an opportunity to carry on the fight, which they did, on land and sea and in the air. In France at that time the Polish First Division lost almost half of its combat strength and the Polish Second Division was decorated by the French Government with the Croix de Guerre. The Poles fought everywhere—on and above the North Sea, in frozen Norway, and in the deserts of Libya.

It was my unforgettable privilege to serve alongside of the Polish troops in Italy in 1944. We were together in the Fifth Army. I was present at one of the early attacks on Monte Cassino in March 1944—an attack which failed in spite of 7 hours of continuous air bombardment and artillery barrage. Monte Cassino, as you know, controlled the whole Liri River Valley and the approach to Rome. Many had tried to reduce it, but none had succeeded. But the Polish troops captured it, opened the road to Rome, and changed the course of Allied battle in Italy.

I was present in Rome on a sunny August morning in the beautiful Piazza Venezia when the American General Devers decorated that gallant and dynamic soldier, Gen. Wladislaw Anders with the Order of Commander of the Legion of Merit. Much later in 1945, on a wintry day in eastern France, I saw General Anders decorate General Devers with the Polish War Cross—the order of Virtuti Militari, with its blue and black ribbon. During a long evening with General Anders we talked about his troops.

These things have given me a close personal interest in Poland, which I know is shared by many Americans who have not had a personal contact with Polish people. For every American, after all, knows about Kosciusko and his contribution to American independence and we all appreciate what Americans of Polish descent have brought to the development of our common country. We therefore support the stated official American policy—and I quote—whereby "The United States refuses to recognize any government imposed upon any nation by the force of any foreign power and whereby we approve no territorial changes unless they accord with the freely expressed wishes of the people concerned."

We support that policy—yes. We do more. We are disturbed about the future of Poland because it involves the future of every nation. The cause of Poland is the cause of world peace. For that reason and because of its performance as our gallant ally it evokes the complete sympathy of the American people.

At Yalta we joined in underwriting a guaranty of free elections. At Potsdam we joined in a guaranty of free ballots in those free elections, meaning that all democratic parties are to be admitted to the ballot in the free election. That is the Potsdam agreement as I read it. It seems to me a minimum of our obligation to our Polish allies.

There is yet another way in which we can help our Polish friends and help ourselves at the same time. I refer to the obligation resting on us to occupy Germany. We would be breaking faith with those who died in this terrible war, and we should be inviting future trouble for ourselves if we allowed the hard-won gains of this war to evaporate simply because we had lost interest in the future of Germany. But the job of occupying Germany goes against our grain and there are citizens of other countries who would do such work with more liking than we do. Prompt and detailed study, therefore, should be given to the practicability of recruiting a force among the stateless young men in Germany who would make a life work of policing the country. There are surely many there who would willingly join a properly organized military force, and who would not find the task of policing Germany uncongenial. There is the great possibility that such a program could materially reduce the demands on the United States to furnish occupation troops. It is indeed quite conceivable that such a constabulary could take over all functions except those to be performed by our American officers and by our technically trained troops. It might conceivably reduce American troop requirements in our zone in Germany to a few separate tank battalions. The idea should be thoroughly explored.

Today, we hear serious and tragic rumors about what is happening in Poland. American policy must, of course, be based on solid fact. I want my country to proceed vigorously with its announced policy. I don't want it to say things which it doesn't mean. I don't want it to be, as one high American official put it, "not unduly exacting about Poland." I want it to be very exacting, indeed about any principle for which it stands. I want it to do more than pass resolutions and utter pious words. They accomplish very little. I want my Government to use its strong bargaining position—and there is no stronger one in the world today—to implement its policies toward Poland and toward all the world. If peace is to exist there must be justice. There can be no justice if we do not keep our promises in word and in deed.

Plight of Widows of World War I

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Monday, December 15 (legislative day of Thursday, December 4), 1947

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Plight of Most Widows, World War I," from the St. Petersburg Legionnaire for October 1947.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PLIGHT OF MOST WIDOWS, WORLD WAR I

(By Mrs. A. T. Lubin, national corresponding secretary, Widows World War I, Inc., St. Petersburg, Fla.)

Perhaps no group of women are more forgotten than the widows of veterans of World War I. They are the middle group of the three major groups of veterans' widows. The first group are the elderly widows now about 75 years of age of the Spanish-American (and prior) wars. The second group are the middle-aged widows now about 55 years old of World War I. The third group are the young widows now about 25 years of age of World War II.

The public including Congressmen and Senators seems to be sympathetic to the first group due to age, and to the third group too because they can still be seen with their babies clinging to their skirts. But, the second group of the middle-aged widows of World War I is in immediate danger of being discriminated against now. Here are some facts about her.

She is "fiftyish" now. A few are still slender, ungrayed and youngish-looking, most of them look their ages. All of them now have first-hand experience of what the change of life means. She is in the peculiar position of being too young for old-age-benefits and for Social Security benefits, yet she is no longer wanted for employment in private industry. She gets neither the understanding of the decrepit-old, nor of the young widows with the babies.

Today, Mrs. World War I cannot be seen with her babies clinging to her skirt for the babies are married now and have rightfully gone their way. She gets little if any regular support from them—the children seem to need it all. Some of these widows reside with their in-laws, often where they are not wanted and made to feel it, too. Some cannot afford to reside alone, others want to but are the last to be considered in housing programs.

A little known but very vital fact about "Mrs. World War I" is that she could very well be called the doubly golden starred widow, because in an era when women in general did not work outside of the home, that she was the breadwinner and the home nurse for her sick, ailing husband often for years after the war.

Most widows of veterans of World War I did not lose their husbands during a war for the simple reason that our country had comparatively few casualties during World War I. But so many of these veterans were made permanently ill and unable to work at all or very little by the effects of gassing and shrapnel among other causes, so they did not die the swifter death during a war but many of them lingered on for years suffering all the time and therefore unable to support themselves, their children, and their

wives. Now "Mrs. World War I," who was the "Rose of One Man's Land," his home nurse and his breadwinner, a truly doubly golden starred widow is now in danger of being doubly-crossed by some of the "bills in the mill" now pending.

One of these bills would give a widow whose husband died during a war (either nonservice or service connected—but died during a war), $75 per month pension, but if either nonservice or service connected—but where the widow had been breadwinner and home nurse for years after a war to her husband—oh, a lower rank and lower income is good enough for her. (Oh death, where is thy sting? Huh?)

To the wife who was breadwinner and home nurse to her veteran husband, it makes no difference as to when, why, where, or how, her husband died—she did an angel job—there should be no rank-and-file amongst the widows of veterans therefore, although, of course, there must be rank-and-file in the military forces. Equality in rank and pensions for all widows of veterans of all wars is the only fair and just thing.

Then there is also "Mrs. World War I," who served as a United States Government clerk throughout World War II. She was not acceptable as a WAVE, WAC, SPAR, or marine due to physical unfitness and/or age. But she served in the same capacity as the majority of these uniformed women, sans the glory of the uniform, sans the pay-with-keep and special rates of the uniforms and sans the full veterans' benefits of the uniformed women. Yet when this particular group of World War I widows who were Federal clerks throughout World War II require medical attention now, they have the shame and humiliation of having to go to charity clinics for same. And many of them eventually will get pauper graves. I wouldn't be surprised if the static on the radio just now wasn't a chorus of dead World War I veterans turning over in their graves.

At least all widows of veterans of all wars who are now 50 years old and over should be granted full veterans' benefits and full equality amongst themselves. At present the widows of veterans of both World War I and of World War II lose their pension rights permanently by remarriage—this is unfair, as the widows of the Spanish-American War have this right to come back to the pension rolls after remarriage is dissolved either by death or divorce, if the latter is not due to her misconduct. This remarriage right should be granted to all widows of all wars, regardless of age, and it would also be of great benefit to the taxpayers, for a large percentage of the young widows of World War II especially, and a considerable percentage of those of World War I, would permanently be remarried if they had the Spanish-American War widows' "come-back right."

"Cast us not off in our old age," and remember that Mrs. World War I was the "Rose of One Man's Land," his home nurse, and his breadwinner.

American Dollars Sent Abroad

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, December 15, 1947

Mr. SCHWABE of Oklahoma. Mr. Speaker, I think the American people are entitled to know something about how their money has been lent, given, and frittered away in foreign lands. The taxpayers of this country should be informed of the amounts of American money that have been sent abroad, and the countries and peoples who have received it. American dollars sent abroad, according to the views of our best thinkers, have been absolutely wasted. It has become a drain upon our economy and should not be continued indefinitely, despite the fact that the President apparently is insisting upon his so-called Marshall plan, a long-range program of giving to foreigners.

Many congressional leaders have said that since the fighting stopped, $20,000,000,000 of our money has already been given to some 59 countries. Here is where more than $13,000,000,000 went, prior to July 7, 1947, the date these figures were published:

Albania: Through UNRRA	$40,502,000
Argentina: Cultural and technical aid, bank credits	297,000
Austria: Supplies, bank credits, surplus property	63,000,000
Australia: Lend-lease and fixed war installations	54,894,000
Belgium: Loans, lend-lease, surplus property	494,000,000
Bolivia: Cultural and technical aid	245,000
Brazil: Bank credits, cultural and technical aid	70,680,000
Burma: Lend-lease	11,000,000
Canada: Alaska highway	138,312,000
Chile: Bank credits, cultural and technical aid	42,195,000
China: Export-Import Bank credits, surplus property, lend-lease	1,482,793,000
Colombia: Bank credits, cultural and technical aid	859,000
Costa Rica: Inter-American highway, cultural and technical aid	1,540,000
Cuba: Cultural and technical aid	190,000
Czechoslovakia: Export-Import Bank credits and surplus property	31,304,000
Denmark: Export-Import Bank credits and surplus property	40,000,000
Dominican Republic: Cultural and technical aid	75,000
Ecuador: Bank credits, cultural and technical aid	1,288,000
Egypt: War installations	11,800,000
El Salvador: Inter-American highway, cultural and technical aid	327,000
Ethiopia: Export-Import Bank credits and surplus property	4,000,000
Finland: Export-Import Bank credits and surplus property	92,500,000
France: Export-Import Bank credits and surplus property	1,950,000,000
Germany: Supplies	400,000,000
Great Britain: Loan, surplus property	4,400,000,000
Greece: Economic assistance, UNRRA, lend-lease surplus property	790,000,000
Guatemala: Inter-American Highway, cultural, and technical aid	627,000
Haiti: Cultural and technical aid	86,000
Honduras: Inter-American Highway, technical and cultural aid	418,000
Hungary: Surplus property	15,000,000
Iceland: Fixed war installations	65,000,000
India: Surplus property	$50,000,000
Italy: Economic relief, Export-Import Bank loans, special considerations	538,000,000
Iran: Surplus property, lend-lease	30,000,000
Iraq: Educational aid	41,000
Japan: Supplies	267,000,000
Korea: Supplies, surplus property	62,000,000
Lebanon: Educational aid	90,000
Liberia: Civic improvements	20,200,000
Mexico: Bank credits, cultural and technical aid	87,574,000
Netherlands: Export-Import Bank credits, lend-lease, surplus property	377,384,000
New Zealand: Surplus property, war installations	5,707,000
Nicaragua: Inter-American Highway, cultural and technical aid	2,430,000
Norway: Export-Import Bank credits, lend-lease	56,500,000
Panama: Inter-American Highway, cultural and technical aid	47,000
Paraguay: Cultural and technical aid	38,000
Peru: Bank credits, cultural and technical aid, war installations	2,930,000
Philippines: War claims	695,000,000
Poland: Export-Import Bank credits, surplus property	90,000,000
Portugal: War facilities	(1)
Saudi Arabia: Export-Import Bank credits, surplus property	12,000,000
Spain: War installations	136,000
Soviet Union: Lend-lease	250,000,000
Syria: Educational aid	10,000
Turkey: Economic and military aid, Export-Import Bank credits	270,000,000
Urúguay: Surplus property, cultural and technical aid	733,000
Venezuela: Cultural and technical aid	144,000
Yemen: Surplus property	1,000,000
Yugoslavia: UNRRA aid	(1)

[1] Value undetermined.

The above figures have been compiled by Prentice-Hall, Inc., one of our leading statistical firms in the United States, and used by me with their permission.

I suggest that all should stop, look, and listen. These figures do not include the expenditures through our military organizations, the interim-aid program, and the President's so-called Marshall plan, involving future expenditures of perhaps another $20,000,000,000.

An Opportunity—And a Challenge

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 10, 1947

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Frank E. Gannett, Rochester publisher, before an Ohio Republican audience in Columbus, Ohio, December 2, 1947:

Whether or not you agree with my views, I do hope that our meeting together will stimulate our thinking and deepen our interest in national and international affairs. It is my honest opinion that we are in the most

critical period in our history. Decisions to be made in our party conventions next summer and in the elections next fall may determine not only the future of America, but the future of the whole world.

The question that we must settle boils down to this: Are we the people going to control our Government as our forefathers provided in our Constitution, or is government going to control us? Are we going to be masters of government, or become its subjects and slaves?

MUST AWAKEN PUBLIC

We must awaken the public to a realization that our liberty and all our freedoms and our way of life are in danger. In most of this world today the sacred rights of the individual, which we enjoy and appreciate, have been abolished. In most of the world the state has become all-powerful.

We fought World War II to destroy the totalitarian states of Germany, Austria, Italy Japan. After great sacrifice of life and property, a cost of $275,000,000,000 and a million casualties, we overthrew Hitler, Mussolini and Tojo, only to see arise a more potent dictator in Stalin who has repeatedly declared that the Soviets must dominate the world. That is their goal.

In my trip last June around the world I saw evidence of intense activity by the Communists. You all know their technique. They hope by intrigue and lying propaganda, by clever, undercover work, by promoting discord, strikes and chaos, to make it possible for a minority to seize the government as they did when only a small, well-organized group overthrew the Czar of Russia.

MILLIONS UNDER STALIN

Since VE-day, with our consent, or at least without our opposition, Stalin has taken control of 12 countries adjacent to prewar Russia and thus brought many more millions of people under his dictatorship.

Today, in Italy and France, the Communists are in great strength. Indeed, they seriously threaten government in both these countries. Intolerable economic conditions may at any time put the people of those two once great countries in the chains of slavery to the Moscow Politburo.

Stalin can gain control of these nations without going to war. Indeed, even now he can march across Europe to the English Channel any time he decides to start and no one can stop him.

Greece, in spite of the financial help we have given her, is not safe from communism. As a matter of fact, there is great concern about the stability of its present government.

China, with its 400,000,000 wonderful people and great resources, is coveted by Stalin. He controls almost all of Manchuria and communistic forces are so strong in northern China and conditions are so bad in China that communism may ultimately prevail. General MacArthur told me that that would be a world disaster.

Even in India the plans of the Communists to promote riots, massacres, and chaos may open to Stalin the door of that great country, with its 400,000,000 population and enormous resources.

BUSY IN SOUTH AMERICA

We don't hear much about it, but in every country in South America the Reds are busy and making steady progress in their plans to get control of that great continent. William Green last week named a Mexican labor leader as Moscow's chief agent in Latin America.

Only America stands in the way of Stalin. We are the one hope of preventing Russian slavery from dominating the whole world.

That being the case, it certainly is of supreme importance that this great country which is only one-seventeenth of the world's surface and only about one-fourteenth of the world's population, must take every possible step to protect our future. War between Russia and America is unthinkable because it would mean such terrible destruction. I had hopes that the United Nations might promote lasting peace throughout the world, but so far Russia has blocked every important move in that organization and we have made no progress in plans to eliminate war. I don't expect war with Russia at present or at least for several years. Whether we shall have war with the Communists depends on the dictators in Moscow.

We must, however, realize that Russia is building up a great military machine. It is reported by our own officials that Russia now has more military planes than the United States. She certainly has a great army, many times larger than our own. She is working night and day to perfect her own atomic bomb and there is no question that she will sooner or later have it.

This situation is so tense and critical that we should be doing all that we can to make America powerful in every way. Our scientists and research men are developing new weapons. We must be ready to produce them in quantity quickly. If we should have war, there will be no one to hold off the foe while we prepare for battle.

I am glad to know that our military leaders are alert to the dangers in this situation, but I'll not be satisfied until we are sure that we are ready to defend ourselves against Russia or anybody else. Our liberty and freedom and what we have in America is all too precious not to be protected by the strongest means that can be developed.

REDS WANT DEPRESSION

As important as our military strength is the strength of our economy. The Reds are hoping that we shall have a great depression—collapse. Then, they say, people would turn to communism. So America must be prosperous. Our production must be increased. We must get our house in order in every respect. By improved tools and machinery, by increased production of all the things that we need, we can make America a land of giants, unmatchable in all the world.

But I am gravely concerned by the trend of the policies of our Government. Never has there been so much quackery, demagogery, ignorance, and stupidity as we are seeing today in Washington. What worries me is the fact that even some of our Republicans in Congress have been misled and do not seem to understand what the proposals of the Truman administration really mean.

On October 16, President Truman described price and wage controls and rationing as police state methods. And yet in his message to the special session of Congress on November 17, this same President Truman submitted a 10-point program which embodies what he had called police state methods.. He has asked Congress to impose police state methods on the American people in peacetime. He would revive here methods used by Hitler and Mussolini.

FOR A FREE ECONOMY

In wartime we had to submit to control of our economy so that everything could be devoted to winning the war, but in peacetime, there is no excuse for police state methods in America. I am glad that Senator ROBERT A. TAFT holds this same view.

It has been proved again and again that if you start on the road to a controlled economy, there is no end but full government control. If you try to control prices of any articles, you drive production into other channels, promote black markets and racketeering. England staggers under planned economy, socialism, and government controls. Today everything in that country is controlled and rationed, and the people have been getting less and less of everything. The standard of living has been driven down lower and lower.

Women stand in a queue for hours with a ration ticket with which to get one egg or an ounce of bacon once a week. Scarcities are increasing, and the ration tickets buy less and less.

The food on the English table, the clothes on the people's backs, the production of industry and its distribution, transportation, and everything else is controlled by the Government. Taxes have been increased and bureaucrats by the thousands have been given government jobs in the effort to control the lives of the English people.

Once our people accept controls, they will be extended until we will be in the same plight as the English people. If we accept controls at this time, we may never be able to throw them off.

WHY RISING PRICES?

The muddled thinking in Washington is the result of rising prices. The politicians fear that they will be blamed because everything is costing more. In their stupidity they don't understand that prices are the result of inflation. Prices are like a thermometer that reports the temperature of trade. We cannot affect the temperature by decreeing that the thermometer may go just so high and no higher. What we must do is to treat the fever. The fever is inflation. Prices merely tell us how aggravated the inflation is.

Some of the economic quacks may blame high prices on speculation, or profits, or labor unions, or the farmer, or marketing costs, or anything else, but the fact remains that our trouble is due to the decreasing value of our dollar.

Dr. F. A. Harper, a former Cornell economist, makes the situation clear by supposing that all of our goods were in a warehouse and that the warehouse had issued receipts for them. If we increase the number of warehouse receipts, we diminish the value of each receipt. Then no single receipt will obtain the full amount of goods called for on its face. Our dollar today is worth about 62 cents. That is why you have to pay more dollars for anything you buy. That is inflation.

INFLATION IS AT FAULT

Our inflation is due to the fact that the amount of our money, that is our warehouse receipts, has been tremendously increased by our Federal Government. If our Government had kept within its income our dollar today would be worth its face value, but instead of keeping within its income the Federal Government in the last 15 years since the New Deal took office has spent 1½ times the total of our national wealth in real property and in improvements—in other words, 1½ times the value of all our homes, offices, factories and farms.

Think of it: Our Federal Government has contracted debts equal to an average of $6,000 for every family in America.

All this debt becomes in effect purchasing power, immediate or remote. Two-fifths of this debt already has been turned into spendable money. Many bonds representing our debt have been turned into cash. The other three-fifths of this debt hangs as a threat over our money supply and hence over the buying power of every existing dollar.

Of course a great debt was created by the war, but our Government before the war had created a great deficit by unbusinesslike management of our Federal affairs.

MORE PAY AND LESS WORK

Much of this inflation is due to policies put in effect by President Truman himself. You will recall of course that after the war ended, President Truman made a plea for the

full employment bill. The Republicans in Congress refused to pass this legislative proposal.

Truman had predicted that by 1946 there would be eight million unemployed. He aided and abetted labor leaders in obtaining higher wages. That was like pouring gasoline on a fire. It was inflationary. It was in effect a more-pay-for-less-work policy. Higher prices were inevitable as a result of this inflationary move.

Had not ten million unemployed in 1939 been put to work producing more goods, our dollar today would be of still less value than it is.

The only way to correct the present distressing price situation is to increase our production more and more, decrease government expenditures and in every way possibly lessen the money in circulation so that the dollar ultimately may regain its face value in purchasing power.

For instance, today there is no excuse for the Government to carry on public works projects which could be postponed.

It would seem that any school boy should understand the cause and effects of inflation. But I doubt if President Truman himself understands these fundamental economic principles. He is more concerned with politics than with economics. He adopted the program drafted by the left-wingers, the CIO the Russian appeasers and Soviet followers in this country because he thought it would get him votes.

It was only because of a coalition of Republicans and Southern conservative Democrats that Congress did not adopt in toto in 1945 Truman's program which would have made this country a police state and still further increased inflation.

MONEY WORTHLESS IN CHINA

Unfortunately many have forgotten the inflation that swept Germany after the First World War when finally it required 3,000,000,000,000 marks to buy a dozen eggs. Today China is suffering from the same sort of inflation. When I was there in June an American dollar was worth 50,000 Chinese dollars. A friend in Shanghai recently wrote that he paid 110,000 Chinese dollars for a drink of Scotch whisky. I'll say emphatically that I don't think it was worth it, but that price indicates that money in China is becoming practically worthless.

Why, oh why, doesn't our Federal Government understand what is going on? Why doesn't it see what causes inflation and do something to check it?

The Constitution gives to Congress the power to coin money and regulate the value thereof. Thus Congress is authorized to increase the value of our dollar. There are many ways in which this can be done without resorting to police state methods.

Quoting Dr. Harper again: "High prices are not the criminal. They are the tracks of the criminal. If you were trying to protect your children against a bear in the forest, you would not feel that they were safe if you merely covered the bear tracks. That would be worse than doing nothing, for it would deprive the hunter of his only means of trailing the beast. The tracks reveal where the bear is. The children, if told that covering the tracks would take care of the matter, would be in more danger than before because they would acquire a false sense of security and would be thrown off their guard."

THE TRACKS OF INFLATION

So it is with inflation. High prices are the tracks of inflation, not inflation itself. Prices are the record of voluntary actions of consumers, acting freely in the market place, buying items of their individual choice at prices agreeable to them, using their own money for that purpose. They are not under compulsion to buy at any price.

Government loans are inflationary. Under the so-called Marshall plan—Marshall himself says it is not a plan but merely a proposal—16 nations of Europe got together and wrote a letter to Santa Claus. They would like to have us give them something like twenty or twenty-two billion dollars. Could anything be more absurd?

As General MacArthur well put it, "You can't buy democracy." Furthermore, there is no guarantee that any amount of money that we might spend in trying to rebuild Europe would check the spread of Communism. Surely the vast sum of money we already have spent in Europe has not lessened the threat of communism. And again, if we do rebuild Europe with billions and billions of dollars, there is no guarantee that these rebuilt countries will not become richer prizes for Stalin.

Where are we going to get any such sum of money as they ask? We would either have to issue more bonds and further dilute the value of our dollar so that it would buy still less than it does today, or the Government could get the money by levying additional taxes on the people. Aren't you paying enough taxes already?

MEANS HIGHER TAXES

Do you realize that 31 percent of the average person's income goes to the Government? In other words, you and I and others work 4 months of each year for the Government. If we are going to make loans of $26,000,000,000 to Europe, or a half a billion dollars to Europe as Congress is now proposing, money must come either from bonds or from taxes.

In any event, we, the people, will have to pay the cost.

Since the war ended we have poured into Europe $26,000,000,000, and what has that accomplished? We made a loan to Britain—really not a loan, but a gift—of 3¾ billion dollars only a little more than a year ago. This money has been spent, and there is no evidence that it has improved conditions in England in any way. Churchill and Lord Beaverbrook charge that the money was wasted. This Santa Claus letter from the 16 nations asking for some $20,000,000,000 includes, as I understand it, a request from Britain for another $8,000,000,000 to help finance its socialistic government.

By the way, no one yet has had full information about this Santa Claus proposal. We don't know exactly what the requests are from the various nations or what they propose to do with the money, but we are told that we are not to have any part in even suggesting how they should use these billions that they ask us to give them.

As I said before, the Governments of Italy and France are in danger of becoming communistic, and yet today Congress is proposing to pour millions of our dollars into these countries.

In France a million workers are on strike. Are we to provide money for these strikers who are not willing to work? Are we to provide money for any people who depend on their government for their maintenance?

NEED FOOD, NOT DOLLARS

I yield to no one in my desire to do all we can to feed the hungry in the war-devastated countries. If we are going to help feed these hungry people we should send them food, not dollars. We should see that the food reaches the people that need it. I should like to see an organization like our American Red Cross set up in Europe to administer the distribution of food so that it helps hungry people rather than some socialistic government. I would not trust any of those governments with a dollar intended for general relief purposes.

Our people are suffering from inflation. The high prices that we are paying for everything are oppressive. Our taxes should be cut so that we could better bear the burden. Mr. Truman's Secretary of the Treasury, Mr. Snyder, and the President himself are opposing cutting taxes. They seem to think it is a good thing for us to pay taxes and that it will help our economy. They say that the money paid for taxes will be withdrawn from buying power. If their theory is true, why don't they advocate higher taxes? They can't answer that question without revealing how stupid and how costly it is for President Truman to veto bills that would reduce taxes. Reducing taxes would give the public more purchasing power without increasing prices. The New Dealers want the Government rather than the people to do the spending.

Another proposal by the Government is to have the power to allocate goods and materials. Not knowing that there is a bear in the forest that should be hunted down, they are crying, "Emergency, emergency." We are having a "government of crises"—crisis after crisis. It would empower the Government to give materials to one manufacturer and withhold them from another. The police state could punish an enemy and reward a friend. By its allocation, it could close down any factory and throw thousands of innocent workers out of jobs.

There is no reason whatsoever for this proposal of price control, of rationing or allocation. They are puny efforts to cover up the bear's tracks. They make inflation worse, not less.

CHALLENGE TO REPUBLICANISM

Here is a great opportunity for the Republican Party. It should be unitedly opposed to these outrageous proposals. It should stand four-square and all together in defense of one of our important freedoms—the freedom of choice in the market places, without interference by the police state.

Anyone who has been abroad has seen the destruction in the moral fiber of the people where black markets and other rackets thrive. It fills anyone with fear that it may happen here.

Let me offer a few suggestions:

Instead of resorting to measures to lessen production, the Government should do everything possible to encourage production.

It can and should reduce taxes. It could urge a tax system that would increase incentives to people to work and produce.

It could advocate repeal of laws passed by the early New Deal which aimed at creating inflation.

The Government could sponsor an honest day's work for honest pay. It could urge a longer workweek so that production might be increased.

It could suspend all unnecessary and expensive Federal projects that compete for materials and add to the inflation spiral.

It could reduce Federal spending. It is necessary to keep the budget balanced or overbalanced. An unbalanced budget adds to inflation.

Such a program and many things along the same line would be much better than going back to ration tickets. Secretary Harriman and Secretary Snyder are asking for powers to put price controls on oil and coal and to ration gasoline and fuel oil again. Do you remember the rackets and black markets we had during the war?

They also want authority to limit the holding of grain on the farm. In other words, they would force the farmer to sell his grain as the police state may order. Thus the police state could interfere with the farmers constitutional rights to his property. Forcing a farmer to sell grain is like the Hitler and Stalin policies.

MORE BUREAUCRATIC BUNGLING

Then, too, they urge that steel be allocated to the most essential programs. Who is to determine what is the most essential programs? Why, of course, the officials of our police state. Some bureaucrat in Washington.

Instead of holding out their palms for billions of dollars from us, why don't the people of Europe follow Belgium's example? Those fine people knew about inflation because

Hitler had tried to destroy Belgium by the easiest means—inflating their currency.

The first thing the Belgians did after the war was to provide money in which people would have confidence. But that is only half the problem. If money can't be exchanged for things people want, it loses value, no matter what governments do. So Belgium backed up its money with goods that Belgians could buy. It took off police control. It welcomed labor from any source. It got the coal mines started and its factories rolling by letting the rewards of competitive work, in goods and money, operate as incentives to work. It stayed out of fool's paradise, the false social security promised by socialistic governments, and urged the people to produce and gave them a reward for producing.

NO INCENTIVE TO WORK

One of the causes of England's tragic plight is the fact that there are no incentives for work. No matter how much time you put in on a job and how much money you get, your real reward is limited to the number of ration tickets you are allowed.

In Belgium with free enterprise at work, the people are getting clothes, shoes, toys, cigarettes, radios, washing machines, automobiles. Belgium is making great progress and is the brightest spot in all Europe today. If the rest of Europe would follow their example, they would not need to seek loans or gifts from us. For those doubting Thomases and skeptics who don't believe in the American way of life, I should like to recommend a study of what Belgium is doing.

Of course we are eager to see the nations of Europe back on their feet. We want to help them. The best way to assist them is to give them the know-how, give them encouragement and spiritual uplift. For instance, I would favor sending a thousand of our county farm agents into Germany for a year under competent leadership. They could teach the Germans better methods for producing food and show them how to produce more food. That would be still better than sending food to them from America.

A score of American businessmen by their suggestions and advice to industrial management could do more to rebuild Europe than unlimited billions of dollars in loans or gifts.

In the meantime, I am hoping that the Republicans in Congress will give us leadership in straight thinking on the problems that confront us. Anyone who favors controls, restrictions and a police state as advocated by the Truman administration, should realize that he is endorsing the Hitler-Stalin system and that it means a tragic end to our liberty and freedom.

OUR OWN BLESSINGS

Returning from my trip around the world, I was more impressed than ever that we have so much more than any other people on the globe. In spite of the great mistakes made by our Government since New Dealism got in power, in spite of the great burden of a crushing debt and a wild spending national Government, we still have full employment and the highest standard of living in the world.

We have obtained this enviable position of being the greatest, richest and most powerful Nation because our Constitution gives to every one an opportunity to work in any field of activity that he may choose. It gives to him reward for his effort which cannot be taken away from him without due process of law.

Here we have incentives. The promise of rewards spurred men on to clearing the land of forests, bridging rivers, tunneling mountains, building railroads, developing our great cities. All this progress was made not by the Government, but by individuals, free and unrestricted.

In 150 years we made more progress than had been made in all the preceding centuries. If we will only cling to the same methods and to our constitutional Government, we are sure to make still greater progress in the years to come. The Republican party must rise to this great opportunity and accept this challenge. Never was there such a need for a united party as there is today. A united Republican party under wide leadership can save America and protect us against any attack.

South's Man of the Year

EXTENSION OF REMARKS

OF

HON. LAURIE C. BATTLE

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, December 15, 1947

Mr. BATTLE. Mr. Speaker, in the South we have a great many businessmen with "social consciences." I believe Mr. Tom Martin, of Birmingham, exemplifies this type of businessman. I would like to place in the RECORD an article written by Hubert Lee, editor of Dixie Business, describing his selection of the South's man of the year.

For distinguished service to the South, Dixie Business has selected Thomas W. Martin, chairman of the board of trustees of the Southern Research Institute and president of the Alabama Power Co., as the South's man of the year for 1946.

In fathering the Southern Research Institute, Mr. Martin has made one of the greatest contributions to the development of the South since the turn of the century.

In honoring Mr. Martin, Dixie Business honors the scores of men over the South who have worked with him in making the institute possible. What Mr. Martin has done has not been done alone. Late in November, leading scientists from over the Nation gathered in Birmingham for the institute's annual meeting and were quoted by the Birmingham newspapers as being high in their praise of Mr. Martin.

More than a score of distinguished leaders over the South were nominated, through letters and telephone conversations, during the past 2 months. Each of the nominees has rendered signal service to this section. And not lightly has the final decision been made.

One letter nominating Mr. Martin said, in part, "I nominate Mr. Martin * * * for his remarkable accomplishments in establishing and putting under way the Southern Research Institute. For the first time in the history of the South, southern businessmen largely have voluntarily contributed in excess of $1,000,000 for capital funds for the institute. Starting with a director and 1 man in October 1944, the institute became self-sustaining in April 1945 and has grown to a staff of 38 scientists and 15 clerical and administrative members of the staff."

In an editorial following the diamond jubilee in Birmingham in November, the Anniston Star, published by Col. Harry M. Ayers, said that the industrial diversification promoted by the Alabama Power Co. has been farsighted and intelligent in every way, * * * whose great president, Tom Martin, is responsible for the Southern Research Institute."

Mr. Martin also had a leading part in the development of the proposed newsprint plant at Childersburg, Ala. He was chairman of the Talladega County War Plants Reconversion Committee, which sponsored the original engineering study of the facilities of the Alabama Ordnance Works at Childersburg, which, in turn, led to the formation of the Coosa River Newsprint Co. Mr. Martin is a stockholder and director in this company, a prominent newspaper publisher who also had an important part in this project, informs us.

The Birmingham News, in an editorial November 26, during the second annual meeting of the advisory council of the Southern Research Institute, said in part, "In the South the need for such work is even greater than in other sections of the Nation," in pointing out the contribution research plays in the development of new products, new processes, and techniques. "Many Alabamians have been aware of that need for some years. The Southern Research Institute maintained in Birmingham by the generous gifts and active enthusiasm of many citizens and companies in this region has already rendered a distinct service to the section and the country as a whole. Such public-spirited residents of Alabama as Thomas W. Martin, leading spirit in establishment of the institute, have indicated how they recognize the importance of southern research for southern advancement by their whole-hearted and all-out support of this work. It is their enthusiasm and their recognition of the need for finding new ways of using the South's products and the South's labor supply for the benefit of southern people that underlies this second annual meeting of the advisory council."

Business Week magazine, in the November 16 issue, devoted a full-page article with pictures telling about Mr. Martin quickly backing a plan proposed by Milton H. Fies for burning unmined coal to produce gas for industrial use. We like Ralph Smith's (editor of Business Week) use of that word "backing" for it has been through backing so many projects and giving his time and service to seeing them through that Mr. Martin has made so great a contribution to the development of his State and the South—and therefore to the Nation.

Through backing so many worth-while projects, Mr. Martin has merited the backing given him by hundreds of prominent leaders. In the Southern Research Institute and other programs he has served as "wheel horse" in helping make possible.

On December 4 Mr. Martin was guest of honor at a luncheon given by leading citizens of Gadsden, where 40 years ago the Alabama Power Co. was started by the late Capt. William P. Lay with a capital of $5,000. There, according to Fred Taylor in a news story in the Birmingham News, Mr. Martin was characterized as "the greatest citizen of Alabama today."

Our good friend John M. Ward, executive vice president of the Alabama State Chamber of Commerce, voiced the sentiment of many men when he wrote us: "Mr. Martin's services to the South are not confined to any one particular project in any one State. For years he has been one of the outstanding men of action with vision and faith in the South's possibilities. His own company, the Alabama Power Co., has probably taken the lead and set the pace among Southern utilities in a number of important programs. In its cooperative program with agriculture and the rural communities, the company has done an excellent job. Mr. Martin was one of the original organizers of the Alabama State Chamber of Commerce and has served continuously as a member of its executive committee. He was head of the committee for economic development in this State. He has been honored by more than one organization during recent years and designated as Alabama's first and most useful citizen. In the splendid success he has had in this State in the conversion of Government-owned wartime facilities to peacetime operation he has taken the lead, having served as chairman of the Talladega war plants conversion committee and other groups. * * * He has been in the forefront of every movement of which I have knowledge during the past 10 years that was for the

further economic development of our State and the entire South.

"Mr. Martin's interests are varied. He has had honorary degrees conferred upon him by educational institutions and, I believe, Dixie Business will honor itself and the South in selecting Mr. Martin."

Editors and publishers over several States have agreed with our selection of Mr. Martin, as well as others who have written us following the news dispatches announcing it for release December 8. On that date Robert W. Kincey, in his Business and Industry column in the Birmingham News wrote:

"Hubert Lee, editor of Dixie Business, Atlanta, has selected Birmingham's Thomas W. Martin as the South's man of the year. Hubert wrote this department a couple of weeks ago and suggested several of the South's most prominent men had been mentioned for the honor and distinction, among them Mr. Martin. Since Hubert invited a suggestion from this department, he was told to look no further. Surely when Mr. Martin's record is reviewed, it would be difficult to find a man more genuinely deserving of this recognition than Thomas W. Martin, president of the Alabama Power Co., chairman of the Southern Research Institute, public-spirited and public-minded citizen, gentleman, and scholar. Mr. Martin's picture will be carried on the cover of the winter edition of Hubert's magazine with a detailed account of Mr. Martin's activities during the past year carried in story form."

Mr. Martin, in 1940, was made an Officer d'Académie by the Republic of France, in reccgnition of his writings on early French military activities in Alabama, and the French settlement at Demopolis, Ala., called the Vine and Olive Colony. He was decorated with the Palmes Académiques, France's highest recognition to men of letters, arts and sciences. Mr. Martin's historical data on early French settlers and French colonies in Alabama has been given a prominent place in the National Archives of France, the National Institute and Public Libraries of Paris.

He recently received from the President of Finland the insignia of Knight of the White Rose of Finland for his work in 1940 as chairman in Alabama of the Committee for Finnish Relief.

The chambers of commerce of southeast Alabama in 1945 awarded Mr. Martin a silver loving cup inscribed with the designation as "Alabama's most useful citizen." The Alabama State Chamber of Commerce at its last annual meeting passed a resolution commending Mr. Martin for his efforts on behalf of the Southern Research Institute.

Born August 13, 1881, at Scottsboro, Ala., and educated in public and preparatory schools and law department of the University of Alabama, Mr. Martin began practicing law at Montgomery, in 1901; served as assistant attorney general of Alabama from 1903 to 1911. In 1912 he became general counsel of Alabama Power Co., was elected vice president in 1915. On February 18, 1920, he became president, succeeding the late James Mitchell, brother of W. E. Mitchell, president of the Georgia Power Co. In 1920 Mr. Martin was elected president of the Alabama Traction, Power & Light Co., Ltd., succeeding Mr. Mitchell, and upon organization of the Southeastern Power & Light Co. in 1924, he became its president, serving in that capacity until 1930 when that company was merged with the Commonwealth and Southern Corp. Upon the organization of the Commonwealth and Southern Corp. in 1929, Mr. Martin became its president and served in that capacity until June 1932.

Probably no other public-utility official, except the late Preston W. Arkwright, of the Georgia Power Co., who died December 2, has had such a distinguished career.

As editor of Dixie Business, which we founded in 1929, we have known and written about many of the South's great leaders. We have followed Mr. Martin's efforts during these years and found them worthy. He has that greatest of all faculties, that of working with and through people.

It would take more than our 20 pages of this magazine to list the names of all the men who share the honors that have been awarded Mr. Martin—by their working with him on so many projects.

In selecting Mr. Martin as the South's Man of the Year we honor those who have worked with him and who achieved with him. Mr. Martin would be the first to pay tribute to them—particularly to the late Robert Strickland, Atlanta's distinguished banker, who played a leading role in the formation of the Southern Research Institute and whose efforts for the development of agriculture will not soon be forgotten.

A Report on Our Grazing Lands

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Monday, December 15, 1947

Mr. HORAN. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD at this time a report on the work being done on our Nation's grazing lands, which I have prepared with the cooperation of the various government agencies having such lands under their control. At the end of the report, I desire also to publish a chart showing some very interesting statistics regarding the revenues of our rangelands and the amount spent on their upkeep and improvement.

The report follows:

The current "save wheat" campaign has placed a tremendous burden on the grazing lands of the United States. For if a greater portion of the Nation's grains are to be shipped overseas for foreign relief, the vast bulk of our meat supply must be fattened on grasslands.

With this fact in mind, I asked the heads of all administrative agencies responsible for grazing lands to report to me regarding the steps being taken to preserve and improve our public pastures and to safeguard them against any harm which might result from overgrazing.

General reports from across the country in recent months have indicated that, while grazing has been more intensive this year than in most years, very little range land has been subjected to the same degree of overuse that most cropland has suffered. However, there are some signs that we should be doing more to increase the availability of grazing lands and to make these lands more secure as an alternate to grain feeding of cattle during these days of crop shortage. It also appears we need better coordination of effort among the various agencies administering range lands, to gain the best use of all available pasture.

RESEARCH NEEDED

Considerably less than one-third of the revenue from grazing fees is devoted to research and range improvements, the survey shows. While gross revenues for fiscal 1947 totaled $6,491,498.45 on the 303,964,126 acres of Federal land used for grazing purposes, only approximately $2,000,000 was spent on reseeding and improvement. About $350,000 was devoted to research on methods of preserving or improving grazing lands.

The amounts spent for research and improvement could not be accurately stated in some instances, because benefits to grazing purposes from Fish and Wildlife Service as well as from national defense funds were described as only incidental to other primary uses for those moneys.

WHAT THEY REPORTED

Most research on range improvement is performed by the Forest Service, which last year spent $330,000 of its $2,250,000 in revenue. An additional $535,000 was spent for range improvements by that agency.

The Bureau of Land Management, which controls 163,784,000 acres, or more than half of the Nation's public range land, collected slightly more than $1,000,000 during 1947. Of this amount, it spent $15,540 for research and $794,350 for reseeding and improvements, a much greater proportion than any other agency.

The National Park Service used no money for research or improvements. Its revenue from grazing fees, however, was only $13,776.67. The Bureau of Indian Affairs spent $146,000 of its $1,438,000 grazing income for improvement but relies on other sources for research information. The Bureau of Reclamation, which took in $56,890.58 for grazing on its half-million acres during calendar 1946, spent nothing on range improvements. The Tennessee Valley Authority ploughed most of its $44,378 grazing revenues back into improvements on its small acreage.

NATIONAL DEFENSE RESERVES

The Army and Navy together control 3,117,714 acres of land in protective areas. Grazing fees on these lands last year were $1,138,713 but the only effort the services put into their conservation was the nominal amount necessary for security purposes.

The Soil Conservation Service, which has an important responsibility in this regard, spent $550,000 last year on research and improvements, much of which can be considered to be more of benefit to the country as a whole, rather than devoted merely to the 6,500,000 acres the agency administers. Its grazing fees were $335,000.

REVENUES WILL INCREASE

The survey showed that revenues from all public range land should increase next year by from 10 to 30 percent. Only the TVA, which will have less land available for grazing, expects a drop. The total increase should amount to nearly $1,000,000.

Most of the agencies are devoting about the same proportion of their revenues to improvement this year as they used last year.

The Bureaus of Land Management and Indian Affairs will increase their work on improvement next year. Soil Conservation Service, however, has $185,000 less for work on grazing lands in 1948 than it had for the fiscal year just closed.

FUTURE PROSPECTS

The probabilities regarding work on our range lands are indefinite at this time. However, I am confident the Agriculture and Public Lands Committees, faced with a realization of the important role our grazing lands must play in the world agricultural picture during the next few years, will give considerable thought to whether enough is being done toward conserving and improving those lands. Of course, almost any work done on grazing lands automatically aids in watershed protection, moisture control, and the production of healthier, heavier livestock. Through such methods alone can we safely increase our use of these lands and thereby save much-needed feed grains.

United States grazing lands

[Compiled by Hon. WALT HORAN]

Department	Bureau	Number of acres	Gross revenue, 1947	Gross revenue anticipated, 1948	Expended research, improvements, 1947		Estimate improvements, 1948
					Research	Improvements	
Interior	National Park Service	1,705,780.00	$13,776.67	Same	None	None	Same.
Do	Indian Affairs	44,311,000.00	1,438,000.00	Slightly higher	do	$146,000	$180,000.
Do	Bureau of Land Management	163,784,000.00	1,058,827.00	$1,470,638	$15,540	$794,350	$858,000.
Do	Bureau of Reclamation	492,791.32	[3] 56,890.58	Same	None	None	None.
Do	Fish and Wildlife Service	853,207.00	112,140.20	do	Incidental [2]	$40,000	Same.
Defense	Army	3,017,427.00	1,069,135.00	Slightly higher	Nominal	Nominal	Slightly higher.
Do	Navy	100,287.00	69,578.00	do	do	do	Do.
Agriculture	Forest Service	83,165,918.00	2,293,773.00	$2,500,000	$330,000	$535,000	Same as 1947.
Do	Soil Conservation	6,493,893.00	335,000.00	$440,000	None [4]	$550,000	$365,000.
TVA		39,823.00	44,378.00	Approximately 25 percent less.[1]	do	$30,000	Approximately 25 percent less.[1]
Total		303,964,126.32	6,491,498.45				

[1] Reduced acreage expected.
[2] Some benefit from research for wildlife improvement.
[3] Calendar year 1946.
[4] This amount included under improvements.

Communist Party Should Be Outlawed

EXTENSION OF REMARKS
OF
HON. WILLIAM C. COLE
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, December 15, 1947

Mr. COLE of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by George A. Blasser from the National Republic:

IT SHOULD BE OUTLAWED

(By George A. Blasser)

The National Republic has consistently recommended to the Congress of the United States, to our State legislatures, to our city and county governmental units: The Communist Party should be outlawed and its activities systematically suppressed, since it is committed to the criminal purpose of the destruction of American Constitutional Government by force and violence.

Approximately half of our 48 States have followed this recommendation, at least to the extent of denying the Communist Party a place on the ballot.

However, in the last Congress—and in discussion groups throughout the Nation—it has been revealed that many patriotic anti-Communists are not convinced that the Communist Party should be outlawed. Because of the many misconceptions which prevail on this subject, we feel it worth while to devote this article to consideration and refutation of the arguments which have been advanced in opposition to the National Republic program for outlawing the Communist Party.

In the first place, some have asked the question: Would this not be a violation of the fundamental right of people in America to organize and function through a political party? The answer is, "No." The Communist Party is not a legitimate political organization—any more than a group of doctors operating an illegal narcotics ring would constitute a legitimate medical enterprise.

By its own declaration of aims and purposes, the Communist Party is engaged in a criminal conspiracy and operation: the advocacy and projected overthrow of the American Government by force and violence. The Attorney General of the United States has abundantly demonstrated that this is the true objective of the Communist Party as has the National Republic and as have various congressional committees.

The policy of the Communist Party is simply this: even though it loses at the ballot box, it proposes "when the time is ripe" to unlawfully seize control of the government by armed insurrection. For the protection of "ballot-box government"—the rule of the majority—any political organization committed to the use of "bullets instead of ballots" should and must be outlawed and rigorously suppressed, just as gangsterism is outlawed and suppressed.

By committing itself to the criminal purpose of bloody revolution, the Communist Party has made itself an outlaw organization. By serving as an arm of a foreign enemy it is also an outlaw force. The only question for the American people to decide, through their elected representatives, is this: Shall we regard the Communist Party as a criminal organization? Shall we deal with it—as we would with any other criminal organization and foreign espionage organization bent upon attaining its end by bloodshed and violence? Or shall we permit the masquerade to continue—whereby at election time the Reds pose as representing a legitimate political party?

The argument has been advanced that the outlawing of the Communist Party would drive the organization underground. Outlawing the dope traffic, gambling, and bank robbery probably drives these criminal gangs underground also. Is it not better to force the criminal Communist conspirators underground than to permit them to operate in the legitimate political arena, masquerading as an American political organization? Furthermore, the Reds are already busily working underground.

The fact of the matter is that the Communist Party always maintains an underground organization, even when it is permitted to pose as a respectable organization. As the American wing of the Red International, the Communist Party has always been directed by underground connections from Moscow. Communist Party literature directs its members to maintain the vitality and integrity of their underground organization.

Following World War I, the Reds were driven underground by the vigorous prosecution of Woodrow Wilson's Attorney General, A. Mitchell Palmer. In the early 1920's, the anti-Red crusade was relaxed. According to William Z. Foster, now head of the Communist Party in the United States, the Reds have been careful to maintain their underground organization, since they never know when they may find it the only vehicle through which they can operate. Suppose the Reds should go underground again? The answer to that is we know who they are and their habitat and the situation requires vigorous suppression of them, wherever they may seek to hide and endeavor to carry on their criminal conspiracy against the Government of the United States.

The argument has been offered that outlawing the Communist Party would really help the organization—by making "martyrs" of Reds and by forcing them "underground." This claim is completely upset by the attitude of the Reds themselves. If it would help them to be "outlawed," they certainly would not be fighting with all their resources against this proposal. They know that if they are made illegal they can be seized without awaiting their violation of some other law and they know that if driven underground they cannot reach the masses and their "fronts" will be shattered.

The simple fact is that the Reds in America fear nothing more than the outlawing of their party. When Congress was considering this legislation, the Communist Party purchased full-page advertisements in leading newspapers to carry on bitter protests against such action aimed at their organization. The Reds well know that to be deprived of legal status would deprive them of prestige, cripple their propaganda machine, and seriously interfere with their whole program for deceiving and misleading their millions of fellow travelers throughout the Nation.

It has been suggested that, by permitting the Communist Party to operate in the open, we can keep a closer eye on it and know what it is up to. But this is fallacious reasoning. The real plans of the Reds are always kept as closely guarded secrets in the inner council of the underground conspirators and their membership lists and financial records are always hidden. In its electioneering, in its above-ground political activity, the Communist Party spreads only propaganda intended to deceive and agitate the people for the purpose of creating class and racial hatred and to undermine our Government. In the legitimate political arena, the Reds always pose as champions of the worker, friends of civil liberty, and advocates of higher wages, larger old-age pensions, and racial freedom. In reality, the Communist Party plans a world-wide dictatorship under which all peoples will be pauperized, all liberty will be destroyed, all workers will be made slaves of the Soviet state, all elderly people will be turned out to starve.

In outlawing the Communist Party, we would simply be denying it a propaganda forum through which it could continue to deceive multitudes of our people. Through false and deceptive propaganda, the Reds have been able to recruit millions of pinkish liberals and fellow travelers to the banner of sovietism. By depriving the Reds of their

legal standing as a political organization we would be taking away from them the very basis upon which they have promoted the deception and misleadership of their legions of suckers and dupes.

Much sentimental nonsense has been uttered regarding the violation of civil rights that would be involved in outlawing the Communist Party. Any American who knows the difference between liberty and license can recognize the flaw in this form of argument. It is not a denial of freedom of speech to put in jail the man who stands on the street corner speaking insulting obscenities to every woman who passes by. It is not a denial of freedom of speech to deny to the Reds the right to agitate for the establishment of Red tyranny with its system of prostitution enforced upon all women.

No civil liberties are violated when men are denied the right to come together, assemble, talk and plan and scheme to rob banks, burn churches, and engage in other criminal enterprises. There is no more reason for permitting Communists to come together and organize politically for the violent overthrow of the American Government than there is to legalize the conspiracies of other criminal gangs intent upon criminal acts.

Every true lover of free speech will favor the suppression of all groups intent upon destroying free speech under Red dictatorship. Every believer in government by the ballot box will be vigilant to suppress movements which would substitute bullets for ballots.

It would be dumb stupidity to permit the sworn enemies of free speech to use it for the destruction of free speech. It would be absurd to permit the enemies of free government to use the institutions of free government for its own destruction.

The Marshall plan involves the expenditure of billions of dollars for the defense of America from communism. Communism in control in China, England, France, and Italy would seriously menace us here. Is it not an oversight to slam the door on Communist expansion abroad, while permitting its free advancement and propagation here at home?

So long as the Communist Party is permitted to function as a legal organization, its agents will be enabled to work as termites, undermining the very temple of American free institutions.

Is it not time to deal with these termites?

Is it not time to recognize the Communist Party for what it is?

The Logic of Peace

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Friday, December 12 (legislative day of Thursday, December 4), 1947

Mr. PEPPER. Mr. President, I wish to have printed in the Appendix of the RECORD, by unanimous consent, an article entitled "The Logic of Peace," by Prof. Ralph Barton Perry, published in the December 1947 issue of the Atlantic Magazine.

At this time, when all of us are searching for an honorable way to a permanent peace for our country and our world, I commend this article to those who are fortunate enough to read it. Prof. Ralph Barton Perry for many years taught philosophy at Harvard under Presidents Eliot, Lowell, and Conant. From 1940 to 1945 he was chairman of the American Defense Group at Harvard University, during which time he made a great contribution to the winning of the war. I therefore ask unanimous consent to incorporate in the Appendix of the RECORD this very able discussion of the most vital matter of obtaining and preserving peace for our country and our world.

I have received from the Public Printer an estimate that the manuscript will make three and one-half pages of the RECORD, at a cost of $248.50.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE LOGIC OF PEACE

(By Ralph Barton Perry)

I

In the hostile alinement between communism and western democracy the United States occupies a peculiar position. It is impossible for an American to live abroad and to read European newspapers without being struck by the profound paradox that the fear of communism is as pervasive and powerful an emotion in this country, in which there is, practically speaking, no communism, as in other parts of the world where communism abounds. In Italy and France the Communist Party is the strongest party, if not numerically, then through its unity and discipline, and through its control of organized labor. It is doubtful if any government can long stand in either country without the support of the Communist Party; and it is quite possible that both countries will have a Communist government within the next few years. If this occurs it will be because of internal conditions; because a majority of the people believe that this party has the answers to the most pressing questions of the day; because it has provided active and courageous support for the resistance movement during the war, and therefore has a strong moral position; or because of a growing economic chaos in which people are inclined to resort to desperate measures.

There are strong if not dominant Communist Parties in every European country outside of Britain and Scandinavia: in Belgium, the Netherlands, Czechoslavakia, Hungary, Greece, Germany. There are, presumably at least, eighty million or more Communists or Communist supporters in China, Manchuria, and Korea. What will happen in India, Burma, Indochina, and Malaya, no one knows; but it will be remarkable if communism does not become a powerful force throughout the entire Far East. Add these areas and peoples to those which are already governed by Communist Parties or Communist-dominated fronts—Soviet Russia, Poland, Yugoslavia, Rumania, Bulgaria, Albania—and it is a modest statement to say that half of the world is actually or potentially Communist.

Those who live outside of Britain and the United States are, then, already living with Communists as their fellow-citizens, or next door to Communist-dominated countries. They cannot get rid of communism by the use of disinfectants, congressional committees, or inquisitions. Their situation is what ours would be if either the Republican or the Democratic Party were Communist and a Presidential election were impending. They cannot be purged of Communists any more than the United States can be purged of Republicans or Democrats.

When, on the other hand, we turn to the United States, the picture is totally different. Communists are few in number; and even recognizing the proportionally greater influence which they exercise through their discipline and fanatical devotion to their cause, their power is negligible. Because American communism has been driven underground, because American Communists dare not acknowledge their party membership, Americans suffer from a conspiratorial complex, a fear like that of a haunted house at midnight. Since we cannot identify Communists in the full light of day, we see them everywhere, and in our panic strike out at random against any sudden apparition.

The real danger, if danger it be, is not communism, but a social and economic movement toward the left, a movement known by various names, such as liberalism, radicalism, the New Deal, or collectivism—the danger that workers may achieve a larger share of the control and benefits of industry, the danger that Negroes may achieve their rights, the danger that the masses of the people may learn to exercise their power, the danger that something may be taken away from the privileged and given to the underprivileged. This is the real danger.

But since it would scarcely do in America to aline oneself against what so closely resembles our original equalitarian ideals, since this danger in large part coincides with what was once called hope and has been held up before our people as their legitimate aspiration, it is often given the bad name of communism in order to excite hostility against it; as, for example, when the superheated advocates of white supremacy give the name of Communist to those who use the word "Negro" in place of the word "nigger." The label is extended to include not only real Communists, that is, members of the Communist Party, but those who share with Communists any tendency to leftism—fellow travelers with communism, fellow travelers with fellow travelers, and so ad infinitum. Hence, in America everybody on the left, every effective advocate of radical change and social betterment, is called a Communist by those on the right who prefer things as they are, or prefer to move more slowly.

Such being the nature of the crisis, there are two strategies which we may adopt—the strategy of war and the strategy of peace. Faced with this choice and the present confused state of the American mind, I wish here to defend the thesis that we should, for some years at least, consciously and methodically pursue the strategy of peace.

II

The logic of war rests on the supposition that conflict is inevitable: At the present time, it rests on the supposition that the world cannot exist half Soviet and half American. The duty of self-preservation therefore requires the United States to adopt the strategy of war. This implies that we should increase our armaments, and strike at the time and in the manner which are most likely to give us the victory. Since at the moment we have the advantage in atomic warfare, with a stock pile of improved atomic bombs and perhaps of other modern weapons, and since within a comparatively brief period the enemy will acquire a like equipment, we should make war at once. Of the other implications of the strategy of war we are only too vividly and painfully aware. It implies that building up of collective anger which inflames the deep-seated combative impulses of man, represents the enemy as hateful, submerges the humane feelings, and breaks down the acquired scruples which inhibit the use of violence. It implies the excitation of the adrenal glands and other parts of the sympathetic nervous system, rather than the control of the higher brain centers. It implies the blurring of the careful distinctions of thought, and the fusing of purposive living into an elemental passion—a will to win, to destroy, to kill.

The logic of war implies that under the stress of emergency we must be prepared to abridge our personal liberties. Believing that life itself is at stake, we must be prepared for a time to abandon most of what ennobles

life, and makes it more than a matter of biological survival. The logic of war further implies that we should endeavor to aline others with ourselves against the enemy; in other words, create a block, beginning with Britain and the British Commonwealth of Nations, and drawing to itself the lesser nations of western Europe and of Latin America; a block which should share our irreconcilable enmity to Soviet Russia and constitute the beginnings of a military coalition.

That this logic of war is sometimes forced upon nations I do not doubt. It was, I believe, forced upon the United States in 1941. There is a strong current of thought and feeling in its support at the present time; and in some measure it describes what we are already doing. On the other hand, there would, I believe, be no doubt in the mind of any reader that this duty of self-preservation is a duty in extremis—to be undertaken only when the necessity is clear and pressing. When you add to the post-Hiroshima superatomic bombs the possibilities of guided missiles, and of biological and chemical warfare, the destructiveness of such warfare both to the flesh and to the spirit of man is literally indescribable. The historical development of war is subject to the law of diminishing returns and it has reached the period where it is of doubtful profit to anybody. It behooves us to be more than normally sure that our self-preservation is at stake.

If war is not forced upon us by the necessity of self-preservation, the alternative duty is to adopt the strategy of peace and follow its logic. This logic dictates a completely different policy. It implies, first, that we should refuse to regard war as inevitable and that our present differences with Soviet Russia should be kept within the limits of good-tempered discussion. It implies that instead of attributing her words and deeds to base motives, even when appearances are against her and the manners of her diplomats are most irritating, we should give her the benefit of the doubt—and when in such matters is there not room for doubt? It implies that we should definitely renounce the idea of exploiting, either by action or by threats, our brief period of superiority in atomic weapons and other forms of military technology. It implies that we should be prepared to spend years, if needs be, in solving the difficulties of the peace settlement and the other disputes which are the normal legacy of war proportionate as they are to the magnitude of the greatest of all wars.

The logic of peace argues for patience. It argues for forbearance and a desire to excel Soviet Russia, not in toughness or in diplomatic repartee or in winning applause from our partisans, but in constructive salesmanship. It implies that we should not wait for Molotov or Vishinsky or Gromyko to be as generous or as high-minded as we should like them to be, meanwhile engaging in the unprofitable game of recrimination, but that we should ourselves exhibit generosity and high-mindedness, and continue to exhibit them for as long as may be necessary to raise the spirit of dispute to a level consistent with the gravity of the issue at stake and the immense responsibility which we carry as one of the principals in the making of history.

The logic of peace argues for a scrupulous avoidance of inflammatory or provocative utterance on the part of public officials, press, and radio, and the spread of clichés in private conversation. It argues that we should scrupulously avoid any international political alinement that confirms the fear of Soviet Russia that the capitalistic countries are leagued against her. It implies that we should strive, not for weeks and months only but for years, to transfer problems of security to the new agencies of collaboration—that is, to the United Nations—and not despair of this organization because in its infancy it displays the weaknesses of infancy and is as yet unable to fulfill the purposes for which it was designed. It is to be expected that during this period of infancy certain great powers, notably Soviet Russia and ourselves, will hesitate for a time to trust their full weight to its as yet infirm foundations, and that international disputes will be settled by a mixture of methods old and new.

The logic of peace in its fundamentals is like the logic of getting on with one's neighbor. It implies seeing the other man's point of view even if you do not adopt it, seeing yourself as he sees you, and seeing him as he sees himself, before finally making up your mind. The most wholesome preliminary exercise for inclining disputants to agreement is to practice the maxim of turn and turn about. Every claim should be first submitted to this test, and, when so tested, conflicting claims tend to be moderated, in tone if not in substance.

The logic of peace implies not only good-tempered and patient negotiation, the gradual forging of methods of international collaboration, but a tolerance of differing ideologies. I do not mean tolerance in the negative sense of indifference, or in the relativistic sense of taking one idea to be as good as another, but in the constructive sense of advocating what one believes to be true by advancing the evidence, by the method of discussion, by listening and comparing, by thinking, distinguishing, and weighing, rather than by sheer affirmation or blind partisanship.

We are the advocates of what we call democracy, and we find ourselves in a world of opposing camps, the other being what is called communism. The logic of peace implies that instead of merely raising our flag and rallying about it amidst cheers and martial music, we ask ourselves what we mean by democracy; not from a pedantic interest in definitions for their own sake, but for clarity and coolness. Instead of hurling verbal smoke bombs at the opposing camp, tolerance asks what they mean. For the simple-mindedness of combat, black and white, for and against, friend and foe, it substitutes the making of more refined distinctions. Tolerance in this sense is a unifying and not a divisive force. It breaks the solidity of total opposition. It looks for common ground and invites agreement. It discloses partial agreements already existing; and partial agreements pave the way to larger agreements.

III

Shall we, then, in relation to that half of the world which we call communism adopt the logic of war or the logic of peace? I am going to accept the logic of peace to the extent of making distinctions. To Americans who oppose it for reasons, and not merely because the name has become a red flag, communism means at least four things, and those who fight it would, if candid, admit that they fight it on quite different grounds. When these grounds are distinguished, those who are allied against communism fall apart.

First, to many communism means simply Soviet Russia—not an idea, or social philosophy, or way of life, but a particular nation. To those who fear Russian expansion, the fact that Russia has become more nationalistic and less Marxian (if this be a fact) affords no comfort. The issue here depends on whether Russia is or is not entering on a career of territorial conquest which will bring a new and more extended Russian Empire into conflict with American possessions, dependencies, interests, and spheres of influence in different parts of this world.

To understand Russia's view of what we call her expansion requires no probing into her dark Slavic soul. In order that one force shall come into collision with another force, both must have arrived at the same place. If our territorial security is threatened by Russia anywhere in the world it is because we are there and not merely because they are there. And to the simple-minded Russian it appears from a glance at the map that the collision, if there is one, is likely to occur nearer where they live than where we live. If we identify our boundaries with China on our west and the Dardanelles on our east, it looks, again in a simple-minded way, as though we had wandered far from home; or as though we have succeeded to the role of those earlier empires which boasted that the sun never set on their dominions.

The zone of Soviet expansion is peripheral and adjacent. It has not leaped across the seas to Canada, Mexico, or the West Indies. It comprises areas from which Russia has in the past been directly attacked, or unoccupied Asiatic areas analogous to our own western Territories, into which her population has moved by peaceful penetration and settlement.

Russia's recent expansion is thus prima facie defensive. It springs primarily, I believe, from a desire to escape forced imprisonment within her icebound ports, and to achieve freedom from the menace of attack. I see no intent of world conquest, no code of militarism, no philosophy of national or racial superiority—no Russian imperialism or pan-Slavism. What I do see is a determination to consummate her own socialist revolution, within her own wide boundaries, with her own vast internal resources, and without interference from abroad; together with a profound suspicion of the inveterate hostility of the capitalistic countries. No fairminded person will, I think, deny that this demand for her own security—this will to achieve it now when she is comparatively strong, together with a tendency to overplay her hand now that she has at last a good hand to play—is a natural outgrowth of her history, both remote and recent; and that this suspicion of the intent of the capitalistic West is well-grounded in Russian memory and experience.

There are three other meanings of communism that identify it not with an aggressive nationalistic force, but with ideas and ideals, which therefore bring it within the duty of constructive tolerance. Force is to be met with force, if needs be; but ideas and ideals with better ideas and ideals.

To the churches, and especially to the Catholic Church, communism means the rejection of Christianity. On this issue the traditional American position is religious tolerance. As regards the specific beliefs of Christianity, Christians will naturally and properly hope for their spread; but this is no part of American public policy. No one, so far as I know, has proposed that the foreign policy of the United States should be directed to the uprooting of Hinduism, Buddhism, Confucianism, Mohammedanism, or paganism, throughout the world. It is a recognized principle of American democracy that religious belief or disbelief should be considered a matter of private choice and left to churches completely separated from the state. This question was, or should have been, settled in the seventeenth and eighteenth centuries, when after the bloody religious wars of earlier times men came to see that sincere piety cannot be spread by inquisition and persecution, but only by radiant infection of its own intrinsic appeal.

There remain the two meanings of communism which most clearly deserve the name—a political doctrine and an economic doctrine

Assuming the most unfavorable interpretation of the evidence, the Communist political system is a dictatorship; a one-party rule, resting on the will of a small and self-perpetuating Politburo, enforced by indoctrination and police control, and exploiting the labor of extensive prison camps. That this system is profoundly un-American I would not for a moment question. If, however, we are to give the Soviet professions the same

credit of sincerity which we claim for our own, this dictatorship, repugnant to us as it is, should be considered a means and not an end, an instrument of revolution believed to be a necessary condition of the realization of a Socialist economy.

The Socialist economy is a debatable economic doctrine, to the effect, namely, that the abundant provision and just distribution of material goods and the maximum of personal security and well-being for all can be achieved better by the public than by the private ownership of capital or the means of production. I say that this doctrine is debatable because its opponents, as well as its proponents, do in fact debate it, and argue for or against it in the light of experience.

IV

To remove these political and economic issues from the area of mere acrimony, to proceed on the principle of constructive tolerance, let us see whether it is not possible to find a meaning of democracy which is broad enough to embrace both the Soviet and the American principles, or to reduce their opposition to a difference of emphasis, or a difference of procedure, or a difference of hypothesis. A democracy, let us say, is a society so organized that it is controlled by the people at large in the interest of the people at large. There are, therefore, two yardsticks by which a democracy may properly be measured, namely, the distribution of control and the distribution of benefits. The first is the strictly political yardstick, according to which a society is deemed democratic in proportion as its government is controlled by a freely formed public opinion. This in turn will depend on the extent to which the people are allowed to express and disseminate their opinions and criticize their government without intimidation or government-inspired indoctrination. The second is the social yardstick according to which a society is deemed democratic in proportion as it is free from special privilege or great inequalities of wealth, education, and leisure. Measured by this second yardstick a society would be undemocratic if it consisted, for example, of peasants exploited by great landowners or workers exploited by industrial magnates.

These two parts of democracy are in principle, and in the long run in practice, interdependent. For the extent to which the people are capable of assuming control of their affairs will depend on the extent of their social advantages; and the extent to which they reap the fruits of organized society will depend on the extent to which they participate in its control. But these two parts of democracy do not always develop simultaneously. One may be behind the other; and in the transition from a nondemocratic to a democratic phase of development either may precede the other.

Soviet Russia began with a social revolution, on the assumption that the power of an exploiting class—the imperial bureaucracy, the landed aristocracy, and the Orthodox Church—had first to be broken before the people could be prepared to exercise political power. Soviet Russia now advocates the same order of procedure in the countries of eastern Europe and the Far East. The United States, on the other hand, in keeping with her different history and tradition, would begin by establishing the political forms which are peculiar to the West—parliamentary government, opposition parties, freedom of discussion, the majority vote by secret ballot. Each laughs derisively at the other's claim to democracy: We, when Russia gives the name of democracy to a system in which there is only one candidate for office or in which the press is strictly censored by the government; Russia, when we give the name of democracy to a system in which workers are dependent on private employers who control their means of livelihood, or in which millions of Negroes and white tenant farmers remain in a condition of poverty and helplessness.

It is possible, I suggest, to view the matter more roundly and to see the dispute not as a conflict between one system and another but between two halves of the same system, which have unhappily, and owing largely to historical causes, been sundered. When democracy is thus roundly viewed our criticism of the Soviet political system will be tempered by an acknowledgment of its social purpose. Undoubtedly the standard of living in Soviet Russia falls far short of that enjoyed in the United States. It is too early, however, to conclude that this comparative failure is the fault of socialism. There are other factors to be taken into account: The legacy of czarism, the exhausting effects of two world wars fought on Russian soil, the divisive and demoralizing effects of civil war, the sacrifices necessitated by a prolonged state of emergency. There has unquestionably been some social gain—some measure of welfare and opportunity of self-development hitherto unknown; and there is unquestionably some hope of better things to come in the near future.

Under given historical conditions it may well be that this gain and this hope would have been impossible without a violent overthrow of the old system and the temporary dictatorial control of the revolutionary party. There is evidence that, as might have been expected, the dictatorship initiated as means to an end has in the minds of a new bureaucracy become an end in itself. But it is too early, far too early, to conclude that this chapter of Soviet political history is the last or that the political liberties provided in the new constitution are only a sham and a pretense.

When democracy is thus roundly viewed criticism is attended with confession. At the same time that we criticize the absence of liberty in Soviet Russia we will admit that we occasionally deny it ourselves. We will recognize that political and civil liberty does not constitute the whole of democracy; the pride which we take in our free political and civil institutions will be accompanied by an acknowledgement of the social and economic inequalities which are as yet unremedied.

This, I think, is the procedure which is dictated by the duty of constructive tolerance—to see democracy whole in order that the opposed champions of its parts may if possible become the allied champions of its whole. The integral democracy to which both parties profess allegiance may then be something more than a name. We may then cease to boast of the victories of the one part over the other part—of our one-sidedness over their one-sidedness; but only of victories of both over the common enemy, antidemocracy, the oppression of the many by the few, of the unfortunate by the fortunate, the backwardness and misery of mankind, the ignorance and helplessness which still frustrate the race of men in their endeavor to achieve the harmonious happiness of all its members. This is the old enemy, recently called nazism, but now widely forgotten amidst the new enmities which divide those who were once friends in action, and are still allies, I believe, in principle—in their long-range design for the good of man.

Insofar as we are imbued with the spirit of constructive tolerance, we shall consider our own institutions as on trial and strive to prove them, to ourselves and to the world, by our practices and by their fruits. We shall best defeat communism, if it should be defeated, by showing that we have something so much better that communism loses its sales appeal.

I submit that the greatest threat of economic communism lies in the possibility of depression and unemployment—in the possibility of a profound and widespread privation and insecurity which would lead men in their bitterness and despair to forsake capitalism for some drastic remedy. And I submit that a catastrophic failure of capitalism would threaten not only our economic institutions but our political institutions as well.

V

How is political communism to be avoided both at home and abroad? By securing and extending our liberties and by proving to the world that they can be reconciled with order, public spirit, and a sense of civic responsibility. By perfecting our political system and by proving to the world that it is capable of guaranteeing the good of all against the selfish pressures of personal ambition or corporate wealth.

How is economic communism to be avoided? By correcting the monopolistic abuses of our present system and preventing its recurrent periods of collapse. By proving to the world that capitalism can do the economic job, achieve stability, provide steady employment, create opportunity, and in general increase and equalize the welfare of the people.

Here is the real fighting front. Here is the real test of our institutions. And this is as we should want it to be, for we want the best political and economic institutions: not those which possess the authority of dogma, or are merely endeared to us by old associations, or to some of us because they give us differential advantages; but those which in the light of criticism and experiment will most perfectly fulfill the social and humane purposes for the sake of which such institutions exist.

If what I have said in general has any validity it should throw light on the specific questions of American foreign policy.

We have our Truman doctrine and our Marshall plan. Unfortunately their wisdom must be debated at the same time that their meaning remains doubtful. Meanwhile the situation which provoked the doctrine and the plan alters from day to day, and the private citizen remote from the scene must necessarily either question what it is too late to prevent, or anticipate what he cannot predict, or confine himself to applying broad principles.

What, then, is the Truman doctrine, as formulated by its author? Its broad moral appeal is based on the assumption that it means the relief of human want from misery. Its broad political appeal is based on the assumption that it means helping free peoples to maintain their free institutions, that is, representative government, free elections, guaranties of individual liberty, freedom of speech and religion, and freedom from political oppression.

But the time and place and implementation of the doctrine implied other meanings—some implicit and some explicit. It seems probable that it had something to do with oil interests in the Near East. American foreign policy has never at any time during the last 50 years or at any place on the earth's surface been wholly free from the smell of oil. Not that there is any harm in coveting oil, but only that if that be a part of the policy it is better to say so—better not to conceal it under high-sounding statements of principle—better for the world, better for the American soul, and perhaps in the long run, even better for oil.

The substance of the Truman doctrine is further confused by its including military and not merely economic aid by its support of admittedly reactionary governments in Greece and Turkey, and by its timing to coincide with the withdrawal of Great Britain's military forces from her traditional lines of empire. Taking all this into account the doctrine begins to look less like a declaration of humane and democratic principles, and more like an announcement of irreconcilable hostility to Soviet Russia and her friends and to communism and its adherents. It is not surprising that in the other

camp, where there is already a disposition to suspect our motives, the doctrine should be interpreted as wolfish power politics clothed in sheepish professions of disinterestedness. It is not surprising that at home the doctrine should be welcomed by Russo-probes and Red-baiters of every description, religious, political, and economic, and used to justify their anger and recklessness.

The Truman doctrine being so interpreted at home and abroad we are brought face to face with the issue of war and peace. There are certain sobering questions which demand an answer before we allow ourselves to be committed further by our deeds or by our emotions.

VI

Are we for democracy, or are we against Soviet Russia, and prepared to defend anybody against her? Are we for democracy, including its social as well as its political implications, or are we against communism, and prepared to defend anything against it? It is our intention at least to contain Russia and communism, no matter for whom or for what?

Do we identify Russian-oriented or Communist regimes in general with "totalitarian regimes imposed upon free peoples," and under that formula do we consider them, one and all, as "undermining the foundations of international peace and hence the security of the United States?" In other words, is the Truman doctrine the opening gun in a war which we are prepared to wage all over the world? Are we staking our national existence, pride, and prestige on victory in such a war, and committing ourselves to all the implications of such a war?

If we consider communism anywhere in the world as a threat to our security, are we prepared to side with Franco and Perón, who apparently hold the same view? Are we otherwise prepared to ally ourselves with any political force anywhere in the world, which for any reason has announced its hostility to communism? Are we announcing a new anti-Commintern pact, similar to that adopted by Germany, Italy, Spain, and Japan in 1939, and accepting the strange bedfellows which such a political alinement would make?

If, as lies within the bounds of possibility, Italy and France should become Communist regimes, are we prepared to advance the necessary billions of dollars and the necessary personnel to defeat them by backing a counterregime? This is unquestionably what the opponents of communism in those countries take to be the logical implication of our proposed action in Greece and Turkey. Are we prepared through our inveterate hostility to communism to oppose popular and revolutionary movements throughout the world merely because they are instigated or led by Communists, and even though this alines us with the oppressor? Can we for reasons either of morality or of prudence afford thus to disassociate ourselves from the prevailing social and political currents of today and tomorrow?

Are we taking over and underwriting the imperialisms of the nineteenth century in defiance of the change in the balance of power through the simultaneous rise of Soviet Russia and decline of the British, French, and Dutch Empires, and regardless of the new economic and political forces which have come into play throughout the world?

Does the Truman doctrine mean that we are committed in advance to a non-Communist Germany—that we should regard a Communist Germany as a threat to our security, and that we are therefore to prevent such a political development of Germany by force? If that is what we mean, what German policy do we expect from Soviet Russia? Does it mean that we are to purge western Germany of Communists—decommunize it rather than denazify it? Are we embarking on a struggle with Soviet Russia in which each shall endeavor to attract Germany to its half of a divided world? Do we propose to dispossess Soviet Russia of eastern Germany; or do we mean to divide Germany itself? How, if we harbor any of these intentions, do we expect to negotiate a peaceful settlement of the German problem—or, in fact, of any European problem?

The Marshall plan had the great merit of confining itself to economic matters; and it did for a time provide a fresh and hopeful approach to international problems. Whether the regrettable unwillingness of Russia and Russian-oriented states to participate in the Marshall plan was due to the Truman Doctrine is not known. But I cannot see how anyone could claim that the doctrine contributed to the plan. A seeming declaration of hostility to Russia and all her works was not calculated to create an atmosphere favorable to pan-European solidarity. It was awkward, to say the least, for an America which had seemingly taken sides against communism to undertake the support of an economic agreement which should embrace communism.

The reconstruction of the European economy is a staggering problem. To put the European economy on its feet, and at the same time repair the losses of the war, guarantee the safety of neighboring States against a resurgence of German militarism, reconcile the methods of capitalism and socialism, and unite the industrial West with the agricultural East, will require every art of statecraft and expertness. It cannot be done by any simple formula, or in a day; perhaps for many years to come it cannot be done at all. One thing, however, is clear, namely, that it cannot be done with the world at the same time preparing mentally or physically, for another war. It cannot be done with the world divided into two mutually distrustful political and ideological camps.

Hence we are brought back again to the urgent and the crucial problem of recreating and preserving friendly relations between the United States and Soviet Russsia. To this end, and since I do not believe that the threat to our security through the spread of communism is either grave or immediate, I would reject the logic of war and follow the logic of peace. I would continue to strive by diplomatic means to secure the acceptance of that policy in Germany and elsewhere throughout the world which we believe to be most consistent with the future peace and prosperity of the world. But I would separate this diplomatic effort altogether from any national, imperial, or ideological offensive which is bound to alienate and harden the attitude of those with whom we are attempting to come to agreement.

In short, I would define the present problem as the problem of living with communism, rather than the problem of destroying communism. I would place a modus vivendi with Soviet Russia first in the order of business. I should be prepared to offer Soviet Russia a loan and a 10-year nonaggression pact. I would do all possible to create with Soviet Russia a relation of collaboration in the cause of peace and in the hope of gradually strengthening the United Nations. As respects the famous or infamous veto, I would bear in mind the fact that we invented it, are still officially committed to it and, for all we know to the contrary, would ourselves use it as often as the majority in the Security Council went against what we thought to be our interests. The present use of the veto by Soviet Russia is a symptom and not a cause—symptomatic of a deep cleavage which would be fatal to the peace of the world whatever its constitutional machinery. The veto will be abandoned when and only when it seems relatively unimportant to us and to Soviet Russia.

I would couple a pacific and conciliatory policy with a ringing declaration of faith which would embrace not only the secular values of policy, law, and economics, but the spiritual values which are a part of our Christian heritage; a declaration which would embrace not only political democracy, but social democracy as well; which would embrace not only our firm belief in the civil liberties, and in the right of peoples to choose their own form of government by free elections and open discussion, but also (and with equal emphasis) our sympathy with the submerged, exploited, and relatively unprivileged classes of men throughout the world, and hence with the purposes, but not the methods, of the social revolution.

If we adopt the logic of peace, we need not in the least abate either the loftiness of our ideals or the hope of their ultimate spread throughout the world. On the contrary, the method of constructive tolerance gives us greater freedom in the profession of our own creed because it is not accompanied by threats. For the ultimate realization of our ideals we would then count not upon the use of military or economic force against the proponents of other ideals. We would attempt to create throughout the world an atmosphere of peaceful rivalry for the good of mankind. We would be for and not against. We would prove our ideals by realizing them at home, and by persuading the people of the world not by pressures or mere precepts but by experience and example that our way of life is the good way—good for us and good for all.

The Coast Guard

EXTENSION OF REMARKS

OF

HON. SCHUYLER OTIS BLAND

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, December 15, 1947

Mr. BLAND. Mr. Speaker, under leave to extend my remarks, I include herein an article from the December 1947 issue of the Coast Guard Magazine. From my knowledge of the present-day Coast Guard and of its long and glorious history, I desire to say, as urgently and emphatically as I can, that the Coast Guard is one of the most useful, most productive, and most indispensable of our Federal services. In wartime it becomes a part of and serves with the Navy. In peacetime it performs many duties in connection with safety at sea and Federal maritime law enforcement. It is indeed the active peacetime service. It pays its own way.

I fully agree with their late Commandant who, for many years and until his death, was my personal friend. Admiral Waesche said that there is perhaps no service with such a wide range of duties as the Coast Guard. He said:

> The men of the Coast Guard are called upon to guard the sea lanes for convoys, to man the landing craft that spearhead the invasions, to carry on their traditional, war-increased rescue work and other regular duties.
>
> Their courage and seamanship reflect great credit on themselves and on the naval profession.

After many years of service with the Coast Guard under the chairmanship of the Committee on Merchant Marine and

Fisheries, which has jurisdiction of legislation for the Coast Guard, I testify to these words as unimpeachable.

Seven years ago, in one of the most rigorous winters on record, the Coast Guard began manning ocean weather-observation stations in the North Atlantic. Weather reports received in the United States at that time were of considerable value in furnishing accurate aerological reports to transport aircraft and to the increasing numbers of military planes flying the oceans. Then, when we got into the war in Europe, the ocean weather-observation stations were continued, even increased in number, to provide the so-important weather forecasts for our fighting forces in Europe as well as to furnish aerological reports for trans-Atlantic aircraft.

After VE-day we operated 13 of the 22 North Atlantic weather stations to assure the safe redeployment of the Air Force in passage across the Atlantic en route to the Pacific theater. Weather stations were also maintained in the Pacific for this purpose.

Losses of the Air Force in thousands of trans-oceanic flights were very small.

The article mentioned above and entitled "Ocean Rescues Not New for Coast Guard," follows:

NATION BEGINS TO REALIZE THAT RESCUES OF IMPERILED MARINERS ARE ROUTINE PART OF COAST GUARD DUTIES

The citizens of America are just beginning to recover their breath after watching, via newspapers and radio, the great sea saga of 69 persons at the mercy of a mid-Atlantic storm that threatened to engulf their stranded plane, the *Bermuda Sky Queen*. Few things captured the fancy and imagination of our people as did the spectacle of the Coast Guard cutter *Bibb* plucking those 69 persons from the grasp of death. All America clung to its radio receiving sets and snatched at late editions of newspapers to watch the progress of *Bibb* seamen as they rescued boatloads and raftloads of endangered victims until all were safe aboard the decks of the big white cutter.

What too many persons will not recollect is that the *Bibb* has been out in the Atlantic for months and years performing typical Coast Guard rescue, assistance, and patrol work. Not many persons will stop to realize that the *Bibb* and all other Coast Guard vessels maintain a daily vigil that is rugged, tiresome, and nerve-wracking. The work of these vessels is never-ending, never-ceasing. Too often the work is thankless and unappreciated. Too often the Coast Guard has virtually to beg for funds with which to maintain its ships, its planes, and its personnel.

Coast Guard cutters assigned to ocean weather stations usually remain at sea for a period of approximately 1 month—included in this figure is 10 to 12 days' travel time, depending, of course, on the location of the station. In the course of future operations it is the Coast Guard's intention to rotate all major cutters on weather station duty—basing them in Boston, New York, and Norfolk.

Life aboard these Coast Guard weather ships patroling their stormy squares in the Atlantic is not only lonely but also trying, both physically and mentally. However, the realization that theirs is among the most difficult of all assignments, as well as of vital necessity to ocean flying, has developed an esprit de corps among these men that is seldom matched.

Rarely in the North Atlantic do stretches of good weather appear—for the most part the days are overcast and stormy, with high seas running. The acute pitching and rolling of the cutter occasionally makes sleeping difficult—the sleeper being tossed about in his bunk, awakening between catnaps stiff and sore.

The food is excellent. Steaks, chickens, French-fried potatoes, ice cream, etc., are regular items on the crew's menu—plus a never-ending stream of coffee from coffeepots that never cease to percolate. Recreation while on station is rather limited, consisting chiefly of movies (where elements are favorable), short-wave broadcasts, daily news bulletins, general reading, and 101 different types of card games.

As the day draws near on which the weather ship is to be relieved officers and enlisted men have but one thought in common, and that is to be home again. During a portion of the time that the cutter is in port certain members of the crew depart on annual leave. The remaining members effect necessary repairs to the cutter, take aboard commissary stores, as well as supplies for the other departments, preparatory to the ship's next patrol.

After the *Bibb's* recent epic rescue performance many Americans confessed that they had not known of the Coast Guard's important peacetime duties. The lack of knowledge about the Coast Guard was almost staggering. Even the United Press in reporting the story of the *Bibb's* performance described the *Bibb* as a weather ship which, having no means of propulsion, had to be towed to its station at sea. A radio commentator also described the *Bibb* in a manner that depicted it as a sort of helpless barge having no motive power.

On the whole, however, Coast Guardsmen were gratified that the people of the Nation, for once recognized the work of the Coast Guard. Coast Guardsmen knew that it was not a new experience for the *Bibb* to perform dramatic rescue. They knew there was nothing new about any Coast Guard vessel rescuing distressed mariners and endangered passengers. It was old "stuff" for the Coast Guard.

For instance, Coast Guardsmen knew that the *Bibb* had performed rescues that were equally as daring and spectacular as the *Bermuda Sky Queen* job. Perhaps this is a good time for this magazine to tell of a wartime rescue job that has never been brought to the attention of the average citizen. Wartime security threw a cloak of secrecy around the rescue.

It was on February 7, 1943, that the *Bibb* (then commanded by Capt. Roy L. Raney) went to the aid of victims of a U-boat attack.

The rescued men—more than 200 of them—were from a torpedoed United States transport which had been known in peacetime as the liner *Henry R. Mallory*. A German torpedo rammed into the *Mallory's* side one stormy, snow-whipped night, and it was not until many hours later that the surviving crewmen and passengers were picked up.

The transport was torpedoed in the middle of the night without warning. Survivors said the crew and passengers had little time after the roar of the explosion to take to life rafts before their vessel went under. It was 5 hours before the survivors saw the "most beautiful ship in the world" bearing in their direction. The question was, "Will she be able to pick us up?"

From that moment it was 7 perilous hours—7 hours in which the *Bibb* fought huge, heaving seas, frothing, wind-driven spray, and enemy subs—before the rescue was accomplished.

U-BOATS ON THE PROWL

Under severe weather conditions, any seaman knows that only half of a rescue is accomplished when a rescue ship approaches a stricken vessel, or its survivors, at sea. There have been many occasions when rescue vessels have been utterly helpless—unable because of high seas, to lend assistance. To come too close to a tossing lifeboat at such a time is to risk smashing it. Many a seaman has died within speaking distance of the ship which came to his assistance.

"But the *Bibb's* skipper, Capt. Roy L. Raney, put that cutter alongside of our boat in that heavy sea just like a cab driver parks a cab," said the *Mallory's* cook, George K. Dunningham, of Winthrop, Mass.

The *Bibb* had been protecting a fleet of ships on the night the *Mallory* was sunk. Early next day she sighted flares fired by the survivors. As the cutter neared the scene, lifeboats and rafts seemed to be all around the horizon. It was evident to the Coast Guardsmen that the U-boat wolf pack had had a good night's hunting. Even as they reached the scene they saw half-frozen survivors fall off rafts and slip into the sea. Men could be seen dying and falling, with safety so near. On smaller rafts were corpses. Cook Dunningham's lifeboat containing 50 shocked and shivering men, was the first one reached.

"They had the lines overside and ready before they got to us," Dunningham said. "The waves were so high that I was able to step right onto the deck of the cutter when a wave lifted our lifeboat. As soon as the 50-odd of us got aboard they gave us dry clothing, food, hot coffee, and cigarettes, and put us to bed in their own bunks. Many of us needed hospital attention. They were swell.

"Then the cutter started to cruise in search of more survivors. We were the last boat to leave the transport."

AND THEN, THE RESCUE

Half an hour later the *Bibb* came upon a number of rafts all grouped together. Some men were overside in the water, clinging to the rafts. Some were too weak to grasp the lines thrown to them. Knowing there was no time to lose, Coast Guardsmen aboard the *Bibb* promptly dived and swam to the men, tied lines on them and saw them hauled safely aboard.

During the 7 hours of rescue work, the *Bibb's* crew were at their battle stations, manning the guns and fire control stations at all times. For the *Bibb* herself could have been easy prey for U-boats. At times the *Bibb* was forced to leave rescue to hunt for subs, dropping patterns of depth charges. Four times, the escort commander of the unit to which the *Bibb* belonged messaged the cutter to break off rescue operations but each time Captain Raney declined and continued the job. The *Bibb* had saved 202 of the *Mallory's* men when she headed away from the scene of tragedy. And 2 hours later the crew of another ship had reason to be thankful that the *Bibb* had been in the vicinity. Thirty-five men from another torpedoed ship, a smaller United Nations merchantman, were picked up in a lifeboat.

It was 7 days before the *Bibb*, thumping through wintry seas with her own crew's and officer's quarters jammed with survivors, reached a United Nations port where the rescued men could be put ashore for the attention they needed.

Rescue at sea? Old stuff for the Coast Guard but thank God the American people are at last awakening to an appreciation of this phase of Coast Guard work.

Incidentally, Mr. Speaker, I might say that the Coast Guard magazine is not published by the United States Coast Guard—it is published by a private concern which is interested in this fine service.

Mr. Speaker, I wish to make some comment on the postwar ocean weather observation station program since that program came up for quite a lot of discussion in the last session.

The present postwar ocean weather program began in the early fall of last year, after demobilization of wartime personnel forced the Coast Guard to abandon all but one ocean weather station.

There is a great demand from commercial aviation in this country to continue ocean weather stations on an increased scale. I am informed that between two and three thousand passengers fly across the North Atlantic each week, and we have every reason to expect that more and more people will fly across the North Atlantic as world conditions improve.

Most trans-Atlantic air travelers are United States citizens, and ocean weather stations provide protection for our own people.

Today a much curtailed weather-station program provides essential weather information for transoceanic flights of commercial and military planes and for ships.

Ten nations now sponsor the weather-station program, including the United States. They are the United States, the United Kingdom, Canada, Ireland, France, Belgium, the Netherlands, Norway, Sweden, and Portugal. Their agreement was drawn up through PICAO, or Provisional International Civil Aviation Organization, which has since acquired permanent status.

In 1944 the Chicago Convention on International Civil Aviation was drafted, and later ratified by the United States Senate. It provided that governments interested in maintaining radio aids to aerial navigation and other ocean facilities might enter into joint arrangements to provide these facilities. The present international agreement on North Atlantic Ocean weather stations is such an arrangement, and this agreement was accepted for the United States by the President in September this year.

Terms of this agreement provide that the United States would man 7 stations with our own facilities and one station jointly with Canada—out of a total of 13 North Atlantic Ocean weather stations. The United States is now operating two of its seven and one-half stations, with the United States Coast Guard doing the job.

The Coast Guard Cutter *Bibb* has shown that rescues of plane passengers and crew can be made at sea. Weather stations, therefore, will assume increased importance in the future as commercial air travel increases across the oceans. The fine spirit of the men who do the work of the Coast Guard is largely due to the training that instills in them the esprit de corps and the great traditions of this service.

The enlisted men are truly a salty group, and learn their specialities at Coast Guard schools, by correspondence courses while serving aboard ship, and through experience after their basic training.

At New London, Conn., is the Coast Guard Academy where officers for this Service are trained. Entrance into this Academy is strictly on a merit basis through competitive examinations held each year throughout the United States.

Lest someone gain the impression, however, that manning ocean weather observation stations is the only duty of the Coast Guard, I would like to list some of the other important jobs that this small Service is constantly performing. The Coast Guard maintains some 37,000 United States aids to navigation, operates loran stations, performs essentially all of the functions of the former Bureau of Marine Inspection and Navigation, relating to the inspection and certification of vessels and their equipment, the enforcement of disciplinary controls over merchant marine personnel and the licensing and certification of officers, pilots and seamen. The Coast Guard also operates the International Ice Patrol each year when large icebergs menace shipping in the North Atlantic steamer lanes. The Coast Guard is particularly instrumental in enforcing the regulations for motorboats—and in patrolling marine regattas. The Oil Pollution Act, the Load Line Act and the navigation laws are also a part of the law enforcement job of the Coast Guard. There are also a number of Conservation laws such as the Northern Pacific Halibut Act of 1932, the Whaling Act, the Pelagic Sealing Act and the Sponge Fishing Act that the Coast Guard enforces.

There are many more duties that this United States Coast Guard has—it is always busy, working in the best interests of this great Nation.

Its motto "Semper Paratus" typifies and describes its service in peace and in war. Its service is performed wherever men need help, whether in war or peace, in storm on the sea or drought on the land, where floods devastate or drought exhausts, whatever the occasion for the call the Coast Guard answers and it is "Always Ready."

What Veterans Are Thinking

EXTENSION OF REMARKS
OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, December 15, 1947

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include the following statement and poll, which was prepared by the Army Times, showing how the veteran feels concerning a number of problems both national and international. It follows:

WHAT VETERANS ARE THINKING

To obtain an accurate cross section of current thinking among veterans of World War II on national and international problems, Army Times recently sent questionnaires to a large percentage of the subscribers of its veterans edition.

General conclusions from the poll, based on answers to 14 key questions, together with the veterans' reasons for each answer, were published in the November 29, 1947, issue of Army Times vet-letter. Additional details are included in the report.

Veterans were asked not only to answer 12 of the questions "Yes" or "No," but to give their reasons. The two additional questions asked them to specify what they considered "the biggest vet problem today" and what they favored "as an immediate program."

Analysis of the statistics and the individual comments (which were voluminous) shows:

That housing and the high cost-of-living are the outstanding problems of veterans; that there is a sizable amount of bitterness about domestic problems, but not as much as might be expected; that blame for the housing shortage and high prices is not firmly fixed; the desire is to get something done about them, rather than to worry about causes, or to place blame.

There is a general awareness among the veterans of the need to vote for their friends and against their enemies; and an overwhelming demand for access to the voting records of Members of Congress.

There is overwhelming support for American institutions; an overwhelming feeling in favor of American preparedness.

The veterans are less emphatic in expressing their feelings about foreign relations. Such expressions of opinion are definitely subordinated to the problems of finding homes and making ends meet.

There is evidence that not enough clear-cut and understandable publicity has been given to the Marshall plan, particularly in its Asiatic aspects but, generally, the veterans favor the Marshall plan in its relation to Europe.

There is a tendency on the part of the more conservative—the sizable minority opposed to price control—to favor a Federal bonus in place of the GI bill of rights. And there is a definite division along age lines on the bonus question; older veterans unable to take advantage of the GI bill favoring it, while younger veterans who are benefiting, realize that its tangible benefits are more valuable than cash.

There is almost unanimous feeling that veteran votes should be cast for the man, rather than for the party; and this is reflected even in replies from the solid South.

The poll developed a sizable minority of completely selfish answers but a very comfortable majority of unselfish and objective type answers. There is much evidence that the average veteran devoted intelligent thought to his answers and listed intelligent and well-thought-out reasons for those answers.

More than 90 percent indicated a complete lack of partisan prejudice and favor political action by veterans for or against candidates for public office, irrespective of political party. Thus, the poll indicates that a great majority of the young war veterans are willing to vote independently when such action appears desirable from the standpoint of their interests and beliefs.

Eighty-seven percent of the veterans answering the poll favor enactment of a universal military training law; 70 percent favor the Marshall plan for economic aid to Europe, but only 52 percent favor extending the plan to other parts of the world.

The greatest unanimity is shown by the answers to the question, "Do you want the voting records of all Members of Congress on all major issues?"—with 97 percent answering "Yes."

On cost-of-living questions, 92 percent of the veterans favor continuation of Federal rent controls beyond February 29, 1948; 90 percent favor cost-of-living increases in GI subsistence allowances, compensation, and pensions; 81 percent favor the use of Federal funds for large-scale veteran-housing projects; 84 percent favor direct Federal home loans to veterans in lieu of the present loan guaranties under the GI bill of rights; only 66 percent favor restoration of Federal price controls on food and clothing.

Only 50 percent of the veterans answered "Yes" to the question, "Do you favor substituting a Federal cash bonus for the GI bill?"—only 3 percent of replies to the biggest-problem question listed a Federal bonus

as the most important problem facing veterans; only 11 percent of the immediate program proposals favored political action by veterans to get Congress to enact a bonus law.

However, 86 percent would like the GI bill revised to include substitute benefits for veterans who are not able to use the present educational and loan benefits.

Fifty-nine percent of the total replies on biggest vet problem today listed housing; 21 percent listed the high cost of living; 4 percent listed employment; 3 percent listed the bonus; 2 percent insufficient subsistence allowances; 2 percent political affairs; 9 percent miscellaneous.

Statistical results of opinion poll

Question asked	Yes	No
Do you favor revision of the GI bill to include substitute provisions for those not able to use present educational and loan benefits?	*Percent* 86.4	*Percent* 13.6
Do you favor restoring Federal price controls on food, clothing, etc.?	66.1	33.9
Do you favor continuing Federal rent controls beyond Feb. 29, 1948?	91.6	8.4
Do you favor Federal funds for large-scale veteran housing projects?	80.8	19.2
Do you favor direct Federal home loans to veterans in place of loan guarantees?	84.0	16.0
Do you favor cost-of-living increases in GI allowances, pensions, etc.?	90.0	10.0
Do you favor substituting a Federal cash bonus for the GI bill?	50.1	49.9
Do you favor the proposed universal military-training program?	86.7	13.3
Do you favor the Marshall plan for aid to European countries?	70.3	29.7
Would you favor extending Marshall plan to other parts of the world?	52.2	47.8
Do you want the voting records of all Members of Congress on all major issues?	97.4	2.6
Do you favor political action for or against candidates, irrespective of which political party they represent?	93.8	6.2

	Percentage of all replies to this questionnaire
What do you consider the biggest vet problem today?	
Housing	59
Living cost and related answers such as inflation, price control, insufficient wages, etc.	21
Employment	4
Bonus	3
Political affairs	2
Insufficient size of subsistence allowances	2
Miscellaneous answers including: Rehabilitation and readjustment, loans, GI bill revision, unity of action among veterans, peace, insurance, antivet feeling, need for VA improvements, high taxes, and good government	9
What do you favor as an immediate program?	
Housing action	21
Political action at the polls	13
Bonus action	11
Organization of veterans for political action	9
Action on high cost-of-living	7
Increase subsistence allowances	5
Influence Congress (by lobbying, etc.)	3
Information service on attitude of specific office holders, etc.	3
Liberalize GI bill	3
Universal military training and national defense	3
Increase pensions and compensation	2
Employment programs for veterans	2
Loans	2
Price control	2
Anything to help the veteran	1
Rent control	1
Marshall plan action	1
Anti-Communist action	1
Improve the Veterans' Administration	1
Peace	1
Veteran organization cooperation or unity	1
Foreign policy	1
Raise subsistence allowance ceilings	1
Tax relief for veterans	(1)
More educational benefits	(1)
Americanism	(1)
Better hospitalization for veterans	(1)
Readjustment	(1)
Independent veteran party	(1)
Against red tape	(1)
Miscellaneous including: Civil service reform, better government, better treatment of enlisted men, economy in government, improvements in insurance set-up, a vet RFC, no immigration, etc.	(1)

[1] Less than 1 percent each.

How Far Is It to Water?

EXTENSION OF REMARKS
OF
HON. ERNEST W. McFARLAND
OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Monday, December 15 (legislative day of Thursday, December 4), 1947

Mr. McFARLAND. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD, an address entitled "How Far Is It to Water?" delivered by the Secretary of Agriculture, Hon. Clinton P. Anderson, at a meeting of the National Reclamation Association in Phoenix, Ariz., on October 30, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

When I received your invitation to take part in this meeting I was pleased both personally and officially. As a westerner, I have a deep personal interest in the development of our great western resources. As Secretary of Agriculture, I am proud to represent a Government Department which has made, is making, and will continue to make notable contributions to sound reclamation.

I want to review what the Department of Agriculture has done in the field of reclamation and to suggest what the Department can contribute in the future.

However, in speaking of Government efforts, I want to make it plain that neither the Department of Agriculture nor any other agency has or should have a vested interest in reclamation, that the sole function of Government in this field is to serve as an arm of the people, that people—not Government agencies—made the "desert entries" that were early pioneer trails to the whole reclamation effort.

Thus, in my thinking, the starting point in reclamation is the old question that was always uppermost in the minds of the pioneers: "How far is it to water?"

Picture in your minds the old prairie schooners on the "sea of grass." As they made their way wearily on toward the West they found day by day that the distance between watering places grew longer. And as they came to the great expanse that their maps called the "Great American Desert" they began to ask anyone they saw, "How far is it to water?" They had to know. Their lives depended on it. The bleached white bones along the trail reminded them that others had miscalculated.

To most of the pioneers, "How far is it to water?" was the neighborly way of asking how far to the next camp site. It was a traveling question, and the answer was timetable information.

But there were those, also, who saw possibilities in the land and wondered how far down it was to water. Those who tried to dig wells found that the answer for them, was about the same as for those who were traveling on. It was about 3 miles to water—3 miles down or 3 miles to the nearest creek. It was a "fur piece" to water, whichever way you went.

To a few of the pioneers, distance was merely a challenge. They had faith in the land. They believed they could make the desert bloom. They knew they could if they could find the water. So there were those who made their desert entries and started to see if they could put to beneficial use the necessary water.

The Government began to take an interest in the special problems of the dry regions as far back as 1877 when the Desert Land Act became law. But while the early laws required settlers to irrigate, there was no provision for proper irrigation. In view of the shortage of water and the capital required for good irrigation, it was not surprising that much of the land went into the hands of large interests, that settlement was slow, and that agriculture was slow to prosper. It was not until 1902 that the Government began, under the Reclamation Act, directly to promote irrigation.

However, from the days when pioneers first dreamed of making the desert bloom, people have been asking, "How far is it to water?" and have been seeking the answer in mountain canyons above the desert valleys. Farmers and engineers of the irrigation companies and of the Government have visualized systems of aqueducts, canals, tunnels, and siphons, but, whether their vision was vast or narrow, they knew they had to center their plans around some kind of a dam. From the days of Elwood Mead on down to the present engineers have sought the best sites for dams. They had to find spots where the streams were narrow enough for damming to be practical, and they had to have space above the dam for the impounded water to form a lake. Those were basic requirements for the early projects, such as Elephant Butte in my own State and for all the rest, including the gigantic Grand Coulee, Bonneville, Shasta, Hoover, and Roosevelt.

Do you wonder what I'm getting at? I think you know.

If the engineers have done their job well—and I'm sure they have—they have chosen the best location for every dam that is now in existence. Nature has provided a limited number of good sites. These sites are the end product of the ages—milleniums of geologic upheaval, the bulldozing of glaciers, and the stonecutting action of fast-running water. We have used the cream of Nature's crop. And if they are ruined by our own neglect, our country will have lost some of its most precious natural wealth. The cost would defy our imagination. What is the price of an irrigation system which makes possible the production of food our people need? What is the price of a power development and the network of industry based on that power? What is the price of a Grand Coulee site?

Through neglect we have already ruined the best sites on some of our smaller streams. Each of you could name several dams that have been ruined or impaired by silt. All of us know there isn't any site which is immune to this danger. It is up to all of us to protect these irreplaceable resources.

This brings me to the first of the two kinds of work which the Department of Agriculture carries on in the field of reclamation.

The first is action above the dam—on all the watershed lands. The second is action below the dam.

Above the dam our responsibility begins where the run-off starts—up in the forests. We have a special, direct responsibility, of course, in the forests where we serve as trustees—the national forests, which make up more than 137,000,000 acres in these Western States and which produce a great deal of our irrigation water. You are familiar, I am sure, with our efforts to protect and improve the timber, the range, and the water resources in the national forests. We seek to improve timber stands, to protect them against fire, insects, and disease, to manage the harvesting so as to meet market requirements and also to provide for future harvests. On the range lands of the national forests we scientifically regulate grazing so as to use without overusing the annual growth of forage. Our timber and range management would automatically contribute to good watershed management. But we do not stop with that. We make the concept of watershed management a basic part of our national-forest administration. In other words, we are directly concerned with regu-

lating streamflow, reducing the danger of floods and soil erosion, and protecting the sources of water for irrigation, power, navigation, and domestic use. We are just as directly concerned with that as with timber and range conservation.

I might add that the Forest Service has developed proposals for intensifying the Nation's forest-conservation effort on the public lands and on private lands in cooperation with States and individuals. The program would include important additional aids to private forest land owners and public regulations to prevent destruction of forests and protect watersheds.

When the pioneers of the dry regions of the West asked, "How far is it to water?" they were not thinking of the headwaters of the streams, but today you and I must think about the headwaters. We dare not forget that if we are to guarantee the long life and continued usefulness of an irrigated farm in the Salt River Valley we must start with the conservation of a forest hundreds of miles away, in a roof area that cradles the headwaters of the stream.

If anyone doubts this, let him take note of what has happeyned in Germany since the beginning of the war. You know, the Germans were good housekeepers and kept their hills forested. They sacrificed the forests only slightly to met their war needs. But I am informed that when the Russians came into eastern Germany, they promoted the rapid cutting of timber from the hilltops, gave a bonus for rapid timbering, with the result that the hills are bare and the streams which were always clear and clean are now running red with silt. I cannot vouch for the situation in eastern Germany, because the Russian Government didn't invite me to go visiting on my trip to Berlin last July, but American observers in western Germany and France have told me that those reports on eastern Germany are true.

What I'm saying is that, because you are interested in reclamation, you are directly concerned with forest conservation.

And just as surely, because you are interested in reclamation, you are concerned with the conservation not only of forests, but of farm and range land above the dams.

Through the agricultural conservation program and the soil-conservation service, the Department of Agriculture cooperates directly with farmers and ranchers as individuals and with the soil-conservation distracts they set up. The whole public, working through the Department, helps to pay the cost of farm and range practices which prevent erosion and save the soil for future generations. This is a gigantic program, and virtually every farmer and rancher in the West cooperates in it. One small example is the fact that in the 1945 program ranchers carried out good grazing land management practices on 81,000,000 acres.

The Department also provides technical assistance to the operators of land in Soil Conservation districts. There are 900 districts in the 17 western States and they embrace more than 500,000,000 acres. Watershed protection is, of course, a big part of the work of the districts. In these districts, the land operators set up an over-all conservation plan and keep their individual plans geared to it. Where those individual plans cannot meet the needs of the whole district, they may plan and carry out cooperative projects such as the construction of small dams or waterways. In some cases, the district plans are broadened to serve the needs of people far beyond the district. For example, river basin flood control plans made by the Department and the Army engineers under the flood control acts often call for land treatment or structures especially designed to control run-off, to prevent the sediment of streams down the valley, and to help prevent loss of life and property from floods in the lands below. In such projects as those, the public may foot the big end of the bill.

Of course, our special flood control work is relatively slight, and although much more of this is needed, we will make our effort to take care of the flood and silt problem as far as it is our responsibility through programs of forest, farm and range conservation. And believe me when I say that we will do this work in the friendliest spirit of cooperation with the Bureau of Reclamation and the corps of engineers who have responsibilities along with us and sometimes greater than ours in the fields of flood and silt control.

Now, in a moment, I want to take you to the dam and on below to see the work we are doing there. But there is one more item above the dam. So far, I've been talking about work which serves to protect our upland resources as well as to safeguard the precious dam sites that nature has given us.

The snow survey, on the other hand, is a job that's done above the dam for the direct benefit of irrigation agriculture. In 1946 the Soil Conservation Service, in collaboration with State and other agencies, made about 2,300 snow surveys. As an example of the value of these surveys, consider the experience of farmers in Crook County, Oreg. The surveys told them they would have an unusually large water supply in 1946. As a result of this advance information, they cropped an additional 4,000 acres, which produced crops worth $400,000. All this in a single county.

Now let's move on down to the dam. The Department of Agriculture has a direct interest in what's going on there, too. We're concerned with power development. And we are concerned with the power shortage, which is a special problem in areas where fuel for power generation is not available. We administer a program of rural electrification, one of the most popular Government services that the country has ever had. As fast as our funds permit, we lend to the farmer cooperatives in areas that the old power lines have missed. And the members of those cooperatives begin to enjoy the conveniences and the increased farming efficiency that are to be had from the use of electric power.

The power generated at the dam concerns us in another way too. Our responsibilities for maintenance of farm prices and income and for improvement of marketing and distribution keep us on the lookout for better markets and new opportunities for farm people. I have strongly recommended that Congress pass legislation enabling the Department of Agriculture and other Government departments to help meet some of the problems of rural industrialization.

Electric power is a base for many industries here in the West—industries to which western agriculture can supply raw materials and food for the workers on the industrial pay roll. These industries also can supply opportunity for some of our farm people as agriculture becomes more efficient and requires fewer people. It is extremely fortunate that the same projects which give us irrigation water give us electric power where it is needed for farm and industrial use and where extensive power generation might not otherwise be feasible.

So we look on electric power as a tremendous aid to our programs for helping low-income farm families get on their feet and for protecting the income of all farm families.

The dam, the water it impounds and controls, and the electric power it generates are wonderful assets to the agriculture of the West and, for that matter, to the whole Nation.

But to the farmer in the valley below, the dam is only a tool and the electric power is not his major concern. He is concerned with the water, the lifeblood of his farm business.

As the water is released from the reservoir through the tunnels, out into the canals, it becomes irrigation water.

So let us go below the dam and see how the water is used.

Through the years, in response to the needs and wishes of irrigation farmers, the Department of Agriculture has developed a large number of services and has made special adaptation of its general program to meet the peculiar requirements of irrigation agriculture. I shall confine my discussion to these special features because to discuss the more general services of the Department—even to name them for you—would take too long a time. Suffice it to say that many of our programs and services, such as rural electrification, cooperative soil surveys, market reports, and agricultural outlook information, apply to agriculture generally, including irrigation agriculture.

As an example of a direct aid to the irrigation farmer, consider the agricultural-conservation program under which payments are made to help farmers improve their irrigation systems and to use practices that prevent erosion, leaching, and seepage. Accomplishments under this program were a surprise to me. To illustrate: During a single year—1945—over 2,000,000 linear feet of siphons and flumes were installed; almost 34,000 cubic yards of concrete and rubble masonry were placed in check dams, drops, wiers, and similar structures; over 50,000,000 cubic yards of earth were moved in leveling more than 600,000 acres on 12,900 farms; nearly 9,000,000 cubic yards of earth were moved in relocation and construction of permanent ditches and laterals; and over 10,000 other farmers were aided in the installation of drainage ditches—all in the 17 Western States.

Furthermore, the Soil Conservation Service provides specialized technical assistance. This agency has, in a few short years, assisted farmers in planning improved irrigation systems for 22,400 farms covering 2,000,000 acres. Among other things these plans call for the preparation of a million acres of land, principally by leveling. More than one-third of this great leveling job has already been accomplished. In addition to this work on individual farms, plans have been prepared for some 600 group-irrigation enterprises involving an area of more than 800,000 acres. Three hundred and fifty-eight of these jobs have been completed.

Recent research findings of the Department, working in collaboration with other Federal and State agencies, will greatly increase the efficiency and financial returns of irrigation farming. For example, improved disease-resistant plant varieties have resulted in increased crop yields, as have studies in improved utilization of water and fertilizer. In the lower Colorado River Basin, research has shown that it is possible to increase the yield of alfalfa to 10 tons per acre, or twice the average yield of the area. In the Columbia basin, where yields of corn have averaged about 50 bushels per acre, fertility studies have shown that production can be increased to 130 bushels per acre. Similarly, potato yields can be increased from 355 to 615 bushels per acre.

The removal of weeds from irrigation ditches and canals with dragline and chain costs irrigation projects upward of a million dollars each year. Department of Agriculture weed specialists have found a simple chemical which promises to eliminate this chore and much of the expense. Other chemicals have been found which can be substituted for expensive mowing and burning to keep down willows and other heavy growth along banks.

The greatest single hazard in irrigation farming is the salt problem. In a relatively

few years a prosperous community can be utterly ruined by the accumulation of salts in previously fertile soils. As we become more and more dependent upon irrigation agriculture, we more and more urgently need weapons to combat this creeping paralysis. This need resulted in the establishment of the Regional Salinity Laboratory at Riverside, Calif. Here research is conducted in the chemical and physical factors affecting soil permeability, the selection and improvement of drainage methods, the reclamation of alkali lands, the survey and diagnosis of saline and alkali areas, plant tolerance to saline soils, and in similar fields.

Irrigation requirements differ in different localities due to variations in soils, climate, crops, topography, and water source. Excessive use of water is costly not only in dollars but in loss of productivity through leaching, erosion and waterlogging. The Department constantly renders assistance to irrigation farmers in different areas by helping them determine their water requirements and to institute measures that save water.

Still another special type of service is rendered by the Bureau of Agricultural Economics. This agency carries on investigations dealing with the various economic aspects of irrigation development and irrigation problems. Such investigations include studies of irrigation development possibilities throughout the West, factors affecting the ability of farmers to meet water charges, circumstances contributing to the financial success or failure of various types of irrigation enterprises, management problems of irrigated farms, and analyses useful in planning new projects.

These activities and the storehouse of factual knowledge back of the activities are important to the farmers on all irrigated land, regardless of where the water comes from. The Department started doing such work in response to the needs of farmers using water from privately developed irrigation projects. That's all there was for many years, and the privately developed areas still make up 16 to 18 million acres out of our total of 20 to 22 million acres of irrigated land. The same services and information are equally available and useful to the people who operate the 4,000,000 acres which are irrigated entirely or partly with water from Federal reclamation projects. The experience and programs of the Department are also available to help guide the selection and development of new areas on a sound basis and can help minimize the hazards to farmers who settle on newly developed lands.

I use these examples to assure you of the deep interest of the Department of Agriculture in the present day problems of irrigation farmers. We sincerely desire to advance irrigation agriculture to the fullest extent possible under existing legislative authorities and fund limitations.

Right now the development of the western water resources is proceeding by leaps and bounds. For this, great credit must go to the Bureau of Reclamation and to many congressional leaders of the past. We are inspired, and even somewhat awed, by the vast magnitude of the Bureau's plans for storing the precious waters of our western mountains behind towering dams so that those waters can give life to arid lands, and so that they may yield electric power that will bring into being great western industries. I pay sincere tribute to the great engineering organization which is carrying this work forward—one of the finest of all the Government agencies.

I likewise pay tribute to the men of science in the laboratories and fields of the Department of Agriculture—to the agronomists, botanists, chemists, geneticists, pathologists, and the others who delve into the mysteries of living things—for agriculture will always be the cornerstone of the economy of the West.

We realize, moreover, that the agriculture of the West—as it is stabilized, expanded, and strengthened—will become an increasingly vital part of the Nation's agricultural plant. It is of utmost importance that western agriculture should be developed as an integral part of the Nation's agriculture. We must see to it that this is done.

America needs the full contribution of western agriculture in meeting the critical world food shortage of the present, and we need an even greater contribution from the West in meeting our long-range needs.

At the moment, our agriculture is hard pressed—and probably it will be for some time—to meet the abnormal demands from abroad. Last year we supplied more than 52 percent of the total world exports of grain although in the prewar years we had supplied less than 5 percent of a slightly smaller total. This year the problem is even greater. Bad weather has reduced crops in western Europe, which is cut off from many of its normal sources of supply and which has 20,000,000 more people to feed than before the war. Furthermore, weather damage to our corn crop has reduced our own supply of grain by an amount greater than last year's record exports. Australian hope of good crops is one bright spot in the picture. But bad weather has cut the Canadian wheat crop. And Argentine farmers, because of their own peculiar problems, have reduced their wheat acreage.

The foreign demand, coupled with the fact that our own people are consuming food at a rate 17 percent greater than before the war, puts a terrific pressure on American agriculture.

Western European countries have reported they will need extensive aid from us in developing their cooperative program of self-help. If financing is provided by Congress, aid to western Europe along with demands from other parts of the world will keep American agriculture hustling to keep up for several years.

Meanwhile, we must strengthen our agriculture as much as possible through conservation and other means, and we must plan for the long-range future.

As you know, the Department of Agriculture in recent congressional hearings has proposed long-range national policy and programs seeking organized, sustained and realistic abundance. This was based on many facts which can be stated quite simply. The simple fact is that, although we have had and are continuing to experience a revolutionary expansion in farm production, we have potential markets for the products of our entire acreage. It is up to us to conserve our resources that we may establish a permanent, productive agriculture, that we may accept the blessing of abundance and find ways of balancing that abundance with effective demand. The wants of our own people, plus a reasonable amount of world trade, can give agriculture a completely adequate market. That is the hope and the challenge of a policy of abundance.

I know the West welcomes both the hope and the challenge, for the spirit of this land of sun and saddle leather is a spirit of courage, progress, hope, and realistic idealism.

In the spirit of the pioneers who inquired the distance to water and then proceeded to bring the water to their land, no matter what the distance, the new West is assuming a vital role in the epic drama of American agriculture. The cotton, the fruit, the potatoes, and the cattle of irrigated lands become inextricably intermingled with the products of rain-belt areas.

From that fact we learn this lesson: Just as we are one Nation, indivisible, we are one agriculture, indivisible.

And just as there must be liberty and justice, there must be opportunity for all.

Your Department of Agriculture always stands ready to help bring assurance that there is and ever shall be opportunity for western ranchers and farmers in the indivisible agriculture of the United States.

Inflation

EXTENSION OF REMARKS

OF

HON. ROBERT A. TAFT

OF OHIO

IN THE SENATE OF THE UNITED STATES

Monday, December 15 (legislative day of Thursday, December 4), 1947

Mr. TAFT. Mr. President, I ask that there be inserted in the Appendix of the RECORD, for the information of the public, a statement of the Republican Policy Committee, regarding inflation.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

We are deeply concerned over the steadily rising prices. Already these prices impose great hardship and suffering on many families. We are equally concerned because so many individuals and groups are seeing excessive gains. If the spiral continues the ultimate adjustment may be drastic, threatening a serious depression. We must adopt immediately policies which will stabilize prices, and encourage the raising of lower incomes up to the new price level.

Many committees of Congress under Republican leadership have been studying the causes of rising prices and the sound methods of preventing further increase. In particular, three subcommittees of the Joint Committee on the Economic Report have held hearings in the East, Midwest, and far West, and all committees have been meeting steadily since our return 3 weeks ago.

The present condition, while growing out of the Second World War, has assumed dangerous proportions because of the policies of the administration which has controlled this Government for the past 15 years—the policy of first restricting production, of devaluing the dollar, of deficit spending, of exporting unnecessarily goods essential for our own economy, and now of tremendous government expense and corresponding taxation reflected in the price of every product bought by 40,000,000 families. The administration now seeks to impose controls on the effects of inflation while it continues to encourage the conditions which cause inflation.

We believe that the sound approach is to strike at the fundamental causes of inflation rather than permit these causes to go on operating and then vainly attempt to prevent the inevitable results by arbitrary bureaucratic controls. Such controls have failed in time of peace to remedy the causes of inflation wherever they have been tried. Furthermore, the primary solution is to increase production and, since this is a slow process, to curtail unnecessary spending in the meantime, particularly that brought about by credit expansion for nonproductive purposes.

The program on which our committees are now working may be stated in general terms as follows:

1. Encourage the increase of production as rapidly as feasible.

2. Eliminate nonessential Government expenses, and reduce debt and taxes.

3. Restrict exports, particularly to countries which have not suffered the devastation of war. This means an extension of the Export Control Act for another year. Legal power to restrict exports has existed for the past year, but deliberate Administration

policy has permitted practically unlimited export, so that $10,000,000,000 of goods and services have left this country without any corresponding imports. This is one of the principal causes of the rise in prices. Most of these exports have gone to countries outside of Europe.

4. Discourage further increase of bank credit for nonproductive uses. The Administration has failed to use effectively the power which it has had to restrain bank credit. The Administration's representatives are in disagreement today as to the method of carrying out the President's recommendation. We must not act without the most careful consideration, particularly since it affects the proper management of our huge national debt. Our committees are still studying this problem and will report at the regular session.

5. Discourage undue increase of consumer credit.

6. Support a voluntary program to eliminate waste in the use of grain and food.

7. Support a general program to encourage all those in a position to do so to save more.

8. Authorize the President to enter into temporary voluntary agreements with industries to limit inventories and authorize priorities, so as to remove bottlenecks in the production of vital commodities. If it appears that voluntary controls are inadequate to meet specific problems we will consider the granting of authority to meet such particular problems.

9. Extend rent control for another year, making such adjustments as are required to give just treatment to tenants and owners alike.

10. Give authority to the extent necessary to prevent improper and excessive speculation on commodity exchanges.

Under the foregoing program we shall attempt at this special session to pass the following legislation:

1. A bill (a) extending for another year the export control power;

(b) extending for another year the control of transportation;

(c) to permit temporary voluntary agreements on inventories and priorities.

2. An appropriation bill to provide funds where necessary to carry out recommended programs.

The definite working out of the foregoing program will be done by the committees of Congress which have initiated it under Republican leadership; and specific legislation dealing with phases of the general program which it has not been possible to study completely will be considered at the regular session.

The present administration has failed to stimulate the initiative and other elements of individual freedom which have made our country the strongest, our people the happiest and freest on the face of the earth. We intend to do our best to give those principles of freedom another chance to operate for the greater benefit of all, with only such restraints as the Government must impose to make them operate wisely.

Veterans' Legislation

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, December 15, 1947

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

VETERANS OF FOREIGN WARS
OF THE UNITED STATES,
Kansas City, Mo., December 11, 1947.

Hon. EDITH N. ROGERS,
Chairman, House Committee on Veterans' Affairs, House Office Building, Washington, D. C.

MY DEAR MRS. ROGERS: I am keenly disappointed and somewhat discouraged over the failure of the leadership in the special session of Congress to give consideration to date to some very vital veteran legislation which was acted upon favorably by your committee during the first session of the Eightieth Congress. I particularly refer to legislation which would grant a much-needed increase in subsistence allowances payable to veterans trying to avail themselves of the educational provisions of Public Law 346, as amended, as well as to increase the ceilings affecting trainees taking on-the-job training and legislation to liberalize the granting of automobiles to amputees. There are many other important items which made some progress in the first session and which we believe could be disposed of with a minimum of controversy in the special session.

I deeply regret that an impression has been mistakenly given that the major veteran organizations were not concerned or interested in having the special session take up and consider vitally needed veteran legislation. I cannot speak for other organizations but I can assure you that the Veterans of Foreign Wars was hopeful and had expected that some of this legislation would be disposed of during the special session. I know that you are aware that literally thousands of World War II veterans have been forced to abandon their schooling and other thousands are barely hanging on. It seems to me that here is at least one instance where the special session could dispose of pending legislation without waiting until the second session and thereby provide the necessary encouragement and additional funds which would permit these veterans students to remain in school and not be compelled to drop out before action can be taken in the second session.

On two occasions I have written to the leadership of the present Congress urging that some consideration be given to vitally needed veteran legislation during the special session and stated that millions of veterans would have difficulty in understanding why all emphasis should be given to the relief and rehabilitation of foreign nations while neglecting the problems of our own citizen veterans who are attempting to rehabilitate themselves under promises made by a previous Congress. The VFW is not opposed to reasonable and practical aid to the destitute and hungry of Europe but we do believe that the problems affecting our own citizens should not be neglected.

Prior to the opening of the special session I addressed communications to Speaker JOSEPH W. MARTIN and Senator ROBERT A. TAFT, chairman of the Republican Policy Committee, with copies to other congressional leaders, making an appeal for consideration of certain veteran legislation which had been considered and on which some progress had been made during the first session, Eightieth Congress. In this communication to congressional leaders I enumerated several bills which had either passed one or the other branches of Congress or had been reported favorably by a Senate or House committee.

In the absence of any action to date and with information reaching me that an impression was being given to veterans that the veteran organizations were not asking for consideration of veteran legislation in the special Congress I have again written to Speaker MARTIN reminding him of my earlier plea and asking that at least some of the vital veteran legislation be acted upon before the close of the special session. I hope you will continue your efforts to persuade the leadership to permit some of this legislation to be brought up for action and that you will be supported in your demands by many other Members of Congress. Our veterans know and understand that action in the special session is not necessarily limited to European relief and rehabilitation and that the determination of what matters shall be considered rests upon the leadership of the present Congress.

Assuring you that you have our wholehearted support in your efforts to obtain consideration of at least some of this most important veteran legislation and with best wishes for success, I remain.

Respectfully yours,

OMAR B. KETCHUM, *Director.*

Russians Want To Smash Plans for Europe Aid To Upset the Entire Continent

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, December 15, 1947

Mr. LANE. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I insert in the Appendix an article which appeared in the Boston Sunday Post December 14, 1947:

RUSSIANS WANT TO SMASH PLANS FOR EUROPE AID TO UPSET THE ENTIRE CONTINENT—FOOLISH FOR AMERICA TO EXPECT COOPERATION FROM THEM NOW, WHEN THEY GAVE NO AID TO US EVEN IN WAR

(By John Griffin)

Another meeting of the Big Four is about to break up with nothing accomplished except some new insults. The London conference is going just the way all meetings with the former Allies have been going; apparently the Russians are determined that they will not offer any cooperation.

General Marshall has finally lost his patience and has told off the Russians in clear terms. It has always been obvious to many people that there is no way of getting anywhere with the present leaders of the Soviet Government, but certainly the United States has made every honorable effort.

This time the immediate cause of dispute is reparations, just as it was more than a year ago. Despite all the conference and all the high hopes, the situation remains just as it was, which means that the United States is contributing heavily to Russian economy.

GIVING IT TO THEM

The United States is pouring money into Germany in an effort to rehabilitate that country, and Russia is taking it out in reparations which have amounted, according to British figures, to $7,000,000,000.

Every time the subject is mentioned, Mr. Molotov answers with a barrage of insults and accusations. Every speech he gives is apparently designed for the Russian people, and he uses the conference just as other Russians use the United Nations, as a platform from which to deliver propaganda.

The fact is that Germany cannot be brought back economically so long as the Russians refuse to cooperate. Even though the British and Americans have unified their zones as far as the German economy is concerned, there will be no real revival without unification of the four occupied zones.

That fact being clear, there can be no doubt that Russia does not want a revival of Germany, for that might mean a prosperous western Europe. They prefer disorder and chaos, which is supposed to be an advantage to those seeking to communize the world.

It is not surprising that Molotov has refused to cooperate at the London Conference, for why should he be expected to work for unity there while Russia is seeking to bring about disunity everywhere else in Europe?

Timed nicely with the London Conference has been the Communist uprising in France and the disorder in Italy which was sponsored also by the Communists. The French uprising was quickly dispelled, and apparently the Communists in Italy have also failed.

PART OF PROGRAM

Obviously all these elements are part of the Communist program for Europe. Obviously the Russians want to break things up before the Marshall plan can become effective. And part of their scheme calls for a complete refusal to work with other countries which have been their allies.

If the Russians failed to cooperate with Britain and the United States during the war, when they were fighting a common enemy, it is not likely that they have any intention of cooperating now unless cooperation means getting their own way in everything.

Maj. Gen. John R. Deane, who was head of the United States military mission to Moscow during the war, has written a book called The Strange Alliance, published by the Viking Press. In it he makes clear that there was a minimum of cooperation by the Russians all through the war.

The United States sent them billions of dollars worth of materials and did everything possible to coordinate activities, but through it all the Russians were so suspicious that they would not give any information about their own activities and refused to share the military knowledge they had learned.

General Deane's book is a most revealing story of suspicion and self-interest on the part of the Russian leaders. And this was during a period of war when their existence was at stake. In view of that, it is probably expecting too much for the Russians to show any cooperation now.

HONEST EFFORTS

All this is undoubtedly clear to our own State Department, but in spite of it American leaders have kept hoping that something satisfactory could be worked out with the Russians. A succession of American officials have undertaken the job of trying to work out some sort of cooperation, but none has made any progress.

Secretary Marshall clearly had no illusions when he set out for London, but he expressed a determination to throw aside all previous unpleasant experiences and to try to work out something at London. It is obvious now that his goal is not going to be reached. It is equally obvious that no one else can attain it either.

No one has been able to solve even the reparations problem in Austria, let alone the greater problem of Germany. In Austria the Russians still insist upon taking as reparations industries that were originated and developed by the Austrians and which were later seized by the Germans.

These industries, in the view of the other allies, are Austrian assets and never were legally German properties, but the Russians are taking everything they want, regardless of the fact that indirectly the United States is paying for them.

Obviously this can't go on indefinitely. The American people have responded to the sad plight of Europe and are willing to give and give of their substance under the terms of the Marshall plan. But sooner or later there is going to be a wave of resentment in America that will demand that we stop supplying funds and materials for the use of the Russians.

There has got to be a time when we refuse to do any more dickering with the Russians. They aren't going to play ball with us, and there is no point in a constant exchange of insults, which is what the various conferences produce, and which seems to be the principal output of the United Nations.

If we couldn't get any assistance from them as allies in a desperate war, what chance is there in getting cooperation at a time when they are determined to grab everything in sight?

Landon on Marshall Plan

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, December 15, 1947

Mr. LARCADE. Mr. Speaker, under previous authority to extend my remarks and include a newspaper article, I wish to submit an article by Mr. William Philip Simms, columnist, which appeared in the Washington News of date December 13, 1947, as follows:

LANDON ON MARSHALL PLAN

(By William Philip Simms)

America's greatest single need, Alf. M. Landon, ex-Governor of Kansas and former Republican standard-bearer, told this writer in an interview here, is to make itself strong both militarily and economically.

"The little guys in this country," he said, "are in a fix. But as bad as their fix is, it would be far worse if America lets her defenses down and becomes involved in another war."

He expressed complete approval of the Marshall plan. But he warned against allowing it to give the people of this country what might be called a Maginot-line complex.

Rightly handled, he said, the Marshall plan would be of enormous help in getting the world back on its feet. But, he went on to say, it will take more than that. Unless law and order abroad are sufficiently restored to give the plan a chance to be effective, and especially unless currencies are stabilized, the plan won't work.

We may as well face the fact, he continued, that for some years we will be teetering on the abyss of another war. And we must act accordingly. That is why in his opinion current discussions in Congress are the most significant since the Lincoln-Douglas debate. Its outcome will determine not only our domestic policies but our position in the world as well.

In Mr. Landon's view one of our biggest issues is how we can face up to Russia's "undeclared war" on the United States. He was not a military expert, he said, but he has devoted considerable study to our defense needs, and here are some conclusions:

First, the next war won't be just a "blitz"—it will be supersonic.

Second, we won't have just a two-ocean front to defend, but a third front along the Arctic Circle.

Third, Arctic Circle bases are imperative.

Fourth, the next war will be an air war, hence a constantly improving air force also is vital.

Fifth, while the biggest navy in the world is not out of step with future warfare, the needs is for plenty of floating air bases—carriers, submarines, and the proper auxiliaries.

Sixth, we should have a Regular Army four or five times the size of our prewar Army; a bigger and more efficient National Guard and organized reserves.

Seventh, proper and efficient intelligence forces and—most important of all—whatever it takes to keep us well ahead of the procession in nuclear physics.

Mr. Landon expressed himself as maintaining an open mind with regard to universal military training. He does not believe it is necessary now, but he admitted it may be sooner or later.

The importance of pronouncements by Mr. Landon, it should be pointed out, is considerable for two reasons: First, he is a national figure of accepted political astuteness, and second, he hails from Kansas, where the grass-roots really grow.

Address by Hon. Robert A. Taft at Two Hundredth Anniversary Dinner of the St. Andrew's Society of Philadelphia

EXTENSION OF REMARKS
OF
HON. ROBERT A. TAFT
OF OHIO
IN THE SENATE OF THE UNITED STATES

Monday, December 15 (legislative day of Thursday, December 4), 1947

Mr. TAFT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered on December 1 at the Two Hundredth Anniversary Dinner of the St. Andrew's Society of Philadelphia. It contains a discussion of the causes and possible solution of the inflation trouble, which I think is at least as scientific as the discussion which the distinguished Senator from Wyoming [Mr. O'MAHONEY] has made this afternoon.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I greatly appreciate the honor of the invitation extended to me to speak on this great anniversary of the St. Andrew's Society of Philadelphia, and the honor of sharing the platform with Lord Inverchapel, the British Ambassador. I have known him since he was secretary of the embassy, too many years ago to count; and I can testify to his ability and honest frankness, to his wide experience in India and China, and his accurate knowledge of the American people. This meeting tonight recalls vividly to our minds the close bonds which exist between the English speaking peoples throughout the world, and particularly those between the peoples of the United States and the people of Great Britain. During the 200 years of your Society's existence, there have been times at which even your Society had to recognize differences and conflicts, but those temporary differences have only served to emphasize the real community of interest which exists, and how much our peoples think alike in our fundamental ideas of government and with human society.

In this century we have fought side by side in two great wars, and we are still united in trying to promote the principles of national freedom on which alone the happiness of peoples can be founded. In both of these wars Great Britain has suffered more heavily than the United States because it has been so close to the field of conflict. Because of the sacrifice which it made in this war it is now temporarily involved in tremendous economic difficulties. There is no

doubt in this country of the necessity of America working with the British through policy and financial aid to help Great Britain to whatever extent one nation can really help another nation to solve its difficulties. In the long run, the solution of any nation's problems rests with its own people. But certainly a helping hand can make that solution a little easier.

Such differences as exists among Americans today relate rather to the method than to the principle of assistance. Economic and political questions between nations are infinitely complicated. The analogy of assistance between individual persons is seldom of any value. Our experience with the Bretton Woods agreements and the British loan have not been encouraging. The Bretton Woods fund distributes dollars automatically throughout the world without much relation to need, and contains conditions which may prove onerous to those who rely on its benefits. At the present moment it seems to interfere with recovery by encouraging the maintenance of currency at artificial values. The British loan agreement permitted the dollars to be used anywhere for any purpose, which seems to have resulted in a large part of the proceeds to be wasted without result. At the same time it imposed conditions, such as that relating to convertibility, which were impossible to comply with, and did more damage than good. Many Englishmen themselves question whether the over-all effect has been helpful or otherwise. Certainly, in further plans we must study carefully the exact extent to which we can be of real assistance to Great Britain in its tremendously difficult problems, and the methods which can be effective to increase her own production.

One thing is reasonably clear. Any aid which we can give to Great Britain or the rest of the world depends on maintaining a sound economic condition in the United States. We cannot stretch our economic strength to the breaking point. A severe depression would not only be a disaster here, but a severe blow to the economic recovery of the rest of the world and to the cause of freedom. At the present moment we are producing more goods than we have ever produced before. In some fields it can be increased, although we seem to have reached the limit in what can be done in the production of grain for the moment. But there is also danger that our production may fall off if the boom is blown up until it busts.

In the domestic field, as in the international, the principles of economics which can bring good times or bad times are infinitely complicated. The relative strength of conflicting economic forces is impossible to measure and there is plenty of disagreement, even on the basic principles. According to prevailing opinion, the spiraling increase of prices and wages presents the greatest threat to our stability, but there is practically no agreement on the best method of stopping this spiral.

Rising prices are not an unmixed evil. As prices of a commodity rise, people buy or use other things so that consumption tends to decrease and production to increase, so that the problem of that particular commodity is ultimately solved. Thus, at the moment the high price of grain is conserving grain for shipment abroad because it does not pay to feed it to livestock. Mr. Anderson is claiming some credit for the decreased weight of cattle and hogs coming to market because of his campaign of education, but I think even he will admit that the high price of grain is a much greater factor. If we arbitrarily reduce the price of grain, its use for feed will rapidly increase and there will be less wheat for human consumption and shipment abroad.

But a continuation of the present spiral of prices and wages is dangerous because it creates all kinds of distortions which, when they get bad enough, will seek a violent readjustment. The income of certain groups like farmers and factory workers has increased faster than the cost of living, but those who live on a fixed return from investments are in a pitiful condition with a 65-percent increase in the cost of living. White-collar groups and unorganized workmen have had increases much less than the increase in the cost of living. Institutions relying on endowment funds find their income decreased, to meet increased expenses. States and municipal governments are unable to increase their tax receipts as rapidly as necessary to meet increased expenses and pay adequate compensation to their employees. These income groups are using up their savings. Sooner or later there will be a falling off in the purchasing power of millions of people which may bring a violent reduction of prices such as occurred in 1920 after prices had outrun all wages. Once this purchasing power falls off, many manufacturers will find the high cost of their particular labor and materials an obstacle to continued production. Without production unemployment can rapidly cumulate.

If prices can be stabilized where they were, it may be possible to correct the present distortion. We could increase the minimum wage, and gradually increase the wages of those who have been left behind. The present high prices in themselves may not be dangerous if the whole economy can be adjusted to some new price level, below where it is today, but 50 or 60 percent above prewar. The United States is such a tremendous factor in the world today that world prices will tend to adjust themselves to American prices, so that there may be no great distortion in international trade. But a gradual stabilization may be impossible if prices, and the wages in all highly organized industries, continue to rise. From the point of view of the increasing hardship to the poorer families, and of the continued prosperity of the entire world we should do what we can to prevent further increases.

There is another kind of inflation going on also. We are building up our production in some fields beyond what can be hoped for in normal times. If, for instance, we create a great activity in some industries based on an abnormal export market which we cannot hope to retain, the sudden cessation of that export market may bring sudden and dangerous unemployment. So, also, in various manufacturing fields where the production is abnormal to make up for wartime deficiences. This abnormal inflation of production where it exists cannot be carried to further extremes without serious danger.

Except from a political standpoint, it is somewhat futile to discuss how we reached the present situation of high prices when all the administration economic experts predicted a collapse after the end of the war, serious unemployment and lower prices. Some time ago, in San Francisco, I pointed out that in my opinion it is the inevitable result of the policies pursued by our Government. The policy of deficit spending which reached $50,000,000,000 a year during the war, increased tremendously the amount of currency, deposits and E bonds available for spending to meet our needs deferred by the war. The OPA deliberately held down prices while it let wages rise, creating a false relationship by 1945 when wage rates of factory workers had gone up 56 percent compared to 30 percent in the cost of living. This relationship created by inflation and deficits the wage earners have naturally attempted to maintain. Prices have constantly had to chase wages, to make production possible at all. This policy was accentuated after the war when the administration adopted the curious theory that wages could be generally increased on top of the condition created by the OPA, without further increase in prices. This theory was disapproved almost at once, but it started the upward spiral.

The maintenance of high Government expenses reflected in high taxes has also been an important factor in raising prices. When taxes are as heavy as they are today, they are passed on into the cost and the price of every article that is purchased by the consumer.

If the removal of price control took place too soon, then it is clearly due to the President's own action in vetoing a perfectly adequate price-control bill, and then himself removing all price control before the Congress met in January 1947.

The real question is not so much past history as present policy. I have no confidence in any proposed remedy of restoring price ceilings. If the underlying conditions create a demand in excess of supply at the fixed price, I don't believe price fixing in peacetime will prevent a black market or prevent prices reaching their natural level. Even if it were successful it would tend to increase demand and decrease supply, creating new shortages and furnishing no ultimate solution. Whatever we do ought to be directed toward increased production and at least a temporary decrease of demand. I was for price control during the war because there was no possibility of reaching a balance when the Government was purchasing a hundred billion dollars of goods for the war. But certainly today we must be fairly close to a proper balance between production and purchasing power.

Current wages and other income such as profits and return on capital represent roughly the value of the goods and services produced by those who receive the income and so should be in reasonable balance. In fact if there is a normal amount of saving production ought to be more than adequate. But there are many other sources of purchasing power than current wages and income. The factors which seem to upset the balance by creating unbalanced purchasing power are the following:

First. Accumulated savings in cash, deposits, and E bonds. There seems to be no net decrease in the total net amount of such savings, but probably money and bonds saved during the war are being spent by many lower income families thus reducing the amount of total savings of all families. Therefore, savings are less than would be normal in times of such prosperity as we have today.

Second. Increase in bank loans now proceeding at the rate of $5,000,000,000 a year. Of course, if we are to increase production, and keep business going with the increased costs of inventories and replacement, this increase in bank loans cannot be completely checked. This dilemma faces us in every effort to control prices, and yet surely the increase should be restrained.

Third. Increase in mortgages on new homes estimated to be about $5,000,000,000 a year. To a certain extent this comes from new savings, but not entirely. This increase is deliberately stimulated by Government guaranties amounting to from 90 to 100 percent of the cost. Again, the program cannot be abandoned, but it could be placed on a sounder basis.

Fourth. Increase in consumer credit, installment buying, amounting from one to two billion dollars a year.

Fifth. Exports of $11,000,000,000 more of goods and services than we import. About $6,000,000,000 of this surplus is clearly inflationary since it rises out of various kinds of foreign credit from the Bretton Woods fund and bank, and from the dollars accumulated abroad through lend-lease or war trading. These dollars are now coming back to compete for our short supply of many types of goods, without providing any imports to be purchased by our people. The other $5,000,000,000 is covered by taxes, but still provides

purchasing power which competes for goods in short supply here and thus raises prices.

Sixth. The tremendous cost of government in this country with the corresponding burden of taxation which is largely passed on by the taxpayer, reflected in the general cost of commodities and added to the price of practically everything we buy.

If we really wish to stop the rise of prices, we should consider how we can best meet these fundamental causes. We can't meet these causes by any panacea of fixed prices and rationing and a controlled economy. We can't have our cake and eat it, too. If we don't want high prices, we, and our Government, will have to spend less. We can't build new houses for everyone who wants them. We can't export many billions more than we import. We can't spend too much borrowed money. If we don't want to sacrifice any of these pleasant, and politically advantageous, activities then we had better face the fact that we will have high prices.

Certainly I do not have any stock solution of remedies, but I suggest that the following fields should be carefully explored in every case. Remedies which appear effective on the surface may be too drastic, or may interfere with the production which we ultimately wish to attain, but certainly none of them can be ignored:

1. Conduct a campaign to secure an increased productivity per man from all workmen, both through the improvement of methods and machinery by management and better individual work by the men. Certainly, if further wage increases are granted, they may well be conditioned on a more complete day's work.

2. Cut Government expenses and activity with a corresponding reduction in taxes.

3. Limit our exports particularly to countries outside of western Europe so that they are largely balanced by imports, and limit our assistance to foreign nations to specific fields which we know can be effective.

4. Restrain the increase of bank credit, either by the traditional methods, or by Mr. Eccles' proposal for increased reserves in short-term Government bonds, as may be determined to be most sound.

5. Reduce the percentage of Government guarantee on housing loans.

6. Impose some limit on consumer credit.

7. Carry on a campaign to discourage spending and encourage saving. The Secretary of the Treasury has excellent plans for the sale of more "E" bonds, but the campaign should include saving in all directions, and particularly the reduction of the purchase of scarce foods by those who can afford to waste less and eat less. Only let it be carefully thought out and made reasonable to the people and the trades.

8. Carry out the obligation to support prices with discretion, and only to the extent required to keep our promise to the farmers.

Up to this time the administration proposals to prevent further price increase do not seem to hit any vital spot. They are demanding indefinite power to impose controls of all kinds, but avoiding the fundamental actions which might really reduce prices. Surely, after the experience with OPA in the postwar period, a complete reliance by the administration on a return to controls at least raises the question whether it is in good faith in its denunciation of high prices. Up to this time the Government officials themselves have disagreed on nearly every important proposal. Is it possible that they would like to see the present condition continue until after the November election in order that there may not be the slightest chance of a falling off in the boom so favorable to anyone in power?

Take the subjects which I have discussed. There has been no suggestion that labor might be more productive. The suggestion that we limit exports, which has always been in the power of the administration, has been discouraged by Mr. Harriman's testimony last week, and by the submission of a greatly increased program for shipments to western Europe.

With regard to the increase in bank loans, Mr. Eccles submits an elaborate plan for increased reserves which meets the universal disapproval of the bankers, and is opposed apparently by Mr. Snyder, Secretary of the Treasury. In the meantime, the Government refuses to use the orthodox methods against inflation, by increasing the rediscount rate and selling some of the Federal Reserve System's bonds on the open market.

Mr. Eccles agrees completely with my proposal that a program to prevent inflation means the cutting of Government expenses. He said: "It means rigid Government economy. It means deferment of all expenditures—Federal, State, or local, to the greatest extent consistent with public obligations at home and abroad. * * * This means the greatest possible economy in all Government expenditures." But the President has fought bitterly every effort to cut any item of his budget, and we now read in the papers that next year's budget is to be $40,000,000,000, two or three billion dollars in excess of this year's budget.

The Government fully agrees with the general idea of a campaign to encourage saving by others than the Government but up to date there has been no official warning against our general spending, and the campaign to save food was so poorly organized that we must almost question its good faith now that it has collapsed.

Mr. Eccles says that the increase of housing credit guaranteed by the Government is a serious danger, but Mr. Harriman says that the necessity for a continued housing program is so great that no change should be made.

With regard to the support price program, while I think it has not had a tremendous effect under present conditions and must be continued to keep our promises to the farmer, certainly the Department of Agriculture up to this time has gone out of its way to indicate a desire to maintain farm prices at a high level, and the bureaus lower down seem to have no conception of the danger of overdoing these prices. They begin to buy before the price reaches the level fixed. I could find no indication in their testimony that they would cooperate in any general effort to lower meat prices as of today.

Except for the saving campaign and the proposed limit on consumer credit which amounts to about 5 percent of the increase in total credit, the Administration has apparently no interest in the fundamental causes of the present situation. Congress will certainly consider their proposals to restore Regulation W on consumer credit and larger appropriations to conduct a proper saving campaign. Congress will furthermore consider most seriously the question of power to fix margins on commodity exchanges, although the evidence to date shows that such margins have no long-term effect on commodity prices.

The administration policy today is to leave all the fundamental reasons alone, particularly if they happen to interfere with some favored policy or special interest, and put their whole cause on a restoration of a planned economy to restrain the prices which other policies cause to rise. They want full power to allocate commodities, to regulate their use, to fix prices and to ration consumers' goods. These are police state methods abandoned by themselves before the end of 1946 because they were so ineffective and unpopular. There is a good deal of talk of limited control, but the authority requested by the President and Mr. Harriman is unlimited authority with the statement that they will only use that authority to a limited degree.

I do not say it is absolutely impossible to regulate one commodity without extending controls to all. Every experience we have had, however, shows that controls of this kind are closely interrelated—that you cannot regulate grain without regulating meat, you cannot regulate meat without regulating chickens and eggs and dairy products. You cannot well regulate steel without regulating the hundreds of industries that depend on steel. We face the issue of returning to a controlled economy, the same kind of economy which exists in nearly every other country in the world. It is an issue greater than that of high prices.

From an economic standpoint, it is not a remedy, although it might hold prices back at least on the surface for a few months. If it were effective, however, it would choke production instead of increasing it and our ultimate solution must be more production to give people what they need at reasonable prices. Certainly, price control has not increased production in any foreign country.

It has had the opposite effect. Here in America we saw how under OPA controls, many important products disappeared from the market. There was no butter, no meat, no soap or canned goods, no white shirts or new suits, no leather and no shoes. There was no lumber or any other building materials, and none of them came back in sufficient quantity until we got rid of OPA. By price control you increase every shortage, necessarily because you increase the demand. When prices are held too rigid, you also decrease production.

Furthermore, no matter how well price control might work in theory, there isn't anybody in the world who knows enough to do it right in a country the size of the United States. There isn't any evidence that the Government can distribute better than the natural laws of supply and demand.

Finally, price controls won't work in the United States. In time of war a certain morale develops which makes it possible to retain control. I served with Hoover in the World War, and he relied almost entirely on that morale. I was always convinced then that we couldn't have done the same job in time of peace. Certainly that was our experience with the OPA after the war. Whenever the economic price of any agricultural commodity was above the OPA price, the commodity went into the black market to seek the natural level of prices. The American people don't like to be regimented and they don't like to be ordered around by Federal officials. There was no regret when OPA closed down and free production started. No, the remedy for present conditions in America does not lie in price control. It lies in saving and restraint. It lies in sound government fiscal policy. It lies in more production and every incentive to more production.

And with modifications the remedy for world conditions lies in more freedom and less government attempts to restrain.

Even more than that, I believe most strongly that a peaceful and prosperous world can only be based ultimately on individual freedom. In time of war that freedom must be surrendered. But if we admit that it must be surrendered in time of peace for some peacetime emergency, we will never find the time when that emergency does not exist. If we once admit that in peacetime we must surrender individual liberty, then it will never return. This country is today the bulwark of the principles of liberty. If we abandon them, the whole world must follow.

The reason this country has a surplus of food to ship in such tremendous amount today is that we have pursued a system based on personal and economic liberty. If we go back to Government restrictions, the time will come when there won't be any surplus to ship abroad. Our European friends can

point out that by strict rationing we could save more food for foreign shipment. That might be so this year, but in the end if accomplished by compulsory controls we would be subject to the same paralysis of initiative which exists in Europe today. In other words, Europe has to take the limitations which are inherent in a free system if they want the benefits produced by it.

The advocates of a planned economy have had their day. They have made a complete failure throughout the world, except in some closely confined areas. Certainly, the Government can greatly improve any condition by sound policy, but it cannot improve those conditions by a detailed attempt to regulate millions of transactions throughout vast areas.

A return to OPA means an end to economic freedom. An end of economic freedom in time of peace leads to the end of political freedom. Surely we should not turn now to the methods that have failed in every nation which has adopted them. Surely, we should not abandon now all of the principles of liberty which have made this country today the envy of the world.

Diplomatic Boondoggling

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, December 8, 1947

Mr. JUDD. Mr. Speaker, under leave to extend my remarks I include the following letter by Mr. William C. Bullitt, former United States Ambassador to Russia and France, in the Washington Post for December 15. Mr. Bullitt demolishes with Mr. Lippmann's own words the latter's recent argument that the fate of China is of little importance to the United States:

DIPLOMATIC BOONDOGGLING

My attention has been called to a column in your paper of December 8, signed by Walter Lippmann, describing action to prevent Communist conquest of China as diplomatic boondoggling. Is this the same Mr. Lippmann who published, in 1943, a book entitled United States Foreign Policy Shield of the Republic?

That book contains the following statements:

1. American naval power in the Pacific must, in order to be fully effective, hold securely a chain of bases extending from continental United States through Hawaii, Wake, Guam, and the Japanese mandated islands to the Philippines. It is, however, a line which cannot easily be held securely unless there is an anchor at the other end of this barrier chain of bases. This anchor can be provided only by China.

2. Manifestly the peace of the Pacific has turned and will turn upon China. All the international wars of the Pacific, including the war we are now waging, have turned upon China, and the future of China will for good or evil determine the future of the whole great basin of the Pacific.

3. As soon as the United States became a power in the Far East by occupying the Philippines, the American Government committed itself to opposing the dismemberment of China into spheres of imperialist influence. This was the open-door policy. With some temporary deviations and some lapses, the United States adhered to this policy, and finally became engaged in the present war because it would not renounce the policy.

4. All we can do is to act on the assumption that the conditions which for half a century have made the integrity and security of China a vital interest of the United States will, as China becomes a great power, make the security of the United States a vital interest of China.

5. In Asia, a Russian policy of aggrandizement against China would disrupt Russian-American relations in the North Pacific and, in the coming air age, across the top of the globe.

Perhaps this is the same Mr. Lippmann. For in the same book Mr. Lippmann advocated a "nuclear alliance" between the United States, Great Britain, and the Soviet Union, thereby displaying such an ignorance of the aims of Soviet imperialism that readers who had some knowledge of world affairs were obliged to concur in his estimate of his own powers: "How wide has been the gap between my own insight and my own hindsight,"—and to note his confession: "And though I knew, and had often argued, that British-American sea power combined was necessary to our own security and to the maintenance of peace, nevertheless I was too weak-minded to take a stand against the exorbitant folly of the Washington Disarmament Conference. In fact, I followed the fashion, and in editorials for the old New York World celebrated the disaster as a triumph and denounced the admirals who dared to protest. Of that episode in my life I am ashamed, all the more so because I had no excuse for not knowing better."

Some day, if Mr. Lippmann exists, he will be as ashamed of calling action to prevent Communist conquest of China "diplomatic boondoggling" as he now is of having advocated the scrapping of a large portion of the American fleet.

Recently, someone using the same name, Walter Lippmann, published in your paper, I am told, 14 articles proving that the United States could not win the "cold war" against the Soviet Union; but before the articles were published in book form, rushed to Europe and returned with the joyful announcement that the "cold war" had already been won by the United States. If this Mr. Walter Lippmann really exists, and is not a chameleon pantologist, he should be more careful—otherwise he will cease to be even the matrons' mentor.

WILLIAM C. BULLITT.

WASHINGTON.

Aid for Veterans

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, December 15, 1947

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

AMERICAN VETERANS COMMITTEE (AVC),
Washington, D. C., December 12, 1947.
Hon. EDITH NOURSE ROGERS,
House Office Building,
Washington, D. C.

DEAR MRS. ROGERS: I have noted with considerable interest your remarks in the House of Representatives on December 11 in regard to the importance of the early passage of three bills to aid veterans. I should like to express the thanks of our organization for your interest in these bills and to assure you of our support.

The bill providing for an increase in subsistence allowances is of particular interest to the American Veterans Committee since, as you know, our college chapters conducted an intensive survey on the subject last winter and spring. These surveys, from more than 50 different institutions geographically distributed all over the country, indicates that veterans are not able to meet even basic living expenses on the present allowances.

The supplementary bill providing for an increase in ceiling on the amount of subsistence allowances plus pay by the employer to veterans in on-the-job training also demands early passage.

We realize the extreme importance of quick passage of the interim-aid legislation and of action by Congress on inflation. But we feel that the veterans' bills which you are supporting are relatively noncontroversial and could be passed without much debate if they could be placed on the House calendar.

I am sending a copy of this letter to the Honorable JOSEPH MARTIN, Speaker of the House.

Sincerely yours,

CHAT PATERSON,
National Chairman.

Danger in the Near East

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, December 15, 1947

Mrs. BOLTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me before the Council on World Affairs, Cleveland, Ohio, December 13, 1947:

DANGER IN THE NEAR EAST

Mr. Chairman, members of the World Affairs Council and guests, it is with a rare sense of privilege that I have come to you today, challenged by the fact that few groups in this country have your understanding of present issues. Ten years of Brooks Emeny's leadership have taken you out into a knowledge of contending forces, of possibilities for war and peace, such as is seldom found. The very name of the Council—World Affairs—gives indication that you are deeply aware that this great country of ours is indeed a part of a world that longs for unity and peace and looks to the United States for leadership. Your fearless choice of speakers down the years who have given you all sides of the problems that confront us as a great power, evidences your determination to be ready to meet every possible contingency. Your special groups, all of them so ably led, give evidence that you have graduated from the preliminary state of just listening, to one of a burning desire to know for yourselves. I wish it were possible for me to tell you what it means to me as your Representative in the Congress to know that you too are constantly reaching out fearlessly ready to go into new areas as these open before us all. I congratulate you on your courageous and progressive course and urge it upon you that you continue in an ever-widening circle. Who can know the extent to which already you have influenced the trend of these rather terrible events in which, as a great world power, we have found ourselves suddenly engulfed? Who can say how far your deliberations may echo and reecho across the world?

This is my first public report, Mr. Chairman, and I am proud indeed to make it before this illustrious company. My informal

report to the House, now in printed form, is available to anyone desiring it.

You have asked me to talk to you of my recent Foreign Affairs Committee assignment as it relates to the Near East. This I am happy to do, though the picture is not a gay one. I am certain that you, like myself, are deeply concerned with what the future holds, troubled as never before by the possibilities for ever-increasing tragedy that seem to press in on every side. I shall speak with complete objectiveness confident that to each one of you and to you all collectively the future of the United States holds within it the future of the world.

We older ones grew up secure in the thought that we were pretty safe behind our oceans, that we didn't have to think about such things. But that world has ceased to exist and we must become acutely aware of the areas that hold danger for us. The whole Near and Middle East is such an area—from Greece to Afghanistan, from Turkey to the southern tip of the Arabian Peninsula.

SUBCOMMITTEE ASSIGNMENT

I must make it clear at the start that I went out on an assignment to study conditions at first hand, to get facts, and to bring those facts back to the Congress. I did not go to form opinions—indeed, except I kept an objective attitude I should have failed completely in the task given me.

When I tell you that the Subcommittee of the Committee on Foreign Affairs, of which I am chairman, is concerned with the movements that cut across national boundaries with particular emphasis on the explosive aspects of communism, zionism, nationalism, etc., you can see that personal opinions are out.

Greece and Turkey, Cairo, the Arabian Peninsula, and Iran, with north Africa were to be the areas of our study. Cholera kept us out of Cairo and a cable calling us back for special committee meetings on the interim-aid program November 10 prevented our getting into north Africa. But we sent two of our men into Greece and Turkey, while Congressman MERROW, of New Hampshire, and I took the Near East as our share.

CONGRESSMAN JACKSON ON GREECE

So much confusion is abroad relative to the whole matter of foreign need and of the efficacy of our help that I wish I could give you not only my own impression, but also the even more authoritative statements of my colleague, Congressman DONALD L. JACKSON of California, who spent some weeks in Greece.

When we had the interim-aid bill up before the Committee on Rules last week one of the committee members said to the witness, Mr. JACKSON, "You don't mean to tell us that the aid we have given Greece has stopped the Communists?" Here is his reply:

"During the period between October 6–23, Mr. TEAGUE and I traveled hundreds of miles through Greece to the northern frontiers, into Thrace, and in general, covered as much of the country as it was possible to cover. We had interviews with many personalities both in and out of the Government. We did not spend our time on the front porch of the American Embassy in Athens. We talked to members of the Greek press, American and foreign correspondents, magazine writers, officers and men of the Greek Army and the Air Force, priests, villagers, businessmen and captured bandits. We made every effort to learn what had happened in Greece * * * since the American mission went in there. Regardless of political affiliations—and there are 27 political parties in Greece—we found no one even among the Communists, who did not say that if we had not gone into Turkey and Greece they would be today in the economic and military control of Russia.

"There might have been differing degrees of efficiency in the administration of aid in that area. There probably was some degree of friction between our Embassy and the aid mission. There was stupidity in some respects in connection with the administration of UNRRA, but the one unassailable fact, in spite of all that has been said heretofore, is the fact that if we had not gone into Greece and Turkey when we did, the iron curtain would have lifted and crashed on the Mediterranean coast.

"The military significance of Greece is of the utmost importance. Fate, perhaps in a mood of irony, gave Greece one of the world's most unproductive soils—rugged, mountainous terrain—and an unbalanced economy which has never in the history of the nation been a favorable trade-balance side. Strategically, however, its importance cannot be underestimated. It has been said that who controls Greece to a large extent controls the Mediterranean. The whole relationship of Greece must be studied from the standpoint of her relationship with the remainder of Europe, and, what is more important, from the standpoint of her relationship with the Middle East. Geographically, Greece stands on the flank of Turkey. Her island possessions dominate the approaches to the Dardanelles and the Bosphorus. Crete lies astride the communication lines of the Mediterranean, and the harbors of Greece, while not the best in the world, would offer facilities for repair and refueling in the event of a world crisis. It is highly questionable whether Turkey could stand alone against military aggression unless her flank on the west were covered. The ancient gateway of invasion to the Middle East lies through Turkey and has, since the days of Attila, the Hun, and Ghengis Khan. The Iran-Turkey-Greece axis stands guard to the reaches of not only the Middle East, but to Africa and the balance of the Mediterranean world. It is for this reason, as you will remember, that America went to the aid of Greece in 1947.

"We have to accept on the face the fact that the Communists have not made a substantial gain in Europe during the last year. The pendulum for the first time since the war, has started to swing in the opposite direction. In all those countries having elections, the tendency has been to repudiate the concept of communism.

"If the same is true in Europe as in Greece and Turkey, the aid we have poured into Europe has had a definitely beneficial effect on containing communism."

Mr. JACKSON says further, "There is anything but a cold war going on in Greece today. It is a hot, fighting war." And he should know. Questioned as to Henry J. Taylor's remarks about Athens being a boom town while nothing he could see there justified the thought of great need, Mr. Jackson said, "I do not know where he traveled, but when one gets outside of Athens he is in a different world. They are grateful for the things we have done for them. All along the way people surrounded our jeep by the hundreds and literally kissed our hands because we were Americans."

MY OWN OBSERVATIONS

During my very brief stop-over in Athens we covered an amazing amount of ground, sitting in on a conference with Governor Griswold and his staff, going on to the information office for a very concentrated hour of questions and answers and inspection of the office space and content, and ending up with an unforgetable hour with the Prime Minister. I came away with a vivid sense of the terrific problem facing the keen, venerable M. Sophoulis. Little constructive work can be done until the guerrilla war is stopped. The condition of the people is deplorable. No wonder they often take the attitude that they couldn't be worse off, and maybe Communist promises might hold something after all.

One of the added trials is the scarcity of water in the Athens area. The Germans emptied the great Marathon Reservoir which takes 7 years of good rainfall to fill. And this year there was a drought.

Do you know I find it difficult to understand the thought processes of people who say, "unless they will change their government and become a democracy we will send no aid." Soviet Russia calls herself a democracy. To me there is no future in imposing upon any people a form of government they don't understand. We believe in our kind of what we call "democracy," but how are we going to make the Greeks understand what we are talking about? After a while, perhaps—but even then it won't be our business to force them, will it? It makes much better sense to me to do what we are doing, giving them food, etc., and help in this business of driving the guerrillas back beyond the borders from which their strength comes. Once that is done and they can give some attention to their internal affairs, then let them choose. Didn't we fight the war to preserve the right of peoples to choose?

At the moment this new King Paul and his Queen Frederika are doing an amazing job and are making the people not only respect but love them. When we were in Athens the King was making a very thorough inspection of the whole of Greece with a rather breath-taking courage. And the Queen was everywhere, working to establish food centers, clinics, etc. Did the papers here carry the story of how she was discovered in a crowd and lifted up onto the men's shoulders and carried along while they all cheered? Give the people something to eat, set them to work, and then let them see whether or not they want to continue to be the most limited monarchy in the world.

STRATEGIC FRONTIERS

Greece, Turkey, and Iran are on the southern frontiers of the Soviet Union, their security constantly threatened. That security is of the utmost importance to us.

We had come through France; the unbelievable attacks against us in the Communist papers, on the air, on billboards and handbills were fresh in our minds. We found the same procedure in varying degrees in Rome, Athens, and Tehran. It served to strengthen my conviction that we are engaged in a grim war—a cold war, if you want—upon which hinges the fate of mankind.

Two months in eastern Europe with 2 weeks of that in Russia in 1945 and a very concentrated 6 weeks in Europe and the Near East this fall, have left me no alternative concept. Our adversary is ruthless, relentless and entirely without honor. His goal is the complete domination of the world. He has said that if in his progress he must destroy those whom he cannot convince, even though he destroy all but a small number of the present population of the globe, he will do so. Evidence of his sincerity in this regard can be found in every land upon which he has laid the finger of his conscienceless lust. Unfortunately, by the appeasement program of the adminstration in power at the time, we gave Moscow a sense of over importance at the very start. It was the American armies that were turned back from the Elbe. It was America that gave Stalin priorities in what are the satellite countries and helped him directly and indirectly to build Soviet strength in Korea, Manchuria, and China. As Americans we cannot escape our truly terrible responsibility to undo as fast as may be that which we have done. You may say to me, "But I didn't do it, I was against it." If you voted against them you did that at least, for it was the majority of those voting who seemingly continued the appeasement administration. If you were among those who did not

vote, then your failure to take your personal responsibility towards continuing freedom and decency, opportunity and hope in a God-fearing world needs expiation.

I am not among the defeatists who say at the outset—"this can't be done, if this is done it won't work, we've poured so much down a rat hole we just can't pour any more, etc." Why not close the rat hole? To base our thinking and our actions on the premise that all Moscow needs to take over the world is to start the juggernaut rolling, is to me shocking beyond measure. What is the matter with us? Have we no good old-fashioned spunk left? Have we no courage, no faith, no belief in ourselves and the way of life we are building? And at this moment in man's battle for existence and for growth when we are faced up with the godless forces of materialism, have we no allegiance to Him in whom our forebears put their trust? Where is our faith in the Almighty and Eternal God whom we call by many names and worship through various formulas? What have we become?

The Turks have refused Russia control of the Dardanelles. They are bleeding themselves white keeping an army out of all proportion to normal peacetime needs. And up in Iran, on the very borders of the Soviet Union, the Province of Azerbajan, with United Nations backing and what is little more than moral support from us, turned them out. While we were in Tehran those same courageous Persians voted down the Russian oil concession 102 to 2. They know that their little army, only now beginning to pull itself together with the help of our tiny military mission would be impotent should Moscow decide to move to the Persian Gulf. But they have stood their ground.

It is of vital importance to the security of the United States, as well as to that of western Europe that the Iranians continue their courageous way. There are many reasons for this, but perhaps the most vital, until science gives us the formulas to unlock atomic energy for use in our economy, is and will be oil. Look at your map, and you will see the gateway Iran could be to Russia.

OIL

At the northern end of the Persian Gulf is the largest refinery in the world. Soviet troops could move down in short order across Persia on the very roads we built with the agreement of the Iranians to give to Russia the supplies with which she repulsed the Germans.

Just in the bend of the gulf lies the fascinating little land of Kuwait—very ancient. Under it is probably the greatest known oil deposit in the world. American concerns own one-half of the concession, and work had begun to go on apace when we were there.

Part way down the gulf lies the island of Bahrein where the British, as well as ourselves, have vital interests. On the mainland is Dhahran. Here the seemingly inexhaustible concessions are ours, and the friendship and understanding that has been built between us and His Very Powerful Majesty King ibn-Saud are making possible a development of the country that should be of great benefit to all the people. We saw the first rails laid on the ties of the railroad that will join together the principal cities. These in turn are to have water, sewage, and light. The engineers are ours, most of the labor is Arab, and for the first time in their lives they receive a living wage. For the first time, also, company schools make it possible to the native to learn a trade, to improve that knowledge and so earn a progressively better position. A hospital is being built and schools, and the palm huts have been replaced by little houses of cement and of brick.

Some of the oil from Bahrein and Dhahran goes to China—to India. During the war our Navy used practically all of the output of ARAMCO, and our ships still count upon fueling there. There is always a tanker at the dock, and there were half a dozen more waiting off shore the day we flew over to Ras Tanura—our ever-growing refinery north of Dhahran.

What if Moscow decided to move south? Yes, there is an airfield at Dhahran and a small American mission teaching a well-chosen group of Saudi Arabian lads how to run a commercial airfield. But could you stop a Soviet paratroop army with a camel corps and a few passenger planes?

Such a situation is not necessarily imminent, but it was our business to look at all these very grave possibilities.

PIPE LINES

Reaching only part of the way across this great peninsula, pipe lines move slowly toward Sidon on the eastern shores of the Mediterranean. You should fly over those deserts as we did. Like a great snake the pipe crawls slowly toward its destination, often covered over by the sands. Occasional small landing fields with a few flat huts make repairs and protection possible. But even the agreements for portions of the rest of those lines have not been ratified by the countries through which they must go. Will they be?

In Damascus I talked with the President several times, as well as with the Prime Minister and others in the Government. Each one told me that strong forces were working on the Parliament for refusal to ratify the agreement made with the oil companies many months ago. And we need that pipe line, friends.

IMPACT OF PARTITION

Let me repeat at this point that our job was to discover and to report on the explosive aspects of national and international movements. Whether there be justice or injustice in the partitioning of Palestine was not our business. But what was and is our business is to give the Congress and to the people of America as calmly objective a picture as possible of the results of the impact of the United States' decision to stand for partition.

We arrived in Jerusalem just at the time it was announced that the United States favored the majority report of the United Nations. It was a strange Jerusalem. Barbed wire thrown around the five separated areas, passes required everywhere, sirens that meant "stop where you are until the all clear," soldiers always in fours and armed. The tension was an experience in itself.

The effect of our announcement was amazing. Nobody was really pleased, not even the Jewish Agency. That was understandable because they have said so often that they would be satisfied with nothing less than a Palestine according to the Jews. Knowing this, the Arabs insisted that they could not believe there was any sincerity behind the Zionist agreement to the suggested partition plan.

We found our Consul General and his very able staff exceedingly well informed. We used their knowledge as background for our discussions and conferences with British, Jews, and Arabs; some of these talks were on the record, others not, but all of them were with people in positions of authority in their groups, though some of their voices have been silenced all too successfully.

It was particularly interesting to find that Creech-Jones' announcement of Britain's decision to withdraw from Palestine was met on every hand with complete incredulity. The High Commissioner Sir Alan Cunningham left no doubt as to its finality when I talked with him, and when later he went on the air. The immediate reaction was pleasure on the part of both Jews and Arabs, although when I discussed it later with the Jewish Agency I found a curious attitude that was most difficult to rationalize. Both groups were very positive that they could handle any violence that might occur should the final decision at Lake Success be for partition.

Let me give you briefly—for my time is short—the reactions and opinions given us, and I assure you it was never the opinion of isolated individuals or even of two of three that we wrote in our book.

As I said—no one was jubilant over that first announcement, and it was not only among the Arabs that we met violent opposition to the partition plan. Just as here and in many other countries, ardent Zionists protest most loudly. The Zionist-Revisionists (they expressed themselves in New York newspaper advertisements in September) are perhaps the most vocal opponents of the partition plan in Palestine. We were told by the authorities that they represent from 17 to 20 percent of the Jewish population. There are also groups of orthodox Jews who told us with an indescribable sadness of their grave concern lest the problems of establishing a Jewish state at this particular time, might become the greatest tragedy ever faced by Jewry.

And there are still others within both the Jewish and the Arab groups who have a deep certainty that Jews and Arabs could and should be able to work out their own salvation. They deeply resent the pressures from without that have brought discord amongst them. To these I have said that I hoped they would let nothing discourage them, but that they would continue to try to find ways to bring about an ultimate peace in order that the dark clouds that presently cover the attainment of a goal long in the hearts of many may be dissipated by unselfish desire and a deep understanding of the need of the world for peace.

I am saying nothing today of the dreams of the thousands upon thousands of Jews taught in their synagogues that they have been singled out by the Lord Jehovah from all mankind and given a particular little country. Nor have I time to speak of the tortured and homeless to whom the Promised Land is their only hope, whose problem has not been simplified by having been made a part of the Zionist plan. But the amazing growth of Tel Aviv to which so many have gone despite the terrible congestion and their own poverty, which is probably true of other cities such as Haifa, cannot be passed over unmentioned. Jerusalem, too, has changed unbelievably. The new wholly modern city has crawled up and down the little hills with incredible elasticity. The fact that all new structures must be of the native stone gives it an appearance of permanency.

I could talk many long minutes on these developments; but that was not my assignment and you have asked for a report.

So today I am giving you as much of a picture as I can of what the impact of the announcement of the American stand for partition was right at the moment and something of the implications as they may play a part in the security and the future of the United States and through us, of the western world.

POSSIBLE EFFECT UPON ARAB-AMERICAN COOPERATION

Let us look at our position quite coldly. As a result of our many conferences we came to the conclusion that the consensus of opinion of a very large majority of those with whom we talked was that a year ago we had the confidence and the friendship of every Arab country. A year ago they believed what they had learned of justice and democracy in the American colleges of the Near East into which they flocked at the end of Ottoman rule. A year ago they trusted us to uphold those doctrines against all comers.

Now? The shock of what is to them our defection, our departure from all they believed we stood for has confused them. They are bewildered by what they consider

our disloyalty not only to them but more seriously still to our own creed, to our own honor. They feel we have betrayed them not only materially, but morally and spiritually, as well.

Nor can they understand our gullibility, our ignorance of the ways of Moscow. His Majesty King Ibn Saud has and has had no illusions about the gangsters in the Kremlin. He sees the danger they present to all who believe that man is a child of God, not a tool of the state. He has watched the machinations of Uncle Joe as he has stretched his long hands out toward the eastern Mediterranean, pulling them back whenever they got slapped, but always reaching out again in some new direction. And now? There was little in our papers about the possibilities of the Russian stand during the first days of maneuvering at Lake Success—nothing to give the picture of the constant pushing and shoving behind the scenes, but definitely felt, to bring out a statement by the United States delegate. How well it was managed that Soviet agreement with America was interpreted as a splendid step toward better understanding. Was there a word said of what was accomplished in the sinister determination of Moscow to control the world? Let us consider the partition plan from that angle and quite dispassionately for a moment. There are two ways—and two ways only—to put it into effect. (1) By the agreement of both groups upon which it is really predicated. (2) By force. It is clearly apparent that the first method is out—and no thinking person can fail to see the implications and possible ramifications of the second. It will do no more than suggest what it would mean should the whole Moslem world of some 300,000,000 join in protest. Is it not important that we consider whether it has not become far more than a question of just Palestine—indeed one has little alternative if one is to face the explosive aspects from the standpoint of world peace and the battle that is on between the cold, merciless Kremlin and a God-fearing world.

RUSSIAN STRATEGY AT LAKE SUCCESS

Let us look at the Russian strategy at Lake Success beginning with the opening gun—the consummate skill of Gromyko's first speech.

"We had hoped that these two people would find a way to reconcile their difficulties * * * we have come most reluctantly to the conclusion * * * Russia stands unalterably"—and here is the heart of the matter—"for the right of all peoples to self-determination * * * for the right of an unhappy minority to withdraw from its association with a majority, the right to live unmolested in his own country, etc. etc."

Does this not make it immediately evident that Moscow has used the Palestine issue merely as a tool to establish within the United Nations the precedent of the right of a minority to separate from the majority and set up a separate state? You will see that by its action in this one instance the UN has sanctioned whatever Moscow has done or plans to do to instigate turmoil and revolt in every country where there are minorities.

Take the Azerbaijan matter, for example.

Look more closely at Kurdistan, and foothills of Mount Ararat, the most strategic land mass in eastern Asia. Once established as a satellite country and it is just an easy downhill walk to Kirkutz and the plains beyond.

And Soviet Armenia—how logical to bring those 7,000 square miles back to the fold—to collect the dispersed Armenians as they are doing, and bring them back to Kars and Ardahan. Why surely if after an interval of 2,000 years one group is reinstated in an area of 10,000 square miles, then another group dispersed but 30 years ago should be given the same rights.

It is this establishment of precedent which Moscow has at the moment successfully pulled off that holds within it more power for destruction than the atom bomb.

Of course courageous little Greece, in spite of all the pressures to which she was subjected, held firmly to her early determination to permit no such precedent to be established, for is not Macedonia upon the very brink?

POSSIBLE EFFECT UPON MARSHALL PLAN

By supporting the partition plan Moscow accomplishes another purpose definitely announced in Europe; the defeat of the so-called Marshall plan. How?

A large part of the rehabilitation plan for Europe is predicated upon the supplying of some 15,000,000 tons of oil annually from the Near East. At the moment the output is about half that amount—but the contemplated pipe lines and new developments could readily double the amount. If this is not brought about—if in addition the 7,500,000 tons are cut off, where is the oil to come from?

Our own oil supplies are about 230,000,000 tons a year, and we know that we must conserve rather than to expand if we are to build security at home. So it is of the utmost importance that the pipe lines be laid and that the output be available to Europe.

Could tankers bring the oil around the long way? It has been roughly estimated that 300 tankers would be required to give the five 8,000-ton ships a day that would be required—the minimum time for the turn-around being about 2 months. To build these on top priorities with no time out for strikes would take at least a year—and very roughly would cost from $150,000,000 to $200,000,000—a small sum perhaps as it relates to the possible 16 billions suggested for a 5-year rehabilitation program—but

Under such conditions the pipe lines loom large in the Marshall plan. And Russia has maneuvered the United Nations into a position where—if no further considerations be given—the precedent of minority withdrawals has been established and underwritten. The immediate result is clearly evident. The Near East is threatening to explode over a plan whose possible implementation has in it explosive elements which might easily ignite not just the Near East but all the world. And who benefits? Moscow and the godless Communist ideology.

Whose will be the hand that made all this possible? Where does that put us, friends, in this great battle that is on between those who believe in God and those who defy Him? Remember that the Arab also is a devout believer. Has it not become a question of the future of our world? Will the men in the Kremlin be able to continue to play their cards as successfully as they have on the eastern coast of the Mediterranean Sea? Shall we continue in our blindness and keep on giving them one strategic spot after another even as we have now helped the establishment of the one precedent Moscow needs to do legitimately what she has so far accomplished without sanction?

RESPONSIBILITY FOR THE FUTURE

That is an unpleasant picture, isn't it? I'm wondering if we have the courage to look at it from every possible angle, facing the worst that could happen, and then say to ourselves: Even now this need not be. Even now those responsible may use a greater wisdom than the leaders have shown. The very fact that neither Arab nor Jew is ready, really, to use force means that time may bring cooler judgments to bear among those seemingly the most involved. Once the British have withdrawn and these two contenders are faced up with the full responsibility for their own future, isn't it still possible that those of both groups who have long felt a peaceful way could be found if only the leaders could be forced to abdicate from their positions of fanatic immovableness, might have the courage and the strength to win through to peace.

Isn't it further possible that when the United Nations Security Council considers methods of implementing the decision of the Assembly, as it must automatically do, they will have to face up realistically to the shattering results of Russian strategy? Isn't it conceivable that at that point, with the peace of the world at stake, some interval procedure may be worked out which would give time for further consideration for all that is involved?

In giving you this dispassionate objective picture of a part at least of the explosive aspects of the present situation in the Near East, I am placing upon each one of you, Jew, Moslem, and Christian, a very heavy responsibility. I believe that it is of infinite importance that we go forward from this moment with a deep and new-found humility, asking that we may see more clearly in the darkness that surrounds us and that we may use all our strength, all our courage, all our energies to protect and uphold the spiritual essence that is freedom, that is America.

Upon us as believers in the spiritual realities, upon us as Americans rests the impelling need to look into the implications of these world-shaking decisions with a deeper responsibility for the safety and security of this our country in a world aflame with passion, with anger, with envy and with greed. Not that America shall be strong for the sake of strength, but rather that her strength may be there to be used by the great forces of the Eternal God to build justice and mercy that in the end there may indeed be light.

Economic and Social Implication of Modern Food Science as Exemplified in Multipurpose Food for Famine Emergency Relief Feeding

EXTENSION OF REMARKS

OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, December 15, 1947

Mr. POULSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert this program put out by the Meals for Millions Foundation. I definitely do not believe that this is a fantastic dream nor do I believe it an impossiblity. Mr. Clifford E. Clinton, the foundation's president, is a successful and reputable businessman, one of the leading restaurateurs in Los Angeles. The food described may not be palatable but it will save lives, and that is what we are interested in.

The program follows:

ECONOMIC AND SOCIAL IMPLICATIONS OF MODERN FOOD SCIENCE AS EXEMPLIFIED IN MULTIPURPOSE FOOD FOR FAMINE EMERGENCY RELIEF FEEDING

(By Clifford E. Clinton, president, Meals for Millions Foundation)

FOREWORD

As the first permanent organized voluntary citizens effort dedicated to the prevention of starvation, the Meals for Millions Foundation was established last fall to develop a new approach to an old problem. The foundation seeks to focus public attention on the fact that recurrent mass starvation is no longer inevitable and that malnutrition is preventable through the application of modern food science and technological knowledge.

The foundation is neither interested nor engaged in the commercial distribution of

food. It is a nonprofit organization. No one connected with the foundation is financially interested in multipurpose food. The foundation merely utilizes multipurpose food in its program as the first scientifically produced food to provide maximum nutrition at minimum cost.

During the past year the foundation has demonstrated that its objectives are practical and can be quickly achieved to the degree that public interest can be aroused.

It has accumulated evidence that adequate food for starving people can be supplied in practically unlimited quantity, within a relatively short period, without depriving well-fed Americans of any item of their accustomed food. It has also demonstrated that its program is one that arouses public enthusiasm.

The present world food emergency imposes on all citizens the obligation to offer to national leaders whatever information and experience they may possess that may contribute to the solution of a world problem that affects us all. Therefore, on behalf of the Meals for Millions Foundation, I submit the following memorandum:

Any program for the fulfillment of America's obligation to a hungry world is enmeshed with serious problems of political, social, and economic importance, as well as humanitarian considerations—

1. To the hungry millions facing the prospect of starvation, economic prostration, and civil disturbance;

2. To well-fed nations of the world such as ours, whose normal resources are great, though inadequate for the task of feeding the world without risks of incurring economic disruptions or catastrophe.

The ideal policy must be one, therefore, that will preserve our willingness and our ability to help over such period as may be necessary, to enable those now dependent to become independent and self-sustaining.

We recognize that there are several possible approaches for both immediate and long-term aid in the foreign food crisis.

A. CONSERVATION AND INCREASED PRODUCTION OF TRADITIONAL FOODS

One immediate approach is to conserve our normal food resources by all the devices being employed by the recently created Citizens' Food Committee. The corollary to this approach is to stimulate maximum world production of traditional foods and of commodities and services which can be exchanged for food.

We must be alert, however, to the fact that if we save too little, produce too little, and export too much, the result can be distortion of our own food economy, disastrous inflation, and consequent national preoccupation with our own internal difficulties, which will preclude effective attention to and solution of the world food problem.

Moreover, even within the margin of our own security, we may soon become discouraged if, with all our sacrifice, we do not achieve rapid rehabilitation and reconstruction abroad. We can take grains and other foods from the domestic market in such quantities as to raise prices at home, and despite this sacrifice, still fail to bring to undernourished people those nutritive essentials necessary to rebuild their wasted bodies and restore their incentive, hope, and ambition, which are all so necessary if these people are to become self-sustaining, and able, as well as willing, to undertake the tasks of reconstruction.

The problem, therefore, is not only that of filling empty stomachs. It is also the problem of rebuilding wasted bodies. It is the problem of synchronizing relief feeding with the requirements of rehabilitation and reconstruction.

B. PRODUCTION OF NEW FOODS

The purpose of this memorandum is to present another scientific approach, which, if properly supported and extended, can, we believe, be of revolutionary significance, and revolutionary for the world's good.

There are many new foods on the scientific horizon which can add to the world's present food supply new, cheap, and nourishing foods developed from many sources not currently utilized for human food. Multipurpose food is the first of these pioneer foods to be actually produced, tested, and exported in a form acceptable to the hungry people of the world.

About 4,000,000 meals of MPF have gone overseas into 21 countries through 32 national relief agencies since the formation of the Foundation. Multipurpose food utilizes the soybean, a vegetable protein carrier of high potency. It is palatable, nutritious, and acceptable. Two ounces (dry weight) of this food, cooked for 10 minutes with four parts of water, make an 8-ounce meal which is sustaining, filling, satisfying, appetizing, and has the approximate nutritive value of a meal of beef, potatoes, peas, and milk. It violates no dietary precept. Its current cost of 3 cents a meal could be further reduced with planned, quantity production.

Multipurpose food is a byproduct. It utilizes the residue of soybean left after the extraction of the oil for industrial purposes. Its present use is for plastic manufacture, stock feeding, fertilizer, etc. It is available in great quantities for human consumption through a new process which makes it palatable. As a protein food, it provides in cheap form those nutritive essentials commonly consumed in scarce and expensive meat, milk, and eggs. Fortified with essential minerals and vitamins in cheap, abundant, synthetic form, it supplies precisely those nutritive essentials usually lacking in the diets of the world's hungry people.

No other single food, regardless of cost, contains all these essentials. It is the lack of proteins, vitamins, minerals, that prevents many relief diets, based on cereals and vegetables, from rehabilitating hungry people to the point where they are self-sustaining and have a sense of well-being and incentive to do a good day's work.

Multipurpose food, therefore, can be used to supplement and extend available grains and other foods made available through our export and conservation program. It makes it possible for the consumer to obtain maximum nutritional efficiency from such foods as he is already able to obtain. MPF is versatile, fits into any food program, and acquires the taste of foods with which it is blended. It can be shipped in one-tenth the space of other foods, and keeps indefinitely.

The use of this food, and such similar foods as may be developed, permits Americans to aid in the prevention of malnutrition and starvation abroad, in accordance with our acknowledged obligation and intelligent self-interest, without disaster to our domestic food economy.

A THREE-POINT PROGRAM

A three-point program to meet the present emergency and prevent recurrent food shortages is suggested herewith:

1. Emergency famine relief! This would involve the solicitation of funds from citizens, as well as the contribution of Government aid. This program would operate through a committee of food experts, food scientists, and expediters. This committee would develop, and utilize, foods not heretofore utilized, such as the soy products.

The American soy crop, with planning, could provide up to 180,000,000 meals daily. While production in significant volume could be stimulated immediately to aid in meeting the problem of the coming winter, the full effect of the program would be felt after the current crop year, when agricultural planning for extended soy planting could attain a yield which would provide for foreign aid as well as necessary domestic allocations for accustomed needs.

Use of the soy crop in such increased amounts for food purposes would greatly expand American production of vegetable oils since, in extracting the protein grit from the soy, much of the oil is drained off. Abundance of this oil would be reflected in lessened pressures on the prices of articles for domestic consumption, such as margarine, soap, etc., which utilize vegetable oils. It would also provide additional oil for export.

Aside from its nutritive values, the extent to which multipurpose foods supplants the export of other foods, such as wheat, will be reflected in reduced pressure on the prices of these domestic foods.

Multipurpose food, therefore, presents the opportunity to attack high food prices at home by producing a food more suitable for relief abroad. Our relief program can become a counterinflationary weapon.

Multipurpose food possesses another distinct advantage from the standpoint of national policy. It is identifiable as American aid wherever it is used. Every package is already so marked. It is distinct from any other food. This is an advantage not possessed by grains and other bulk foods.

Multipurpose food is an incentive food in a double sense. While it supplies those nutritive essentials which build a sense of well-being in the human body, it is still an emergency food. While giving men the ability to do a day's work, it will stimulate the desire to make the traditional, appetizing combinations more plentiful by making the day's work count in renewed production of those foods. Multipurpose food is not a deluxe food. It will, however, sustain people who desire to work to restore their normal food economy as quickly as possible. It will enable farmers, miners, factory workers, professional men, and office workers to get ahead with their tasks without undue exhaustion * * * but it will in no way minimize their desire to obtain more diversified food as soon as possible.

Multipurpose food for emergency relief feeding can be dramatized in such a way as to stimulate fund raising from every citizen. Every family can afford to invite an unseen, hungry guest to dinner at a cost of 3 cents. This, tied in with the conservation drive, would balance the negative appeal to eat less with a positive appeal to give the price of a postage stamp regularly at each meal to feed someone who is hungry. The volume of contributions received by the foundation to date demonstrates the power of this appeal.

2. Governmental food purchases and production planning: The emergency relief feeding program discussed above should of course, be synchronized and coordinated with the immediate and long-range food production plans already developed by governments and intergovernmental agencies, such as the Food and Agricultural Organization of the United Nations. Such plans look to the removal of trade barriers and the interchange of foods to balance the economies of various shortage areas and increase their production through international cooperation.

3. Agricultural- and economic-aid plan: Emergency feeding aid and governmental assistance in food purchases as suggested, could be extended to countries which enter into agreements to adopt approved procedures for bringing themselves to a plan of agricultural and economic self-sufficiency.

Such a program of cooperation would incorporate the best available technological and scientific advice for production in field and factory.

For example: Many countries could, within two crop periods, become self-sufficient in food production for the emergency needs of their areas. Soy, or its nutritive equivalent, could be grown and processed to produce sufficient food to provide for basic nutritive needs. This would involve technical instruction to these areas as to the production,

processing, and blending of the food elements required in order to make an inexpensive, abundant food, nutritionally adequate.

A similar procedure could be adopted in those areas, such as India, China, and the Near East which have never had an adequate food production and technology. A cooperative program should be set up to provide the farm and factory facilities whereby these deficiency nations could begin the production of a food which would be within the purchasing power of the Hindu untouchable, the Egyptian fellah, the Chinese coolie.

CONCLUSION

To accomplish the foregoing, the program should also provide adequate funds for continued research and development of those foods which, for the first time in history, will make it possible to prevent famine and malnutrition throughout most of the world and bring nourishing food within the reach of impoverished peoples.

Only then will people have the strength to raise their own standards of living and look forward to a hopeful, peaceful, productive, and self-sustaining future.

Food-Sharing Plan

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, December 15, 1947

Mr. POULSON. Mr. Speaker, the District of Columbia League of Republican Women has devised a food-sharing plan which in my opinion has much to commend it for widespread adoption throughout the United States as an effective way of supplementing the Government's foreign-aid program. The plan was devised by a food-conservation committee under the chairmanship of a young housewife and mother of two infant children, Mrs. Roy E. James. As one would expect, the plan is simple and personal. It is what one would expect from the mothers of America.

Under the plan to which I refer it is suggested that the boss of the American kitchen, so to speak, make a pledge to restrict the use of fats and grains in her own household and to conserve food by one or more of the following very simple methods:

First. Exclude one whole course from the day's heaviest meal.

Second. Cut out one vegetable or meat serving from the main course of the day's heaviest meal.

Third. Establish one "fast" day a week and ask healthy and ablebodied members of the family either to forego one or more meals entirely or to eat only a "fast" meal in lieu of a regular one.

Fourth. Take an unseen foreign friend along to the grocery store and put into the "share" bank an amount equal to the cost of the food you would have bought if he had stayed for dinner.

Fifth. Deduct a reasonable amount of cash from the weekly food budget and put it into the "share" bank.

The food-sharing plan which Mrs. James and her committee have devised is nothing more than age-old charity and neighborliness in its simplest form. I hope that by placing it in the RECORD it will come to the attention of women's organizations throughout the country. The mothers and housewives of America may find in this plan the suggestion by which they can help the Nation to share its plenty with those of our foreign friends who are in need.

Taft-Hartley Act and How It Works

EXTENSION OF REMARKS
OF
HON. AUGUST H. ANDRESEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, December 15, 1947

Mr. AUGUST H. ANDRESEN. Mr. Speaker, since much has been said about the Taft-Hartley Act in the press and over the radio, the time has come for the rank and file of workers, as well as employers to learn how the law works out in actual practice.

Mr. E. F. Johnson of the E. F. Johnson Co., of Waseca, Minn., one of the leading manufacturers of the Northwest, writes:

The Taft-Hartley law could well be described as an act to protect the rights of labor. It could be enthusiastically acclaimed, if its proponents were as vocal as its enemies, as a guarantee of the freedom of individual employees.

I am very well acquainted with Mr. Johnson and his associates in the E. F. Johnson Co. I also know many of the employees of this company. They are all fine Americans. They work together to secure maximum production of the highest quality of precision-made radio equipment and other products. This company, both management and workers did an outstanding job during the war. I know that every Member of the House will benefit from reading Mr. Johnson's analysis of the Taft-Hartley Act and how this law works out in his company.

WHAT'S IN TAFT-HARTLEY BILL THAT'S CAUSE FOR ALARM AMONG UNIONS?—SURVEY SHOWS THAT UNION MEMBERS FAVOR PROVISIONS OF THE ACT—LAW EXPECTED TO MAKE NO DIFFERENCE LOCALLY

Just why is all this fuss about the new Labor-Management Relations Act of 1947, commonly called the Taft-Hartley law? Is there some calamity hanging over the heads of all workers, especially union members? What is going to happen to Johnson employees in particular, and to their relations with the company?

Well, from where I sit, there appears no reason to expect any change whatever, in any matters affecting people in this plant. Now, as always, good relations are determined not by law but by the good intentions and sincere efforts of all participants.

The conditions leading to trouble elsewhere, necessitating legislation to protect the rights of the public and the individual worker as well as equalizing the responsibilities and rights of management and unions, just have not existed here. During all of the period of our A. F. of L. union contracts, neither management nor union has had to assert its legal rights in conflict with the other. Differences, of course, have arisen, but have been settled peaceably by the process of true collective bargaining.

Credit for that condition should be shared jointly by all of us, but particularly by the management and union representatives who have honestly endeavored to get along. They are, for the company, Bernie Hess and Les Loomer, and for the union, Business Agents Bill Foard and Jack Bray, and Shop Steward Harold Webber. This company has no intention of using the new law as an excuse for stirring up trouble. I have much confidence that the union members and representatives have the same motives. If this confidence is warranted, no one need expect any adverse effect from the enactment of the law.

What, then, is the reason for all the denunciation the Taft-Hartley Act and its supporters have been getting from labor officials? Is there the remotest reason for thinking it will enslave labor? Can it possibly work to wreck unionism? These and other similar claims have filled the air and the press for many months. If they are valid, there's reason to be disturbed; if not they should be challenged, and it's up to employers in the absence of much other defense to put the facts truthfully before their employees and the public.

An interesting poll of public opinion was presented in the Minneapolis Sunday Tribune of September 21, being the results of a national survey by the Opinion Research Corp. to determine employees' attitude on the act. Fifty-four percent of all employees and 64 percent of union members disapproved of the act. However, when questioned as to their views on 10 individual provisions in the law, every such provision was strongly approved by from 86 percent to 56 percent of all employees which included union members. All but one such provision was approved by from 85 percent to 50 percent of union members, only 48 percent of them favoring outlawing the closed shop.

Similar results have been obtained in many other opinion surveys. If we think we don't want something, but want everything in it, isn't it likely that we have misunderstood the proposition? Perhaps the campaign to discredit the Taft-Hartley law has convinced a majority of workers that it must be bad, even if it has much in its favor. Well, in such a case we have to examine the whole question—to see just what is in the law, and especially to look for any hidden jokers.

It's pretty tough reading to study the law as written, but we have it for anyone who wishes to do that. Many summaries have been prepared by supposedly disinterested persons, and they agree pretty well, so I've tried to summarize the summaries.

In actual fact, the Taft-Hartley law could well be described as an act to protect the rights of labor. It could be enthusiastically acclaimed, if its proponents were as vocal as its enemies, as a guarantee of the freedom of individual employees.

A very large part of the law is devoted to provisions that prevent practices common in some unions which are detrimental to members collectively and individually. Among these provisions are: prohibitions of secondary boycotts and jurisdictional strikes, which often resulted in large-scale unemployment even though there were no labor disputes with the employers so involved; requiring that unions as well as employers refrain from unfair labor practices, such as coercion, or charging excessive initiation fees; regulating the expenditure of union funds obtained from members dues, and requiring financial reports; altering the structure and procedure of the National Labor Relations Board so that it can work more effectively in the interest of the individual and with equal fairness to employer and union; prohibiting the closed shop under which an individual could be denied a job; limiting the reasons for which a member could be expelled from a union thus requiring loss of his job in a union shop (or maintenance of membership contract such as we have). Every provision designed to protect employees in the old Wagner Act is continued.

The above and still other similar provisions have only one reason, the protection of individual rights, even though they may restrict practices formerly employed by some (by no means all) unions. They are definitely gains for the whole of labor, although definitely a curb on certain excesses that had become so common in many places. So far as I know these things have not been issues here, consequently we may never be aware of the change in the law.

The rights of the general public have been recognized. Strikes in large public-service types of industries cannot now be hastily called to the immense detriment of all people. They are not prohibited, but steps must be taken to give every possible chance of settlement without strikes. Mediation procedure is strengthened in an effort to avoid strikes. Federal Government employees may not strike. We've all been affected by labor difficulties in the past, in which we had no direct part whatever, and the above and other provisions are designed to reduce loss and even suffering on the part of the public. If it does, we all benefit equally.

Employers do get some concessions. They have greater freedom of expression in labor matters, no longer being subject to prosecution so long as they avoid threats or promises of favors. They can now petition for an election to determine the proper bargaining agent for employees. They can now sue unions for breaking contracts just as unions could previously sue them (but the individual union member still is not jeopardized). That looks fair enough, and nothing in those provisions should be any cause for concern.

Union officials in certain capacities must sign affidavits certifying they are not Communists. International unions do not have a preferred status over independents. Unions can now be found guilty of unfair labor practices. They are prohibited, as are corporations, from engaging in certain political activities. Certainly these do not appear to be excessive restrictions.

That, as I see it, is the essence of the Taft-Hartley Act. It has been treated this fully not because we may be directly involved, but because it is a matter of great national importance which so far has been inadequately presented. Instead of loud denunciation, and personal vilification of its sponsors, which seems to be the chief methods of attack, it should have calm judgment and full appraisal. That should indicate to fair-minded people that it is a fair act and deserves a fair chance to succeed.

E. F. JOHNSON.

Postage Rates on Gift Packages to Foreign Countries

EXTENSION OF REMARKS

OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, December 15, 1947

Mr. BLATNIK. Mr. Speaker, I have today introduced a bill to reduce postage rates to a token payment for gift packages of food, clothing, and medicines to various foreign countries. This bill resembles the measure introduced in the other body by several of its most distinguished Members—Mr. LANGER, Mr. THYE, Mr. BUTLER, Mr. GREEN, Mr. MCMAHON, and Mr. O'CONOR—and is similar in principle to several House measures which have been sponsored by my distinguished colleagues—Mr. POTTS, Mr. YOUNGBLOOD, Mr. AUGUST H. ANDRESEN of Minnesota, and Mr. Gleason. During the House debate last week, the able gentleman from Michigan, and my very good friend [Mr. SADOWSKI], sponsored this proposal in the form of an amendment to the European emergency relief bill, and presented in a most logical manner the reasons for its adoption.

My bill is a simple one, and embraces the following two major provisions:

One, the bill provides that postage rates on gift packages containing food, clothing, and medicines mailed by individuals in this country shall be reduced by at least 75 percent, or allowed to go postage free at the discretion of the United States Post Office Department, when addressed to individuals or accredited relief organizations in the countries of Europe (including Eire, Great Britain, and Iceland, and China and Korea.

And two, the United States Post Office Department is reimbursed for the loss of postage revenue resulting from the reduction, and for the cost of handling said relief packages, from relief funds already appropriated by Congress for foreign countries.

The justifications for this measure are obvious. During the last few years, the common people of America, in the spirit of Christian charity and humanitarianism, have been giving generously to the needy everywhere. Churches and religious organizations—Catholic, Protestant, and Jewish—and other private relief organizations have been raising money and collecting food and other supplies for the suffering people of the world.

During the fiscal year of 1947, over 317,000,000 pounds of relief supplies have been sent by individuals and private organizations to Europe alone. An additional 137,000,000 pounds of such supplies have been mailed since last July, which makes a total of 454,000,000 pounds of private relief for the last 17 months. These relief packages, valued at an amount of at least $50,000,000, have not cost the taxpayer one single cent, but represent the voluntary contributions of individual citizens.

Unfortunately, the flow of private relief to Europe and Asia has been restricted by the heavy postal rates on relief packages. It costs 14 cents per pound to send these packages, which means that postage is often more than the cost of the contents. Total postage payments on private relief shipments to Europe for the 1947 fiscal year amounted to $44,447,265.38, and nearly $20,000,000 have been paid out for the same purpose since July 1.

Mr. Speaker, the generous American people have contributed voluntarily well over $115 millions in relief packages and postal charges to the hungry people of Europe. This is genuine Christian charity, motivated by real friendship, and it deserves to be encouraged. The reduction of postal rates, or permission to send these packages postage free, would stimulate and encourage the sending of private relief to Europe. The Post Office Department estimates that the effect of this bill would double the volume of private relief shipments. In other words, this measure would provide over $100 millions of private relief per year to supplement the Government relief program which we have considered.

In my opinion, private relief of this kind creates more good will for America among the peoples of the world than any Government relief program that we may enact. The recipients know that there are no political strings attached to these packages, nor political considerations involved, but that they represent contributions by common people who have a real concept of relief.

Motivated by the belief that this bill will help feed and clothe thousands of destitute people, and will help create international good will, I submit this measure for consideration by the Congress.

Radio Address to My Constituents

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, December 15, 1947

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me over Station WNBF on December 13, 1947:

Dear friends of the Triple Cities and my congressional district, as the season of peace on earth and good will to men approaches, I want to propose something for the benefit of a forgotten group which, although relatively small, is nevertheless a large number when considered in round figures.

I speak to those men who, during the recent war, were punished for minor infractions against military discipline and who lost the opportunity thereby for honorable discharge.

Most of the millions of our boys who came out of that struggle terminated their services without blemish or taint. Yet, there are many against whom still rest charges of desertion, going over the hill, eluding the guard and a dozen other lesser breaches of Army deportment.

Because of this misbehavior, most men did not receive an honorable discharge. Yet they put in several years, in practically every case, of military service, much of it overseas.

I am not referring to extreme examples where major crimes against society more than justified the heavy punishments meted out by Army authorities. I would not defend men in this category because it is obvious they deserved what they got.

But so many boys appealed to me to save them from the threats of court-martial and dire consequences because they had jumped camp to reach a dying mother's bedside or to visit some other relative seriously ill.

So many young men appealed for my assistance in helping them wipe off an ugly mark from their records by trying to obtain an honorable discharge when it had been denied them.

It is all the more unfortunate when you consider most of these offenders were mere boys. However, now they are men and must face the grim world with two strikes against them whenever they apply for jobs, either of a public nature or in private business.

It is a pretty desperate employer who will hire a man who cannot produce an honorable release from the fighting forces. The door is barred in nearly every instance to

those upon whom there remains a black mark of the type I am describing.

Every time some offender writes to me for help as a last resort, I think of the great act Abraham Lincoln did while the Civil War was raging.

A frantic mother gained the audience of the President and begged him to pardon her son, just about to be shot for going to sleep on guard duty.

This boy had been raised on a farm, accustomed to going to bed early and working hard all day. Natural sleep overtook him while he was a sentry but the military tribunal sentenced him to execution.

Lincoln remembered his own youth and his hard early years. He recalled his own shortcomings.

Reassuring this pleading mother, Lincoln wrote out a pardon which set the young man free and saved him from the firing squad.

Now that the war is over, I believe the War Department can well afford to look into a great number of cases with transgressions far less glaring than sleeping on sentry duty. I think all these incidents deserve a general review. Wherever the old order can be changed or the penalty made lighter, I think serious consideration should be given to this end.

Let us not deprive these people forever of the chance to make their name in peacetime pursuits. Such a barrier placed in their way constitutes a handicap most of them cannot surmount.

Therefore, I say to the military and naval authorities of our country, be generous with these young men, let the spirit of Christmas pervade your minds and hearts and after careful review, make it possible for as many of these minor military offenders to obtain the honorable discharges they so zealously seek and are in such dire need of receiving.

Thank you.

British Round Recovery Corner and Optimism Pervades Islands

EXTENSION OF REMARKS
OF
HON. HUBERT S. ELLIS
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Monday, December 15, 1947

Mr. ELLIS. Mr. Speaker, the following item by Glenn Williams should be good news to everyone, especially to the bleeding hearts who have been pleading that the world is coming to an end and that we should give the United States Treasury to Europe. The item follows:

BRITISH ROUND RECOVERY CORNER AND OPTIMISM PERVADES ISLANDS

(By Glenn Williams)

LONDON, December 13.—Increasing evidence that Britain is surely beating back national poverty has brought a new surge of optimism to these islands.

Deputy Prime Minister Herbert Morrison declared in a speech prepared for nation-wide broadcast tonight that Britain had rounded the recovery corner.

"Let's look at the facts and figures and be proud of ourselves as a people," he said.

"I am the last to start cheering before the game is won," he added, "but it's not going too badly."

The new optimism has spread even to the office of Sir Stafford Cripps, dour boss of Britain's economics and finance, where a spokesman said "things are on the up and up."

The optimism is as clear a change of spirit as was the tiredness and let-down feeling that followed the war. Good news now is hailed in headlines that for months have told only of ration cuts and one crisis after another.

The most spectacular bright spot is in coal production, which has risen above safety levels and allowed renewal of exports. Even the black spots in the industrial picture—a severe shortage of freight cars, comparatively low textile production and the foreign trade deficit—are brightening a little.

European Scrap Supplies

EXTENSION OF REMARKS
OF
HON. LINDLEY BECKWORTH
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, December 15, 1947

Mr. BECKWORTH. Mr. Speaker, I desire to include in the CONGRESSIONAL RECORD some letters I have recently received concerning scrap in Europe:

DEPARTMENT OF STATE,
Washington, December 3, 1947.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

MY DEAR MR. BECKWORTH: This is in reply to your letter of November 20, 1947, in which you forward the suggestion that iron and steel scrap be brought back to this country from Europe by the boats used to transport foreign aid materials.

The possibility of obtaining European scrap as return cargo has been a subject of widespread interest in recent weeks. Investigation has shown, however, that western Europe is suffering from a shortage of scrap more serious than our own. In fact, the report of the Committee of European Economic Cooperation estimates that a deficit in European scrap supplies of at least one and one-half million tons will exist in each year of the period 1948–51.

Although the potential supply of scrap in western Europe may be large, much of it is in inaccessible locations, and much of it is rubble scrap, and the collection and transportation of such materials involve extreme difficulties in the present state of the European economy. In Germany, which is presumed to be the richest source of European scrap, the obstacles to the organization of a successful collection program are particularly serious. In the meantime, presently available supplies of steel scrap in western Europe are inadequate for local requirements. In certain areas, notably Italy and Austria, stocks are so low that there is danger of an enforced reduction of even the present low levels of production and employment in the steelmaking and fabricating industries of these countries. There are considerable quantities of United States Army scrap in overseas theaters which might be used to alleviate this situation, but a present directive requires that this material be sold only for return to this country.

You will understand that in these circumstances the Department does not wish at the present time to press for shipment of indigenous scrap from Europe to this country. If, at a later date, we ascertain that there is surplus scrap abroad which could be shipped to the United States without such serious detriment to the European economy, consideration of a change of policy will of course be in order.

Sincerely yours,

FLORENCE KIRLIN,
Special Assistant
(For the counselor).

MUNITIONS BOARD,
NATIONAL MILITARY ESTABLISHMENT,
Washington, D. C., December 11, 1947.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR MR. BECKWORTH: Your very interesting note of November 20, 1947, on the subject of iron and steel scrap, which was addressed to Secretary Forrestal, has been referred to the Munitions Board for reply.

For some time the Army, Navy, and Air Force have been alert to the critical shortage of iron and steel scrap. However, in the sale of scrap the authority of the service is limited to that generated from service-owned supplies and equipment. Nevertheless, to assist in alleviating this shortage, aggressive action has been taken to effect maximum return of these critical materials to industrial channels. This action has included an "as is, where as" sales policy of overseas scrap. Under this policy the purchaser is required to return the scrap to the United States. In this manner large quantities of scrap generated by the military have been made available for domestic use.

The broader aspects of this problem, such as the export of iron and steel scrap to Europe under a foreign-aid plan, as well as the availability of manpower and transportation for the collection and preparation of scrap in Europe, should be considered in evaluating the proposal you suggest in your note of November 20, 1947. These are factors, however, involved in viewing the problem from the standpoint of the over-all of national economy and are not necessarily the factors which are of direct concern to the military services.

Your suggestion is greatly appreciated; however, it is felt that it should be given consideration by other departments of the Government more directly concerned with over-all national economy, such as the Executive Committee on Economic Foreign Policy.

Sincerely yours,

T. J. HARGRAVE, *Chairman.*

UNITED STATES LINES,
New York, N. Y., December 12, 1947.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN BECKWORTH: Referring to your letter of December 10, the United States Lines, through our European representatives, have been working for months on the potential movement of scrap iron from United States and British zones of Germany to the United States.

The processing of the scrap for transportation and moving to the ports for loading on ships has been the bottleneck, but these are being overcome and it is hoped before long there will be a steady flow to the ports.

The vessels of the United States Lines and those of the other United States flag lines maintaining regular service to and from German and other continental European ports, are in position to lift very substantial tonnages of scrap as the quantity of other cargo offering is small.

If there is any further information you would like to have please let us know.

Cordially yours,

P. E. MCINTYRE,
General Freight Traffic Manager.

MOORE-MCCORMACK LINES, INC.,
New York, N. Y., December 12, 1947.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR MR. BECKWORTH: I have your memorandum of December 10, with regard to ships moving scrap iron from Europe and I am happy that you called this to our attention.

We operate a service to Scandinavian and Baltic countries termed "American Scantic Line" and have weekly ships in both directions calling at Norway, Sweden, Denmark, Gdynia in Poland, and also Finland.

Yes, indeed; we could handle scrap iron from Baltic German ports but, unfortunately, at this time this section is under the control of the Russians. We have had no inquiries as to movement of scrap iron from Scandinavia nor from Poland; however, we have our own man in these fields and if any scrap is offered would be mighty glad to handle it. Also, if extra ships were required to handle scrap iron from German ports, such as Hamburg, or Bremen, we undoubtedly could supply some of them.

Generally speaking, scrap iron is difficult and slow cargo to handle, however, if large tonnages were available shippers could no doubt arrange wherein the material is pressed in rather uniform blocks or packages, which would permit quicker handling in loading and discharging and necessarily a lower freight rate than if it were just shipped loose.

Sincerely yours,

ALBERT V. MOORE, *President.*

Public Housing Administration

EXTENSION OF REMARKS
OF

HON. FOREST A. HARNESS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, December 15, 1947

Mr. HARNESS of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following memorandum:

MEMORANDUM

To: Hon. FOREST A. HARNESS, chairman.
From: Frank T. Bow, general counsel.
Subject: Public Housing Administration (formerly FPHA).

At the direction of the chairman, your counsel proceeded to San Diego, Calif., by air on October 9, 1947, arriving in San Diego at 10:30 a. m., October 10. The purpose of the investigation was to determine whether or not the Public Housing Authority in the San Diego region had indulged in improper practices in relation to its publicity and propaganda, complaints having been received by the subcommittee which would indicate propaganda had been used for political purposes, as well as the union activities of the United Public Workers—CIO, Local 263. In the course of the brief investigation made by your counsel, certain matters came to his attention which he deemed to be irregular and should undoubtedly be the subject of further and intensive investigation.

In the consideration of the subjects of the following report, it should be borne in mind that your counsel was limited in time and facilities and of necessity, therefore, this report is directed to subjects and leads for investigation and is not complete in all details. To properly complete an investigation of the subjects referred to, competent auditors, as well as investigators, should be assigned.

I submit to you for your consideration the following subjects:

POLITICAL ACTIVITY OF FEDERAL EMPLOYEES

Several days before the election of 1946, political posters appeared in prominent places throughout every housing project in the San Diego area, particularly at bus stops and especially in front of management offices. These posters were captioned "Save your home" and contained alleged statements of certain candidates which were unfavorable to the Public Housing groups. Statements were made as direct quotes, and investigation proves the quotations to be inaccurate.

All housing tenants have the first 5 days of each month to pay their rent, and approximately 78 percent of the tenants do so on the fifth day, which was the day before the Federal election. Signs were placed prominently around the management offices, with the obvious intent to impress the tenants when paying their rents.

There is attached to this report and marked for identification exhibits — and —, which show the posters in front of the management office at Bay View Terrace in the San Diego area. There is also attached and marked as exhibit —, one of the original posters taken from one of the housing projects in San Diego.

Your counsel believes this to be not only improper propaganda, but a violation of the civil-service regulations which prohibit "helping to get out the voters on registration or election days."

A further activity of a similar nature to the one above referred to by the Federal employees in the Public Housing Administration was the circulation of petitions to abolish cross filing in the State of California. These petitions were handed out during a Public Housing Administration meeting, and your counsel is informed that at the request of Mr. John Arvin, former regional director of the project, they were circulated by two Public Housing officials on Government time and on the Housing properties. Signatures of many of the employees of the Public Housing Administration appear on the petitions.

There is attached hereto and marked "Exhibit —," photostatic copies of the petition, together with the Civil Service Commission's warning to Federal employees. Particular attention is directed to the language of the warning, declaring that "initiating or circulating political petitions, including nomination petitions" is prohibited.

Your counsel was informed that considerable political activity was inspired by officials of the Public Housing Administration; that at a meeting on October 4, 1946, at the Orlanno Cafe in San Diego, that the area housing manager, Mr. John Arvin, requested a $50 contribution from each Federal employee, such contribution to be made to one of the major political parties.

Your counsel also conferred with Mr. Aubrey Davis, a realtor of San Diego, and former area housing manager of the Public Housing Administration in San Diego, who stated that one of the reasons for his resignation from the Public Housing Administration was the pressure put on him by higher authorities in the Administration to indulge in political activities in the administration of the project.

I believe it pertinent to the subject here under consideration to quote from an affidavit of Hinton A. Miller, which was subscribed and sworn to on the 10th day of August 1947. Mr. Miller, who lives at 1100 Fuego Court, San Pedro, Calif., is presently employed as assistant housing manager, Banning House project, Los Angeles City Housing Authority. In the affidavit referred to Mr. Miller stated in part as follows:

"John A. Arvin's political activities became increasingly evident as time passed. As the Jackson Day dinner approached in 1946, Milton Kraft, areas procurement officer at the time took me aside one day and said that the boss (meaning Arvin) wanted me to attend the dinner. I had never attended any prior Jackson Day dinner. It was not a matter of invitation but more of a command. I am a registered Democrat and had never given a thought to attending this dinner. I took these instructions as an order. This was later evidenced at the dinner when John Arvin made a speech at this Jackson Day dinner and boasted of being the head of an organization that could muster that kind of a turnout. There were 35 to 50 of us housing managers and divisional office employees. Collections for the dinner in the amount of $25 a plate was made by a check written to the order of the Jackson Day Dinner Committee. I gave this check to Hale Berlin, who turned this check over to William Meyer, our personnel officer, in my presence in the area office.

"Later as the primary campaign developed, I was asked to attend a luncheon for Charles Dail, who was the Democratic candidate for State senator. I do not recall who asked me to attend. It also happened that I personally favored Mr. Dail and intended to vote for him. I rode with Everett Stevens, another FPHA employee, in his car to this luncheon, which was held after the Jackson Day dinner and before the primaries in 1946 at the El Cortez Hotel. This luncheon was attended by the FPHA area officials and managers and about the same group was in attendance as was at the Jackson Day dinner, there were 35 to 50 present. I can specifically recall John A. Arvin, Milton Kraft, Hale Berlin, William A. Meyer, Everett Stevens, George Weeks, Harry Asborn, and Walter Alley, as well as Omer Mills, assistant regional director, and Candidate Charles Dail. Mr. John A. Arvin presided and told us that the purpose of this meeting was to organize us as a machine to swing the primaries for Dail by organizing the tenants in our projects and getting out their vote on primary election day. Since it was felt that some of us might have qualms about being politically active in the face of the Hatch Act, Mr. Omer Mills, assistant regional director of San Francisco, was present to assure us that we had the O. K. of the regional director (Langdon Post) to take part in such activity as was suggested by Mr. Arvin. In furtherance of this instruction, I looked up one of the tenants in the Coronado housing project whom I knew to be interested in politics and told him to see Charles Dail. This man's name was Mr. Pumprey; his first name I do not recall.

"As the primary campaign wore on I received a call from Hale Berlin to the effect that John Arvin had promised to assist Charles Dail financially in the sum of several hundred dollars and my share of this contribution would be $10. I gave Hale Berlin a check made out to cash in the sum of $10 and I noticed that he has endorsed this check. I paid this to Berlin in his office. Berlin is FPHA area commercial facilities adviser."

COMMERCIAL LEASES

As a part of the Linda Vista development, there is a large commercial section embracing dry-goods stores, grocery stores, drug stores, restaurants, bakeries, confectioneries, and many other types of commercial establishments. These buildings were built and equipped at Government expense as a part of the housing development. There was a great demand by merchants and others for leases of the buildings. It should be noted in this regard that Linda Vista is adjacent to San Diego and 125 miles from Los Angeles. However, an exclusive agency contract was entered into between the Federal Public Housing Administration (now known as the Public Housing Authority) and the Land Improvement Co. of Los Angeles. The Land Improvement Co. was located at 727 West Seventh Street, and later moved to 407 Roosevelt Building, Los Angeles, Calif. The president of the company was Harvey L. Silbert, the vice president was Guido Braccini, the treasurer was Philip Cravitz, and the manager was S. L. Price.

Under the terms and conditions of the exclusive agency contract, the Land Improvement Co. was to receive a straight 5-percent commission on all rentals regardless of the number of years provided for in the lease.

No real-estate firm in San Diego had an opportunity to make leases in the commercial center, and it is of particular significance that the schedule for commissions established in San Diego is 4 percent of the rental for 3 years, and 1½ percent thereafter.

Your counsel was advised by a reputable realtor of the city of San Diego that in his opinion this difference in commissions cost the Government between $150,000 and $200,000. No explanation could be made as to the reason why this exclusive agency contract was entered into with the Los Angeles firm, nor why there was a difference between the established San Diego rate and that contained in the Land Improvement Co. contract. The contract further provided that where there was a fixed sum contained in a lease the total commission for the entire period would be paid by the Government within 30 days.

Your counsel was further advised by the area housing manager that at the present time some of the properties are now being operated and leases held by S. L. Price, the former manager of the Land Improvement Co., and that one leasehold of a confectionery and liquor store is now in the name of E. Blum and operated by Henry B. Cramer. The regional director stated that in his opinion no one by the name of E. Blum was in existence, and that, in his opinion, this lease was actually held by someone formerly connected with the Land Improvement Co.

The question of commercial leases and the operation of commercial properties should undoubtedly receive close scrutiny and minute investigation. This is also true of a number of other contracts entered into by the Public Housing Authority and renovating and janitorial concerns.

There is attached to this report copies of contracts and some correspondence and affidavits which, in the opinion of your counsel, should be carefully checked by competent auditors. Conversations held with some of the employees of the Public Housing Authority lead to the inevitable conclusion of the possibility of fraud in the letting of the contracts, and to the fact that some officials of the Public Housing Administration had direct interest in the contracts herein referred to. It will be noted from a consideration of the contracts that even though services could be rendered in the city of San Diego, in some instances they were placed with concerns several hundred miles away—in San Jose, San Francisco, and other cities.

IMPROPER USE OF GOVERNMENT PROPERTY

Investigation should be made of the flagrant abuse of the use of Government-owned cars for personal use by officials of the Public Housing Administration. A specific example is the use of a Cadillac by John Arvin while serving as area housing manager, car NH 1773. Repairs on this car amounted to $1190.85 from April 15, 1946 to June 3, 1947. (See exhibit — attached.) Some of these repairs are reported to have been made as the result of accidents occurring while being operated for the personal use and pleasure of housing officials. It will be noted that purchase order No. 4803–58, dated August 9, 1946, to the Muelheisen Manufacturing Co., is a tarpaulin in the amount of $60. This tarpaulin was used as a part of a fishing camp of the area housing manager, although directly charged to the Cadillac automobile referred to herein. The fishing camp, located on the Colorado River, was enjoyed by the manager and other housing officials. Attached to this report are photographs taken at the camp showing the Cadillac, NH 1773, also the PHA pick-up truck, NH 490. The pick-up truck from the housing project preceded the party to the camp with equipment and the camp would be set up and ready for the housing officials upon their arrival. Much of the equipment used has been identified by competent witnesses as property of the United States Government, to wit, the Public Housing Administration (blankets, cots, mattresses, etc.).

Also of interest in this regard is the daily time card of employee Howard B. Shyrock, badge No. 272, dated October 13, 1944, job No. W–6353, "Help clean shot guns for Mr. Arvin." Arvin was the area housing manager.

To complete the camp and properly use the tarpaulin, steel tubing was necessary and purchased from the Western Metals Co. of San Diego, purchase order No. 4803–62, in the amount of $13.

Under date of July 29, 1946, order No. 4803–29 was issued to the San Diego Auto Electric Co. for a radio for Mr. Arvin's car, the cost of which was approximately $90. In reference to this matter, Marguerite Snell Nelson, who is in the Procurement Division at Linda Vista, made the following statement:

"When requisition No. AS–53L covering a purchase request for one Model 705 Golden Voice car radio for approximately $90 was received at my desk I contacted the Budget Department to ascertain if it had been noted—I was told it was in line with budgetary purposes. As I recall Mr. Rhodes was out of town on the day of the receipt of this order. However, a call came in to me from Mrs. Florence Harrell of the Procurement Section in the Regional Office and I discussed the purchase of the radio with her. Mrs. Harrell advised me not to make the purchase—and that they had had a very hard time securing approval to put short-wave radios into certain cars during the war black-out but she was sure no pleasure radio would be approved.

"Upon Mr. Rhodes' return I showed him the requisition and told him that according to manual instructions only certain accessory items were permitted to be purchased for automobiles and I knew that a purchase of a radio would require special action. I told Mr. Rhodes of my conversation with Mrs. Harrell. Mr. Rhodes replied that this radio was to be used in the Cadillac, which was Mr. Arvin's pet. Mr. Rhodes told me that he was sure that Mr. Arvin had clearance for the purchase and that I was not to question requisitions covering this car. In Mr. Rhodes' words, "the Big Chief is pretty fond of that car and we will just have to humor him." This order was later canceled.

MISLEADING INFORMATION

Efforts of public agencies to mislead officials and the Congress are quite apparent from the activities of the Public Housing Administration in the San Diego region. One example is that of the registration of prospective tenants and the acceptance of their application without regard as to whether or not the applicants are eligible for public housing.

Your counsel believes that the information supplied by Mrs. Marjorie Gregory, a former receptionist for the War Housing Center, gives a clear outline of the procedure. A brief summary of Mrs. Gregory's interview is as follows:

"First of all, private listings at the War Housing Center reached the saturation point and there were no accommodations in the Government housing projects. When I was interviewing and screening applicants, I took particular interest in trying to advise them as to what the housing situation really was and what appeared to be to their best interests and advantage. Where requests were made for a type of prewar housing which I knew was not available and would not be available and the applicant's family status would not warrant placing an application at all, I explained the situation to them as thoroughly as possible and left it up to them to decide whether to place an application or not. I did this for one reason alone, namely, if I were the other fellow I would much prefer to know what I was up against and would feel far more friendly toward an organization which showed enough personal interest in my problem to tell me the truth. I know of no better way to obtain good will.

"With this thought in mind, I carried on until one day, a few days after Mr. Woodward became active manager of the Center and Mr. Markle, field representative for NHA, called me into the office and stated that Washington was beginning to question certain facts and figures regarding applications—that 'my virtue was my fault', and that applications would have to be built up at any price. In other words, stuffing the files was to be the new policy, and obviously at the applicants' expense. Increasing listings to any degree, even through periodical publicity, was out of the question. Increasing applications for the purpose of appeasing Washington was merely a matter of misleading the applicants.

"One method of doing this, and the most lucrative, was to see that every person applying for war housing and particularly Federal Public Housing, was sent to the prewar housing desk, to also place their applications there. The procedure was to advise the applicants to fill out a card either before or after placing an application with FPHA on the theory that they might find something before they could be housed through FPHA. Many applicants were urged to change their applications from FPHA to title 6 or Conversions in an effort to build up that department and warrant a change of policy on passing on eligibility. Those figures, unless broken down in the proper way, naturally presented a very different picture to Washington of the real operation of the Center. The true percentage of business legitimately handled by FPHA, which was the majority, was not to be kept in the foreground in connection with the new policy of building up facts and figures for the approval of Washington."

I am attaching hereto and marked as "exhibit —" the manner in which the records of applicants were kept by the Public Housing Authority in the San Diego region. It is apparent from the records herewith submitted that the number of applications could be increased with ease, and that there was no attempt to keep any record of the eligibility of those inquiring.

There is also attached hereto and marked "exhibit —" copies of literature distributed through the offices of the Housing Authority in the San Diego area by the UPW-CIO.

NATIONAL ASSOCIATION OF HOUSING OFFICIALS

Much of the publicity and propaganda relating to the Public Housing Authority emanates through an organization known as the National Association of Housing Officials, more often referred to as NAHO. This association has been very active throughout the country and most of the officials and employees in the Public Housing Authority are also members of NAHO.

Your counsel suggests that a full and complete investigation be made of the activities of Federal employees in the organization, and also that the expenditures committee make investigation as to the use of Government funds in paying the expenses of Federal employees to the various regional conventions of the organization, as well as the national conventions. (Violation of title 5, sec. 83, and title 31, sec. 551, U. S. C.)

At a recent convention of the Pacific Southwest regional council of the association held at Santa Barbara, Calif., many high ranking officials both from the national level and the regional levels were in attendance. The following is found in the Los Angeles Housing News, October 1947:

"From the opening luncheon at which PHA Administrator Dillon Myer made light of the fact that so far all he had had time to do between investigations was to prepare for other investigations."

It is further stated in the same article:

"Both Myer and Epstein dwelt on the importance of getting the correct information on the struggle for housing to the public. 'The great bulk of the American people,' said Myer, 'do not understand how vitally the outcome of this struggle can affect their welfare.' He went on to point out that the whole future of housing was now the basis for what amounted to a life-and-death battle between 'a small group of power-hungry men and the larger interests of the world as a whole.' He named some of the power hungry as the 'national officers of the National Association of Real Estate Boards, the National Association of Home Builders, the Building Products Institute, the United States Savings and Loan League, and a few other similar organizations with direct interest in housing activity.' Epstein pointed out the difficulties that faced housers in trying to deal with the rapid shifts of the Eightieth Congress. As an example of congressional inconsistency, he mentioned the constant pressure on PHA to get rid of so-called excess-income families, only to have a law passed in the last days of the session which virtually nullified all the Agency's efforts in that direction."

The foregoing quotations are but an example of the activities within NAHO. The organization has further been used for propaganda purposes in furthering of the Taft-Ellender-Wagner National Housing Commission bill. Federal employees have also used the association to foster and promote State legislation, the purpose of which is to carry on in the public housing field after the Federal Government has ceased to function in the activity at the conclusion of wartime emergency.

CONCLUSION

Your staff is continuing its investigation as it relates to publicity and propaganda within the Public Housing Administration, and shall hold in the files of the committee supporting documents and evidence relating to this report, for the use and benefit of any committee or investigator assigned to make further study of the subjects referred to.

Respectfully submitted.

FRANK T. BOW,
General Counsel, Subcommittee on Publicity and Propaganda.

Use of Tin for Containers of Certain Products

EXTENSION OF REMARKS
OF
HON. CHARLES R. ROBERTSON
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, December 15, 1947

Mr. ROBERTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by R. S. Solinsky, president of the Can Manufacturers Institute, Inc., Chicago, on proposed restrictions on the use of tin for containers of dog food, beer, coffee, motor oil, and certain other nonfood items:

I speak for the Can Manufacturers Institute, of which I am president, and which represents more than 50 makers of metal containers, as well as for myself as the head of a typical small company of the industry—Cans, Inc.

For the last several weeks there have been numerous press reports from Washington to the effect that the Department of Commerce is considering restrictions on the use of tin plate for the packaging of coffee, beer, pet foods, motor oils, and other nonfood products.

We are told in these releases, some of which have been attributed to Secretary Harriman and others merely to authoritative sources, that an order calling for such restrictions is now in the making, although the can manufacturing industry, which will be most directly affected, has had no formal notice of how far the Department intends to go, nor has it had an opportunity, as an industry, to participate in the planning.

The proposed ban by the Department of Commerce on metal cans for packaging of beer, coffee, pet foods, motor oils, and nonfood products would be an unnecessary and unjust hardship on many small businesses and would accomplish negligible results.

Such an order would seriously affect the businesses of many small manufacturers and processors, as well as wholesalers, retailers, and consumers, and add a greater burden to the country's already overtaxed transportation system, while actually having little effect on the supply of critical materials.

It has not been made clear to us just whether the purpose of these drastic restrictions is to save tin, as some press reports of Commerce Department statements indicate, or whether the Department of Commerce is using its right to control tin as a means of curtailing the use of steel.

The Can Manufacturers Institute has requested of Secretary Harriman that the Government's Can Manufacturing Industry Advisory Committee, which worked closely with Government agencies during the war to conserve steel and tin, be called to Washington to present facts and figures and to help develop a constructive plan for accomplishing whatever purpose the Department has in mind.

Complete banning of all cans for the coffee, beer, pet food, and motor oil industries and the consequent disruption of these businesses, would result in a saving of only 1 percent of the country's 1948 steel production. By the same token the total saving in tin consumption through such an order would be less than 2½ percent.

Can manufacturers and their customers believe that little hardship would be suffered by anyone if this small curtailment of steel and tin consumption were applied across the board to all steel-using industries in the same proportion. On the other hand, many businesses as well as consumers will be badly hurt by arbitrarily concentrating the hardship, as the Department apparently now intends to do.

While the estimated 1948 usage of steel for the products that would be affected by the order would be 20 percent of the can manufacturers' total usage, it would be only 1 percent of the estimated 70,000,000 tons of steel to be produced in 1948, since the entire can manufacturing industry uses less than 5 percent of the total steel. Likewise, the savings of tin would approximate only 2,145 tons out of the 88,300 tons estimated consumption by all industries in 1948.

The can-manufacturing industry has probably gone further than any other industry in finding ways to conserve critical materials essential to its operation. Development, in cooperation with the steel industry, of substitute plates, and research in ways of using less tin in solder and in metal cans generally, has resulted, since 1940, in accumulated savings of more than 80,000 tons of tin in can manufacture. The saving this year alone has been nearly 18,000 tons, or nearly 60 percent of the amount that would be used in 1948 if we were working by 1940 methods.

In spite of this voluntary action which has made it possible to limit United States can manufacturers to specific tin coatings for all canned products, tin plate exported to foreign countries is carrying the maximum coating of tin. We use very little tin plate with more than 1¼ pounds of tin to the base box of metal, and for many products we use as little as one-quarter pound to the base box, while nearly all tin plate exported uses 1½ pounds. It seems to me that considerable savings could be effected by reducing the amount of tin permitted on export plate. I understand that in Brazil, for example, motor-oil cans are being made of 1½-pound tin plate, while in this country we use one-quarter-pound electrolytic plate or terneplate.

A tremendous, extra burden would be placed on transportation through the use of glass as a substitute package for metal cans. Because of the greater weight and bulk of glass, the thousands of extra freight cars, motor trucks, and large quantities of fuel, which would be needed and which are already in short supply, would more than nullify the small savings in other critical materials. A recent survey made for the United Brewers Foundation showed that if the beer industry alone attempted to market its estimated 1948 volume of canned beer in bottles (if bottles and bottling equipment were available), 42,500 extra freight cars would be needed if shipment were made in fiber cartons, and 51,300 extra freight cars if shipped in wooden containers.

The coffee people have announced that there is no way in which their total product can be marketed if they are deprived of cans. The canned pet-food industry was practically driven out of business during the war when restrictions prohibited its use of metal containers. Brewers have publicly stated that their volume will be drastically curtailed if they are deprived of this method of marketing and that thousands of small merchants will suffer seriously as a result. Many of the smaller can manufacturers who depend entirely on nonfood items for their business volume, were completely out of the can business during the war and would not be able to turn to other types of manufacture as they did when war work was available.

The dire results in the various affected fields would be entirely out of proportion to any benefits gained.

We are thoroughly in sympathy with the Marshall plan and we believe that sacrifices must be made here at home to supply the reasonable needs overseas, but we do not believe that the burden should be concentrated in a small segment of American industry. If it is necessary to conserve this 1 percent of the country's steel, or any greater amount, the Congress has the power to authorize fair and equitable allocation. It is not the democratic way to single out a few industries on which to impose crippling restrictions merely because it is expedient, in that their use of steel is presently the only usage that can be restricted through the control of tin.

Headed for War

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, December 15, 1947

Mr. HOFFMAN. Mr. Speaker, remember how, before the Congress in

1941 officially declared war, President Roosevelt was secretly carrying on a shooting war in the Atlantic, although he had,shortly before that,promised that American youth would not be sent into any foreign war? The internationalists insisted our frontier was on the Rhine? That England and the British Navy were our only defense? That we should extend all aid to Britain short of war in order to keep out of war?

Many of us fell for that last one and unwittingly contributed to getting us into war. We have a similar procedure now.

President Roosevelt, at Yalta and Potsdam—in fact, at every conference he ever held with foreign representatives—apparently made pledges of which we then knew nothing. Although he had no authority to make treaties, he nevertheless made agreements which, it was later argued, were binding upon the people and the Congress. The State Department is now following a like course.

The result of New Deal policies and later those of President Truman got us into our present situation, where we are now told that, in spite of the billions we have given to foreign countries, we must make further contributions in order to defeat communism.

December 11, the House, because the strategy was controlled by politicians, without a record vote passed the so-called "stopgap emergency relief bill," authorizing the appropriations of more millions to be spent abroad to stop communism and aid the unfortunate. When that bill comes back from conference, it is my purpose to insist upon a record vote, for the people are entitled to know who supports and who opposes this bill.

We should also know what we are getting into. In the November 17, 1947, issue of Life, which is more or less international in its policy, I find this statement:

Let's stay in—

* * * * *

So if the United States is to defeat the Molotov plan our effort must be predicated on more than emergency relief, more than a certain number of dollars, more even than one Marshall plan. It must be predicated on a resolve to banish fear from the hearts, and to quicken the hands, of all our friends. If we are to see this war through, we must take responsibility for nothing less than the restoration of economic hope and self-respect to all of Europe, east and west; indeed to all the world.

There you have the plan and purpose of the internationalists in a nutshell. It calls not only for this emergency relief, for the Marshall plan with its sixteen to twenty billion dollars; it calls for an army to translate into a realized actuality a falsely-assumed responsibility to make everybody everywhere prosperous and happy. It means war.

The plan means that 140,000,000 people here in the United States must do all the work to supply the needs of the balance of the population of the world, some 2,010,960,000 people, provided they either cannot or will not do the job themselves.

Forgetting that it has always been our policy to give to other nations the right to determine for themselves the form of government, the kind of religion, they wish to adopt, a right we established for ourselves by the Revolutionary War, the internationalists now propose that we emulate Alexander the Great and, with our dollars or, if need be, our arms, conquer the world and compel its people to subscribe to and follow our ideas and views.

In the first place, as pointed out previously in other statements, the thought of a people cannot be molded by force or by purchase. In the second place, the task is an impossible one.

Every ambitious would-be dictator who sought to conquer the world, from Pompey on down, has failed. Even those who sought to build the Tower of Babel, who had no idea of conquest, who only wanted to join all mankind into one people, all talking one language, all peaceful, happy, and prosperous, did not succeed.

For myself I will be quite content with doing as we have in the past—extending aid to the unfortunate to the utmost of our ability, whether the misfortune comes through fire, flood, or war; keeping ever in mind, however, that we must retain sufficient of our resources, of our productive ability, to make our national defense impregnable, our independence in the world of warring nations secure.

I want no more war, nor do I propose to follow a plan—Marshall or otherwise—which leads to war.

Socialists in America

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, December 15, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, Mr. Robert Bliss, editor of the Janesville Daily Gazette, Janesville, Wis., has called the turn on the American Socialist in an illuminating editorial on December 5. He states that the Socialists do not speak for America. I am including said editorial as part of my remarks:

SOCIALIST DOES NOT SPEAK FOR AMERICA

One of the distinctions of American democracy is that all political beliefs may be voiced, for we have free speech, a free press, and free religion. Therefore, we print the Socialist communication in the Voice of the People today.

The writer objects to our quotation of Winston Churchill, October 29, 1947, in this column that Britain's Socialist government policies are delaying British recovery. (Note we quoted Churchill). Then she uses her objection to our statement about the Socialist failure in Great Britain to forward the worn-out Socialist propaganda that not only is socialism better for Britain, but that the American system of free enterprise is outmoded and that socialism would solve all our American ills.

The Socialist strategy in using the press is like the Moscow strategy in using the United Nations—as a sounding board for propaganda.

What our editorial actually said: "England's future lies in simple hard work. It was Prime Minister Attlee of Great Britain who said that. Britain will rise or fall according to how hard the people work. It was Winston Churchill who pointed to the United States and called upon the British Labor government to follow our lead in removing price controls. He also advised discarding of Socialist planning which he said is holding up national recovery."

We also said: "Churchill is right. Socialism is not for Britain. It is failing now and will continue to fail—meaning that Britain will continue to lean upon us till they learn the truth."

Britain indeed seems to be learning the truth about socialism. So are Denmark, France, Holland, and others where recent selections proved that the people are turning away from Socialist tendencies and policies toward the right.

State socialism is not working out in Britain. Neither will it work in the United States. Through the Roosevelt administration, when we approached nearer to Socialist planned economy than ever before, we saw how miserably top-heavy bureaucracy fumbles the ball in an economy as complicated as ours.

What the writer is really interested in is not the British socialism but socialism in this country. To begin this trend she would have us return to planned price controls and rationing—but she does not mention wage controls.

The fallacy of that reasoning is obvious in her omission of wage controls because control over prices cannot be had without control over wages. Socialists don't believe that, or don't want to accept it. That is simply one weakness in their program to harness the people to top-heavy Government control over the people, assuming that Government, as a sort of expert, knows more than the people themselves what is good for the people. Socialists don't believe in America.

We believe in the American system. We believe that the least government is the best government. We believe the reason this country is the greatest country in the world is that free enterprise has provided the initiative and has made possible the productive capacity of the American people to lift themselves to the highest standard of living the world has ever seen.

Stabilization of Commodity Prices

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, December 15, 1947

Mr. BYRNES of Wisconsin. Mr. Speaker, the Marshall plan was conceived as a program of American aid to help Europe help itself prevent its own economic and political collapse. It has been described as a great cooperative enterprise. Born out of the critical European crisis, its essence is voluntary action.

We are now faced with a serious internal problam—runaway inflation. If it is not checked, the President tells us, we face an economic catastrophe, which will not only nullify our program of foreign aid but will mean disaster from which our economic system, as we know it, might not recover.

Is not this, then, one of the greatest paradoxes in history: that a national administration which has had the imagination and faith in the American system to evolve a program of voluntary self-help for the nations of Europe to solve their economic problems has completely failed to enlist the voluntary cooperation of the economic elements in our

country in a program to help this Nation avert an economic catastrophe? Is it not tragic that an administration which would offer the fruits of the American economic system to succor an ailing world has failed miserably to recognize the genius of that system and has made no attempt to bring that genius into full play to meet the domestic problem?

We can only charge the administration with a failure in leadership. We charge that the administration has failed to assume its responsibility in evolving a plan, just as broad in scope and just as fired with imagination as the Marshall plan, to meet the economic crisis by the same methods implicit in that program—voluntary action.

What should be the broad outlines of such a bold program?

I think that the essence of voluntary action on the part of the producers in our economy—capital, labor and agriculture—to curb the effects of inflation is this: that for their own benefit and in their own enlightened self-interest, the members of our economic team, by mutual consent, agree to give up certain privileges and benefits, for a limited period of time, to alleviate the pressures upon our economy and to prevent the economic collapse which historically follows uncontrolled inflation.

The virtue of such agreements is that they obviate coercion by statute and they enlist a spirit of cooperation not to be gained by compulsion. They would, further, substitute the possible for the theoretical, by leaving the restraints in the hands of the restrainees rather than in the hands of the restrainers, in this case, a Federal bureaucracy.

Will such agreements work? They will work just as surely as the American economic system works, provided that the agreements are kept scrupulously voluntary, both in conception and implementation. They will work if compulsion by any means is avoided, lest their basic spirit, the spirit of cooperation in enlightened self-interest, be irrevocably lost.

That is the fallacy of the President's theory of stand-by controls. It reduces the prospect of the success of voluntary methods to a minus quantity. There would be as much volition in agreements obtained under that program as there would be volition on the part of a bridegroom at a shot-gun wedding. Without that volition, as in the latter days of OPA, there would be noncooperation and dismal failure. In truth, the agreements outlined in the Harriman bill, for instance, might better be called "compulsory voluntary agreements," if such a description were not absurd on the face of it.

But, such agreements are possible under the Wolcott resolution. It removes every stigma of compulsion. It clears the way for voluntary agreements by industry, labor, and agriculture. It opens the way for dramatic, imaginative, and constructive action by the President.

We can only suggest what that action should be. It is perhaps naïve to think that such action will be taken, in view of the administration's dalliance in the past few months, but we would be derelict if we did not carefully spell out one possible line of action that would compare in thoroughness to the suggested plan for European aid:

First. The President should summon to Washington representatives from every element in our economic structure—industry, small business, labor, agriculture, and finance—to meet in conference with the Council of Economic Advisers to the President and leading Cabinet members, representing the executive branch and the Joint Committee on the Economic Report and the Senate and House Committees on Banking and Currency, representing the legislative branch.

This would compare in imagination to the summoning of Europe's nations to the Paris Conference.

Second. This group should be asked to remain in conference until they had agreed upon the basic and contributing causes of the present inflation. They should be urged to compromise any serious disagreement over causes, and in the event of complete disagreement on any one cause, they should be urged to pass on to the others. The roll of the executive and legislative representatives in this phase of the conference should be advisory and conciliatory.

This would compare, in common sense, to the action of the European nations in determining causes for their difficulties before seeking remedies.

Third. The resulting agreement on inflationary causes should be publicized as no toothpaste or cigarette has ever been advertised in America before. The American people must know what is wrong before they can intelligently assist in a vast Nation-wide voluntary program.

This would compare to the publicity given to the basic causes of European distress.

Fourth. The conference should then break up into economic groups. Each group should determine, in consultation with the whole body it represents, what it can do, in its own self-interest, to mitigate or remove either a contributing or basic cause for our rampant inflation. Each group should not only determine what it would do without any action on the part of the other groups, but it should also determine what it would be willing to do if other represented groups make certain concessions.

This is the spirit of self-help implicit in the Marshall plan.

Fifth. The conference should be reconvened, and under the guidance of Government representatives, and with frequent consultation between the groups represented, should hammer out a voluntary program to curb inflation—to be followed faithfully for a definitely limited time by all of the groups involved. It should be stressed that no compulsory action on the part of the Government could enter into this plan.

The conference should call upon the representatives of the executive branch for action which it believes the President should take to help further their program.

It should call upon the representatives of the legislative branch for action to help further the voluntary program, and for action that it believes necessary to attack the basic causes of inflation.

The conference representatives should pledge the whole-hearted cooperation of their group, insofar as they are able to give it, to the prosecution of their plan.

This would be similar to the final report of the European nations and could be compared to the pledges of cooperation given to this Nation by the signatories of that report.

Sixth. The final program agreed upon should be publicized and promoted with all the vigor that the United States Government possesses, and through appropriations willingly granted by this Congress.

This would capture the imagination of the American people just as surely as the boldness of the Marshall plan has captured it.

Seventh. The conference should then break up up into executive committees representing each group. Their job would be to see that their particular group participated wholeheartedly, and in their own self-interest, in an American program mutually and democratically agreed upon. The Congress and the President, each in their own wisdom, would then act upon the measures suggested by the conference.

This is the kind of program we need immediately. This is the kind of all-out national effort that cries for the assumption of leadership by our chief executives. It would be American, because it would be voluntary—in spirit, in method, and in action. It would be sound—because it would seek voluntary agreement upon causes, before it sought voluntary agreements on action. It is the only kind of program that will work.

By the passage of this resolution, we make such a program possible. By the passage of this resolution, let us signify our desire that the President will seize this opportunity, and lead us away from cringing words concerning the inevitability of national catastrophe.

Stabilization of Commodity Prices

EXTENSION OF REMARKS

OF

HON. THOR C. TOLLEFSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, December 15, 1947

Mr. TOLLEFSON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therein an editorial from the Tacoma Times, October 14, 1947. I respectfully direct the attention of every Member to this extremely thought-provoking article at a time when we are considering the problems of inflation. It follows:

CAN SOCIALISM HAPPEN HERE?—CONGRESS MAY GIVE US THE ANSWER

Can it happen here?

It is a question worth asking.

Socialism is on the march. Conservative parties in such nations as England, France,

and Italy cannot raise an effective voice against government ownership of basic industries.

In those nations mammoth corporations have in the past controlled entire industries. The small producer had no place.

Meanwhile, output was stifled, prices increased.

The average man felt he had nothing to lose, perhaps much to gain, by government instead of private monopoly. The average man acted. Socialism found a new haven.

And what is happening here?

The Federal Trade Commission reports that in the first quarter of 1947 more corporations were merged than in any corresponding period since the depression year of 1931. There were 20 percent more mergers than in the last quarter of 1946.

Two hundred fifty corporations now control two-thirds of this Nation's manufacturing capacity. That is the equivalent of all United States manufacturing facilities in 1939.

In a monumental study published recently by the Twentieth Century Fund, Dr. J. Frederic Dewhurst and associate economists say that the United States, under capitalism, can virtually "abolish poverty" by the latter half of the century.

But Dr. Dewhurst warns that we must "exercise eternal vigilance to keep competition free of the ever-recurring trend toward monopoly and cartelization that ruined private enterprise in Europe and brought about the demand for socialism."

At the present time the United States has one policeman shouldering almost the entire burden of checking monopoly's growth.

It is the Antitrust Division of the United States Department of Justice.

Many small businessmen in Tacoma and Seattle know the Department well.

Perhaps a big eastern firm or a big western firm was undercutting prices—selling at a loss to smash competition. Or perhaps a large competitor had agreed with a producer to cut out the little man.

An antitrust representative met with executives of the large and small firms. An agreement was reached, sometimes under the threat of prosecution.

Seattle personnel of the Antitrust Division was almost moved to Los Angeles this year. Only vigorous protests by the Grange and other groups prevented it.

Congress, in granting the entire Division its customary appropriation of about $2,000,000, had insisted on stringent economies.

It seems to us that this was another example of the "false economy" so enthusiastically practiced at the last session of Congress.

Here are some facts:

From 1940 through 1946 the Antitrust Division received appropriations totaling $12,030,600.

Fines assessed through court action brought a return of $5,902,979.03 to the Government, almost half the Division's cost of operation.

As the result of a single antitrust suit royalties were reduced by 50 percent in one industry, bringing yearly savings to consumers of over $4,000,000.

Meanwhile, the Antitrust Division receives more than 650 written complaints per year. It can act on a mere 50 of them. Adequate funds are lacking.

It is proper and necessary that this Nation spend billions of dollars a year to conserve its national resources.

Is it not equally necessary that it spend more than a niggardly $2,000,000 to preserve its democracy?

It is a question worth asking.

We shall see how Congress, including Representatives of this State, reply.

The Chicken Situation

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, December 15, 1947

Mr. MURRAY of Wisconsin. Mr. Speaker, the United States Department of Agriculture on November 10 set up a chicken-purchase program that provided a 15-cent per pound floor for 3½- to 4½-pound chickens and 20 cents per pound for 4½ and above weight chickens. It also provided 22.50 to 28 cents per pound support for New York style, but evidently the New York style are not producer prices.

There are two questions involved right here: First, Where does the USDA get the authority or power to put a 15-cent per pound support price on chickens when the law states "not less than 90 percent of parity"? Ninety percent of parity is 24.8 cents per pound for chickens as of November 15, 1947. Second, Where does the USDA get the authority to set up a purchase program on November 10 that gave the processor 7½ cent per pound for processing 3½-pound fowl and 8 cents per pound for processing 4½ pound chickens? Then again under what law did the USDA advise the processor on December 1, 1947, that he could increase his processing charge from 7½ to 11 cents per pound on light fowl or by 46 percent? Or, where did the USDA get the authority to raise the processors charge from 8 cents per pound to 11 cents per pound or by 37½ percent?

The War Powers Act is supposed to have expired. If the USDA can do this to the chicken industry, why are they asking for more power and more authority?

The producers of 7- to 10-cent roosters in the Midwest and the 10- and 11-cent-per-pound chickens in the Midwest are being denied the protection of the Steagall amendment.

In the Appendix of the CONGRESSIONAL RECORD, on page A4361, can be found my letter to Secretary Anderson. The answer and my reply are as follows:

WASHINGTON, D. C., *December 8, 1947.*

Hon. REID F. MURRAY,
House of Representatives.

DEAR MR. MURRAY: This is in reply to your letter of November 24 regarding poultry prices and the Department's fowl purchase program.

We can understand your concern in the matter and appreciate this opportunity to explain the basis for establishing the announced producer prices. However, we should first like to point out that effective December 1 purchase price levels were adjusted to permit a more effective operation of the program. A copy of the press release announcing these price adjustments is enclosed.

Under the recent fowl purchase program announced by the Department of Agriculture, prices for fowl were established at levels which would reflect not less than 90 percent of parity to producers.

Accordingly, the prices announced were based upon the September 15 index of prices paid by farmers including interest and taxes. This was the latest available index prior to consideration by the Commodity Credit Corporation Board of Directors. The parity price upon which the purchase prices were based is a national average farm price without seasonal adjustment. The purchase price covers fowl weighing more than 3½ pounds live weight, and of A and B grade. These prices are to be determined on an area basis and will reflect appropriate location and quality differentials. However, at the outset of the program, purchase prices were announced for the Midwest area only.

As the index prices paid by farmers including interest and taxes was 237 on September 15, 90 percent of parity for all chickens was 24.3 cents per pound. If purchases are made, they will probably be made in the Midwest area. It is this area which produced over 65 percent of the total tonnage of chicken meat raised on farms and is the area which produces in excess of local needs. In 1937-41 the average spread between United States average farm prices and those of Midwestern areas were 2 to 2½ cents per pound. Spreads in the market currently are 3½-4½ cents a pound. Accordingly, in developing our fowl purchase program, the initially announced producer prices in the Midwest are 3½ cents per pound less than the United States average price at 90 percent of parity, rounded off to the nearest one-half cent.

The Bureau of Agricultural Economics estimates that during 1947 about 45 percent by weight of the chickens marketed would be young stock and about 55 percent fowl. Since fowl prices are generally discounted from young stock prices, it appears only reasonable to establish average purchase prices for fowl below those of young stock. However, the two prices when weighted and averaged should reflect the average Midwest support levels.

Present price patterns and buying practices in the Midwest indicate that the weighted average price for fowl is about 3 cents below the national average price for all chickens at 90 percent of parity or 18 cents per pound for all fowl. Since lighter weights of fowl are being substantially discounted below heavier birds, it was recommended that purchase prices reflect a breakdown between light and heavy. Estimates of the proportion of heavy and light fowl marketings for the United States as a whole and 60 percent and 40 percent by weight. Applying these weights to the above average price for fowl and allowing for a spread of 5 cents on light and heavy on the basis of actual current marketing practices results in farm prices for heavy fowl being 20 cents per pound, and light fowl at 15 cents per pound.

Accordingly, on the basis of an index of prices paid of 237, farm prices on live basis established were as follows: Heavy fowl, 4½ pounds and over, live weight, 20 cents a pound; light fowl, 3½ to 4½ pounds, live weight, 15 cents a pound.

It is believed that these prices, when averaged with prices received by farmers in other areas, which may be expected during 1947 to be as much as 6 cents above Midwest levels, together with prices received for other types of chickens such as fryers and roasters, will result in returns to producers of at least 90 percent of parity.

Sincerely yours,

N. E. DODD,
Acting Secretary.

WASHINGTON, D. C., *December 12, 1947.*

Mr. N. E. DODD,
Acting Secretary, United States Department of Agriculture, Washington, D. C.

DEAR MR. DODD: Thank you for your letter of December 8 in reply to my letter to Secre-

tary Anderson. The many courtesies and considerations extended to me at the FAO conference soften the comments I will make.

1. I fail to find anything in your letter that indicates that the support price announced by the United States Department of Agriculture is in conformity with the law, nor in compliance with the Steagall amendment, or the Taft-LaFollette amendment.

2. Your letter states that on September 15, 90 percent of parity for all chickens was 24.3 cents per pound; 90 percent of parity on November 15 was 24.8 cents. So far so good.

3. If, as you state, 90 percent of parity was 24.3 cents per pound, under what provisions of law did the United States Department of Agriculture set up a program paying as low as 15 cents per pound for chickens, or less than 60 percent of parity?

4. The Steagall amendment provides, "not less than 90 percent of parity." Therefore, there has been no reason why chickens should not have had a 24.3 cents or 24.8 cents per pound floor. The Secretary of Agriculture has had the authority to put the floor above the 90 percent of parity, but there is nothing in the law that gives him any authority to support a price that is below the 90 percent of parity. For example, the Secretary had authority to announce a support price for flax that was over 150 percent of parity, but there is nothing in the law that would give him authority to announce a 60 percent parity on flax, chickens, or any other Steagall commodities. Neither have I found anything in the law to authorize the Secretary of Agriculture to pick out any one part of the country and subject the producers to a support price below the 90 percent of parity. If it is in the law, I wish you would have one of your attorneys point it out.

Permit me to call your attention to the President's message to the Congress on November 17, 1947, in which his fifth recommendation in his anti-inflation program was for legislative action "to authorize measures which will induce the marketing of livestock and poultry at weights and grades that represent the most efficient utilization of grain." When the President is asking for this power in his message, who in the Department of Agriculture can take the position that he now has such authority.

5. I repeat, there is nothing in the law that gives the Department of Agriculture the authority to pay below 90 percent of parity for one class of fowl based on weight. If I am wrong, please have your attorneys quote the law to me.

I note in your revised purchase program that the department increased the processor's fee 3½ cents per pound on lightweight fowl and 3 cents per pound on heavy fowl. The original program then would allow processors to receive 26 cents instead of 22½ cents per pound for light fowl and 31 cents per pound instead of 28 cents per pound for heavy fowl. In other words, there seems to be a willingness to justify the processors' margin even if the farmer did not receive the legal support price for the chickens he has raised. Where in the law is the Secretary of Agriculture given the authority to have control over the processing charge? I realize he has the power over sugar in the Sugar Act, but where is this power over chickens and other farm products?

My contention is that the weight of the chicken has nothing to do with the Steagall amendment. Further, if the law is not followed in conformity with the spirit of the law as passed by the Congress, the Steagall and Taft-LaFollette amendments may as well be repealed.

Since the reign of Mr. Luckman, I am sure it is evident that someone must put a little common sense into this program or the entire agricultural-support program will be jeopardized. The 5-percent increase in the egg production in November 1947 over a year ago should be an indication of the importance of approaching these problems in a sensible manner. If properly administered in accordance with the law, the Steagall and the La Follette-Taft amendments are really the foundation of the agricultural program.

Sincerely yours,

REID F. MURRAY,
Member of Congress.

Mr. Speaker, if the USDA is going to be allowed to juggle producer prices and the processors' "take," then we surely have a country of men and not a country of laws.

Proceedings in Democratic National Committee

EXTENSION OF REMARKS
OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 11, 1947

Mr. CANNON. Mr. Speaker, under leave granted me to extend remarks in the RECORD, I include the following addresses by Hon. Robert E. Hannegan, of Missouri, the retiring chairman of the committee, Hon. J. Howard McGrath, of Rhode Island, the newly elected chairman, and Hon. Francis J. Myers, of Pennsylvania, speaking for the city of Philadelphia, at the recent meeting of the Democratic National Committee at the Mayflower Hotel in Washington:

ADDRESS OF ROBERT E. HANNEGAN

The time is appropriate for a brief reference to certain events of the past 3 years and to set forth to you candidly the position of our party at this time.

The Democratic National Convention of 1944 and the national election of 1944 are historic milestones in the annals of American democracy.

When I assumed the post which I now relinquish we were engaged in a great global war, enlisted as a Nation in defense of the democratic way of life. Today, at the end of my tenure as chairman, our Nation and our party are still enlisted in defense of the principles for which we fought, and, we are enlisted for the duration of the struggle.

We commenced that struggle under the daring and matchless leadership of a great captain, Franklin D. Roosevelt. Everyone of you, like me, is proud to have fought under the banner which he carried and proud that we had an opportunity to work under his leadership.

When on the evening of April 12, 1945, Harry Truman became President of the United States, the problems that faced America were even greater than Americans themselves could foresee. Crisis involving all mankind hung over the world. And the voice of America trying to measure the man who had become their leader could only hope that he would guide them safely through. They did not know. Now, after almost 3 years of his leadership, they do know.

Already the American people have recognized the capacity and quality of his statesmanship. His devotion to American ideals, his courage in the face of difficulties, his calm, serene, and balanced judgment in the face of abuse and calumny at home and abroad have built for him an abiding place in the affection and confidence of the American people. I know that you are likewise proud to have had an opportunity to work under the leadership of Harry S. Truman.

Our strength as a party derives from three sources:

First, we Democrats are clear on the policies of our own leadership, both in the foreign and domestic field and we stand by those policies with a firmness of purpose, a unity of thought;

Second, we have the man in Harry S. Truman. His record of performance in the service of this Nation has earned the deepest loyalty that we of his own party are able to give him. That loyalty now reaches far beyond our own party's limits. Americans, millions of them, are with our President heart and soul, and their voices are calling ever more clearly for him to stay at the helm. We shall keep him there.

Third, I am convinced that the record of the Eightieth Congress in control of the Republican Party would alone be sufficient to assure the triumphant re-election of President Truman and the election of a Democratic Congress in 1948. Not a single forward step has been made toward the solution of the many domestic problems which called for decisive action. The Eightieth Congress has kicked the lid off the smoldering fires of inflation and has released a conflagration of rising prices, which still threatens to consume the substance of the American economy.

On the important issues of housing, minimum wages, medical care and social security, the Republican leadership has shown a callous indifference to the needs of the people.

The memories of my association with you and of my activity in the service of my party will lay close to my heart so long as I shall live. I am proud of the work that we have done together. I wish to express to you the deepest gratitude of which I am capable for your loyalty and support.

To my successor I pledge unreserved loyaly and assistance in the service of the only political party which has survived since the commencement of our Government. I know that under his guidance we will assure the President of the full support of our party organization, and that we shall continue to live up to our heritage as the progressive and liberal party in America.

ADDRESS OF SENATOR J. HOWARD M'GRATH, OF RHODE ISLAND

I appreciate the great distinction which you have conferred in selecting me to be chairman of the Democratic National Committee. With all my heart I express my great happiness for the confidence thus entrusted and bestowed.

I wish that it were not necessary for you to face the task of choosing a new chairman at this meeting. Would that your duties could be confined to set in motion the machinery for our national convention.

This wish expresses for you no less than myself the deep feeling of loss occasioned by the force of circumstances that now deprive us of the continued leadership of Bob Hannegan. All of us understand the natural impulse to see happily concluded the tasks to which one's hands and heart have long been set. Chairman Hannegan has devoted himself over the past recent years to guiding our party organization with the sole aim in view that we might again triumph in the elections of 1948.

I undertake my new assignment with the utmost good will toward all the component parts that constitute the Democratic Party. I have a firm intention to serve with unbiased devotion those causes for which our party has always stood and which have been the foundation of its every success. These are briefly, to direct our actions toward the good of the many rather than the few, service to

humanity rather than worship of the materialistic.

Before us lies a great tradition of human progress under Democratic Presidents. Franklin Delano Roosevelt gave our party a tradition to which, if we remain loyal, there can be no doubt of success. Franklin Roosevelt put together the team of Roosevelt and Truman and when the hand of Divine Providence made President Truman the heir and custodian of all the great traditions to which I have alluded it indeed placed them in the hands of a trustee who has by his every word and deed proven exceptionally worthy.

With much of the world living in fear and discouragement, Harry S. Truman has become a great inspiration of confidence. He has grasped the reins of world leadership; he has spread the spirit of neighborliness and good will among the nations that are composed of men of good will. He is the beacon light to which democratic countries look for guidance into the harbors of peace and security. Humble yet firm in his manners and decisions, he has appealed to the hearts of American citizens as a true product of all that has gone into the make-up of American culture.

In the workings of our democratic process there is little that he can do to safeguard his own political future. That task is ours.

With democracy threatened on all sides, our greatest challenge in 1948 is to give an example to all mankind that we in the United States not only appreciate our institutions of freedom by accepting their benefits, but that we are willing to make sacrifices for their preservation. If we could achieve through the common efforts of both political parties in this world of 1948 a record enrollment of American voters, we would be giving the most practical answer to the followers of totalitarian and Fascist states that Americans of every party persuasion love their country and its institutions and their freedoms. Such an enrollment would, to my way of thinking, be the best service that we could render our party and our country and the finest guaranty that the Democratic administration in the four years to follow 1948 will be truly representative of the wishes of the American people.

ADDRESS OF SENATOR FRANCIS J. MYERS, OF PENNSYLVANIA

The Democratic Party stands at one of those fateful crossroads which periodically have marked the history of our party over many generations. The election in 1948 will be a fundamental test of the place of principle in the political maturity of America.

Our party will go before the electorate next year on a platform which will be largely the platform of performance of our record. It is a magnificent record, and we are proud of it. Four times in the last 15 years the Democratic Party has swept to victory. Each of those times our standard bearer was the magic man of destiny, Franklin D. Roosevelt.

Franklin Roosevelt is gone. But the Democratic Party still carries the heritage of his political genius, still treads the path of political decency, which he brought to full flower in America, still hews to the principles of economic decency which Franklin Roosevelt established in the pattern of American life.

Now, I do not intend today to try to sell you on the idea that you must come to Philadelphia in 1948 in order to assure the election of President Truman. I have a whole lot more confidence in his assurance of victory than that, and so do you.

I want to invite you to Philadelphia. I want to urge you wholeheartedly to come to Philadelphia, because Philadelphia will provide a fine and fitting setting for the launching of America's oldest major political party into a new era of victories—victories based on a consolidation of our 16-year record into a continuing upward level of American economic prosperity and even more firm adherence to the principles of political freedom.

When a party such as ours comes to Philadelphia for a national convention, it is coming to the recognized shrine of American freedom, and that is where the Democratic Party belongs in these troublesome times of international upheaval.

In the shadow of the Liberty Bell, warmed by the spirit of love of freedom and of our fellow man which characterized the founding of Pennsylvania and of the Nation, and which today characterizes the approach of the Democratic Party to national and international problems, our Democratic delegates next year can add further luster not only to our party but can, in turn, put new sheen on the brightest pages of American history by rededication, in Philadelphia, to the principles of Jefferson and Roosevelt, two of our greatest men who in Philadelphia in past years made great history.

It was in Philadelphia that Jefferson wrote the Declaration of Independence. It was in Philadelphia that he and other great patriots met and wrangled and argued and compromised and agreed, in the American way, on the principles of our great Constitution.

It was in Philadelphia that Franklin Roosevelt awoke America and Americans to their new role in world affairs. It was in Philadelphia that he told us, a few short years ago, when many faint-hearted Americans were ready to sell our Nation, that our generation of Americans had a rendezvous with destiny.

Those were words cut out of the pattern of Philadelphia's history, which is the history of America and of political democracy throughout the world.

Ever since the time of the Constitutional Convention in Philadelphia many generations ago, a Constitutional Convention which drafted into the framework of American political principle the principles of William Penn and Philadelphia, Philadelphia and Philadelphians have stood steadfastly committed to the spirit of that Constitution and to the principles of political equity among men and among nations.

This is not to say that other cities, other States, do not also have proud heritages. It is only to say that in Philadelphia you Democrats will feel at home because Philadelphia, all of Philadelphia, believes in the things which our own Democratic Party holds sacred.

You will find friendship for our party in Philadelphia. You will find real and sincere and genuine affection for, and belief in, our President, Harry Truman. You will find a spiritual kinship in Philadelphia which will make you glad you brought our convention to Philadelphia.

Finally, when our convention comes to Philadelphia, you will find our city much more than friendly and interested in your deliberations. They will want a ringside seat in the pageant of history our party will create there. Philadelphians, my friends, are at heart a liberal people. They live so close to the reminders of the origin of America's liberal greatness that it has become part of their own personalities. Liberal Philadelphia, which gave our party such resounding victories in 1936, 1940, and 1944, will be with us again next year, wholeheartedly, to launch Harry Truman on a magnificent path to victory.

Chicken and Meat Prices

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, December 15, 1947

Mr. MURRAY of Wisconsin. Mr. Speaker, some people are advocating a ceiling on meat prices. This administration has the power, authority, and money to control the price of all domestic food. The program of the United States Department of Agriculture has resulted in distressingly low prices for chickens. The United States Department of Agriculture states that eggs and meat are both splendid sources of animal protein. Everyone will concede that meat prices have stimulated egg consumption. This is evidenced by the 40-percent increase in egg production.

These situations bring up a few questions: First, Is there anyone who believes that it makes sense to have eggless Thursdays and still complain about the price of meat? Second, Is there anyone who believes that it makes sense to have eggless Thursdays and advocate less egg consumption when the United States Department of Agriculture has millions upon millions pounds and dozens of surplus eggs? Third, Do you believe it makes sense to have eggless Thursdays so long as section 32 funds are used to procure eggs on the basis by law that eggs are in surplus? Fourth, If you realize the price and food relationship between eggs and meat, do you believe that meat prices will be increased or lowered by eggless Thursdays? And what would be the effect of eggless Fridays, Saturdays, Sundays, Mondays, Tuesdays, and Wednesdays? The answer is evident.

The People's Foreign Policy

EXTENSION OF REMARKS

OF

HON. JOHN W. BYRNES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, December 15, 1947

Mr. BYRNES of Wisconsin. Mr. Speaker, under leave to extend my remarks, I would like to call the attention of the House to an editorial which appeared in the Green Bay Press-Gazette of December 10, 1947. I think we can all learn much from this editorial and the excerpt from the resolution recently adopted by the Wisconsin Farm Bureau Federation:

THE PEOPLE'S FOREIGN POLICY

Pundits in Washington and New York sit in their tall office buildings composing long and complicated creeds about the drift of American opinion on national and world affairs.

They employ elaborate sentences, sprinkling their dispatches with technical, political, and philosophical phrases. Often the word "isolationism" creeps into their learned essays when they write about the great American heartland, the Midwest.

We commend to all of them the concise but eloquent statement of principles and belief which recently prefaced the resolutions adopted at the convention of the Wisconsin Farm Bureau Federation.

There is probably no more representative farm organization in Wisconsin than this federation, composed of typical, hard-working, loyal American rural families, sons and descendants of virtually all of the peoples of Europe.

The federation declared:

"Throughout the world humanity despairingly searches and prays for guidance toward peace and security. With all of

Christian humility we most covet this trust that all of mankind may share the fruits of freedom, liberty, and democracy. To share in this responsibility of world leadership with other Americans, the 25,000 farm families of the Wisconsin Farm Bureau Federation dedicate themselves to work toward producing abundantly goods and services which the world needs, and to exhibit such conduct so as to merit the confidence and the respect of all nations."

There is the voice of responsible, work-a-day citizens of Wisconsin.

It is the simple voice of American democracy, generous, trusting, humble.

American foreign policy and American propaganda abroad has fumbled and hesitated for several troubled years since the bloody curtains fell on World War II. We have traded and dealt. We have participated in secret covenants and shady compromises. We have been a part of the power politics so dearly loved by the gentlemen in the striped pants in the chancelleries of Europe.

But we have failed to convey the essential good will and the generosity of the American people, their desire to share their own liberties and opportunities with the rest of the world. Beaming the resolution of the Wisconsin Farm Bureau Federation to the people of Europe on the propaganda radio would be more effective than a bundle of the political appeals of our professionals.

Republican Way

EXTENSION OF REMARKS
OF
HON. BRENT SPENCE
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, December 15, 1947

Mr. SPENCE. Mr. Speaker, under leave to extend my remarks, I insert the following editorial from the Washington Post of December 15, 1947:

REPUBLICAN WAY

The outstanding feature of the Wolcott bill, which goes before the House today with the blessings of the Republicans, is its emphasis on voluntary agreements by private industry for the allocation and inventory control of scarce commodities. Although the Wolcott bill provides that such agreements shall be subject to approval by the President, Senator O'MAHONEY points out that, unlike the Harriman bill, it does not give the Government the power to limit the scope of agreements and set standards for the guidance of industry. The President will, so to speak, be put on the spot if Congress relies on the purely voluntary system of agreements contemplated by the Republicans. For if he should reject an agreement that he considered too restrictive or otherwise unfair, there would be nothing to put in its place, since the Government would be powerless to act.

While we think it highly desirable to give voluntary methods a preliminary trial, the chances that they will succeed will be poor, unless the administration is armed with weapons of coercion that can be used if or when needed. In the national interest it may become necessary to impose restraints on free enterprise to which private industry will not voluntarily submit. There will almost certainly be nonconformist individuals or groups that will not agree, except under the threat of coercion, to even the most reasonable plans for husbanding our resources and checking price advances. Furthermore, voluntary agreements of the restricted kind contemplated under the Republican plan would not afford protection against increases in the prices of essential materials or wage increases that would inevitably result in higher prices of finished products.

Yet, apart from the provision for voluntary agreements and noncontroversial proposals to allocate transportation facilities and export controls, the Republican program offers nothing except a recommendation for curbing credit expansion by increasing reserves held by the Federal Reserve banks against note issues and deposits. This proposal would have little, if any, immediate effect in restraining over-all credit expansion, although Representative WOLCOTT believes that it would have "a very strong psychological effect." He says that it should be taken as a sign that Congress disapproves of the easy money policy of the administration. Since the administration is committed to that policy and shows no signs of retreating, we doubt whether this method of expressing disapproval will yield results. Moreover, from a long-range viewpoint, tightened reserve requirements are open to serious objection. For the Federal Reserve System needs leeway in carrying out its operations, and its usefulness might be seriously impaired in the future, as has been the case in the past, by a high level of reserve requirements.

That many Republicans are dissatisfied with the program of the House Banking Committee is indicated by demands of some Senate Republicans for its expansion. Significant also is the declaration of the Republican Policy Committee that it will consider at the regular session phases of the general anti-inflation program that it has not been possible to study at the extra session. Meantime the Republicans are relying on the inadequate Wolcott bill to eliminate industrial waste and hold back inflationary tides. For the reasons given we do not believe the kind of voluntary program contemplated by the bill will succeed unless the Government is equipped with the reserve powers of control requested by the President.

Soil Conservation

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, December 15, 1947

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I include a resolution as passed by the soil conservation districts in western Nebraska, at a meeting held in Alliance, Nebr., November 17, 1947.

Mr. Speaker, the soil conservation program of America should be of the utmost interest to this Congress and all the citizens.

Our soil is being depleted because of the tremendous drain in trying to produce enough food to feed ourselves and the world. I hope the Agriculture Committee and the Appropriation Committee will recognize the need for not only a sound program, but sufficient appropriations to carry out the plans for a good soil conservation program.

The resolution follows:

Whereas the necessary legislation was enacted by the Nebraska Legislature in 1937, for the organization and operation of soil conservation districts, and recognizing that there is some overlapping and duplication of purpose between governmental agencies, no legislation should be enacted by Congress, unless it be to more clearly define the scope of operations of each agency dealing with agriculture; and

Whereas there are now 82 soil conservation districts organized and in operation in the State of Nebraska, covering almost the entire area of the State; and

Whereas throughout the United States upwards of 2,000 soil conservation districts are now in operation and more than 1,000 farmers and ranchmen are giving freely of their time and resources to govern these 2,000 districts, and each district being governed by 5 local farmer supervisors, who do not receive any pay for their services and their only interest in this program is the conservation of our land and water resources; and

Whereas during the past few months there have been introduced in the Congress of the United States, legislative bills, namely, H. R. 4150, H. R. 4151, and S. 1621, which vitally affect the welfare of the soil conservation movement: Therefore be it

Resolved, That we as conservation supervisors, responsible under our Nebraska laws for the carrying out of a soil-and-water program in our districts, assisted by other agencies willing to cooperate, do oppose the passage of the bills above mentioned, for the reason that they would destroy the soil-conservation program, built up during the past 8 or 10 years, destroy the local farmer planning and control, and eliminate the Soil Conservation Service's technical assistance to farmers and ranchers, by combining it with the already overloaded Extension Service; be it further

Resolved, That we favor the present program of Soil Conservation Service, as an independent, qualified and separate agency, under the Department of Agriculture, and make it responsible for all soil-conservation activity of the Federal Government; be it further

Resolved, That inasmuch as present relations between the State Soil Conservation Committee, Soil Conservation Districts, State Extension Service, the Soil Conservation Service, and other cooperating agencies are satisfactory, efficient, and effective, such relations should be maintained as they now are. The assistance from the United States Soil Conservation Service should be increased. It should include more technical assistance, more conservation equipment, and more conservation material such as seed, trees, etc.; be it further

Resolved, That a copy of this resolution be sent to members of the Nebraska congressional delegation, to the Secretary of Agriculture, Chief of the Soil Conservation Service, and to interested organizations.

Why Not Do Something for the People in the United States?

EXTENSION OF REMARKS
OF
HON. WILLIAM H. STEVENSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, December 15, 1947

Mr. STEVENSON. Mr. Speaker, I have a letter from a constituent this morning, reading as follows:

Why not do something for the people in the United States? Do you know that there are countless families who are unable to get any fuel oil? You can cut down on eating but when you have nothing to keep your house warm what is a person expected to do?

Many people here are plenty worried over the situation. Why not do something to help us? The situation now is much worse than during the war. It's really cold here and how are we going to get through the winter without heat in our houses? These are the things that make life pretty tough.

Please do something about this. Surely in America we can at least have our houses heated.

The Housing Problem

EXTENSION OF REMARKS

OF

HON. ROLLA C. McMILLEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, December 15, 1947

Mr. McMILLEN of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. RALPH A. GAMBLE, chairman, Joint Committee on Housing, before the New York Metropolitan Association of Real Estate Boards, Commodore Hotel, New York City, December 12, 1947:

It is not mere pleasantry when I tell you that it is a privilege to address this gathering of realtors, banks, builders, and others interested in the housing in metropolitan and urban New York. Neither is it an exaggeration to state the time is most propitious. It is so because we have reached a crisis in our Nation's economy. Trying to help others restore the substance lost to them through years of war, we are in danger of losing our own substance through rising prices.

Because all of you are specialists in the subject which the Joint Committee on Housing is investigating, I shall take it for granted that you already know much of what we have just learned, which is, that there is an economic housing shortage of perhaps as many as 5,000,000 units, that there is plenty of money to erect, rent, or buy these houses, and that labor is willing and efficient, but that prices are far too high. The plain fact is that prices are prohibitively high. So it is about prices and the part you have to take in reducing them, that I wish to speak to you today.

Our congressional committee recently completed some 25 hearings in every part of the United States. Not so long ago we were in New York City. Everywhere we found the specter of high prices moving uneasily among the thousands of new dwellings under construction. In some places we found this specter a reality. Even in a time of prosperity, there are unmistakable signs of home builders, or realtors, pricing themselves out of the market.

Let us first take a look at this market, this economic market. It is not found in the income classes of Park Avenue, or in those of the other extreme in Orchard Street. It is found in that great middle group which constitutes the body of America, and from which came those ex-servicemen and women whose housing requirements it should be our patriotic obligation to meet. How shall we meet them?

Before attempting to answer my own question let me reassure you that I am not edging up for an oblique attack on the so-called "real estate lobby." If there is such a lobby, it is, in the opinion of some, inept, in contrast with other lobbies active in Congress, and prominent among which is the quasi-government lobby for so-called public housing at the taxpayers' expense. If you are benignantly negative as a lobby in your own behalf—as I and many of my colleagues believe—my personal hope is that, after hearing my remarks today, you will transform yourselves into a positive force and help us to bring down the costs of home building.

The estimated average cost of a one-family home started in January this year was $5,669, exclusive of land, land improvements, and the builders' profit—22 percent higher than the average in 1946. By October this same type of home had a further increase up to $6,635, an increase of $1,000 in 10 months exclusive of land and land improvements and the builders' profit. And the increase continues, with no sign of abatement in the near future.

This disturbing fact, supplied to me by the Bureau of Labor Statistics, Department of Labor, is admitted to me everywhere I go. Who is to blame? Recalling conferences which we have had on the Pacific coast, in the South, in the Midwest, and in the East, whoever was to blame was never present—it was always the absent ones, it was always somebody else. That absent one was not a person or a thing. It was, and is, nothing more than indifference to individual responsibility, that personal selfishness which collects its profit while inflation spreads.

Now, to erect a home, three essentials must be considered. For simplicity (and not just for alliteration) let us call them money, men, and materials. Let us examine each.

Money is easy. Money is cheap. It hasn't been so cheap for 10 years.

Men (by which is meant construction trades labor) do not constitute a problem today. They are returning by the thousands to their trades from war industries and from war itself. And be it said to the great credit of their leaders in the building trades department of the AFL that they have not yet followed the CIO's latest will-o'-the-wisp of demands for another round of wage increases.

This leaves us mainly materials to consider. And there, in my opinion, lies most of the responsibility. Let us look at the record, as supplied by the Bureau of Labor Statistics. Statistics are dry, but here, important.

Since August 1939 to October 1947, here are the percentages of increase:

	Percent
Brick and tile	60.9
Cement	31.5
Lumber	221.9
Paint and paint materials	96.6
Plumbing and heating	71.5
Structural steel	33.3
Other building material	70.4

You will note that, by grace of steel and cement, the average increase for all building materials is 107.4 percent.

You will also note, however, that the increase for lumber is 221.9 percent. I do not know why. I have sought an explanation from lumbermen from Oregon to Arkansas, and it seems that they do not know. But I assure you that before my committee concludes its work we will not only know, we will have done something about it.

Even this fantastic rise of 221.9 percent doesn't tell the whole story of lumber. By species—and again I quote the Bureau of Labor Statistics—here is the percentage of increase since August 1939 to October 1947: Douglas fir boards, No. 2, up 317 percent; Douglas fir dimension, No. 2, up 228 percent; oak flooring, up 224 percent; southern pine boards, No. 2, up 266 percent; southern pine dimension, No. 2, up 219 percent.

When our committee got underway our first step was to examine acute shortages and consequent high prices. We called in the manufacturers of various commodities. We found many reasons and excuses. I do not propose to pass judgment on either. The ones most frequently given were gray markets and export drains. Between the two there is, of course, a kinship. Asked as to increasing supplies, the manufacturers were willing enough. We were assured that 60,000 mills were sawing lumber, that in 1948 gypsum products would be up 25 percent over 1947, that nails would be boosted from 16,000,000 kegs in 1947 to 18,000,000 kegs in 1948.

But when it came to prices, it was another matter. Many "matters," so to speak. And believe me, I can sympathize with each and every manufacturer with whom I talked. So you see, I have no desire to hold them up to contempt as profiteers at the expense of a homeless public. One of the inhibitions, I soon learned, was that certain of the trade associations and some of their members were either under consent decrees from the Department of Justice, or had been visited very recently by Department agents. Is it any wonder that they were disinclined even to discuss prices, let alone concertedly reduce them? So what else could they do except to gather the dollars while they might, dollars from desperate domestic homeseekers, and dollars from European governments which had been lent to these governments by ourselves.

It is just such conditions as these that led the Republican Party leaders in both Houses of Congress to recommend immediate amendment of the antitrust laws to permit industry-wide agreements to hold living costs in line. It is also such conditions that impelled it to call for continuation and expansion of export controls. As a matter of fact, nearly 3 months ago, I requested the Department of Commerce to retain export controls on lumber after I had learned through our investigations on the west and east coasts that such an inflationary move actually was about to be made by the administration.

TACOMA, WASH., *December 12, 1947.*

Hon. RALPH A. GAMBLE,

Chairman, Joint Housing Committee:

In response to your question as to what can be done about lumber prices, you know this industry is made up of over 50,000 individual small producers, no one doing as much as 5 percent of the business. So individual action is completely ineffective; and, under the laws and consent decrees, joint action is impossible. If you will call a meeting of industry leaders, we will participate and endeavor to work out some effective plan to lower lumber prices, provided, of course, it can be executed with the approval of the Department of Justice.

WEYERHAEUSER TIMBER CO.,
LAIRD BELL, *Chairman.*

I shall be glad to call such a conference at once. I know that certain lumber companies are ready to make substantial price cuts right now. I have no doubt the industry will reach a price-cut agreement. If the Department of Justice doesn't interfere, I am hopeful that lumber prices will shortly be reduced by as much as 25 percent. If the Department of Justice does block this sincere attempt on the part of lumber manufacturers to speed up and cut costs of housing, then Congress will see that the laws are amended. I believe that one industry-wide agreement, such as is proposed by Weyerhaeuser—the biggest lumber company in the world—will lead the way to other agreements, and thus bring immediate relief to consumers. I believe this will mark the beginning of the end of inflation.

I can assure you that the seven Senators and six other Congressmen of both parties constituting my committee are solidly with me in our feeling that the costs of home building should come down. I know they can come down, for I have seen a sufficient number of balance sheets to convince me that this is possible. I demand that they do come down, at once, and voluntarily, in the public interest and in the interest of American individual enterprise.

Now, do you ask, what has all this got to do with us? It has a lot to do with each and every one of you. I do not know how many thousands of realtors belong to the National Association of Real Estate Boards, but the 500 in this room today are sufficient

in numbers, intelligence, purchasing capacity, and prestige to persuade your material sources that the patriotic course, the profitable course, the only wise course, is to reduce prices—voluntarily and at once.

And while you are about it let me suggest that you scrutinize yourselves, for in this battle to build the missing homes of America, and to "bust" the inflation, there can be no exceptions.

But there is a brighter side. In spite of all our difficulties, we are making progress.

The number of new homes started this fall has reached record levels for this season of the year, even exceeding the past record set in 1925. A total of 92,000 homes were started in October—the same number were started in September—and preliminary reports to the Bureau of Labor Statistics indicate a less-than-seasonal drop in November. The Bureau of Labor Statistics predicts that total starts for the year will reach 860,000 dwelling units compared with 670,500 in 1946 and 937,000 in 1925.

As a result of better materials supply, the average time required to complete a dwelling has dropped from more than 7 months in the summer of 1946 to 4½ months currently. By the end of October 658,000 dwelling units had been completed this year—50 percent more than the total last year.

About 10,300 apartment units (three-family and more) were started in October. More than twice as many as in May, and 3½ times as many as in January. These figures reflect decided improvement in construction for the enormous rental market. Apartments still represent only 11 percent of the total of 92,000 permanent dwellings started in October, however.

Two other subjects should be touched upon before I close. One is so-called public housing and the other certain aspects of labor. We believe we have discovered the first steps out of the controversy over public housing. They are to be found in facts. Our committee has been directed by Congress to help it lick the housing shortage. Public housing is a part of the problem and consequently a part of the answer.

We have called on the Bureau of the Census and the Bureau of Labor Statistics, which, together, constitute the most reliable sources of Government information at our command, to supply us with the record of normal requirements for housing based on the number of families. They have projected the increase in the number of families up to 1960. On this basis of reasoning, it is possible to arrive at a defensible estimate of the economic shortage in housing, regardless of social standards.

Public housing for social betterment of the lowest-income classes is quite a different matter. The need for differentiation has required us to insist at our hearings that witnesses make it clear just what they are advocating and that they understandably define the words they employ.

At the hearings I conducted there appeared some earnest and sincere people who seemed to think that it was the Federal Government's responsibility to house all the middle-class workers as well as the lowest-income class, made up mostly of the indigent. In effect, some regarded "housing" and "public housing" as being synonymous. This is incorrect.

Speaking for myself only, it would not appear to me that there is any inclination to reject the propcsition that some sort of housing assistance should be given in urban communities to the indigent and to the lower income group. And if this is true of urban populations, it is logically true of rural populations. The question is not so much one of a housing shortage as it is one of social betterment.

At our hearings and conferences there was evident a widespread conviction that, if public housing is to be paid for by Federal taxes, there will come a time (if it has not already arrived) when competition by cheap Federal loans, 100 percent insured loans, or outright Federal capital grants, will have a deadly effect on private capital and individual enterprise in the construction industry.

In Indiana, Illinois, New York, and elsewhere there were visible signs of the conviction that, as there is only one place from which Federal moneys can be drawn, namely, local taxes, it follows that real responsibility for public housing should rest, not on the Federal Government, but on the municipality, or the State, or a combination of the two.

Comment on public housing would be incomplete without reference to the fact that, in city after city, and particularly in this ctiy of New York, Communists were boisterous in their advocacy of more and more public housing. Public housing, rural or urban, on a sound basis, has nothing to fear from this committee, I believe, but it has much to fear from the ardent activity of the Communists.

Now one final word about the home builder's and realtor's great partner—labor. Members of the committee were in general agreement from the outset, I believe, that we could make more progress through cooperation than through compulsion. At all the subcommittee hearings thus far held, members, regardless of party, made it plain that while this Joint Committee on Housing is to be no witch-hunt, neither is it to be a whitewash.

Of the three essential elements—money, materials, and men—labor, in the long run, is by far the most important. Although the index of union wage rates now stands at 147.4, as compared with 100 in 1939, labor costs in a 6-room frame dweling unit are now 69 percent of the total cost, as compared with 56 percent in 1939.

From testimony, and from personal observation by committee members, it would appear imperative that labor productivity be increased. To this end, I have been working with international officers of the AFL building trades, while in every city where hearings have been held, subcommittees have discussed the problem with local union heads. Proof that this approach predicated on cooperation, friendliness, and mutual respect, is sound, is found in a progressive reduction of defensive restrictions, in the "American will to work to produce," rather than simply to jack up pay through monopoly and cultivated overtime. Impressive evidence of the sincerity of labor's approach came from various quarters. In Cleveland, for example, a lather's local which had barred Negro apprentices, even though there was a shortage of lathers, reversed itself at the insistence of the head of the Cleveland building trades council and now conforms to the nondiscriminatory policy of the AFL Building Trades Department, in Washington. In supplementing his testimony at the New York hearing, the head of the carpenter's local specifically stipulated anti-feather-bedding practices in the use of time-saving machinery, such as power saws. In Chicago, the head of the building trades council went on record as to the willingness of painters to use spray guns and of all trades to erect prefabricated houses.

Further proof is seen in the appointment by the president of the AFL building trades department, at our request, of an AFL committee of six, bipartisan and representative of various parts of the country as well as of principal home-building trades to meet with our committee. The appointment of this AFL committee may be one of the most significant developments thus far apparent in our investigations.

Highly skilled on-site labor merits commensurate high wages, high productivity justifies high wages. High productivity of on-site skilled labor will assure the success of a 4- or 5-year housing program, even though the other elements—money and materials—may fall somewhat short of the challenge which confronts them.

It is my belief that the same cooperation, through special committees, should be sought among the financial interests, material producers, home builders, and realtors as has already been established with labor, and I am taking steps toward this end.

Through cooperative effort, we are bound to succeed.

Conservation of Natural Resources

EXTENSION OF REMARKS
OF
HON. RICHARD J. WELCH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, December 15, 1947

Mr. WELCH. Mr. Speaker, one of the most disturbing problems facing our Nation today is that involving the proper utilization and conservation of our natural resources. Our entire future destiny rests squarely upon a proper solution of this increasingly critical problem.

The Committee on Public Lands of the House of Representatives, of which I am chairman, held hearings during the congressional recess in several States and gained expert knowledge of the grave importance of this matter. I should like to call to the attention of the Congress a statement I made in opening a hearing by the Committee on Public Lands in the city of San Francisco a few weeks ago which was attended by the Governor of California, Hon. Earl Warren, and the mayor of San Francisco, Hon. Roger D. Lapham, both of whom addressed the meeting:

When Congress convened last January I had the choice of becoming chairman of one of three committees—Merchant Marine and Fisheries, Public Lands, or Labor. I selected the Committee on Public Lands, which under the Reorganization Act consists of six former legislative committees—Insular Affairs, Territories, Public Lands, Irrigation and Reclamation, Mines and Mining, and Indian Affairs. The merger of these six committees into one under the title of Public Lands gave to it the responsibility of nearly all the Nation's natural resources, which are principally in the Western States.

In selecting this committee, I did so in the hope that I could help conserve our fast-dwindling natural resources, particularly our irreplaceable oil reserves and our forests on public lands, and to develop our water supply. Shortly after the turn of the century, as a member of the California State Senate, I was active in the good fight of saving the big basin grove of redwood trees in Santa Cruz Mountains from the woodsman's ax. You will see those forests, my colleagues, in a couple of days. These giants of the forest are known only to certain sections of California and no other place in the world. As I have stated before on the floor of the House, they are the oldest and largest living things in the world.

They were there when Moses was a baby in the bulrushes and when the Saviour was carrying His cross up Calvary Hill. This historic fact, however, has no appeal to those who would destroy the remaining forests of the country.

At the present time there is being cut nearly 1½ times more timber than is being replaced by natural growth. Last year over

a billion board-feet of lumber was shipped out of the United States. Add to this the terrible loss by devastating forest fires and also the loss through forest diseases, particularly of the young trees, and it can readily be seen it is only a matter of a limited number of years until this country will be completely denuded of its forests.

The States of Michigan, Minnesota, and Wisconsin are gruesome evidence of what is sure to happen if the great forests of California, Oregon, Washington, Montana, Idaho, and other States where they still have large stands of timber are continued to be cut at the present rate. Congress owes it to the next generation and their children for the years and centuries that lie ahead to follow the wise policy of Belgium, Norway, Sweden, and Germany by passing mandatory laws providing for selective removal of trees on a sustained yield basis followed by immediate reforestation.

Oil and electricity are two of the greatest assets of both our national economy and our national defense. Our national petroleum resources are limited and every barrel of oil we take from the ground is gone forever. We are now shipping irreplaceable oil to foreign countries at the rate of 140,000,000 barrels a year. During the past year our petroleum resources were further diminished nearly 40,000,000 barrels for the production of electric energy. In those areas where hydroelectric power can be developed it is a sinful waste to use this irreplaceable oil for that purpose. In the State of California alone we are using between ten and fifteen million barrels annually to generate electricity.

The American Petroleum Institute estimates that the oil reserves from known petroleum deposits in the United States at the end of 1946 amounted to approximately 20,000,000,000 barrels of crude oil. Consumption is now at the rate of 1,750,000,000 barrels per year. This means that our known reserves will be exhausted in 12 years.

Hydroelectric power is inexhaustible. Every reclamation project developing hydroelectric power conserves just that much of our oil reserves for future uses and extends the life of those reserves. Money advanced for irrigation and conservation projects from which hydroelectric power can be developed, is not a Government subsidy. It is an investment, an investment in the future of America. Every dollar must be repaid. There is no honest objection to the development of hydroelectric power by private capital. On the other hand, private power interests have no right to interfere with public development of great hydroelectric power projects beyond their scope or with infant projects which are made economically feasible by Government participation.

There is a critical power shortage in the State of California at the present time. So critical has the shortage become that a number of industries have been forced to curtail production and lay off help. It has been suggested that the United States Government permit the Navy Department to generate electricity to help this shortage. To meet the present and future demands for water and power in this State, every potential source of water and power supplies should be brought to its maximum development either by private or public enterprise.

The city of San Francisco is generating approximately 534,700,000 kilowatt hours of hydroelectric power annually. This power crop could and should be trebled without further delay to meet the growing demands for hydro-electric power in this section of the State of California.

There is a critical shortage of both water and hydroelectric power in every section of the State of California. Because of the fact that 2,750,000 people have located in this State since Pearl Harbor and are continuing to do so by thousands weekly, it is imperative that every potential acre-foot of water and every possible kilowatt of hydroelectric power be developed to meet the present and the future demands of this fast-growing State. The present shortages of water have already affected Government military and naval establishments so necessary to our national defense.

Finland

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Monday, December 15, 1947

Mr. NORBLAD. Mr. Speaker, it is my privilege to call to the attention of the House an editorial from the Washington Post of December 13 and another from the Evening Star of December 14. Both pay well deserved tribute to Finland and should be read by every Member of Congress.

The editorials point out that Finland made another payment last week of $260,852.24 on its World War I debt. The Washington Post so rightfully says, "Gallant little Finland, the country that believes in living up to its obligations."

As we consider further loans and gifts to foreign countries at this time and reflect on loans made by us over a period of years, it is, indeed, gratifying to know that at least one country has had the sense of honor and obligation over this long period of years to never fail to make debt repayments to us. It has not been easy for this small country as it has been beset with wars and political upheavals for the past 8 years, but despite the fact that their economic plight has been a difficult one, they have never forgotten their obligation.

I concur heartily, Mr. Speaker, with the suggestions made by both newspapers that it is high time that we gave recognition to the Finnish nation in something more tangible than words and expressions of gratitude. The Post states, "Hasn't the time arrived to let bygones be bygones, including the debt, and with further payments to do something tangible in Finland's behalf to show that in America's opinion the obligation has been more than honorably discharged?" Quoting from the evening Star editorial, "It would seem that the time is at hand when we should make some adjustment of this transaction."

The fact of the matter is that in interest and principal payments, this country has paid us $8,060,000 on a debt of $8,400,000, and the time has come for the Congress to give proof of its appreciation by cancellation of the balance of that debt. When the Congress reconvenes in January for the regular session, I shall introduce a resolution formally declaring the entire debt paid and canceling any and all financial obligations arising out of this loan between the United States and the gallant Republic of Finland. I earnestly request your consideration of this proposed resolution at this time and your support for the measure when I have introduced it.

For your information the contents of these editorials are as follows:

[From the Washington Evening Star of December 14, 1947]

FINLAND PAYS AND PAYS

The brief announcement that Finland has paid another $260,852.24 on its post-World War I debt to this country comes like a voice from a dead past.

With this payment, the Finns keep intact their record of being the one country which has not defaulted on its debts of that period to the United States. All of the other debtors have fallen by the wayside, and, after defaulting, most of them have come back to obtain millions and billions more from us. Only the Finns continue to pay and pay.

They are proud of this record, and justly so. We have less reason for pride. We loaned Finland $8,400,000 at 3 percent interest. They have repaid a total of about $8,060,000, but they still owe us more than $8,000,000, practically all of the past payments having been applied to interest.

It would seem that the time is at hand when we should make some adjustment of this transaction. Finland has been pulled into the Russian orbit and life there is not what it used to be. When the United States has collected the amount of the original loan, why not write off the remaining balance as a tribute to a people who have set for this world a splendid example of national integrity?

[From the Washington Post of December 13, 1947]

REMEMBER THE FINNS?

On Friday a tiny item appeared in our news columns which must have stirred our readers' memories. It merely related that the Finns had made their usual half-yearly payment on their "war" debt. Gallant little Finland! The country that believes in living up to its obligations! This is the 24th year in which the money has been forthcoming. It has been the only constant phenomenon in the turbulent life of Finland since the settlement was signed. At that time she was an infant of five, a new country who had been freed by the new Russia. By the time she had attained youth she had become an ideal commonwealth. In 1939 she started to undergo trial by fire just because she happened to be in the way of the big fellows, and it left her prostrate. Even the signer of the debt agreement, Risto Ryti, is in jail, languishing there at Russia's insistence as a war criminal. All he did was to do his part in the defense of Finland. Hasn't the time arrived to let bygones be bygones, including the debt, and with further payments to do something tangible in Finland's behalf to show that in America's opinion the obligation has been more than honorably discharged?

Veterans' Affairs

EXTENSION OF REMARKS
OF
HON. WILLIAM G. STIGLER
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Monday, December 15, 1947

Mr. STIGLER. Mr. Speaker, I recently read an article in one of the local newspapers by Mr. Tyrrell Krum on veterans' affairs which describes a new racket with reference to our repatriated heroes. According to his article, it seems that in some sections of our country there are

some overenthusiastic undertakers running up unwarranted bills in the reburial of our war dead. The condition described by Mr. Krum should be immediately investigated by the appropriate committee of the House.

As part of my remarks, I wish to include the following article by Mr. Krum:

VETERANS' AFFAIRS

(By Tyrrell Krum, lieutenant commander, U. S. Naval Reserve, retired)

Here's a low-down racket we certainly hope doesn't get a foothold in these parts.

It has to do with one very important phase of the Government's return of our overseas war dead to this country.

Let's start at the beginning and you'll see what I mean.

When the Congress passed the repatriation-of-the-war-dead program a coupe of years ago, appropriations were made for having the Government defray all the costs of bringing the remains back to the locality the next of kin desired in addition to furnishing a $500 steel casket and all costs of a military funeral.

In order that the family which had lost so much might not be called upon to bear an added burden, the Government authorized the advancement of $75 to the next of kin toward defraying the cost of conducting the final rites and burial in private cemeteries.

This figure was based on evidence submitted by the War Department after a national survey indicated that $75 was deemed sufficient to conduct the final stages of the repatriation program—conveying the remains from the train to a chapel and thence to the final resting place.

And look what happened in a number of cases that have arisen in recent days as certain overenthusiastic undertakers indulged in slick salesmanship to run up wholly unwarranted bills in connection with the repatriation program.

The mother of a young marine who lost his life in the Marshall Islands in 1944 received the remains of her son in New York. Before the reburial had been completed, a bill totaling $300 had been run up.

There was $75 for use of the funeral parlor for 3 days; $35 for use of draperies, palms, and candelabra; $25 for a canopy and artificial grass mats at the grave; $22 for use of the hearse; $20 for pallbearers; and $45 for three limousines.

Also included was $50 for opening and closing the grave, and there were additional incidental expenses to make up the total.

In another case in an eastern city the following charges were accumulated: $25 for undertaker's professional expenses; $45 for use of the chapel three nights; $28 for use of hearse from church to national cemetery; $23 for open car for flowers; $23 for one limousine; and $5.60 for death notices in local newspaper. To offset this, the Government advanced the usual $75 fee plus a free lot in a national cemetery.

There are many similar instances of gouging along the same line.

We put the proposition up to the head of a local undertaking firm which has the reputation of being the largest of its kind in the country. It handles upward of 30 percent of all funerals in the Nation's Capital. Here is what he told us:

"We have laid down a policy that no funeral of an overseas hero shall exceed the regulation $75 in any instance, so far as our services are concerned. If we remove the remains direct from the train to the grave, we have a stipulated price of $50. If the family desires the use of our chapel, that will be an additional $25. But we never charge more than $75 in any case.

"We deem it a fair price and we intend to stick to it, and we can't see how any undertaker can take it upon himself to try and work a clip on the next of kin in their hour of sorrow."

"We don't think it is very widely done. But, as the popular saying goes, 'There's bound to be some rotten apples in every barrel.' "

We certainly hope, as we said above, that the racket of playing upon the emotional heartstrings of bereaved families doesn't get a foothold hereabouts.

Because, if it does, it can only work harm to one of the finest and noblest operations in which Uncle Sam is engaged in the whole postwar period.

Truman Plays Politics With Inflation

EXTENSION OF REMARKS
OF
HON. HUGH D. SCOTT, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, December 15, 1947

Mr. HUGH D. SCOTT, JR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Philadelphia Inquirer of December 15, 1947:

TRUMAN PLAYS POLITICS WITH INFLATION

President Truman's implied threat to veto the Republican anti-inflation program—if it is adopted by Congress—is a shocking piece of political high-handedness.

This outrageously dictatorial attitude on an issue that concerns the bread and butter of all the people is a throw-back to Mr. Truman's political expediency of last summer when he twice vetoed tax-reduction bills which had been passed by Senate and House with the support of Democrats as well as Republicans.

The Republican counterproposals to the President's 10-point plan to curb ruinous prices haven't yet been debated in Congress. They are just now being revealed in detail. Based on voluntary agreements rather than compulsion, they include tax reduction and Government economy, important matters that aren't mentioned in the President's program.

But, with a grim recklessness suggestive of a return to the one-sided Roosevelt New Deal, Mr. Truman sneers in advance at the Republican measures and, judging from his slighting remarks at his press conference, has turned his back on all anti-inflation plans not originating in the administration.

In thus closing his mind against all proposals but his own the President is putting politics ahead of inflation controls. If Congress, torn by partisan rivalries, now fails to solve the immensely difficult problem of curbing prices without imposing hamstringing restrictions upon the Nation, the chief blame will lie with Mr. Truman.

And at what cost? When he twice swung his political veto ax at the tax-cut bills a few months ago he compelled taxpayers to go on, needlessly, shouldering war-high income taxes. If he should succeed in twisting inflation curbs to his own political purposes the possible cost staggers the imagination.

When the President brought out his proposed anti-inflation checks last month this newspaper praised him for trying, however belatedly, to combat the inflation menace. But when he lightly pooh-poohs the Republican program for voluntary curbs before he knows what it is all about, he reveals a partisan prejudice that is a grave threat to the Nation.

Why does Mr. Truman think his own plan is sure fire, to the exclusion of all others? Is there anything in the history of the Truman administration which could prove its economic infallibility? Most assuredly not.

Immediately after Japan surrendered in August 1945 and before this bewildered country realized what was happening, President Truman, with one magnificent gesture, swept away the wartime curb on wages and gave price inflation its first big push.

The fireworks came fast. Demands for higher pay poured from all sides. Industrial disputes developed overnight. In the next few months the steel, automobile, and coal industries were stalled by great strikes which cut down the production of goods critically needed to avert shortages and consequent price boosts. Then Mr. Truman's recommendation of an 18½-cents-an-hour wage boost to end the steel strike, and the Government's permission for a $5 a ton increase in steel prices, hurried inflation on its disastrous way.

The price-wage spiral is now in full swing, a third round of wage demands is threatened and the country is in the throes of a price inflation which already is grinding down vast numbers of our people, including those who must live on small fixed salaries, pensions, and annuities. If price inflation is not checked promptly the whole country—and its ability to feed hungry millions overseas—will suffer.

By making inflation curbs a partisan issue President Truman is inviting, with appalling disregard for the national welfare, failure of Congress to agree on real anti-inflation controls. His defiant imprudence will be remembered, we believe, by the voters in November 1948.

Meanwhile it remains the imperative duty of the Republican majority in Congress to pass the soundest, most practicable measures it can devise to halt skyrocketing prices. The President's political veto is his own responsibility.

Commissioner Parkhurst's Address to Graduates of United States Maritime Academy

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, December 15, 1947

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Commissioner Richard Parkhurst of the United States Maritime Commission before the graduating class, United States Merchant Marine Academy, Kings Point, Long Island, N. Y., on December 10, 1947:

Admiral Knight, Admiral McNulty, officers of the Academy, distinguished guests, parents and friends, and members of the graduating class, I am grateful for the invitation to be here on this pleasant occasion. Likewise, I deem it an honor to come to Kings Point as a member of the United States Maritime Commission and to say to you at the outset how much the Commission believes in this school, what it stands for, what it teaches; how earnestly we endorse its continuance and how vital we believe it to be in present and future considerations regarding the well being of the United States merchant marine. We take deep pride in the accomplishments of its graduates, and we remember with deep affection and a sense of personal loss those of its student body who, following the path of duty in the war years,

gave their all, even to life itself. Their endeavors and the spirit which actuated them, are now part of that intangible we call tradition and, in contributing so nobly to it, these men have enriched it for this Academy forever.

A good many years ago, gentlemen of the graduating class, I sat as you do now, a member of the graduating class of my college. My classmates and I looked up at the platform on which sat the president of the college, the trustees, our professors and instructors, and the graduation speakers. They were there to give recognition to our 4 years of effort, to wish us well, to bestow upon us the final accolade as undergraduates. I remember being a little overwhelmed by it all, feeling a sense of unreality—and hoping that the speeches would be short. The outside world in which we were to take our places was the comparatively uneventful one just before the First World War. The future seemed to us to hold much that was bright. There was not the challenge in the air that you men face today, nor were we equipped, as you are through your training here, to embark upon a chosen profession so directly and immediately concerned with the welfare of our country.

Civilization has many facets; it is never static and as it pursues its course down the years, it imposes, upon successive generations, new refinements of duty based upon timeless virtues. In this evolution, "citizens are made by doing the things for which, at a given time, citizenship stands."

You who have chosen the merchant marine as your profession have placed yourselves in a position to be of great service to your country and the way of life it represents. You will be the first to agree with me when I say to you that the mark of the real officer is not his diploma alone, well deserved and meritorious though it is. From that milepost at which you begin your career as an officer, the extent to which you succeed in that career will depend upon your individual initiative and your determination to develop yourself through profitable experience and further study. There will always be the opportunity to pursue and overcome the difficult—seize it. In a practical profession always remember, too, that the stars shine down upon us all. Reach for one, and thus add to the technical and business elements of your profession so urgently required by the exigencies of our times, a search for things of the spirit to help guide you on your way.

Perhaps you have heard the story of a conversation said to have taken place between a famous major league second baseman and a rookie shortstop just assigned to the team. The former had accepted a hard-fielding chance and had made a brilliant play for the final out. As the players walked to the bench, the new shortstop said to the veteran: "I sure am glad that I did not have to make that tough play you just made." The veteran replied: "Don't let me hear you say that again. You'll never be a major leaguer, my boy, until you are not only ready to accept the hard chances, but until you also hope they will come your way."

As to the merchant marine of which you are about to become a part, the question of United States flag shipping service is no longer one of commercial enterprise alone. It is definitely a question of national policy of the highest consequence. We are no longer an isolated country. We are the leading international power, and plans and procedures as to our merchant marine must envisage the responsibilities which that new status implies. In the marine, no less than in other fields, there is a heavy task of readjustment and reconversion, historically the aftermath of such an upheaval from whose effects we are now struggling to right ourselves.

Over a century ago the first oceangoing steamer, the *Savannah*, set forth on that history-making voyage from Savannah to Liverpool. This was a daring enterprise, under the flag of the United States, and it has a parallel today in the challenge facing us to keep at sea a merchant fleet under that flag, to carry a goodly number of passengers, to handle a substantial part of our own commerce, and to be a bulwark in our national defense. If the element of drama is more evident in the *Savannah* voyage of long ago than in this current undertaking, the opportunity for a great achievement is nonetheless present and compelling—the rehabilitation of the American merchant marine to serve the needs of our country, whatever those needs may be.

It falls to the lot of the Maritime Commission to take the lead in this matter. The Commission is not a restrictive body. It was created to serve shipping, not to dominate it, and it is our full and continuing intention to emphasize not only the desirability but the necessity of closer coordination of effort between the Commission and all segments of the shipping industry. To all of you here I emphasize that this project of building up our merchant marine is a joint venture. It will rise or fall as such. Men in the ships and on the docks, men in steamship management and operation, men in the Government—I fully believe that a team of this composition, a team so made up and so great as to astonish the world in the war years, will continue to play ball together in these times of less evident but nonetheless trying stress and strain. Speaking for the Commission and our participation in this venture, I want you to know that in the deliberations we undertake, in the decisions we reach and in the rulings we make, we try always to keep in mind the fact so well pointed up in the words of Victor Hugo: "We make the road, others will make the journey."

Two wars found this country without adequate reserve ships and merchant officers and seamen to meet our needs. Briefly, as to each of these, national reserve fleets of merchant vessels have now been established on the three ocean coasts of our country. The Commission is in close cooperation with the armed forces in establishing the number and types of vessels which are to compose these fleets. The ships are being preserved by sound and economical methods, determined by careful experimentation. They are not rusting away, and they will not do so. On the manning side, meeting the wartime requirements for men was as big a task as that of building ships. Maritime personnel increased from about 50,000 officers and men available at the start of the war to more than 400,000 trained officers and men. With the return of peace we have, of course, scaled down our training program to meet changing needs. The training will be more thorough; it will emphasize the part the merchant marine must play in world passenger and cargo trade, not forgetting the aspects of national defense. To serve adequately our domestic and overseas trade, our best estimates are that we should maintain in regular service by 1950 about a thousand vessels. This fleet will require, we anticipate, between ninety and a hundred thousand men for operations afloat and ashore.

The war left the cargo-carrying side of our merchant marine in much better shape than it was in the preceding years of peace. The best of our war-built cargo ships have been sold to our American-flag companies. They are the fastest, safest, most efficient ships this country has ever operated. Yet, despite this fact, our cargo fleet is out of balance. For example, in wartime we built no ships specifically designed for our coastwise and intercoastal trades and few had been built in the years before the war. Also, we are short some special types for special trades and to accommodate the problems of certain trade routes. At present, new construction is very limited. The Commission has, however, a carefully developed program by which the existing gaps in our fleets can be filled. In order properly to service the products of American farms, mercantile establishments, and manufacturing plants, we must not only fill these gaps but we must endeavor so to plan that the standard of the merchant marine as to size, speed, and type will be constantly maintained in terms of established decisions concerning these factors.

Among the matters with which we are most concerned is the provisions for a safe, fast, and efficient passenger fleet for the traveling public, for the American businessman, and for our national defense. One look at the present United States passenger fleet is enough to invoke the most serious thought. Our studies indicate in no uncertain terms the shortage of passenger and passenger-cargo combination ships for the principal trade routes which have been declared essential to the economic requirements and to the defense of our country. Reverting to the experiences of the war, you will readily recall that our prewar passenger ships proved a vital link in the chain that led to final victory. Even though some of these ships were old and slow, we were nevertheless better prepared upon our entrance into this conflict than we were in 1917 and 1918 when nearly all our men and supplies were carried in foreign-flag vessels. A large number of our troops and equipment were likewise carried by foreign-flag ships in this war. In both instances our allies gave us a measure of time in which to shape our destiny. Will there be time if another war comes, and is that a chance we dare take? To the Maritime Commission, for one, the answer is "No."

The Merchant Marine Act of 1936 directs that insofar as practicable the fleets should be privately owned and operated by American citizens. We of the Commission subscribe to that objective. We want to get out of ship operation and in support of our feeling in this respect the following statement seems sufficient. At the war's end the Commission, through the War Shipping Administration, was operating over 4,500 vessels. Today, a short 29 months after VJ-day, we are operating about 200 of the active American-flag fleet of 2,400 vessels. To the extent that we do remain in the shipping business, it is only because of necessity and to meet relief and rehabilitation needs and special situations here and there around the world.

As of the world at large, so it can be said of the development of the merchant marine, there would be no greater folly than for us to proceed on any assumption other than that the days ahead are decisive days. The whole problem of the merchant marine is now under the most searching scrutiny in many responsible circles, both in and out of Government. I sincerely hope that the outcome of these studies will result in a sound program of long-range development on a scale which will insure not only first-class American-flag service in the domestic and foreign trades, but also a modern and dependable maritime organization shipside and shoreside, which will be able at a moment's notice to place itself again, if needed, in the front line of defense of our country. This is a hope in which I know you all join as we reflect upon the larger aspects of our maritime outlook. To protect our competitive picture in peace, to have our own ready ships if war comes again, that is, in brief, why we need an American merchant marine.

Gentlemen of the graduating class, in behalf of the Commission and personally, I congratulate you and wish you well as you enter upon the age-old calling of the sea. The case for this Academy rests not upon what it has nor upon what it may lack, but upon its product—men, trained men, yourselves. I am certain that as you pass through

Vickery Gate with the imprint of this school upon you, you will remember this and face your life's work four-square.

I have known as you have, and with you hope to know again, the starlight on the tropic seas, the sweetness of the landfall, the breath of soft air over the blue waters. I have likewise known, as you have, the churning of the western ocean swells, the scream of the headwinds and the shrouding of the swirling fog. These are components of that universe we call the sea, and enter into the being of those who serve upon it. Smooth sailing and rough sailing—both are there. I believe you are ready to accept both with pride, with courage, and with distinction.

Tax Reduction

EXTENSION OF REMARKS
OF
HON. HUBERT S. ELLIS
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Monday, December 15, 1947

Mr. ELLIS. Mr. Speaker, today I submit for the consideration of my colleagues an editorial from the Jackson Herald of December 12, 1947, edited by Mr. Sattis Simmons, which you will find is a forthright statement on the tax question.

This paper is published in one of the great farm counties of the Ohio Valley, and the statement indicates forcibly that the people are tax conscious and want, and expect, relief from the high wartime tax rate. They will know that our high tax rate is manifested in our price structure and plays an important part in the high cost of living.

The editorial follows:

TAX REDUCTION

It is becoming evident that one of the first things to be considered in the coming session of Congress will be tax reduction. Many people are wondering why, if we have billions to spend for the relief of Europe, we can't give a little relief to the American taxpayer.

The New Deal economists who oppose tax reduction say that it is inflationary in that it will give the people more money to spend and increase the monetary circulation.

This is nonsense. If this money is not given to the people in tax reduction it will go to the Government and will be spent by the New Deal bureaucrats, putting exactly the same amount of money into circulation. What the crackpots are afraid of is not inflation through tax reduction, but the cutting down of the bureaucratic squander-mania if the golden faucet at Washington is turned off. They want the people's money spent by the bureaucrats, not by the people who earn it.

Some of them prate about the necessity of reducing the public debt. Once again they have their tongues in their cheeks, for during the past dozen years or more they have been busy not in lowering the national debt but in pushing it higher.

Present high tax rates discourage not only production but the movement of our present grain supply. Observers who have toured the grain belt tell us that there is far too much corn still on the farms. Part of this is due to lack of transportation, while we are shipping new boxcars abroad. Part of it is due to the fact that the farmers who have much of their 1946 corn crop still on hand know that if they dispose of it and the new 1947 corn crop together the income tax collector will punish them. Having two crops to dispose of in one year, they will get more than a double dose of tax assessment. No good reason has yet been advanced why the people should not have tax reduction at this time.

Hot Oil or Hot Lunches

EXTENSION OF REMARKS
OF
HON. JAMES DOMENGEAUX
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, December 15, 1947

Mr. DOMENGEAUX. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following radio address which I delivered over a network of radio stations in Louisiana on Wednesday, November 26, 1947:

IS EARL K. LONG HONEST?

My friends, I am going to speak tonight on a most important subject. I am going to speak on a subject which vitally touches the welfare of every school boy and every school girl in Louisiana. I am going to speak on the subject of hot oil!

I am going to explain what hot oil means and why some of the former hot oil gang went to the Federal penitentiary! I am going to show you Earl Long's encouragement and approval of this practice when he was governor, and of the support of Earl now by these "hot oil" operators.

I hope to make it abundantly clear to you that if Earl Long, who is backed by these hot oil operators goes back into office and the running of hot oil is resumed, then you must face the fact that there will be less money to pay for hot lunches for your school children; there will be less money to purchase school books for your children; there will be less money to finance school busses and less for the teachers and other school employees. There will be less for your whole public school system if the hot oil operations are resumed by Earl's supporters. For it is this money which supports your public schools. The school children and the hot oil operators cannot both have it at the same time.

Let us see just what we mean by running hot oil. I think you can realize immediately my friends, that if you had a way of buying gasoline at a filling station without having to pay the State tax on the gasoline that it would represent a lot of money. If you could find a way to bootleg gasoline without paying State highway taxes to a large group of people you would have a very lucrative racket. You would simply put that enormous amount of tax money in your pockets.

The hot-oil racket works in a somewhat similar manner in its final effect. In the interest of conservation, our State requires that all oil and gas wells be held down to a certain number of barrels per day. The severance tax and other State taxes are computed on that basis. But, suppose, my friends, that with the connivance of the governor and his conservation commissioner and one or two others of the conservation department, certain oil or gas men in the dark hours of the night were allowed to open their wells full flow and run a flood of hot oil. There is no record of such runs, of course. No taxes are paid. The purchaser of that hot oil pays cash at a reduced price. The seller in effect pockets the amount which would have gone to the State in taxes.

You can see what happens, my friends, those running hot oil get rich almost overnight. Our oil resource is the biggest thing we have in the State.

But, while the hot-oil operators are getting rich, something else is happening. Revenues to the schools are reduced. That tax money which the hot-oil operators put in their pockets is money that would have gone to purchase hot lunches for the school children and to purchase school books and pay teachers. The running of hot oil literally means taking hot lunches away from school children and hot oil means reducing all the other things needed for the education of our school children.

What is the background of hot-oil operations in Louisiana? Well, before going into that, my friends, I should like to remind you that Bob Maestri, ex-mayor of New Orleans, one of Earl's strongest present supporters, has always dominated Earl Long. He is the man who has always called Earl Long's political plays. Maestri had Earl come down for governor in 1944 and take second place on Morgan's ticket.

Mr. and Mrs. Robert S. Maestri and Earl Long had important real estate transactions together while hot oil was being run and during the time Bob Maestri was conservation commissioner in charge of the oil and gas resources of Louisiana. Later some of these hot oil folks committed suicide; some went to the Federal penitentiary.

Federal Judge Davidson said from the bench that Maestri was as guilty as those who went to the Federal penitentiary for failure to pay income tax on the money they took in from running hot oil.

The real estate transactions which I refer to between Bob Maestri's wife and Earl Long may be found in book 51, folio 446 of the conveyance records of the parish of Winn.

I will repeat this reference and I will ask that some of you get your pencils and take it down and look up these references. You will find the real estate transactions between Mr. and Mrs. Robert Maestri and Earl Long recorded in book 51, folio 446, of the conveyance records of Winn Parish. You will find that the dates on these deeds correspond with the period that hot oil was being run in Louisiana.

In this deal with the Maestris, Earl acquired a magnificent ranch of 577 acres in Winn Parish, on which was located a fine residence and other improvements worth many thousands of dollars. He has also acquired apartment houses, and other real estate in New Orleans, worth a fortune.

Where did Earl get the money to purchase ranches and apartment houses if not from hot oil? Earl's profession is law, but Earl has never made an appearance in court in his life. Earl has never really earned a dollar practicing law in his whole lifetime. It is true that Earl billed the Louisiana Public Service Commission $10,000 for legal services while he was lieutenant governor and made them pay it. Later, since he couldn't deny it, Earl said he gave some of that money to Huey's widow. Huey's widow said she got no part of the $10,000. At all events, that fee was a direct swindle on the State of Louisiana. It was a swindle on the people.

Now Earl didn't go in for mansions on the "gold" coast or gold fauceted bathtubs. Earl was satisfied with a large ranch and apartment houses. Not a bad take, my friends, for a patent medicine salesman and a lawyer who has never tried a case in his life.

What is the secret? How was it done? How did Earl get so well fixed overnight? Hot oil is said to be the explanation for his fortune.

No wonder Governor Earl could give hot lunches to only 64,000 school children in the whole of Louisiana. Money was going to hot-oil folks. No wonder Governor Earl starved mental patients on 9 cents per day. Money was going to the hot-oil folks at that time. No wonder, my friends, Earl could only pay old folks $11.90 per month. Money was going to political big shots at that time. Our

old people are now receiving an average of $24 monthly under Sam Jones' philosophy of honest government.

Earl was either getting his cut or did not have the courage to speak up. Or Earl was too dumb to see what was going on around him. He was second in command—right in the middle of things. But Earl said nothing against these hot-oil crooks.

Maestri, Earl's bosom friend, is not Earl's only hot-oil backer. Consider another big shot from Ouachita Parish, the multimillionaire, Mr. Bill Feazell. He is reputed to have put up a fortune on Earl's candidacy.

Bill Feazell was in partnership in gas contracts with Dick Leche. Bill Feazell is an old head at the business. When the State sued Leche to recover some of the $350,000 Leche swindled the State out of on a State highway truck deal, a garnishment was run on Bill Feazell to reach Leche's interest in the gas contract that Dick Leche and Bill Feazell owned together. This contract was made at a time when oil and gas leases on our State lands were being given for the price of a smile and a "much obliged." And, also, my friends, a kick-back. Let's not forget the kick-back, for that's what spark plugged the deals.

Bill Feazell, now putting up a fortune on Earl, was in cahoots with Dick in the gas business. Do you think Bill Feazell loves Earl any more than he loved Dick Leche, or do you think he is backing Earl so he can go in business with Earl just as he went in business with Dick Leche?

What's wrong with Bill Feazell and Governor Earl going in the gas business together? Not a thing, my friends, if you are willing to take hot lunches away from your school children, take their books away from them. If you are willing to pauperize your teachers, stop your school busses from running, and destroy the educational opportunities of your children.

The coastal waters of Louisiana are indescribably rich in oil and gas deposits. Competent geologists estimate that there exists over 15 billion barrels of oil to be found in these mineral deposits, located off the coast of Louisiana; the State should collect ultimately, if properly handled, at least 3 billion dollars from royalties, bonuses, and leases from these tidewater lands; a sum sufficient to liquidate and pay our total State debt, leaving enough to pay for the paving of every road in Louisiana and to build State hospitals in every town of over 4,000 population, together with the payment of adequate old-age pensions and the soldiers' bonuses. These rich oil deposits represent too much money not to attract the attention of oil operators, like Maestri and Feazell. It is true that the title and ownership of these coastal lands are now claimed by the Federal Government. I believe that Congress will enact legislation, as it did previously, but vetoed by the President, recognizing the ownership of these lands to the State. The Dick Leche-Earl Long administration made millionaires of many hot-oil operators. If you put Earl in again he may make not millionaires but billionaires of others by the favored operations of these coastal oil State lands.

I would like to call to your attention that under Sam Jones and the present administration there has been a great improvement in the financial structure of our schools. In 1939, when Earl Long was governor, the State provided approximately $13 dedicated funds for each child under our school system. Today the State pays $40 for each child; or more than three times as much as was paid out under the Leche-Long administration. School teachers received a salary, under Earl Long in 1939, of $1,100. Today, under the Jones philosophy of Government, the salary paid to school teachers is an average of $2,400 per year, or twice as much. How was this done? In 1939 the State, under the Leche-Long administration, received from bonuses, rents, royalties, and severance tax, approximately $11,000,000. Under honest administration the State today receives approximately $33,000,000; three times as much. Instead of these revenues going into the pockets of the hot-oil operators and those who trafficked their influence to secure valuable State oil properties, the revenue now flows into the State treasury for the use of our schools.

There is one other thing that I wish you to consider, my friends, before I close. Not only does the running of hot oil deprive your children of educational benefits rightfully belonging to them, but it also depletes your most valuable natural resource. Our oil and gas reserves are honestly, wisely, and carefully administered at this time to give the utmost benefits to the people over the longest possible period of time. When hot oil is run, conservation is thrown to the winds. The good of the State is forgotten. The welfare of the people is considered not at all; only the enrichment of a few big shot politicians is considered. The oil and gas resource unlike our forest, is not a replenishable resource. If this resource is raided and wasted by hot oil operators, it is gone forever. There is nothing we can do to retrieve the awful mistake.

Earl says that I have vilified him. I have said, and will say again, that Earl was a slacker of World War I—that he kept out of the Army under false pretense; I have also said, that Earl tried to swear his own brother, Huey P. Long, into the penitentiary—his own flesh and blood. I have said further that Earl on January 19, 1932, in his speech at Gretna stated, "Huey P. Long was the yellowest physical coward that God ever let live." I have said that Earl swindled the State of Louisiana of $10,000 on a faked charge for legal services; I have said that Earl acquired valuable properties worth thousands and thousands of dollars while hot oil was being run in Louisiana and during the time he served as lieutenant governor. I have said that Earl, while governor, starved mental patients under an allotment of 9 cents per day. This is not vilification—I am telling the absolute truth and quoting from the public records.

This is Earl Long's record. His unpatriotic act establishes him as a slacker who would avoid responsibility and escape duty. His attack on his brother shows him to be an unnatural person with a distorted mind and intellect. His swindle of $10,000 from the State and his questionable acquisition of other valuable properties worth thousands and thousands of dollars shows him to be a dishonest person.

Earl would like for you to feel that he just came into the world the day he became governor. He would like for you to forget that he was second in command under Leche. That Earl was elected lieutenant governor at the same time Leche was elected governor.

Huey Long fell out with many men including Earl Long. But, Earl didn't fall out with Dick Leche. They worked together harmoniously and well. The Dick Leche-Earl Long partnership worked without any friction whatever. Earl didn't fall out with Dick and Dick didn't fall out with Earl because they needed each other.

If Earl Long thinks we are going to suppress the truth about him to the detriment of our school children, he is mistaken. We are not about to do that. Earl was not born on the day he was sworn in as governor. Earl had a record before he became governor and the people are entitled to have it. A lot that Earl did as governor will not bear too much light. If Earl cannot face the record then Maestri and Feazell had better get him out of this race. We are not going to suppress the truth at the request of Earl Long, Maestri, Feazell, or anyone else.

Now at the close: Do you want Earl Long and hot oil and less for your school children or do you want Sam Jones and honest and efficient administration?

It is Earl Long and the hot-oil boys against your school children. You will decide the issue when you vote on January 20. My prayer is that your answer may be for the school children.

I thank you.

Budget Saving Versus Lost Taxes

EXTENSION OF REMARKS

OF

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, December 15, 1947

Mr. FORAND. Mr. Speaker, under leave to extend my remarks, I include the following article by Joseph Hanlon which appeared in the Washington Sunday Star on December 14, 1947:

TAX SLASH HELD POSSIBLE IF THE "CHEATING" STOPS—BUDGET SAVING THROUGH FIRING THOUSANDS OF INTERNAL REVENUE INVESTIGATORS IS OUTWEIGHED BY LOST TAXES

(By Joseph Hanlon)

Shortsighted economy practiced by Congress early this year when it trimmed the budget request of the Bureau of Internal Revenue is costing the United States about a half billion dollars a year. That is the estimate of Treasury officials.

Others who have studied the matter have come up with the conclusion that if the Bureau of Internal Revenue had enough money to catch all the tax dodgers it would be possible, without curtailing any Government activity, to cut Federal taxes by 20 percent. This is a theoretical figure. It is possible to make an arguable case for this conclusion, but no Treasury officer will assume responsibility for it.

LOSS EASY TO FIGURE

The Treasury estimate of something like a half billion dollars in potential revenue lost is a matter of simple arithmetic. The Treasury, in its budget request, sought for its Bureau of Internal Revenue $208,000,000. Congress shaved the appropriation to $188,000,000. This made it necessary for the Bureau to drop 7,000 of its 27,000 tax auditors and investigators.

On the average the employees dismissed were paid $4,000 a year—a total of $28,000,000. On the average these people brought into the Treasury between $20 and $25 for each dollar they were paid.

The saving in Government salaries, then, was $28,000,000. The loss in taxes—taking the minimum figure of 20 to 1 as additional revenue produced by a tax investigator or auditor in return for his salary, would be $532,000,000. That represents the difference between the $28,000,000 which would have been paid to the tax investigators, and the $560,000,000 they might have collected from tax cheaters.

HIGHER MATHEMATICS

The more intriguing alternative—that 20-percent tax cut—involves a complicated calculation and several assumptions. It assumes a Government budget in the vicinity of $40,000,000,000 and that the official Treasury estimate of $5,000,000,000 in potential tax revenue not now collected might prove to be about $8,000,000,000—if an army of tax investigators were put to work.

By an army of tax investigators is meant 50,000 instead of the present 20,000. A further assumption is that the 50,000 would be able to perform at the same scale of efficiency as the 20,000—that the law of diminishing returns would not come into operation.

Granted these assumptions, the rest is easy. The extra $8,000,000,000 in revenue works out to 20 percent of a national budget of $40,000,000,000.

Under Secretary of the Treasury A. L. M. Wiggins puts the figure of revenue lost through tax dodging at a conservative $5,000,000,000. Other Treasury officials lean toward the higher figure of $8,000,000,000.

In recent years the Internal Revenue Bureau has stepped up its investigation of tax returns. Results have been quite revealing. Considering only the war years—1941-47, inclusive—recoveries of evaded taxes have risen from $383,320,585 for fiscal 1941 to $1,928,710,237 for fiscal 1947. Each year has shown an increase, but it was not until fiscal 1946 that the total rose above the billion mark.

LARGE RECOVERY EXPECTED

Curiously, despite the cut in personnel this year, the expectation is that the total in recoveries for fiscal 1948 will go above the two-billion mark. This is because an investigation often requires several years, and the fruits of work done in the last year or two will not become apparent until next year or two.

The smaller figures for the fighting war years are attributed in part to the circumstance that Internal Revenue men skilled in investigations were in the Army. They think, at the Bureau, that a trained and skillful man can almost "smell" an untruthful return when he looks at it. With many of the Bureau's skilled men in uniform, their places were taken by others who lacked the necessary experience.

But as the fighting war approached its close, the Bureau regained the services of its old hands and it was they who were primarily responsible for the great increase in recoveries for 1946 and 1947.

Early in 1945, as the war drew toward its end, a decision was made to make fuller use of the trained men returning after military service. Congress agreed then, and the Bureau was authorized to about double its staff, bringing the total to the 27,000 previously mentioned.

With its present staff the Bureau can investigate thoroughly only about 5 percent of all tax returns. All the larger ones receive a complete audit. That means that an investigator not only scans the return as filed, but almost always goes back to the taxpayers' records and double checks them against the return.

Every return gets some form of scrutiny and even these casual examinations sometimes turn up information which calls for a more thorough inquiry.

"For instance," a Bureau spokesman said in describing its operations, "a return is filed by a store assumed in its community to be prospering, but the return shows that it has done no more than break even. That calls for investigation.

"Sometimes we get tips from workers that their employer is falsifying his returns. Sometimes the deductions appear to be out of line. Sometimes tips come from busybodies, who may have a grudge against the taxpayer.

"Instead of the 3 to 5 percent of returns on which we make a thorough investigation, we ought to investigate 15 to 20 percent, but we don't have the staff to do it.

"We have found that when we do make an investigation and discover income understated word gets around among friends and acquaintances of that taxpayer, and often some of them come in voluntarily to amend the returns they have filed."

MANY CAN'T CHEAT

One who submits information of a false return to the Bureau—a tipster—is entitled to as much as 10 percent of the amount recovered in additional taxes. These payments are not made when suspicion of a false return is reported, but only on the basis of evidence. Surprisingly, few of the tipsters claim payment for their evidence. In the last 10 years the Bureau has paid out as rewards for evidence only about $80,000. For that $80,000 it was able to collect $20,000,000.

Most taxpayers are so situated that they could not even attempt to cheat on their returns. They are the salaried workers whose employers report to the Federal Government what has been paid to them. They are the people whose income is derived from dividends, also reported to the Treasury by the companies which pay them. They are the vast majority of incorporated companies whose profits are known to stockholders and many others.

The self-employed—the farmers, the doctors, individual retailers, barbers, plumbers, taxicab drivers, waiters, gamblers, black-market operators, promoters—these and a host of others are the people whose income is known to themselves alone or to few others. They are the people whose opportunities for cheating and getting away with it are best.

They are also the people who pay through the nose when they get caught. Many will remember Henry Lustig, who owned a chain of restaurants in New York and kept two sets of books—one for income tax purposes, another so that he himself could keep track of how much he was making. It took Internal Revenue Bureau agents several years to work up the case against Lustig. When they did they presented him with a bill for $7,000,000 and the Federal Court sent him to prison for 4 years. To pay the $7,000,000 he had to sell his business.

Penalties for tax evasion are severe. Aside from the criminal punishment—the inconvenience of spending time in prison—there are civil penalties. On top of the tax owed there is, as a civil penalty, an additional levy of 50 percent plus interest at the rate of 6 percent a year for whatever time the tax has been due.

POULTRY DEALER CAUGHT

One poultry dealer in an Eastern State has been finding out about the cost of tax cheating. The Bureau came across him in the course of a general investigation of black markets in poultry.

He had reported total income over a 5-year period of $38,000. But agents of the Internal Revenue Bureau say he used two methods to conceal his actual income.

He went to his business establishment about 4:30 o'clock in the morning, as this account goes. That was 3 or 4 hours before his employees reported for work. In that interval he sold—without knowledge of his employees, because he feared they might report to the Treasury the business he did not report—a considerable volume of chickens, ducks, and turkeys.

He had still another method of concealing the amount of his income. He wrote checks to nonexistent farmers for nonexistent poultry he claimed to have purchased and resold. Then he cashed the checks and pocketed the proceeds.

Over the 5-year period, as stated, he reported net income of $38,000. Now the Internal Revenue Bureau has submitted to him a bill for $720,000 in additional taxes and has referred the matter to the Justice Department with a recommendation for criminal prosecution.

All the revenue men had to do, once they began their investigation, was to take his invoices for poultry purchased and try to find the sellers. They couldn't find some of them and were told by others in the business there were no such persons.

Rail Accidents Crime Under Law

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, December 15, 1947

Mr. PRICE of Illinois. Mr. Speaker, while a large number of our Nation's railroads plead with the Interstate Commerce Commission for exemptions from an order for installation of safety devices the list of rail accidents and the toll in dead and injured increases to refute claims of railroads that the ICC order should be subject to a survey by the roads themselves to determine whether they feel these safety devices should be installed on certain stretches of track.

While men die—are crippled—while valuable equipment is smashed out of service at a time when shortage of such is a blow in our domestic economy—railroads continue to stall.

Witness the latest rail accident on the Missouri, Kansas and Texas lines—not of national disaster proportion only because the two trains involved were not more crowded. Had they been filled with crowds returning to their homes on a holiday week-end, the casualty list would have been in figures to command greater attention from the Nation. We rejoice in the good fortune that the cars were not crowded, but we would not pass over the wreck lightly and regard it as a minor incident.

Its seriousness is told in the many, many other rail disasters that have preceded it—and that will follow until the time arrives when the Interstate Commerce Commission has the power and the will to compel the railroads to take this matter of rail safety as serious business.

The ICC certainly cannot be exonerated of blame in many of these accidents. The mere issuing of orders is not enough. It is time the Commission does something about enforcing orders. If it does not have sufficient power, it should come to Congress and ask for it, and let Congress act.

Somewhere along the line, someone is responsible for the loss of many lives, the crippling of many railroad workers and rail passengers—it is time to place that responsibility. It is long past time for the responsible authorities to give some measure of protection to the riding public and the thousands of rail employees.

To show how ridiculous is the Nation's concern for adequate safety precautions on our railroads, the Congress has given the ICC the power to fix blame in accidents, and if it finds that an accident resulted from the railroad's failure to carry out an ICC order the carrier can be prosecuted and if convicted can be fined the amount of $100. Think of it, fined $100 for "wanton carelessness" which might have resulted in an accident taking 100 lives.

I am going to use every ounce of energy at my command to do something about that. I am going to seek suggestions from the ICC, and I hope and feel it will be cooperative—but, notwithstanding,

the least this Congress can do is to fix a penalty which will take such a crime out of the class of a misdemeanor and brand it the felony that it is.

In conclusion I want to commend two great newspapers, the St. Louis Star-Times and the St. Louis Post-Dispatch, which have waged a militant fight to spur the Interstate Commerce Commission to action and to influence railroads to become more progressive in the matter of rail safety.

I include with my remarks, under leave to do so, an editorial from the St. Louis Post-Dispatch of December 12, 1947. It follows:

WANTON CARELESSNESS ON M-K-T?

Four persons are dead today and nine are injured because the Missouri-Kansas-Texas lines, like many others in the United States, operate crack high-speed passenger trains with the primitive methods of stage-coach days.

Two M-K-T trains which crashed head-on near New Braunfels, Tex., Wednesday night were operating in what is known as the time-table and train order system, the most primitive method of dispatching.

They lacked the protection of the block-signal system. Yet the Interstate Commerce Commission recommended to Congress 44 years ago that the operation of passenger trains without this protection be outlawed, and 27 years ago Congress gave the ICC the power to prohibit it.

Sixty-five years ago the president of the Union Pacific Railroad, Charles Francis Adams, Jr., said what he thought of operating trains without the block-signal system. He said it indicated a degree of wanton carelessness, or an excess of incompetence, for which adequate provision should be made in the criminal law.

In other words, it was a crime in fact and should be made a crime under the law.

Yet regularly ever since, the railroads have gone on killing employees and passengers because they lacked the safeguard which Adams said it was a crime to lack, which the ICC asked Congress to require, and which Congress authorized the ICC to require.

Wanton carelessness and excess of incompetence are harsh words. If they apply to the railroads, as Mr. Adams said they did, they apply to the ICC with equal accuracy.

Bankrupt GOP Leadership

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, December 15, 1947

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial from the St. Louis (Mo.) Post-Dispatch of December 11, 1947. It follows:

BANKRUPT GOP LEADERSHIP

Rejecting rationing and wage-price ceilings, the principal Republican leaders in Congress have offered their substitute. They propose continued controls over exports and domestic transportation and higher gold requirements behind bank credit and the currency. This agrees with administration policy on exports and transport, and increased reserves are a time-honored weapon against the expansion of credit.

All together, however, these measures cannot arrest today's inflation. Intelligent voters know that they can hardly slow it. Therefore, as their big measure, the GOP planners want to set aside the antitrust laws and use Government funds to obtain voluntary industry-wide agreements to hold down prices.

This is the National Industrial Recovery Act of 1933 in reverse, but this engine will not run in reverse. It will stall. Manufacturers who want to reduce prices will do it more readily alone than by agreement with their competitors, because going it alone gains good will and competitive advantage.

Adam Smith, the Moses of capitalism, showed 171 years ago that such groups do not encourage their members to reduce prices, but deter them from reducing. Smith wrote that businessmen get together to restrict trade and raise prices—not to liberate trade and reduce prices. The GOP scheme will not bring prices down but, like the original NRA, will hold them up after they pass the peak and would otherwise fall of their own accord.

This proposal is as unconvincing as the NAM's desperate efforts to slough off the blame for the dangerous boom which it did so much to bring about. It is a strange thing for Senator TAFT to sponsor, who was preaching just the other day about the beauties of "natural economic law." It is a strange thing from the party which praises competition and condemns the "unsound economic experimentation" of the New Deal. On top of all that, the Supreme Court may have knocked out the "GOP, NRA" when it found the original NRA unconstitutional.

Leadership that offers nothing better than this is intellectually bankrupt. This "program" is as futile as Senator TAFT's repeated sermon to "save more and spend less"—as though most families could save anything after swollen living costs—as though a year and a half of the NAM-Taft medicine had not left the country sicker than ever it was under OPA.

In spite of 14 years of defeat because it would not cope with the boom-and-bust cycle, in spite of the probationary status in which it was returned to power in Congress, the GOP offers puny arrows and a hollow pretext to combat a scourge that already makes millions of Americans suffer cruelly. So it is fair to ask, as a labor journal does elsewhere on this page, if the Republicans "will win an epitaph as the party that killed free enterprise and plunged America into the greatest depression of history."

Against Rationing

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, December 15, 1947

Mr. SCHWABE of Oklahoma. Mr. Speaker, the people of my part of the country certainly are opposed to reimposition of price controls, rationing or any other form of New Deal planned economy. This is expressed in the following editorial from the Tulsa Daily World of December 11, 1947:

AGAINST RATIONING

It is evident Congress is against rationing of great staples, and it is also fairly plain that the people are against it. How to get around the inflation evil without going into wartime controls is actually the big question.

There is a majority counterproposal in the House of Representatives; it calls for voluntary rationing, with the Government financing and supervising the effort.

The President's plan, as expressed in a bill framed by Secretary Harriman, is undoubtedly socialistic. The practical phase which Congress must face is whether any such drastic action is necessary. Certainly it is not desirable. There is an unfortunate air of politics over the whole situation.

Steel and oil are two of the main items in the administration program. Steel is a sore point; it develops that the lack of steel, or the insufficient quantities thereof, affect almost everything. Hence, the steel market is a great alibi. It develops that oil is largely dependent upon steel and that an oil shortage is actually setting in. The rationing of gasoline by some method is practically certain.

The anti-inflation plan as proposed by Mr. Truman would put the Government very much into the railroad business; the allocation of freight cars is a whale of a detail in management. The car shortage, naturally, hooks into the steel supply; it also is allied with prices, for the lack of transportation for wheat, for instance, was and is a very serious matter. Livestock business, poultry and almost everything else of the larger sort are involved. The prospect is that if the control bill, or power to the President to invoke controls, should be granted there would be vast derangement and a lot of black marketing.

This country, engaged in a world-wide fight with communism, is not strongly disposed to adopt socialism. In this connection it is noted that Soviet Russia is abandoning, or pretending to abandon, rationing of food.

The relation of our own food supply to foreign aid is an inescapable factor in the whole situation. We seem to be committed to shipping great quantities abroad and there must be reasonable changes in our own economy. How they will come about is a job for Congress, possibly the toughest of the generation. There will be appropriations for foreign relief, but they will be reduced from estimates and guards will be set up.

Me, Too

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, December 15, 1947

Mr. HOFFMAN. Mr. Speaker, the morning mail brings me a letter from a constituent, a small businessman and a manufacturer, who writes that if we continue to have high prices, the people will insist on "having a new group in Washington."

He did not write whether he was displeased with the adminstration or the legislative branch.

Doubtless, the gentleman is quite familiar with the fact that the administration and the New Dealers are responsible for the present situation. However, that means nothing to him. What he wants is relief from high prices.

That is what everyone wants—except those who have something to sell—and some of the sellers are beginning to realize that the high price they get does not do them very much good because they have to pay more for what they must buy. The net result is they get no more of what they want than when they sold for a lower price.

From my constituent's letter, I do not know whether he is going to vote against Republicans and, having forgotten that the New Dealers are responsible for what he has now, thinks he will try another and larger dose of new dealism.

The cure for our present ills will come only when we have a Republican administration determined to think of and act for America, make our own welfare our primary objective. The people forget that Republicans have control, and that more apparent than real, of but one branch of the Government. They forget that the administration blocks every effort a Republican Congress makes.

The people do know, however, that Republicans have not been as aggressive and as persistent as they might have been. They do know that not a few Republicans still have the "me too" habit. That they are aware of the situation is made evident by an editorial from the Saturday, December 13, Chicago Tribune, which expresses the thought of many Midwest Republicans.

Many eastern Republicans, many bipartisan Republicans, some "one world" Republicans, think the Chicago Tribune attempts to dictate to Midwest Republicans. With all due appreciation of the leadership displayed by the Chicago Tribune, in my humble judgment the Tribune also reflects and makes vocal the sentiment of Midwest Republicans.

The editorial is as follows:

The Republicans in Congress seem determined to swallow the Truman program of foreign aid whole. This will be a matter for great satisfaction in Wall Street and in the counsels of the New Deal Party, but it is profoundly disturbing to the great majority of the people of this country.

Voters who had looked to the Republican Party for independence of Wall Street's influence are becoming increasingly alarmed. The Republicans once again are saying "me too." The policy proved disastrous in the 1940 and 1944 elections but the lesson of those defeats has not been learned.

The strategy of the New Dealers has been obvious from the start. Their goal is the adoption of the Marshall plan with its $20,000,000,000 drain on American resources and its implied commitment to go on supporting the European loafers until our people are reduced to a misery equal in all respects to theirs. Mr. Truman isn't too smart but he was smart enough to know that he would have to go slow at the start if he didn't want to arouse an overwhelming opposition.

Hence, the stopgap plan, floated on a sea of propaganda alleging the utter inability of the French, for example, to live through the winter without help from us. In fact, French hoarders hold something like $3,000,000,000 in gold which the Government in Paris could mobilize if it wanted to. The same French whose plight is declared to be desperate, have lately been refusing to unload ships bearing the grain and coal which stopgap appropriations are supposed to supply.

The Republicans nevertheless fell for Mr. Truman's phony arguments. If the bill passes, as seems almost inevitable now, he will be able at the regular session in January to say that this country is already so heavily committed to his program that there can be no backing out. Europe, he can say, has been given assurances of American support which, if not fulfilled, will surely drive Britain, France, and the rest of them into the arms of Russia.

This is the plan and all that can be said against it is that it is highly offensive to the voters, that it will impoverish our country, and that it won't solve Europe's problems. It invites our noble allies to go on loafing, pursuing their socialistic experiments at our expense and making none of the political and economic adjustments that must be made, if there is to be a prompt and genuine recovery.

England has accomplished more toward recovery since the billions of the gift loan were exhausted than before. Italy, receiving relatively little from America, has taken genuine steps toward self-support. The lesson is obvious. Europe's recovery must start in Europe. As long as Europe can look to us as to Santa Claus, nothing substantial is going to be accomplished.

Gerhart Eisler

EXTENSION OF REMARKS
OF
HON. JOHN McDOWELL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, December 15, 1947

Mr. McDOWELL. Mr. Speaker, on December 15, 1791, 156 years ago today, the precious Bill of Rights became a part of the Constitution of the United States.

Mr. Speaker, a few days ago Gerhart Eisler, a German Communist, an agent of Soviet Russia, identified by the Department of Justice as the boss of the Communist Party of the United States, convicted and sentenced for contempt of the Congress of the United States, arrested and convicted for violation of the Passport Act, known to be in violation of the McCormack Act, for many years known to be in violation of the Voorhis Act since the day it was adopted, a known terrorist who was personally responsible for the death sentence by torture of hundreds and hundreds of Chinese patriots fighting for their country, has been making a lecture tour of educational institutions of the Middle West, speaking to students. The other night, in Chicago, this foreign agent provocateur said this, and I quote:

The world will once again see an American Boston tea party, with the Un-American Committee in the role of the tea.

Mr. Speaker, here is a known and established enemy of the Constitution of the United States and its Bill of Rights preaching pure treason and sedition almost every waking moment of his time. I here and now call upon the President of the United States and his Attorney General to apprehend Gerhart Eisler and place him in custody in confinement on Ellis Island until his case is finally disposed of by the courts of the United States.

Mr. Speaker, there is ample precedent for this. It is known that men whose patriotism cannot be denied, who fought gallantly, and whose bravery and devotion to the flag were recognized by the United States Army and Navy, but because of left-wing influence on various Government officials, were taken to Ellis Island and held in durance until their cases were finally settled conclusively by the courts of the land.

I feel very sure, Mr. Speaker, that this demand will be concurred in not only by a vast majority of the Members of the Congress of the United States, but by an overwhelming majority of the people of the Nation.

Gerhart Eisler is known to have violated the income-tax law, the registration law, the Voorhis and the McCormack Acts; he has been convicted and sentenced for contempt of Congress and has been a constant violator of the passport and immigration laws of the United States for more than 20 years. Here is a Communist who publicly and openly threatens to throw a committee of the United States Congress into the water. Here is an agent of the same powers that shot down American aviators flying on a friendly mission over a little corner of Soviet territory. Here is an agent of the Moscow conspirators who insist that the United States is war mongering.

Mr. Speaker, here is a man who most certainly ought to be in jail for the protection of the people of the United States.

Lest We Forget

EXTENSION OF REMARKS
OF
HON. JAY LeFEVRE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, December 15, 1947

Mr. LEFEVRE. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include an article by Mark Sullivan appearing in yesterday's New York Herald Tribune.

Mr. Speaker, Mr. Sullivan is justified in bringing to his readers' attention the part Mr. Truman played in starting high prices. My criticism is that he does not go back far enough. Lest we forget, you may recall that the Democrats with their New Deal policy came into power in 1933 on a platform that promised a 25 percent reduction in the cost of government. Almost immediately it broke that promise. Bureaus with their tax-eating bureaucrats grew in leaps and bounds. And finally the American people guided and led by the Republican Party had a little relief, after a hard-fought battle to cut some of the personnel from the Federal pay rolls. Mr. Truman vetoed the two bills which would have reduced taxes. The Republicans were able to pass a sound and just labor relations bill, over the President's veto, which short history has proved to be a great benefit to all Americans. Increased production is the secret and key to all our present price troubles. If the administration can keep its hands off and we can enjoy less Government interference our domestic economy will right itself. Let the record speak for itself. We must have a change of administration and one not living on emergency measures.

START OF INFLATION IS TRACED TO 1946 STRIKE OF STEEL UNION—MARK SULLIVAN SAYS ADMINISTRATION ADOPTED POLICY OF ENCOURAGING WAGE INCREASES AND THUS IS IN VULNERABLE POSITION IN "WHO DONE IT" DEBATE

(By Mark Sullivan)

WASHINGTON, December 13.—As Congress deals with President Truman's proposals to check high prices and inflation, the leaders

of the two parties wrangle over "who done it"—that is, who and which party caused the stage of inflation that now exists.

The wrangling is futile. The inflation is here, and it will destroy us unless we check it. But for the sake of history as well as present understanding, it is worth while to identify the steps in the upward spiral. One that is especially concrete and easy to see took place 6 months after the ending of the war.

On January 21, 1946, the United Steelworkers of America, having 750,000 members, went on a strike for an increase in wage rates. It was, as a publication of the Department of Labor put it, "the largest strike on record, the Nation's steel industry was brought virtually to a standstill."

TRUMAN TOOK A HAND

During negotiations between heads of the steelworkers union and heads of the steel industry President Truman personally took a hand. After several conferences he recommended a wage increase of 18½ cents an hour. This was agreed to, and the strike was ended February 15.

On the same day came the pay-off by the public, the upward step in the inflation spiral. The manner of its coming to public attention was described in the New York Herald Tribune:

"President Truman disclosed at his press conference today that the Government pricing agencies had agreed to grant a $5-a-ton general increase in the steel industry." (This, of course, was to compensate for the raise in wages.)

The inflationary effect was obvious. Because steel would cost more, everything made of steel would cost more, and everything into which steel enters. This was brought about by action of the government itself, by President Truman personally and by official action of Government pricing agencies.

CONTRADICTION CHARGED

The step was directly counter to an administration policy which had for months been proclaimed and publicized and urged upon the public in the form of a slogan: "Hold the line against inflation." The contradiction between proclaimed policy and actual action was obvious to everybody, including newsmen, one of whom asked the President about it. As told in the New York Herald Tribune:

Mr. Truman was "asked whether the new order was not a retreat to a new line. He replied no, it isn't. After a dramatic pause he added: It is a bulge in the old line; if you will all cooperate with me there will be no break-through."

But no such soft word as bulge could accurately describe what had taken place. Bernard M. Baruch, blunt and wise, stated it starkly: "It is a break, and a serious one."

It may be that this one break in the line was what destroyed the whole hope of averting inflation and led to what we have today. It was especially serious for several reasons, including the immensity of the industry involved and the psychological effect of the fact that the break had been brought about by the actions of the administration.

The incident as a whole worked doubly toward inflation. The increase in the price of a commodity so basic as steel had enormously ramifying effects, for it led to increased costs of hundreds of kinds of goods into which steel enters, from automobiles and freight cars to needles and nails. An increase in the cost of such things as freight cars, for example, led in turn to higher cost of carrying freight, and this to higher costs of everything carried by freight. The spreading automatic effects of increase in the price of steel ran into practically every industry and countless kinds of goods. It was an immense contribution to inflation.

Besides, the strike preceding the wage raise and price increase made goods scarcer and postponed production. During the 25 days of the strike, as available supplies of steel became exhausted, "related industries," said the Department of Labor Monthly Review, "were forced to curtail production." And scarcity of goods was, in the condition existing, a cause of inflation. At the same time increased production is a cure and preventive, and this was interrupted and postponed. The loss of steel production by that strike nearly 2 years ago has never been made up and is a serious factor in inflation today.

But too much emphasis need not be laid upon the wage raise and price increase in one industry. The case of steel is especially vivid, but it illustrates the whole course of the administration.

RAISES WERE ENCOURAGED

After the end of the war the administration adopted a policy of encouraging wage raises. The policy, as officially phrased, included a kind of double talk which said or implied that the wage raises need not lead to price increases. One statement by President Truman, in a message of Congress on September 5, 1945, said: "Hold wages in line where their increase would cause inflationary price raises." That declaration of policy was directly violated when Mr. Truman himself recommended a wage raise in the steel industry and simultaneously the Government pricing agencies increased the price of steel.

As the policy was phrased by John W. Snyder, new Secretary of the Treasury and then Director of Reconversion, it said, October 15, 1945: Many industries should be able to grant wage raises that will not in turn mean price increases." But President Truman, by his part in what was done about steel, admitted with stark plainness that wage raises would lead to price increases. It took place again and again, in automobile, in coal, in so many industries as to be practically universal.

Administration policy favoring wage raises encouraged unions to demand them and strike to get them. One strike, in General Motors, lasted nearly 4 months. The wage raises and ensuing price increases made for inflation along one line. Suspension of production and scarcity of goods made for inflation along the other line.

This went on in great volume a year before Office of Price Administration was terminated. In the present "who done it" debate over who and which party is to blame for inflation, the Truman administration has a hard case to defend.

Fuel-Oil Shortage

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, December 15, 1947

Mr. HESELTON. Mr. Speaker, during a hearing before the Interstate and Foreign Commerce Committee on Friday afternoon, testimony indicated the possibility of some actual relief of the fuel-oil shortage through conversion from oil to coal heating in some Federal Government buildings. Obviously, if this can be done speedily, it will be welcome news to everyone in New England and in other areas of the country now faced with the problem of heating their homes and keeping industries in operation.

A subcommittee from the New England delegation in the House was recently appointed by the Speaker, with three other subcommittees, to work on various phases of the problem. This subcommittee is charged with following developments at the hearings before the Interstate and Foreign Commerce Committee. Consequently on Saturday morning it was decided by those members of the subcommittee, who were available, to send a telegram to the President reporting the suggestion and requesting immediate action in ordering an investigation of the possibilities. The gentleman from Minnesota [Mr. O'HARA] joined in the decision and the telegram, as a member of the Interstate and Foreign Commerce Committee and as a representative of region No. 3, which is confronted with an acute heating situation also.

Prompt and effective action on this suggestion by the Federal Government is imperative. Any lessening of its use of fuel oil will be reflected immediately not only in the supply available for other consumers but also in increased shipping and other transportation space vitally needed now. If conversions can be made by the Federal Government in other parts of the country not affected by the fuel oil shortage, that will also increase the supply and permit the diversion of tankers and tank cars to the areas desperately needing them.

It is also reasonable to believe that such a concrete example of conservation on the part of the Federal Government would lead to similar investigations of possibilities by State, county and local governments. Although there is not adequate data as to the use of fuel oils by governmental units at this time, it might be that practical adjustments by those units, if made promptly, would lessen substantially, if not eliminate the threat of shortages in industry and in individual homes. The telegram to the President was as follows:

DECEMBER 13, 1947.

Yesterday afternoon in the testimony of William E. Gannon, Purchasing Agent, Bureau of Federal Supply, before the House Committee on Interstate and Foreign Commerce, it appeared that many suppliers of fuel oil, Diesel oil, and kerosene have determined not to bid for the period of 6 months beginning February 1. It also appeared that a number of Government buildings had reconverted to oil heating units within the last year. The witness stated that he did not know why they could not reconvert to coal. The total requirements for the 6-month period in region No. 1 was 28,500,000 gallons, and for region No. 2, 27,500,000 gallons. We do not now have the figure for region No. 3. We understand the supplies of coal for all those regions are much more adequate than the supplies of fuel oil. As you know, the shortages of fuel oil in portions of both regions one and three have created emergency conditions which may become much worse soon, and appeals have been made and are being made to the public of those areas to carry out conservation measures. We believe it is of the utmost importance that immediate steps be taken to investigate the possibility of conversions in Government buildings not only in the affected areas but throughout the country to determine the wisdom of such means of relieving the fuel-oil situation and that vigorous action should be taken to that end. If it is possible to do this it should also have the further effect of encouraging the conservation suggestions now being urged on the general public. We respectfully and urgently request that you order that such

investigation be conducted immediately. Mr. O'HARA signs this telegram as a member of the House Interstate and Foreign Commerce Committee and as a Representative from Minnesota in region No. 3, an area deeply concerned with the existing fuel-oil situation. The others sign as members of a special committee appointed by Speaker MARTIN to inquire into possibilities as to the fuel situation in New England and as to developments before the House Interstate and Foreign Commerce Committee.

Long-Range Spending Program for Europe

EXTENSION OF REMARKS
OF
HON. J. EDGAR CHENOWETH
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, December 15, 1947

Mr. CHENOWETH. Mr. Speaker, there seems to be a great deal of discussion these days concerning a long-range spending program in Europe. It has been labeled the Marshall plan, and at other times known as the Truman doctrine. It makes little difference what the name is, the plan seems to be fairly clear, even though the details have not been announced. We are being told that in order to preserve world peace and prevent another war we must spend about $20,000,000,000 in Europe during the next 5 years. This is probably a conservative estimate, and if we do embark upon any such program we will no doubt spend twice that amount.

I am among those who are not convinced that any such spending spree is necessary for the security of our Nation. I have seen no assurance that at the end of the 5-year plan we will be any better off than we are today, and no one can guarantee what type of government the European nations will adopt in the meantime. We are told we must spend this money or these countries will go Communist. It appears the Communists could take over several of them now without much effort. I have never been able to see where our security is inseparably tied up with the government of every nation of Europe. I am wholly out of sympathy with the utopian idea that we are going to make a democracy out of these nations, and they will embrace our own ideas of free enterprise and individual worth. They do not easily change their conceptions of government, and American dollars will have very little influence, in my opinion, in changing their thinking.

I have voted for appropriations of money to assist these people of Europe and to prevent them from starving. I have had no illusions about stopping communism or spreading democracy. As a Christian nation I believe we should help those in distress, not with any idea in mind of changing their type of government but solely as a Christian obligation to feed those who are hungry. I draw a line between charity and business. It looks like we have been very liberal in sending billions of dollars to help foreign countries, but I do not see how we have committed ourselves to now go ahead with another program involving reconstruction and rehabilitation. These nations will have to work out their own salvation—we cannot do that for them. Up to now some have shown very little interest in helping themselves. They seem to like the idea that the United States will continue to feed and clothe them, so why should they be concerned.

Mr. Speaker, I wish to include in my remarks an editorial from the Pueblo Chieftain of Pueblo, Colo., on this subject. I think it is time for the Congress to do some serious thinking on this proposal of committing the United States to a 5-year program of spending in Europe. The editorial deals solely with the picture in Europe and calls attention to the fact that there is very little we can do to change human nature, wherever it is found. I concur in the observations contained in this editorial and hope it will be read by every Member.

WHY COMMIT OURSELVES TO A 5-YEAR SPENDING PROGRAM IN EUROPE?

Already signs of improved production are coming out of Great Britain. This is good news and should be hailed by Members of Congress as an indication that at least some European countries can come back to normal production, in which case they surely will not need continual financial aid from the United States.

In France Communist troublemakers are being defeated which will also mean that production in that country may be materially improved; it has been the program of the Moscow Communist Party in France for several years past to cripple production and thereby try to have the people adopt the Communist form of government.

In Italy the conditions are not so hopeful. In that country the Communists seem to have obtained a stronger hold on industry than in Britain and France. It is hoped, however, that the far-thinking people of Italy will not finally succumb to the hollow promises of leaders of the Communist Party who are taking their instructions from Moscow, just as Moscow is giving instruction to the Communists in France.

Just now the United States is coasting along on a wave of prosperity, but just as sure as the sun shines we are going to have a period of reckoning during which we may be extremely sorry if we commit ourselves to a long-range reconstruction program in Europe.

What most people seem to forget, or at least seem to fail to realize, is the cold fact that we, the people of the United States, owe approximately $260,000,000,000, which is more than the combined debts of all the civilized nations on the face of the earth.

When the certain depression in the United States comes, where are we going to get sufficient income even to pay interest of approximately $5,000,000,000 on this debt, much less enough Federal income to pay it off. In the event that we fail to pay interest or reduce the debt, then Government bonds will begin to shrink in value, and if and when that time comes then good-bye to all forms of investments and securities in the United States, and if and when that time comes then nothing under the sun can prevent bread lines and soup kitchens again in America.

This may sound pessimistic, it is only pessimistic to the extent that unless and until we begin to have some concern for our own future welfare, then nobody but ourselves will be to blame for the catastrophe which may ensue before the 5-year period of reconstruction aid in Europe, which we are sponsoring, comes to an end.

In other words, we may be officially committed to supply four or five billion dollars a year to be spent on aid and reconstruction in Europe when we may not be in a position to fulfill our commitments without incurring disaster at home.

Every public official, newspaper correspondent, and radio commentator who have come from a visit abroad are unanimous in their opinion that what Europe is demanding is overstated and that it should be pared down before we give the spendthrifts over there continued financial aid.

Furthermore, unless the Socialist Labor government in Great Britain shows even more signs of improving on their fallacious policies and unless the Socialist government of France or the middle-of-the-road government of France, whichever finally prevails in that country, show signs of greater productior, then our 5-year aid program will be of little, if any, permanent benefit.

It should be definitely remembered that most countries in Europe always have been in a state of chaos, with factional wars always in progress, and with bread lines and soup kitchens always prevalent. These facts are indisputable, so why can we hope to change human nature in countries where human nature always has been and always will be just what it is at the present time.

United States Soil Conservation Destroyed by Measure Proposed to Congress

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, December 15, 1947

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Louis Bromfield:

A VOICE FROM THE COUNTRY

"The sum total of the common sense of the common people is the greatest and soundest force on earth." (Thomas Jefferson.)

(By Louis Bromfield)

(Louis Bromfield is one of America's leading writers; author of The Green Bay Tree, Early Autumn (a Pulitzer novel), The Rains Came, Pleasant Valley, and numerous other books.)

UNITED STATES SOIL CONSERVATION DESTROYED BY MEASURE PROPOSED TO CONGRESS

There is an iniquitous bill seriously and adversely affecting the welfare of every American citizen now drafted and ready to be presented at the regular session of Congress. It is commonly known as the Cooley bill and seeks to destroy the United States Soil Conservation Service. If it is passed it will set back agriculture in America at least 50 years.

It not only affects the farmer—in fact, it affects him perhaps least of all. It affects you, the housewife, who, if it is passed, will pay higher and higher prices for your food as your husband will pay higher and higher taxes in order to subsidize bad farming. It affects you, the property owner, who is damaged by floods; and you, the sportsman, who wants good fishing and hunting; and you, the average citizen, who loves his country

and wants to see it preserved and remain prosperous.

The purpose of the bill is to abolish soil conservation service and place the soil conservation program under the direction of the various State agricultural colleges and the affiliated extension service districts. This means simply that the whole of the soil conservation program as well as much of the forestry program and the various flood-control programs would go down the drain.

For the sake of the uninitiated, it would mean that each State had its own conservation program and that there would arise immediately the kind of confusion and cross-purposes which have complicated, delayed, and wrecked any attempt to control the disastrous floods of the Mississippi River Basin. It would mean that soil conservation which is a program of action in the field, would be placed under the direction of 48 different State agricultural colleges represented in certain counties only by county agents, with training or experience.

The function of the State colleges is education and research and I have been unable to find one instance in which an action program undertaken by a State college has been successful. The truth is that if the State colleges and the extension services really did the jobs they are authorized to do (and some of them do) they have more than they can handle already.

Poor substitute

State colleges, it should be pointed out, do not have uniform standards. Some of them are excellent, some are still operating in the "middle ages" of agriculture. The existing United States Soil Conservation Service is made up of trained experts whose experience and achievements are uniform and are respected and sought not only by the farmers of the Nation, but by the Governments of China, Palestine, Venezuela, South Africa, Greece, India, and many other nations which suffer from problems of erosion and bad land use similar to our own.

So far as I have been able to discover, no State college in the United States contains an expert with similar experience and practice in the field. The proposed law would destroy the soil-conservation districts established in 48 States by which farmers join together under a self-governing committee to correct the ravages of erosion and bad farming in their particular area.

You might well ask, "Who is for such a bill?" The answer is an organization known as the Farm Bureau, favored over private business by tax laws and possessing one of the strongest lobbies in Washington—a gigantic cooperative, which operates fertilizer factories, agricultural machinery plants, oil refineries, insurance businesses, retail stores, and many other activities.

The National Grange, the Farmers Union, the United States Soil Conservation Districts Directors Association, and even some of the local Farm Bureau organizations, as well as countless regional farmers' organizations have passed strong resolutions against the so-called Cooley bill.

You might ask why the Farm Bureau alone of all the farmers' organizations is for the bill? Some of the motives are obscure, some of them obvious. The reason the bureau gives is economy and this has misled some business organizations into a half-hearted support of the bill.

No more hypocritical reason has ever been given for the support of any bill. In the first place, the United States Soil Conservation Service receives but a tiny fraction of the gigantic appropriation of the Department of Agriculture—appropriations which go, many of them, for destroying millions of bushels of potatoes to hold up the price to the consumer; for price supports to subsidize the bad agricultural practices by the majority of the absentee landlords of the Nation; for the old triple A (now known under the fancy name of the Production and Marketing Administration) which bribes farmers; and most of all, big landholders and absentee landlords, to do what any good intelligent and prosperous farmer does anyway.

Present service excellent

The Soil Conservation Service bribes no one with taxpayers' money. Its experienced hard-working experts work in the field with the farmer to save the soil, water supply, woodlots of the Nation; to control floods and to achieve the better yields per acre which will bring down prices and taxes for every citizen. They do not sit in swivel chairs in the vast Department of Agriculture offices in Washington, concocting plans to subsidize the inefficient and destructive agricultural, grazing, and forestry practices which have so largely destroyed our natural wealth and raised all our taxes and food prices steadily. The United States Soil Conservation men are working with fundamentals and not subsidies and bribes.

The Farm Bureau in some States has been urging members to write their Congressmen to support this iniquitious Cooley bill. If you are interested in the future of this Nation, in the conservation of its natural resources and real wealth, in lower taxes and a dollar which buys more, if you are interested in game and wildlife, and in a good agriculture write your Congressman to hit this destructive bill on the head, before it destroys the most constructive and economical agency that American agriculture has ever known.

Passage of Cooley Bill Would Prove Costly to Taxpayers of Country

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, December 15, 1947

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Louis Bromfield:

A VOICE FROM THE COUNTRY

(By Louis Bromfield)

(Louis Bromfield is one of America's leading writers; author of The Green Bay Tree, Early Autumn (a Pulitzer novel), The Rains Came, Pleasant Valley, and numerous other books.)

PASSAGE OF COOLEY BILL WOULD PROVE COSTLY TO TAXPAYERS OF COUNTRY

This is the second article about the proposed Cooley bill which is aimed at the destruction of the United States Soil Conservation Service and the turning over of what is one of America's greatest problems to the 48 different State agricultural colleges of decidedly varying merits and abilities.

The so-called Cooley bill (H. R. 1621) has the support of only one farm organization—the Farm Bureau—and has from its rank and file membership either lukewarm support or none at all. The officers of the organization have made their principal argument one of economy which has deceived some business groups, among them many actually suffering from competition from the tax-favored Farm Bureau itself.

As I pointed out last week, the United States Soil Conservation Service has been the most constructive single service in agricultural history. During its comparatively brief history, it has created more wealth for the Nation and more prosperity for the individual farmer than any other agricultural agency ever established. Its experts work in the field with the farmer rather than resting in arm chairs devising ways of mulcting the taxpayers and housewives of money to bribe and subsidize the bad farmer, the big landholders, and the absentee landlords.

The Soil Conservation Service works to create a better, more productive agriculture rather than to subsidize a bad agriculture. It works with fundamentals.

Moreover, the State colleges and the allied extension service are already overworked if they are doing their jobs, and the transfer of the Soil Conservation would mean either the abandonment of the problem, a half-hearted ineffective program, or more taxes, both State and Federal, to provide for a whole new set-up.

The economy angle put forth by the Farm Bureau lobby does not hold water at any point, especially in view of the fact that the expenditures of the Soil Conservation Service are only a small fraction of the money spent by the old triple A, now called the Production and Marketing Administration, which is favored by the big landholders and absentee landlords of the Farm Bureau and serves to bribe farmers to do what any sensible farmer would do anyway.

Damage in millions

In its negative aspect, the possible damage done to the Nation's agricultural resources by the destruction of the Soil Conservation Service can run into billions.

Soil conservation, good forestry practices, flood control can never be practiced effectively under individual State or local controls, simply because God did not lay out watersheds along the surveyed lines of States, counties, and townships. For example, it does the State of Texas no good to undertake good soil-conservation and flood-control practice if the State of Oklahoma chooses to do nothing and continues to dump flood waters, topsoil, and useless silt and gravel over the State border into Texas.

The Farm Bureau had honorable beginnings. It is an association of State cooperatives loosely linked together and possessed of a powerful lobby skilled in confusing all issues as it has sought to confuse the Soil Conservation Service with the production and marketing corporation (a new and fancy name for the old triple A). The two services have no connection whatever, the one being based upon constructive efforts and the other upon an agriculture subsidized by the taxpayer.

Originally the Farm Bureau cooperatives were organized justifiably by farmers to protect themselves against certain big business abuses, but the bureau has long since ceased to be a simple ordinary farmer's organization. It has itself become big business, owning in some States factories, oil refineries, insurance businesses, retail stores, etc. While not exempt from taxes it has, as a cooperative, been greatly favored by the tax laws.

In some States it has gradually come to represent principally, if not exclusively, the big landholders and absentee landlords, to the neglect of the average farmer and the ignoring of the small farmer. It has even begun to develop some of the vices of big business.

In the early days in some States farm bureau members were recruited largely by the State agricultural colleges through the extension service and in some States today the extension service and the farm bureau work so closely together as to be practically indistinguishable. This is clearly a case of State employees paid by all the taxpayers working for the special interests of a self-interested minority. Some have said, perhaps rightly, that the farm bureau advocacy of the Cooley bill is based upon the obliga-

tion to pay off in terms of power the debt it owes some State colleges and extension services for their early and still existing aid to the bureau.

In any case, it is extraordinary and a reason for suspicion that of all the great farmers' organizations, the farm bureau alone sponsors the iniquitous Cooley bill which would deliver over the vital soil-conservation problem to 48 different State agricultural colleges of extremely varying degrees of excellence.

Why the State colleges, and the extension service, already overburdened, should want to take over so vast a responsibility as soil conservation with its allied problems of good forestry and flood control, is another mystery to which the only answer can be the politics and power hunger which have always affected some of the State agricultural colleges to the detriment of American agriculture.

In any case, it is in the interest of every American citizen—farmer or city dweller—to fight by every means possible, this iniquitous bill. Its passage would be little short of a national disaster.

Seeds for Europe Under Aid Program

EXTENSION OF REMARKS
OF
HON. ELLSWORTH B. FOOTE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, December 15, 1947

Mr. FOOTE. Mr. Speaker, I trust that those who have jurisdiction over the allocation of funds under H. R. 4604, the emergency foreign-aid bill, will give serious consideration to the fact that in the interest of economy to the American taxpayers and efficiency and speed in the rehabilitation of the recipient nations, seeds be specifically provided for. In the report of the Foreign Affairs Committee, $7,000,000 is allocated for seeds, fertilizer, and pesticides for Austria, but I do not know how much is set aside for seeds. I understand the United States occupation authorities in Austria have surveyed the situation carefully and late last summer requested about $11,000,000 worth of seed for 1948 planting. No allocation of funds for seeds for Italy and France is included.

The most economic way to increase the food and feed supply of the war-torn European countries is to supply the seeds necessary for them to grow everything possible for themselves. This is such a self evident fact that one would assume that seeds would be given first consideration. Millions of acres in Europe lay idle last summer or only partially productive for the want of seeds. This statement may be confirmed by agricultural experts who have been sent over to survey the conditions and yet no adequate provision has been made to supply the seeds needed. Certainly fertilizer alone will not bring results. In France the dollar shortage has caused the government to refuse import licenses so that the French seedmen have been unable to acquire seed they need for next spring's distribution. In both of these countries we will have another heavy demand for food next winter if they do not have maximum seed production. We are fortunate in having large supplies of many important kinds of seeds well adapted to European conditions. Undoubtedly food is required for immediate relief, but if we are to avoid repetition of that same urgent need next winter, we must see that seed is made available to produce every pound of food and feed possible for feeding themselves and their livestock. For its most effective use, the seed should be on hand not later than March 1, 1948.

Housing

EXTENSION OF REMARKS
OF
HON. JOHN A. CARROLL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, December 15, 1947

Mr. CARROLL. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include the planks on housing adopted by the American Veterans' Committee—AVC—at its recent national convention in Milwaukee, Wis.

The AVC has long played an active part in the fight to secure adequate housing for veterans and other citizens. I am sure that Members of Congress found in their own home States and districts that housing remains one of the most important problems facing World War II veterans. The problem remains to be solved and I am sure that this session of Congress will devote full attention to developing an adequate housing program.

I am glad to see that the AVC favors the early passage of the Taft-Ellender-Wagner long-range housing bill. This bipartisan measure offers the only comprehensive solution to the housing crisis which has yet appeared on the congressional horizon. By lowering costs of both rental and sales housing for all groups, as well as making possible housing for those lower-income groups who simply cannot afford any of the housing now being offered on the market, the bill is a vital item on the agenda for this session.

Another prominent objective of the AVC is the extension of rent controls without mandatory increases. With the continued increase in the cost of living any lifting of rent controls might well be the straw which will break the consumer's back.

The AVC also emphasizes the importance of aid to the industrialized housing industry which offers the hope of low-cost housing by utilizing modern mass production techniques.

HOUSING

100. The No. 1 domestic issue in the United States today, as it was a year ago, is housing. We believe that the country has failed in its obligation to house the veterans of World War II. Therefore, we feel that the Government must assume the responsibility for getting homes for the veterans.

101. From the Federal Government, we insist that rent control be continued in its original form and be properly enforced until the housing shortage is largely eliminated: We ask for the immediate passage of the Taft-Ellender-Wagner bill, with an amendment authorizing an unsubsidized self-supporting public housing program, and the Douglas bill; we ask for the continuation of a vigorous program to assist producers of new building materials and industrialized housing; and finally, we ask for the development of a comprehensive financing program to encourage home purchasing and low-cost rental housing. We further ask that the low-rent housing program now administered by the Federal Public Housing Authority be continued and that adequate appropriations be made to assure the low-rent character of the program.

102. We urge the adoption of the principle of cooperative housing to help solve the housing crisis.

MODERNIZE BUILDING CODES

103. From State and local governments we ask for the modernization of building codes, the encouragement of State enabling legislation to finance local housing authorities. We urge the use of State and local funds for the construction of subsidized public low-rent housing and the encouragement of unsubsidized public housing, and we demand the abolition of zoning practices which prevent the setting up of low-income housing in new areas. We ask the abolition of real-estate covenants that deprive persons of the right to live where they choose.

104. From industry we ask for greater emphasis on the development of new housing materials, and a greater emphasis on the construction of rental units. Since industry cannot supply such rental units at rents which veterans can afford, we insist that the Government undertake the responsibility of providing adequate shelter through programs of its own. We call upon industry to reduce the over-all price of building materials as a first step to bring building costs within the range veterans can afford.

105. From labor we ask that the supply of building mechanics be expanded by increasing the number of apprentices, where necessary. We ask the adoption of industrialized methods of building construction, training in new methods being given any employees adversely affected so that members of the building trades will not be displaced. We ask that support and assistance be given industrialized housing where that type of housing receives structural approval from the Government. We urge that cooperation be given in modernization of building codes.

106. We favor the setting up of joint committees by AVC, other veteran and progressive organizations, and trade unions, to fight by legal methods evictions of tenants unable to pay increased rents.

107. The building industry is in the beginning of a slump at the time when the need for construction is the greatest in our history. Rather than waste precious time trying to assign the blame, we call upon the Congress to acknowledge the need for at least 1,500,000 new homes each year for the next 10 years and to underwrite this level of production. The Government should undertake to produce, through the medium of local housing authorities, whatever number of houses may be necessary in addition to the volume produced by priority builders to build up to the total of 1,500,000 units.

Folly of the Fake MVA

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, December 15, 1947

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the

RECORD, I herewith include an editorial from the St. Louis (Mo.) Post-Dispatch of December 12, 1947:

A NINE-FOOT CHANNEL

The Post-Dispatch believes that the time has come for some plain talk about the 9-foot navigation channel the Army engineers propose to build in the Missouri River under the Pick-Sloan plan.

There are two big questions about the 9-foot channel. The first: Is there enough water in the Missouri River to supply it and at the same time provide for the irrigation which the upper valley needs? The second: Is it likely to save enough in transportation costs to pay for itself?

Nobody knows how much water flows in the Missouri River. The records don't exist.

Nobody knows how much water would be required to maintain a 9-foot channel for the 8 months of the navigation season.

As former Governor Sharpe, of South Dakota, one of the main mouthpieces of the Army engineers, testified at a congressional hearing: "They do not know right now what water they are going to have to sustain any of these plans."

But by the best educated guess the Army engineers have been willing to make, it would require a flow of 20,000 cubic feet a second or more at the upstream end of the channel. That's approximately the whole flow of the Missouri River according to the best available records.

It is possible, of course, that there is enough water in the river to maintain the 9-foot channel and to irrigate 5,000,000 new acres as the Reclamation Bureau plans. At the very best, it is a terrific gamble. And if both the navigation and the irrigation projects are carried out, and there turns out not to be water for both, a lot of money will have been thrown away.

The Army engineers are confident they can stand on their constitutional priorities and take the entire flow of the river if that much is required for the channel.

The Reclamation Bureau says it is confident that its rights are protected by a congressional provision which gives irrigation the priority in the event of conflict with navigation.

Since a statute of Congress doesn't amend the Constitution, the Army engineers seem on the face of it to have the advantage here.

But if there is only enough water in the Missouri River for either the navigation channel or the irrigation project but not for both—as the known facts indicate—one of the agencies will have to give way.

If the Reclamation Bureau wins, the people will lose the $338,000,000 or more they had spent on the 9-foot navigation channel.

If the Army engineers win, the people will lose the $298,000,000 or more they had spent on irrigation.

But in that latter event the people will also lose something more precious than money—the financial stability and productiveness and wealth of a vast area which irrigation alone can sustain.

Plainly, the 9-foot channel isn't worth what it would cost in water.

Is the channel worth what it would cost in money? The Army engineers have made only one documented study showing how much it would cost to maintain and operate the channel and how much it would save in shipping charges.

This study shows that the channel would cost $2,500,000 a year more for maintenance and operation than it could save in shipping charges—to say nothing of the cost of building it. And that would be every year. $2,500,000 down the drain. Little wonder the Missouri River division engineer of the Army engineers, Col. George R. Spalding, said in 1933: "I am unable to convince myself that the undertaking is sound."

Plainly, the 9-foot channel isn't worth what it would cost in money either.

The course of wisdom, it seems to us, would be to use the present channel as much as it can be used without robbing irrigation of water, and to abandon this scheme for a 9-foot channel, which has been discredited by every authority, including those same Army engineers who are now spending millions of dollars on it.

There is another thing that is as plain as day on the face of the facts. These agencies—the Army engineers and the Reclamation Bureau—do not commend themselves to public confidence by the monumental gamble in which they are engaged.

They have shown a crass disregard for the public interest and for the prudent use of funds.

They have, in effect, sold out the future of the Missouri Valley for no better reason than to keep the development program in their own hands.

We submit that it is long past time for an appropriate agency to be formed and placed in charge of this valley's development. We mean an agency that won't have to take political gambles with the Treasury's money or the valley's future. We mean a Missouri Valley Authority.

Do We Owe Europe a Living?

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, December 15, 1947

Mr. VAN ZANDT. Mr. Speaker, several days ago, as I was reading my morning mail, I came across two interesting items of information concerning our policy of foreign aid.

First I read a compilation of information by the Office of Coordinator of Information, House of Representatives, entitled "Around the World With Sixty-six Billion," in which was furnished a break-down of the amount of aid to foreign countries and the purpose for which it was used. The report is as follows:

Around the world with $66,000,000,000—how United States dollars were spent

A. LEND-LEASE

Belgium	$158,598,000
Bolivia	5,611,000
Brazil	331,651,000
Chile	21,680,000
China	1,564,698,000
Colombia	8,127,000
Costa Rica	155,000
Cuba	6,093,000
Czechoslovakia	503,000
Dominican Republic	1,614,000
Ecuador	7,541,000
Egypt	1,060,000
El Salvador	894,000
Ethiopia	5,252,000
France	3,233,859,000
Great Britain	31,392,361,000
Greece	75,604,000
Guatemala	1,779,000
Haiti	1,443,000
Honduras	374,000
Iceland	4,809,000
Iran	4,798,000
Iraq	4,000
Liberia	7,237,000
Mexico	38,617,000
Netherlands	248,896,000
Nicaragua	902,000
Norway	52,503,000
Panama	84,000
Paraguay	1,965,000
Peru	19,033,000
Poland	16,954,000
Saudi Arabia	$17,531,000
Turkey	27,457,000
Uruguay	7,141,000
U. S. S. R.	11,297,883,000
Venezuela	4,418,000
Yugoslavia	32,036,000
Total	48,601,365,000

B. SURPLUS PROPERTY

Austria	2,000,000
Belgium	380,000,000
China	824,000,000
Czechoslovakia	9,304,694
Denmark	20,000,000
Egypt	11,800,000
Ethiopia	1,000,000
Finland	15,000,000
France	1,398,000,000
Great Britain	587,800,000
Greece	45,000,000
India	50,000,000
Iran	25,000,000
Italy	565,000,000
Korea	25,000,000
Netherlands	20,000,000
New Zealand	5,500,000
Philippines	638,000,000
Poland	50,000,000
Saudi Arabia	2,000,000
Turkey	10,000,000
Uruguay	666,666
Yemen	1,000,000
Total	4,686,071,360

C. DIRECT LOANS

Great Britain	3,750,000,000
Greece	250,000,000

Source: New York Daily News, Oct. 5, 1947.

Mr. Speaker, after reading the above report, which has outlined our mammoth program of sending American dollars abroad, I came across the following editorial from the pen of Mr. Robert Boyer, editor, Altoona Tribune, Altoona, Pa., which appeared in the December 9 issue of the Tribune. The editorial is filled with facts that should have the earnest consideration of every thinking American.

DO WE OWE EUROPE A LIVING?

Reports from abroad by the most qualified and impartial observers, most of whom are American newspapermen, inform us that the average European believes that American wealth is endless.

Raymond Daniell, New York Times reporter, writing from London had this to say, "An Italian, better informed and more pro-American than the average, told me recently in Venice that even if the funds appropriated for European rehabilitation under the Marshall program were on a scale proposed by the Paris conference (which made most thinking Americans shudder) the cost of the individual American would only amount to about one good-sized beef steak per year. He remained skeptical and unconvinced when I assured him that the cost to the American taxpayers would be close to $400 each, which would buy quite a number of beef steaks even in Italy's most expensive black market restaurants."

Mr. Daniell quoted a truculent German burgomeister of the Ruhr, who demanded of the American reporter, "If you haven't got the wheat for us yourselves, why don't you buy it for us from the Argentine? Your country has plenty of money, hasn't it."

Says Mr. Daniell, "Wherever you travel in Europe, you find the feeling that no matter how much America does, we could and should do more. A British friend remarked the other day that he thought it shameful that a nation as rich as the United States does not share some of the good things of life."

Yet, with this prevailing feeling, it is remarkable and shocking to find that Europeans hold a feeling of cultural superiority over Americans.

"Even Europeans untouched by Communist propaganda are fond of expatiating on the superiority of their culture and civilization of America's" writes Mr. Daniell. He goes on to say that the European judges culture by Beethoven and Bach, fine wines, and alluring art.

It is apparent that the European's conception of civilization needs a modern renovation.

He does not think that his "superior civilization" has produced the most barbarous warfare of modern times; that his fine European culture has almost completely destroyed a major part of the European Continent twice in this century; that his type of civilization has produced, with its fine art and music, the most degrading experiences for the European people since the Middle Ages; that this "superior civilization" of Europe has lost sight of the humanities, the true wisdom of the ages, and has completely failed to produce a constructive civilization, either in cultural thought, which is in fact spiritual thought, or in material production.

Instead, it turns constantly to the "uncivilized and stupid" democracy of America, where it demands constantly a renewal of its sustenance, so that it may continue its culture, while we feed its women and children, while European men plan more world conquest while meditating over their fine wines and their inspiring music.

All of these things indicate that the leaders of this country are ignoring too many facts with regard to our relief program for Europe.

They are letting their sympathies blind them to the fact that Europe has come to depend upon this country to produce for it—to make this country in fact, if not in name, a slave producing nation for European indolence and rotten government, from Moscow to Paris and London.

Too little attention is being given by our State Department to this acquired atitude of the people of Europe; this feeling, gradually taking root since World War I, that the United States of America owes them a living.

Too little concern is shown for the vitally important job of telling the people of Europe the truth, in such strong and repetitious fashion that they will not remain unconvinced, as the Italian was to whom Mr. Daniell spoke.

We are tardy with our educational program. We have been content for years to swallow the propaganda of Europe, and to make little or no effort to educate Europeans to the real America, the real conditions, and the all-important fact that America is rich, and Europe is poor because we in America give more time to work and production than to concocting grandiose schemes for world conquest, for wars, and for power-mad governments.

Europe still has that lesson to learn, and we are doing nothing to help those people learn it.

Instead, we are feeding their illusions concerning us.

Mr. Speaker, after digesting the contents of both of these articles, I find myself in the same position as that of millions of American citizens, who are asking, "How long can we keep financing the world?"

Helping Inflation

EXTENSION OF REMARKS

OF

HON. HUBERT S. ELLIS

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, December 15, 1947

Mr. ELLIS. Mr. Speaker, today I submit for the consideration of the House a splendid editorial from the Parkersburg News of December 11, 1947, edited by Mr.

Francis Pierce Fisher, which clearly indicates that the President is not getting by in his effort to blame everyone except himself for the high cost of living. The administration is solely responsible for the existing inflation and high prices, and everybody knows it.

HELPING INFLATION

One of the worst phases of the price problem is the attempt to over-simplify it by blaming the whole inflation on particular groups, such as industry.

This misleading device has been used, unfortunately, by a number of Government officials whose positions give them ready access to the newspapers and radio. The truth is that Government itself has been one of the most important, and perhaps the most important, influence which has pushed prices inexorably upward. As long ago as last February, writing in the New York Times, Henry Hazlitt pointed out that abnormal demand was bringing higher prices and that demand was "far greater than it was before the war because money incomes are far greater; and money incomes are greater principally because the supply of money and bank credit has been almost tripled since the outbreak of the war." There has been little change in the situation since then.

Few businesses want high prices, and most businesses are doing what they can to resist them. As an example, William Eden, vice-president of American Stores Co., a large chain system, recently testified that his company's volume of business is up 31 percent—yet its net income is down some $500,000. That is not an exception in the retail field, where all kinds of stores have voluntarily shaved profits when possible to hold their customers.

The Government cannot attack the price problem with clean hands until it puts its own house in order. Our Government fiscal policy alone makes more inflation inevitable.

Texas Commissioner of Agriculture Says Secretary of Agriculture Is No Friend of the American Farmer

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Monday, December 15, 1947

Mr. SCHWABE of Oklahoma. Mr. Speaker, I am just in receipt of a letter from Mr. J. E. McDonald, commissioner of agriculture of the State of Texas, enclosing a copy of a telegram he recently sent to the Speaker of the House of Representatives, JOSEPH W. MARTIN, Jr., and Senator TAFT, in which the Texas commissioner of agriculture says that the Secretary of Agriculture is no friend of the American farmer and agriculture.

I assume that Commissioner McDonald is in a position to know, and perhaps actually does know, as much about agriculture and the needs and interests of the farmers of this country, and particularly of the great Southwest, as any other man in the country. He certainly has manifested a sincere interest in the farmers and the agricultural industry of this country. He is to be complimented for his forthright and courageous appeal in this and other instances to prevent the destruction of our free institutions and in his effort to prevent the Federal Government from putting the American farmer in a strait-jacket. I agree with Commissioner McDonald heartily when he says that if we give the Secretary of Agriculture, or any other Government bureau, control over commodity exchanges, it will naturally result in their attempt to control and fix prices, and be the entering wedge of bureaucratic price control. Surely we are justified in judging the future by the past.

I am pleased to quote the telegram sent by Commissioner McDonald to Speaker MARTIN and Senator TAFT, as follows:

AUSTIN, TEX., *December 8, 1947.*
Hon. JOSEPH W. MARTIN, Jr.,
Speaker of the House,
Washington, D. C.
Senator ROBERT TAFT,
Senate Office Building,
Washington, D. C.

In the interest of our national welfare and free Government I urge you not to give Secretary Anderson or any other Government bureau control over commodity exchanges. This will naturally result in their attempt to control and fix prices and be the entering wedge of bureaucratic price control. We now have the best marketing system and the cheapest and most plentiful supply of food and commodities in the world whereas foreign countries who have price controls are asking us to help feed and clothe them. Secretary Anderson and the Department of Agriculture have proved they are no friend of the American farmer and agriculture who are producing the food, fiber, and clothes for our country. Although agriculture represents 25 percent of our population yet they receive less than 12 percent of the cost of manufactured goods to the consumer. Therefore it is evident that 88 percent of the cost of living is due to labor, manufacturing, transportation, and distribution charges coupled with high taxes. Also we should bear in mind that our country has never been prosperous and cannot be prosperous without a high wage and price level and equitable prices for the farmer. With the existing Government debt and high taxes, low wages and commodity prices would result in deflation, millions of unemployed, and disaster for our country far worse than what happened in the 1929–32 disaster and debacle.

J. E. MCDONALD.
Texas Commissioner of Agriculture.

Why Should Employers Deal With Agents of Foreign Plot?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, December 15, 1947

Mr. MULTER. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include an article entitled "Why Should Employers Deal With Agents of Foreign Plot?" that appeared in the Brooklyn (N. Y.) Eagle on Friday, November 28, 1947:

WHY SHOULD EMPLOYEES DEAL WITH AGENTS OF FOREIGN PLOT?

Within recent weeks 10 men have been cited for contempt of Congress. The House of Representatives, by a sizable majority, sustained the contempt proceedings of one of its committees. On Tuesday, the employers of these men, the movie magnates of Hollywood, decided to suspend the 10 without pay or fire them outright.

Serious questions hang up on this sequence of events. The issue lay in the refusal of the defendants to answer one question: "Are you a member of the Communist Party?" In evident, prearranged unity each one refused to answer. Has a congressional committee proper jurisdiction to ask such a question? Eventually the final and decisive reply will have to come from the Supreme Court. Nothing forbids the public discussion of it.

The so-called liberals claims that such a question infringes upon a man's right to think and speak as he wishes according to the nature of civic rights in America. This, to them, is a violation of a citizen's right to hold whatever political belief he wishes.

There is a vast difference, in our opinion, between a man's personal political beliefs and membership in the Communist Party. The one is merely the possession of radical or nonradical thought; the other is actual membership in an international conspiracy, the purpose of which is to defend a foreign nation's interests and by any and all means to substitute the totalitarian state not merely in place of capitalism but by destroying in our present form of democratic government.

It is true that such a conspiratorial organization has not been declared illegal as yet by a definite statute. We believe that it is implicitly contained in the tradition and the decisions of our courts.

Whether these 10 men are actually Communists or not will have to be decided by the proper public authority. Whether or not a congressional committee has the right to question their status will likewise be settled by the courts. But there is an even broader question involved, namely: "Has a member of the Communist Party a right to a job in the United States of America?"

Every discussion we have ever heard on the subject of communism has ducked the answer to this one. We will put our neck out and deny the Communist such a right. We do not believe that an employer has any more obligation to hire a Communist than he would have to hire an habitual drunkard or a man who, though unconvicted, was known to be a robber.

Membership in the Communist Party is a declaration of intent to place the Soviet Union above the United States of America, to engage in sabotage of American industry whenever or wherever the Commie leaders give the word, to break down subtly or openly the traditional form of society in which we live, to undermine American institutions at all times, to use trade unionism as a vehicle for bringing other workers to the same state of mind and to engage in the same kind of tactics as the Communists.

We do not believe that a member of such an organization has any right to be supported by American industry so that he might the more easily destroy it. Employers are forbidden to sign a contract for a closed shop. Why should they be obliged to deal with the agents of an international conspiracy?

The Role of the United States in Economic Affairs

EXTENSION OF REMARKS
OF
HON. ALBERT W. HAWKES
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES

Tuesday, December 16 (legislative day of Thursday, December 4), 1947

Mr. HAWKES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the speech which I made before the American Tariff

League at its sixty-second annual dinner at the Waldorf-Astoria Hotel, New York City, on October 17, 1947, on the subject entitled "The Role of the United States in Economic Affairs."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE ROLE OF THE UNITED STATES IN ECONOMIC AFFAIRS

It is unfortunate that we who serve you in Washington have so little time for public group discussions of important matters. For that reason I value this opportunity to discuss with you the role of the United States in world economic affairs.

Of great and growing concern is the role of these United States in the world of today. Not a unified world answering the concept, One World, about which much has been heard, but a world more seriously divided than ever before.

The division is not a trivial one. To the contrary, it goes to the very roots of our civilization. In short, it is a conflict between freedom and statism. One philosophy holds that government is an agent of its people, the other that it is their master.

It makes little difference whether we think of communism or socialism. Both are forms of statism and as such are in opposition to the concept of freedom on which the Government of the United States was founded.

Communism would have the world regard it as similar to our political parties. As I understand it, it is nothing of the kind. It is a world conspiracy aimed at the destruction of every aspect of freedom, spiritual, political and economic.

Nor should we be deceived by the label, socialism. It promises greater freedom for the individual, but where is there an actual instance of it ever having increased such freedom? We have an example before our eyes in the case of Britain. What we see and hear indicates an increasing denial of freedom to the individual and a disastrous brake on productivity.

And lest we preen ourselves on our superior virtues in this regard, let me remind you that almost daily I see citizens of our as yet free country, coming to Washintgon demanding socialized this and that. It is this creeping statism of which we should beware.

We must steadfastly resist these socialistic practices for ourselves lest we, too, lose our most-prized possession—freedom—and come under the dominance an all-powerful state.

As we plan our participation in world affairs, we need to keep ever in mind the fact that all statism is a denial of individual freedom.

We like to think of this as a day of great opportunity to help and perhaps to lead the world to better things. It may be such an opportunity, provided we have the wisdom to lead but not to carry, to help but not support.

You in the Tariff League are interested in the specialized field of international economic relations, including the tariff policy of the United States. Let us look at that first.

The Congress enacted a Trade Agreements Act of 1934. Stripped of the wordy nonsense as to its purposes, the real object was to permit reduction of United States tariffs by other means than provided by the Constitution. Despite the fact that the much-condemned tariff of 1930 was already lower than the tariff of most great nations, as clearly shown in the study published by your league in 1942, a very drastic further reduction in rates has been made under the authority of the Trade Agreements Act since 1934. This policy was enthusiastically supported by the groups who expected to profit the most from the expected increase in exports, and by those attracted by the idealism of the propaganda.

More than a decade of propaganda, which even now is at floodtide, has sought to convince our people that increased foreign trade is the alpha and omega of prosperity for the Nation.

PROPAGANDA AND PUBLIC THINKING

Over a year ago the city of New Brunswick, in my State, was used as a guinea pig to prove that concentrated propaganda could alter public thinking about the value of foreign trade.

Sponsored by the World Trade Foundation, there was created an advisory group in New Brunswick, which included representatives from educational institutions, women's organizations, churches, parent-teacher associations, and others. They got the support of the publisher of the daily newspaper. Then they put on a 10-week "educational" effort. Quoting from the magazine Tide, August 2, 1946:

"They kept the world-trade message under New Brunswick noses virtually all day, every day. They ran poster and essay contests for the pupils in the schools. They sat up photo exhibits, charts, and three-dimensional displays in the shop windows. Through Rutgers they got the international message on radio programs, wound up with a town-wide quiz contest.

"All the community organizations, most of which had representatives on the Advisory Committee, sponsored lectures, socials, and formal discussions of the world-trade problem. And most of them heard talks by Foundation speakers to keep them on the right track. Backbone of the campaign, of course, was Boyd's newspaper, which kept the message on the front page, published all the stories, and gave invaluable publicity to the whole drive."

Then they took up a new survey, asking certain questions, and found that while New York, under the influence of dismal international news, had shifted toward so-called isolationism, New Brunswick had developed a much greater awareness of the importance of two-way trade and lasting peace. In other words, New York, with greater actual knowledge of the subject, did not react the same as did New Brunswick under the propaganda ministrations described.

Some time ago, at an affair in Montclair, a very prominent lady said to me that she was supposed to write me a letter but had for the moment forgotten what she was to write me about. I asked her if she would recognize the subject if I told her what it was. She said she would.

So I told her, "You were supposed to write me a letter asking me to vote for the renewal of the Trade Agreements Act without any amendments."

"Yes; that's it," she said, "but how did you know?"

I told her that I had already received several hundred such letters from other ladies. I asked her what she knew about the trade-agreements program and she said she knew nothing about it at all.

I said, "My dear Mrs. Blank, do you think it is fair for you to urge me as to how I should vote on something you know nothing about?"

A propaganda campaign is now being carried on by the Advertising Council, sponsored by the World Trade Foundation (now out of business), Carnegie Endowment for International Peace, Twentieth Century Fund, the National Planning Association, and others.

The objective is to inform the average person as to the vital importance of increased foreign trade. Translated into the simplest language this means that our people are being propagandized into thinking that 10 percent of our trade is of relatively greater importance than the other 90 percent. Obviously, whatever is said about the great value of the 10 percent, which is our foreign trade, only serves to point up the much greater importance of the 90 percent, which is our domestic trade. Yet the internationalist propaganda continues to insist that the tail should wag the dog.

LOOKING AT THE FACTS

But suppose we look at some facts. Exports recently were at the annual rate of more than fifteen billion and imports at approximately one-third of that rate. You know that it isn't trade at all unless we get paid for the exports.

There is the rub. We are told of the shortage of dollars. Everyone wants them. All we are asked to do is to supply them in adequate amount. Of course, other nations don't want dollars. They want the goods which we can produce and which dollars will buy.

After the most destructive of all wars, their need is unbelievably great, but they are producing little, if anything, with which to repay us. That is why they want us to supply the dollars as well as the goods. In fact, they are falling so far short of producing for their own needs, that they must use the dollars they get to buy such things as food and coal. Yet coal was formerly the chief export of the United Kingdom.

Besides, they say: Isn't the United States rich? Do not some of her own citizens boast of being a great creditor nation? How to become a creditor through the accumulation of uncollectible debts is, however, another story long and fantastic. What is more important is that the American people, misled into thinking of present fantastic exports as profitable trade, are persuaded to work like the devil in order to preserve the illusion. We can provide dollars through loan or gift or foreign investments or travel or, more normally, through the purchase of foreign commodities or services. In a futile attempt to provide enough dollars, the same groups who have all along supported the trade agreement program want to continue it to the point apparently where United States producers will not have effective tariff protection.

Sometimes I think it might teach our people a wholesome lesson if this Nation were to establish barter as the compulsory method for the conduct of foreign trade for a year or so. More people might then comprehend that real trade is the exchange of goods you have but can spare, for goods you need or want but do not have.

The mechanism of money tends to obscure this fundamental truth so that people talk of dollar shortage whereas they really mean shortage of commodities with which other nations can pay us and, more importantly, supply some of their own needs so that they would need less dollars. But even if the other nations had the commodities with which to trade, we in the United States could not make enough of them to balance currently the fantastic value of our present temporary export volume without at the same time upsetting our domestic production of the items reported.

So far as I know, the United States has never denied itself of any imported commodity which it needed or wanted. In fact the United States is the world's largest importer of many things, of which I might cite rubber, silk, sugar, newsprint, wood pulp, tin, furs, tea, and coffee, as examples. Of the commodities mentioned all except sugar pay no tariff duty at all.

DIVISION, NOT EXPANSION

Aside from increases in our imports of duty-free commodities, or of raw materials or special qualities of manufactured goods, any gain in dollars through sales to us by other nations must depend on increased sales of competitive goods, which we can produce as well or better ourselves.

To expect the United States to follow such a course is unreasonable, to say the least. It is just silly to talk of providing enough dollars that way. Besides, this is division of trade. It is not expansion of trade, which is supposed to be the objective of our policy.

If, as is often boasted, we in the United States have the ability to produce more than half of all the world's manufactured goods, that fact alone explains why we have no great need to import them.

The inescapable fact is that the Nation gains only through its imports of what it needs or wants. Unless the value of imports and exports eventually balance, the excess of exports are gifts, not sales. Therein lies the deception of propaganda to make people believe that these excessive exports are profitable trade providing increased employment whereas, actually as taxpayers we must pay for the excess exports. For when Government loans the money abroad, it must collect it from its own citizens as taxes.

Current propaganda of the advertising council uses the slogan: "Part of every dollar you get comes from foreign trade." The truth is that at present part of every dollar you get goes to pay for foreign trade.

The emphasis on exports puts us on the wrong foot. We have the ability to produce and export, but we do not have the corresponding capacity to import an equal value. Reduction or even elimination of United States tariffs altogether will not increase our need for foreign commodities.

When a government, under pressure from special interests within the country, unduly lowers tariffs on competitive products, it strikes a devastating blow at the vital basis of its own prosperity and by its own act creates the conditions for unemployment.

Some bankers and merchants are vociferous in their denunciation of tariffs or other legitimate regulatory devices as barriers to trade. At the same time they advocate huge foreign loans in order to finance continued vast exports. Such trade, they say, makes for peace.

As we read the sweet things currently said about us by those to whom we have loaned the most, we may wonder if the peace tag put on these things has any validity or whether perhaps it is just the carrot before the donkey. There is truth in the old adage that the way to lose a friend is to loan him money.

DEFINITION OF TRADE

What is trade anyway?

It is an exchange or a bargain. Exchange of what? Obviously an exchange of something you have for something you want.

It is just as simple as that; nations who already have or efficiently produce something, do not at the same time want it. As they have no need for it, they can either forbid its import or they can levy a tariff which permits its import anyway on payment of a fee. In one case there is prohibition, a barrier; in the other a tariff, which is permission to import for a fee.

The merchants and bankers say both are barriers to trade, peculiarly enough concentrating their fire on tariffs, which are the devices permitting trade. Virtually, they say that distribution of the commodity, that is, trade in it, is of greater importance than the need for the commodity which was the reason for its production.

Of greater importance to whom? To the merchants and bankers, of course.

How often have you heard it said that because of our great productive ability we have nothing to fear from European competition, particularly in view of the wrecked industries there. But contrariwise, it is also said that we cannot support Europe in idleness and that, therefore, we must help her get back into production. That means that we furnish new, up-to-date equipment and "know how" which, coupled with low wage and living standards, can create again the kind of competition it is impossible for us to meet and yet retain our higher standards.

Admittedly we mass produce certain commodities so efficiently that despite higher labor rates we can, nevertheless, realize low-unit costs. There may be other reasons resulting in a similarly favorable position in other cases.

Wherever this is true so that we can compete without any tariff equalization, then by all means let us remove the tariff, if any. So far as I recall, no producers of motor cars or business machines have as yet put in a plea for such action on their products.

My guess is that the differences in standards and in resulting cost of production will be long continued. If we are wise, we will not demolish our tariffs, which are the fairest equalizing device yet created anywhere.

Access to our United States markets by the world without equalizing protection to our industries based on the difference in living and wage standards as they are reflected in unit costs will, if persisted in, destroy the position of the United States and its leadership and bring untold suffering to American labor and those who have built the industries of this Nation. This can be best illustrated by taking one example such as the textile industry.

D. F. Edwards, president of Saco Lowell Shops, a man who knows the textile industry intimately, said, in addressing the Foreign Policy Association in Boston, in February 1946, that the difference in wages paid textile workers in New England, as contrasted with southern mills, accounted for the loss of two-thirds of New England's cotton spindles, yet the differences in wages ranged only from 17 to 35 percent. These relatively moderate differences were enough to destroy two-thirds of New England's greatest industry, yet the differences were small as contrasted with those between United States and foreign textile mills. He said, admitting that our equipment is modern and more efficiently operated, the advantages still fall far short of enabling our mills to realize as low a unit cost as the foreign mills in normal times.

In this connection, let me quote you a statement, the like of which is often made:

"American industries which require protection do not bulk large in our economy whereas, industries which profit from large foreign markets affect millions of workers and a great proportion of the Nation's invested capital. Tariffs are maintained to protect inefficient industries characterized by low wages."

The automotive and textile industries come to mind as perhaps representing the two groups referred to. What are the facts?

In 1939 the automotive industry gave employment to approximately 400,000 and the textile industry to about 2½ times that number. The actual wages paid were about $650,000,000 for automotive and $908,000,000 for textiles. The value of their product was almost the same, approximtely $4,000,000,000 for each. The investment in each case was also very close at about $3,250,000,000.

In this instance, therefore, the actual facts do not bear out the glibly made assertion, for while the value of the product and the amount of the investment are very nearly the same, the textile industry provides a very much greater amount of employment. Admittedly, wages in the textile industry are lower than in the automotive. Why? Simply because the United States automotive industry has such a world leadership that is foreign competition is inconsequential as compared with that met by the textile industry. Every nation that has done any industrializing at all has a textile industry. In normal times there is very keen competition. Nor is it a question of the American industry being inefficient, for it is actually more efficient than most foreign textile industries. The difference is in the wages it pays, which are very much higher than those of any of its foreign competitors. Increased efficiency can absorb part of this but not all of it.

It is a good idea also to define what we mean by efficiency, which is the ratio of effect produced to the energy expended. Thus, United States producers may be more efficient and yet their product be more costly per unit. When cheapness is regarded as synonymous with efficiency, it means that we are confusing energy expended with the cost of that energy.

Of far greater importance and of course including tariffs is the proposal to establish an International Trade Organization as a specialized agency under the Economic and Social Council of the United Nations. Our concern about this was so great that, as you know, the Finance Committee of the Senate held hearings in March and April in order to interrogate key figures in the Department of State as to what it all meant. I hope you have read the printed hearings giving the questions and answers. You will not like many of the answers, but you will know more about what is afoot.

PROPER ROLE OF ITO

Most of us would agree, I think, that there are constructive functions for such an organization even in the present chaotic state of the world. They are statistical, consultative, and advisory. I do not favor the creation of more and more international bureaus that will largely write their own ticket as to bureaucratic activities, including administrative functions. An International Trade Organization that will help us to cooperate in the economic field is desirable. An organization based on the concept of one world with ideas of world planning, controls, and administration, is untimely and undesirable and in many respects the negation of our concept of freedom and thus is a surrender to statism.

The proposed ITO charter contains many provisions that require interpretation. As an example of this, Max Suetens, representative of Belgium and chairman of the Preparatory Committee at the Geneva conference, in explaining the ITO charter said, "two sentences in the draft charter provide a working basis for ITO ideals. They are of such importance as to deserve separate, careful analysis." He stated the first of these to be:

"To further enjoyment by all countries on equal terms of access to markets, products, and productive facilities which are needed for their economic prosperity and development."

Continuing, Mr. Suetens said:

"This is, as it were, the high command policy for ITO's attack on the systems with which many countries have built a wall around their international commerce."

Certain internationalists have become much enamoured of these phrases. What do they mean?

Denial of access to products and productive facilities took the form of preclusive buying during the war years in order that critical materials would be kept out of enemy hands. Subsequently, Russia has denied access to the foodstuffs of eastern Europe.

The first probably ceased with the war's end so that anyone able to pay for what they wanted could have access on equal terms. No set of fine phrases seems likely to affect the Russian action.

But what about "enjoyment of all countries on equal terms of access to markets."

The best market of all is here in the United States, and every other nation wants access on equal terms. To them that means abolition or drastic lowering of our tariffs. Otherwise they must pay tariff whereas the United States producers do not, hence no equal access.

On the other hand, access on equal terms is to apply to all countries. With tariff removed, would the United States producer have equal access to his own market?

What the internationalists pretend not to understand is that we have a tariff in order that we may preserve for ourselves equal access to our own market by equalizing differences in unit costs which are due to lower standards elsewhere.

A COMPROMISE OF PRINCIPLES

The more I have studied the present proposed charter for ITO the more convinced

I have become that to accept it in its present form would be extremely unwise. One of the convincing reasons is the apparent need to sacrifice almost every sound principle, in order to gain adherents to the charter. If other nations voice agreement with the principle only providing there are sufficient exceptions to permit the indefinite continuance by them of their present practices, then I conclude that the charter is premature.

Mr. Clayton in his radio talk from Paris referred to the criticism of the compromises in the charter. Said he, "Compromise is a virtue, not a defect." Compromise of nonessentials to reach an important goal or objective is permissible. Compromise of basic principle is anything but a virtue and is like compromise with truth. If we indulge in it, we can only end up in failure.

That is a grave fault of the charter. It so abounds in compromise of principles as to make a mockery of them. We should make up our minds and, if the principles are sound, then steadfastly adhere to them. As it stands they are for immediate observance by the United States, which is as it should be, but for all or most of the other nations they are at best only far distant and perhaps from their viewpoint not too desirable goals.

One of the glaring examples of conflicting principle is in the denunciation of private monopolies in one chapter of the proposed charter and the provision for their wholesale creation in another. True, the new monopoly cartels would not be called that. They would be called intergovernmental commodity arrangements or agreements. but this is hypocrisy.

To me the remedy for monopoly is not more monopoly and particularly not monopolies created and run by governments.

Why people pretend to believe that the same human being is a devil when acting as a private citizen but is positively angelic when an officer of government, is difficult to understand.

Yet human beings would operate the monopoly whether under private or governmental auspices. In one case he would pay for his own mistakes, legal or otherwise. In the other, mistakes would be at the taxpayer's expense and abuses beyond reach.

With the exception of the United States and Canada, and one or two others, almost every country represented at Geneva has a policy of planned or controlled economy. What chance has private enterprise and the objective of less-restricted trade when the charter embodies the ideas of those who believe in and practice contrary programs?

PITFALLS IN ESCAPE CLAUSE

In my opinion, the escape clause, upon which the advocates of reciprocal trade agreements and the International Trade Organization depend so much, carries with it great danger, while at the same time being presumably devised for safety. Whenever I have shown any advocate of the International Trade Organization the dangers which come from our being the leaders of the world who must live up scrupulously to our agreements, whereas weaker nations might be excused for deviations—the enthusiastic advocates always say—yes, but don't forget the escape clause. My point is, we must not do things in contemplation of using the escape clause because, if we do, we will create 10 times as much enmity through its liberalized use as we could possibly do without having a charter.

It is reported that the United States representatives have endorsed the idea of customs unions among European states. Thus, if Britain were to declare that she and a number of western European states planned a customs union to be effective even 25 years hence, they could immediately adopt preferential customs treatment among themselves.

Before Geneva, we were told with much fanfare that British preferences were to be eliminated. The British apparently think otherwise, and presently are discussing customs union for their Commonwealth of Nations, which in effect would put the United States at a still greater disadvantage than it is now under the preference system.

A customs union for western European nations is also under discussion; it paves the way for the formation of several trade blocs. There would be a western European and an eastern European bloc, one practicing complete totalitarianism, the other its near relative, a planned and controlled economy—two versions of statism.

Perhaps geographical divisions may have merit, particularly if each within itself would function as a customs union; that is, have no trade restrictions or only limited ones. That would be a constructive process of evolution.

Of the 17 nations other than the United States who have been working on ITO charter, all but about 5 would be in 1 or the other of these customs unions. In arriving at all the compromises of principle they have each voted as individuals, of course. The point is that it makes the whole present concept of ITO ridiculous unless it is held exclusively to advisory, consultative, and statistical functions. If this were done, it might help to eventually bring the groups closer together on matters of principle and policy.

Voting procedure is important in any international organization. We recall how a series of vetoes makes the United Nations look rather sick. In the proposals for ITO, the United States representatives want one vote for each country. This would be of less concern if ITO were limited to its advertised statistical, consultative, and advisory functions. In the absence of such limited functions, it is difficult to see why a country like Lebanon should have a vote equal to that of the United States. The reported vote on subsidies was 8 to 1 against the United States. Perhaps it should have been on that particular issue, but I mention it only to illustrate how the United States can be outvoted at will, so that European ideas of statism, cartels, monopolies, and controlled economy will prevail. This can and will entail changes in our domestic policies and laws.

It is not true, therefore, to say as its proponents do that ITO as now planned will not have powers enabling it to interfere in the internal affairs of its members.

FREEDOM AND STATISM

There are those in the United States who advocate a world government. If that is the real objective, the people should have the opportunity to vote for or against it after the definite proposal and its consequences are clearly put before them. They should not be eased into something they do not want by false assurances that it is something else.

I remind you of my earlier statement that the conflict is between freedom and statism. If to procure adherence to the principles of freedom we embrace the practices of statism, what happens to the principles and to freedom?

I have no quarrel with the work an ITO can do in working for universal agreement on rules of the game in international trade, such as uniform practices as to taxation, freedom of transit for goods, antidumping laws, customs formalities, statistics, terminology, etc. To the contrary, I think that work would be constructive.

On the other hand, I am unalterably opposed to the idea of an international agency to determine employment policy and to plan and administer economic policy for the United States or for the economic development of nations, just as I am opposed to the creation of intergovernmental cartels under false labels.

Would you subscribe, as I do, to this as a good statement of the case?

"The pattern of international trade that is most conductive to freedom of enterprise is one in which the major decisions are made not by governments but by private buyers and sellers, under conditions of active competition and with proper safeguards against the establishment of monopolies and cartels." (President Truman at Baylor University, Waco, Tex., March 6, 1947.)

A framed copy of this quotation should hang over many desks in the Department of State. The proposed charter for an ITO does not meet this standard.

Now where do we go from here?

In my opinion proposals for acceptance of ITO and the renewal of the trade-agreements program will both come before Congress early next year. You will do well to keep in very close touch with this situation.

No one in the executive branch of this Nation should obligate us on an important matter such as the International Trade Organization, which affects the economic life and future welfare and happiness of every American citizen, by making prior agreements with other nations which can in any way obligate the Congress to carry through and approve such agreements unless the Congress, in its own judgment, deems the proposed arrangement to be in the interest of the American people and the peace of the world to such an extent as to justify its ratification and confirmation by the Congress.

If we have reached the point where an executive agreement without authorization from the Congress can bind this Nation on things against which our forefathers tried to protect the American people through the constitutional provision requiring a treaty with congressional approval—then if the American people wish to preserve this Nation it is time for them to wake up and say so in no uncertain terms.

I have already stated my belief that a properly constituted ITO could do a constructive work in the field of international commerce. I am opposed to the creation of an international bureaucracy, with authority to control and direct such commerce.

Otherwise we help in the extension of statism and sacrifice freedom such as few other nations have ever had.

On the more specific question of tariff policy, my views are simply stated:

1. I think tariffs are the fairest means of equalizing conditions with which we do not want to compete—low standards which affect cost.

2. Unless there is definite need for a tariff, we should not have one, except where for revenue purposes.

3. A new Tariff Commission should be created. The Commissioners should be men of the highest ability and integrity. They should have adequate salary and a long tenure. This Commission should be given authority to determine through hearings and otherwise, the facts necessary to a calculation of a proper tariff rate to implement the policy laid down by the Congress.

4. Such Tariff Commission should have the further authority to make or change rates, such changes to be proclaimed by the President, if not disapproved by Congress within a specified time.

5. The Congress should enact a statute establishing the principle or basis on which rates shall be made or changed within prescribed limits. Provision for flexibility should be provided to meet changing conditions but with some practical limit on the frequency of change.

6. A program of tariff changes by negotiation, through the Department of State, could perhaps be continued provided there was reasonable equality of concessions and that the rate to be used in such trade shall be set by the Tariff Commission, as before described.

Actual legislation would naturally spell this out and probably include things I have

omitted. In essence, however, these are my views.

In any discussion involving international trade policy there is the immediate problem of how best to aid in the rehabilitation of Europe.

THE MARSHALL PLAN

In his speech at Harvard, Secretary of State Marshall made what I think was a timely suggestion. It is distressing to see the way this has been distorted first in Europe but also here at home. It is referred to as the "Marshall plan." The Secretary proposed no plan. He asked the nations of western Europe to propose one. The very essence of his suggestion was the idea of maximum self-help. Inherent was the idea that the United States might then extend such further aid as to help them to help themselves.

The first thing that happened was that those nations drew up a schedule of how many dollars they wanted. Really this was not surprising in view of some of the news treatment here which discussed the idea in terms of its aid to United States exports.

Sam Pettengill recently said that the universal question among nations is "What is my fair share of what you make? Is it a contest between the producers and the dividers?"

The lead article in the July issue of Anglo-American News said:

"Economically the Marshall plan is one way of distributing dollars and of giving Europe a chance to cash in on the United States passion for backing enterprise in a big way."

Just so long as Britain and other nations of western Europe continue to think of United States aid in this way, it is worse than futile to tax our people in order to provide it, and will lead only to increasing ill will when it is no longer possible for us to make gifts or unsound loans.

People are asking why we should supply coal and petroleum products to Britain. They have one under their own soil and the other close by in the Near East. The first requisite ought to be for them to go to work and produce these things for themselves. If they fail to do so, what justification is there for us to supply them?

If all Europeans go to work and do everything possible to help themselves, it will not only lighten the tax burden on our people, but it will also make what we do contribute very much more effective in restoring their ability to produce, which is all important.

The British Trade Journal for October, discussing their government's proposals to deal with their proposition, says:

"The public (British) will want to be assured that effort asked for is to be put to maximum purpose before pledging wholehearted support."

Such an assurance seems wholly reasonable. It is precisely the kind of assurance we in the United States should be given.

These facts ought to be hammered home. Otherwise, the United States and its people voluntarily assume the role of a conquered nation paying tribute to all the world.

OUR PRICELESS HERITAGE

In closing I want to emphasize again our priceless heritage of freedom and our belief that moral forces are all important. Let me quote a short passage too often forgotten and to many of our people unknown. It is from the Preamble to the Declaration of Independence:

"That all men are created equal; that they are indowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness; that to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed."

This is most apropos when we consider all of our relations with the rest of the world.

Here is a ringing declaration of our faith. We acknowledge God as our Creator and that human rights are God-given. Every one of the rights mentioned in the part of the Preamble I have quoted is today under attack. Ex-President Hoover may have had this in mind when in an address on the occasion of his seventy-first birthday he said:

"America should again proclaim our faith. We should proclaim our resolution to hold it. We should cease to apologize for it. Our first postwar purpose should be to restore it."

We have problems complex and innumerable before us. We have opportunities likewise. In our approach to a just solution I like to keep a sort of guidepost in my mind's eye. This is my guidepost:

1. A Christian Nation in fact in which we seek and follow divine guidance.
2. Rededication to our Constitution, the greatest ever written by man.
3. Complete return to a government of laws.
4. A strong, prosperous United States.
5. Practice of the Golden Rule in our international relations.

Universal Military Training

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, December 16 (legislative day of Thursday, December 4), 1947

Mr. CAPPER. Mr. President, I send to the desk and ask unanimous consent to have printed in the RECORD the attached partial text of a speech on universal military training by Dr. Robert M. Hutchins, chancellor, University of Chicago, before the National Council for the Prevention of War, December 14, 1947, in Washington, D. C.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

Universal military training would be useful if it could prevent another war. Large numbers of men who have gone through "squads right" under the auspices of obsolescent officers are not likely to help us win a war.

They are not necessary to help us occupy a country the cities of which have been destroyed by us. That can be done by forces recruited for the purpose at the time—such forces would not have to be large or particularly skilled. But does anybody imagine that training men, even for ambulance duty, nursing, fire fighting, or first aid, will assist us much in case of an atomic raid?

In Hiroshima the men trained for this purpose could not function; they were killed. The complete disorganization produced by a surprise atomic attack means that no form of preparation can be of more than accidental advantage.

Can universal military training prevent a war? The notion that large military forces preserve you from attack is as old as mankind. It is like the notion that wars will stop because they are so horrible. The fact is that large military forces merely stimulate other nations to build up their military forces.

They suggest to the warmongers and jingoes in other countries that you are out to dominate the world and that every country must arm against you.

For this country to talk about universal military training is the acme of provocation, for this country now possesses the exclusive monopoly of the most deadly weapon in history and has greater productive power than all the rest of the world put together.

If this country, so equipped, has to have military training, what does it have to have it for? No other nation will believe that it has to have it to protect it from attack. It must therefore want to have it in order to attack somebody itself.

Universal military training in the United States is an act of war.

It is a ridiculous and wasteful act of war. It cannot protect us. It will inflame other nations against us. It will weaken us, for it will waste our resources and the time which our young men should be giving to more profitable undertakings.

And since other nations know that universal military training is a military absurdity in the United States in the atomic age, they will not be deterred from attacking us because we have such training.

If they are bent on attacking us, they will attack us whether we have universal military training or not; for they know that large masses of men cannot threaten a country which has the atomic bomb; and they know that large masses of men cannot defend any country against the atomic bomb. Large masses of men are now irrelevant.

So much for the military aspects of universal military training. The program is so weak as a military program that it has been thought necessary to bolster it up by calling it an educational program as well. It is even suggested that it will have splendid effects upon the morals of the young.

As to this I can say only that it would never occur to me, after 2 years as a private in the the Army, to attempt to improve the character of my son by putting him in the care of a marine sergeant. Education, it would seem, can best be conducted in institutions established for the purpose by persons who have dedicated their lives to the cause.

The Army can train men to be soldiers, just as engineering plants can train men to be mechanics. Neither armies nor engineering plants can educate men to be men.

If I understand the proposal correctly—and I may not, for I have not had a chance to read the 188,000 words of the report—it involves discriminatory provisions like those which afflicted the Army Enlisted Reserve Corps of unhallowed memory.

Apparently boys who can afford to go to universities, at least to those which have Reserve Officers Training Corps, will not be required to spend the last 6 months undergoing the trials and hardships of Army life.

They will be privileged to enter the university, and there spend a few hours a week in polite military maneuvers, while their less fortunate brethren remain under the supervision of the armed forces.

The primary requisite for entering upon the higher learning in America is money. Those who have the money can go to the university. Those who have not cannot.

Therefore this proposal—if I understand it correctly—is a proposal to give 6 months' military training to those who have money and 12 months' to those who have not.

The whole plan reflects that American attitude toward education. Only a country which regarded education as unimportant could seriously consider such a scheme, unless, of course, it was in imminent danger of attack and felt it necessary to keep its full manpower under constant mobilization.

The United States is not in imminent danger of attack. It is the most powerful nation on earth. If it were in imminent danger of attack, or if it were the weakest nation on earth, universal military training could not assist it.

But I venture to predict that little objection will be raised to the proposal on the basis of its most serious defect, and that is its interference with the educational opportunities of the young. The reason why little objection will be raised on this score is that we do not regard such opportunities as of

much significance. They are nice, but they are not necessary. And they may not adequately fulfill the parent's dream which is to have him taken off his hands and taught the things he should be taught at home, such as punctuality, neatness, discipline, and good order.

"These," the American Parent will say, "will be drilled into my son in the Army. I do not want to take the trouble to teach them to him myself. He may not learn them at college. I am for universal military training."

I will not here discuss questions of etiquette, for they do not seem to me of much importance one way or another. But certainly if we are talking about character, the place to develop it is anywhere but the Army.

By character we mean the moral habits of a man. Habits are formed by acts. But those acts, if they are to have any significance in a democratic country, must be the result of free and independent choice. The Army is distinguished by absence of choice.

The soldier is told what to do, and he soon learns not to do anything he is not told to do. Only if we want a race of men who will do what they are told and will not do anything they are not told should we look to universal military training to build character.

The Acadians in Louisiana Today

EXTENSION OF REMARKS
OF

HON. JAMES DOMENGEAUX

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, December 15, 1947

Mr. DOMENGEAUX. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by President Joel L. Fletcher, of Southwestern Lousiana Institute, Lafayette, before the Cambridge Historical Society of Massachusetts, October 30, 1947:

We have come from Acadian Louisiana to do honor to the distinguished poet of Cambridge on the centennial of the writing of the beautiful poem, Evangeline.

In that Eden of Louisiana where dwell the sons and daughters of the Acadian exiles, the name of Henry Wadsworth Longfellow has become an established part of their most cherished heritage.

This chronicler of the wanderings of their fathers after their deportation from Nova Scotia until they reached a haven among their kith and kin in French Louisiana has been adopted by them as not only their favorite poet, but also one of their greatest historians.

We are here representing the Acadians, as well as all other citizens of Louisiana, to pay homage to a great American writer and to extend an invitation to you who love the poet and his creation, Evangeline, to visit Louisiana in order that you may see how faithfully he recorded that lovely land and those who live there.

I hope that each one of you will be privileged to visit the Acadians in Louisiana. I know that you would make every effort to come to their land it I had the words today to describe properly the beauty and charm of my native State. I am sure that if you made such a visit you would realize that the Acadian wanderers have now been amply rewarded for the trials of their deportation and the long journey southward with all of the hardships which they endured.

Nearly 200 years have elapsed since the Acadians came to Louisiana and 100 years have now passed since the distinguished poet of Cambridge made these wanderers and their way of life familiar to all men. Yet today the descendants of that group live in southwest Louisiana much the same as their fathers did in Nova Scotia, adhering still to many of the old customs and traditions and holding to their quaint language.

Today is harvest time in the fertile fields along the bayous and among the prairies of southwest Louisiana. If you were to ride along one of the highways in the bayou country tonight, you would smell the sweet odor of freshly cut sugarcane and in countless factories you would see the lights gleam as the cane is crushed and its juice boiled to make sugar. There are a few of the primitive sirup mills left in which horse-drawn crushers are used, but the greater part of the cane is processed in modern sugar factories which have equipment that costs in the hundreds of thousands of dollars. Some of the plants are owned by outside interests, but more and more they are being owned and operated by the Acadian farmers themselves and financed through the bank for cooperatives.

In the western part of the Acadian country where grazed great herds of cattle during the early days of Basil, the blacksmith, and his fellow Acadians, there today thrives the valuable Louisiana rice crop. While the cane crop was developed altogether by the French in the alluvial regions, the rice crop was first grown commercially about 1804 on the prairies of southwest Louisiana by emigrants from the Midwest. At first the Acadians resented the breaking up of their grazing land, but today these same Acadians have become the leaders in rice growing, and in the rice territory many persons who bear the Anglo-Saxon names of the Yankee emigrants of 60 years ago are as Acadian as the natives. Where women are as fair as Longfellow describes that Acadian maiden of 17 summers, and where the men are well-favored, gentle, and kind, it is impossible for a staid Yankee farmer, whether he be of English, Scotch, or Irish stock, to rear his children in the Acadian section and not have grandchildren that are true Acadians.

The Acadian girl is not only fair to look upon and sweet to be around, but also superior as a wife and as a mother. However gay during girlhood, she becomes at marriage the most decorous of wives, with her entire attention centered upon her home and family.

In the land of the Acadians big families are still in vogue, and what real happiness and joy is to be found in the Acadian home where, with few exceptions, the children are like stairs in a great staircase, one following right after the other. Holidays and feast days, which are numerous, are times of family reunions and rejoicing, and how these fathers and mothers and brothers and sisters and uncles and aunts and even distant cousins love one another and with what joy they gather around the festive board on such gala occasions.

There are few drunkards among the Acadians, but wine is an integral part of all such holiday feasts. The Acadian does not gulp his liquor as the Anglo-Saxon for the effect, but sips and laughs and gaily chats with his kinsmen and his friends, one small glass lasting for an hour or more of such festivities. The wine for merry occasions may be purchased, but in many cases it is made in the home. Blackberries, the flower of the elderberries, dewberries, and many other native fruits are used for this purpose. A favorite drink for winter is cherry bounce, which is made by soaking the small native wild cherry in sugar, and later thinning this thick sirup with bourbon.

The Acadian, like all people of French descent, is a connoisseur of good food and tends to be a rather heavy meat eater. The Acadian woman, however, is very thrifty and able to make much from little. During the winter the main dish may be a heavy soup which can be made from a soup bone or a small piece of a cheap cut of meat with a so-called soup bunch consisting of only a carrot, onion or leek, and a few leaves of some green vegetable. On feast days mutton, pork, beef, chicken, goose, or duck may be the main dish. In some of the more prosperous homes three or more kinds of meat may be served at one meal. On Friday and the other fast days shrimp, fish, both fresh water and salt, crabs, and oysters form the source of the main dish. These fish dishes, delicately flavored, as only an Acadian cook can season, with bay leaves, garlic, and the different types of onion and pepper which form an integral part of every Acadian pantry, will compare favorably with the cooking of any of the world's finest cooks.

The Acadian men are usually as skillful cooks as the women and enjoy nothing so much as preparing their specialties over a camp fire. One who has not enjoyed a Good Friday fish dinner prepared and served by an Acadian man along one of the numerous bayous of French Louisiana has missed the finest in the way of food. The dish may be courtbouillon, a fish soup prepared with a roux of flour and water gravy as its base, or the more sophisticated bouillabaisse, in which special cuts of fish are prepared and placed in a cast-iron vessel, together with a layer of green pepper, another of fish, a third perhaps of tomatoes, and so on, until the pot is filled. This is then covered and placed upon a fire of coals, where the contents are cooked for hours in their own juices. It is delightful to sit on a sward of green clover in early spring and smell the delicate odor while the pot is boiling for some 2 or 3 hours. One can enjoy no finer meal than a dish of bouillabaisse, with a crusty loaf of French bread toasted brown and a glass of red wine, and even though the Acadian who serves it may never have been out of his native parish of St. Martin or Vermilion, he has enjoyed a way of life that few others know.

While the Acadian still speaks the French language, there is in his heart no divided allegiance. He is a citizen of the United States, and, as I told countless FBI investigators during the last war who were looking into the loyalty of men being considered for strategic positions, "When a man has an Acadian name, there is no need of further investigation. Without exception, an Acadian loves this country devotedly and will give of his all to preserve it."

The Acadians are very proud that their sons have taken part in every war in which this Nation has participated. In 1779 their men went with the young Spanish General Galvez against the English in what was then West Florida, and thus weakened what might have been a successful British attack from the south upon the armies of the Colonies. In 1812–15 with Louisianians of all faces and creeds, they remaincd loyal to their new country and aided Jackson in repelling the mighty British invasion from the Gulf. In 1846 Louisiana was, of course, the spearhead in the fight against Mexico, and in the ranks of the lost cause there were no more gallant soldiers than the Louisiana Acadians. I like to tell my students—youths named Arceneaux, Broussard, Breaux, Mouton, Landry, Martin, LeBlanc, and Hebert—of the great tribute paid to the courage of their fathers by Stonewall Jackson. These Acadians were members of the brigade commanded by Gen. Dick Taylor, son of President Zachary Taylor. Dick grew up on a Louisiana plantation and knew and liked the Acadians as few outsiders ever have. For Taylor, the Acadian soldier would fight to his utmost. At the time Taylor reported to Jackson just before one of the early engagements of the Civil War, it is related that his soldiers began playing on mouth organs and dancing with one another. When Taylor spoke to Jackson, the dour old Presbyterian remarked concerning his lack of confidence

in men who would be gay on the eve of battle. Taylor replied, "General, those are Louisiana Frenchmen. They and their fathers have made love to the women and fought the men all over the world. Please reserve your judgment of them until you have seen them in action." Surely enough, after the battle was over, Jackson called Taylor in to his headquarters and told him that, although he had seen brave soldiers, never had he seen men display such courage under fire as had those Louisiana Frenchmen.

The two World Wars were no exception to this rule of Acadian bravery. An Acadian, a country doctor, Claude Martin, of Welsh, was the most decorated Louisianian during World War I. An Acadian from St. Martinville, Brig. Gen. Robert Maraist, was one of the two American commissioners at the surrender of the African Corps during the last war. Later General Maraist commanded the Sixty-ninth Division in France. A Breaux Bridge Broussard was the executive officer who was given much credit for the survival of the cruiser *Houston* when that ship was so badly damaged during one of the early Pacific naval battles. Jefferson DeBlanc, a brave, young St. Martinville Acadian who served as a marine aviator, had the Congressional Medal pinned on him by the President of the United States. St. Martin Parish claims the honor of having more of her sons decorated in this last war than any other parish in Louisiana.

As far as loyalty to France, today there is only a cherished old memory of the connection that once existed with that nation. The severest criticism of France that I ever have heard was from the Acadian boys who were in that country either during 1917–18 or at the time of the last war. Their comparison of the people of France with those of the Louisiana French today was stringent.

The description of the Acadian would not be complete without touching upon his contribution as a citizen. I do not wish to leave the impression that I am here to laud the Acadians and to paint them as being perfect. These are—as are all groups—men with varying degrees of morality, honesty, and idealism. In Louisiana, however, as a group the Acadians are an influence for good. Where people have not been educated, where ignorance is still too prevalent, especially in the older generation, demagogs are prone to rule. However, the average Acadian is a man of high ideals, and when properly informed will choose the way of right and honor. If one were to list the leaders of the State who have been the most honorable in their public service, men who have had integrity to stand for right and the courage to carry out their convictions, one would find the names of the Acadian leaders in the forefront.

Originally the Acadians all settled on farms which they laid out along the bayous, notably those of the Teche and Lafourche. Later, as they increased in numbers, they pushed westward to the boundless Louisiana prairies, which they first used as meadows for grazing herds of cattle, then later as fields for the cultivation of rice. Families of 10 and 12 and even more children, however, soon made it necessary for other means of livelihood to be sought. Today Acadians are trappers of muskrat, miners of salt, pickers of the gray Spanish moss, trawlers for shrimp, and workers in all the industries and commercial undertakings of their native State. Literally thousands of Acadians have treked on to the new industrial cities of east Texas, and in Beaumont, Port Arthur, Port Neches, Texas City, and Houston these people comprise a large percentage of the industrial workers. The telephone directories of those cities now look like a replica of one of the Acadian cities—Lafayette, Opelousas, New Iberia, or St. Martinville.

The poet's description of the promised land sought by the wanderers as one where under the feet is a garden of flowers is literally true in Acadian Louisiana. There is no place where every month of the year there is a greater profusion of flowers. This is especially true of the winter months, which in Nova Scotia are bleak and cold, but in this Acadia are the season when the lovely camellias and azaleas are at the height of their bloom. During February and March one may stand in the second-story window on the campus of the college at Lafayette and look out over a veritable sea of azaleas, with here and there an island of Pink Perfection or Governor Mouton camellias. Forming a background for all of this bright color is the dark green of the live oak, a tree which has become symbolic of the Acadian section of Louisiana. The great masses of crepe myrtle which bloom during the late summer are just as lovely, their pink, red, and melon colors being more delicate than those of the winter-blooming camellias and azaleas. The most perfect flower of that Eden of Louisiana, however, is the wild iris, which grows in profusion along every ditch bank and all over the marshes during spring. This flower is more like an orchid than is any other blossom and is today being bred to grow as a cultivated plant.

The Acadian has been deeply influenced by all of this natural beauty which surrounds him, and in the yard of every home, humble or otherwise, there are always flowers blooming—camellias, azaleas, and many others in their season.

In Lafayette each January hundreds of Acadians gather to pay homage to the lovely camellia in a pageant which is presented annually at the college. Acadian beauties decked in the lovely blooms which the Jesuit Kather Kamel brought from the Orient long ago attract tourists from many States. These visitors are amply repaid by the beauty of the pageant and the exhibits of the hundreds of varieties of camellias of every hue and color, every size and shape, displayed in the camellia show which is held at the same time.

Later the State Iris Society, a small but enthusiastic group, hold their show, and in Louisiana it is accepted as a matter of course that such shows and festivals are always held in the Acadian section of the State.

It has been my good fortune to serve as a teacher for 28 years in the State college which is located in the Acadian section of Louisiana. I have come to know and respect and love the Acadian citizens of my State. Today with an enrollment of 3,500 students, a large majority of the students at that college are descendants of the Acadian exiles. On that beautiful Louisiana campus dotted with live oak, pines, camellias, and azaleas one may occasionally hear the patois as it was spoken in far off Nova Scotia, and there abides still among these children the gracious courtesy and genuine friendliness of old Acadia. On that campus everyone speaks to everyone else when passing and strangers coming there for the first time are impressed with the friendliness and graciousness of the people.

You will be interested to know that this college is the direct result of the vision and leadership of an Acadian leader, Robert Martin, of St. Martinville. Mr. Martin, a successful lawyer, sugar planter, and banker, in his only term of office as an elected official secured the appropriations with which to found this school for his people. Until his death in 1928, he served as an active member of the board which controls the institution. The growth and development of the college founded by Robert Martin mirrors to a great extent the development which has taken place among the Acadian people during the past half century. When the college opened its doors for the first time on September 18, 1901, admission was based upon completion of the second grade. Even then there was difficulty in securing enough students to make it worthwhile to keep the school open.

Fortunately for the college a brilliant young scholar, Edwin Lewis Stephens, was selected to be its president. Dr. Stephens was a member of an old Louisiana Anglo-Saxon family, and he was aware of the many good qualities of the Acadian people and immediately charted an upward path for this school over whose destiny he was to preside for 38 years. It had been Robert Martin's idea originally to confine the efforts of the school to vocational or practical studies, but as time passed Edwin Lewis Stephens convinced him that education of the hands alone was not enough and that regardless of vocation or profession a thorough basic education is an essential to success in all fields of endeavor.

Today the college which was guided for so many years by Edwin Lewis Stephens with the support of its founder, Robert Martin, adheres to the course which they marked out so well. Although the school now comprised of four distinct colleges or divisions, namely agriculture, education, engineering, and liberal arts, the basic subjects of English, mathematics, history, and other liberal arts courses still form the most important part of the curriculum and the selection of able teachers in those departments is looked upon as the most important phase of the college administration.

When the Acadian leader, Robert Martin, made a fight in the Louisiana Legislature for a school to serve his people, there was not a public institution of learning worthy of the name in all of Acadian Louisiana. Today within 30 miles of Lafayette in any direction one may take there are consolidated standard public schools housed in modern brick plants; enrollments of above a thousand students are a common occurrence in that thickly populated section of the State. I realize that it is daring for one from the deep South to make claims for educational progress in this very center of learning, but Hughes and Lancelot in their recent publication Education, America's Magic, aver that some States have made great advances in education in recent years compared with what they had made a few decades ago. They cite Kansas, Wisconsin, and Louisiana as examples. Much of the progress that Louisiana is making today is being accomplished within the Acadian territory, where not only the public schools and colleges are working earnestly to overcome ignorance, but where there are many efficient church schools, especially those of the Catholic faith. Catholicism is the religion of the Acadians.

During his early days in Louisiana the Acadian youth was taught by French teachers, textbooks in French being used. All books and newspapers of the people too, were in that same language. By the time of the Civil War, however, the ties with the mother country had been severed to such an extent that it was impossible to secure the French publications. There was a long period from about 1861 to the beginning of the present century when education of any kind was lacking in the South. Even after the Anglo-Saxon peoples had begun to recover from the poverty and ignorance of the post Civil War period, southern Louisiana made little or no effort to develop public education. Today, however, that section is making greater progress educationally than is any other part of the State. A recent study made by the department of education of Southwestern showed that in the Acadian parishes high-school enrollment and graduation have increased seven times more than high-school enrollment and graduation have increased for the State as a whole.

Those of us who are in educational work realize that much, much more progress is needed, but if one of you had visited Acadian Louisiana 25 years ago and had not returned until today I believe that you, too, would be greatly impressed.

Those of us who are responsible for the training of the Acadians are eager for them

to have as excellent an opportunity for education as the children of any section. We do not, however, feel that standardization of these people into an accepted mold for Americans is good either for them or for the Nation. There are those of us who are working through the schools, through the colleges, and through civic clubs to retain the beautiful Acadian language and the delightful Acadian customs. We feel that it would be a tragedy indeed to allow Heberts to become Herberts, LeBlancs to become Leblanks, or Sonniers Swinneys. We know that in Acadian Louisiana exists a basic culture and patriotism which is today found in too few places and is genuinely needed in our Nation.

If you stood today on one of the highways or roads in lovely southern Louisiana, you would see hundreds and hundreds of the descendants of the Acadian wanderers climbing into the busses which transport them to modern high schools. If you could see those bright-eyed Acadian boys, those countless maidens, many with eyes black as the berry that grows on the thorn by the wayside, I am sure you would agree with me that this Nation is fortunate indeed to have such fine children among its future citizens.

Grain-Exchange Gambling

EXTENSION OF REMARKS
OF
HON. C. WAYLAND BROOKS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES

Tuesday, December 16 (legislative day of Thursday, December 4), 1947

Mr. BROOKS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from C. M. Yager, editor of the Modern Miller and Bakers News, transmitting an editorial entitled "Grain Exchange 'Gambling,'" which appeared in that publication on December 13, 1947.

There being no objection, the letter and editorial were ordered to be printed in the RECORD, as follows:

MODERN MILLER AND BAKERS NEWS,
Chicago, December 13, 1947.

Senator C. WAYLAND BROOKS,
Washington, D. C.

DEAR SENATOR BROOKS: There is a great threat to the functioning of the grain exchanges through possible Government controls, additional to those already imposed. It is likewise a serious threat to the flour-milling industry and the handling of grain.

I am enclosing you herewith a tear sheet of our December 13 issue of Modern Miller and Bakers News, and as it would be useful in clarifying congressional thinking on the speculative element in grain exchanges, I am in hopes that you can have this inserted in the CONGRESSIONAL RECORD. If, after reading this, it meets with your approval, I hope you can find the opportunity to so use it.

Sincerely yours,

C. M. YAGER,
Editor.

GRAIN EXCHANGE GAMBLING

Is there any wonder that the President of the United States lacks understanding of the fundamental basis of grain exchange trading?

There are, of course, millers who have devoted study to the essentials of this functioning, but on the other hand in many years of contact we have found successful commercial millers and others associated with the milling industry, who are equally lacking in an understanding of what is essential to sustain exchanges, commodity exchanges as well as grain exchanges.

And in our many contacts with the bakers, we have never found one who did not consider a large part of grain exchange trading as gambling.

When lawsuits have tested this evaluation of grain trading they have consistently found for the exchanges. Judges given the facts are competent to render decisions.

The grain exchanges are partly responsible for not making clear what grain exchanges do in serving the public economy. The fact that the public, Congressmen, and the President lack this knowledge is evidence of the failure. The Washington grain hearing was the first dominant elucidation that should clarify grain exchange functioning and this should include millers who think that hedging is legitimate and that they can use exchanges so that they can make a profit in processing grain without risk, at whatever price they pay for it, which they call protection. But the elements of protection many have not analyzed.

Just who can differentiate risk taking between speculation and gambling? Consult your dictionary as to taking chances which involve human efforts to progress in business or life's betterments.

Is marriage a gamble? The marriage ceremony admits that it is and it defines it when the parties accept marriage for better or worse.

If it is gambling, should marriage be stopped?

Risk is defined in different ways. If a man buys or sells real estate he is assuming a risk and 10 times more money is lost and made in real estate every year than in grain trading.

If a man buys stocks it is called speculation or investment and if he buys them for speculation or investment he takes a risk which in measure involves possibly a hundred times more than is made or lost in grain trading. You cannot eradicate the hope for gain any more than the desire for marriage. Is there a human who does not aspire to betterment through gain, be he poor man or rich man?

Is buying of Government bonds a gamble? Ask someone in Russia, Germany, or France? Washington spends huge funds to influence bond holders not to sell their Government bonds, to precipitate a flood of selling and price decline. After the First World War many who bought bonds on faith in our Government lost money in precipitate selling to invest in better paying investments.

The element of risk is involved in every human activity. There is a risk in money. How good is Chinese money, the Russian ruble, the French franc, and the German mark? There is a great obligation in Washington to protect industry against loss to investors, infinitely more than protecting the public from grain trading in wheat. Gambling is better defined as crooked trading and this does not exist in commodity exchanges, supported by men of character, operating under legal procedure.

Crippling the grain exchanges is a serious matter. Men who attended the grain hearing in Washington asserted that the fundamental functioning of grain exchanges got the best factual presentation ever rendered. Senator TAFT was present at all the hearings. He gave studious attention and held an open mind to absorb the facts. Congress as a whole will observe the facts as given and for the first time will evaluate exchange functioning to true up their lack of knowledge and temper prejudice.

The heads of grain exchanges gave important facts to the Joint Committee on the Economic Report and of particular interest to the millers and baking trade were the statements of Mr. Henry H. Cate, president of Flour Mills of America, Inc., the only miller who presented facts. Most of Mr. Cate's statement is given elsewhere in this issue. As to regulation of exchanges, control over margins and limiting trading in grain so as to control the movement of prices, he said: "To any such legislation I am opposed. We are not speculators and do not want to be compelled to speculate. But speculation is inherent in the marketing of grain. It is in the public interest that such risks be carried by those who wish to assume them. The proposed legislation is unsound because it would have the effect of casting the burden of risk upon the trade and so upon the public.

"I am opposed to granting the Administration requests on principle. Who should have the power in such a country as ours to regulate the volume of business and to control prices? A free market in a free country should do these things without the bungling intervention of men. Does Congress want to grant power to a bureau to turn trade off and on with the purpose of influencing prices? If so, shall that power be used to benefit the producer or the consumer."

He showed how a thin trading market is a threat to the function of hedging—a real threat to the milling industry. Mr. Cate's statement should be studied.

Bankers are directly concerned. They are not going to loan money for buying and storing unhedged wheat, and they showed the committee the necessity of hedging facilities. Without hedging of flour sales there would be no forward selling of flour.

As one prominent grain man remarked, tampering with hedging facilities just a little bit is like taking a watch apart and expecting it to run with parts missing.

Major H. G. L. Strange, director of research for the Searle Grain Co., Ltd., Winnipeg, Canada, gave a vivid picture of Canadian grain trade under Government control, which has eliminated all hedging under control, price-fixing and guaranteed prices. It has resulted in lower flour prices to British and Canadian consumers but has cost Canadian farmers $419,000,000, an average of $1,600 to each farmer, making him an humble servant to the state.

Major Strange's full statement will be given in an early issue of Modern Miller and Bakers News. He concluded his statement in Washington:

"Today, in Canada, our farmers have unwittingly become merely humble servants of the state. The state is their master. Thousands of us in Canada look longingly to the United States, where farmers still enjoy the liberty and freedom fought for and won by their ancestors against kings and governments. Many of us in Canada today believe fervently that the United States is an oasis of liberty in a gradually extending world desert of human servitude.

"It was not to have their every action policed and dictated by bureaucrats, with a constant fear of fine and imprisonment for the breaking of minor regulations, that Canadian farmers made very great sacrifices in order to assist in winning two great wars for human freedom. We in Canada are hoping, therefore, that some day we may again be blessed with that same individual liberty and freedom which is still fortunately enjoyed and cherished by our brother farmers in the United States."

A United States Government agency, after investigation, recently made a report on exchange grain trading which was factually complete, outlining hedging and speculative trades. The report substantially absolved speculative trading as a dominant factor in price inflation, which couldn't be otherwise because there couldn't be buying without selling, and every buyer will eventually sell. But the concluding summary emphasized that speculative traders included bankers, lawyers, doctors, farmers, barbers, and clerks.

To deny them grain-trading facilities would drive them away from grain to the stock exchanges or real-estate trading, a slower but more potent hazard in these uncertain times.

But what the report omitted was the recent prediction by a Government official in the same department that wheat in December would sell at $4. It was an official prediction which electrified the market and made every barber and doctor and speculator buy wheat. This intemperate temptation was inspired by a Government official far beyond anything contemplated by the grain trade.

And again, if the author of the report on grain exchanges imagines that grain trade functioning can be confined to hedging, he has a lot to learn. When a billion bushel crop must be sold and buyers store it, those buyers all sell hedges. They don't buy cash wheat and buy hedges at the same time.

Without two elements, buyers and sellers, after the wheat leaves the farms, market prices would show violent shifts which this normal exchange functioning obviates. You can't take away part of the functioning any more than you can take a watch apart and expect it to run with parts missing.

Universal Military Training

EXTENSION OF REMARKS
OF
HON. ERNEST K. BRAMBLETT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 16, 1947

Mr. BRAMBLETT. Mr. Speaker, it is my privilege to offer for inclusion in the CONGRESSIONAL RECORD the text of what I consider to be a very comprehensive editorial regarding universal military training and its adoption by this Nation. The author of this editorial is Col. Allen Griffin, publisher of the Monterey (Calif.) Peninsula Herald, who served this country with distinction during World Wars I and II, and who is eminently qualified by his military experience to give his views on this important issue, which undoubtedly will be before the Congress soon for its determination. I commend it to my colleagues in the Congress for study and consideration.

Colonel Griffin's editorial follows:

Universal military training will be one of the most acute issues after Congress convenes in regular session, following the present special session.

Lines are sharply drawn on this issue. UMT is sponsored by the Truman administration. It has many adherents among the Republican majority in both Houses. It has strong opponents, particularly among those Republicans that will line up with the opposition already bluntly announced by Senator TAFT. It is opposed by the Wallace wing of Democrats.

While many educators favor it, organized education is opposed. Organized labor is also opposed, officially, as a matter of policy; but it is doubtful if it will make a vigorous fight against the measure. Many church organizations have announced opposition, especially the Methodist Church. Bedfellows with conservative opponents are the political left wingers.

In innumerable cases the issue is entirely an emotional one. However, it is an error to state that the entire foundation of attack on universal military training is emotional. Much of it is by critics who believe in a strong military force but who think that universal military training will not provide strength commensurate with its cost.

The people of a republic founded on essentially democratic principles, economically devoted to free enterprise, suspicious of government control over the lives of people, are not the sort who willingly agree to the drafting of youth in time of peace as a matter of principle.

Rightly or wrongly, the American people have been historically reluctant to see growth of power in the armed forces, particularly in the Army. That is a tradition from earliest times. It has repeatedly caused the disintegration of the armed forces, due to lack of appropriations sufficient to maintain even modest forces.

These conditions are coupled today with natural revulsion at the thought of war. No matter how unrealistic that attitude may be, no matter how often the error of pacifism has been offset only by the lives of allies who stood between us and the enemy in the early years of war, it is an attitude that exists and that is a factor in opposition to universal military training.

If the hopes of the world had been served by the outcome of the recent war and by the strength of a United Nations Organization as an immediate promise for long-standing peace, this newspaper would not support universal military training.

The unfortunate fact remains to confront us, that there is no peace. Although the desire for peace is greater than it ever has been among the multitudes, the affairs of the world are in the clutches of power politics as cynical and as ruthless as man has ever experienced.

The very fact of power politics has called for power to offset power, since weakness has been demonstrated to be nothing other than an invitation for an aggressor to act. It doesn't matter what a country stands for, the question of the nations and peoples caught in between is: Has it the power to uphold what it stands for?

The plagued and unfortunate people of Europe ask that question of us today. They ask it because they fear war more even than we do, because they know our repeated historical weakness that has twice within less than a generation invited attack upon our friends and our kind of a world.

UMT is a system of military training that prepares young men for the Organized Reserve.

It is not military service but preparation for military service in the event the latter becomes necessary.

It is 6 months of preparation, indoctrination, and small-unit training, an introduction to military life, after which the youth has a wide selection of his future affiliation as a reservist.

The young man who completes his 6 months of preparation may then return to his home and join the National Guard, the Naval Reserve, the Coast Guard Reserve, the Air Force, or Army Reserve, or, if qualified, some specialist branch. His future schooling or jobs are not affected any more than they are affected where young men join Reserve units or the National Guard today.

On the other hand, if he has found satisfaction and opportunity for a successful career in his period of introduction to military life, he may enlist and continue a military career—certainly better fitted to make his choice than volunteers straight from civilian life.

We are convinced that until the world takes a permanent turn for the better, with the present bitter tensions removed and an appropriate international military force provided, it is a threat to this country's safety and to the world's shaky peace for the United States to fail to construct a mighty reserve behind its armed forces while applying itself to the job of maintaining those forces at full authorized strength.

UMT will assist in maintaining the strength of the professional forces by introducing in them innumerable young men who will discover, through UMT, opportunities and advantages in military life that they do not understand or appreciate today.

In that respect it will improve the quality of the regular establishments.

UMT will fully recruit the National Guard and the various other reserves and, moreover, provide much-needed specialists for the highly specialized branches of the services. It will affiliate with the services in a reserve capacity the young men who will continue their education in science and in the professions.

In the event of a great emergency, this prior affiliation of youth in the Reserve and in its specialities would prevent the maldistribution of useful men, that has been a circumstance of previous emergencies, when the sorting out of qualifications is done in a state of confusion despite staff studies and directives to the contrary.

UMT will not be an immediate military wonder-maker. It is an introduction to military service, not military service itself.

It will take several years for the graduates of UMT to be so apportioned through the Reserves, that the Military Establishment may look upon its reserve rolls and distribution of manpower and say that this country has at last a reserve to substitute for the rapidly depleting veteran strength of World War II.

In the meanwhile, however, that strength will be developing, and the world will know that the United States has taken a practical common-sense step to maintain its military house in order. That will be a reassurance to free peoples. It will mean to them that our program to maintain our military power will stand as a deterrent to the aggressor.

To Clarify the Public Mind Regarding Highways

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 16, 1947

Mr. CUNNINGHAM. Mr. Speaker, by virtue of permission to extend my remarks, I would like to include herewith a copy of a statement by F. R. White, chief engineer, Iowa State Highway Commission, regarding the national system of interstate highways as it applies to Iowa. There has been much confusion in the public mind regarding the national system of interstate highways and the so-called superhighways. Mr. White's statement will help to clarify the confusion existing in the minds of many people regarding the Federal road program. His statement pertains to Iowa, but it is equally applicable to other States since Iowa is an average State.

The statement follows:

NATIONAL SYSTEM OF INTERSTATE HIGHWAYS

On August 3, 1947, the Federal Works Agency (U. S. Public Roads Administration)

announced from Washington the designation of the national system of interstate highways. In Iowa the routes so designated include U. S. Road No. 6, east and west across the State; U. S. Road No. 69, north and south across the State; U. S. Road No. 75, from Sioux City to Council Bluffs; U. S. Road No. 275, Council Bluffs south to the Missouri State line.

Numerous articles in the press and many inquiries addressed to this office indicate a widespread misunderstanding of this matter. This memorandum is written to set forth the facts.

1. DESIGNATION OF THE NATIONAL SYSTEM OF INTERSTATE HIGHWAYS

Section 7 of the Federal Aid Highway Act of 1944 provides:

"SEC. 7. There shall be designated within the continental United States a National System of Interstate Highways not exceeding 40,000 miles in total extent so located as to connect by routes, as direct as practicable, the principal metropolitan areas, cities, and industrial centers, to serve the national defense, and to connect at suitable border points with routes of continental importance in the Dominion of Canada and the Republic of Mexico. The routes of the National System of Interstate Highways shall be selected by joint action of the State highway departments of each State and the adjoining States, as provided by the Federal Highway Act of November 9, 1921, for the selection of the Federal-aid system. All highways or routes included in the National System of Interstate Highways as finally approved, if not already included in the Federal-aid highway system, shall be added to said system without regard to any mileage limitation."

That is all there is in the Federal laws pertaining to this matter. The law merely provides for the designation of certain roads to be called the National System of Interstate Highways.

2. FUNDS FOR IMPROVEMENT

There are no funds earmarked for the improvement of roads included in the National System of Interstate Highways. These roads are a part of the regular Federal-aid road system (primary roads). They are, therefore, eligible for improvement with regular Federal-aid road funds (primary-road funds) the same as any other part of the primary-road system.

3. PROGRAM OF CONSTRUCTION

There is no special program for the construction of the roads included in the National System of Interstate Highways. These roads must await their turn in the construction line-up, the same as all other parts of the primary-road system. If, as, and when necessity may require and funds may be available for improvement of any particular section of road included in the National System of Interstate Highways in this State, such section will be improved. The same is true of any other portion of the primary-road system. Inclusion of any road in the National System of Interstate Highways does not give that road any priority of improvement over any other part of the primary-road system.

4. NATURE OF IMPROVEMENTS PROPOSED

Contrary to popular concept, there is no plan or proposal for the building of superhighways, or four-lane highways, or divided-lane highways, or military highways. Each section of the National System of Interstate Highways, when it is built, will be designed to conform to the traffic which that section of the road then carries or may reasonably be expected to carry in the near future. In other words, the improvements on any road included in the National System of Interstate Highways must be designed to fit the traffic on that road. That is just what is being done now on all primary roads. It would be foolish to put number 12 shoes on a 10-year-old boy. It would be equally foolish to build a four-lane road or divided-lane road on a highway where an ordinary two-lane road is sufficient to carry the traffic.

5. TRAFFIC

Traffic records of the State highway commission show that the roads in Iowa, outside of cities and towns, which are included in the National System of Interstate Highways, now carry traffic as follows:

(a) Lowest traffic section, 560 vehicles per day.

(b) Highest traffic section, 5,300 vehicles per day.

(c) Number of miles on which the annual average daily traffic is 2,700 vehicles or less, 550.

(d) Number of miles on which the annual average daily traffic is 2,700 to 3,300 vehicles, 26.

(e) Number of miles on which the annual average daily traffic is 3,300 to 5,300 vehicles, 28.

(f) Number of miles on which the annual average daily traffic is over 5,300 vehicles, none.

(g) Total mileage of the National System of Interstate Highways in Iowa outside of cities and towns, 604.

6. WIDTH OF PAVEMENT REQUIRED

The standards adopted by the United States Public Roads Administration applicable to projects on the National System of Interstate Highways, require various widths of pavement and numbers of traffic lanes, depending on the amount of traffic on the particular section of road under improvement. Stated in simple, easily understood language, these standards require,

(a) Where the annual average daily traffic is 2,700 vehicles or less, a two-lane pavement 22 feet wide, is required.

(b) Where the annual average daily traffic is more than 2,700 vehicles and less than 3,300 vehicles, a two-lane pavement 24 feet wide is required.

(c) Where the annual average daily traffic is 3,300 vehicles or more, but not over 5,300 vehicles, a 4-lane pavement 48 feet wide is required, but dividing the pavement into separate slabs for traffic moving in opposite directions, is not required.

(d) Where the annual average daily traffic is over 5,300 vehicles, a divided pavement of four lanes or more is required.

Applied to the traffic volume on the Iowa portions of the National System of Interstate Highways, as shown in the preceding paragraph, we find these standards require—

1. Two-lane pavement 22 feet wide on 550 miles.

2. Two-lane pavement 24 feet wide on 26 miles.

3. Four-lane pavement 48 feet wide but not divided, on 28 miles.

4. Divided pavement, none.

Total mileage of national system of interstate highways in Iowa, outside cities and towns, 604 miles.

Thus Iowa traffic is such that on 95.4 percent of the mileage of the National System of Interstate Highways in this State, only two-lane pavement is required by the standards adopted by the United States Public Roads Administration.

The Iowa State Highway Commission's standards for two-lane pavements on primary roads which carry 800 vehicles per day or more, call for pavement 22 feet wide. These standards have been in effect since before the end of the war.

7. WIDTH OF RIGHT-OF-WAY

On a road of the National System of Interstate Highways where the traffic is such that a two-lane pavement is all that is required (and that includes 95.4 percent of all the mileage of such highways in the State of Iowa) a right-of-way 120 feet wide is required as an ordinary minimum standard. That is the same width of right-of-way as is now being purchased, and has for the past several years been purchased for all primary roads. Additional width of right-of-way (over and above 120 feet) will be purchased on national interstate routes where necessary on account of deep cuts or high fills, just the same as additional right-of-way (over and above 120 feet) is purchased where needed, on regular primary road projects.

8. IMPROVEMENTS NOT MATERIALLY DIFFERENT

The kind and timing of improvements on the roads in Iowa included in the National System of Interstate Highways will not be materially different from the kind and timing of improvements on other parts of the primary road system which carry a comparable amount of traffic. The entire mileage of the National System of Interstate Highways in this State is now surfaced with pavement. Some of this pavement is badly battered by traffic and the elements, and must be replaced within the next few years. Some of this pavement is in excellent condition and may reasonably be expected to provide suitable traffic service for many years.

Improvements on these national interstate roads will be made as needed and as funds may become available. The kind of improvement on each portion of the national interstate system will be determined by the traffic requirements. There will be no building of four-lane roads to handle two-lane traffic. Nor will two-lane roads be built to handle four-lane traffic.

The same may be said with respect to the improvement of all other portions of the primary road system. In fact, the improvement of the national interstate routes and the improvement of the other parts of the primary road system will move along together. The type and kind of improvements built on both of these groups of roads will be based on the traffic requirements.

9. SUPERHIGHWAYS

In the press and in popular conversation the national system of interstate highways is frequently but erroneously called superhighways. They have never been so referred to by any official source. The term "superhighway" is a popular or catch term which has no exact meaning. It does not appear in the 1939 dictionary. Insofar as the word "superhighway" has any real meaning, it may be assumed to refer to a multiple-lane, divided highway, on which access is controlled and limited to certain infrequent points; a land service road is constructed on each side of the main highway to provide local service for adjacent properties, and cross traffic at grade is eliminated by grade separations. That is a far cry from the two-lane roads which will be built on a very large percentage of the mileage of the national system of interstate highways in the State of Iowa under the standards of construction applicable to these roads. Traffic on about 95 percent of the mileage of the roads included in the National System of Interstate Highways in Iowa is such that the construction of multiple-lane pavements, or anything approaching "superhighway" proportions, is not necessary, nor is it economically justifiable. No one in an official capacity has ever proposed such a program.

Succor and Propaganda

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, December 15, 1947

Mr. SCHWABE of Oklahoma. Mr. Speaker, I am pleased to quote the following editorial, which appeared in the Tulsa Daily World, Tulsa, Okla., December 8, 1947:

SUCCOR AND PROPAGANDA

There is a big natural question: What will be the mental and moral effects of our impending help upon the people of Europe?

It is a fact that we have not properly prepared the ground for the large crop of gratitude and appreciation we may expect to reap. It may be that most Europeans will be more hostile, sullen, and suspicious after aid than before. These possibilities are not factors in the legislation at Washington just now, but they are matters to think about in the whole period of operation and experiment. What we are trying to do is, to put it baldly, head off communism and thus prevent all Europe being openly and formally hostile to us and our way of life. The liberal samples of life we expect to send over should be preceded, accompanied, and followed up by more intelligent publicity than we have ever had. Europe and America are suffering from misconceptions, and Russia has carefully fostered bad impressions both ways.

The matter of propaganda has come alive. The word itself is a hateful one which we derived from the First World War, but it sticks in our vocabulary and in world practices. Senator HENRY CABOT LODGE, who spent several months in Europe, says: "My broad conclusion is that in western Europe we are losing the battle for men's minds. The most improbable and unsavory things about America are being widely circulated. More unfortunately they are also being widely believed * * * The lies that the Communists tell are being repeated so often that, like drops of water wearing away stone, they are making a real impression. * * * I am convinced that a Government information bureau, beneficial though it is in a limited sense, is only a drop in the bucket. Due to the war and enemy activity, the great problem was and is how to get the message abroad."

There have been experiments. We tried broadcasting messages to Russia, but testimony of observers is that the people did not listen. The intelligensia listened, but that doesn't help much. Russia, like most of Europe, has many wrong conceptions of the United States and Americans.

The idea extant in Europe, outside Russia as well as inside, is that Americans are rich, greedy, vulgar, selfish, and unappreciative. Didn't they let us whip Germany for them? Their generosity in that respect entitles them to everything we have, so they claim, and they say now we are holding out on them and not doing all we can. Simple reasoning is that wheat is the greatest necessity in Europe; that we have about all the money in the world; that Argentina has the wheat; hence, why don't we buy all Argentina's wheat and ship it over. The people point to our extravagant tourists and spending soldiers and the big, shiny automobiles as evidence that everybody in America is rich. They don't believe that a great many of our people are poverty-stricken and that real suffering comes to a vast number of our families and that some of our resources are strained.

Just what can be done by palpable, conscious propaganda is uncertain. But it is certainly incumbent upon our Government, particularly the State Department, to adopt sensible, realistic methods of putting our message across along with our aid.

Do Ye Even So

EXTENSION OF REMARKS
OF
HON. GEORGE W. ANDREWS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 16, 1947

Mr. ANDREWS of Alabama. Mr. Speaker, under leave to extend my remarks, I include in the RECORD the following thought-provoking and constructive editorial written by Mr. Horace Hall, publisher of the Dothan Eagle, Dothan, Ala.:

DO YE EVEN SO

The troubles that beset this chaotic world today are so unnecessary that Shakespeare's "What fools these mortals be" is probably more applicable now than at any time in world history. By the simple application of the Golden Rule all the distrust and suspicion that forbids the meeting of minds of our leaders would disappear as if by magic.

If Mr. Molotov should suddenly decide to apply that rule in his deliberations with other members of the Big Four at London, and if they, in mind, were willing to meet him halfway, how quickly peace could be restored to the world. Gone would be the bickering and conniving, the threats and demands.

Just suppose the Jews and Arabs, now at each other's throats in the Holy Land—on whose very soil the lowly Galilean teacher spoke the undying words from which stemmed this great rule—should remember what He said, and decide to live peacefully together. What a difference it would make in the world picture.

Near the close of His Sermon on the Mount, as recorded by St. Matthew, the Master said: "Therefore all things whatsoever ye would that men should do to you, do ye even so to them; this is the law and the prophets."

Upon these words most of the common laws of the world are based. There is no need for any law in any land except that man should "do unto others as he would have others do unto him." One is led to wonder why in the name of common sense people are such fools. Why do they bring upon themselves so much trouble and grief, when it would be so simple to keep it away?

God, we are told, was pleased with His handiwork after He had made the world. Then He made man and His troubles began, and there will be no end to these troubles as long as the world stands, unless men decide to live with one another without greed. For it is greed, perhaps more than anything, that causes men to fight wars and make conquests. Greed for gold and greed for power.

We have just come through the greatest war in the history of mankind. More fearful weapons than ever before were used in this last war. Even more fearful ones are even now being manufactured for the destruction of men and nations.

It is an awesome thought that in the twinkling of an eye whole cities can be reduced to rubble, thousands of lives snuffed out, and thousands more maimed to a life of misery and suffering.

All because man is trying to run the world his way, without taking a thought toward running it God's way. The Galilean has shown the way to peace and happiness for all the world, for all nations, and for all men of all races and creeds. His rule is no halfway measure, for He says, "all things whatsoever."

In this United States of America, whose very Constitution is founded upon the principles of Christianity, the principles laid down in the Golden Rule, we have the key to the solution of the world's ills. We know the way—we know God's way. Let us then arise and heed God's way, and point the way for the rest of the world, for as "ye would that men should do to you, do ye even so to them."

Taxes Should Be Earmarked To Insure Debt Retirement

EXTENSION OF REMARKS
OF
HON. SID SIMPSON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 16, 1947

Mr. SIMPSON of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Quincy (Ill.) Herald-Whig:

TAXES SHOULD BE EARMARKED TO INSURE DEBT RETIREMENT

This Nation is carrying the biggest national debt ever borne by any country at any time, yet many of those who were alarmed over the relatively small debt at the end of World War I or the deficits of the thirties appear unconcerned at the huge obligation incurred during World War II. It may be that unusual conditions become commonplace through long association or that faith in the country's economic power has been strengthened.

The fact remains that the United States Government owes to the people of the country a total of $258,000,000,000, with interest. Broken down, this is an average obligation of $6,540 for each American family. In addition, there are heavy State, county, and municipal debts in many areas. But for the average family the national debt is sufficient source for worry. It represents, under normal conditions, more than the value of the average home and more than the average family's savings over a long period.

America is rich in resources and it is currently prosperous. But the economic history of our own and other nations proves that prosperity never is static. It varies often. Good days are followed by times that are not so good. Perhaps the world will find a formula for permanent prosperity as well as for permanent peace. But that remains in the field of wishful thinking.

The most disturbing thing is that no provision has been made for systematic liquidation of the national debt. Congress goes along from year to year in the hope that after all bills are paid there will be something left for debt retirement. But no specific provision has been made to insure regular payments.

The Nation's finances would be on a better permanent basis if certain sources of revenue were earmarked for debt retirement, or if a fixed portion of the income tax could be reserved, by congressional action, for application on the debt. This would make possible the orderly liquidation of the debt within a period of time—say, 75 to 100 years.

It also would result in a steady reduction of interest charges and would be an added guarantee of sound currency. Similar plans have been used in financing road building in Illinois and in many other things. Financing of private debt usually calls for a schedule of payments and proof of the probable ability to meet them. Uncle Sam is the only borrower who is able to get money in large amounts without a sound plan for repayment.

No nation can prosper for long with unsound financial policies. Our currency is the world's strongest, but so long as an unfunded debt hangs over it there can be no guarantee of continued strength. A long-range program of amortization is as necessary in the case of public indebtedness as in private financing. It is folly for officials or private citizens to refuse to admit the cold fact that the public debt is a mortgage on the future of every citizen.

It is high time for Congress to set up a plan of earmarking certain revenues for debt retirement and for no other purpose. This is more important to the future economy than tax reduction or any of the suggested credit or monetary controls.

Bill To Remove Duty on Imported Exposed Medical X-Ray Films

EXTENSION OF REMARKS
OF
HON. AUGUST H. ANDRESEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 16, 1947

Mr. AUGUST H. ANDRESEN. Mr. Speaker, I have introduced H. R. 4739, which proposes the removal of the tariff duty on exposed medical X-ray films which are frequently brought into this country for medical purposes. The bill has been referred to the Ways and Means Committee for consideration. The language of the bill provides:

That paragraph 1629 of the Tariff Act of 1930 is hereby amended by inserting after "Par. 1629." the letter "(a)", and by adding at the end of the paragraph a new subparagraph to read as follows:

"(b) X-ray film, exposed, whether or not developed."

I desire to point out that thousands of people from other countries come to the United States each year for medical treatment. Many of these sick persons have been under treatment of local doctors in their respective countries. Frequently local doctors have made X-rays showing the progress of the disability of the patient. The use of such X-ray films by doctors in this country can be very helpful in the making of a proper diagnosis. These X-rays should be made available without governmental delay and red tape, and without the payment of duty.

Exposed X-ray films serve only one purpose and enter the United States in relatively small quantities. Individuals coming to the United States for the purpose of consulting physicians or clinics because of physical ailments frequently bring X-ray pictures as an aid to the examination. Some exposed X-ray films are sent to this country by mail, also for the purpose of scientific examination. The importers are clinics, institutions, hospitals, and physicians.

In many cases the X-ray films are reexported after examination, either being taken out by the owner or mailed out by those who have studied them.

There seems to be no particular reason why such films brought into the United States should be dutiable. The imports are so small that the revenue collected is insignificant and the costs of collection probably exceed the amount collected. On the other hand, X-ray films brought into the country frequently are used in emergency cases and any delay at ports of entry is objectionable.

There is no competitive industry in the United States as X-ray film is not exposed except for the purpose of taking a particular picture to be used for medical purposes or to expose flaws in various types of apparatus and is of no value except for the particular purpose for which it was exposed.

Although X-ray is used in the examination of articles in order to discover flaws or weaknesses, there is little need for the shipment of exposed films used for this purpose. Used X-ray film after it has served its original purpose is considered waste. Small quantities of this waste have been imported into the United States mixed with waste motion picture and other film. The amount has been and is likely to be inconsequential. It seems, therefore, unnecessary to restrict the free entry to exposed X-ray film for medical purposes only. To do so would make administration difficult and would offer little protection to any domestic industry.

Not the Nation's Wish, but Washington's Will

EXTENSION OF REMARKS
OF
HON. WILLIAM C. COLE
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 16, 1947

Mr. COLE of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following poem by Horace C. Carlisle:

NOT THE NATION'S WISH, BUT WASHINGTON'S WILL

Immediately under the spacious rotunda,
Beneath the great Capitol dome,
The crypt was perfected—but later rejected—
For Washington's last earthly home;
For he had requested, as his will attested,
To be laid away, to his rest,
To sleep through the stages of Time's ageless ages,
As Mount Vernon's time-honored guest.

While, like a song-poem, the river below him
Sings on 'neath the sky's changing gleam,
Unharmed and unhurried, unwatched and unworried,
He wished there to silently dream,
In unbroken slumber, through years without number,
Till his Lord and Master shall come,
And gently awake him, and lovingly take him
To his waiting, eternal home.

Yes, directly under the vaulted rotunda,
Beneath the world's most noted dome,
His Nation intended that, when his life ended,
He should rest in this rock-wrought home;
But, since he requested to sleep, unmolested,
At Mount Vernon, he's laid away,
Contentedly sleeping, in her care and keeping,
Until dawns the great perfect day.

—*Horace C. Carlisle.*

A New Labor League

EXTENSION OF REMARKS
OF
HON. LAURIE C. BATTLE
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 16, 1947

Mr. BATTLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Birmingham Age-Herald on December 11, 1947. I would like to commend it to the Members of this House:

A NEW LABOR LEAGUE

The American Federation of Labor has decided to enter the political scene to an extent unprecedented for that organization. Samuel Gompers always advised against the kind of action the organization he headed so long has now agreed to take. The whole aspect of labor-management relations has changed so greatly since Gompers was alive and active that one may wonder whether he would have been as strongly as ever opposed to the political line now under promotion by his successors.

For the AFL has announced that its present aim is to "house clean" Congress. President William Green says that every Member of Congress will be rated according to his stand on labor legislation and that no Member who voted for the Taft-Hartley bill will get an endorsement for reelection. His hope is that a fund can be raised quickly for political purposes; if every one of the 8,000,000 members contributes a dollar there will be a huge sum to be expended for what the AFL calls favorable propaganda. Thus, through the sponsorship of what President Green has announced as Labor's Educational and Political League, the hope is that an organization as potent as the older Political Action Committee of the CIO may come into being.

Mr. Green insists that labor must have the chance to express its own point of view. He is correct in that statement. No fair-minded person would have the leaders of labor muzzled before the American public. Green points out that the NAM has funds to pay for newspaper advertising and radio time; he insists that labor's cause must be as widely publicized. His plan cannot be criticized insofar as it intends to present widely the beliefs which labor holds important.

Nor can there be any objection to any group of Americans binding together for political preferment so long as they stay within the provisions of the law. The AFL has every intention of doing that. But there is a danger if any large organization, no matter whom it may represent, chooses to press its beliefs by concerted action upon any individual or group of individuals who choose to withstand them. The danger lies in use of pressure. It is unsound, too, to pass judgment on a Congressman on the basis of his vote on one measure alone. If the fund is used for educational purposes and if no harm is ever done

to the civil rights of any individual, no matter what his views, the move may be constructive in some respects.

But it is well to point out that any building up of a cleavage between classes is essentially dangerous. It is probably well that no two persons can agree about everything all the time. Should the time ever arrive when labor and management are arrayed in two utterly hostile camps which rank behind them all their sympathizers on either side, then we should likely see a calamity descend upon our Government and our land. It is only by the American system of give-and-take that we can accomplish the feat of living together in amity, of disagreeing at times with good nature, and of cooperating frequently for the welfare of all.

If the American Federation of Labor can use the newly created Educational and Political League for purposes consistent with the American tradition of fair play, it may prove a good thing. If it ever becomes a hardened group of die-hards who never see any point of view but their own, then it may lead to serious new trouble.

Keep America Strong

EXTENSION OF REMARKS
OF
HON. ROBERT J. TWYMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 16, 1947

Mr. TWYMAN. Mr. Speaker, under leave to extend my remarks, I wish to include a resolution adopted by the executive council of the International Association of Machinists. I believe that we are all concerned about the unsettled condition which exists in the world today. While we hope for peace we do not dare let down our guard. The best insurance that we have against war is a strong, well-prepared United States of America. No country would dare to attack us or any country in which we were interested, if it is known that we are well prepared to withstand attack or aggression.

RESOLUTION ADOPTED BY THE EXECUTIVE COUNCIL, INTERNATIONAL ASSOCIATION OF MACHINISTS, IN SESSION, NOVEMBER 17-DECEMBER 5, 1947, WASHINGTON, D. C.

Whereas the international situation respecting relationships between the great powers continues to deteriorate and the concepts of democracy are being challenged in the international field; and

Whereas the democratic-minded allies of the United States are being forced to reduce their military strength as a result of critical economic conditions growing out of the war; and

Whereas the sudden outbreak of a future war may endanger the whole idea of democratic government and will give the United States little time to revamp its production machinery for war production: Therefore be it

Resolved, That the executive council of the International Association of Machinists recommend to the Federal Government that it undertake every possible measure designed to increase the armament potential of the Nation—on land, sea, and air—through continuing experimentation and expanded production; and be it further

Resolved, That copies of this resolution be furnished to the President of the United States and to every Member of the Senate and the House of Representatives.

Tax Revision

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 16, 1947

Mr. McDONOUGH. Mr. Speaker, taxation determines the type of government we have. The kinds of taxes levied, the amount of taxation, and the use of funds raised by taxation affect the individual lives of all of us.

It is generally recognized that Federal taxation must undergo some revision in the immediate future, and that reduction of some taxes is necessary and elimination of many excise taxes should be considered. Readjustment of the Federal-State tax relationship also should have attention when the tax problem is considered by Congress.

The joint conference of Representatives of the Congress of the United States and of the Governors' conference has issued a statement concerning the need for tax revision and long-term objectives toward which we may work. I recommend this statement which follows to the Members of the House for their consideration:

STATEMENT OF JOINT CONFERENCE OF REPRESENTATIVES OF THE CONGRESS OF THE UNITED STATES AND OF THE GOVERNORS' CONFERENCE, SEPTEMBER 27, 1947, CHICAGO, ILL.

We recognize that the power to tax is the power to destroy. But it is equally true that a sound, coordinated use of the taxing power of all levels of our Government can contribute to the strength and durability of the American system.

Tax systems and the raising and spending of public moneys substantially determine in the last analysis the type of government we have.

The American form of government is founded upon the principles of local government and citizen participation in government. If these principles are to be developed and maintained—local, State, and Federal governments all must be strong.

The unprecedented high total tax bill now being paid by the American taxpayer to support all levels of government requires an immediate readjustment of the Federal-State tax relationship for the purpose of preserving a working Federal system.

This conference of Representatives of the Congress and Governors of the States, recognizing these principles, has agreed on a plan of action and has demonstrated that the problem is a joint problem and that progress can be made toward constructive solution by joint action.

To achieve a higher degree of efficiency, reduce duplication, and achieve economy and stability in our coordinated system of Federal, State, and local governments, our States must cease relying upon the Federal Government to do things for them and their citizens which they can do for themselves as well as, or better than, the Federal Government. In order that the State and local governments may be enabled to assume those functions, the Federal Government should reduce those taxes which can be administered best by State and local governments.

The accomplishment of these objectives is largely dependent upon economy in government and the establishment of fiscal self-sufficiency among the various levels of government. Reduced governmental expenditure is a prerequisite to tax reduction and payment of the national debt.

These are long-term objectives, but first steps can now be taken. Accordingly, this conference is of the opinion:

1. That the Federal Government should reduce Federal excise taxes as soon as practicable; [1]

2. That the Federal Government should amend inheritance and estate taxes to provide more equitable division of this revenue between the Federal Government and the States;

3. That the Federal Government should relinquish to the States the Federal tax on employers levied to cover the administrative expenses of the State employment security programs, and the States will assume the responsibility for the administration of the unemployment compensation and employment service programs;

4. That the Congress take the earliest possible action to correct by Federal law the income-tax inequities existing between the community-property and the non-community-property States;

5. That the States should avoid encroachment upon tax fields which are peculiarly adaptable to Federal uses.

The Conference believes that the beginning here made has demonstrated the desirability of cooperation between the Federal Government and the States in the consideration of tax and revenue problems. It is therefore recommended that the procedure initiated at this Conference be established on a continuing and regular basis.

Alaska Land Problems

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 16, 1947

Mr. BARTLETT. Mr. Speaker, the matter of Indian land ownership in Alaska has been a vexing problem for several years. Now, it seems more than ever urgent that some settlement based upon justice to all parties be arrived at with least possible delay. Such settlement will remove beyond all possible doubt any barriers which may exist with reference to title to the great forest lands of southeastern Alaska. These forests, constituting the major timber reserve of this Nation, can provide an inexhaustible supply of pulp for the manufacturing of paper. Question as to title has been one of the stumbling blocks in the way of entry of the pulp industry to Alaska. I had occasion recently to express my views on this subject in a letter written to Mrs. Josephine Peele, president, Camp 14, Alaska Native Sisterhood, Ketchikan, Alaska, and, under permission to extend my remarks, that letter is reproduced here:

DECEMBER 13, 1947.

Mrs. JOSEPHINE PEELE,
President, Camp 14,
Alaska Native Sisterhood,
Ketchikan, Alaska.

DEAR MRS. PEELE: I have received your radiogram, dated December 12, which reads as follows:

"Alaska Native Sisterhood, Camp 14, ask you protest Joint Resolution 162."

Senate Joint Resolution 162 was introduced December 4 by Senator BUTLER, chairman of

[1] Special consideration should be given to local telephone calls, intrastate electric energy, gasoline, and admissions taxes.

the Senate Public Lands Committee, for himself and Senator WATKINS, of Utah. On the same day Congressman D'EWART, of Montana, introduced an identical joint resolution in the House of Representatives. It is styled House Joint Resolution 269. Congressman D'EWART is chairman of the House Public Lands Subcommittee on Indian Affairs.

These joint resolutions, after a general statement in the preamble, seek repeal of section 2 of the act of May 1, 1936, which gives the Secretary of the Interior authority to establish Indian reservations in Alaska. They also rescind the orders of the Secretary of the Interior heretofore made with respect to the establishment of reservations at Akutan, Karluk, Wales, Unalakleet, and Venetie, or any other Indian reservations in the Territory of Alaska.

Since your radiogram was the first message received by me from Alaska seeking to ascertain my position with respect to these joint resolutions, I consider it appropriate to reply to you in some detail so as to outline my position on reservations and related subjects. It should be noted here that before Senator BUTLER and Congressman D'EWART introduced the resolutions in the Senate and House, respectively, I had been requested to take such action by the Ketchikan and Juneau Chambers of Commerce and the Ketchikan Bar Association.

As I see it, the problem relating to Indian lands in Alaska is threefold, and a considerable degree of confusion exists in the public's mind about the whole issue. The three phases now of interest revolve around:

1. Reservations.
2. Validity of House Joint Resolution 205.
3. Aboriginal possessory rights.

Such research as I have been able to make convinces me beyond all measure of doubt that section 2 of the act of May 1, 1936, was not intended for other than establishment of comparatively small reservations for townsites and related purposes. The history of congressional understanding and action on the bill demonstrates that. I do not think any of us could quarrel with such usage of power granted by the act. Certainly, such protection could often be justified for the benefit of the native people.

It was not until some years later that a different interpretation of section 2 was arrived at. Use of the 1936 act for much broader purposes is well exemplified in the creation of the Venetie reservation in the Chandalar district of northern Alaska. There something like 1,400,000 acres were set aside for a total population variously estimated to number between 23 and 400 persons. In one of the last speeches, if not the last, he made on the floor of the House, former Delegate Anthony J. Dimond called attention to the alarming trend toward the establishment of big reservations.

Weighing the possible economic advantages that would be gained by reservations as against the deficiencies of the reservation system, the Alaska Native Brotherhood and Alaska Native Sisterhood for a number of years stood for an anti-reservation policy. Although I have not yet seen the resolution adopted at the Thirty-fourth Annual Convention at Hydaburg, my information is the organizations have now reversed their positions.

Notwithstanding, it still seems to me that reservations will not and cannot provide the answer to the problem which is ours in Alaska.

It is my firm belief that no matter what is said to the contrary, reservations mean more and more Government control and less and less individual initiative and right. With reference to the Indians of Southeastern Alaska, I maintain that our economic resources are sufficiently great to permit them to gain a better living than they now can without resorting to a system which certainly has not been a shining success in the States.

One has only to study the reservation system in the United States proper to agree with those who allege that it has overwhelming defects and deficiencies. Admittedly, the Indians in the States were oftentimes placed on the least desirable and productive lands and that is one reason for their inability to prosper.

The situation in southeastern Alaska may be and, in my opinion, is quite different with respect to economic opportunities and natural resources.

I know that those in Washington and those elsewhere who favor these reservations in Alaska—I refer now to the white proponents of the reservation idea—insist that the Indians would have a free hand and would not be hedged about by Government restrictions. But I do not believe it. Government has a habit, when it has the power, of edging in and taking over whenever it has the opportunity. We all see this in our daily lives and the observation does not have to be confined to the Government's relations with the Indian people.

Few Americans, indeed, would trade away their democratic rights for a slight economic gain. And I submit in all sincerity that some of those rights would have to be traded away once the reservation system had reached full flowering in Alaska. An Alaska Indian leader has repeatedly called upon the Government to restore his people to the status of free men and women. Certainly, they are infinitely freer now than they would be as reservation people. They would not have title to the land upon which they lived. And I predict that notwithstanding everything they may be told that once they were established upon reservations their lives would be more or less directed by rules and regulations utterly foreign to them.

No, I cannot believe that reservations can ever provide the answer. I can understand, however, why the Indian people who have felt themselves neglected and deserted and left alone could come temporarily at least to the conclusion that they should advocate reservations. I hope that when they have thought the problem through they will reverse their present position and revert to that stand they formerly advocated. It could well be that some of their distant friends who are lavish with great and grandiose promises to them have painted false pictures. That, I think, is one of the great tragedies of the present situation. There are men and women, some quite new to the Alaska scene, who have given assurances which never, never can be fulfilled. Bitterness unrestrained will be the natural sequel but these men and women who do not live in Alaska and who have never lived there will be as alien to that as they are to the realities of the present moment.

Allow me to give you a concrete illustration. There was introduced in the House of Representatives, on June 16, last, H. R. 3859. This is a bill "To authorize the leasing of salmon-trap sites in Alaska coastal waters, and for other purposes." Upon its face this bill would reduce the number of traps controlled by present operators by means of a preferential schedule and would, it was argued, be beneficial to the Indians because they would have opportunity to obtain some of the traps released by the larger operators. Long before the bill was introduced there were various meetings and conferences on the desirability of having such legislation. From the very first I attacked this proposal because I saw it as an instrument designed to give owners of salmon traps a legal right to that device. My opposition has not diminished since the bill was introduced, although a then Assistant Secretary of the Interior appeared before both House and Senate committees early last summer in support of the bill.

In a letter which appeared in the magazine The Nation on October 4, 1947, Miss Frances Lopinsky, a law associate of Mr. James E. Curry, took me drastically to task for protesting "vigorously against Secretary Ickes' antimonopoly regulations." Those regulations, which never came into being are now sought in the bill above described. If there is one Indian in Alaska in favor of that bill I failed to find him on my visit to the Territory last summer. I wonder if Miss Lopinsky will go before the congressional committees when the regular session of Congress starts in January in support of that bill. I wonder. Likewise, I wonder if the Department of Interior will continue its support of the measure. I have a feeling that some of those who thought I was taking an antinative position when I attacked this bill may now be ready to admit privately I was right. I cite this merely in an attempt to demonstrate that some of the white friends of the Indians who actually live in Alaska—and I am proud to count myself as one of these—have more real understanding and fuller comprehension of the realities than those so distant from the scene of our daily lives that they can deal only in theories, not in realities.

The Butler resolution and the D'Ewart resolution would never have been introduced if there had always been prudent employment of the powers granted under section 2 of the 1936 act. And especially would they not have been introduced if the word had not spread that those powers were intended to be used in ever increasing measure.

Referring to the intention or purported intention of the Indians of Kake and Kasaan to sell timber to a New York corporation, you will remember the United States Forest Service has publicly stated it will resist in the courts any such attempt. That, I should think, will be exclusively a matter for determination by the courts. Congress has acted by passing House Joint Resolution 205. If a suit is brought in court, that would simply be carrying to a logical conclusion the belief expressed before congressional committees by the counsel for southeastern Alaska natives that the provisions of the resolution are not constitutional. Concerning this, I do not think there is anything further for Congress to do.

Now as to the matter of possessory rights. All of us will agree this is a subject the final determination of which must be reached at the earliest possible moment. The trouble is, all of us have been saying that for a long time and nothing has happened. There is an exceedingly sharp divergence of opinion as to what course of action should be taken to bring about settlement. For my part I had hoped it could be done through the courts. There the issue could be dealt with on its merits. There the emotions which increasingly surround this issue would be lacking. There we could hope the facts, and the facts alone, would prevail. But I note increasing belief on the part of some lawyers who have studied this problem that it is going to be a matter of great difficulty to present the issue, complete and in one package, for early judicial determination.

There is, of course, the alternative method of congressional settlement. Here again there is difference of opinion as to what method of legislative procedure ought to be followed. One school of thought has held out for a simple extinguishment bill giving the Indians access to the Court of Claims where they could present their case for compensation. This proposal for court action should not be confused with the proposal previously referred to for settling the existence or nonexistence of aboriginal rights through the Federal courts. Another school has urged that the hearing method heretofore employed should be continued with congressional blessing. The findings of the board or boards appointed thereunder by the Secretary of the Interior would have to be later ratified by Congress to become effective. I have joined with those who have urged this latter plan if the matter is to be settled by

Congress. In fact I have introduced a bill along those lines. A preliminary hearing took place last summer before the House Subcommittee on Indian Affairs of the Public Lands Committee. The Department of the Interior testified for the bill and the salmon industry and the Forest Service against it. Nothing further has been done. It is impossible to predict what the outcome will be in the presence of this opposition. An extinguishment bill of the type first referred to would also run into difficulties. I for one, as I have stated many times in the past, would offer such opposition as I could to such a bill because I do not think it gives the Indians an even break.

It had occurred to me that my bill, which is H. R. 190, might meet with more favor from its opponents if an independent commission were appointed to conduct hearings in Alaska instead of a board named by the Secretary of the Interior. I am advised informally by industry, however, that opposition would not be withdrawn. The position of industry as explained to me is that its fundamental objection to such a bill is because passage would indicate congressional acknowledgment of the existence of aboriginal possessory rights, and this industry denies.

A report on this subject was prepared a few days ago for the use of the Senate Public Lands Committee. It expresses in rather vigorous language the opinion that no aboriginal possessory rights exist in Alaska. So far as I know, the report has not been taken up by the full committee and so cannot at this time be construed to represent the attitude of the committee. Nevertheless, it is indicative of what can easily be discerned in Washington by even a casual observer as an increasingly hostile attitude toward the Indian position. Categorically, it can be said this feeling has been strengthened and intensified since the reservation issue has been projected again in recent weeks.

Despite the findings of the circuit court of appeals at San Francisco with respect to the Miller case and the Karluk case, it is obvious that decision of this perplexing issue must be made in the future. If the circuit court conclusions were final there would be no need for anyone to concern himself further. The decision would irrevocably have been against the Indians. That so many people are concerning themselves is sufficient proof that the end of the story has not yet been written.

For my part, I sincerely believe the Indian people should be given complete opportunity to present their case in support of the aboriginal rights they claim to have, either before the Congress or before the courts. I cannot reconcile criticism of dictatorial processes elsewhere with failure on our part to give these American citizens, truly the first Americans, all the consideration which in justice and equity they are entitled to. Further, if it should be finally determined they have possessory rights with respect to specific areas I do not think the heavens would tumble if title to these tracts was to be conveyed to them. It might be they would prefer money settlement but in any event the right of choice should be theirs. After all, if at long last it is determined that these possessory rights do exist they truly would be rights deriving from "time immemorial." Other rights, including Government reservations of one kind or another, are of much more recent derivation.

To recapitulate:

1. I do not favor the establishment of large reservation for the exclusive use of Indians. My observation is that the 1936 act was never intended to be used for such reservations.

2. I do not know if aboriginal possessory rights exist and no one else knows. I shall, recognizing the obstacles outlined above which stand in the way of speedy action, do everything I can to assist in an early solution. And so long as I am Delegate in Congress I shall do nothing and in fact actively oppose any movement intended to foreclose the Indians of their every last right to obtain a fair and impartial hearing.

Since this detailed statement is an explanation of my position I know you will not object if I send copies to other interested parties.

Sincerely yours,

E. L. BARTLETT,
Delegate.

Thinking Toward Peace

EXTENSION OF REMARKS
OF
HON. HOMER A. RAMEY
OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 16, 1947

Mr. RAMEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the article entitled "Thinking Toward Peace," reprinted from the Christian Science Monitor:

"THINKING TOWARD PEACE"

Under this title, the Christian Science Monitor has been presenting some forward-looking proposals for newer new orders, put forth by various groups. Such a presentation would be incomplete without a consideration of the oldest new order in existence—the "new covenant" which God made with His people centuries ago, and which never has been abrogated:

"I will put my laws into their mind, and write them in their hearts: and I will be to them a God, and they shall be to me a people."

Some of the plans reprinted in these columns have envisioned a world union of nations. It is patent that an organization on that order is humanly necessary. But unless it first honors God's covenant and is made subordinate to His government, it cannot be wholly successful, for it will be built on the sands of human fallibility and man's misconception of practicality.

No experienced business man would, on taking possession of an invention, discard the basic rules for operation provided by the inventor or manufacturer. Yet that is what men, for the most part, have done in their attempt to run God's creation—this earth which is "the Lord's and the fullness thereof."

Again and again God's words and laws, while honored in the abstract, have been shrugged aside as too impractical for the meeting of everyday problems. Men have gone on their "practical" way producing want and woe and war, when, through obedience to God's laws, they could have been reaping plenty, joy, and peace. Years of research, countless sums of money have been devoted by men to new machines only to have them turned against themselves.

And always, regardless of the surface causes, the roots of the trouble have been selfishness, hatred, and injustice, which are in direct contradistinction to the laws of God.

On the other hand, obedience to His laws enforces the acknowledgment that this is God's universe, not a universe belonging to different races and nationalities. It bespeaks a willingness to let the Government rest on God's shoulder, with man responsive to that government and its loving consideration for the welfare of all humanity. It necessarily rules out individual and national greed, false nationalistic pride, unbridled desire for power.

Many years ago, Mary Baker Eddy, on being appointed fondateur of the Association for International Conciliation, wrote:

"Right thoughts and deeds are the sovereign remedies for all earth's woe. * * * When pride, self, and human reason reign, injustice is rampant. * * * Individuals, as nations, unite harmoniously on the basis of justice, and this is accomplished when self is lost in love—or God's own plan of salvation." (The First Church of Christ, Scientist, and Miscellany.)

Human plans, organizations, and laws are, of course, essential, but their only potency is in the degree to which they are based on man's adherence to his Maker's covenant, and his utilization of that most practical of all methods—love.

The Late Dr. Charles Browne

EXTENSION OF REMARKS
OF
HON. FRANK A. MATHEWS, JR.
OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 16, 1947

Mr. MATHEWS. Mr. Speaker, the Members of this House who served as early as 1925 and other Members who may recollect him, will be saddened to learn of the death of Dr. Charles Browne, of Princeton, N. J., who served one term, from 1923 to 1925, in the House, representing the district in which Princeton was at that time located.

Dr. Browne passed away at the Princeton Hospital after a long illness.

One of the outstanding members of the local Democratic Party, Dr. Browne numbered among his many activities, four terms as mayor of the borough of Princeton, three terms in the New Jersey Assembly, and membership on the New Jersey Public Utilities Commission. He was also a well-known gourmet, writing two books on the subject and participating in the organization of the Nassau Gun Club.

Born in Philadelphia in 1875, son of the late William Hardcastle Browne and Alice Beaver Browne, Dr. Browne prepared at Rittenhouse Academy in Philadelphia and received his bachelor of arts degree at Princeton in 1896. In 1900 he was graduated with honors from the University of Pennsylvania medical school.

STUDIED IN BERLIN

From 1900 to 1902 Dr. Browne served as resident physician at the University and Presbyterian Hospitals in Philadelphia. After a year of study in Berlin he returned to Philadelphia in 1903 as a staff member of Phipps Institute for Tuberculosis, also serving in the outpatient department of Children's Hospital.

Dr. Browne came to Princeton in 1906 and combined his medical practice with welfare work and politics until he was elected mayor in 1915, the first Democratic mayor of Princeton since 1892. He

retired near the end of his fourth consecutive term to serve one term in the House of Representatives, from 1923 to 1925.

Dr. Browne was president of the board of trustees of Princeton Hospital from 1923 to 1925. For 6 years, beginning in 1925, he was a member of the New Jersey Public Utilities Commission, and the same year was a member of the board of control for the New Jersey Department of Institutions and Agencies.

HEADED POWER STUDY

In 1926 Dr. Browne was appointed chairman of the joint giant Power Commission of New York, New Jersey, and Pennsylvania, formed to study regulation of electrical power crossing State lines. In 1932 he served as chairman of the New Jersey Block-Aid Commission, organized by the legislature to conduct emergency relief drives during the depression. He was a member of the assembly for three terms, beginning in 1936.

During World War I, Dr. Browne was commissioned a lieutenant in the Medical Corps. He was advanced to captain when named commandant of the reclamation hospital at Lawrenceville. He served in New Jersey throughout the war as medical officer and examiner at various installations.

Dr. Browne was the author of the extremely popular Gun Club Book, published in 1939. He was a founder and the first president of the Nassau Gun Club, established about 1917, as a shooting group, but which later gained fame as an organization of connoisseurs of fine food and drink. He always insisted that gun-club members, rotating as hosts, should prepare their own meals. In 1939 he became the first president of the Gourmet Society of New Jersey and the next year wrote a supplement to his cookbook, titled "Gun Club Drink Book."

MANY CLUB AFFILIATIONS

Dr. Browne was a director of the Princeton Inn, the Kingston Coal Co., Delaware & Bound Brook Railroad, First National Bank of Princeton, and the Beneficial Loan Society.

At one time he was a member of 20 different clubs, among them the University, Racquet and Tennis, Princeton, and Manhattan Clubs, all of New York City, and the Nassau and Colonial Clubs of Princeton.

Dr. Browne leaves his wife, the former Georgeanna Gibbs, of Haverford, Pa., and four sons, Colston H., Anthony D., Charles B., and Archibald.

B. F. Goodrich Co.

EXTENSION OF REMARKS
OF

HON. PETE JARMAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 16, 1947

Mr. JARMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by John L. Collyer, president of the B. F. Goodrich Co.:

(By John L. Collyer, president, B. F. Goodrich Co.)

It is always gratifying and interesting to meet with new fellow citizens and to consider relationships that are essential for success when a company takes out its industrial citizenship papers in a community.

This was an experience that Dr. Benjamin Franklin Goodrich, founder of the B. F. Goodrich Co., had—and happily so—back in 1870, 77 years ago, when he started his little company in Akron, Ohio, the first rubber company west of the Allegheny Mountains.

The consumption of rubber in the United States in 1870 totaled only 4,000 tons. The consumption of rubber in the United States last year was 250 times greater, totaling 1,000,000 tons. This year the consumption of rubber should approach the 1946 record, but next year there will be a reduction in consumption as the pent-up demand for tires and other rubber products, resulting from wartime shortages, will have been substantially met.

B. F. Goodrich over the years has kept pace with the enormous growth of the rubber industry. The small brick building that had been built in Akron in 1870 has now grown to buildings having floor space of 125 acres. However, this phenomenal growth in Akron is only half the story of B. F. Goodrich expansion because in more recent years our manufacturing operations have reached out far beyond the confines of Akron, as Tuscaloosa well knows.

There are now 19 B. F. Goodrich plants located in 12 different States, and more than one-third of these plants are in the great South. In addition to these plants, B. F. Goodrich has manufacturing interests in eight foreign countries, including Canada and Mexico. B. F. Goodrich products are sold throughout the world.

We look forward to the future with confidence because it is our firm conviction that rubber manufacturing is still a growth industry with great opportunities for the future use of the vital and indispensible material—rubber—and supplementary materials.

Benjamin Franklin Goodrich in founding his little company for manufacturing fire hose and wringer rolls declared, "we will make goods destined for service." Our company has never wavered from this wise course.

B. F. Goodrich policy has always been to produce better and better products at lower and lower costs, making for broader and broader markets and providing more and more good jobs for Americans.

This march of progress by B. F. Goodrich included the founding of the first research laboratory in the rubber industry, 52 years ago, and the pioneering of most of the important inventions and developments in the rubber industry.

I would mention such developments as the rubber chemicals—age resisters which multiplied the life of rubber products—accelerators which shortened the time of vulcanization from hours to minutes—the introduction of the cord tire—the use of carbon black in tires, an abrasion resister five times better than the material that it replaced.

Then I would mention the wonder material Koroseal; B. F. Goodrich Chemical Co.'s Geon; and most important, American-made rubber which made possible the winning of the war.

TUBELESS TIRE

These and other B. F. Goodrich pioneering developments have earned for our company the title, "B. F. Goodrich—First in Rubber."

I should like to remind you of the major role that the B. F. Goodrich Co. was privileged to play in helping our country survive the almost tragic rubber crisis that developed at the outset of World War II.

It was on June 5, 1940—18 months before Pearl Harbor—that our company manufactured and introduced for sale to the American people for the first time, automobile tires in which our rubber—the first general-purpose rubber produced in the United States—replaced more than 50 percent of the normal crude rubber content.

There was no economic reason for our company taking this important step, but we believed then, as we do now, that a rubber program for national security was vital. Back in 1940 we had two objectives in mind, both of which, I am glad to say, were realized: First, to stimulate Government and public opinion for national security action in terms of rubber; and, second, to challenge American industry in the field of research and development for the production and use of man-made rubber.

B. F. Goodrich did not act any too soon because, as everyone knows, our country's rubber-supply line was severed, suddenly and completely, in the days that followed Pearl Harbor. Thanks to our company's pioneering of man-made rubber, our demonstrated know-how, and in urging that a program for its manufacture to be undertaken before the war broke out in the Far East, we were called upon to play a major role in the engineering, construction, and operation of gigantic plants to produce man-made rubber.

Perhaps you are aware, too, that we had made such progress in new technique with rubber and the many other component materials that go into tires that a few weeks after VJ-day we were able to introduce the first new postwar tire—a tire that outwears prewar tires.

Turning to the present and future rubber position, it is the will of the American people that never again should our country depend on sources on the other side of the world for all its rubber supplies. This is why Congress is now giving consideration to legislation for a rubber program for national security.

The B. F. Goodrich Co. has consistently and urgently made recommendations for such a rubber program to be based upon a foundation of competitive enterprise, because we know that aggressive competition between private companies is the key to the most rapid progress in development of American-made rubber. We want to get the Government out of business.

I have talked to you about certain aspects of our company's business, because we now consider the citizens of Tuscaloosa to be part of the B. F. Goodrich family—B. F. Goodrich and Tuscaloosa interests are mutual.

It is no exaggeration to say that the decision to locate a new manufacturing plant is about as important as any that a company is called upon to make. Many factors must be considered carefully, some of them tangible and other intangible, but all combining to make the enterprise either successful or unsuccessful, depending on how well the program has been formulated and executed by the company and the community, whose respective responsibilities are based on mutual confidence.

You know that the conception of this plant in Tuscaloosa was originally part of the Government's wartime program of expanding tire-production facilities to meet the critical needs of the war emergency. B. F. Goodrich was selected by the Government to engineer, construct, and operate the plant, which was canceled before construction was anywhere near completed.

The decision by our company to purchase and complete the plant at enormous cost was far from an easy one to make. In addition to the basic economic considerations of

personnel availability, power, water, transportation, and accessibility to markets, there were other considerations less tangible but equally important. These included such factors as character, general disposition, and industriousness of the citizens, the caliber of the schools, churches, the university, and parks—in short, the kind of environment to be found here. These are some of the intangibles on which the Tuscaloosa score appeared favorable and reassuring.

Success or failure for a company, its employees, and the community is measured largely by the degree of adherence to the basic principle—responsibility. The community, as you know, has the important responsibility of providing an environment which will encourage its industries to prosper, because only prosperity can benefit the community and bring a measure of security for the employees, stockholders, and customers, whose interests are mutual. From time to time these interests may seem to be in conflict, but taking the long view they are one and the same, because the success of each depends on the stability and prosperity of the company.

Providing a favorable climate for successful business involves responsibility for good government and peace and order, made possible by honest and competent officials.

The city government is responsible to its citizens for good government, for the education of their children, for adequate police protection, for fire protection, for sanitation, for the maintenance of streets and public facilities.

On the other hand, it is the responsibility of an industrial concern to provide reasonable working hours, earnings that are fair, good and safe working conditions, and equal opportunity for advancement.

The B. F. Goodrich plan of organization for its various plants and divisions is one of decentralized management and administration within a broad framework of company philosophy and policy, with responsibility and authority going hand in hand.

Members of the B. F. Goodrich management team who head up the great Tuscaloosa plant were carefully chosen by Mr. Graham and Mr. Gulick for the important responsibilities which they shoulder as this plant moves toward completion and high levels of production. Joe Herbert and his team have performed admirably.

And now I desire to extend to the citizens of Tuscaloosa and the great State of Alabama the sincere thanks of B. F. Goodrich for the helpfulness and for the many courtesies that have been accorded to members of our organization.

B. F. Goodrich and the city of Tuscaloosa are off to a good start but the pace will get hotter. We know full well that in the rubber industry the race is long and the competition severe.

Yet I am supremely confident that everyone who has a part to play will do better than his best to make the Tuscaloosa plant a winner and a perpetual champion.

How We Got That Way

EXTENSION OF REMARKS
OF
HON. ROSS RIZLEY
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 16, 1947

Mr. RIZLEY. Mr. Speaker, the following editorial from the Monday, December 8 edition of the Daily Oklahoman contains excellent food for thought and ought to be interesting reading to the do-gooders and spenders who would give America away without asking any questions, and who seemingly question not only the intelligence but the patriotism of anyone who opposes in any manner the various and sundry gift programs for billions of dollars of the American taxpayers' money to foreigners:

HOW WE GOT THAT WAY

A well-known newspaper and radio commentator recently took time out from his intent gazing at the national and international scenes and came out into the Middle West to view some of the individual trees. And he finds himself both disturbed and puzzled at what he saw.

His first impression, the observer wrote, is that the citizens of this sprawling region "like those elsewhere in America, though perhaps a little more so, are in the very old and human state of mind of wanting to have their cake and eat it, too," in their attitudes on both domestic and foreign affairs.

He also complains that while midwesterners want Russia curbed, they are not very enthusiastic about the Marshall plan and want to know if we aren't being suckers to pour all that money and food into Europe. Striking out at the general impression that Europe's plight is due to laziness and for going in for socialism, the observer wrote with doleful finality: "Few persons seemed to realize that the principal cause for the mess in Europe was the most devastating war in history."

Yet, in almost the same breath, he conceded there is ample evidence of the inherent generosity of the mass of Americans out here in the way they lavished food gifts that bulged the Friendship Train and believes if they could really be convinced that the Europeans were starving there is no doubt they would come through generously with whatever was needed.

This observer, upon rediscovering mid-America, placed his finger squarely on the people's thinking but blithely overlooked the reasons for it. There is little, if any, mystery how we got that way.

Sure, we want to eat our cake and have it, too. Haven't we been told for the past 14 years that this was not only desirable but possible? Didn't work beyond the 40-hour week become a national legislative felony? Didn't pay rates hike skyward, all on Government order, while the same political leadership urged us to work less? Weren't we given the example of a government pursuing the greatest and costliest war in history with one hand and social reforms with the other? Hasn't central government consistently plugged this "Hit Parade" winner: "The more we borrow and tax and spend, the richer we'll surely be in the end"? We've been fully educated to the eat-your-cake-and-have-it-too theory.

Certainly, we are suspicious of the Marshall plan or any other. And why not? The most devastating war in history ended in 1945. We have fed Europe and much of the rest of the world, too, through that crop year, through the 1946 harvest time and through the 1947 grain gathering. And we are being asked to feed the folks again—at least through the 1948 crop season. Maybe longer.

The Marshall plan, folks recall, runs through 1951. True, factories, railroads, and cities were badly battered and smashed. But nobody made off with the land which supplies the world's physical basis for living. We made seed available for these past crop years and pardon our curiosity if we rise to inquire why food still is so terrifically short. We know there was some unfavorable weather in parts of Europe this past year but we also know, for one example, that France actually seeded about 20 percent less grain acreage in the spring of 1947 due to socialistic tinkering with price controls.

And why shouldn't we be a little gunshy of other rehabilitation plans? Haven't we seen the bulk of our governmentally-supplied food relief go straight into Europe's black markets? Haven't we seen our heavy machinery and equipment rusting on the docks to which it was delivered months and months ago? And, last but not least, haven't we seen continuing shipments of supplies, vital to both peace and war, going to Russia, Yugoslavia, and other countries whose aims, per choice or per force, run counter to our concepts of living together in a world at peace? So pardon us if our skepticism is showing just a tiny bit.

These are just a few of the many very good reasons why we got the way that so puzzles and disturbs this modern Columbus. He could render yeoman service if he would quit worrying about our symptoms and seek a diagnosis of the cause which, if the truth be known, is probably so close to the nose he keeps glued on international and national affairs that his eyes simply cannot focus on it.

Fertilizer Production

EXTENSION OF REMARKS
OF
HON. J. VAUGHAN GARY
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 16, 1947

Mr. GARY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement which was made by Mr. Charles E. Heinrichs, of the Virginia-Carolina Chemical Corp., Richmond, Va., before the Fertilizer Subcommittee of the House Committee on Agriculture at its hearing December 9, 1947:

Mr. Chairman, my name is Charles E. Heinrichs, manager, phosphate-mining department of Virginia-Carolina Chemical Corp., of Richmond, Va.

Eleven months ago production estimates were presented before the subcommittee of the House Agricultural Committee by representatives of industry with respect to the available supply of fertilizer materials. Certain estimates, especially with respect to phosphate rock and superphosphate production, may have appeared to be on the optimistic side. Certainly at the time they were made it was with the hope that equipment, supplies, and materials would be available for shorter deliveries and in ever-increasing quantity for expansion of production facilities. It was further hoped at that time that there would be a marked improvement in the transportation situation and that there would be an end to crippling strikes. In fact, the estimates were based to a certain extent on the expectation of a rapid return to something approaching normalcy.

As matters turned out, there was an improvement in the labor situation as concerns the number, nature, and severity of strikes. However, severe car shortages have continued at intervals throughout the intervening period, and supplies, material, and equipment are still being procured only on the basis of deliveries ranging all the way from 4 months to 5 years.

Nevertheless, the production of phosphates has met and exceeded all predictions and further expansion of production is proceeding, even under adverse conditions, at an amazing rate.

With 5 months of the 1947–48 fertilizer year already behind us, it is apparent that the production of phosphate rock in Florida alone for the year will equal, and possibly even exceed, 6,000,000 gross tons. The production of the entire country, including Florida, Tennessee, and the western field, is expected to be in the neighborhood of 8,000,000 tons with the possibility of reaching 8,500,000 gross tons. With new construction already completed or nearing completion it is now estimated that the production capacity of the industry for the year 1948–49 will have been brought to the level of more than 10,000,000 tons. Of this total the expanded capacity of the Florida field alone will be between 8,000,000 and 8,500,000 tons. This national production should be ample to meet all requirements in the United States and at the same time leave a substantial tonnage available for export. As a matter of fact, it appears that in the opinion of the United States Department of Agriculture a condition of sufficiency is expected to be reached in the current year. In the report of the Production and Marketing Division (November 1947) it is stated that "World production of phosphate rock will probably be sufficient to meet world demands in 1947–48."

It was properly stated before the committee in January of this year that there was no dearth of capacity to make superphosphates and that a material expansion of concentrated superphosphate capacity was definitely under way. It was at the same time pointed out that the production of superphosphates is limited merely by the ability to supply the raw materials, phosphate rock and sulfuric acid.

The soundness of these representations has been demonstrated by the increased production of superphosphates which has accompanied the expansion of phosphate-rock production and the improvement in sulfuric acid supplies. According to data published by the United States Department of Agriculture, a total of 8,968,000 net tons of superphosphates was produced in the United States in the year 1946–47 and it was indicated that a substantial increase could be expected in the year 1947–48. It now appears, however, that the actual increase in the current year will far exceed such indications. In view of the greatly expanded rock production, increased acid supply, and construction of new superphosphate plants, it is now considered likely that the production of superphosphates of all types will exceed 10,000,000 tons in the year 1947–48 and should reach a total of well over 11,000,000 tons in the year 1948–49.

It is a matter of pride to the industry that, though the domestic demand for phosphate rock in 1940 was for only 3,000,000 tons and though the demand has nearly tripled during the past few years, the production capacity has been increased at such a rate and in sufficient amount to now be able to meet the mushroomed demand. And it must be borne in mind that this expansion has been accomplished by private industry on its own initiative and at its own expense, not under normal conditions but during a period when construction projects met more and greater obstacles than have perhaps ever before been encountered by an expanding industry.

There are ample mineral phosphate reserves within the boundaries of continental United States to dispel any fear of a shortage of this raw material. Of the total known world reserves of phosphate rock, estimated by competent authorities at approximately 26,000,000,000 metric tons, the United States has about 51 percent or approximately 13,500,000,000 tons.

The findings of a joint congressional committee substantiate this fact, phosphate resources of United States—hearings before the Joint Committee to Investigate the Adequacy and Use of Phosphate Resources of the United States—Congress of the United States, Seventy-fifth Congress, third session, 1938, printed in 1939.

These United States reserves are distributed approximately as follows:

Eastern States:	
Florida	5,081,839,000
Tennessee	194,468,000
South Carolina	8,798,000
Kentucky	863,000
Arkansas	20,000,000
Total	5,305,968,000
Western States:	
Idaho	5,736,335,000
Montana	391,323,000
Utah	1,741,480,000
Wyoming	115,754,000
Total	7,984,892,000

The joint congressional committee in 1938 found that the mining of phosphate rock was conducted on a high plane of efficiency and with due consideration for the conservation of mineral resources, but this has received little or no publicity.

Allowance of Income-Tax Deductions To Cover Cost of Relief Parcels

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 16, 1947

Mr. KEATING. Mr. Speaker, charitable bequests up to a limit of 15 percent of one's income are very properly deductible for income-tax purposes.

In order to obtain the benefit of this deduction, however, it is necessary to show that the gift was made to an established corporation or organization engaged in charitable, educational or religious activities.

Thus, contributions to the Cooperative for American Remittances to Europe, otherwise known as CARE organization, are deductible. The only difficulty with limiting such deductions to gifts to this or other established relief organizations is that, in most instances, those who sacrifice the most in sending parcels abroad and who, therefore, most need the benefit of an income-tax deduction, are not able to take advantage of the provision in the existing statute.

Those who go to the corner grocery, make up a package, and send it off to their stricken relatives or friends in Europe cannot share in this tax advantage because their gifts are not made to an established relief body.

As I said when I introduced legislation to reduce by one-half the postal charges on shipments of relief supplies abroad, this voluntary method of helping our stricken friends across the seas should be encouraged in every reasonable way.

I am today endeavoring to give a further impetus to this method of extending relief by introducing a bill to amend the Internal Revenue Code so as to provide that one who sends to persons in foreign countries parcels containing food, clothing, medical supplies, or other necessities of life may deduct the fair value of such parcels as a charitable contribution, when he files his income-tax return. The value is to be determined at the time the parcel is mailed and to be shown on the postal receipt which is issued at that time and on the accompanying customs declaration.

There would seem to be no difficulty in administering the provisions of such a law since it will not require that anything more be done than is now the established practice. It will certainly result in definite encouragement to those who are trying to help suffering in the world. It will not result in any appreciable loss in revenue to the Government. Such contributions, like all others, will be subject to the 15-percent limitation. It will, however, mean a great deal, particularly to those with relatives or national origin ties in foreign countries, many of whom are now making such great sacrifices in order to share a few of the necessities of life with the less fortunate.

It is my hope that the Committee on Ways and Means will grant an early hearing and a favorable response to this suggestion.

Criticism of Congress

EXTENSION OF REMARKS
OF
HON. E. E. COX
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 16, 1947

Mr. COX. Mr. Speaker, we all have been aware, somewhat painfully, perhaps, of the propaganda which has been under way for years to belabor and belittle the legislative branch of the Government. We have recognized that campaign as a concerted effort to destroy the confidence of the American people in the Congress. We have also recognized that if this could be brought about, our American system of government would be destroyed, and the very things against which Thomas Jefferson warned us would come about.

Some years ago, I was one of several Members of the Congress, embracing both sides of the aisle, who helped to organize the American Enterprise Association, which is an educational organization designed to render a wholly objective, nonpartisan, unprejudiced, free service to the Members of the Congress in the interests of good government.

A large number of the Members of the House of Representatives and many Senators have taken this service for years, and we have found that it is wholly objective and is devoted to the cause of good government.

Recently, I learned, Commander Guy E. Wyatt, of West Orange, N. J., the executive vice president of the American Enterprise Association, has interested himself in a public relations activity on

behalf of the Congress. He made a speech recently at New Orleans, La., and later a similar speech in Nashville, Tenn., to large and appreciative audiences, in which he pointed out how unthinking or careless persons might lend themselves to the evil and cunning schemes of the subversionists to destroy our American form of government by falling in with the quick and easy criticism and ridicule of the Congress.

So effective was Commander Wyatt's speech in New Orleans that the New Orleans States, a very large and influential newspaper, ran an editorial which I wish to insert in part in the RECORD.

Then in the Nashville (Tenn.) Banner, another large and influential paper in the South, a very fine first-page article appeared which quotes a part of the speech delivered by Commander Wyatt and commends his views.

Mr. Speaker, this is all very gratifying to me, because it indicates that the American people have not been as infected with this accursed virus of communism as perhaps some of us might have believed.

The confidence of the American people in their Congress has not been destroyed. I think it is a very wholesome development that a gentleman like Commander Wyatt, an official of an organization maintained by very responsible citizens for the purpose of affording a free service to Members of Congress, should go out on a mission of acquainting the people with the excellence of the legislative branch of their Government. I think it will be gratifying to all of us, as it has to me, that the response has been so marked and so enthusiastic, and I think this is a public service which will have very important results.

[From the New Orleans States of December 6, 1947]

BANTERING CONGRESS

Mr. Guy E. Wyatt, of West Orange, N. J., the executive vice president of American Enterprise Association, Inc., in a talk before the Members Council Thursday deplored a prevalent tendency in the country to ridicule and belittle Congress. He thinks this is subversive conduct in these particular times, or that it serves the purposes of the subversive groups.

Mr. Wyatt's point is, we believe, well taken. It is stupid of the American people to deride, lampoon, and satirize, as a whole the people they themselves have chosen to transact their public affairs. This is equivalent to ridiculing themselves. They are belittling their own acts and their own judgment. Any citizen feeling impelled to criticize National Congress as a unit should pull himself up short and take himself out to the woodshed for a self-administered booting.

[From the Nashville (Tenn.) Banner of December 9, 1947]

WYATT FLAYS CRITICISM OF CONGRESS

Americans who belittle and fail to support Congress are playing into the hands of subversive forces which are trying to discredit our form of government, Guy E. Wyatt, executive vice president of the American Enterprise Association, declared today in an address before the Nashville Rotary Club.

Wyatt, who directs the activities of a fact-finding organization representing some 500 small and large businesses throughout the country, was introduced at the luncheon meeting in the Chamber of Commerce Building by Lipscomb Davis. Joe Sills, Rotary president, presided.

"There has been for many years now a concerted and studied propaganda campaign designed to break down the people's confidence in the legislative branch of our Government," Wyatt declared. Stressing the seriousness of this movement in view of the fact that Congress is the people's special instrument of control, the speaker added, "if your confidence in it and your support of it are not destroyed, you may hold a constantly growing bureaucracy in check and keep down a constant tendency for the Federal Government to encroach upon local and State governmental functions and private prerogatives."

Stating that it is true there have been instances when legislation was counter to public interest, Wyatt said this situation, which has existed for years, takes a more sinister note when subversive forces and enemies of representative government pounce upon this means to belittle and discredit our form of Government.

Such subversive movements can be detected and corrected, the speaker said. However, a condition more difficult to diagnose is the blind faith of the people that a law in and of itself will achieve a desired result and the people's consequent abandonment of interest and support after a constructive law has been enacted.

It is in this respect that industrial statesmanship must be developed and put to work to interpret, protect and uphold the operation and respect for laws and for those elected representatives of the people who make them.

Wyatt pointed out how difficult it is for Congressmen to secure the necessary information to handle a myriad of different legislative suggestions. "Like businessmen who learn to depend upon able assistants and department heads," he said, "Congressmen need a service from business which will provide factual, objective, boiled down information on controversial issues.

"It behooves industry to rise to the measure of its responsibility to bring forth objective leadership," he concluded, "to spread the knowledge and understanding of the mutual advantages of free enterprise, to volunteer readjustments of known equalities between industry, labor and the consuming public, to cooperate with Congress either individually or by supporting organizations set up for that purpose, and, in doing all of this, to strengthen and perpetuate this great bulwark of freedom, this cherished institution of representative government, the Congress of the United States."

This is the purpose of the American Enterprise Association, Wyatt explained.

The speaker also attacked government on a basis of want and need. The wants of one era become the needs of the next * * * unless our capacity to provide increases to the same degree, it is only a matter of time before we complete the cycle of folly.

GOP, NAM, and Inflation

EXTENSION OF REMARKS

OF

HON. CARL ALBERT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, December 15, 1947

Mr. ALBERT. Mr. Speaker, the Democrats in this House have a better name for the so-called Republican anti-inflation program, as set forth in House Joint Resolution 273. It should be called a relief bill for the members of the National Association of Manufacturers. If it passes the Congress, it will, from the very language of the bill, relieve the giant monopolies of this country from "the operation of the antitrust laws and of all other restraints, limitations, and prohibitions of law." I agree with the Attorney General's recent statement that there could be no more effective check against inflation than for Congress to increase the appropriations for the enforcement of the antitrust laws. Remove the antitrust laws, and what protection against the monopolies is left for the little man, the farmer, the laborer, the small businessman, the white-collar worker? This legislation is supposed to control inflation. Yes, it will control inflation, but it will so control it that the upward spiral will be sure to continue until Wall Street has once again attained domination over the Nation's wealth as it did in 1929.

This is said to be a bill for the voluntary control of inflation, but voluntary on the part of whom? Big business will have the power, free from the operation of the antitrust laws, to allocate materials. There will be nothing voluntary about it on the part of little business, which will be subject to the allocations made by big business whether it agrees to it or likes it or not.

The bill is no anti-inflation measure. By its very terms, agreements to control prices are not authorized. Its object is to prevent inflation; its effect is to insure the continuance of inflation to the profit of big business.

This subject is a very important one, indeed. How inflation might be controlled by legislation is a problem which should require the full and complete consideration of the Congress. Whether we should attempt to legislate in this field at all is a matter about which considerable argument has been heard through the years. It is difficult, therefore, to understand how such an important measure could be brought to the floor of the House under a gag rule with only 20 minutes of debate on each side. The Democratic Party will not be made the goat of this attempt by the Republicans to dodge their responsibility. They can make their appeal to the big-money campaign contributors if they like; we will rest our case with the American people.

Amending National Housing Act

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 16, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, I am in favor of passage of H. R. 4675 and will vote for the bill. A critical housing shortage still exists in this country and the bill will go a long way to assist in maintaining a high volume of new residential construction. This high volume can be maintained under

the bill without supporting unnecessary or artificial costs.

In particular, Mr. Speaker, the bill will authorize the Federal Housing Administration to insure mortgages on new residential construction under title VI of a National Housing Act as amended. According to the report of the committee which is handling the bill, it appears that under title VI that the original authorization was rapidly approaching exhaustion and unless this bill is passed it would mean that the Federal Housing Administrator would be compelled to discontinue receiving additional applications for mortgage insurance.

Mr. Speaker, passage of this bill will also assist former servicemen who are trying so desperately to establish new homes for their families. If this bill does not pass, it follows that construction of new homes will be curtailed to a great extent and certainly it is incumbent upon the Congress to do all it possibly can to insure a high level of home building in this country. I am sure that there will be almost unanimous approval of this legislation.

Inflation

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 16, 1947

Mrs. ST. GEORGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wall Street Journal of December 15, 1947:

REVIEW AND OUTLOOK

ON A DANGEROUS ROAD

The November monthly letter of the National City Bank of New York contains significant observations which are pertinent to the current discussion of remedies for inflation in the United States. We quote:

"In Sweden, the Government central bank has been maintaining a fixed support of 3 percent bonds at a time when the country's gold and foreign exchange resources were being rapidly drained away to finance large import surpluses. Thus the tendency for import surpluses to draw off excessive purchasing power has been neutralized in major part by the shift to the central bank of public debt previously held by the banks and the general public. The inflation problem remains on hand. To meet the crisis, the Swedish Government has invoked a series of direct controls, including a severe cutback in building activity, tightened limitations on imports, and seizure of all private holdings of dollars, Swiss francs, Argentine pesos, and Portuguese escudos of Swedish nationals plus certain other assets in those countries."

Thus, by keeping money cheap so that the Government might finance easily, Sweden succeeded in converting hard currency into a soft currency; the policy achieved the ridiculous result apparently of causing a flight from Swedish currency into the currency of poor little Portugal.

That is not all the Swedes achieved. Having fed the sources of inflation, they then went through the familiar resort to repressive measures, such as curtailing building activity and limiting imports.

We quote further from the National City Bank's statement:

"The experience of the occupied countries suggests that when governments try to borrow money at rates too low to attract genuine savings, or to compete with alternative outlets for funds, the government bonds they sell wind up in the central bank, which pays for the bonds by issuing new notes or by giving banks credits to their reserve accounts on its books. The end result is a dressed-up version of old-fashioned printing-press inflation. In fact, the results can be worse if the doors of the central banks are held open to the 'monetization' not alone of current government deficits, but also of government securities originally taken up by the public in financing previous government deficits. It is little wonder that in so many countries respect for the money of the realm has descended to such low levels."

We hope that those who make and those who accept statements that monetary inflation has been stopped in this country because Treasury deficits have been replaced by Treasury surpluses will read the above carefully. Because when bonds issued to finance past deficits wind up in the central banks, past deficits are doing their deadly inflationary work.

And at this moment the central bank in this country is helping to maintain an artificially low interest rate on Government securities and unless it stops doing so the results will not be different than they have been elsewhere.

It is always the other fellow in some other country who is taking inflationary action. Those who are doing it in a particular place at a particular time can always tell why their policy and actions are sound and why conditions are different. But the end result is always the same.

The Federal Reserve supports the price of Government bonds, and already we have what developed in Sweden and the occupied countries, that is, the proposals to repress the results of monetary inflation by a network of sanctions and controls, the feeding of inflation at its sources and trying to repress its symptoms.

And if anyone thinks that there is not a flight from the dollar, let him listen to the testimony of one of President Truman's advisers who said quite candidly that he sent his dollars into commodities to hedge against inflation.

The remedy is clear. Only the courage to act seems lacking.

Honor Paid Col. Milton B. Ochs Well Deserved

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 16, 1947

Mr. KEFAUVER. Mr. Speaker, I believe in passing around a few bouquets to people who deserve them during their lifetime. Col. Milton B. Ochs, of Chattanooga, brother of the late Adolph S. Ochs, publisher of the New York Times, has devoted a lifetime to the assistance of his friends and of worthy causes in the State of Tennessee. A list of his beneficences is too long to set forth. Sufficient it is to say that Col. Milton B. Ochs through his thoughtful generosity has brought much happiness to thousands of people and has done much to make a better place of the community in which he lives. It is very fitting, therefore, that the Kiwanis Club of Chattanooga has selected him as the man of the year. A few words about Colonel Ochs and his life were well set forth in Alfred Mynders excellent column, Next to the News, of December 10, as follows:

[From the Chattanooga Times]

NEXT TO THE NEWS

(By Alfred Mynders)

In selecting Col. Milton B. Ochs as the outstanding citizen of the year, the Kiwanis Club honors a man who has devoted his adult life to Chattanooga and its social, civic, and journalistic interests. The Kiwanis Club adds to its long list of distinguished outstanding citizens a man whose good fellowship seems to have reached its climax in his presidency of the Chattanooga Half-Century Club. He is the beloved fountainhead and guiding spirit of that unique organization.

The Half-Century Club is the outward and visible form of an inward and spiritual grace which has dominated Colonel Ochs' thoughts for many years and which has been expressed daily in his Looking Backward column on this page of the Chattanooga Times.

This writer frankly envies his infinite variety and his capacity for reflecting the golden youthful years and events in the lives of the Half-Century Club members through his Looking Backward column.

It is no secret that Colonel Ochs is past 80. Even the lovely Miss Fan, whom he married as the belle of Chattanooga is, herself, just past 80. But the amazing man writes his Looking Backward columns in longhand every day.

It would be a job of work for a newspaperman of just 30 years of age, but being a labor of love with him, he seems to like it and to thrive on it.

If he goes out of town on a trip—too often of late a sad trip to see his beloved sister, Miss Nannie, or to attend some sorrowful farewell to a friend who has not stuck it out as long as Colonel Millie—he leaves his columns in advance, all hand-written and all in order.

Daily, there are thousands who read Looking Backward and who anxiously turn to it and echo Longfellow's words:

"This is the place. Stand still, my steed,
Let me review the scene,
And summon from the shadowy past
The forms that once have been."

The Kiwanis Club told his part in persuading the late great Adolph S. Ochs to build that religious gem, the Memorial Temple to Julius and Bertha Ochs out on McCallie. Adolph Ochs furnished the money and Milton Ochs furnished the time and the dreams to give Chattanooga a great Lookout Mountain Park, which will be preserved for the people.

Colonel Ochs was married on the 26th of April 1893 to the beautiful Miss Fannie Van Dyke, the daughter of the late William D. and Anna (Deadrick) Van Dyke. Three children blessed the union. The elder son is Col. William Van Dyke Ochs, of the United States Army, retired. The second son is Adolph Shelby Ochs, former general manager of the Chattanooga Times. The third child, the only daughter, is Mrs. Margaret Elizabeth Ochs Palmer.

A friend of the military cadets in his younger days, a worker for every patriotic movement here in two World Wars, a newspaperman in Philadelphia and Nashville, and a vital force in the newspaper life of this city for two generations, Colonel Ochs' daily column on this page is easily one of the best of its kind in the South. One marvels at his play of wit and sentiment, and one knows

that over the coffee cups, Looking Backward is the most widely read feature of the Chattanooga Times.

"Trade hardly deems the busy day begun
Till his keen eye along the sheet has run;
The blooming daughter throws her needle by,
And reads her schoolmate's marriage with a sigh;
While the grave mother puts her glasses on
And gives a tear to some old crony gone."

Its appeal is to all, for it deals in the light which glows forever in human hearts—the light of other days. That is the light never seen on land or sea, but the light which is never quenched—the light of other days.

"Oft in the stilly night,
Ere slumber's chain has bound me,
Fond memory brings the light
Of other days around me;
The smiles, the tears, of boyhood's years
The words of love then spoken;
The eyes that shone, now dimmed and gone,
The cheerful hearts now broken."

The Kiwanis citation says:

"When he took over the presidency (of the Half-Century Club) there was a membership of approximately 175. Today, under his guidance, there is a membership of 640 active and 203 have passed away * * *. The members of the Half-Century Club all agree he has endeared himself to more people during the last 10 years than any individual in our city."

Colonel Ochs has held too many honors to be enumerated in this space. He has been so active a force in journalism from his salad days that his life confirms what so many of us slaves of the lamp believe—that there is no other profession like journalism. He has promoted civic progress in every way. And with all he has been a vivid, charming, and informative writer.

The outstanding citizen of the year is still a newspaperman and a very hard-working one and his life in Chattanooga has been reflected in the things newspapermen do and the friends they cherish.

"Nor ever once ashamed, so we be named
Pressmen; slaves of the lamp; servants of light."

Are We Subsidizing Communism Abroad While Increasing Inflation at Home?

EXTENSION OF REMARKS
OF
HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, December 15, 1947

Mr. ANDERSON of California. Mr. Speaker, I wish to call the attention of every Member of Congress to the following profound communication I have received from a man who has spent a lifetime studying international financial problems. The most careful consideration should be given to his observations and advice before the Congress takes action on the proposed Marshall plan or any phase of it.

Freedom and plenty abroad are not compatible with regimentation, inflation, and loss of liberty at home.

SARATOGA, CALIF., *December 2, 1947.*
Hon. J. Z. ANDERSON,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN: In June I wrote you calling attention to the pegged prices required by order of the stabilization fund to be observed in exchanging foreign currencies into United States dollars, an order entered upon demand of the governments of western Europe. I used the pegged price of the French franc as illustrating the insuperable barrier interposed by these pegged prices against export of French merchandise to the United States. My purpose was to make it clear that by thus preventing exports to the United States the French Government had, by its own act, created a shortage of dollars in France and could relieve it by raising the barrier. A new spending project calling for advances unrelated to food to western European governments, including that of France, is now before Congress. In its support it is urged that these countries are suffering from economic ills caused by events beyond their control; that they must have dollars which are unobtainable through their own exertions or they will "collapse." It is in respect to this new spending project that I am writing. What I am about to point out is this:

That the principal countries of western Europe are in economic chains of their own forging and the major economic ills from which they suffer are the natural and inevitable consequence of these self-imposed shackles.

That they cannot recover until freed, and their freedom is to be had only through drastic political and economic reforms.

That these reforms present political difficulties of great magnitude and must come from within and not from without.

That sound and stable money must be provided and honestly maintained within these countries. That production and trade must be freed from an intolerable control the purpose of which is to force persons having things to sell, or services to render to accept in payment a debauched paper money at whatever values bureaus decree—decrees the people decline to obey since they know them to be founded upon false pretense.

That they must reduce expenditures to the level of revenues, a process which requires the cessation of subsidies and gratuities; the denial of hand-outs to powerful pressure groups; the abolition of the 4-day week with reduction of salaries and wages to the fair level of production.

That they must purge the public pay rolls of hosts of unnecessary clerks and useless functionaries.

In short, that governments must return to those policies of fiscal sobriety and common honesty essential to normal life in an orderly society. Money must cease to be common harlot to political expediency and return to its true position as an honest and respected servant of the people. No Member of Congress need be told that as things now stand in many of the countries, such reforms present near insuperable political difficulties. Held prisoner by interests now well vested, the natural fruit of their own follies, these governments will encounter fierce resistance in respect to every necessary reform. Success will be possible only under indomitable leadership, and then only when conditions are ripe: Under such circumstances, subsidization will not be required. If governments are weak and conditions not ripe, subsidization will be worse than useless, since it will perpetuate the evils. This is because subsidies granted those in power will strengthen their hold upon office, and thus assure continuation of existing practices. Request for $3,000,000,000 to be expended in efforts to maintain pegged prices for debased paper moneys of itself betrays lack of courageous purpose and intent upon the part of those concurring in the request.

Both reason and experience sustain each of the conclusions just expressed. But in their support I propose to summon not only reason and experience but painful circumstance as well, the first circumstance being that $20,000,000,000 already have been appropriated by Congress and spent by bureaus for world rehabilitation since the surrender of Japan with as little permanent good as $20,000,000,000 spent for wheat to be broadcast upon a desert as an agricultural experiment.

II

That there may be no misunderstanding of my position, let me make it clear that I offer no objection to the gratuitous provision of food and all other necessities to the conquered peoples and those residing in occupied areas. Since we hold them in military custody and deny them freedom of action, we must provide for them or confess ourselves no better than those keepers of starvation camps we have hanged. Neither do I offer objection to the gratuitous provision of food and clothing within the liberated areas where it is proven that the country itself cannot make provision for its own needy, and where its distribution to those for whom it is intended is adequately assured. I make this qualification since it is my understanding that foods heretofore sent abroad gratuitously have not been supplied gratuitously to the needy but, on the contrary, have been sold by those in power, and the money used as the government saw fit. Neither do I oppose combatting the spread of totalitarian communism by methods likely to prove effective.

It is because the present project goes far beyond feeding and clothing needy persons and contemplates immense gratuities to existing foreign governments for expenditure in such manner as they choose that I am troubling myself to write this letter and you to receive it, for I do not believe that such gratuities under present conditions will either bring prosperity to the people of those countries or serve to combat the spread of communism.

III

Those who advocate this new spending project, despite the failure of those which have preceded it, say that the way to prevent the spread of communism throughout western Europe is to make the people of that area prosperous and hence contented; that the people of the states they propose to aid are not prosperous—at least, not as prosperous as they would like to be—and cannot become so through their own exertions. It is for this reason that they propose to aid them. The aid they suggest is twenty-odd billions in American money to be secured through the imposition or continuation of extraordinary taxes on the people of the United States, this money to be transferred as subsidies to foreign treasuries. Upon receipt the money is to be used by the recipient governments in such ways as they deem proper to make their people prosperous. Even in a mad world, Congressman, it is difficult to soberly accept the doctrine of subsidizing governments which on their profligate record stand as proven purveyors of poverty and destroyers of plenty.

Since France is the largest and most important of the states proposed to be aided by gratuitous capital grants, I propose to consider this plan in respect to that country.

The French people are strong and capable. They possess great wealth both at home and abroad and invaluable natural resources. There are many wealthy individuals and families. I shall refer to these in greater detail before I have finished. Throughout a long history the French have demonstrated industrial genius as well as great military valor and aggressiveness. By force of arms they have conquered and now hold peoples and lands in subjection both in Asia and Africa. Since the year 1800, a period of less than a century and a half, which is less than the lives of two 75-year-old men running consecutively, their armies have more than once overrun all of Europe. So complete was this conquest that throughout that Continent they were enabled to place French kings of their own selection upon forcibly vacated

foreign thrones. In turn, within that period, France herself has been overrun. Heretofore French recoveries both from defeat in wars and from internal revolution have been remarkable. The country is self-sustaining because of its naturally fertile and highly productive lands, and as a farmer the French peasant has no superior. He is industrious, frugal, and intelligent. He cherishes the land and spares no effort to maintain its fertility.

As compared to other war-torn countries, the physical destruction in France was relatively little, and agriculture continued with slight interruption throughout the occupation. Nearly 3 years have passed since the liberation and the return of the French prisoners of war to their occupations. In addition to domestic production and that of her overseas colonies, France, since the war's end, has had several billions of American production in exchange for which she has parted with nothing. Yet despite the exertions of the French people, supplemented by princely gifts from abroad, their Government has felt compelled to reduce their bread ration to a level below the lowest received during the German occupation, and, admitting no malfeasance in its own administration, appears as suppliant for free gifts from abroad.

IV

In my letter to you of June 28, to which I have already referred, I pointed out how invalid is the claim of the French Government that it has made a genuine effort to obtain American dollars through its own exertions, that is by honest reciprocal trade between Americans and Frenchmen. But a moment's examination of its conduct is required to demonstrate that by deliberate act in establishing a grossly overstated pegged price for the franc through the mechanism of the Stabilization Fund, it has so heavily penalized American travelers and merchants as to make substantial sales of French merchandise and services to Americans impossible. The facts speak for themselves and require no elaboration. By a coldly calculated expedient, whatever its purpose, the French Government has created its own shortage of the dollars of which it claims to be in need, and it is not an unfair deduction that the French Government proposes to part with French merchandise in exchange for American dollars only when hope vanishes of obtaining them for nothing. I say this because it is impossible to suppose that a government seriously desiring export business for its people would enact an insuperable barrier against it. But a government which believes that course of conduct to offer possibility of obtaining dollars without consideration would most certainly do so. The effort itself affords a melancholy commentary upon the French estimate of American intelligence.

V

In the period following the liberation the French Government, according to its statistical reports, has issued more newly printed francs in payment of treasury deficits than did the Vichy government during the occupation. By this flagrant abuse of the sovereign power to issue money French politicians in office have made pretense of giving the people something for nothing. Its deficits represented subsidies of every conceivable sort; outrageously built up pay rolls; free services and wasteful extravagances including increased pay for a 4-day week. But in truth the miracle of providing the people with something for nothing consisted of nothing more than the shabby and ill-concealed robbery of every man, woman, and child in France who owned paper francs or obligations payable in francs, as well as all pensioners and annuitants and all wage and salary earners who lost steadily because of the lag between ascending prices and pay readjustments. Rationing and price exchange controls were resorted to in the hope of concealing the declining purchasing power of the franc. With these controls came scarcity, their inseparable companion. These measures, senseless since they sought to defeat the protective forces of human nature itself, deceived no intelligent Frenchman and should deceive no intelligent American. They seriously aggravated a situation already becoming unendurable. They have driven free markets underground and forced trade from the hands of established tax-paying merchants into the hands of free-booters who dare not declare their unlawful gains to the tax collector even if so disposed. In this manner they have both dried up the revenues of the state and converted normal plenty into abnormal scarcity.

There are few among the French people who do not understand paper money inflation and none understands it more clearly than the French peasant. His understanding is born of experience and family tradition. He will not willingly submit to being victimized through an oft repeated deception. It is for this reason that he hoards gold coins, both of French and foreign minting, even resorting to the purchase of thin cuttings from gold bars to be added to his hoard. He also acquires such foreign currencies as he deems stable, and it is well known that a great portion of the United States currency spent in France by our armies found its way into French hoards where it still remains. It is because of his understanding of what has been and is daily being done to debase the franc that the French peasant withholds his produce from the price-controlled markets and secretly disposes of it upon the underground free market where the true value of the franc is recognized. A realist from experience and hard circumstance, he declines acceptance of the doctrine that false pretense becomes truth at the will of the lawmaker or bureaucrat, and that by legal enactment and printed inscription paper can be given whatever value government decrees.

But the hoarding in France is not confined to peasants. Obeying the most natural of all protective instincts, people of every class seek to save themselves from loss or impoverishment. Thus they quietly convert francs into things of permanent value and find ways to secretly get their money and valuables out of France and into other countries. The drain of French-owned capital from France through such measures has been enormous. A vast amount of this French-owned capital is known to be invested in American securities deposited by French owners in American strongboxes. It is this French capital driven into hiding because of the notorious delinquencies of its own Government that is to be replaced through taxation of Americans, if Congress gives consent.

Yet all human experience proves that when the French Government again establishes and maintains an honest medium of exchange and discontinues price controls and rationing, food will return in abundance to the free markets of the cities, as it has many times in the past. Expatriated capital will come home, gold will be returned to the banks, commerce and industry will revive, and the national revenues will be restored. Americans should understand this. Did not meat and butter disappear from our own controlled markets, reappear when controls were lifted, and disappear again when controls were reimposed, only to promptly reappear when freedom was restored? Only persons of short memory can fail to recall this.

VI

Public distress in France because of the steadily falling value of the franc has now reached the stage where a resolute Government might hope for success in drastic fiscal and monetary reform. All law-abiding persons in France and all who must work for wages or salaries or subsist upon income payable in francs are victims of a destroying force from which they are frantically seeking escape. The Communist leadership understand this far better than do those Americans of little understanding who suppose the situation controllable by gifts to the French Government or some additional food for sale to the French people. The Communists propose the overthrow of a Government which has failed to provide either honest government or an honest media of exchange. Under the leadership of Moscow, both intelligent and conscienceless, they have made headway, a fact which should astonish no one. A people fleeing from a great evil may readily fail to discern the greater evil toward which they are being directed.

In reply to those who in their desperation have alined themselves under the leadership of the Communists, the Government has announced its purpose to print and distribute additional francs. This is perhaps its only feasible recourse at the moment. But this temporary palliative must be followed forthwith by the essential and drastic operation, or nothing permanent will have been accomplished. Should subsidization from abroad result in postponement of this operation, it will have worked evil and not good.

It must be borne in mind that monetary inflation is of political origin though its manifestations appear in the realm of economics. It finds its source and its continuation in political expediency. Its purpose is to enable those in power to increase public expenditure without a corresponding increase in taxation. As example, by the printing and expenditure of additional paper money or credits convertible into money, appearance is given of something being obtained for the people for nothing. So it is that by the mass of the people in its early stages monetary inflation is deemed Santa Claus, and, since in the homely vernacular of a great American, "Nobody is going to shoot Santa Claus," protests of those who understand the ultimate effect go unheeded. The people accept appearance for reality and vote to support those they deem to be their benefactors. Not until it is learned by the mass of the people through painful experience that behind the benevolent mask of Santa Claus hides the cruel countenance of an ogre which from the beginning has created nothing, but on the contrary has secretly taken cruelly and ruthlessly, is there political hope of bringing monetary inflation to an end. Once started, as long as there is political gain in its continuance, the practice will be continued; only when its continuance has come to mean political loss will it be discontinued.

If freedom survives the present crises, there is but one serious possibility of long postponement of remedial action in France. That possibility lies in unwise American interference by subsidizing the French Government. By supplying the French politician in office with the means with which to continue his subsidies, his extravagances, and services with neither increased taxation nor the printing of additional francs, it is within our power to prolong the French economic malady, even to the exhaustion of our own available resources. But in essence the operation will consist of nothing more than the temporary expedient of importing to our shores and unjustly inflicting upon our own people a portion of the misery brought upon the French people through the maladministration of their own government. And in the end, when our own exhaustion compels cessation of our intervention, every responsible American official and every lawmaker and publicist party to the process will be detested for it both at home and abroad; at home for starting and continuing the practice, abroad because of its discontinuance. And, Congressman, should any of your constitutents inquire as to the probable duration of economic distress in France, and you

may be sure many of them are wondering, you may with perfect safety reply that the duration will at least be coextensive with continuation of the practice of shipping American wealth to France in attempts to shore up a rotting franc; a franc rotting not because of exhaustion of French resources, but because French politicians in office decline to be honest.

VII

There is ample support of a current factual nature for the conclusions just expressed. It is to be found almost daily in press reports from France indicating the declining value of the franc under pressure of new issues and the discontent of the people because of it. It is to be found in speeches by French Cabinet members; in strikes and demands for increased wages; in the withholding of agricultural produce from the price-controlled markets of the cities, though there is no evidence of scarcity in the country. Of equal significance are reports from returned American travelers. The correspondent, Marquis Childs, has recently reported from Paris that expensive Parisian restaurants are daily filled with French diners, while the French Riviera, the expensive gambling and resort center has just closed its most profitable year. Others have made similar reports.

Dr. Heiser, the distinguished American physician and author who gave a lifetime to the service of humanity through the Rockefeller Foundation, has just returned from a 3 months' motor trip through France and Italy. He speaks both languages and talked freely with the people of the country and cities. This competent man declared upon landing in New York that he found no evidence of serious lack of food in either country and that the shops of Florence in Italy where there is no meat rationing carried more steaks and chops on display than he observed in similar New York markets.

The distinguished San Francisco weekly, the Argonaut, of October 24, contains a letter from John Gallois, a prominent San Franciscan. It was written at sea to the editor by Mr. Gallois who was returning from a 4 months' tour of Sweden, Belgium, Holland, France, and a small part of Germany. In this letter he says, "These Europeans are not suffering, alhough they appear broke. Never, even in the heydays of the late twenties have I seen such spending, luxury, gambling, and so forth as in France and Belgium. It's not like the old days when the Americans, British, and Russians were the great spenders in Europe. Now it's the local people. What these people now need is to get down to work and forget about our helping them. The countries and people look healthy and prosperous, and unless the 16 nations now assembled in Paris can form a sort of perpetual United States of western nations which would forget their dollar demands without productive planning, I would let them paddle their own canoe. * * * If France wants to get out of her mess, she must revise her ways of living and abandon the habits of luxury she has acquired in the years since the liberation. The exhibition of indecent riches I saw in French summer resorts has certainly not given tourists the impression she needs financial help. You cannot ask for help and live as well as before the war. * * * At present France offers a strange picture. Her industrial production is equal to 1938 but she lacks essential manufactured commodities. Her agricultural output equals 1938, yet she goes begging for wheat and meat. The cause is hoarding for black-market prices. Her cities go short of food and the countryside eats as never before." Many other interested travelers have reported similar observations. None of the indecent display of wealth and luxury on the part of Frenchmen, described above, has escaped the eyes of the helpless middle and wage-earning classes of France, desperately struggling against the declining value of their francs. Their bitterness and resentment are manifested in the strikes and disorders now being experienced. This resentment will continue until conditions are changed, and change will come only with removal of the causes.

VIII

Proof of the cause of scarcity in the French cities and of the rapidly declining value of the franc is to be found in the Government's financial reports. In January of this year there were published in the Commercial and Financial Chronicle, of New York, a study of the French situation by a competent economist, Egon Kaskeline. The figures which follow are taken from that study. I have seen none of them questioned and have no reason to doubt their authenticity. The French national debt is $453 per capita as compared with a per capita debt in the United States of $1,185, and in Great Britain of $2,152. In December 1946 the controlled price level in France, as a consequence of the paper money inflation, had reached 800 percent of the 1938 level. It is now much higher and moving upward steadily. Upon the free or black markets which were then doing over one-third of all French business, the price levels had reached 1,600 percent of the 1938 levels. The franc, officially valued at the pegged price of 119-plus per the United States dollar by the International Stabilization Fund, was selling at 350 per United States dollar. It was estimated by M. Phillip, the new Minister of Finance, in his December address to the assembly that the tax frauds of the year 1946 ran as high as 150,000,000,000 francs. One hundred and fifty billion francs, Congressman, at the pegged rate of exchange is $1,-250,000,000. The total deficit of the French Government for the year 1946 was reported as 415,000,000,000 francs of which two hundred and three billion came from losses in the nationalized railways and industries. This deficit was met by the issuance of newly created paper francs. The deficit for 1947 was estimated at 500,000,000,000 francs to be met in the same manner.

The foregoing are shocking figures but those which follow must appall every Congressman who is giving serious consideration to the question of voting taxes against his own constituents on behalf of a French Government which openly declines to do its duty. Taxes collected in France represent but 22.7 percent of French income as against nearly double that percent in the United States and 40 percent in Great Britain, while from the estimated annual 400,000,000,000 francs worth of agricultural production, but 2,000,-000,000 francs (one-half of 1 percent) are taken in taxes. It is in the face of these figures that it is gravely proposed that additional taxes be laid upon all Americans, rich and poor, farmer and factory worker, to support the Government of France.

The French Government's reported income for the fiscal year ending in 1946 was 373,-000,000,000 francs. This equals $3,130,000,-000. The division of this by 40,000,000, the estimated population of France, gives $78 as the per capita tax burden imposed upon its people by the French Government in the fiscal year ending in 1946. Now subject to the same calculation the $40,000,000,000 tax collection of the Federal Government of the United States from the American people. In a word, divide 40,000,000,000 by 140,000,000, the population of the United States. This calculation discloses that the tax collection from the American people by the Federal Government alone during the year 1946 was $285 per capita, nearly three times that collected by the French Government from its people.

It is not for taxing lightly that the French Government is to be condemned. It is for taxing lightly while spending heavily and meeting the deficits by the printing of paper francs. For this it is inevitable that it will soon be called to account by the French people. That is, Congressman, the French Government will very soon be called to account by the French people unless you and your colleagues can be persuaded to tax your own constituents to make good its deficits.

IX

If the Congress of the United States is to become tax collector extraordinary for the bankrupt governments of Europe and the American citizen taxpayer extraordinary on behalf of those governments, it is well that Congressmen visit those countries on whose behalf they propose to enact tax measures. But one day spent in examination of French books readily available in translation will afford great enlightenment both to those legislators who travel abroad in search of information and those who remain at home. For French scholars, with the industry and meticulous care characteristic of their race, have assembled and analyzed the records pertaining to the great French paper-money inflations of the past, even to the daily police reports respecting the feelings and conduct of the people.

In these studies one is enabled to observe, as in a mirror, precisely the conditions to be observed in France today. The disappearance of food from the price-controlled and policed markets of the cities; food in plenty in the country; black markets flourishing; expensive restaurants and gambling resorts filled to overflowing; speculation rampant and discontent and unhappiness everywhere; an overstaffed and wasteful Government unceasingly pouring newly printed paper francs into the country's circulation while harassed and impotent officials struggle to force the people to accept the printings of the Government at such values as bureaucrats prescribe, the people declining to do so. History is repeating itself in France. The French people, knowing their own history, and understanding the ways of the French politician, far better than do Americans, are resisting and rejecting a great imposture. There are, of course, persons in France, as in the United States, who lay the blame for stagnation of trade in price-controlled markets, the scarcity of food in the cities, and the steady increase of prices, upon the demands of labor and salaried persons for increased pay; others lay the blame upon merchants, others upon bankers, and still others upon industrialists and farmers. These charges are as false as they are unjust. The blame lies with none of these but upon those Frenchmen who cojointly constitute the French Government. By their dishonest fiscal practices they have destroyed an essential factor in French civilization, the lawful medium of exchange of France, while the struggle of labor, of salaried persons, of merchants, of farmers, and industrialists for additional francs is but the natural struggle to survive. In it is exhibited the protective instinct of the individual to safeguard himself and his family, and nothing more. The issue of economic recovery in France lies between the French people as a whole and the French politician, and there it must be decided. Our intervention can prolong the struggle and the agony and import a portion of it to our own country. But it cannot determine its final outcome.

X

I have used France as example, but in one respect the case of England is more illuminating. When I wrote you 18 months ago expressing opposition to the British loan in the form then advocated, I stated that I opposed it not because of antagonism toward the British people but because upon objective reasoning I believed the loan would prove harmful both to the British and to ourselves. I stated that reason led to no other conclusion than that it would impair Anglo-American friendship since the conditions attached to the loan could not be met and therefore should not be imposed. I also stated that the ad-

verse effects of so great a drain on American resources, the total of $20,000,000,000 then under consideration for foreign grants being, interestingly enough, the same as at present, could not be postponed but would promptly manifest themselves. Little time has been required to vindicate the accuracy of these conclusions. As an alternate to the blanket loan as planned, I suggested a careful examination of the fiscal affairs of Great Britain and that approach to its financial problems dictated by all experience. But it soon became apparent that the great mass of the American people, moved by humane instincts and high purpose, was being won by a skillful campaign of official propaganda to accept the representations inscribed upon the bottle with no real knowledge of its contents. Congress thereupon succumbed to the pressure of the administration. It was but a repetition of similar administration successes. The result was but a repetition of past failures. Events have moved swiftly in America. The people have demonstrated that they like neither the scarcity and the advancing inflation they are experiencing at home nor the news they receive from abroad. They have learned that fine phrases and lofty declarations of purpose are poor substitutes for objective reasoning, and that an economic untruth does not become truth because advanced in support of a cause deemed worthy.

XI

We now know in enlightening detail what happened to the British loan. To make use of an ancient expression it went for corn and games for the British populace, for food and clothing subsidies, for tobacco, for Hollywood films, for doles, for losses incurred in nationalized industry with that increased pay for decreased production which makes for political popularity and national bankruptcy. By indirection through the subsidies it went for unprecedented welfare programs and the pay of new heavily staffed bureaus to control the mechanisms of the new order.

Bewildered Americans express astonishment that by-elections in Great Britain in regular succession have sustained the Socialist Government, a seeming anomaly if things in Britain are as bad as reported. There need be no astonishment. During the past year the pay of British labor in shillings has been higher than ever before, and the cost of food and clothing relatively less because of prodigious Government subsidies made possible by the American loan. As a consequence of this and of the little left to buy because of the export program of his Government, the British wage earner has a surplus of shillings in his pocket. It is for this reason that absenteeism has reached proportions hitherto unknown and the increased attendance at horse racing, dog racing, professional football matches, and all other forms of public and private gambling have become a national scandal. The churches gambling committee has just reported that receipts on greyhound racing tracks in England, Scotland, and Wales last year were $796,000,000; that bookmakers' takings are estimated at slightly more, bringing the total expenditure at greyhound racing tracks over $1,600,000,000. And who, Congressman, one may ask, paid for the colossal food and clothing subsidies, for the tobacco, for the Hollywood films, for the absenteeism, for decreased work with increased pay? The answer is not difficult. It was paid for in substantial part by Americans under compulsion of an act of Congress. It was paid for out of the loan which, confidently supposed by well-meaning Americans to last 4 years and assure the rehabilitation of British industry, was dissipated in living expenses and amusements in 1 and served no real purpose except to enable the Socialist government to keep itself in power.

Is it great wonder that so many Americans now meeting this bill through taxes and higher prices witness with grave concern the efforts of elements within the administration to exact from them under force of law additional contributions to so little purpose?

XII

That which objective reasoning made clear has been proven by events. From every part of the world into which American money has been poured the story is the same. The four and a quarter billions received by the Government of Great Britain from the Treasury of the United States has all but disappeared in a year, and with what result—increased austerity for the British people and no abatement in the economic distress of their country. Billions to the Government of France, and with what result—conditions more critical than before, and a decrease in the bread ration of France to levels below that of the German occupation. Billions to Russia and her satellite states and the measure of their gratitude is the murder of innocent young Americans and the denunciatory charge that we are imperialists, war mongers, and enemies of mankind. Billions for the liberation and rehabilitation of China and our Government dares not publish the report of its official observer, so gruesome are the details of corruption and malfeasance; hundreds of millions for Greece, and the dispatches of yesterday disclose the discovery of $75,000,000 in supplies abstracted and hidden in the interest of Greek individuals.

Among all who have accepted our benefactions, which since the surrender of Japan have aggregated the great sum of $20,000,000,000, few are to be found who believe our motives to be other than those of calculated self-interest. Nor are they entirely without justification for this belief, since each successive overseas-spending project has, like the present, been represented by its promoters as demanded in our own national interest.

In every city, village, and hamlet in America people are crying out against scarcity and high prices. The oppression is real and not fancied. There is scarcity and prices are high. One has but to pass through the food markets and observe the anxious faces of poorly dressed women to gain first-hand knowledge of what this condition means to many. Even the President coupled to his demand for these new gratuities abroad a demand for action against scarcity and high prices at home. It is a demand for relief from the very ill he proposes to inflict. It is a demand that one be subtracted from five and the result be six.

To contend that these proposed shipments of billions of American resources and production abroad do not inflict definite shortages and consequent higher prices at home is to indulge in meaningless abstraction. To say that it is the American wheat eaten by Americans and not the American wheat eaten by Europeans that makes prices high; that it is the American steel consumed by Americans and not the American steel consumed by foreigners that makes steel scarce, are distortions of reason into nonsense. In appraising the working of an entire economy earmarking of portions in the manner indicated is impossible. But it is indisputable that for every million bushels of wheat and every million tons of steel sent abroad there is an equivalent decrease in supply upon the home market. It is also indisputable that the addition of dollars and convertible credits to our already overexpanded circulation sharply increases demand upon those markets.

XIII

There are persons who say that the United States can well afford to send an additional $20,000,000,000 worth of its resources and production abroad with nothing to be received in return, and should make provision to do so not only without delay but apparently without study insofar as Congress is concerned. In lieu of independent congressional study, they demand that Congress act upon the recommendation and report of committees, composed of lay individuals, selected by the Executive to instruct Congress respecting its duty. These committees have presumed to ascertain what "the economy of the Nation" can afford. I propose to point out the callous falsity of the concept underlying these studies of what "the economy of the Nation" can afford: a concept bearing no greater relationship to reality than the doctrine that the Government's debt is meaningless because "we owe it to ourselves."

The Government of the United States, the proposed bestower of these foreign grants, does not own the wealth of the Nation. The purchasable and exportable wealth of the Nation is owned by individuals and corporations, and in varying proportional shares. The income of the Nation is also received by individuals and corporations in varying proportional shares. Whatever goes abroad pursuant to these spending projects must be purchased, paid for, and withdrawn from the supplies otherwise available for purchase by individual Americans. The impact upon individuals will vary with their income and their necessities. Every item must be secured in the markets in competitive bidding against American citizens, few of whom are rich, the vast majority of whom are at best in no more than moderate circumstances, and many of whom are desperately poor. I beg of you to mark carefully the contrast between these two classes of purchasers in the American market, the individual American who is compelled day by day to earn his own, often meager, supply of dollars, and the foreign government which is supplied with dollars gratuitously. And having carefully marked this contrast consider the handicap under which the American purchaser labors since he must not only earn his own dollars but provide the dollars spent by the foreign government as well. Slight analysis of the facts is required to demonstrate the falsity of that singular concept which presumes to determine a question so vital to individuals upon an examination of what "the economy of the nation" can stand. The question is not what "the economy of the nation" can stand. The question is what that tangible flesh and blood creature already desperately struggling to make both ends meet, the average American, can stand. It is upon his back that Congress is asked to strap this load and it is with him that Congressmen and the political parties to which they belong must reckon in the end.

I have in mind, Congressman, the average people of the United States, the men and women, old and young, of small or moderate income who with mounting anxiety are struggling day by day not only against the present unparalleled rates of taxation which add heavily to the price of everything they buy but against the grinding burden of the national debt as well, a burden applied through the gross inflation of our circulating media. Among these men and women are to be found the best the country has, all salaried workers, all teachers, the clergy, all civil servants, all labor which suffers loss because of the lag between increasing prices and increased wages, the five million families recently declared by Government to be without present possibility of procuring homes of their own because of high costs and scarcity of materials. There are also those whose life savings, once sufficient for their support, are no longer adequate because of advancing prices.

It is true that there are poor persons in Europe and persons paralleling in circumstance those I have described. It is no less true that there are rich persons in Europe and great resources available to those Europeans willing to work as Americans work. There is poverty and destitution in Asia of an appalling character, and until the nature of man changes there will be poverty and destitution throughout the world as there always has been. But the cure does not lie

in seizing that produced by the provident and industrious and giving it to the improvident and those who decline to work. Through that process all will assuredly be reduced to a common level of indolence and destitution.

XIV

A lawful medium of exchange in the continuing value of which the competent persons of a modern society repose confidence is as indispensable to production, distribution, and trade as tools are to the erection of buildings. Without such a medium a civilized society in the modern sense cannot exist since its existence requires a steady accumulation of liquid as well as of permanent capital, and contemplates a broad diversification of production with a continuing exchange of the things produced. When confidence in its established medium of exchange is lost or seriously impaired, every phase of the economic life of such a society sickens. It is a sickness for which there is no cure except in removal of the cause. France is suffering from this sickness in an acute stage. Great Britain suffers from it as well but in a lesser degree. Nevertheless her illness is aggravated by practices already pointed out. In both countries production and commerce are stifled with those controls never absent when money, forced to forsake its true function of handmaiden to commerce, becomes harlot to politicians. The purpose of such controls is neither to stimulate production nor facilitate distribution. The purpose is to force trade to accept debauched currencies at prices fixed by political bureaus. They constitute an attempt by government to enforce expropriations designed to serve the political interests of men in office.

To subsidize a government is to subsidize the men who constitute it and their policies. Demonstration of this is plain in the case of the British loan, which is now clearly seen to have constituted subsidization of the Socialist Government of Great Britain. If the practices of a government are prodigal, subsidization of that government constitutes subsidization of prodigality. If the policies of a government promote scarcity and stagnation of production and thus promote the spread of communism, subsidization of that government promotes the spread of communism by perpetuating the conditions that foster it. If the correct method of combatting the spread of communism in western and central Europe is to restore prosperity, measures calculated to restore prosperity must be adopted. The subsidization of western European governments is not such a measure. Neither are measures for the reshackling of Americans. Such measures will do no more than destroy production at home. There is but one method of restoring prosperity in western and central Europe. That is to unbind the people, provide them with an honest medium of exchange and permit them to create prosperity.

Congress can tax Americans until they cry for mercy and millions of them are uttering that cry today, and it can subsidize existing foreign governments without end, but until governments are set up which will establish and maintain honest media of exchange, live within their means, and free their peoples from bureaus and harmful controls there will be no recovery. And when they do establish and maintain such media of exchange, reduce government expenditure to the level of government income, and free commerce from its chains, there will be no occasion to cry for foreign relief. The cure for Europe's economic distress, Congressman, is to be found neither in the exportation of American resources gratuitously to European governments nor in re-regimenting Americans. It is to be found in the freeing of Europeans.

Very truly yours,

WILLIAM CHAMBERLAIN.

Proposing a Consistent Foreign Policy

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 16, 1947

Mr. MUNDT. Mr. Speaker, under leave granted me by the House, I am herewith incorporating as part of the permanent RECORD the transcript of a broadcast which I delivered on Thursday night of last week under the title "A Consistent Foreign Policy":

A CONSISTENT FOREIGN POLICY

(Radio broadcast by Representative KARL E. MUNDT, of South Dakota, over the Nationwide facilities of the American Broadcasting Co., Thursday, December 11, 1947)

My fellow citizens, citizens in every walk of life, these days are becoming increasingly disturbed by the failure of our Government to develop and declare an American foreign policy which is both consistent and constructive. Congress is now in the process of completing action on a program of interim aid for France, Italy, Austria, and China which is being adopted with the hope it will help stop the militant aggressions of communism abroad. Nobody in Washington, however, believes that the aid provided by this extra session of Congress will be sufficient in size or adequate in scope to restore order and security in Europe. For that reason, it is generally referred to in the Halls of Congress as stopgap aid or what amounts to a device for buying a few months of time during which Americans can hammer out for themselves a positive foreign policy. It is hoped a realistic program can be developed to free America and the world from the danger that revolutionary communism, inspired and guided by Russia, will take over where Hitler left off and plunge the world into another war for survival.

As we discuss for a while tonight some of the elements which it appears must be incorporated in any affirmative American foreign policy of positive and practical action, it is well that we keep in mind some of our mistakes of the past. I want to recount a few of them now. I do this not for purposes of recrimination or political indictment but in order that as we plan ahead we may not become the victims of repeating or continuing policies which have failed us so miserably in the past.

After VJ-day, America hoped that we might continue in peace as we had in war to cooperate with Russia for our common good. Russia and America had spearheaded the successful military battle against Hitler and fascisim. While a wide gulf separated the economic, political, and ideological patterns of Russia and the United States, it was hoped that each could use its own formula to help rehabilitate the war-stricken world and to give both big and little nations a decent opportunity to function as independent countries in a peaceful world to be patrolled and policed by the United Nations.

APPEASEMENT IS A POLICY OF FAILURE

Well, unfortunately, that dream did not come true. While the United Nations organization has quibbled and quarreled without meeting such major challenges as how to control the atomic bomb, how to set up an effective world police force, and how to modify or amend the veto provisions of its charter so that specific progress can be made toward collective security, things have been happening in Europe and Asia in the years since the war. These developments have materially reduced the comparative strength of the United States while substantially increasing the comparative strength of the Russians. It is a trend which must be stopped if peace is to prevail.

Even during the war we know that our wartime leaders lost diplomatic contests and surrendered to the more insistent and vigorous Russian advocates on so many important decisions that our dreams for mutually acceptable peacetime cooperation with Russia were probably foredoomed to failure even before they began.

At Cairo, at Tehran, at Yalta, and at Potsdam, in four successive conferences, the administration appeased and apologized, surrendered and succumbed, backed down and backed off on so many important matters that our Russian allies quite understandably convinced themselves that loud talk and swift action could always continue to confuse and intimidate America. So proceeding on this false premise which our diplomats helped to create, and encouraged by numerous other examples of indecision and weakness on the part of the United States, the rulers of Russia while blocking constructive action in the United Nations moved rapidly to build by direct action the size, and scope, and significance of the Russian orbit. Now we find that what was once the one Communist-dominated country — Russia — with which we cooperated in war, has today become a Red phalanx comprised of what formerly were 12 independent countries when the war began. Suppose we call the role of the Red parade through Europe: Russia, Latvia, Lithuania, Estonia, Yugoslavia, Albania, Bulgaria, Rumania, Hungary, Poland, Czechoslovakia, and Finland.

The State Department, the White House, and our foreign-policy makers in America have watched and worried as this great Red wave of aggression has splashed down from Moscow to engulf 11 additional countries of Europe. But only within the past few months have they presented any program which even remotely could give hope that Communist aggression might be stopped short of the point where it feels strong enough to challenge the Western Hemisphere or to try stretching its string of conquests from its present clutch of 12 captive countries into a world controlled by godless, atheistic communism.

And even now—in December 1947—as our country contemplates and considers proposals which have been far too long in coming and which are still woefully short of being complete and consistent, we find our administration in Washington still dismally pursuing some of the same appeasement policies and hang-dog apologetic programs that contributed so substantially to the seriousness of our present situation.

For example, in 1947, during the very year that Russia refused to permit a committee from the United States Senate to visit our own embassy in Moscow, we find that our State Department has granted over 3,000 official visas to visiting Russians, all of them Communists, mind you, since only the faithful are permitted to leave Russia legally—yes; has granted over 3,000 visas to Russians for the purpose of surveying, studying, and observing the progress and the plants of America. Is it any wonder, I ask you, that the men of Moscow still cling to the idea that tough language and swift action will confuse and intimidate our Government?

There is other evidence, too, that our Government still clings to the appeasement policies which have served us so poorly since the end of the war. Last week, to be specific, the House of Representatives approved overwhelmingly a resolution (H. R. 366) which I introduced for the purpose of compelling our reluctant or embarrassed Department of Commerce to give Congress all the facts in connection with our current shipments of freight cars, farm machinery, machine tools, petroleum products, and other war-serving and critically short supplies to Russia and her

satellite countries. Why was this resolution necessary? Because, my fellow Americans, even now while we are being challenged to make great sacrifices to send needed supplies to western European countries and to China in an effort to stop communism from conquering the continents, this administration is not using the export controls for which it asked and which Congress has given it to prevent shipments of war potentials to a country which will not even permit Members of the Senate to enter its boundaries.

There are still other humiliating policies which this administration continues in conformity with our appeasement program as accepted at Cairo, Teheran, Yalta, and Potsdam. If time permitted, the whole sorry sequence of appeasement attitudes and activities could be expanded even further. I believe, however, that the evidence is clear enough by now to prove that running from the Russian bear every time it growls or bares its teeth is not a policy which will build a permanent home in this world for the dove of peace.

THIS ADMINISTRATION MUST MAKE UP ITS MIND

What, then, of the future? Bad as have been the consequences of past blundering and the disaster of permitting left-wing pressure groups at home to influence the pattern of our foreign policy, I do not believe the future is hopeless or that war is the only harvest we must now await. The hour is late—much later than so many realize—but in this late hour there is still time for action and room for hope.

In the first place, Secretary of State Marshall at long last is letting the Russians understand that there may be an end to American appeasement. If he achieves nothing at the Foreign Ministers' Conference it is becoming clear that he will also surrender nothing more. Secondly, his proposal to provide such aid as America can afford to foreign countries who will help both their neighbors and themselves while resisting the tyrannical efforts of Communists from within and without their borders is another signal to Russia that the days of her easy conquests may be over.

A third encouraging indication is the belated admission that the Morgenthau plan for Germany has dismally failed and the start at least toward utilizing the German economy for general European recovery instead of keeping it as a cancer to infect Europe with hopeless disaster.

But, my good friends, these three encouraging signs are still not enough. If we are to avert war by positive action instead of to invite war by appeasement policies we must round out and shape up an American foreign policy which is both consistent and constructive.

The time is here when this administration must make up its mind. Either we are trying to stop communism abroad or we are trying to support it by sending overseas as we still are the very supplies and equipment it needs to make its aggression formidable. The White House and our State Department have too long followed the disillusioning and futile policy of bailing water out of the boat with one hand while dipping it back in from the Red sea with the other!

A CHALLENGE TO REPUBLICANS

If this administration fails by the January session of Congress to present a consistent program of foreign policy, then, I submit that responsibility falls to the Republican Party and I hope we can come through with a constructive and consistent program. I propose that as a fourth part of such program, therefore, we cease exporting to Communist countries supplies of which free countries are critically short or equipment which can be adapted to war purposes.

As a fifth point, I, personally, recommend that we establish and operate an information program overseas which will not only present the positive virtues of freedom as practiced in America but which will also answer and expose the false allegations and accusations of the noisy communism propaganda machine. Surely, if we feed only the stomachs of Europeans while the Communists feed their minds, we are engaging in an expensive and a futile exercise.

In the sixth place, moving concurrently with the rest of this program, we must provide vigorous leadership in the United Nations to develop policies and to secure the necessary modifications in procedure so that organization can achieve its purpose of collective security rather than degenerating into a name-calling society in which wars can be incubated more easily than they can be outlawed.

Finally, as a seventh step toward peace, I recommend that in all matters our policy toward Russia and her captive countries be revised to operate strictly on the basis of a firm and friendly formula of reciprocity. We should henceforth make no concessions and yield no privileges to Russians which they are unwilling to grant to Americans. That reciprocal formula, in my opinion, should be put into operation straight across the board. Americans are more proficient bargainers than they are beggars. By reciprocal exchanges I think we can succeed where we have conspicuously failed as appeasers and as supplicants.

Speaking as one who has worked long and hard in support of the interim foreign-aid program now completing its passage through Congress, I plead for leadership in an era where followship has failed. The past can be rescued in part from its dismal colorations if from our mistakes we can evolve the outlines of an affirmative American foreign policy of positive action and consistent procedure which even yet can win the peace. Let us, as Americans, dedicate our prayers and devote our mightiest efforts toward that common goal.

I have enough confidence in the dynamic power of freedom, as we know it in America, to conquer the destructive forces of communism, to believe that by vigorous, constructive, and consistent action we still can win and hold this peace.

Modification of the Land Limitation Clause

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 16, 1947

Mr. MILLER of California. Mr. Speaker, last May, M. C. Hermann, quartermaster adjutant of the Veterans of Foreign Wars of the United States, Department of California, and Robert W. Pontius, member, postwar planning committee, Veterans of Foreign Wars of the United States, made the following statements before a committee with respect to the modification of the land limitation clause made part of the Reclamation Act in 1902:

STATEMENT BY M. C. HERMANN, QUARTERMASTER-ADJUTANT, CALIFORNIA DEPARTMENT OF THE VETERANS OF FOREIGN WARS OF THE UNITED STATES

Mr. Chairman and members of the committee, my name is M. C. Hermann, and my address is Veterans Memorial Building, San Francisco. I am quartermaster-adjutant of the California Department, Veterans of Foreign Wars of the United States.

My department, representing organized veterans, believes that to repeal the 160-acre water limitation is contrary to the interests of veterans. Ever since 1944 when we first took a position against the Elliot rider to the Rivers and Harbors bill, we have considered the various bills that attempt to repeal this water limitation, and we oppose them all, including the latest one, S. 912. On February 23, 1947, the VFW Council of Administration for California passed a resolution requesting that immediate steps be taken to protect the rights and opportunities of veterans of World War II in the Central Valley project. That resolution is the authority under which I appear before you today representing veterans.

Briefly there are three principal points which express the views and program of the California Veterans of Foreign Wars:

1. More veterans—many more veterans—of World War II want farms than will get them. That is our fear and regret. We want the number of disappointed veterans to be as small as possible.

2. Repeal of the 160-acre water limitation is a direct deprivation of opportunity for veterans to make homes on the land. As citizens and as veterans we are against this.

3. We want veterans to get on farms while they are young—not to wait until 10 years from now, or until they are old men. We want Congress not only to kill repeal, but to pass simple legislation like it passed on Columbia Basin to authorize Government purchase of excess landholdings. That will make veterans' preference effective on all projects which benefit private lands like Central Valley, and will make it effective now.

Let me explain these points in detail.

First, the veterans of World War II want farms, and more of them want farms than are able to get them. About 3,000 veterans filed for 86 farms at Klamath project recently, a ratio of around 30 to 1. For the land opening to take place near Yakima, around 10,000 veterans have filed for 28 farms, a ratio of over 300 to 1. The lands on these two projects are public lands, on which veterans have preference by act of Congress. No one looking at the overwhelming evidence which is before our eyes can doubt that veterans qualified to farm are hungry for the chance to do it. No one can doubt that unless the Government does more than it is doing—more than to provide veterans' preference on public land—there are going to be a lot of disappointed veterans. We do not believe in inaction at home. The Veterans of Foreign Wars, California department, wants just as few disappointed veterans as possible.

My second point is this: To repeal the 160-acre limitation would be for Congress to go in just the wrong direction—180 degrees wrong. In the first stage alone of the Central Valley project there are around 230,000 acres in excess holdings. That is enough for 2,900 farms of 80 acres each for the families of veterans. Full development of the Central Valley is going to bring around 3,000,000 acres of land under irrigation. That means a chance for a lot more families to farm. The purpose of the water limitation, ever since 1902, has been to give them that chance. The effect of S. 912 is to throw that chance away. Let's not do it.

Speaking for the Veterans of Foreign Wars in California, I want to say to Members of Congress from other States that your veterans are eligible for settlement on Central Valley farms, just as ours are eligible on reclamation projects in Washington or Colorado or Texas. A reclamation project is national, not local, and the veterans of the Nation will benefit from each and every one of

them—that is, they will benefit unless we kill their chances now. S. 912 is a bill to kill the veterans' chances, and you can't make anything else out of it, no matter how hard you try.

Out in California we are getting to understand the Central Valley project pretty well now. On the technical side and on the side of the tactical maneuvers it seems a bit complicated at times, and these complications have made things easier for those people who are trying to take the small man's chances away from him, without his knowing it. We think that they have succeeded in confusing people outside California, some of them even in the Congress, into doing what we don't believe most of the Members of the Congress want to do. We have found by watching the tactics of the land monopolists, that outright repeal, as proposed in S. 912, isn't the only way they have of killing the veterans' chances in Central Valley for their own special benefit. They have at least three other ways, maybe more, and we think that the Congress ought to know them.

Their second way, besides direct repeal of the water limitation, is to persuade you, in the War Department civil-functions bill, to appropriate money for the Army engineers to build dams in Central Valley. They try to do this because they know that the Army will not enforce the reclamation law. Their third way is to have the State of California take over the project, for the same reason. Their fourth way is to employ threats, defying the Government of the United States to enforce the law in the hope that the Congress will yield to their threats and repeal the law. These beneficiaries of reclamation threaten to use deep wells and powerful pumps to suck the small farmer's water away from him underground, and they threaten to tie up the project in endless and costly litigation. They decline to sign the contracts to repay and to comply with the laws of Congress, at the same time they ask for more appropriations from you. They fight the simple legal provision which would secure fair enforcement of a fair law, and work tooth and nail for repeal, asking you to believe they do it all for the sake of the small man.

In these ways, and maybe in more ways that we shall discover before we are through, they seek to secure the same ends that direct repeal by passage of S. 912 would give them. "There are many ways to skin a cat," and there are many ways to skin the veterans. We oppose all of them.

It isn't nearly as hard to enforce the law as the land monopolists who are trying to escape it want you to believe. Just attach to your appropriations the clause that there shall be no construction until those who are private beneficiaries of congressional expenditures shall have signed contracts agreeing to comply with, and to make repayment under the reclamation law. To require this procedure is not novel; Congress uses it repeatedly. It's the only business-like procedure there is, and we believe you should use it on every appropriation to develop water resources in Central Valley, no matter to what agency you may make the appropriation.

I could elaborate this very important point, but to conserve the time of this committee may I request that a brief statement made recently by Robert W. Pontius as a member of the postwar planning committee of the California VFW before a joint legislative committee in California, be printed immediately following my testimony. The San Francisco News described that statement, which spells out the point I am making, as a "block-buster," because those who heard it knew that here was a simple, sound, and sure way to enforce the law, and that threats to evade will not prevail against it. We ask only that this Congress act upon its own best precedent for protecting public policy and the Treasury when spending the public's money.

While discussing how S. 912 and the devices for evading the law will kill the veterans' chances, I would like to clear up a couple of other confusions which appear to have been cultivated. One of these confusions is the statement that land subdivides naturally when you irrigate it; therefore, why not repeal the law? Congress was familiar with that argument in 1902 and rejected it then. History and the census, now as then, prove that sometimes land does subdivide naturally and a lot of times it doesn't. Even if the land does naturally subdivide, every veteran who tries to buy a subdivided farm under the project without protection of the 160-acre water limitation will be forced to pay to the present landholder a price to include the capitalized value of water improvements created, not by the investment or labor of the landowner, but by the appropriations of Congress. If, relying on what you are told about the land breaking up easily and naturally, you should decide to repeal this 160-acre water limitation, you will be repealing the law that controls speculation as well as monopoly, and you will leave the veteran who purchases a farm to be shorn like the lamb.

Some people think, when we talk about water limitation, that we are deciding only about farm opportunities. Some think—even some Members of Congress, I regret to say—since the opportunities to farm are so inadequate, anyway, that they might as well yield to the pressures of special interests to support repeal. The California Department of the Veterans of Foreign Wars is interested in standing up for those veterans of World War II who want to farm, even if they are in a minority, and even if all our best efforts will not be enough to get farms for all who want them. Even that position is too narrow, and we take our stand on one that is broader. The 160-acre water limitation insures more than opportunity to farm. It assures opportunity for those veterans who want to go into small business or who want to practice their professions in small cities and towns located within reclamation projects. That is another important reason why we are against any move to defeat enforcement of the reclamation law. Everybody knows that family farms make better communities with better business and professional opportunities than do large corporate farms. And we don't want veterans of World War II to have to wait for them, staking their hopes on somebody's overoptimistic prediction that better communities will happen just naturally.

Now for my third and final point. The Veterans of Foreign Wars, California Department, wants veterans of World War II to get their farms now, not 10 years from now, or when they are old men. The present contracts offered by the Bureau of Reclamation in Central Valley allow excess landholders 10 years in which to sell, but neither provide them a market nor give veterans any preference. The existing preference granted by Congress on public land remains a pretty empty gesture while there is so little public land on reclamation projects. It will not be difficult to give that gesture the sincerity with which the Congress undoubtedly intended to make it. Nor will it be without precedent. We ask you simply to provide, as you did in the Columbia Basin Act of 1943, for Government purchase of excess landholdings. By so doing, you will provide for prices fair to seller and to farmer alike; and, wherever lands are held in excess of the legal water limitation you will create areas on which qualified veterans will be able to exercise their preference.

I want to say to the committee in conclusion that our position on this issue is not taken hastily, and bears no taint of demagogery or expediency. It is founded on the highest public principle. No body of men is more dedicated than the Veterans of Foreign Wars to the principle that sound homes make a sound nation. We recognize a drive against family farms in our State or Nation when we see it. We are not ready, under the guise of these wholesale exemptions or by any other subterfuge, to throw overboard the family farm. We are not ready—neither as citizens nor as veterans—to junk the reclamation law.

STATEMENT OF CALIFORNIA DEPARTMENT, VETERANS OF FOREIGN WARS OF THE UNITED STATES, BY ROBERT W. PONTIUS, MEMBER POSTWAR PLANNING COMMITTEE, VETERANS OF FOREIGN WARS OF THE UNITED STATES

We are wholeheartedly in support of measures to increase the number of solidly based American homes. That is why we stand opposed to any attempts to tear down the antimonopoly provisions of the reclamation law. The motto of the movement for reclamation a generation ago was "make homes on the land." With that we are in entire agreement. When the first attempt was made to break down acreage limitation at the 1905 session of the National Irrigation Congress, Judge Baker answered the representatives of the large landholders in these words:

"The committee of 17 that originally planned and arranged the adoption of the national irrigation law secured its adoption and presentation to Congress solely and entirely upon the question that the great land monopolies would be prohibited from getting the benefit of it by getting the lands to be watered, and after they were watered by the Government to go in with large means and take up all the land irrigated and thereby prevent the homeseekers from getting homes. Schemes which would limit development for private gain must give way to larger works and greater general benefits. We must stand by the law, by the Government that is in favor of building up the home in the great arid West and making it an empire in itself."

That is how Judge Baker of California answered those who would repeal the acreage limitation in 1905. There are many ways to defeat the law designed to make homes on the land, and repeal is only one of them. Another way to defeat the law is for the Army to build flood-control dams. Still another way is for the Reclamation Bureau, itself, to proceed with the construction of canals before the owners of land that are to receive water officially ask for the water. It is recognized as good business that contracts for the water must be completed before construction of dams or canals are begun.

The Bureau of Reclamation has always recognized it to be the best practice to require execution of recordable contracts agreeing to comply with the law, in advance of construction. Upon more than one occasion the Congress has written this wise provision into law. For example, the Reclamation Extension Act of 1914 provided that "before any contract is let or work begun for the construction of any reclamation project hereafter adopted, owners of private lands must be required to execute contracts to agree to dispose of their excess holdings." A similar provision was included in the Columbia Basin Act in 1943. The same rule should prevail in Central Valley, and is necessary if veterans and others are to have any substantial opportunity to make the homes on the land which the National Reclamation Act intended to provide them.

The veterans' interest in compliance with acreage limitation on water extends to dams and other irrigation structures built by the Army Engineers as well as by the Bureau of Reclamation. Indeed, veterans have been particularly shocked by the apparent willingness of high Army officers in responsible position to sacrifice acreage limitation, and at the same time to sell the opportunity for their own veterans to make homes on the land down the river. I refer particularly to Pine Flat Dam, where construction is about to begin, with no contracts for repayment or

compliance with excess land provisions. To this situation the veteran can only make the most vigorous protest. We will insist, before any further appropriations are made, and before further construction is made under presently appropriated funds, that recordable contracts be executed by private landholding beneficiaries, agreeing to abide by the law of repayment and acreage limitation.

More specifically, we recommend as follows:

1. That all initial features of the project be completed as soon as possible except that no appropriations be made for or construction started on the Friant-Kern canal beyond the Kaweah River until recordable contracts for disposition of excess lands within the SJMUD are received by the Bureau. And that no appropriations be made for, or construction begun to continue the canal further southward unless the present law is fully carried out.

2. That no further appropriations be made for, and no construction be started on the Kings River unless and until the beneficiary landowners, the Army engineers and Bureau of Reclamation comply fully with the law in this respect.

3. That if the present recommended budget of $20,000,000 now under consideration by Congress contemplates Friant-Kern canal construction beyond the points mentioned above, it be reduced by this amount.

We are convinced that when Central Valley construction is completed as I have indicated, it will afford full irrigation and other benefits to about 97 percent of all the people within the great Central Valley. Further construction at this time will benefit only 2 or 3 percent of the people of the valley and these people have not yet officially asked for help.

We recommend to Congress that here is a legitimate place to cut the budget

Price and Rent Control or a Christmas Holiday?

EXTENSION OF REMARKS
OF
HON. WALTER A. LYNCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, December 15, 1947

Mr. LYNCH. Mr. Speaker, I regret that the distinguished majority leader refused to yield, so that I might propound the question, "Do you think it is more important for the Members of the House to enjoy the Christmas holidays at home than it is to debate and determine the all-important question of anti-inflation controls?" It was an embarrassing question—I intended it to be so. I wanted to know whether it was more important in the war against inflation for us to go home or carry on the war. The Republican majority decided it was more important to go home, especially as they do not want a price-control bill and they are opposed to inflation with their tongues in their cheeks. For my part, I am opposed to any holiday adjournment until a price-control and a rent-control extension bill is passed, and I shall oppose any such adjournment.

Mr. Speaker, in our generation we have fought two world wars—the last more destructive than the first. World War II has left the world in short supply of the things that are needed for normal life. Scarcity has produced high prices. High prices make sellers hold out for still higher prices and thus the vicious circle goes round and round. If we are to stop the spiral upward we must have a Government edict that will say: "Prices must be rolled back to June 1946." This may cause some loss to those who have speculated in foodstuffs but, I can assure you, it will be for the benefit of the general welfare.

President Truman called this Congress into special session for two purposes, namely, to aid Europe as a foreign program and to aid the United States by anti-inflation legislation. We spent days debating foreign aid; in fact, so much time was allocated to this subject that at times there was a scarcity of speakers and a surplus of time. The Republican majority, unmindful of its responsibility to legislate, sought by every parliamentary device to delay the final consideration of the foreign aid bill. Their so-called political strategy is now apparent—they wanted to use up as much time as possible before the Christmas holidays so as to prevent any extended debate on price control.

What is their strategy? The tide of inflation is sweeping on. The housewives of the country daily see their dollars purchasing less—if they never knew what inflation was before, they know it now. They have had enough. The whole country has had enough of ever-increasing high prices. The country looks to the Congress of the United States to enact legislation that will not only curb present-day high prices but will also roll back prices to the level of June 1946. They look in vain, for the Republican majority brings in this bill, House Joint Resolution 273, introduced on December 10, reported on December 12, without giving the Democratic administration a chance to utter a single word of objection before the Banking and Currency Committee. Before the House on December 15 the Republican majority not only disclosed its disdain for the Democratic administration and the Democratic Members of the House, but they have shown to the American people an unprecedented callousness to the whole inflationary spiral by allowing only 20 minutes' debate on either side and by insisting on a suspension of the rules so that a two-thirds vote, instead of a majority vote, would be needed to pass the bill.

The bill itself is a travesty. It insults the intelligence of the American people. It is called a price-control bill. In truth and in fact, it definitely provides on lines 1 and 2, page 3, that although the President may approve voluntary agreements provided for in the bill, "he shall not approve any agreement which provides for the fixing of prices."

What kind of a price-control bill is that which specifically provides that there shall not be any price control? How can we have price control unless there is the power to fix the prices at a definite level? What else does the bill provide? Voluntary agreements on the part of industry and agriculture to stem the tides of inflation. The President has issued the warning and has called upon Congress to strengthen the dikes against the tide of inflation—and what does the Republican majority responsible for the legislation in Congress do? They offer the President a broom to sweep back the tide. They do not even give him the broom when they insist that this bill pass by a two-thirds vote instead of the usual majority, because they know they cannot muster a two-thirds majority. I wonder if it is the intention of the Republican majority to duck the responsibility for legislation that goes with the majorityship by henceforth demanding that all legislation be passed by a two-thirds vote.

The cynicism of the Republicans toward the plight of the people is evidenced by the fact that they would extend export controls another year from February 28, 1948, when the present export controls expire. No one has any fear that export controls would not be extended. But what of rent controls that expire the same day? Not a word about that in the bill. Thousands upon thousands of tenants are being blackjacked into the so-called voluntary rent increases because Congress wants to go home for the Christmas holidays and will not pass legislation so that the tenants can know where they stand.

It is my intention to ask the President to call another special session of Congress to convene immediately upon the adjournment of this session and to keep the Congress here in Washington until it passes a price-control bill that will roll back prices and provide for rent control.

The Late Honorable Raymond S. Springer

EXTENSION OF REMARKS
OF
HON. FRANK L. CHELF
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, November 17, 1947

Mr. CHELF. Mr. Speaker, I was on board the *Queen Mary* this summer heading for Europe with the Fulton subcommittee to make an inspection of displaced-persons camps, when the sad news of the passing of my good friend, RAY SPRINGER, of the Tenth Indiana District, was beamed via radio out to sea. I was shocked and deeply saddened by the broadcast and somehow, without warning, a hot lump immediately appeared in my throat and I found great difficulty in swallowing. Slowly, very slowly, I forced myself to realize that RAY had been summoned by the Master of all lodges and men to his final reward.

RAY SPRINGER was a Christian gentleman, a great lawyer, and a splendid Congressman. Although it had been years before, just after World War I, in fact, that he had laid his country's uniform away in moth balls; nevertheless, he was stricken in the service of his country, his native State, and his district. He was a victim of overwork in the interest of his people whom he loved with all of his heart.

I had the pleasure of working and serving with RAY on the Judiciary Committee of the House. I had a better opportunity to know, love and understand RAY

by reason of the fact that we served together on Subcommittee No. 4 of the Committee on the Judiciary. He was always in good humor and his smile had a way of easing tension whenever a controversy threatened. His advice and excellent judgment contributed much toward the solution of many difficult problems before our committee for final decision.

RAY SPRINGER shall be missed by all, for to have known RAY was indeed to have loved him. By his exemplary life here among us, he has constructed an everlasting monument to his name.

May God bless and keep his loved ones forever and a day.

Mr. Laski's Slurs

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 16, 1947

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter addressed to the editor of the Washington Star and appearing in that newspaper under date of December 5, 1947, by Mr. Edward Boykin, well known historian and lecturer, of Charlottesville, Va. Mr. Boykin and I have a common ancestor in Edward Boykin, who came to Virginia from England in 1685.

MR. LASKI'S SLURS

To the EDITOR OF THE STAR:

I am writing to reply to the slurs and innuendos directed at the United States and contained in the interview with the British economist, Harold Laski, which was published recently in the Sunday Star.

I resent these ungenerous slaps at a nation that last year gave Britain over $3,500,000,000 and is just now considering another blank check. It is about time some American told the bunch of political inepts, who are fast running Great Britain into the ditch, just where to head in.

Mr. Laski says that we are politically immature, that we have failed, as yet, to reach political maturity. If political maturity means the sort of maturity Great Britain is now enjoying, then God save America from such maturity, reached as it was by the sweat and degradation of millions of people to whom a helping hand was never even offered.

Mr. Laski slurs the unity of the United States. In 1776, the 13 United States had unity enough to snatch from Mr. Laski's then predecessors in office the greatest prize in the world's history. Indeed, Canada would have unified with the Thirteen States had it not been for a vile intrigue that included paying the Indians $2 apiece for American scalps. We had unity enough to save Great Britain's scalp in 1917. We had unity enough to save Great Britain's scalp as well as her hide again in 1941.

Mr. Laski says we are a Santa Claus people. That's just a jealous, smart-aleck crack. It is reminiscent of the Uncle Shylock slap that followed World War I. But, who made us a Santa Claus people? That's one for Mr. Laski to answer.

Maybe we are a Santa Claus people. But isn't it better to be a nation of Santa Claus people than a nation of those who sponge on other people's generosity? Mr. Laski, seated "beside his cozy fireplace," as the Star describes him, is a fine example of those who bite the hand that feeds them.

THE LIST IS LONG

Mr. Laski accuses us of an inherent distrust of Europe, of being wary "of being outdone by those skillful European diplomats." Why shouldn't we be wary? Would that we had been more wary. But who taught Europe and the world all the backdoor tricks of secret diplomacy? Who took the secret run-out powder on the Balfour Declaration on Palestine? Who intrigued with the Confederate States to overthrow the United States? Who plotted against every move President Lincoln made to save this Union of ours? What nation burglarized the American Ministries in Europe when we were but an infant nation? Who plotted to snatch Texas from the arms of the United States? The list is long—too long.

Mr. Laski could not resist taking a potshot at the Congress of the United States. He comments with sarcasm on "the clamor of the raucous voices of the American Congress" arguing the merits of foreign relief. I daresay the voices of our Congress did not sound so "raucous" to Mr. Laski last year when they voted ayes enough to give Great Britain over $3,500,000,000.

Mr. Laski takes a backhand slap at Winston Churchill. Well, Churchill was the best salesman Great Britain ever had and one of her greatest citizens. He will be remembered gratefully by the world long after Mr. Laski has lapsed back into the obscurity from which he has temporarily emerged. Winston Churchill it was who sold America the idea of coming to the rescue of Mr. Laski and his fellow-travelers in 1941. It now looks as if Winston Churchill will have to be called on again to lift Mr. Laski and his friends out of the mire of dole and distress.

Mr. Laski complains, "Whatever you wanted, you got," So did Great Britain, but she didn't even ask for most of it. For two centuries she ranged the world, grabbing whatever she wanted—and now look at her, with a bunch of half-red, muddle-headed politicos steering her around and around from one bright theory to another, with no idea of where to land the drifting ship.

I, for one, am sick and tired of having my country sniped at by British officials. One would think they would at least have good taste enough to keep their mouths shut when our President is at the moment asking Congress to tigthen the noose about the American taxpayer's neck to help the very ones who are sniping at us.

EDWARD BOYKIN.

CHARLOTTESVILLE, VA.

Letter of Mrs. T. J. Talbert, of Columbia, Mo.

EXTENSION OF REMARKS
OF
HON. MAX SCHWABE
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 16, 1947

Mr. SCHWABE of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

COLUMBIA, MO., *November 8, 1947.*

Hon. MAX SCHWABE,
Member of Congress,
Washington, D. C.

MY DEAR CONGRESSMAN: Our American civilization has reached the crossroads of its destiny. As one of your constituents in the Second Congressional District of Missouri, I am taking the liberty of writing you concerning the great need for a better understanding of our own ideology. I find much bewilderment everywhere.

A radio report only this morning revealed that Russia has a bumper wheat crop and is rushing aid to the people of her satellite countries. Another radio commentator assures us that a Friendship Train is traveling across the continent collecting food and clothes for the hungry and cold Europeans.

May I ask, Have both the Russians and the Americans adopted the philosophy of the pigsty? Might we not compare them to two men interested in pouring the most corn into the trough to determine who would get his porkers fattest the quickest in preparation for the winter kill?

Surely America is not bidding for the brawn and brute force of the Europeans. Are we not more interested in preserving their civil liberties that like the Americans they may use their creative abilities to secure the necessities of life by civil means?

How can we protect the birthright of the peoples of other nations if we sell our own for a mess of pottage? Civilizations, like men, do not live by bread alone.

If I understand our American ideology, it was not formed by men who adhered to the law of the jungle and the survival of the fittest. Our ideology does not guarantee men the material things of life. It does under the Constitution and Bill of Rights guarantee men and women their spiritual freedoms to secure necessary food, clothes, and shelter by just and civil means. The means must justify the end, not the end the means.

Granting that many Americans have digressed from the philosophy of our way of life and are seeking refuge in a philosophy which they think would guarantee their food, clothes, and shelter, the fact remains that it was the desire of the latter that prompted the leaders of two pagan ideologies to try to change the world and whose followers now lie prostrate seeking help from America.

Food, clothes, and shelter are not the real issue. They are but the cry in the wilderness of the war lords of Europe to perpetuate themselves by a man-made philosophy on one hand and the politicians of the Western Hemisphere to do likewise by the same token.

The real issue is the destruction of human personality and its potentialities which would make every individual a slave to the state and those in power on one hand and the preservation of the human personality and its potentialities and what he can contribute to the general welfare of his fellow man by the exercising of his spiritual freedoms on the other.

The iron curtain of Russia must be melted and the smoke screen of America blown away. Then and then only can the world make progress toward a lasting peace.

The masses are on the march for a higher standard of living. Let us help them to gain their objectives not by leveling down the culture of past generations but rather by extending to them the civil liberties and the right to use civil means to accomplish their end.

Our American ideology may be crucified upon a cross for a time but it shall roll back the stones by its impact of spiritual strength and stand unconquered before the world. Let us never forget that it was the spiritual impact of our 250,000 veterans, who now lie beneath the sod in every section of the world, against the cold steel of foreign foes in World War II which has preserved our freedoms. Their spirits rest today in the realm of the unconquered.

May I request that you as a Member of Congress and a Christian gentleman help to make the real issues crystal clear.

MARY W. TALBERT
(Mrs. T. J. Talbert).

Pearl Harbor Day

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 16, 1947

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me at the sixth anniversary of the Pearl Harbor meeting of the American Legion, Arlington, Mass., on December 7, 1947:

It is a great pleasure for me to come to Arlington and see all of my wonderful friends who have been so fine and generous to me. I am particularly glad to be here on this occasion, the anniversary of this eventful tragic day in our country's history.

It is most fitting for us tonight to meet here to commemorate the memory of our brave men who gave their lives fighting to save freedom. Throughout the historic towns and countryside of old Middlesex, here in Arlington, over these familiar hills and valleys, the freedom which we prize so highly was won. It was here that the brave men who came to a new world to establish freedom decided to make their stand. And when the alarm was given to every Middlesex village and farm, that alarm was "heard 'round the world." The autocrats, the rulers, the dictators, the kings by so-called Divine right were concerned because men in a new world had taken a stand to establish the freedom of mankind. This was something new. This was the dawn of a new civilization.

Several times, in almost every generation since that time, some selfish, egotistical, foolish, insane men have tried to take this freedom away from America. Every time they have failed. Every time we have met the challenge successfully. On December 7, 1941, a Sunday, the day of rest and worship, the day when Americans exercise one of their precious freedoms, the right to worship God in their own way, a terrific blow was struck at our freedom. The sneak attack of the Japanese on that fateful Sunday morning 6 years ago caught this great nation of ours asleep. It was devastating. Many of our brave men did not even have the chance to fight. Although this smashing attack found us asleep it proved to be a most beneficial awakening. Immediately the Nation was aroused. It was humiliated. It was mad. And when freemen get mad and work and fight together no power on earth can stop them or prevent them from achieving their goal. The power of this great Nation working and fighting together as freemen beat the Jap and eliminated Hitler. We annihilated the forces which were threatening to abolish our free way of life.

But we must never forget Pearl Harbor or permit those brave men who died to have died in vain. If we keep their banner flying we must follow the lessons we learned so expensively on that sleepy Sunday morning. Now what is the gain? What is the lesson? What does Pearl Harbor mean to freemen?

It is this. If freedom is to survive, those of us who are trusted with it must be constantly prepared to defend and meet every challenge. Never again can we afford to be caught asleep. Never again can we afford to be unprepared. Never again can we wait for the enemy of freedom to strike first. If we do not obey these truths our freedom will be lost, our country defeated and civilization annihilated.

The question arises as to how we can insure against unpreparedness. I believe it is the duty of free people, the citizens of this great and valuable country, to demand that the Congress provide for a strong Navy, a strong Army and Air Force. Our military forces must have the advantage of every scientific advancement and discovery originated by man. Don't be fooled or misled by enemy propaganda and jealous assertions by selfish military men that the day of the great Navy is over. Never before in the history of warfare has the modernized Navy been so important and essential. With modern inventions the Navy can hit any enemy in the world from the sea. Moscow can be bombarded from great ships at sea, which can immediately change their position and hit again and again. Because of modern inventions the great surface ships of the future will be able to take care of their own defense even against air attacks using atomic bombs. Only by luck could any enemy bombing airplane get close enough to these ships to damage them.

Our subsurface fleets are the greatest threat to any possible enemy that exists today. The modern submarine can travel very deep in the sea and shoot at its target without coming to the surface. And the important thing is, it will not miss the target, due to modern invention.

Our submarines of the future will be able to surface within enemy waters and shoot rockets and missiles with atomic warheads far inland as well as destroy all harbor facilities of the enemy. Such ships and submarines on the drawing boards, in the planning stage, are of little value. They must be real. They must exist, fully equipped and fully manned. They must be ready.

In addition to the strong surface and subsurface fleets, we must possess a powerful naval air force, made up of both land-based and ship-based aircraft and air weapons. This is most necessary because these air weapons will be the first and foremost striking force of the country. It will be near the enemy, within range of the enemy without first making a 5,000-mile flight. It will be there in position to strike quickly and effectively. A 1,000-plane naval air attack on the enemy in addition to the use of other air weapons might very well be the difference between victory and defeat, in the future—in this new age that is just beginning to appear over the horizon. To be adequately prepared, however, our Navy needs your support, my support, the support of Congress and the President. The necessary appropriations must be provided.

A necessary part of the Navy is the Marine Corps. I do not need to tell you that the United States Marine Corps is the finest, most courageous military organization in the world. It is always ready. It is always prepared. In its long history not once—never has it failed. This organization must be continued and strengthened and provided with every piece of scientific fighting equipment known. It must remain with the Navy, for both are interdependent on the other. There is no person in this land, loyal to the country, who will tolerate for one moment, any effort to reduce the strength and duties of the marines. Our country depends on their valor. Don't ever forget, ladies and gentlemen, our Navy today controls the sea and for any country to win a war it must have control of the sea. If we ever lose control of the sea and the air over the sea, we will lose out and go down to defeat. Don't ever forget that our Navy is our first line of offense, and I do not need to tell you that a strong offense is the best possible defense.

Scientific developments in aviation and air power must be constantly under way in order to provide our Air Force and naval air power with the most effective airplanes and weapons which can be developed. It is the duty of our Air Force to defend the United States from any enemy air attack. They must be equipped and ready to prevent any enemy air force from ever getting close to this country. This is their primary job. In time of emergency it will be the duty of the Air Force to control the air over the entire North American Continent and all of the approaches. It is possible this responsibility will include, in cooperation with our friends and neighbors of the South, the control of the air over all of South America. The Western Hemisphere is a primary responsibility of the United States from a military viewpoint and this responsibility rests heavily with the Air Force.

As an offensive striking power the Air Force must be adequately prepared to strike devastating blows at the industrial centers of any enemy.. The enemy's production must be destroyed quickly in any war of the future. The Air Force must be able to completely and adequately support the Army in all of its operations in enemy territory. To assure victory in a war of the future our Air Force must be the finest, best equipped, best trained, and the most modern fighting organization for air warfare in the world. It is not only essential but very wise for us to provide the necessary means and equipment.

Constant effort must be applied to the development of new weapons for the Army and ground warfare. Our Army must be well trained. Our Army must be maintained at sufficient strength to meet any prospective threat. Our Army must be ready to fight on the spot at a moment's notice. This is the time to prepare for there will be no time when the next attack on freedom, when the next war, begins.

It takes time to train and equip an army. The war of the future will not allow this time after it has started. Because of modern inventions, the atomic bomb, and other methods of striking down a people, the war of the future may last no longer than a few weeks. The nation that is prepared will win and the country which is unprepared will be defeated. No war was ever won without a strong army. No enemy was ever taken without a strong army. No war was ever prevented without a strong army in the background.

A strong army needs every type of equipment science and invention can develop. It needs strong men, strong women, well trained and in fine condition. To obtain these necessities after the next war begins will be too late. If we wait until then we will lose our freedom, our country will be defeated and our people destroyed. Our Army must be provided with every necessary requirement now and in the days just ahead. It needs your support and it needs the confidence of the whole country. We cannot survive another Pearl Harbor—nineteen hundred and—your guess is as good as mine.

I have been speaking to you about the needs and requirements, the duties and responsibilities of our Navy, Marine Corps, Air Force, and Army. Under the National Security Act of 1947, commonly known as the Unification Act, an attempt has been made by the Congress to provide the country with the best possible military organization. Under unification we think of the respective military services as the Nation's armed forces. The basic motive of the Congress behind unification was complete cooperation between the different services and the saving of money wherever it was possible without interfering with the proper functioning of any of their activities and responsibilities. Certain specific language was written into the law for the protection of the Marine Corps and naval aviation as well as their responsibilities and functions. Recently, I not only have heard of cases, but I have seen statements which have as their direct objective the undermining of the legal duties and responsibilities of other services such as naval aviation and the Marine Corps. Such action is contrary to the law and the spirit of Congress, detrimental to the security of the Nation, and violates

the exact purpose of unification, namely, cooperation. This activity should stop immediately. If it does not stop, those either directly or indirectly responsible should be relieved of their command and dismissed from their service. There is no room in our military organization for officers, thinking of their own selfish advancements at the expense of the activities and responsibilities of other services. There must be cooperation in accord with the law or an effort will be made to find officers who will cooperate. There must be an end of this attempt by one service to absorb another service. Congress and only Congress has the power to determine and set up the military organization of the United States. Any officer who thinks he is bigger than the Congress and can defeat its will, desires, and motives, as well as its laws, is indeed walking on very thin ice in regard to his own future. Unification will work but it cannot work if it is subject to selfishness, unwise thinking, and a complete lack of cooperation.

There are some who might say that my plea for preparedness, complete preparedness now—has the atmosphere of warmongering. I say to you that no person is a warmonger who believes in his country and its protection—who believes in peace and its constant continuance—who believes in freedom and its protection. When peace is no more, when the country is lost, when freedom is lost—all is lost. I hate war. I dislike the spending of huge sums of money for our military forces just as much as anyone. But I know it must be done. I know the only protection at this hour against war is to be completely prepared. I know we cannot afford the luxury of making a mistake. This time it is necessary to be right to live as we know living today.

All of these developments, these scientific improvements, this modernizing of our armed forces requires money. This undertaking demands large appropriations. But foolish, utterly foolish, is the person who places more value on money than on freedom, than on the security of his country, than on the lives of himself and his family. I believe in cutting out all foolish spending by the Government and saving our money where it is possible. But on the other hand, I believe my country comes first, my freedom comes first, I believe civilization must be preserved regardless of cost. This is our challenge today. This is the lesson of Pearl Harbor. We must not forget it. We cannot forget it Will you stand with me and support me in this challenge and crusade to protect America, to protect freedom, to protect civilization? I know the men and women of Arlington and Middlesex will not fail—just as they did not fail on that dark night many years ago to answer the call made to every "Middlesex village and farm."

Blank Check

EXTENSION OF REMARKS
OF
HON. FRANCIS J. LOVE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, December 15, 1947

Mr. LOVE. Mr. Speaker, when the special session of Congress was called I was led to believe, as was the general public, that the purpose of the "stopgap" aid bill was for the relief of the hungry and cold people of Europe.

The facts are that the bill provides for much more, including so-called incentive goods to be taken from short supplies in the United States; petroleum products, industrial materials, and fertilizer. I was ready to support this program as far as necessary food was concerned but under these circumstances I could not feel justified.

The bill provides for the same old blank check method of relief as was used in the $20,000,000,000 already given to Europe since the war which has kept prices high here and failed to rehabilitate Europe. Agents of the State Department bought some 100,000,000 bushels of wheat for this program in the months of October and November 1947 before authorized by Congress thereby causing the price of wheat to jump from approximately $2.80 a bushel to $3.15 per bushel.

As a Member of Congress who would like to help the needy and war stricken people of western Europe, I do not intend to be led around by the State Department or any group and forced to vote for legislation to approve unauthorized purchases that result in certain high prices at home and uncertain relief abroad. The fact that this legislation does not specifically prohibit aid from going to governments under the influence of communism is another reason why I could not support the bill.

Un-American Political Organizations

EXTENSION OF REMARKS
OF
HON. CHARLES A. HALLECK
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 16, 1947

Mr. HALLECK. Mr. Speaker, under leave to extend my remarks, I include an article written by Frank C. Waldrop, appearing in the Washington Times-Herald of December 16, 1947.

It is a powerful and well-reasoned argument in support of a measure introduced by my able and patriotic colleague, Representative WILLIAM C. COLE, of Missouri.

HOW TO DO IT
(By Frank C. Waldrop)

At last somebody has put the bell on the cat. Representative WILLIAM C. COLE, Republican, of Missouri, has a bill before Congress to bar from the ballot all political organizations which are un-American.

Yesterday, Mr. COLE laid the case before the Congress in language nobody can misunderstand.

Last week, he pointed out, the House of Representatives voted $600,000,000 of emergency money to stop communism in Europe. Billions more are being asked by the Truman administration for the same purpose. Billions have already been spent for that purpose.

Mr. COLE wants to know why it is therefore, that the same people who are shoveling billions abroad to "stop communism" in other countries, are so timid about stopping it here. Has anybody an answer?

His project to bar Communists from the ballot and along with them all others who teach, justify, advocate or aid or seek the overthrow of our Constitution by force and violence, is something that ought to have been done years ago.

It can hardly be left out of any program against communism worthy of the name.

Just how to put Communists over into the camp where they belong, outside the law, is worked out in Mr. COLE's bill very neatly. Wonder why nobody ever thought of it before?

For instance, he starts with the basic proposition in our Constitution, article 4, section 4, which states:

"The United States shall guarantee to every State in this Union a republican form of Government and shall protect each of them against invasion."

The Federalist papers of John Jay, Alexander Hamilton and James Monroe, throw plenty of light on the background thinking by the founding fathers, as to what they had in mind when they put that in the basic law of the land. In paper No. 43, it seems almost as if they were talking about today:

"Who can say what experiments may be produced by the caprice of particular States by the ambitions of enterprising leaders, or by the intrigues and influence of foreign powers?"

Long-headed men, those constitutional founding fathers.

Now as to what is meant by the one word, "republican," itself, we have a Supreme Court statement, and it just about tells the story:

"By the Constitution a republican form of government is guaranteed to every State in the Union and the distinguishing feature of that form is the right of the people to choose their own officers for governmental administration and pass their own laws in virtue of the legislative power resposed in representative bodies, whose legitimate acts may be said to be those of the people themselves.

"But while the people are thus the source of political powers, their Governments, National and State, have been limited by written constitutions, and they have themselves set bounds to their own power, as against the sudden impulses of mere majorities."

That admirable description can be found in the case of *Duncan* v. *McCall* (139 U. S. 461) and was written by Chief Justice Fuller.

Its doctrine is that the people own the Government but they cannot lawfully overturn it except by constitutional amendment.

Now where do the Communists stand in the matter of our Constitution? The Department of Justice has put that in the plainest possible language: That the Communist Party teaches, advocates, and advises the overthrow of our Constitution by force and violence.

The Communists do not seek to amend the Constitution. They seek to destroy it. They say it a thousand ways. All their history and all their declarations say it.

Therefore, it is plain crazy to give them any political fighting room whatsoever.

The only trouble with Mr. COLE's bill is that it doesn't go far enough. Not only should Communists be prohibited from political activity as a formal organization but it should be illegal by any test to hold membership in any kind of Communist organization.

These babies are out to destroy us. No need to make it easy for them to stay in the business.

Foreign Relief

EXTENSION OF REMARKS
OF
HON. HERBERT A. MEYER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, December 15, 1947

Mr. MEYER. Mr. Speaker, because of the lack of safeguarding, restrictive provisions, despite repeated efforts for the enactment of such amendments, I

am one of those who cannot support this so-called stopgap foreign-aid measure.

I am ready to vote the taxpayers' money to halt the spread of communism and, with due regard to our own solvency, to help feed the hungry people of the world. I am not, however, willing to vote another blank check to the administration, which, in the light of past performance, gives no assurance that these two objectives will be accomplished. And that is what this measure is—another blank check.

Let us take a look at some of the features of this alleged foreign-relief bill. We find that out of this $597,000,000 over $100,000,000 will be spent to furnish coal for industries in France and Italy, yet France was forced to take over its coal mines to break the recent strike. Then $35,000,000 will go to furnish petroleum while gasoline and fuel oil are being rationed by the petroleum industry in our country. France is also to have $17,000,000 for payments to Belgium and $10,000,000 to pay Brazil on a commercial account, $26,000,000 to pay off interest on the French foreign debt, $10,000,000 to the International Monetary Fund, and $28,000,000 to pay for the export of food into the French zone of Germany, so it appears that we are to provide France with dollar exchange to square her accounts in these other places. If any indebtedness is to be paid off, how about the need for something being paid on our own national debt? And how is the United States going to get any credit for the food which France takes into the French zone in Germany? Yet all this is classed as stop-gap relief for the needy.

The other alleged purpose of the bill is to stop the spread of communism. And, again, how absurd it is to spend millions on such a plan and continue the shipment of heavy machinery, petroleum, and other materials to Russia, the fountain head of communism, thereby strengthening her as an aggressor.

During the first 9 months of this year, the Russian Government has purchased from this country $113,700,000 worth of heavy machinery and farm implements. Official records likewise show that some 216 freight cars found their way by undisclosed sources into the Soviet during the period running from April through October. The fact that these cars were built to the broad-gage specifications of Russia's railroads constitutes thin excuse for any such sales. In a statement to the Associated Press of November 21, the President says he sees no need to halt heavy machinery, farm-tool and freight-car shipments to Russia.

As for extending relief to the destitute, I would have America, as always, be charitable, but I would have her extend relief through private charitable organizations in which there would be less chance of waste and black markets and we would have assurance that it would go to those in need. For a program of that kind and for an appropriation to implement it I would vote.

Mr. Speaker, I cannot support a foreign policy of which this so-called relief legislation is a part which will not accomplish its intended purpose and at the same time draws on our already short supply, thereby aggravating our growing national problem of inflation, and which makes us weak and vulnerable to the very forces we wish to destroy. Proponents of the measure say that the bill specifically states that a vote for it will not commit us to future aid to Europe, but during the course of the debate it was apparent that this measure is an integral part of the long-range Marshall plan calling for the expenditure of billions of dollars with the resultant spiraling of prices and the infliction of regimentation for bureaucratic controls.

Let it not be forgotten that President Truman in his message to the Congress, said that our aid to Europe necessitates our giving him wartime powers and restoring these controls over our daily lives—controls which only a short time ago the President told us were a part and parcel of the police state.

And so, Mr. Speaker, while I yield to no one in the desire to feed the hungry and clothe the naked, I cannot in good conscience support this so-called stopgap foreign relief measure. Our first responsibility is to protect the interests of our own people, to reduce the cost of living, to preserve the financial solvency of our own Nation. Let us take care of the aged, the disabled, and the needy at home. Let us build up our own defenses against both foreign aggression and weakness within.

Mr. Speaker, I feel that the greatest contribution we can make for the future peace of the world is to keep America strong, and in that purpose we should follow reason as well as emotion and not lose our balance wheel completely.

Mayor Thomas D'Alesandro

EXTENSION OF REMARKS
OF
HON. HUGH A. MEADE
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 16, 1947

Mr. MEADE of Maryland. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered last evening by Hon. JOHN W. MCCORMACK, of Massachusetts, at a testimonial dinner given in honor of Mayor Thomas D'Alesandro by the Italian-American Civic Club of Baltimore:

Mr. Toastmaster, distinguished guests, friends and associates of Mayor D'Alesandro, when I received the kind invitation from the Italian-American Civic Club to join with you tonight in paying tribute to your distinguished mayor, I confess that it stirred within me mixed emotions.

At one and the same time I was impressed with a sense of loss and a feeling of elation.

The fact that a testimonial dinner was being tendered to our guest of honor as mayor of Baltimore made me realize that we would no longer have the close and continuing benefit of his valued services in the National House of Representatives.

On the other hand, I was acutely aware that the occasion signified his entry upon a new phase of a career wherein he could render even greater service to the people he loves.

For him and the people of this famous American city, therefore, I was happy to think that the servant and the served were mutually fortunate.

I came to know your city's chief executive well during his service at Washington.

Before his advent at the National Capital, his fame and reputation had preceded him.

His service in the State house of delegates had equipped him admirably with a thorough knowledge of legislative technique.

His business experience had fortified him with a training which enabled him to analyze expertly the complexities of our national fiscal, industrial, and economic problems.

His manifold fraternal and civic interests had imbued in him a social consciousness which instinctively led him to the path of sympathetic consideration for his fellow man.

His active part in the enactment of progressive social legislation during his period of congressional service eloquently demonstrates his devotion to the cause of human welfare.

Service in the municipal council of this city and with the office of the internal revenue collector happily combined to extend his legislative and executive experience and to broaden his knowledge of local and national governmental problems.

Such was the gentleman which the Third Maryland District sent to Congress in 1938.

He was welcomed with open arms.

The broad background of his training and experience made him invaluable in the national legislative councils.

He enjoyed the confidence of congressional leaders.

His sage counsel and sound advice were sought, considered, and frequently adopted.

The confidence which his political associates reposed in him was matched by the respect and esteem in which he was held by his political opponents.

Without regard to his political affiliation, he was recognized as a man and a legislator of unimpeachable honor, probity, and integrity.

His advance within congressional circles was steady and deliberate, and was finally rewarded with assignment to the important and powerful House Committee on Appropriations.

In the deliberations of that committee and on the floor of the House, he again distinguished himself with a display of keen analysis, cogent reasoning, and sound judgment.

If I may be pardoned for the injection of a personal note, I should like at this point to pay tribute to those splendid personal traits of his which shall be so sorely missed in Washington.

As his party leader in the House, it was my good fortune to be able to rely upon him at all times.

He remained steadfast in his adherence to high ideals of public service.

His personal honesty and integrity were ever beyond reproach.

His sense of justice was never distorted by considerations of expediency.

He subscribed to the ideal of statesmanship in national affairs and was always motivated to act for the common good.

His own Americanism, and his devotion to American principles, stamped him as a leader in the fight against subversive elements whose avowed purpose is to destroy the world's greatest temple of democracy.

And above all, he never departed from the rigid dictates of that code of ethics by which a true gentleman is defined as one who never knowingly gives offense to even the least of his fellow men.

This, then, is the man whom the people of Baltimore have recently wisely chosen to be their Chief Executive.

We here tonight do honor to ourselves in honoring him.

For in his person and in his character we recognize the flowering and the promise of the American way of life.

He himself would be the first to agree with me, I think, when I say that more important than the man, is what he stands for.

A sturdy American of Italian descent, Mayor D'Alesandro represents the fulfillment of the American tradition.

By personal effort and diligent application, he gradually made the force of his personality felt in his community. As larger areas of service beckoned to him, he spread his talents to the State and National scenes.

A tireless worker, he nevertheless enjoyed the companionship of people and kept his finger constantly on the pulse of life around him. His keen sense of public spiritedness has made him ever willing to serve. His charming manner and sympathetic responsiveness makes friends quickly and wins the affection of all his associates.

His knowledge of the affairs of government is surpassed only by his love for and devotion to God and country.

His life, his career, and his example have all been dynamic inspirations to those who have been privileged to know him.

We are sorry to lose him from the House of Representatives in Washington.

We congratulate the city of Baltimore and the State of Maryland for their wise choice and sound judgment in calling him home.

The increased responsibility of his present high office will be a challenge to his talents—and if his past career is any omen of success, he will welcome the challenge as a further opportunity for service.

With all of you here tonight—with all of the people of Baltimore who have bestowed high honor upon him—I join in extending to him that testimony of high esteem than which there is no higher praise: "Well done, thou good and faithful servant."

Central Valley Project

EXTENSION OF REMARKS
OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 16, 1947

Mr. MILLER of California. Mr. Speaker, under leave to extend my remarks, I have received permission to include therewith a statement by the Honorable C. J. Haggerty, secretary, California State Federation of Labor.

The California State Federation of Labor has actively and aggressively supported the Central Valley project and has continuously urged the Congress to appropriate money for its immediate completion.

In carrying out this long and well-defined policy Mr. Haggerty made the following statement before a subcommittee of the Public Lands Committee of this body, in San Francisco on September 24, 1947:

My name is C. J. Haggerty, and I am speaking as secretary of the California State Federation of Labor, representing more than a million organized wage earners in California.

We are grateful to you, Congressman WELCH, for inviting your House Public Lands Committee to California. We are pleased that your colleagues have been willing to take the time and make the effort to come here to listen to our statements and to see our water problem at first hand.

We have a natural pride in the great prospect which full development of the tremendous water resources of the Central Valley holds before us. But we also have a feeling of responsibility to prevent any program of divided development or divided operation in the valley. We feel that a divided program would be a sell-out of the future of California, and, speaking for the State Federation of Labor, our future is not for sale. What we want is a thoroughly unified program under a single set of Federal laws, with engineering, financial, and administrative unity. Furthermore we intend to stay with this issue until we get it.

We know that our people cannot be fully and profitably employed unless we have greater and more rapid development of our water and power resources. Within the past 30 days members of our own organization working at a chemical plant in this bay area have felt the results of suddenly curtailed production. Our members are beginning to learn the hard way that full development of our water power is not just a problem of some remote future. They are getting their heads bumped by a power shortage now.

For years we have battled in this State with special interests which have tried to block any water and power developments they were unable to control. But the State Federation of Labor and the people of California always have stood for public development and transmission of power, and we are in the fight to win.

In 1933 we held a special election in this State to see whether the people wanted public water and power development of the Central Valley or not. The private-power trust tried its best to get the people to decide against it. They failed; the people wanted development and voted for it. But the opponents of public water and power development have not ceased their efforts. They continue to use the very arguments and to promote the same ends which the people of the State expressly repudiated. From the beginning, the State federation of labor has played its role and thrown its strength on the side of the public interest, and we shall continue to do so.

Our direct interest is in cheaper power and more jobs. We said so at the time of the Water and Power Act fight in 1933. With your permission I should like to submit for the record, without reading, the resolution of our State executive council in 1944, which endorses development of the entire Central Valley water and power resource by the United States Bureau of Reclamation, under reclamation law for the reason that reclamation law contains provisions against water monopoly, against land monopoly, against power monopoly, and against land speculation.

For the sake of economy of the committee's time, I will read the latest official declaration of the California State Federation of Labor on development of Central Valley water resources, which is a restatement of policy within the past month. It reads as follows:

"California has no resource more important than water. Scarcity of water, more than any other single factor, places an ultimate ceiling to the future economic development of the State. If our present efforts to develop this water resource, warped under pressure of special interests, should prove defective and partial, the ceiling will rest low upon us; if our efforts are sound and are carried to completion, that ceiling can be pushed high.

"We have the plain warning now. Curtailment of employment and production from shortage of power in 1947 is a failure not so much of rain as it is a lack of sufficient facilities built to conserve water and generate power. It is for us to heed the warning. Only the fullest and most skillful development of our water resources will enable California to keep its rapidly growing population employed and to maintain us all for generations to come at a high level of living.

"This interest which the million members of the California State Federation of Labor hold in the future of our Commonwealth is very great, but it is not special or peculiar to themselves; it is broad enough to embrace the hopes and to enlist the support of all citizens.

"Our demand is for adherence to simple principles that will assure maximum utilization of our water resources and the most equitable and widespread distribution of their many benefits. We oppose the callous disregard of those principles which, under the driving and deceptive tactics of special interests, now threatens to channel the benefits of Central Valley water into their pockets and to lower permanently the ceiling of the State's economic potential.

"THE FIRST PRINCIPLE

"I. The California State Federation of Labor stands first upon the principle that unity, not disunity, must govern development and operation of water resources in the Central Valley.

"Water control is not the simple task which some may suppose it to be, something to be parcelled out to whomever may be ready to build a dam here or there. In a great valley stretching over 500 miles, fed by a score of streams, each with its own basin, which is but a depression in the floor of the greater basin, the water-control works to be constructed must constitute a system. In the Central Valley these works will embrace nearly two score major reservoirs, hundreds of miles of main canals, thousands of miles of laterals and drains, more than two dozen hydroelectric plants, hundreds of miles of power transmission lines, with substations and feeder lines.

"The end to be attained is stability and dependability in the use of every drop of water that can be made available for irrigation, for power, and for the other purposes to which it can be put. This great and difficult end must be achieved by harnessing a resource which in its natural condition exhibits the widest diversity and instability. Along the 500-mile watershed of the Central Valley the rains and snows fall unevenly. From north to south, precipitation tapers off sharply. Through the seasons it comes unevenly. From year to year it fluctuates in volume irregularly.

"The uses of water caught in the reservoirs also are diverse, changing, and at times contradictory. Flood control demands the emptying of reservoirs in anticipation of coming floods; irrigation demands the filling of reservoirs to capacity while flood waters are high, with release during seasons after the danger of flood has long passed; power demands the release of water through the turbines steadily and evenly through the year.

"The technical problem of achieving the maximum potential of these uses requires that the intricate system of reservoirs and other works which we are creating shall be so skillfully interlocked in design that the whole shall indeed be greater than the sum of the parts.

"The task of operating the water controls of the Great Central Valley development will tax the highest capacities of a master dispatcher of water, one who can foresee by many days the need of an irrigator for water in a field 400 miles away, and the requirement for power of an industry in a distant city.

"Two or more agencies simultaneously attempting to develop and operate so intricate a system of controls can only cause friction and confusion and cannot possibly achieve the full economic potential to which Cali-

fornia is entitled. To do this is a task for one agency alone.

"The California State Federation of Labor has watched the drive by special interests to destroy the unity of Central Valley water development for their own purposes with an ever deepening apprehension. Their disruption appears principally in the form of efforts to install the Army engineers, as a second agency operating under separate and conflicting laws upon the Kings, Kern, American, or other streams within the great valley. Already they have won footholds upon the Kings and Kern. We condemn unsparingly this threat to the future of our Commonwealth.

"We call upon the people, the legislature, and the State administration to recognize unity as an elementary necessity, and to insist upon it. The issue is no mere contest between two Federal agencies—Army versus Bureau. The issue is Unity versus Disunity. Are the people of California going to have unity in a great project which cannot succeed fully, except with unity?

"The time has come to demand, and we do demand, that Congress shall pass basic legislation placing under reclamation law all water development within the Central Valley, and assigning sole authority and responsibility for success of the entire project to the United States Bureau of Reclamation.

"THE SECOND PRINCIPLE

"II. The California State Federation of Labor, as its second principle, holds that power for production, for employment, and for convenience must reach consumers at the lowest possible economic cost. To this end we demand full and rapid development of Central Valley public power plants and transmission lines.

"We reiterate our traditional stand against private power monopoly. The people of California, who voted their approval of a full public-power program and their opposition to private monopoly at special referendum in 1933, ought not to have to face repeatedly the obstacles which special interests continue to place in the way of achieving the public's own program.

"THE THIRD PRINCIPLE

"III. As its third principle, the California State Federation of Labor insists that water monopoly and land speculation based upon private receipt of publicly financed Central Valley water shall be prohibited, and that the benefits of water shall be distributed widely.

"Limitation upon reclamation water to an amount sufficient for 160 acres per farm family, is the tool by which the reclamation law holds water monopoly and speculation in check. We condemn all efforts to evade this beneficial law, whether by direct repeal, by the subterfuges of technical compliance or other lawyers' devices, by threats of defying enforcement, by purposeful neglect to require that beneficiaries shall execute the customary contracts for compliance and repayment in advance of spending public moneys, by threats to take the project away from the Bureau of Reclamation, ostensibly in the name of the State of California but really for the benefit of special interests, or by intruding the Army engineers, who operate under separate laws, into the Central Valley.

"The principal means by which special interests seek to monopolize water and to monopolize power are the same means—namely, use of the Army engineers—by which labor and the people are robbed of a unified project.

"The California State Federation of Labor stands, as it always has stood, for development of the entire water resources of the Valley under reclamation law, administered solely by the United States Bureau of Reclamation, because that is the only way to secure widespread distribution of the benefits from water development, and to attain the maximum resource development needed to secure the future of California."

The members of congressional committees holding hearings in Washington must often be confused by the apparent conflict in views among Californians who come to testify on the Central Valley. I should like to take advantage of your presence here to offer an explanation that may help.

The explanation is this: There are a very few, powerful vested interests—great landholders and private utilities—that want to reap the major benefits of congressional appropriations for themselves. The only way they can get those benefits is to get out from under the antimonopoly provisions of the reclamation law in one way or another—by repeal, by having their interpretations warped, by paralyzing enforcement, or by substituting the laws without anti-monopoly provisions which govern Army flood-control work. However appropriate those flood-control laws may be in the humid regions, they are both inappropriate and injurious here. The Flood Control Act is limited practically to authorizing a construction agency to construct, and has no broad public purpose. The reclamation law was designed so as to distribute the benefits of water and power development as widely as possible.

That is the reason why some men from California will lobby to have you authorize and appropriate to the Army engineers in Central Valley. If they can persuade you to do that, they believe they can escape the 160-acre limitation on distribution of public-financed water. They think they can get water cheaper for themselves under the Flood Control Act, because they believe the Army engineers expect them to repay less of the public investment than does the Bureau of Reclamation under the reclamation law. Finally, they can use the limited legal authorizations under which the Army engineers build dams as a convenient device to postpone and to obstruct power generation and transmission, which they cannot control.

Whether these unfortunate conditions prevail elsewhere in the country I am not in a position to say, but in the Central Valley the evil of injecting the Army engineers and the special set of laws under which they work is devastating to us. I will be as specific and clear as I can, within the limits of brevity.

The fact that special interests regard use of the Army as a neat device for escape from the reclamation law has been an open secret for a long time. As long ago as May 13, 1944, the national magazine Business Week described the tactics of those interests in detail. During their unsuccessful attempt to repeal the 160-acre water limitation in 1944, Business Week named the three other tactics to be employed if direct repeal should fail. Under the title "Valley Divided," Business Week said:

"If the big land owners in the valley lose out in this particular fight, they have several other proposals to accomplish their end. One of them is a House bill which would authorize the Army to add irrigation and power development to its present navigation and flood control powers. The legislation also would call for construction of a series of irrigation and power projects throughout the country, especially in Central Valley.

"This would circumvent the 160-acre rule, since the Army is not bound by that restriction.

"Another proposal, said to have originated among the big land owners of Fresno County, is for the State of California to take over the Central Valley project, paying the entire bill. This, too, would side step the 160-acre limitation. Still other land owners are sinking wells around their holdings in order to be prepared to pump irrigation water from the raised water table, thus getting a free ride on the Central Valley project."

Business Week was right. Special interests have played and continue to play these four tactics—direct repeal, use the Army, use the State, use pumps. First one, then another, then two or three at a time, like a man running his hands up and down the keyboard of a piano. Sometimes they use the soft pedal, sometimes the loud; frequently they confuse the audience, but they never forget their monopoly purpose.

The purposes of the land monopolists and of the private power monopolists make them natural allies. To both of them the Army engineers look like a useful tool. The land monopolists use them to obstruct the power development now, which our members need to keep employed.

May I illustrate specifically. Special interests in this State used their influence to kill appropriations to the Bureau of Reclamation to build Pine Flat Dam as part of a $53,000,000 irrigation, flood control, and power unit of the Central Valley development. The record of the testimony before committees of the House shows specifically and in so many words that they wanted this full development checked for two principal reasons: First, they wanted to escape the water limitation; second, they wanted no power development on Kings River now. In 1944 and 1945, Congress was persuaded to drop a program of full and early water development on the Kings River.

The very next year, in 1946, the special interests which had been blocking action by the Bureau so successfully, now suddenly became impatient to get action on an Army engineer appropriation for the same river. At this point, I regret to say, the State Engineer of California swung into action on the side of the special interests. At one time the State engineer's office stood as a true pioneer of unified water development, but by 1946 it was standing for something far less creditable; namely, a divided valley. Through his Washington representative testifying before the House Appropriations Subcommittee on War Department Civil Functions Appropriations, the State engineer urged strongly a no-power-now appropriation to the Army engineers on Kings River and on several others. The California State Federation protests that action by the State engineer and his Washington lobbyist as a direct injury to its members.

Not only did our State engineer choose the interest of the few, rather than the interest of the many, but the testimony in his behalf falsified the issue and otherwise beclouded the record. For just a moment I ask you to examine that testimony with me. I believe that by so doing I can clear up some decisions the Congress will doubtless be called on to make in the next and in succeeding sessions.

The testimony on behalf of the State engineer reads in part, as follows:

"There has in some instances been disagreement between the War Department and the Reclamation Bureau as to which agency shall construct some of these projects, and in what manner they should be operated. At this point the State does not want to become involved in rivalry between those splendid organizations. We want to have these projects. We want the dams started and let the issue be settled later as to who will operate them and in what manner. If appropriations are postponed now, the delay in getting flood relief will be a year or a year and a half. The need is urgent."

The plausibility of that statement that "the State does not want to become involved in rivalry" between the Army and the Bureau lies in its seemingly reasonable appeal to abandon partisanship for either Army or

Bureau, and in its implication that the differences between laws and points of view which govern construction and operation by Army or by Bureau, respectively, are of such secondary importance to the State of California that they safely can be put aside for settlement later.

Of course, by that action the engineer placed our State in a very unfavorable position. His action was one of utmost partisanship for the Army and for its laws and its point of view. The State federation, and we believe the State itself, is concerned, deeply and immediately, over what laws shall be applied, is concerned over the blocking of power development, and is concerned whether one or whether two agencies shall construct and operate dams at one and the same time within its Central Valley watershed.

By using the prestige of his office to bring the Army engineers into the valley, the State engineer has in addition done incalculable financial damage to the chances for ultimate development of the Valley, and to the farmers who have been looking to power revenues to help them get water at reasonable rates. By choosing the Army and its flood control law, the State engineer has chosen to funnel the power revenues from Kings River, if ever there should be any, clear out of the Central Valley development. Under the Flood Control Act of 1944 these revenues can never be credited to the valley in support of repayment of its obligations, and in support of full development of all its water resources. The State engineer has foreclosed that hope on Kings and Kern Rivers already, and he is trying now to persuade Congress to foreclose it on the American River.

The State engineer's representative ended his appeal to the House committee with the words "the need is urgent." One is tempted to question whether the "urgency" of flood damage which the State engineer's representative cited as a spur to hasten Congressional action for the Army really was an urgency for flood control, or whether perhaps it was an urgency for something else. We, too, think construction is urgent, but if the State engineer really was serving the interest of our State in the "urgency" for action, why did he fail to appear upon any one of several occasions which were prior to his "urgent" appeal for the Army? At any of these he could have helped to secure construction of Pine Flat Dam by the Bureau of Reclamation even earlier than when he seemed so anxious to save a year or a year and a half in 1946. Can it be that the State engineer's sense of urgency was something less than a genuine desire to obtain prompt construction in the interest of the people of California, and more a desire to serve special interests which notoriously and publicly have proclaimed they would prefer no development at all on Kings River rather than to have development under the national reclamation law, and who have said they want no power now?

Gentlemen of the House Public Lands Committee, I thank you again for coming to Congressman WELCH's home city to hear us.

Lynn Heartbeat

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 16, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article entitled "Lynn Heartbeat," by Tom McGovern, which appeared in the Lynn Telegram News Sunday, December 14, 1947:

LYNN HEATBEAT
(By Tom McGovern)
"BAD WILLIE" A MEMORY

As the short stocky gent started down the hallway stairs at 484 Summer Street the other evening, the Reverend Thomas J. Heagney, pastor of St. Patrick's church, reminded him, "Turn the knob and the latch toward St. Mary's Billy."

The man's tread never faltered but his response was rapierlike, "The time will never come when you can tell me how to open doors, Father."

In a few minutes, William Edward Gray, who gives his home address as 484 Summer Street, was swallowed up in the darkness and Father Heagney laughed and exclaimed, "What a fellow."

I felt much the same way myself after having spent 2½ hours with this squatty gent, who is bald and whose face isn't pretty, due to an automobile accident which nearly claimed his life.

Fifteen or sixteen years ago this same Mr. Gray was confounding the police of Massachusetts and four other New England States with as bold a series of escapades as there appears in the annals of criminology.

It was at a hold-up in Boston they caught up with him one evening. Billy tells it something like this, if I can remember correctly, as I took no notes.

"I was having something to eat in a Boston restaurant with a friend one evening, and a couple of buddies came along who were out of cash and wanted to knock off a place. I was pretty well fixed at the time and wanted no part of it. They insisted, however, and I went along to be a good sport.

"A gambling spot was the destination, and it was decided that myself and another fellow would do the actual robbing. The other two were to watch the house and the street.

"It wasn't long after that we had entered the house and I was covering a gang of 30 men with a pistol. I could see that my companion had no experience and that it was a tough spot. He should have been searching them, but instead he was removing nickels and dimes from a cash register. I figured that the best bet was to get out as quickly as possible.

"What I didn't know, however, was that there was a railroad dick in a telephone booth taking in everything and as I started to leave he stepped out behind me and ordered me to drop my gun.

"As I wheeled around, we both began shooting at the same time, I hit him three times and he hit me twice in the leg. I got out somehow but when I reached the street my leg was nearly paralzyed. They had to drag me into the car and we headed for New Hampshire."

That particular experience of our Mr. Gray was followed by his capture in a lonely cottage in New Hampshire. Somebody squealed and the Boston cops came up to kidnap him. They wanted no truck with extradition proceedings. Forty-five cops all supplied with machine guns, searchlights, and tear gas made the trip to New Hampshire but there was little fight in Billy when they arrived. He was so ill they didn't even bother to shackle him on the return trip.

Awaiting trial, the erstwhile "Bad Willie" was confined to the hospital ward at the State prison under heavy guard. He wasn't there a week when friends had smuggled in files to him and in the wee hours of the morning, he was sawing away at bars heretofore described as escape-proof.

One night Billie made the break in typical Hollywood fashion. He had such little room to work with, the bars scraped the skin from his chest, but he got down nevertheless with the aid of sheets which he felt were going to give way at any minute.

Friends were awaiting him on the outside and whisked him to a downtown lodging house where exactly 30 hours later he was recaptured on another tip.

Ten to twenty years was the original rap assigned Willie and they tacked on 15 more for the escape, which was a pretty kettle of fish for a gent who loved the great outdoors and was an epicurean by nature.

At this point they made certain Billie wouldn't escape, placing him in solitary confinement at the prison where he spent 37 months of his 13 years of incarceration incidentally.

The records will show that about 10 years ago a change came over Willie Gray. Suddenly he decided that he had been a damn fool all of his life and he vowed that if ever given the opportunity to walk God's good earth again he was going to be an honest to goodness peace loving citizen.

There weren't many people who believed that story, excepting one—he being the then pastor of a church in Holbrook, the Reverend Father Heagney. He listened to Billie's stories of his early youth, his misadventures, his career in crime, and didn't laugh when Billie suggested that he'd like another fling at society.

The story is old, of course, about Father Heagney and his appearances before the parole board on Willie's behalf. He was a thousand to one shot so far as obtaining a parole was concerned.

Came the day when Billie appeared before the parole board and Harold Lundgren, one of the board members, inquired, "Billie Gray, if you were in my spot and a fellow with your record came in here and asked for a parole, what would you say?"

Billie's response was lightning like. "I'd say 'No,'" he returned frankly.

But somehow or other they said "Yes" and Billie walked from State's prison after serving 13½ years behind bars.

A lot rests on the square shoulders of this 49-year-old man. With him rests the hopes and desires of many thousands of men not only at Charlestown but all over the weary world. Billie Gray is an experiment. If he can continue to go straight, then there is hope for the most hardened criminal.

I asked Billie the other evening if he ever had any desires to resume his career in crime.

"Not me, Tom, it's more fun working for a living," he replied smilingly.

For the past 2½ years Billie has served as a deck engineer on a merchant marine boat. During his prison stay he improved himself by mastering three extra languages, French, Spanish, and Italian, and his added value to his company is evident from the promotions he has received in the short space of time. He presently holds a full card in the seamen's union, so is seemingly set for life.

Father Heagney hasn't the slightest worry over Billie Gray. The good priest invested more than his sympathy by the way. When Billie got out of prison the pastor advanced him sufficient money to start him in a little business and, while the business failed, Billie is still paying back faithfully.

In his travels around the world Billie has kindly consented to represent Lynn Heartbeat, gratis of course. From time to time he's going to contribute little items of interest from various parts of the globe and I know that the people of Lynn will be more than happy to digest them.

I'm certain that after today Billie Gray will have more rooters in the city of Lynn than the few people he knows intimately. We can say with full confidence that bad Willie Gray is no more. He is a memory and an exciting one at that.

Los Angeles Housing Situation

EXTENSION OF REMARKS
OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 10, 1947

Mrs. DOUGLAS. Mr. Speaker, under permission to revise and extend my remarks in the RECORD, I include the following report from the Right Reverend Monsignor Thomas J. O'Dwyer, president of the Los Angeles Citizens Housing Council, to the members of the Joint Committee Investigating the Housing Shortage:

LOS ANGELES CITIZENS' HOUSING COUNCIL, INC.,
November 11, 1947.

To Members of the Joint Committee Investigating the Housing Shortage:

As president of the Los Angeles Citizens' Housing Council, a nonpartisan delegated body consisting of representatives of veterans' organizations, labor unions, church groups, and civic bodies, I have requested to be heard in order that I may present such information regarding the Los Angeles housing situation as the council has compiled in the course of its work.

That a vast housing need exists in Los Angeles is scarcely debatable; the question is just how great that need is. On this point we have the figures of the special census taken by the Census Bureau at the request of the city on January 28, 1946. The survey showed the population of the city of Los Angeles as 1,805,687, a gain of 301,410 persons since April 1, 1940. Percentagewise, this represented a gain of 20 percent. (See table below.)

Population comparisons: City of Los Angeles

(U. S. Census Bureau, Series P–SC No. 188 (final figures)

Total population Apr. 1, 1940	1,504,277
Total population Apr. 28, 1946	1,805,687
Net increase in population	301,410
Percentage increase	20

On July 1, 1947, the county regional planning commission issued a report showing that Los Angeles had gained in population an additional 6.7 percent in the intervening 17 months, making a total gain of 26.7 percent since April 1, 1940. (See table below.)

Los Angeles Regional Planning Commission, July 1947—Dwelling units and population, city of Los Angeles

Total population Jan. 28, 1946 (U. S. Census Bureau)	1,805,687
Total population July 1, 1947	1,905,824
Total additional increase in population from Jan. 28, 1946, to July 1, 1947	100,137
Total population increase since 1940	401,547
Percentage increase	26.7

The regional planning commission report set the total number of dwelling units in the city of Los Angeles on April 1, 1947, at 612,361, as compared with the number of dwelling units in 1940 of 529,261, or a gain of 83,100 dwelling units. The city department of building and safety reports that an additional 3,424 dwellings were completed during May and June 1947. Thus, the total number of new dwellings in the city on July 1, 1947, was 86,524.

The United States Housing Census of 1940 reported that there were 3.05 persons per occupied dwelling unit within the city of Los Angeles. By using this formula, it is possible to divide the 401,547 increase in population since 1940 into a total of 131,654 dwelling units which would be required to shelter the new population.

However, as reported above, the Los Angeles Regional Planning Commission and the city department of building and safety estimated that only 86,524 new dwellings became available through July 1, 1947. Since July the completions of new homes have been inadequate to house the continuing increase in population. Thus it may be fairly established that there is an absolute minimum need for 45,130 dwellings in the city of Los Angeles at this time.

In all probability the actual number of homeless families is somewhat higher. The 1940 formula of 3.05 persons per occupied dwelling unit fails to take into consideration the accepted fact that a large percent of the population increase represents the smaller, newly married veteran families. In this regard it is interesting to note that the United States Census Bureau recently conducted a special study of the housing problem of veterans of World War II. The release, known as Census Release P–21, No. 30, dated August 18, 1947, estimated that there were 83,000 homeless veteran families in the Los Angeles area. On the basis of the city's proportionate 49 percent share of the population in the area, it may be estimated that there are approximately 40,670 World War II veteran families alone among the thousands of homeless residents of the city of Los Angeles.

Furthermore, if the 7 percent vacancy ratio of 1940 is taken into consideration, and maintained as a normal factor to be achieved before the acute housing shortage can be declared ended, then the total dwelling units required would be proportionately higher. However, the estimated minimum total of 45,130 families without homes of their own does not tell the final Los Angeles story by any means. The census of 1940 showed 58,419 substandard dwelling units in the city of Los Angeles, exclusive of overcrowded dwellings. That many families were then living in housing which was not fit to live in, due to its need for major repairs or lack of necessary sanitary facilities.

With nothing having been done to better the situation during the seven intervening years, with the exception of the small but significant slum-clearance program undertaken by the city housing authority, we certainly cannot say that the number has decreased. Indeed, the problem has been seriously aggravated as desperately homeless families have carved out thousands of additional slum dwellings from garages, attics, and chicken coops.

The 1940 United States housing census also reported that 19,039 families in Los Angeles were residing in overcrowded homes, that is, with more than 1.51 persons per room. The combined total of both overcrowded and physically substandard dwellings is not available. Undoubtedly, however, many families reported as overcrowded in 1940 were not listed among the 58,419 families residing in substandard housing.

The surveys of the Regional Planning Commission indicate an increase in population of 68,602 persons between October 1946 and October 1947. There is no evidence to assume that this trend will be reversed during 1948. Again using the 1940 formula of 3.05 persons per occupied dwelling unit, this population increase can properly be translated into an additional need for 22,492 dwellings to house the estimated potential increase in population during the ensuing year. (See table below.)

Los Angeles Regional Planning Commission population estimates, city of Los Angeles

Total population October 1946	1,852,683
Total population October 1947	1,921,285
Total population increase since October 1946	68,602
Estimated number of dwelling units required to house increased population between October 1946 and October 1947 (1940 U. S. Housing Census: 3.05 persons per occupied dwelling unit)	22,492

Additionally, there are in the city today 8,967 temporary dwellings, exclusive of temporary student accommodations provided by the universities and colleges in the city. These were built by the Federal Government, or Federal and State Governments, either in the interests of the war effort or in the Veterans' Emergency Housing Program. According to the terms of their erection, they must be demolished as soon as practicable. This emergency housing, if left for any great period, will degenerate into still further slums, and must, therefore, be included in any overall view of Los Angeles' housing needs.

Adding these various necessities—homes for the homeless, the slum dweller, the temporarily housed veteran, and the estimated number of homes needed to house the increated population during the coming year—we arrive at the total housing need figure of 135,008 homes (see table below); a figure which, I am constrained to say, I personally feel is overconservative.

Summary total of estimated housing need for city of Los Angeles

Additional dwellings needed to provide housing for increase in population over increase in dwellings since 1940	45,130
Additional dwellings needed, or existing dwellings requiring major repairs, to remove all substandard dwellings in city (United States census, 1940)	58,419
Additional dwellings needed to replace existing temporary public housing	8,967
Additional dwellings needed to house estimated increase in population due to immigration and new marriages during ensuing year	22,492
Total housing need in the city of Los Angeles	135,008

To meet this overwhelming expression of need for shelter, we have the following information from the Los Angeles City Department of Building and Safety. The department reports a total of 14,811 new homes that have actually been completed during the first 9 months of 1947. (See table below.)

Los Angeles Department of Building and Safety report on residential completion by number of dwelling units

Month, 1947:	Dwelling units completed [1]
January	1,282
February	1,207
March	1,317
April	1,737
May	1,626
June	1,799
July	2,156
August	1,646
September	2,041
Total dwellings completed in the city of Los Angeles between Jan. 1, 1947, and Sept. 30, 1947	14,811

[1] Completion papers filed, as required by law.

According to the report of the California State Legislative Joint Committee on Housing, released April 9, 1947, approximately 65 percent of the homeless families within this State desire to secure rental accommodations.

Yet, during the first 7 months of this year, permits for rental housing averaged only 15 percent of the total number of residential building permits issued.

The United States Bureau of the Census in special housing studies made in Los Angeles County during the past year has reported that the average World War II veteran family can afford a maximum of $7,300 as purchase price on a home, and an average of $48 in monthly rental payments, including all utilities. The Bureau made a special study of a selected area of bad housing in the city of Los Angeles, reporting a maximum of $5,700 as the amount the average veteran could pay for a home, and $38 as the average rental payment, including utilities, which the veteran families in the area studied could afford. World War II veterans of minority groups indicated $5,500 as the average amount they could pay for a home. Twenty-five percent of all veteran families in this area of worst housing in the city could afford a rental of only $32 or less monthly.

Meanwhile, estimates emanating from various Government agencies and private lending institutions in this area have quoted the average cost of houses sold in Los Angeles the past 9 months in excess of $12,000.

The picture regarding rental construction is similarly dark. Prior to July 1, 1947, estimates on average rentals being charged on new home construction in Los Angeles exceeded $70. Upon the lifting of all rent controls on new construction on July 1, estimates have exceeded an average of $100. Neither figure includes the cost of utilities.

Thus, on one hand, we have a housing demand never before reached in the history of our city. On the other, we have a declining home-construction industry which is apparently incapable, under existing legislation, to meet the low-cost housing needs of the average family, veteran and nonveteran alike.

Needless to say, the consequences to the community are deplorable. Juvenile delinquency steadily increases. Tuberculosis, diphtheria, and venereal disease are gaining constantly. The Los Angeles divorce rate, 35,731 divorces to 42,063 marriages during the past year, is a shocking indictment of the low moral standards created by bad housing. That this terrible figure is directly related to the lack of housing was vouched for by Superior Court Judge Georgia Bullock and concurred in by several of her fellow jurists some months ago. The judicial opinion was unanimous that bad housing and lack of privacy, with concomitant friction and uneasiness, was a basic factor in local divorce actions. On this ground alone speedy building of houses should be mandatory.

Without the almost 14,000 units of public housing that Los Angeles has, it would be difficult to imagine what the situation would be in this city today—especially for that large part of the population which cannot afford to bid for housing against all comers.

During our years of work in the interest of adequately housing the community, we have encountered many times claims that this public housing is more expensive than private housing and that Government building has contributed to the present inflated cost of construction. The facts do not bear out these claims.

The temporary housing built under the veterans' emergency housing program in Los Angeles cost $2,450 to $3,200 per unit, including site improvements and utility lines. At the same time, private houses were costing $6,000, exclusive of land. Of course, one was permanent construction and the other was temporary, but it is to be recalled that the temporary structures were moved in from other locations and re-erected. This emergency housing program provided immediate shelter without putting any significant drain on the tight material market.

When one considers the vast distances that some of this housing was shipped—from Washington to California, for instance—in order to effect this material-saving, we do not think that the Government can be charged with wastefulness or contributing to the inflation of building costs. And again, the emergency projects often went forward on a 24-hour, 7-day schedule to provide the veterans with shelter as soon as humanly possible, while private building usually proceeded at a leisurely 8-hour, 5-day pace. These facts must be considered in weighing comparative cost factors.

As for the efficiency of permanently built, federally aided housing, that, we have always understood, is built by private contractors on competitive bids. Therefore it would be difficult to see how it could be more expensive or less efficient than comparable private housing. The public records of the Los Angeles City Housing Authority for the prewar period when that agency was building such housing under the provisions of the United States Housing Act, reveal that comparable costs with private enterprise were consistently maintained.

The council has repeatedly counseled criticism for certain local and national organizations representative of special interest and privilege within the building industry. There can be little question that the repeated and powerful representations on behalf of these lobbying groups have been in major part responsible for the premature lifting of building controls, the effective blocking of all remedial legislation, the flagrant violation of congressional and administrative intent regarding nonresidential construction, and the unprincipled attacks upon constructive efforts to meet the housing crisis.

That this Nation needs a coordinated, sense-making housing program would seem to be obvious. The Los Angeles Citizens Housing Council is of the opinion—repeatedly expressed—that such a program is to be found in the Taft-Ellender-Wagner National Housing Commission bill (S. 866). Lowered interest rates, lengthened amortization periods, and yield insurance would doubtless stimulate private building into a vastly expanded construction program. Moreover, the very safety features named would make it a "boom" without the apprehension of an attendant "bust."

The public housing provisions are an absolute necessity for those of our families who cannot possibly reach into the competitive private home-building or rental market. As long as low-income families are a part of American life it is only intelligent self-interest to see that they are properly housed. A slum cannot be contained; its effects—disease, delinquency, moral corrosion—wash over the community in black waves, defiling all that they touch.

On behalf of the citizens' housing council I urge your committee to do all in its power to help exercise the twin evils of bad housing and no housing, by recommending immediate passage of the Taft-Ellender-Wagner National Housing Commission bill.

Respectfuly submitted.

Rt. Rev. Msgr. THOMAS J. O'DWYER,
President.

The Labor Bosses Will Live To Learn That American Workers Are Not Fools

---

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 16, 1947

Mr. BOYKIN. Mr. Speaker, back in colonial days when the people determined they wanted to establish a government—of their own—and on these shores—they laid aside their tools and proceeded to organize one.

When they completed the task and established the form they desired decision was reached that they would themselves elect their officials and pay taxes to support the government of their choice.

They each went back to his work.

They did not tackle the problem as cotton or tobacco farmers, as fishermen or as miners, as carriage or harness makers.

They tackled it as Americans all.

The representative government and their representatives to the halls of the legislature were chosen from out of their midst—not as artisans of this or of that craft—as members of this or of that profession—they were chosen by the electorate of each community to represent that community in the Halls of Congress.

Mr. Speaker, the press of the Nation for the last week has been telling of a great fight that organized labor is about to launch against certain members of the people's government.

Personally I regard the statement that "organized labor is going to launch that fight" as a gross misstatement. I think it far more proper to say professional labor leaders—men who make their living, not by sweat and toil, but by being professional labor leaders—just the same as other men make their living by being lawyers, dentists, doctors, or as vendors of snake medicine in a medicine show in a street carnival.

The press announces that these professional leaders of organized labor are about to spend $8,000,000 to defeat 331 Representatives to Congress elected by the people only last year.

That is the equivalent of more than $25,000 for each House seat.

Inasmuch as only about one-half of the total are from districts in which these self-anointed hold sway, it is comparable to the expenditure of $50,000 in each congressional district to prevent the election of a real representative of the people, in their insane desire to gain control of the Congress of these United States.

Mr. Speaker, I have here in my hand an editorial clipped from the New York Journal-American, and carried by all other papers published by the Honorable William Randolph Hearst, a former Member of this House.

This editorial by our former colleague is so replete with the wisdom and sagacity which has characterized our friend throughout his long, useful life that I am offering it for insertion in the CONGRESSIONAL RECORD today.

America is to be congratulated upon the patriotic spirit which still burns in the heart of our former Member. May he live long to point out to all that the people created the Government and pay the taxes to finance its every endeavor.

The editorial reads as follows:

LABOR IN POLITICS

Both the American Federation of Labor and the Congress of Industrial Organizations declared war on the Taft-Hartley Act at their national conventions.

Both organizations have announced their purpose of causing the defeat in 1948 of Senators and Representatives who voted to

override President Truman's veto of the measure.

Each organization is raising a large campaign fund to carry out the purpose.

The declared hope of the leaders is to bring about a repeal of the Taft-Hartley Act.

This is definitely and distinctly a movement of the labor bosses, whose arbitrary powers have been curtailed by Congress in the interests of labor peace and industrial justice.

If they should succeed in their punitive and intimidating endeavor, the United States will take a long step toward class—or labor—government dominated by a ruling clique.

But well-informed surveys indicate that the labor bosses will not succeed.

They cannot succeed because the actual political situation will not permit their success.

And they will not succeed because, even if other factors were favorable to them, they will not have rank-and-file support when the 1948 election day arrives.

The Congressional Quarterly, a nonpartisan information-service publication, has made an inquiry into the congressional candidacies involved, and comes up with this revealing report:

"Organized labor cannot defeat enough Congressmen in 1948 to bring about repeal of the Taft-Hartley Act in the Eighty-first Congress.

"Although there are an estimated sixteen million union members, they are so unevenly distributed geographically that organized labor has little or no strength in the districts of most of the Congressmen who voted to override the veto of the Taft-Hartley Act.

"Of the 331 Representatives who voted to override the veto, all but 118 are from districts which professional politicians in Washington consider safe.

"Of these 118—106 Republicans and 12 Democrats—about half, are considered beyond the reach of organized labor.

"In the Senate, 28 out of 68 Senators who voted to override the Taft-Hartley veto are up for reelection, but only nine are from States in which labor is politically important.

"Some of the Congressmen whom labor opposes may be defeated on other issues, local or national, and some of those in safe districts may not get their party's nomination even though the district remains in the same party.

"But insofar as the CIO, AFL, and Railroad Brotherhoods depend on union members for political action, they have reasonable chances of defeating only about one-fifth of the Congressmen whom they regard as their enemies.

"Their chances of defeating the other four-fifths range downward from improbable to zero."

The labor bosses, in other words, do not wield the political power which they pretend to have and, in fact, which they seemed to have when the New Deal was using the United States Treasury as a campaign fund in their support.

Second, the labor bosses have discredited themselves by the indefensible nature of their attack on the Taft-Hartley Act.

Instead of presenting any kind of analysis of the new statute, they have attacked it in demagogic language as a slave-labor law.

The position of the labor bosses in this respect has been completely torpedoed by Opinion Research Corp.

Opinion Research conducted a poll among workers, not on the Taft-Hartley Act as an unexplained whole but on the separate provisions and requirements of the statute.

The poll showed that as many as 80 percent of all workers and 70 percent of labor-union members favor and approve, on its own merits, every part of the law which they had been misled into opposing as a whole.

The implication ought to be obvious, even to a labor boss.

American workers are not fools.

Long before election day, they will know that the Taft-Hartley Act confers upon them the very benefits which they themselves want.

And they will not vote to deprive themselves of these benefits merely because labor politicians have sought to apply a false epithet to the legislation.

The Housing Shortage

EXTENSION OF REMARKS
OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 10, 1947

Mrs. DOUGLAS. Mr. Speaker, housing for millions of our American families, especially our veterans, is a national scandal. The answer of the Eightieth Congress to this all-important problem was to set up an investigating committee to discover whether or not there really was a housing shortage.

Mr. Speaker, I wish to include in the RECORD a letter which was part of the report I sent in reply to a request from Representative RALPH A. GAMBLE, chairman of the Joint Senate-House Committee To Investigate the Housing Shortage, for information on housing in Los Angeles.

DEAR CONGRESSMAN GAMBLE: Pursuant to your letter of September 8, 1947, I have proceeded to gather such information pertinent to the lack of housing in my area as is available.

I have done this several times for bureaus or committee in the pious hope that something might be done about the deplorable housing situation in downtown Los Angeles. To date, those hopes have not materialized. Now, the situation approaches the hopeless.

In the last session of the Eightieth Congress, we spent a great deal of time talking about the incipient dangers of communism. Communism, in my view, is the last refuge of those who are without hope—and certainly there is nothing better calculated to drain a man of hope than the denying to him of the basic decencies of life.

In California—in Los Angeles—in my Fourteenth Congressional District that denial is taking place. A great group of our people have literally no place to live. Another, even greater group, is living in housing which is not fit to live in. And no housing is being built at a price that those who need it most can afford to pay.

Population in the Fourteenth Congressional district grew from 319,000 in 1940 to 377,000 in January 1946. In July 1947 the population of the city of Los Angeles had increased an additional 6.7 percent. Assuming that the Fourteenth District shares equally in the increase, and considering that an additional quarter year has now elapsed, there can be no reasonable doubt that the population of the Fourteenth Congressional District as of today exceeds 400,000 persons.

In 1940 we had in the Fourteenth District 120,680 dwelling units, of which 7,276 were designated as overcrowded, and 30,420 were stigmatized as substandard. Granted that there may be a certain amount of overlapping between these two figures, it cannot, in the vast aggregate, be important. Suffice it to say that in 1940 more than one-quarter of all our housing was bad housing.

Far from improving, this situation has deteriorated markedly. The regional planning commission gives figures for existing housing in Los Angeles by districts which do not coincide with congressional district lines, but two of them, designated as central and eastern, furnish pertinent information. The central district, which lies almost wholly within the Fourteenth Congressional District, is shown as having 5,053 less dwelling units in 1947 than in 1940, while that part of the eastern district, which lies within the city boundaries, and of which probably one-half is in the Fourteenth Congressional District, is shown as having gained 622 dwelling units since 1940. Thus, a net loss of 4,400 units is indicated.

This figure is readily believable, since while there has been no appreciable residential construction in the Fourteenth District during the war and postwar period, there has been considerable demolition involving war-expanded commercial facilities, the creation of downtown parking lots, and the putting through of a so-called Freeway system by the State department of highways. Important to note in connection with this is that because of the necessarily arbitrarily chosen sites for these projects, there has been little or no selectivity of demolition. Whatever was in the way had to go, whether good housing or bad. Consequently, we may safely assume that our outrageous "substandard" percentages are today no smaller.

On a series of housing-study charts made by the Los Angeles city planning commission, I have outlined the Fourteenth Congressional District. On chart after chart, these district lines correspond almost exactly with the areas of worst housing that the planning commission designated. Similarly juvenile delinquency and tuberculosis incidence, which are inseparably tied to bad housing, follow almost the same lines.

One more housing fact bearing directly on American life may be noted. Last year, a caucus of Los Angeles County Superior Court judges gave it as their considered opinion, based on the hearing of thousands of cases, that Los Angeles' fantastic divorce rate (five divorce actions to every six marriages in 1946) was in large measure attributable to the dire lack of housing in which families could be reared in some degree of decency and permanency.

On the basis of the facts adduced, I think it may be categorically stated that what is needed in the Fourteenth California District—and, for that matter, in Los Angeles generally—is (1) more houses as speedily as possible, and (2) an immediate program of slum clearance.

Moreover, all available studies make it clear that by and large the worst-housed group are the veterans. A special census report on veterans' housing in central Los Angeles shows that there are two and one-half times as many veterans without homes of their own as there are nonveterans.

The same report states that the average monthly rental, including utilities, which these veterans are able to pay is $38 per month, and that one-fourth of them are only able to pay $32 per month or less.

Further, of those veterans who signified their desire to buy or build individual homes, it was stated that the average total cost they were able to shoulder was $5,700 at monthly payments of $43, including utilities.

Nor do these figures tell the full story, for the survey did not cover transient hotels, commercial rooming houses, trailers, or tourist cabins. Obviously, many of the poorer and most overcrowded veterans live in one or another of these facilities.

However, contrast the figures quoted above with the average cost of single houses sold in Los Angeles County during the first 7 months of this year, $12,350; and the average rent charged for rental construction during the same period, $70; as well as the

monthly rental anticipated to be charged on rental construction since that time, $100.

When this juxtaposition is made, the reason for my introduction of H. R. 1750, my veterans' housing bill, will become clearly evident. That bill calls for Federal loans to local bodies to enable the construction of veteran housing to rent at not more than $50 per month for the duration of the housing emergency.

In further support of this proposed action, but even more strongly in support of the public-housing features of the Taft-Ellender-Wagner bill, are the figures submitted by Al Weinberg, coordinator of the veterans' advisory committee of the Los Angeles City Housing Authority. This advisory committee is made up of the county commanders of all the 11 veterans' organizations functioning in Los Angeles, plus the director of the veterans' service center. Speaking for this blue-ribbon committee, and testifying before the O'Gara committee, Mr. Weinberg stated that a survey of 1,000 veterans' applications for housing, picked at random from the applications on file at the Los Angeles City Housing Authority, revealed that 83.2 percent—17 out of 20—have incomes ranging from $900 to $2,400 per year.

In summing up the Los Angeles situation, Mr. Weinberg stated: "Limited incomes—lack of adequate rental opportunities at prices these veterans can afford to pay—are creating tremendous hardship. Disease is on the upgrade. Juvenile delinquency and adult uneasiness, because of housing problems, are fomenting added social disorders. Divorces are frequently mentioned among our young veteran families as a means to an end of family responsibility. * * * Despite all laws, promises, and plans, the only entity actually providing shelter is the public-housing program. Until private enterprise produces houses for rent, then public housing must be provided and expanded."

On November 21, 1946, the Los Angeles City Housing Authority, which since VJ-day had been accepting only veterans' applications, closed the doors of its applications office. Housing Commission Chairman Nicola Giulli stated that with 16,000 applications on hand and no up-coming housing in sight, "further taking of applications would constitute a fraud on the veteran."

Eight months of intensive interviewing of applicants designed to weed out all who had died, left the State, or found some housing, no matter how bad, plus 1,000 additional State-aided temporary units, plus available turn-over, brought the total figure down to manageable proportions. On August 1, 1947, the housing authority reopened its applications office. Almost immediately, applications started pouring in at the rate of 1,100 per month.

Remember that these figures concern veterans of World War II only; no provision whatever is made for nonveterans or veterans of World War I.

Concurrently, the city housing authority has several hundred families whose incomes exceed the figure set for continued occupancy of a low-rent housing development. In an effort to clean up this situation, the authority wrote to the local Apartment House Association, the real-estate board, the chamber of commerce, and various real-estate agents, detailing the need, the number of potential renters and buyers, and the approximate prices they would be able to pay, and asking if any of them could be accommodated.

The answers were a complete blank. No one had anything either for rent or for sale that these so-called excess-income families could possibly afford.

Indeed, the great potential housing market that exists all over Los Angeles is being systematically strangled by the skyward-bound costs of real estate and construction. Less and less residential building is being done because no one can afford to buy it.

Light from another angle was recently thrown on Los Angeles housing by Dr. George M. Uhl, the city's chief health officer, who stated bluntly that "animals in the zoo have better housing than some of Los Angeles' human residents."

Dr. Uhl cited a one-room, corrugated iron building which housed over 60 persons; an ancient, rat-infested, 14-room building in which 71 persons lived; people actually living in packing cases; in abandoned warehouses; in semidemolished buildings; in junked truck bodies; and as many as 10 people eating and sleeping in shifts in a single hotel room.

If any sense is to be made of this chaotic condition—if people are to be prevented from being driven to the brink of absolute desperation, and from the elemental social upheavals that such desperation inevitably induces—then, I submit that we must have a housing program; some such well-rounded program as is provided in the Taft-Ellender-Wagner national housing commission bill.

The low rates of interest and long period of amortization provided by that bill would allow people to build who cannot now do so. The so-called yield-insurance features would encourage the building of desperately needed multiple housing. And the relatively small but vitally important allocations for subsidized public housing would be a veritable God-send to those many low-income families who are now completely priced out of the market and reduced to competing with each other for living space that is not fit for man to live in.

We need the Taft-Ellender-Wagner bill for the setting up of a sensible, orderly, long-range program. We need the Douglas-Taylor bill for immediate veteran housing. These, in my humble opinion, are minimum needs; legislation that should now be effective.

If further investigations are necessary or desirable, I suggest an investigation of construction and real estate prices, with special emphasis on the profits involved; an investigation of hold-backs on scarce building materials for higher prices; an investigation of commercial building, much of which must have been done in complete violation of all Federal regulations; and above all, an investigation of the activities of the so-called real-estate lobby in effectively smothering all national legislation.

But I do not press for these things. Investigations, at best, are backward looking. I urge your committee to look forward instead; to make recommendations that will halt the sacrifice of tomorrow's generation on the altar of the real-estate lobby; to uphold and strengthen our democracy (or our republic, if you prefer) by advocating the right of the American child to grow up in a decent home.

The need is urgent. Let us meet it.

Mr. Speaker, there can be no doubt that a vast housing need exists in Los Angeles. Our desperate need for homes is not debatable. What is to be done about it? That is the question.

If the investigating committee proceeded in other parts of the country as it did in Los Angeles, Calif., it had better have stayed in Washington and not spent the people's money.

The hearings of the joint Senate-House committee to investigate the housing shortage held in Los Angeles were not a success.

They were an affront to the people of Los Angeles.

Mr. Speaker, I include a letter from the Right Reverend Monsignor Thomas J. O'Dwyer, president of the Los Angeles Citizens Housing Council, to Congressman GAMBLE in criticism of the conduct of the Los Angeles hearings:

LOS ANGELES CITIZENS
HOUSING COUNCIL, INC.,
Los Angeles, Calif., November 20, 1947.

Congressman RALPH A. GAMBLE,
Chairman, Joint Committee to Investigate the Housing Shortage,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN GAMBLE: It is the feeling of the Los Angeles Citizens' Housing Council that you should be informed of the council's reactions to the recent visit of the Subcommitee of the Joint Senate-House Committee To Investigate the Housing Shortage.

Although we realize that the suddenly called special session of Congress must have necessitated certain alterations in plans as to hearing dates and committee make-up, we are nevertheless of the opinion that the investigation of the housing shortage in the Nation's second largest State by a one-man subcommittee is thoroughly unjustifiable. Especially is this so when the one-man committee, Representative CHARLES K. FLETCHER, lists himself in the Congressional Directory as "now president of the Home Federal Savings and Loan Association of San Diego" and may thus, at the very least, be said to have a special interest in the results of the investigation. Other men, detailed in investigatory or judicial capacities, have disqualified themselves on lesser grounds.

Although Representative FLETCHER repeatedly stated for the record that he had an open mind, had arrived at no preconceived conclusions, and wanted only to get at the facts so that a solution could be reached, he was quoted in the local press as stating at a luncheon tendered to him in the chamber of commerce building that, of course, we don't want any public housing. Who "we" referred to was not specified.

The housing council, of course, takes exception to this statement, both on the ground that public housing is acutely necessary in Los Angeles, and on the further ground that it clearly demonstrates bias and prejudice on the part of the subcommittee.

This bias was clearly evident all during the hearings as Representative FLETCHER insisted on referring to charity housing, of which, he indicated, approximately 6,000,000 American families stood in need.

The hearings were, seemingly, unnecessarily rushed; at least, as far as any witnesses were concerned who might conceivably be expected to support public housing or the Taft-Ellender-Wagner bill. Such witnesses were admonished that no testimony regarding need was necessary; only specific recommendations were wanted.

On this ground, Howard Holtzendorff, executive director of the Los Angeles city housing authority, was denied permission to read a statement, although he had been requested to attend for the purpose of presenting public housing's side of the picture. How public housing could possibly be discussed or defended without going deeply into its need or non-need is difficult to comprehend. On the other hand, witnesses representing groups known to be opposed to the Taft-Ellender-Wagner bill were not only in no way limited, but were encouraged to engage in philosophical colloquies with the chair, even to the extent of being asked the uttermost in leading questions when they did not say exactly what the chair wanted in the record.

In the waning moments of the hearing, several names were called rapidly as potential witnesses, and remarks made that it was too bad they were not present as they had signified a desire to be heard. That they were not present is easily understandable. It had been announced that hearings would continue throughout the afternoon and it was only during the morning session that the Congressman announced that the hearings would be rushed to finish at noon.

The council, therefore, wishes to protest the validity of the Los Angeles hearings on the groups of the totally inadequate time allotted, the obvious bias displayed by the subcommittee, and the thoroughly unbusinesslike quality of procedure.

Los Angeles' great and crying need for low-rent and lower-middle-income housing is fully documented in the mass of statements and statistics submitted to the committee, but it will not be found in the stenotype records of the hearings.

Sincerely,

Rt. Rev. Msgr. THOMAS J. O'DWYER,
President.

Woolen Prices Due to Inflated Costs, Not Profits

EXTENSION OF REMARKS
OF

HON. FRANK A. BARRETT

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 16, 1947

Mr. BARRETT. Mr. Speaker, I am very much impressed with the concise and forceful statement of Curt E. Forstmann on the question of high prices in the wool-textile industry. The administration has attempted to show that the industry is controlling production in order to keep prices up, and as a consequence its profits are unduly high; in fact, exorbitantly so. If you will but read his statement, you will see there is absolutely nothing to the charge. The wool-textile industry is working on a 24-hour basis and in many cases on a 7-day week. It is going all out to produce at maximum capacity to supply consumer needs.

It has held its selling prices down to a point where raw material and labor have increased more than twice as much as prices. In this inflation controversy it is easy to blame the other fellow. The administration has over 3,000,000 employees on its pay roll. It resists every effort to reduce that army. Take a million off the Federal pay roll and let them produce goods in private industry and the story would be different.

Now, Australia does not attack its woolen industry. It rebates 27½ percent on the cost of raw wool on fabrics sold in Australia. It has placed an embargo on imports of woolens and worsteds. Another thing the administration should take note of the fact that the joint agency raised the price of its United Kingdom wool by 9 percent as soon as our tariff was lowered 25 percent.

Mr. Speaker, in my opinion, Mr. Forstmann has put the blame precisely where it belongs. I commend him for the forthright manner in which he has stated the position of his company and the industry on this question.

The statement follows:

WOOLEN PRICES DUE TO INFLATED COSTS NOT PROFITS

(By Curt E. Forstmann, president of Forstmann Woolen Co., of New Jersey)

The inflationary policies of our own Government, and the aftermath of war, not excessive profits, are directly responsible for today's high wool textile costs, Curt E. Forstmann, president of the Forstmann Woolen Co., declares in a documented analysis of costs and selling prices from 1932 until the present time, made public today.

The statement, entitled "The Corporate Cost of Living in the Wool Textile Industry," was issued, Mr. Forstmann explains, to clarify a price situation which directly affects the public's cost of living, and which has given rise to Administration threats of a return to price controls. While the facts and figures cited relate specifically to his own company, Mr. Forstmann declares he believes that they have a broad application to the entire industry.

Seventy-five percent of the cost of a yard of cloth consists of raw materials and labor, it is stated. A series of charts showing the trends of these costs, and of selling prices from 1932 on, are presented to illustrate that since 1932 costs of raw fibers have risen 180 percent and average labor costs have increased 171 percent, whereas selling prices have advanced only 75 percent.

In addition to these higher raw material and labor costs, increased costs of machinery and improvements to enable it to produce more efficiently and economically are requiring the company to expend 86 percent of its net income after taxes for the years 1945 through 1947, Mr. Forstmann states.

GOVERNMENT CREDITS INCREASE WORLD WOOL PRICES

Price increases at the fabric level are attributed to: (1) the policies of the Government itself, (2) the inexorable general results of inflation brought about by these policies and (3) the usual results of war.

"The price of our chief raw material—wool—has for many years been controlled by the American and the British Governments. Domestic wool is bought at legally established prices by the Commodity Credit Corporation," the statement points out.

"Our chief sources of fine wools, of which this country is the largest user, are the British Dominions. These wools are sold under the direction of a closed corporation owned jointly by the United Kingdom, Australia, New Zealand, and South Africa. American mills, to secure the foreign wools which they require, must bid against the entire world at prices which must be at least higher than the floor levels set by the British Joint Wool Organization."

Present high prices for these wools, Mr. Forstmann declares, are due in considerable measure to our own administration's foreign policy.

"Through huge extensions of credit, primarily to Great Britain, it has made it possible for the British, the French, and the Italians to bid up the prices of wool in Australia, South Africa, and South America," Mr. Forstmann says. "Those wool buyers on the continent of Europe whose own finances were insufficient have operated on credit granted them by Great Britain.

"They have bought chiefly fine wools in contrast to their historic practice of using larger quantities of coarse wools. A large percentage of the tops, yarns, and fabrics made of these wools has subsequently gone to Great Britain to be sold in the world markets as British products. The balance is being offered by foreign mills largely as exports to South American countries, who, lacking dollar exchange, have a virtual embargo on American textiles.

"We therefore have the almost incredible situation where our own dollar credits make it possible for competitor nations to increase world wool prices to such an extent that American buyers hesitate to buy in the world wool markets. Thus, our own Government, by following a policy which has permitted loans without restrictions or designated end uses, has made it possible for a virtually bankrupt Europe to outbid the solvent United States."

CAN CONTROL SELLING PRICES—NOT COSTS

Beginning with the National Recovery Act, the Government has encouraged increased wages and higher labor costs, the statement declares.

"Manufacturing costs were increased by prohibiting the operation of a third shift in the wool textile industry; thereby decreasing potential production and increasing costs in individual mills," it is asserted. "Simultaneously, wages were increased, and minimum wage levels were established by Government fiat. Ever since then countless agencies, and a long succession of Executive orders, regulations, and laws, have progressively contributed toward the constant rise in production costs."

Declaring that under existing conditions the company has little or no control over the costs of raw materials, labor, and high taxes, the statement adds there is one factor over which it has complete control—its own selling prices. It then states:

"The Forstmann Woolen Co. makes the unqualified statement that its mark-up from standard cost to selling price is less than one-half as much today as it was in the depths of the depression of the 1930's, and is furthermore less today than was permitted under the fabric ceilings imposed on the company during the operations of the Office of Price Administration."

INDUSTRY PRODUCING AT UTMOST CAPACITY

"Far from withholding textile production with which the industry has been charged, the Forstmann Woolen Co. has been operating on a 24-hour, three-shift basis, 6, and partially 7, days a week, and it is producing and shipping by far the greatest yardage in its history.

"The remedy for the admittedly critical phase of an inflationary period," it is declared, "does not lie in condemnation of industry.

"It resides in the policies of our own Government which controls and directs those physical factors of taxes, credits, farm, and other subsidies, wage policies, and foreign loans and grants—all of which are a direct charge upon production and distribution over which industry has absolutely no control.

"I certainly do not advocate a return to the low-wage levels of the depression, nor do I feel that wool prices should return to the low levels of the early 1930's. However, there is a palpable injustice in first encouraging increased costs and then viewing the resultant price increases of manufactured consumer goods with an alarm which overlooks the very facts that have caused them."

MACHINERY AND IMPROVEMENT COSTS TREBLED

Declaring that every company engaged in business has a corporate cost of living, Mr. Forstmann emphasizes the tremendous increase in the costs of repairs and renewals of machinery.

During the war it was impossible to replace, or even adequately repair, machinery, equipment, and buildings which were being operated and worn out at an unprecedented pace," he says. "The corporate cost of living of making these repairs and replacements has increased to a greater extent than has the Bureau of Labor Statistics cost-of-living index for an individual.

"The price of textile machinery has increased from 200 to 300 percent. In the early 1930's industrial building in the textile industry could be constructed for $4 per square foot. The cost today is approximately $11.

"Because of these facts * * * it has been necessary for the Forstmann Woolen Co. to spend and appropriate 86 percent of the company's total net income, after taxes, for the postwar years 1945 through 1947 for machinery replacement and modernization. This money is not being spent to enlarge

production facilities, but to enable the company to manufacture still better goods at still lower prices.

"The ability to invest money in new machinery and new methods is the only way to cut production costs, and therefore selling prices, in the future. It is the only way in which to further counteract the continued increases in costs of raw material and labor."

Preservation of Civil Liberties

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, December 10, 1947

Mrs. DOUGLAS. Mr. Speaker, there has come to my attention a copy of a letter sent to the President of the United States, the Secretary of State, and the Speaker of the House of Representatives, signed by 22 of the 26 members of the faculty of the Yale Law School and relating to present problems in connection with the preservation of civil liberties.

A news story on this letter appeared on the front page of the New York Herald Tribune for November 27 of this year.

In view of the distinguished authorship of this letter and because of the eminently fair and objective way in which it treats a matter of concern to all the American people, I offer this letter for inclusion in the RECORD:

YALE UNIVERSITY SCHOOL OF LAW,
November 26, 1947.

The PRESIDENT OF THE UNITED STATES,
The SECRETARY OF STATE,
The SPEAKER OF THE
HOUSE OF REPRESENTATIVES.

SIRS: It is clear from the bold and forthright report of the President's Committee on Civil Rights and other facts of common knowledge that the liberties which have so long distinguished our Nation are in danger from within as well as from without. Irremediable tragedy only can result if the advice of the President's Committee is ignored. We, the undersigned members of the Yale law faculty, take this opportunity to urge immediate and decisive action. This Nation needs not alone to be reminded that our Government is one fashioned for courageous men, who prefer the conceded hazards of living in liberty to the indignities of the police state; it needs also to reaffirm its faith and to secure its freedoms by vigorous and appropriate measures now.

We are not insensible that in a world becoming increasingly divided, our Government must take all rational precautions against acts which threaten or seem to threaten our national security and existence. Precautions cease to be rational, however, when they defeat the very ends they are designed to secure. We need not create a police state to escape a police state. It can make little difference to the citizen who loses his liberties and dignities as a human being whether his loss comes from an enemy or from a native oppressor who subverts democratic government in the guise of protecting it.

There is in our history no evidence that our faith in freedom of thought and speech is not well founded. For a hundred and fifty years the most violent dissidence of political expression has been allowed, not only as a monument to "the safety with which error of opinions may be tolerated when reason is left free to combat it," but in the abiding belief that "the ultimate good desired is better reached by free trade in ideas." It is not now apparent why the American people should be so wanting in courage or so skeptical of our foundations as to fall victim to the fears of frightened men either inside or outside the government. It is, however, unhappily true that America appears to be embarking on an era similar to that which followed the First World War. There are alarming signs that persecution for opinion, if not soon curbed, may reach a point never hitherto attained even in the darkest periods of our history. With it, we may expect racial, religious, and every other kind of bigotry which, if it is to run its full course, can loose such a flood of intolerance as utterly to destroy the civil liberties without which no democratic society can survive.

A pattern of suppression is today evolving at the highest levels of the Federal Government. The more alarming aspects of the situation include the President's loyalty order of last spring, the recent "Statement of Security Principles" by the Department of State and the current performance of the Committee on Un-American Activities of the House of Representatives. The procedure followed by the committee and that prescribed by the order and the statement are such as to subject the citizen to intimidation and abuse without redress and to expose the Government worker to loss of reputation and livelihood without the opportunity to defend his honor or his job.

It is the right and the heritage of every American freely to form political opinion and to express it; when accused of offense, to be presented with the charges against him, confronted by his accusers and given a fair opportunity to defend himself before an impartial tribunal. Under the cloak of congressional immunity or the cloak of anonymity, high officials of the national Government are today acting in disregard and in defiance of the American tradition of civil liberties and, in our considered judgment, in violation of the Constitution of the United States. It is, we believe, high time that the executive and legislative branches of the United States Government foreswear belief in witches and, by practicing democracy, set an example to those parts of the world which we hope to have embrace its principles. We therefore, urge (1) that the House of Representatives immediately abolish its Committee on Un-American Activities and (2) that the President and Secretary of State revise their present policy with regard to governmental employees suspected as disloyal or as security risks, so as to bring that policy into conformity with both the spirit and the letter of the United States Constitution.

Very truly yours,

Fred Rodell, Ralph S. Brown, Jr., Thomas I. Emerson, Eugene V. Rostow, S. E. Thorne, James Wm. Moore, A. G. Gulliver, George H. Dession, F. S. C. Northrop, Walton Hamilton, Fowler V. Harper, Wesley A. Sturges, Boris I. Bittker, George D. Braden, Henry A. Fenn, Grant Gilmore, Griedrich Kessler, Edwin Borchard, Myres S. McDougal, Addison A. Mueller, David Haber, Fleming James, Jr.

The Age of Great Challenge

EXTENSION OF REMARKS
OF
HON. SAM RAYBURN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, December 17, 1947

Mr. RAYBURN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address entitled "The Age of Great Challenge," by Fred M. Vinson, Chief Justice of the United States, before the annual meeting of the American Bar Association, Cleveland, Ohio, September 22, 1947:

At some point in the distant future, scholars poring over the history of our time may well label the days through which we are passing as "The Age of Great Challenge." There can hardly be a thinking person in our country today who has not experienced the sense of urgency and crisis which our age envisions. The challenges cannot be ignored. They confront us in every aspect of human activity—in the political and economic, in the social and intellectual, and in the moral and spiritual realms.

Fundamental values upon which we have erected the edifice of our civilization are under attack. Our very successes in responding to the challenges of our time have bred new crisis and new challenge. Thus, confronted with the military might of the Axis, we rose to meet that test. In achieving success, we have fallen heir to the grave problems growing out of a postwar world in need of physical and spiritual rehabilitation. Our age gives striking confirmation to the observation of Mr. Justice Holmes that "repose is not the destiny of mankind."

The symptoms of this age of crisis are many and familiar. Perhaps the most striking evidence of the confusion of our time is the conception of the nature of man which forms a part of many widely-held ideologies. Under this view, man is a mere automaton incapable of sharing in the determination of his own destiny, bereft of dignity, capable of responding only to the grosser of materialistic motivations and irrational passions. That such a creature is incapable of exercising the high privilege of self-government is obvious. Essentially this conception of the nature of man underlies all of the totalitarian doctrines of our day, and unfortunately, it underlies the thinking of some in our own midst who shrink from its inevitable and logical conclusion. This conception contains the seeds of destruction. We must resist it and prove it fallacious.

But we see evidences of crisis elsewhere. We are confronted with the challenge of the weakening of the family and the loss of the spiritual values growing out of the strong family bond. As lawyers, we have been made disturbingly aware of a growing lack of faith in and respect for law and the legal process. After the First World War the ideal of the supremacy of law was subjected to successful attack in many countries with the result that the legal systems of those nations abdicated their high functions and in cynical subservience served the demands of all-powerful states. But the challenge to the supremacy of law has not been confined to the totalitarian regimes. In our own country we have seen evidences that there are those who have failed to realize that the only alternative to the supremacy of law is anarchistic chaos or the region of a personal dictator.

We need not explore the symptoms of our age at greater length. We are all conscious of their existence; they confront us at every turn. They confirm the proposition that we are, indeed, passing through the age of great challenge.

An age of great challenge is an age of danger and difficulty, but it is also an age of great opportunity. Though the hazards are real and menacing, the opportunities for great achievement are correspondingly enhanced. Rarely in human history have men been accorded so high a privilege and so appalling a responsibility. The release of atomic energy, for example, is fraught with dangers which could spell the doom of our civilization, but it also creates opportunities for advances in human welfare never before contemplated.

As lawyers, we have been accorded peculiar privileges and, therefore, we have inherited peculiar responsibilities. Perhaps no group in our society is in so favorable a position to observe and to contend with the challenges of our day. It is entirely appropriate, therefore, that we, from time to time, should give particular attention to the problem of how we may intelligently respond to the challenges that confront us, and then go forth to meet the demands of our age.

Men react to challenge in many different ways. In every age of crisis, there are those, for example, who react by attempting to escape challenge or to ignore it. Those persons live in the vain delusion that by avoiding responsibility and shrinking from the struggle they may find peace and security. In the words of Justice Holmes, they exist under the peril "of being judged not to have lived." We cannot escape the challenges of our time. Failure to respond in the face of crisis results in quite as positive consequences as the courageous assumption of responsibilities. A policy of drift can lead only to disaster. I would leave this thought with you: "He who lights a candle is better than he who curses the darkness."

There are also those who react to challenge by rigidly opposing all change and all innovation. There are others who reject all the methods and techniques of the past and find virtue only in the new. Frequently, such persons are sincere and well-intentioned. They are aware that the civilization which they value is under attack. The one group attempts to preserve and defend it by insisting that, in a changing world, the old institutions shall remain unchanged and inflexible and that the old forms of action shall remain unaltered. The other group reacts by insisting upon the precipitous abandonment of the entire legacy of the past without adequate consideration of the consequences. Both groups make the error of failing to distinguish between the essential values of their civilization and the transitory forms by which those values are given expression. They fail to realize that by insisting upon the use of outmoded techniques or by indiscriminately rejecting all that is old, they make impossible the effective defense of the foundation rocks of their civilization which are essential and timeless.

But there are other more constructive ways in which to react to the crisis of our time. We need, first of all, to reaffirm our faith in the fundamental values upon which has been based all that is worthwhile in our society. We need to revitalize our conviction that that society is best which gives the greatest practical recognition to the dignity of individual man and which affords greatest opportunities for the development of the higher potentialities of all men. We need to develop the same high sense of personal responsibility which led the early American statesman, George Mason, to write: "The debts we owe our ancestors we should repay by handing down entire those sacred rights to which we ourselves were born." We need, finally, to devote our full intelligence and greatest efforts to the task of devising ways and means whereby those essential values can be given their most complete expression in a world of flux and change.

Perhaps the greatest hazard which besets us today is the danger of losing faith in ourselves. In the fact of the crisis of our time, some may be tempted to doubt the adequacy of human capacities to contend with the challenges which confront us, to fear for our ability to defend and preserve our civilization—our way of life. Such fears are irrational, but their consequences can be grave. The courage and sacrifice of our people in time of war mounted the heights. Courage and sacrifice were the paramount ingredients of the miracles of production on the home front and the heroic deed on land, sea, and in the air. The courage and sacrifice of our sons and daughters in the face of death should shame us for our fears today. "Courage," 'tis said, "is fear that has said its prayers." And sacrifice, to paraphrase Emerson, is the real miracle out of which all the other miracles grow. We must be alive and alert to the problem of a shaken world; we need not be mercurial in arriving at quick conclusions as to the efforts to solve our problems; we must have patience, tolerance, and understanding. We need always to keep a sense of proportion. The problems we face are human problems, and, therefore, are capable of human solution.

We should recall that this is not the first period of crisis and challenge in which the American people have found themselves. Our Nation was born in crisis. It was founded upon a political ideal held in hatred and contempt by the rulers of powerful and hostile nations. We too easily forget the fears and doubts which must have beset the minds of those who had pledged their "lives and sacred honor" to the task of founding a government by the people in the face of internal dissensions and external opposition. We have recently celebrated the one hundred and fifty-eighth anniversary of the adoption of the Federal Constitution.

During the long period in which our National Government has been functioning there has not been a generation which has been free from crisis and challenge. Our fathers emerged from those struggles in the past with added strength and wisdom. Our children—and their children—demand no less of us. The courage and sacrifice necessary for us to keep faith with them must be grounded on the conviction so well expressed in the opening lines of An American Creed, written by a great contemporary, Cardinal Spellman:

"I believe in America, in her high destiny under God to stand before the people of the earth as a shining example of unselfish devotion to the ideal that has made us a great Nation; the Christian ideal of liberty in harmonious unity, builded of respect for God's image in man and every man's right to life, liberty, and happiness."

With this faith in our country, with a spirit of understanding, courage and sacrifice, we may be assured that the age of great challenge will usher in the age of great achievement.

Stock Piling of Critical Materials

EXTENSION OF REMARKS

OF

HON. WILLIAM F. KNOWLAND

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Wednesday, December 17 (legislative day of Thursday, December 4), 1947

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Stock Piling Critical Materials," written by John Gerrity and published in the current issue of the Pathfinder magazine. The article deals with the stock piling of critical materials, with particular reference to how that might be done in conjunction with the Marshall plan.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STOCK PILING CRITICAL MATERIALS

(By John Gerrity)

Until world peace becomes a reality—not frail promises of good behavior—threats of violence between nations will force the United States to consider and prepare for the awful business of war.

For its own defense and for the protection of weaker, friendly nations, this country's military and industrial leaders are building an arsenal of war tools; piling up vast stocks of raw materials for future war tools. Far from being warmongers, these men, charged with maintaining United States military strength, are simply using good common sense. For should another war arise, victory or defeat will hinge upon how much mercury, tin, tungsten, quinine, pepper, and other critically needed strategic materials the United States has to throw into that war.

Without some 85 of these materials this Nation could not even begin to fight. With not enough, she would certainly lose the fight. And if she is able to secure and hold large enough stocks of the world's supply she can, by denying other nations these same materials, dissuade them from starting wars.

That, in a nutshell, is why the United States will spend about $2,500,000,000 for critical materials between now and 1952. As long as the now whimsical hope of the Atlantic Charter for "abandonment of the use of force" remains only a hope, this Nation must literally buy world peace.

False cloak-and-dagger notions of stock piling to the contrary, only the size and locations of stock piles are kept secret. Such information, if made public, could indicate the cope and nature of military plans. Hence few Americans know the listed needs. Nor do they know precisely why those materials are needed or how they are used.

Yet if any American is curious enough to find out just what his country is buying and saving to preserve world peace all he need do is wander into his own kitchen—and open his eyes. For there, in one form or another, are many of the scarce 85 materials which United States military authorities consider vital to the successful waging of war.

Tungsten is in his light bulb. The essential insulator, mica, is in his wife's toaster or electric iron. Tin covers cans of food. Pots and pans are made of aluminum. The dry-cell battery for an electric doorbell probably has a manganese base. A cocktail shaker is chrome plated. Match heads contain antimony. The kitchen sink was bathed in zirconium before it was enameled. Without thin plates of quartz a kitchen radio would be useless. Tantalum or beryllium was used to harden the interior of the oven so that it could stand great heat. Mercury rises and falls in the glass tube of a thermometer. And in at least a score of places rubber can be found.

Because these and other materials of commonplace use in most homes are scarce, the United States is now engaged in a worldwide race to build great reserves. Without them America's "have" position in many essential minerals like iron, copper, and lead would be meaningless. For only through rare-metal alloys can guns, tanks, warships, bullets, medicines, aircraft, radar, atom bombs and the rest of the items in the national war-chest be made.

LOWLY TIN TOPS THE LIST

Using a few of the samples found in the average kitchen, it is worth while to examine their sources, the estimated amounts available and their uses in war.

Tin, most critical of strategic materials, comes mainly from British-owned Malaya, the Netherlands' East Indies, and Bolivia. Next year these three sources alone will furnish the world 151,000 tons of the total 207,000 expected tons. Of this world supply America needs about 90,0000 tons for civilian and military purposes. From Britain and the Netherlands—participants in the European recovery program (the Marshall plan)—United States expects to receive for stockpiling purposes $85.6 million worth of tin. Since tin is used in nearly every weapon and

because United States must depend entirely upon foreign sources, it is easy to understand why one-third of the $253,000,000 worth of strategic materials which the Harriman committee hopes for, will be spent on the "least respected" of all metals.

Chromite, which turns up on radiator grilles and bicycle handle bars, is another strategic metal for which United States must rely mainly on imports. The Philippines, Turkey, Union of South Africa, Greece, Yugoslavia, Southern Rhodesia, Cuba, and New Caledonia are main sources. From Britain (Southern Rhodesia), France (New Caledonia) and Turkey—three suppliers covered by ERP—Munitions Board expects to receive next year about 104,250 tons worth about $6.2 million.

Three times as strong as aluminum, chromite shows up in a host of war tools. America can proudly say that it put a chromium plated Army of 15,000,000 men on the field in World War II, for every GI uniform was dyed and toughened with a chrome-base dye. The rear sight on every Garand rifle was made of a chrome-steel alloy, which a housewife calls stainless steel. Stainless steel covered most light-weight armor plate. And the wings and fuselages of many American planes were made of the same critical stuff.

BERYLLIUM FOR JET ENGINES

Of little known—but vitally important—beryllium, the United States had 4,118 tons in stock last September. Because Argentine and Australian sources are fast being depleted, future supplies of beryllium are a matter of great concern to the Government. For beryllium, along with tantalum, is the material which will make jet planes and self-propelled missiles of future wars possible. Mixed with steel it creates an alloy capable of resisting extreme heat—such as that generated by jet engines. Without that alloy a jet pilot might easily find his tail burning behind him.

Beryllium has an even more vital use. A casing made of it is the only thing which will raise the explosive efficiency of the plutonium in an atomic bomb, assuring its instant disintegration.

Other metals are equally important and hard to get. Tungsten is another steel hardener. Mercury forms the explosive base of detonators. Antimony, for which the United States depends almost entirely upon Britain, is still another hardener. Tantalum, which can be found in an ordinary radio tube, comes mainly from British-owned Malaya and the Dutch East Indies. Its rust-resisting qualities made it indispensable in bayonets. Its acid-resistance makes it essential for the manufacture of synthetic rubber. Many a broken skull has been repaired with a tantalum plate. And radar can't work without it.

So it is with every one of the 85 strategic items. Each contributes much to America's security. If, in 1952, the United States can point to the world's finest stock pile, the $2,500,000,000 will be well spent.

Stock piling is no hush-hush mystery. In July 1946 Congress, knowing the United States to be a have-not nation in many vital war materials, authorized the Munitions Board to find out what was needed and go out and buy it. The Board, headed by Thomas J. Hargrave, president of the Eastman Kodak Co., is comprised of Secretaries of the Army, Navy, and Air, and professional soldiers and sailors, expert in what it takes to make a war machine tick.

Twice each month the Board meets, reviews inventories of present stocks, considers most urgent needs, and orders the Federal Bureau of Supply to buy whatever is available.

While it is true stock piling has lagged—of $350,000,000 scheduled purchases only $250,000,000 were acquired last year—the scare-report, that the men in charge of the program have fumbled the ball, is untrue. The Federal Stock Piling Act specifically rules out any purchases which civilian industry needs, thus sharply restricting the Board's buying. Moreover, while there is a "buy American" clause in the law (it's obeyed) many critical materials can come only from abroad. Hard hit by the war, most foreign producers cannot now meet the United States demands. So long as these conditions persist, stock piling will lag and strategic materials will become more critically short.

In this light, early this month when Congress begins its study of the administration's European recovery program, the question, "How much can Europe repay in strategic materials?" will gravely influence the volume of aid to 16 nations.

FOR US—FROM EUROPE

Admitting that its estimates are not much better than guesswork now, the Harriman committee claims that the United States can draw from Europe about $250,000,000 a year in strategic materials.

Should ERP funds expand production to the extent that the program sponsors hope for, here's how some recipient nations and their empires can bolster America's stock pile:

United Kingdom	$119,612,000
Belgium	63,740,000
Netherlands	48,600,000
France	11,549,000
Portugal	4,500,000
Norway	2,000,000
Sweden	2,000,000
Turkey	1,600,000
	253,801,000

Still to be decided is which of two systems the United States will use to get these strategic materials. Under the first method proposed by the House Foreign Aid Committee the 16 western European nations would simply transfer the materials to the United States. The dollar value of the transfer would then be regarded as part payment for aid.

The other proposal—which the State Department favors—would allow foreign producers to sell for dollars whatever critical materials they will not need for home use. In this way, State argues, United States would provide American dollars which could be used to pay for some of the benefits granted under ERP. Furthermore, the State Department insists, because the most critically needed of all strategic materials are those which must be bought abroad, the buy-American clause of the stock-pile purchase law would not have to be changed.

BUY EARLY AND SAVE

The stock-piling law and whatever law Congress writes to make ERP possible would dovetail to the mutual advantage of the United States and European nations. Frankly admitting that some degree of dollar imperialism is inevitable—even desirable—State claims that dollar purchases, plus 50-percent tariff cuts on many imports of critical materials effective January 1, will serve as potent shots in the arm to Europe's production.

While there is no preclusive buying comparable to that of 1942–45 (Portuguese wolfram, from which tungsten is made, rose from $5 a ton to $463 a ton), some aspects of a buying race are already apparent. Argentina, for example, has signed a 5-year contract to buy 8,000 tons of Bolivian tin at 76 cents a pound—and none of this will be for reexport. All will go into Peron's war stock pile, since his government has stopped exporting any strategic materials.

And while no Government experts are sure of amounts, they know that Russia is building up all its stocks as rapidly as it can.

Grain Conservation Program

EXTENSION OF REMARKS
OF
HON. THRUSTON B. MORTON
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 17, 1947

Mr. MORTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Louisville (Ky.) Courier-Journal of December 14, 1947:

COX CLAIMS GRAIN-SAVING PROGRAM IS CREATING DISTILLERY MONOPOLY—SAYS PUBLICKER IS BENEFITING

The Government's grain-conservation program is fostering a monopoly in the distilling industry, Millard Cox, counsel for the Kentucky Distillers Association, charged yesterday.

It has given one company—Publicker Industries, of Philadelphia—a commercial advantage over all others, Cox declared.

Wartime expansion by the Government made Publicker the country's largest producer of beverage spirits, Cox said. And the Government's grain-allotment program gave Publicker the lion's share of grain, he added.

TRACES GROWTH OF FIRM

If shut-downs—such as the present whisky holiday which Cox said Publicker asked for—and other restrictions continue, Publicker will be able to "force the trade at its own price" to buy the beverage spirits valuable in blending whisky, Cox said.

Cox traced the growth of the Publicker Co. as part of his answer to the Government's request that distillers hold down their use of grain to half of normal for at least 6 months after the present whisky-making holiday ends Christmas Day.

This proposal, recommending that the industry ration itself to 2,500,000 bushels of grain a month, would give Publicker as its share 416,000 bushels a month, or 100,000 bushels more than is used by the next largest producer, Joseph Seagram & Sons, Cox said.

WON'T SAVE MUCH

Cox further charged that such a program of "partial" rationing won't mean much in the over-all saving in grain anyway because the distilling industry "never has used more than a fraction of 1 percent of the entire grain crop."

"It was the only grain-using industry that was called upon to shut down completely, although it is one of the smallest users of grain."

Cox, who with a group of Kentucky distillers will attend a meeting in Washington Wednesday to consider the Government's rationing proposal, also noted that the grain saving during the present whisky holiday has been less than negligible because:

"The whisky holiday was announced October 5 and became effective October 25," Cox said. "And in October the whisky production for the United States declined from September.

SAYS MORE GRAIN USED

"But the spirits production went up. It was 7,000,00 gallons in September; 20,000,000 gallons in October. In those 20 days between the time the whisky holiday was announced and it went into effect, more grain was used than would normally have been used in 3 months.

"And who used it? Why it's obvious that the country's largest producer of beverage spirits and the one that originally asked for the whisky holiday did," Cox said, referring to Publicker.

Going back to October 1942, Cox observed that the country's distilleries were converted to wartime use because of the need for alco-

hol. This wartime need was so great that existing facilities had to be expanded and new plants built.

The Government built three plants in Iowa, Nebraska, and Missouri and then decided that it would expand the Publicker firm in Philadelphia.

"The Government spent $13,000,000 expanding the Publicker Co. and used steel and copper and other materials which had high priorities," Cox said. "These, of course, were denied to other distillers for expansion."

After the war, when the industry began to reconvert, tthe Secretary of Agriculture, under the War Mobilization and Reconversion Act, allocated grain for beverage distilling. At that time, Cox said, Publicker had a production capacity equal to the 61 distilleries in Kentucky.

CAPACITY BASIS USED

"The grain was allotted on a capacity basis," Cox said, "and as a consequence Publicker received an enormous share.

"Before the war Publicker produced 2.8 percent of the beverage spirits in this country and Seagram's produced 20 percent. In August 1946, Publicker produced 20 percent and Seagram's 10 percent."

In February 1947, the restrictions on the whisky industry were lifted and the distillers could produce in practically unlimited quantities. During this time Publicker's production of beverage spirits declined.

"But in the fall when the President recommended a curtailment on a 50-percent basis Publicker asked for a shut-down," Cox said. "Publicker had a great deal of immature whisky on hand which during a shutdown would have greater value. Continued operations would have the opposite effect—it would depreciate.

PRICE ALMOST DOUBLED

"Although Publicker asked for the shutdown because the company said they wanted to save grain for Europe, more grain was used in the 20 days prior to the whisky holiday than normally would have been used in 3 months.

"The trade has been forced to buy the valuable beverage spirits from Publicker and the price of spirits almost doubled. A series of indefinite shut-downs plus an inequitable grain-allotment program would force all the trade t buy from Publicker."

Under the Government recommendation advanced yesterday grain would be allotted on the basis of usage during December 1946, and January, February, March, 1947, and on plant capacity.

This program again would give Publicker the advantage, Cox maintained. He suggested that the program be based on the percentage of use of grain for beverage purposes by the distilling interests during the 4 months mentioned.

Secretary of Agriculture Clinton Anderson proposed that the new plan, which also calls upon the distillers to forego the use of wheat after the distillery holiday ends, be carried out "during the next 6 months and so long thereafter as the need for grain conservation continues."

Anti-American Propaganda in Europe

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 17, 1947

Mr. CASE of South Dakota. Mr. Speaker, under permission granted by the House, I place in the RECORD my remarks at Town Hall's Town Meeting of the Air, New York City, December 9, 1947, on the subject How We Can Combat Anti-American Propaganda in Europe:

Thank you, Mr. Denny. As you said, Congress is considering a program for half a billion dollars' worth of additional aid in war-devastated countries. That is in addition to one billion three hundred and thirty million already appropriated this year for overseas relief, and does not count another half billion requested for additional relief in the occupied countries. It is discouraging to spend such money and have our motives misconstrued by anti-American propaganda.

Mr. Mellish seems to think this anti-American propaganda is increasing. General Donovan sees it clearly as a subversive war, a war of maneuver against us. Senator LODGE, as a good former newspaperman, suggests that we must decide what to say and how to say it.

I have three points of comment, Mr. Denny, and three suggestions.

First of all, while anti-American propaganda may be increasing in volume, violence, and Vishinsky, I do not think it is increasing in effectiveness. For basically no government can gain converts by professing democracy while it liquidates its political opponents, keeps war prisoners for slave labor, and sends its civil prisoners to Siberia.

A wise man once said, "What you do speaks so loudly, I cannot hear what you say."

In Hamburg, Germany, I met a woman who spent months in a concentration camp. Storm Troopers heard her say, "Hitler is crazy." "How did you come to say that—out loud?" I asked. "Because after every raid Berlin radio would say 'Royal Airforce Kaput'," she replied. "But next day RAF come again and our cities were kaput."

So, comment No. 1 is to remember that facts speak louder than words. Comment No. 2, it doesn't pay to waste time and effort trying to answer every Red that talks.

Theodore Roosevelt once got a letter from a son in college. "Why don't you tell these critics off," the boy wrote. "I'm too busy getting my work done," the great Roosevelt answered. "If the postman stopped to argue with every dog that barked, he'd never get the mail delivered."

Dogs bark. Bears growl. That's their nature. If they didn't the crowd back home would think they had gone soft. So if what we are doing is right, let's keep on doing it and let the Russian bear growl.

Comment No. 3. We should not hide our light under a bushel.

Sterling Morton, whose salt always pours, told me this personal experience. He was getting a tire fixed in France. The French repairman told him that Russia was a great friend. Why? Because they had sent two shiploads of wheat to France last winter. What about the United States? Oh, he hadn't heard of anything they had done. Congressman ANDRESEN says all we had done was to supply the money that paid Russia for the wheat.

You remember the old saw about kissing a girl in the dark; you know what you're doing, but no one else does. So point No. 3: Tell 'em.

Now then for suggestions. The Voice of America needs money of course. It would have had more money last year if Mr. Benton had resigned earlier. He simply had lost the confidence of Congressmen who control the purse strings.

Why? The messy, so-called art pictures, for one thing. The circus girl—and those futuristic splotches which Mr. Benton himself couldn't identify. They looked like the mural atrocities perpetrated in the post offices back in WPA days. That such stuff should get $49,000 of taxpayers money bred suspicion of the whole program.

Incidentally, Benton's chair has been empty for months. If this work is so important, Mr. Truman better get somebody on the job. But now for the suggestions.

No. 1. Better teamwork between Washington and the field.

Last week, a former South Dakota woman wrote me from Costa Rica: "Why not give the whole world the same programs the average American listens to at home? The programs have been so terrible that no one bothers to listen to them."

In Austria and Germany it was hard to find anyone who listened. Finally in Heidelberg, two university professors said they had. "How do you like them?" we asked. "Too high brow," the professors said. "These people are hungry."

No. 2. Use the normal channels of publicity more.

I asked some German city officials what paper they liked best. "Stars and Stripes," our Army paper, they replied. Why? "Because it's what you publish for your own people," they said. "We think it's more likely to be the truth and not propaganda.

Several good American publications have foreign language editions. They should be put in all the reading rooms of Europe—including the so-called satellite countries.

No. 3. Make more paper available in the occupied countries.

Our one overt paper, Die Neue Zeitung, has about 1,000,000 circulation where it could have 3,000,000 if they had the newsprint. In Berlin, where we have a chance to tell our story in our sector and let it spread into the Russian zone, circulation has been cut from 200,000 to 100,000 for lack of paper. In Munich, Catholic and Protestant leaders joined in appealing to us for paper to counteract a flood of communistic publications. They wanted magazine paper to print Bibles and religious publications. A youth organization with 150,0000 members did not have a single medium of printed publicity or communication.

If the metropolitan press which cries so loudly for more funds for the Voice of America would share their newsprint with Europe—well, our homes wouldn't be so cluttered up on Sunday morning and there would be more paper to do the job, over there.

Summing up, Mr. Denny, the way to combat anti-American propaganda in Europe is to be sure we are doing a good job and then—let the Eagle scream.

Veterans' Emergency Housing Program

EXTENSION OF REMARKS

OF

HON. GEORGE MacKINNON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 17, 1947

Mr. MACKINNON. Mr. Speaker, under leave to extend my remarks, I include the following statement prepared by the Federal Housing Administration setting forth the new-home mortgage commitments issued under section 603 of the Federal Housing Act—veterans' emergency housing program—from May 22, 1946, through October 31, 1947.

Sec. 603, veterans' emergency housing program—new home mortgage commitments issued, May 22, 1946, through Oct. 31, 1947

They're Out To Get Taft

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES

Wednesday, December 17 (legislative day of Thursday, December 4), 1947

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting and enlightening editorial which appears in today's issue of the Philadelphia Inquirer.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THEY'RE OUT TO GET TAFT

Democratic National Chairman McGRATH has hit something like a new low in political bad sportsmanship in announcing that his party would be "cut to get" Senator ROBERT A. TAFT, whether or not the latter wins the Republican Presidential nomination next year.

Mr. TAFT, apparently, is to be made the "whipping boy" of the Democratic Party, if the plans of the neophyte chairman are carried out. Upon him the Democrats will vent their spite and spleen, regardless of the outcome of the Republican National Convention. They will try to "get him"—an elegant phrase much used in hoodlum circles.

We do not believe this expression of malevolence directed at Senator TAFT will do him any harm. More than anything else it would seem to indicate that McGRATH is terribly frightened of TAFT, of his influence and his ability.

Mr. TAFT has gained the respect and admiration of the American people for his distinguished service in the United States Senate, and he is not likely to suffer any loss of political stature because of Chairman McGRATH's ill-tempered and unsportsmanlike threat to "get him."

The Why's and Wherefore's of the Marshall Plan

REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 17, 1947

Mr. MASON. Mr. Speaker, paraphrasing the old saying, "Chickens come home to roost," I want to point out that our leaders' international mistakes have now come home to roost, in the form of the Marshall plan. In their futile efforts to appease Stalin at Teheran, at Cairo, at Quebec, and again at Potsdam, President Roosevelt, and later on, President Truman, made mistake after mistake, all of which have now become history. As a result of these mistakes we have thrown away in two short years since hostilities ceased almost every advantage we won in the war, and we have already handed out something like $20,000,000,000 in an effort to try to correct those mistakes. Now we are told that in the cold war in which we are now engaged, largely as a result of those mistakes our leaders made, we must adopt the Marshall plan

and give away at least twenty to thirty billion dollars more.

Mr. Speaker, when President Roosevelt agreed with Stalin and Churchill to divide Germany into four zones of occupation, each zone to be governed or controlled by one of four victorious nations—thus dividing the German economy into four different segments—he made a great mistake. When later he accepted the Morgenthau plan for postwar Germany—a plan to make Germany into a pastoral nation, a nation of potato patches—the German people's postwar conditions was made impossible. To pay for these mistakes we have spent during the past 2 years $500,000,000 to keep Germany from starving. This burden will get heavier when Britain pulls out of Germany as it is reported she intends to do. Because of the mistakes made by our leaders in trying to appease Stalin we now have to support our defeated enemy. As Lewis H. Brown, president of Johns-Manville Corp., says in his excellent report on the German situation:

> The decision of President Roosevelt to stop the forward push of the western Allied armies until the Russian Armies from the east could take eastern Germany and reach Berlin was one of the most fateful mistakes of the war, and it may well have repercussions in the pages of history yet to be written.

Eastern Germany, now under Russian control, is the breadbasket of Germany. With this in Russian hands, how can western Germany, the industrial Ruhr, feed itself? Because of this mistake of Roosevelt's, Stalin now holds the breadbasket of Germany and we supply the breadline of Germany. In destroying the German industrial system we destroyed the whole economy of Europe, damaging friends along with foes.

Mr. Speaker, the industrial heart of Germany for many years before the war was the hub of European industrial activity. Around this hub the economic life of all Europe revolved. Under the Morgenthau plan we destroyed the industrial heart of Germany, so there is no longer any hub around which European industrial and economic life can revolve. As a result Europe is flat on her back—industrially, economically, financially, and politically. Because the European nations are in such a prostrate condition, Stalin has a golden opportunity to communize the whole of Europe. He planned it that way and our leaders were foolish enough, shortsighted enough, to agree to his plans.

The Marshall plan now proposes to correct, if possible, the mistakes we made when we adopted the Morgenthau plan and divided the German economy into four segments. The Marshall plan, if adopted, would provide during the next 5 years from twenty-five to fifty billions of dollars worth of needed materials, such as coal, steel, machinery, railroad equipment, trucks, factory equipment, and so forth, to put the European nations back upon their feet so that they may once again support themselves. The hope is that by doing this we will prevent them from falling victims to the Communist octopus.

The Marshall plan, if adopted, will mean that the American taxpayer will continue to pay the present high wartime taxes, and perhaps have them increased. However, the greatest impact of the Marshall plan will be felt by us in present scarce goods becoming more scarce, and present high prices going higher and higher. With the adoption of the Marshall plan we Americans must continue to pay for the mistakes made by our leaders.

Mr. Speaker, the mistakes our leaders have made are also costing the German people vast sums in the booty that has been and is being taken from them, mainly by Russia. The extent of this booty being looted from Germany by the occupying forces is shown in the following article from the front page of the Chicago Tribune of Monday, December 15, 1947:

REICH SEES SEVENTY-ONE BILLION PAID SO FAR—LISTS LOOT TAKEN BY VICTORS

(By Hal Foust)

FRANKFURT, GERMANY, December 14.—British, French, and Russian enslavement of between 2,000,000 and 3,000,000 former German soldiers for more than 2½ years since VE-day constitutes reparations payment of $2,000,000,000, according to German calculations.

The robbery of 10,000,000 Germans and Germanic people shunted from their homes in Stalin's expanded zone of influence is listed by the Germans as a reparations payment of $16,200,000,000. This is their estimate of the value of private fortunes stolen from families jammed into the shrunken reich under the Stalin-Truman-Attlee pact at Potsdam.

STATEMENT OF ITS CASE

Figures are from a study nearing completion which will become Germany's statement of its case if and when it has the opportunity to bargain with World War II victors over their collections of loot, booty, and compensations for losses. The study concludes that the equivalent of $71,000,000,000 has been taken from Germany since the end of the war. It is almost as much as wartime damage estimated at $100,000,000,000.

The American taxpayers have a peculiar interest in this bargaining and therefore in this German statement of the case. The United States alone among the victors is not grabbing for slaves, territories, goods, and properties. It is also alone in paying around $1,000,000,000 a year to relieve distress in Germany caused by Washington bowing to the cupidity of its World War II allies.

DISMANTLED FACTORIES

Expropriated German factories, still being dismantled while the Marshall plan is being implemented to boost Europe's productivity, are listed in a survey as accounting for $5,000,000,000 reparations payment. Another $3,200,000,000 is drained from the German economy to cover the cost of dismantling and shipment.

The largest single item in the accounting is $28,000,000,000 listed as the value of the Saar taken by France, and the slice of east Germany given to Warsaw by its Kremlin patron as compensation for the Soviet taking of eastern Poland.

Russia and France are charged in the report with having requisitioned German food and manufactured goods from current production worth $2,000,000,000. This one extraction from Germany by Russia and France is approximately at the same rate as the American donations to the German economy, mainly in food gifts.

REDS COLLECT TAXES

Taxes collected by the Soviet in its occupation zone are listed for another $1,800,000,000.

The ruthless slaughter of German forests, with little regard for detriment to agriculture or the future of woodland industries, is listed as reparations payment of $400,000,000 to date. England and France are still avidly felling more trees.

Manipulations in currency in the British zone are charged as a $700,000,000 reparations payment.

Patents, trade-marks, and scientific reports taken by the Allies are evaluated at $5,000,000,000. German assets sequestered abroad are valued at $3,900,000,000, gold seizures at $300,000,000, and merchant ship confiscations at $200,000,000.

For mixed services performed for the four occupation powers, German accounting presents a bill of $1,800,000,000.

Establish an Educational Fund for Citizens of Finland Out of World War I Debt Payments

EXTENSION OF REMARKS

OF

HON. JOHN B. BENNETT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 17, 1947

Mr. BENNETT of Michigan. Mr. Speaker, I have introduced a joint resolution which would provide that all future payments by the Republic of Finland on its World War I debt to the United States be placed in a special fund in the Treasury of the United States. This fund would then be used to finance studies, instruction and technical training in the United States for citizens of the Republic of Finland. This education and training would enable the people of Finland to have the services of a new generation of technical experts to aid them in their efforts to rebuild their country and its shattered economy.

Finland is the only European country which has consistently recognized the sanctity of its financial obligation to the United States. Year in and year out—in good times and bad—Finland has pinched and saved to make payments upon its World War I debt tc this country. Other nations have fallen by the wayside—repudiated their obligations to us one day and come back the next asking for more money. Finland alone has paid and paid. If we were to do real justice to the Finns, we ought to cancel the balance of their World War debt in its entirety. The original loan to Finland amounted to approximately $8,400,000. Up to now approximately $8,060,000 has been repaid but practically all of the past payments have been applied on interest and hence the principal of the loan has not been greatly reduced. The original indebtedness of Finland arose on account of relief supplies which we furnished that country under an act of Congress approved February 25, 1919. It seems ironic, in the face of our generosity in giving away billions in relief to other countries, without any expectation of being repaid—that we should require payment of a similar obligation from the Finns.

I intend very shortly to introduce a resolution to authorize the President to cancel the remainder of this indebtedness.

But in the meantime, and as long as further payments are being extracted from Finland, it seems to me that we should do something in the way of repaying that gallant nation for its basic honesty and integrity.

The present resolution which would provide educational benefits for young Finnish people would at least partly atone for our policy for austerity toward Finland.

Address of Hon. Charles A. Halleck, of Indiana

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, December 17, 1947

Mr. SIMPSON of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech of Congressman CHARLES A. HALLECK, of Indiana, majority leader of the United States House of Representatives, at the annual dinner of the Pennsylvania Society, Waldorf-Astoria, New York City, Saturday evening, December 13, 1947:

Mr. President, General Eisenhower, members of the Pennsylvania Society, and fellow Americans, it is indeed an honor and a privilege for me to be invited here tonight. The Pennsylvania Society is recognized as one of the most unique and distinctive in the United States. I can readily understand why that is so.

From what I have observed tonight I have no doubt that your organization has done much for furthering the best interests of Pennsylvania. You have definitely convinced me—a native of Indiana and a zealous Hoosier—that there is more than one reason why Pennsylvania is known as the Keystone State.

Many years ago, when historic Georgetown still was the metropolis of the north bank of the Potomac and the city of Washington was little more than a plan on paper, a bridge was erected to connect the two across Rock Creek. There were 13 stones on the face of the arch of the bridge on which were inscribed the abbreviated names of the 13 States that had created and successfully defended the Union. On the keystone of that arch were the letters "PA."

It may be a matter of debate as to whether that was the actual origin of the nickname Keystone State. Nonetheless, the name is aptly descriptive of the outstanding role of Pennsylvania in American history and industry. I do not believe any State has made a greater contribution to the building of America, from the year of its founding by William Penn to the present day.

Pennsylvania is a great producer of coal, oil, and steel. It is rich in raw materials, in agriculture, in industry, and in vitally necessary financial institutions. But in more than this, Pennsylvania is great. It is rich in culture and tradition. Indeed, here are people with vision, initiative, ingenuity, and drive. It can be truthfully said: "Pennsylvania has everything."

Philadelphia is the birthplace of American liberty. Even today it is the Convention City. You will forgive me if I make passing mention of the fact that it will be in Philadelphia next June that the next President of the United States will be nominated. I hope you have taken special note that I was careful to refer to the June convention.

As a loyal and devoted Hoosier, I naturally wondered why I should be invited to this dinner of loyal and devoted Pennsylvanians. I imagined I might find mysef in somewhat the same position that my good friend George Wharton Pepper, tells that Cal Coolidge found himself in when he was Vice President.

According to Senator Pepper, the Coolidges were living in the Willard Hotel in Washington, when a fire alarm in the middle of the night brought every guest into the lobby in a variety of attire. Mr. Coolidge speedily surmised that there was no danger and started to trudge back to his room.

"Nothing doing," said the fire marshal, "Get back in that lobby."

"You are speaking to the Vice President," said Coolidge with some dignity.

"Okay, then," said the marshal, "go ahead."

A moment later he called suspiciously, "What are you vice president of?"

"The United States," said Coolidge.

"Come right back down here," ordered the marshal. "I thought you were vice president of the hotel."

As deeply as each of us loves his native State, we have a common love and devotion that is even deeper and more abiding. That is our love and devotion to these United States and to the principles of freedom and justice for which she stands. And we have a common task. That is to preserve and to make secure those cherished principles that make this country the one great hope of the liberty-loving people of the world.

Under the bold and brilliant military leadership of such men as your guest of honor, Gen. Dwight Eisenhower, a God-fearing man devoted to his country, we fought and won a bloody and costly war to preserve the American way of life. That we might continue to enjoy the material, cultural, and spiritual riches that only freemen can attain, thousands of our young men and women made the supreme sacrifice. They, and the things for which they fought and died, are part of our great heritage. We must prove ourselves worthy.

The problems confronting us, as an aftermath of the war, are as real and vital as those that confronted us during the war. We won the war. But we have yet to win the peace.

On the economic, diplomatic, and political fronts the conflict between freedom and totalitarianism continues.

To achieve victory for the cause of freedom we must be no less realistic, no less courageous, and no less self-sacrificing than we were in the achievement of our great military and naval victories. To make freedom secure we must be as courageously determined in our efforts as men like Benjamin Franklin, James Wilson, and Robert Morris, of your great State of Pennsylvania, who helped draft the Constitution of the United States. And, most important, we must be wedded to the fundamental principles of our republican form of government the Constitution embodies and its guaranties of freedom, of religion, of press, of assembly, and of free private enterprise.

Our problems are many and complicated. We have a $260,000,000,000 public debt—the largest in history—to carry and pay. We have a tremendous Federal budget to cut back. We have a burdensome tax rate to be reduced. We have other impediments to sustained production to eliminate. Production has not yet balanced with demand, and prices are high.

Our internal difficulties are further complicated by the demands from abroad. These demands are not so much for money as for goods in terms of money. They constitute a tremendous drain on our wealth and resources. They affect our budget, taxes, and prices. They strain our whole economic structure.

There are no simple, magic-wand solutions. Indeed, the failure of our Government in the past to do the hard and sometimes unpleasant but necessary things has contributed in large measure to our present difficulties.

An even greater tragedy than Europe is facing today would be for the United States to adopt the very methods of government that have contributed to Europe's desperate plight. It must be realized that Europe's problem is not solely economic and that it cannot be resolved by outside financial assistance alone. What has been happening in Europe is not just that they have been running out of goods in terms of dollars. They have also been running out of freedom by too much government.

That must not happen here. But it can happen here. There are those who today urge more Government regulation and control as the solution to the problem which Government regulation and control itself helped create.

If to be free the rest of the world depends upon our strength, then we must remain strong. That can only be done by reemphasizing, not by discarding or ignoring, the very principles of government that have been our source of strength. America can and will solve its related problems of inflation and aid to distressed foreign countries without adopting the communistic philosophy of Marx, Lenin, and Stalin.

There are many other questions of immediate interest and importance I might discuss here tonight. But on this occasion, when we do homage to the great Keystone State and honor a great American it is appropriate to direct our thoughts to the status and rights of the States.

This is the hour and the place to rededicate ourselves to the principle that all powers not delegated to the Federal Government are reserved to the States.

This is the hour and the place to resolve that we will bring our Government back home where it belongs. By so doing, we will be preserving a principle of government which has been a source of our great strength as a nation.

Our American way of life, as most of us understand it, depends in large measure on local home rule. The nearer the government is to the people the more the people like it, and the better it is likely to be. A nation of 48 States, spanning a great continent from ocean to ocean and from the lakes to the gulf, cannot be completely and wisely governed from Washington.

The Federal Government has been intruding into governmental areas formerly controlled and properly belonging to the States, until the centralization of power in Washington has become a menace to our form of government and to our whole economy. If this process of centralization of government is permitted to continue unchecked, the States will become little more than convenient geographic boundaries, and our people will have lost their capacity for self-government.

Through the political influence of Federal employees, the money-power of Federal dispensing agencies, and the punitive and administrative power of the centralized bureaucracy, the States and local communities and the individual citizen are held in a sort of bondage repugnant to our ideal of free government.

In the last 14 years the Federal Government has expanded from 521 agencies and bureaus to 1,141 and the number of employees increased from 582,000 to 2,000,000.

Of the approximately 2,000,000 persons constituting the Federal machinery, only 533 are elected by the people. Obviously, there is no elected person, not even the President of the United States in whose department these appointees serve, who can possibly know what these individuals, acting as agents of the Government, are actually doing. Yet they have extensive authority. They are not only expending the people's money but

exercising over them far-reaching governmental powers.

This is the direct result of the centralization of governmental power and authority in Washington. And, if the trend continues unchecked, the end will be the destruction of the States and the loss of individual rights and liberties.

I venture to say that the general assembly of my State of Indiana also voiced the sentiments of you Pennsylvanians in a resolution it recently adopted.

This resolution said:

"Indiana needs no guardian and intends to have none. We Hoosiers—like the people of our sister States—were fooled for quite a spell with the magician's trick that a dollar taxed out of our pockets and sent to Washington, will be bigger when it comes back to us.

"We have taken a good look at said dollar. We find that it lost weight in its journey to Washington and back. The political brokerage of the bureaucrats has been deducted. We have decided that there is no such thing as Federal aid. We know that there is no wealth to tax that is not already within the boundaries of the 48 States."

The resolution says:

"We have grown up. We serve notice that we will resist Washington, D. C., adopting us."

And it resolves:

"That we respectfully petition our Congressmen and Senators to vote to fetch our county courthouse and city halls back from Pennsylvania Avenue. We want government to come home."

Much of the extension of Federal Government has been for worthy purposes, but the accomplishment of those purposes could have been committed to local agencies. Our highly complex mechanized society cannot be governed as in the simpler days before the railroads opened up the West and the telegraph, telephone, radio, automobile, good roads, and the airplane brought us all closer together. What was once parochial has in many instances become national in scope.

But the movement has gone too far. Many of the trespasses could have been avoided. There never was any need for so great a centralization of power in Washington. The trend is dangerous and should be stopped.

The inevitable end result of the centralization process is a government by men, by propaganda, a government arbitrary, wasteful, and extravagant. The Government becomes the master of the people.

There are, in general, but two sorts of government: One which operates from the people upward, and the other which operates from the top downward. The one is a government of law, responsive to the will of the people. The other is a government of men, responsive only to the will of their official superior. It is an ominous fact that we have been becoming less and less a Government operating from the people upward and more and more a Government operating from the top downward.

The history of free government proves that when men and women cease to exercise their privileges as citizens in the conduct of their local affairs, they lose the strength and the fiber requisite for the retention of freedom itself. The present dependence upon a great central government is not calculated to develop a citizenry capable of self-government.

The road to the centralization of power in Washington is the road to a fat government and thin citizens. A huge bureaucracy, far removed from the people and out of their direct control, is wasteful and extravagant.

The secretary of one of the Federal supernumeraries, who had very little to do walked into her boss' office one day and suggested that in view of the shortage of file cabinets that she destroy all correspondence that was over 6 years old.

"Yes, that's a good idea," he responded. "But be sure to make copies of it."

Whether that actually happened, I do not know. But from my observation of bureaucrats in operation, making work and doing useless things, I would not be surprised if the story were true.

It seems to me axiomatic that the closer a government is to the people and the closer the collection of taxes is to their expenditure, the greater will be the efficiency in their expenditure and the greater the public resistance to wasteful and unnecessary expenditures. The people then definitely see the relationship between taxes and expenditures.

But in recent years the people have allowed themselves to believe that money out of Washington does not cost them anything. The fact is that it has cost the people many times more, not simply because of the duplication of State and Federal operations but also because of the inability of a government far removed from local situations to make wise and prudent expenditures.

At the present time $1 out of every three of our national incomes goes to defray the cost of government. But, as I can personally testify from my experience in our economy drive at the last session of Congress, it is difficult to economize unless there is the will and the courage to economize. It is politically easier to leave expenditures alone than to reduce them. Every government expenditure has vested interests and supporters, both in and out of government.

Centralization of governmental authority also leads to government by propaganda. The various bureaus and agencies issue a flood of press releases, pamphlets, booklets, and all manner of publications to sell the public on their particular program or some new program. There are several thousand employees in the Federal Government engaged in public relations or propaganda work. It is difficult—extremely difficult—for the people to learn the truth concerning a particular operation. It is even difficult for a Member of Congress to get the facts.

Free representative government depends on informed public opinion. When a government operates close at home, through the local communities and the States, it is harder to fool the people about what the government is doing and how well it is doing it.

One of the major methods by which the Federal Government has increased its powers at the expense of the States is by the increasing use of the so-called grants-in-aid system, whereby Federal funds are granted to the States for purposes and upon conditions that may or may not be within the constitutional ability of Congress to control by more direct methods.

The system had its beginning in the land grants to the States for roads and canals. Today it is used for all manner and kinds of programs.

In some circumstances Government subsidies are justifiable. But it is perfectly clear that over the last several years the Federal Government has all too extensively used this device. It has been the expedient and politically popular method of dealing with particular problems and situations.

Grants and subsidies have frequently served as a refuge from reality. They have tended to encourage dependence rather than independence. They tended to destroy individual initiative and often postpone to a fateful day the sound solution of the problem involved.

The power to grant or withhold large sums of money is a tremendous power. And there is abundant evidence that the Federal bureaus administering the funds have used this power to impose their will on the individual States. Arbitrary formulas or standards set up in Washington to which the States must conform, regardless of their unique geographic or economic situation, are pressured upon the States. It is in this way that the Federal bureaucracy has been able to extend further its power and authority at the expense of local governments.

If we are to retain a government that is close to the people and responsive to the will of the people, we must never cease to resist the tendency toward centralization.

As dark and as grave as the present situation may appear, I am confident the American people can find effective solutions to our many problems. We surely have learned the lesson that there is no substitute for individual initiative and incentive. This is something which the people of Europe must learn. All of us must realize that collectively we get for a dollar what we individually are willing to give for a dollar in time and effort. Commissions and boards making plans and regulating the affairs of a people, while the rest of the people are unable or unwilling to do the constructive things because of the plans and regulations, do not make for national strength.

Freedom and production may be failing elsewhere in the world, but it will not fail in the United States, if the people continue to emphasize that the Government must be their servant and not their master.

We are suffering today from too much government and too little production.

Let us bring our government back home. By doing this, I am sure the United States will continue to be the citadel of democracy and world progress, and we will enjoy peace and stability.

Trans-Atlantic Air Mail Contracts Discriminate Against American Carriers

EXTENSION OF REMARKS

OF

HON. ALBERT L. REEVES, JR.

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 17, 1947

Mr. REEVES. Mr. Speaker, I think every Member of the House will be interested in the article by Wayne W. Parrish which appeared in a recent issue of American Aviation. It outlines an extremely critical situation affecting the rates paid international air lines for trans-Atlantic mail and emphasizes the discrimination which appears to be employed against our own air carriers.

Mr. Parrish's article is as follows:

THE MAIL PAY SCANDAL

Along toward the end of this year the three American trans-Atlantic air lines are going to come forth with a lot of red ink on their 1947 balance sheets. The poor showing early this year combined with the seasonal slacking off now in process will more than offset the very fine spring and summer records.

So there will be talk that trans-Atlantic carriers need subsidy to keep in business and a lot of wise guys who either don't have the facts or who don't want to have them are going to be painting gloomy pictures of our international air policy. The unsuspecting public is going to conclude from the financial reports that it is going to cost an unholy amount of subsidy to keep our trans-Atlantic air lines in operation.

Then someone will recall that the New York Times for August 15 published in a leading news position an interview with CAB Chairman James M. Landis in which Landis visualized an early end to Atlantic subsidies [sic] and had said that the three American

carriers over the Atlantic might well show profits this year even without counting subsidies [sic] paid by the Government in the form of air-mail contracts.

Mr. Landis will be asked how he could have made such a prediction in August when the three air-line companies piled up so much red ink for the year, and Mr. Landis with his customary facility, will squeeze out of that one and the public will be left with the thought that either air-line management is awfully stupid and incompetent, or this flying business over the ocean is a very expensive thing for the taxpayer. Meantime, the air lines will have to scream for more money because they have pay rolls to meet and other obligations to perform.

But the actual picture is neither gloomy nor difficult to see in the correct focus, and before the American international air policy again undergoes attack through ignorance or conniving, or both, the proper Government authorities had better get the correct focus.

This has been a good year for trans-Atlantic air traffic despite the critical economic situation in Europe and the crippling effect of the recent British action in keeping their own people either at home or on British transport. There were 2,254 eastbound departures by 7 airlines for the first 8 months of this year, not counting cargo flights and trips of other carriers, and if anyone tells you that over 5,000 roundtrip flights by 7 airlines in the first 8 months in the second full year of trans-Atlantic air service isn't an historic and praiseworthy achievement in the annals of world transportation, he has been asleep for 20 years and fuzzily groggy since birth.

We get awfully sick and tired of hearing loose talk about subsidies and it's about time the record was set straight. If the three American trans-Atlantic carriers were going to end up the year with heavy red ink after payment of subsidies, then the public would have reason to complain.

But the record is not one of subsidies. It is a shabby record of underpayment by the United States Government for carrying the United States mail. The answer to this year's forthcoming red ink is abundantly clear. The United States Government is paying a ridiculously low price for carrying the mail on which it is reaping a big profit, and it is even paying foreign carriers four time as much for carrying United States mail on the same routes. If the same situation existed in private industry the Attorney General would be seeking legal means to break up the racket.

Look at the figures. For the first 6 months of 1947, the 3 American flag carriers, American Overseas, Pan American, and Trans-World, carried 1,040,000 pounds of United States mail from this country to Europe.

For carrying this mail the carriers received less than $2,000,000, roughly as follows: AOA, $600,000; PAA, $500,000; and TWA, $890,000.

But the Post Office Department took in about $6,250,000 for the sale of stamps for this 1,040,000 pounds of mail—at a conservative estimate. This is figured at the standard count of 40 pieces to the pound and a stamp charge of 15 cents per half ounce. (Much of the mail going east-bound requires more than 15 cents per half ounce.)

In other words, the payments to the three air lines averaged 32 percent of the estimated stamp revenue to the Post Office Department. (TWA estimates it is paid 28 percent of the stamp revenue for mail it is carrying.)

What this amounts to is that the post office is making money out of international air mail during what should be considered a development period, that the Civil Aeronautics Board is negligent in its duties for setting fair mail payment, and the air lines will get kicked in the pants at the end of the year for failure to make a profit.

But that's only part of the story. The rate paid by the European governments to their air lines for mail carriage is set by the Universal Postal Union and is presently 6 gold francs per ton-kilometer. This works out to $2.87 per ton-mile, or nearly four times the ton-mile rate paid to United States air lines by our own post office.

But here is where the blood vessel bursts. When a foreign air line carries mail out of the United States, our own Post Office pays it at the Universal Postal Union rate of $2.87 per ton-mile. (The American companies get 75 cents a ton-mile.) The records show that only a limited amount of mail is being handed over to foreign air lines (174,000 pounds in 8 months), but the principle of discrimination against United States carriers is there just the same. The United States Government, in short, is working a bargain counter racket against its own air lines.

Somebody in the back row will now get up and suggest that the $2.87 per ton-mile rate set by the Universal Postal Union is undoubtedly a sinister foreign subterfuge for subsidy and that the European taxpayers are paying the freight. But let us counter immediately with the fact that the UPU, to which the United States belongs, is not a subsidy organization and that payments in Europe to European air lines under the UPU rate structure are less than half of the stamp revenues for mail carried.

The profit mark-up to the Post Office is terrific. It should be brought down to a reasonable business-like level. If a private business maintained such a mark-up it would either go out of business or be prosecuted for monopolistic practices.

Instead of the United States subsidizing the air lines, the air lines are running in red ink subsidizing the United States Government for hauling huge quantities of mail at starvation rates of pay.

The next person who gives out a statement to the papers or writes a newspaper article or makes a speech mentioning the word "subsidy" for trans-Atlantic air service should be made to stand in the public square at high noon and read dictionary definitions of the word for one solid hour. Subsidy is not a fair payment for services rendered. Subsidy is a gift, or a grant, for activities or services deemed advantageous to the public. The trans-Atlantic air lines would be receiving subsidy if they were paid amounts over and above the stamp revenues received by the Post Office and over and above Post Office overhead. But when they receive 32 percent or less of the stamp revenue, and operate in the red because of it, they are being severely and shamefully short-changed.

One may well ask how this situation has evolved. It has evolved through red tape, narrow thinking, lack of realism, and tedious procedural delays. The present mail rate is said to be temporary, but the prospects for a permanent rate are far away. The system operates on a quaint theory by the CAB that it will set a low temporary rate to see how things go, then permit the air lines to come screaming for help if they run into financial trouble.

That's a fine way, indeed, to build up a strong international air system. Not only does it put air-line management in the class of street walkers, but it is forcing them to curtail, to lay off trained personnel and to spend large sums unnecesarily to prove to CAB underlings that what they have done in the past has been sound. It is sound business in absolute reverse. In the old days the Government helped air lines to get a start. Today it is throwing up a barrier to keep private enterprise from operating efficiently and prevents a reasonable profit by holding off legitimate payment for services rendered.

Trans-Atlantic air service has been an overwhelming success operationally and traffic-wise. If it faces red ink this year it is only because of underpayment for carrying the mail. The United States, in the second full year of air service to Europe, cannot withhold the profits for itself and expect private management to make a respectable showing.

WAYNE W. PARRISH.

No Block Signals

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 17, 1947

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith the following editorial which appeared in the St. Louis Star-Times on Saturday, December 13, 1947:

(The accident occurred on a single straight-line track. No block signals are used along that part of the line and trains pick up orders from points along the line, officials said.—News report on M-K-T wreck.)

On June 19, 1947, the Interstate Commerce Commission ordered all railroads to install additional safety equipment on tracks over which trains are operated at high speed and at the same time revealed the amazing fact that there are 45,000 miles of track with inadequate block signal systems, automatic train control, train stop or cap signals—or none at all.

The order gave the railroads no alternative. It set December 31, 1952, as the mandatory deadline. It looks as though some roads have taken full advantage of the generosity of this time element, since wrecks due to faulty safety devices or their absence continue to pile up.

Exhibit A of what may be expected to happen under such circumstances is noted in the wreck of the two Missouri-Kansas-Texas passenger trains which collided head-on Wednesday night near New Braunfels, Tex. Relying entirely on the human element to avoid wrecks on this particular section of the track, the inevitable happened—the human element failed. Result, the death of four trainmen and injury to nine persons, not to mention the loss of much valuable railroad equipment needed in the present transportation emergency.

The explanation of Mickey Pattillo, special agent for the railroad, was very simple. He said the two engineers evidently got their orders mixed up.

The engineers could have had their orders as mixed up as eggs in an omelet, and there still would have been no wreck if they had seen the red arms of block signals turned against them. By relying on a method that was invented soon after the replacement of stage coaches by the iron horse, these two engineers sped their trains to their doom without an inkling of knowledge that another train was on the same single track headed in the opposite direction.

There is some understanding of the fact that the foolproof methods, such as automatic train control and train-to-control-tower radio are not adopted on lines handling little traffic. But it does seem strange

that so elementary a protection as the block signal is omitted on any line with regular and frequent schedules. The records of the Interstate Commerce Commission show that installation of automatic block signals were ordered on 18,556 miles of track, some as many as 25 years ago. But many of them have ignored or resisted the application of such orders which accounts for the fact that there are still 45,000 miles of unprotected track.

The recurrence of wrecks due to faulty protection or no protection at all indicates that the Interstate Commerce Commission, in setting December 31, 1952, as the deadline, was far too liberal with time. When it is compiled, the casualty list for 1947 to 1952 will be a long one. The need for this type of safety is far more pressing than the commission seems to realize.

Perhaps what is needed is a streamlined commission to govern the railroads, replacing the present body that dates back to 1887 and has too much to do anyway. Needless to say, a modernized commission should have a new set of commissioners who don't think in the terms of the mid-nineteenth century.

Fact and Fiction About Mergers

EXTENSION OF REMARKS

OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 17, 1947

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address recently given by Gilbert H. Montague, a member of the New York bar, at the annual meeting of the Cotton Textile Institute, Inc., in New York City. This address will be of interest to Members of the Congress because of its pertinency to the discussion of the Kefauver bill, H. R. 3736, and the O'Mahoney bill, S. 104, seeking to amend the Clayton Act regarding acquisition of corporate stocks and assets. The address follows:

FACT AND FICTION ABOUT MERGERS

(By Gilbert H. Montague, member of the New York bar)

Because about 1,800 mergers have occurred in the manufacturing and mining industries in the United States between 1940 and 1946, a pressure group of Government officials are now besieging Congress to transform the Federal Trade Commission into a vast governmental bureaucracy that would shackle American business with the following fantastic procedure:

No corporation shall be allowed to acquire more than $100,000 assets from any other corporation, even though there is no competition between them, unless and until clearance has been obtained from the Federal Trade Commission.

This clearance will be practically unobtainable, because the legislation urged by this pressure group of Government officials requires that this clearance shall be conditioned upon a long list of requisite findings by the Federal Trade Commission, and few if any proponents of an acquisition can ever produce the proofs needed for establishing these findings, and fewer still can afford to wait the time and spend the money required to complete the litigation and proceedings necessary to obtain these findings, before acquiring assets from another corporation.

This procedure will put a strait-jacket on every small- and medium-sized corporation, and will guarantee every big corporation against the possibility that its small- and medium-sized competitors can ever approximate by merger or acquisition the size and efficiency of the big corporation, and will protect the large competitor, and will hurt the small- and medium-sized competitor, and will place the dead hand of arrested development upon the entire national economy.

This proposal is particularly disastrous to the cotton-textile industry, because that industry is now entering a period when the demands of new fabrics, new finishes, and new techniques, inspired by the rapidly changing requirements of a highly imaginative fashion world, call for new machinery, new processes, and new methods, all the way from the purchase of cotton through every stage of processing to the marketing of the consumer product, and requires of the cotton-textile industry a greatly increased degree of consolidation, if the industry is to continue to perform its full duty of service to the public.

PRAISES INSTITUTE BRIEF

The Cotton Textile Institute is one of the few trade associations that has recognized the threat presented by this proposal which this pressure group of Government officials is now pressing upon Congress.

The presentation in opposition to this proposal, which Dr. Murchison and Dr. Michl submitted to the committees of both branches of Congress in behalf of the Cotton Textile Institute, is a masterpiece of statistical research, sound economics, and common sense, and completely refutes the statistical untruths regarding the cotton-textile industry which are contained in the propaganda of this pressure group of Government officials.

This presentation by Dr. Murchison and Dr. Michl dealt only with the cotton-textile industry, and the mergers and consolidations that are needed in that industry in order to raise competition to a level of far greater efficiency and service.

I assume their presentation is familiar to everyone in the cotton-textile industry, so that today I shall call attention only to some other and more general and more fundamental fallacies that vitiate and invalidate the propaganda of this pressure group of Government officials.

This pressure group of Government officials suppress in their propaganda the following facts:

NO LEGISLATION NECESSARY

No new legislation is now necessary, because today any form of economic concentration, be it any person, firm, corporation, or group of them, that has the power to raise price or exclude competition, even though it never exercises such power, is unlawful under the Sherman Act, and may be prosecuted criminally and civilly, and be fined, imprisoned, enjoined, and dissolved under that act, as that act has been interpreted and enforced by the unanimous decision of the final Federal court on March 12, 1945, in *U. S.* v. *Aluminum Company of America* (148 F. 2d 416, CCA 2 C), and in the unanimous decision of the Supreme Court of the United States on June 10, 1946, in *American Tobacco Co. et al.* v. *U. S.* (328 U. S. 781).

Relying on these unanimous recent decisions, the Attorney General of the United States has created in the Department of Justice a merger unit to scrutinize all mergers, and to halt before consummation all mergers that are questioned. In June 1947, the Attorney General obtained in Wilmington, Del., an injunction staying the acquisition of assets of the Consolidated Steel Corp. by the Columbia Steel Co., a subsidiary of the United Steel Corp.[1]

The effectiveness of the existing laws in respect of improper mergers and acquisitions is carefully suppressed in the propaganda of this pressure group of Government officials. They talk about 1,800 mergers in the manufacturing and mining industries in the United States between 1940 and 1946, but they suppress the following facts:

Between 1940 and March 31, 1947, the total number of concerns operating in manufacturing and mining industries in the United States rose from 237,500 to 339,600.

Between 1940 and March 31, 1947, the numbers of new concerns starting in the manufacturing and mining industries in the United States are as follows:

1940	33,300
1941	37,900
1942	34,700
1943	21,200
1944	27,200
1945	43,100
1946	64,500
3 months, January-March 1947	13,400

Certainly it is absurd, unfair, and deceptive for this pressure group of Government officials to talk about 1,800 mergers in the manufacturing and mining industries in the United States between 1940 and 1946, and to suppress all mention of this phenomenal rise in the number of new concerns starting in the manufacturing and mining industries in the United States between 1940 and March 31, 1947, especially since VJ-day.

OMIT REASONS FOR MERGERS

Nowhere in their propaganda does this pressure group of Government officials mention the reasons for any of these 1,800 mergers.

Questioned by congressional committees before whom they have testified, they have confessed that they have not investigated to find out the reasons for these mergers.

Strangling taxation is a primary cause.

Every business corporation pays a combined normal tax and surtax of 38 percent (plus 2 percent for consolidated returns, but with a preferential graduated return of 21 to 38 percent on taxable net income up to $50,000), and is required by law, subject to

[1] The Government's application for a permanent injunction against the acquisition of assets of Consolidated Steel Corp. by Columbia Steel Co., a subsidiary of United States Steel Corp., was denied by Judge Rodney on November 7, 1947 in the United States district court in Wilmington, Del., on the ground that the proofs showed that this acquisition would result in no substantial lessening of competition, in fact less than 2 percent, in the market served by the Consolidated Steel Corp. Though Judge Rodney denied the Government's application for a permanent injunction, Judge Rodney conceded throughout his decision that any merger or acquisition, whether of stock or of assets, is now prohibited by the existing Sherman Act and Clayton Act, if such merger or acquisition results in any substantial lessening of competition in the market served by the company whose stock or assets are merged or acquired. Under Judge Rodney's decision, therefore, the existing Sherman Act and Clayton Act are ample and effective to deal with any improper mergers or acquisitions. Judge Rodney's decision may be appealed by the Attorney General, and if the higher court disagrees with Judge Rodney, and decides that the proofs show that this acquisition would result in any substantial lessening of competition, the higher court may reverse Judge Rodney's decision, and may direct that a permanent injunction be issued against the acquisition of assets of Consolidated Steel Corp., by Columbia Steel Co.

penalty taxes, to distribute 70 percent of the net income as dividends, unless it can demonstrate the need for greater retention of earnings in the business.

Because each small business concern is owned by a few individuals, all dividends become subject to high individual taxes.

With all the risks and responsibilities in business today, and the growing multiplicity of labor complications, labor laws, voluminous reports to manifold Government agencies, collection of social security taxes, salary withdrawal taxes, sales taxes, excise taxes, and with heavy estate taxes on the death of any of the principal owners, which may require taking out a large sum of money to pay estate taxes, thereby wrecking the business, it is not surprising that owners of small business concerns frequently find that if they sell out, pay the capital gains tax on any increment in value, and put the money into diversified investments and trust funds, they will be better off than if they continue in business.

What About Hotels?

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, December 17, 1947

Mr. DAVIS of Georgia. Mr. Speaker, one of the pressing problems affecting millions of people in the United States is that of living quarters. To many people "home" means a hotel room, and even hotels are experiencing the pressure which results when demand exceeds supply. In the last issue of the magazine Dixie Business, published in Atlanta, Ga., Mr. Andrew A. Smith, manager of the Robert Fulton Hotel, discusses problems which are interesting both from the standpoint of the hotel and the guest, including the very vital problem of eliminating fire hazards. On the leave granted, I insert Mr. Smith's article herewith:

WHAT ABOUT HOTELS?

(By Andrew A. Smith, manager, Robert Fulton Hotel, Atlanta, Ga.)

Businessmen are on the move—today perhaps more than ever before—branching out, seeking new markets, making contacts, attending conferences.

When they leave home, hotels become their hosts They provide rooms for a good night's rest, space for business and fraternal meetings, and accommodations for conventions.

Because the South's hotels are so intimately involved in its commercial and industrial activities, and because so many businessmen spend so much time in hotels, some knowledge of the hotel industry and its problems should be of interest to them.

USEFUL KNOWLEDGE

Here is one fact which many businessmen, who are familiar with it, have been able to use to advantage; commercial hotels are less crowded during the latter part of the week than during the first part. It is easier, therefore, to get rooms needed for meetings, conventions, or overnight lodging, from Thursday through Sunday.

The opposite is true of resort and pleasure hotels, which are filled during the last days of the week with week-end vacationists, and are comparatively uncrowded during the early part of the week.

One of the biggest headaches to those in the hotel business is the "no show," a person who makes a reservation which he fails to claim, but never cancels. He not only deprives other persons of accommodations, when the room is held, but also deprives the hotel of its revenue. A hotel room is one of the most perishable commodities on the business market; there is no way to salvage even a part of the revenue lost on one when it remains empty.

SIZE OF INDUSTRY

The Nation's hotels provide rooms for about a million and a half guests each night. Occupying some of the most expensive real estate in their respective communities, they represent investments totaling $5,000,000,000, and are important taxpayers. About 362,000 persons depend on their pay rolls.

During the war most hotel men faced an unprecedented demand for rooms at a time when many of their experienced employees were in the armed forces or war plants. Unable to maintain their usual standards of service under these conditions, they had to adopt practices which would provide adequate accommodations for the maximum number of persons.

Because of this high percentage of occupancy, the gross income of many hotels reached an all-time high. Profits were good too, but not as good as they appeared to be, because many normal and ultimately essential expenditures were prohibited by wartime shortages. Equipment wore out and could not be replaced. Neither could damaged furniture, and often it could not be repaired. Hotel renovation, normally a more or less constant operation, was dishearteningly slow and inadequate when it was possible at all.

ILLUSIVE PROFITS

Funds which would have been spent on these things, had labor and materials been available, could not be saved for the day when the expenditures inevitably must be made. Instead they became part of the hotel's profits, subject to heavy taxation. With a return to peacetime conditions hotels embarked on a program, still in progress, of replacement, renovation, and alteration which the American Hotel Association estimates will involve an expenditure of $360,000,000.

A great deal of this money is being spent to incorporate fire-safety principles learned from the Winecoff disaster and other recent hotel fires. Salient lessons learned from these fires are the importance of eliminating vertical openings which act as flues, spreading flames from floor to floor; sealing transoms through which smoke and fumes could spread from hall to room; and providing enclosed escape stairs protected by fire doors at every floor.

LEVEL OF OCCUPANCY

The labor problem has been relieved since the end of the war, and, in most sections, hotels still enjoy high occupancy percentages. They are operating profitably. If they are to continue to operate profitably, however, they must maintain this high level of occupancy; it would be disastrous for them to drop back to a level considered "pretty good business" before the war. In 1940 the average hotel could break even if it kept 65 percent of its rooms filled. Today it is necessary to fill 84 percent to make expenses, and the margin threatens to become even more narrow.

Reason for the decreased margin of profit, as most businessmen can guess, is the increased cost of labor, equipment, and operating supplies. United States Bureau of Labor statistics show the hourly wages of hotel employees have risen 78 percent since 1941. Cost of supplies and equipment has risen somewhat more, and, of course, taxes have increased. Most hotels lifted their rents slightly when transient were decontrolled, but, broadly speaking, their volume of business is limited by physical capacity, while there appears to be no limit in the advance of operating costs. To grasp an idea of the enormity of the hotel pay roll, figure what it costs to keep one servant in a home for a few hours each day, and remember the vast services a hotel must maintain 24 hours a day.

NEW HOTELS?

Do we need more hotels? Persons who are unable to obtain rooms when they want them, and groups which cannot schedule conventions on the dates they prefer, are sure that we do. Hotel men, however, are more cautious.

The question must be localized to individual communities, of course, and the answer depends upon conditions affecting each community. Unquestionably, more hotel rooms are needed in many sections today, but veteran hotel men question whether the current demand for accommodations will continue. They remember the building spree set off by the apparent need for more hotels following World War I, and the bleak years of the early thirties when 81 percent of the Nation's hotels were in bankruptcy or suffering serious financial loss. This is not to say they believe any new construction would be unwise; they simply approach the problem with the caution of experience.

While many hotel men are planning to expand their present facilities, most of them feel that the current scarcity of materials and high cost of building renders new hotel construction, from the ground up, impractical, if not impossible. Experts estimate the cost of a new hotel in the South to average about $10,000 a room; in some other sections it is as high as $14,000; also, experience has shown that old hotels enjoy certain advantages over new ones under competitive conditions; regular transients generally prefer the familiarity of long-established houses, provided these are comfortable and properly managed, to the newness of new hotels.

New hotels will be built where they are needed, and no doubt many will spring up where they are not needed, but it appears evident there will be no widespread construction in the near future. Construction costs must drop before many investors can feel they can get a fair return on the dollars poured into a new hotel.

Congress Should Adopt Voting Machines

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, December 17, 1947

Mr. MACK. Mr. Speaker, pursuant to permission granted me to extend my remarks in the RECORD, I desire to insert an editorial from the Spokesman Review of Spokane, Wash., which is one of the greatest daily newspapers in the State of Washington.

The Spokesman Review editorial highly approves the bill of the gentleman from Nebraska [Mr. MILLER] which would provide for the installation of voting machines in Congress for taking roll calls. I am in complete agreement with the purposes of the Miller bill.

The editorial follows:

GIVE CONGRESS A VOTING MACHINE

Push-button warfare may be a long way off, but push-button voting in the House

of Representatives in Washington will soon be a reality if Nebraska Congressman A. L. MILLER has his way.

Mr. MILLER has introduced a bill calling for the installation of mechanical voting machines to replace the time-consuming roll calls of the membership that frequently take place every day.

Anyone who has ever visited the House or Senate Chamber in the National Capitol usually comes away with two distinct impressions about Congress. The Members present at the usual legislative session rarely seem to pay attention to the man who is speaking, and the methods of voting are slow, antiquated, and boring.

People back home should not criticize their Members of Congress too severely for not sitting through each legislative session. If he did nothing but sit and listen to some colleague drone on and on he'd never get his letters answered nor do his messenger work around the scores of Government offices in Washington.

Every Congressman's constituent, however, has a right to demand an end to the roll-call method of voting, by which a clerk hollers out the name of each of the 435 legislators, who respond in turn with an aye or a nay on the measure under discussion. This procedure now takes about 45 minutes for each vote. Several roll calls in one afternoon can thus easily kill a whole day.

Push-button voting could enable each Congressman to register his opinion almost simultaneously with that of other Members. A totalizer board could flash the results momentarily and could record the total vote.

In this day of electronic marvels isn't it about time that Congressmen adopted a modern method of casting their ballots?

Veterans' Reemployment

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, December 17, 1947

Mr. McDONOUGH. Mr. Speaker, many people believe that veterans' reemployment is now practically completed with most veterans of World War II already placed in suitable positions. But this is not true.

Not only do we still have some disabled veterans who are waiting for employment and others who will need jobs when discharged from veterans' hospitals, but we also have over a million veterans in our schools and universities who will seek jobs upon completing their education within the next few years.

Our obligation to provide employment for our veterans of World War II has not been discharged until all of them have jobs including 1,350,000 who are now enrolled in educational institutions. The problem of finding suitable positions for these young men is a big one, and we are facing it now.

The following report from the Labor Department bulletin, Labor Information, outlines this problem of jobs for veterans who sought to complete their education:

In his 1947 annual report, Perry Faulkner, chief of the Veterans' Employment Service, calls attention to a big job facing the employment services—that of finding employment for 1,350,000 World War II veterans who enrolled in educational institutions this fall, and will leave school in later years.

"The task of finding employment for the veteran who left the service over the last 2 years and sought employment in the civilian labor force largely has been completed," Faulkner said. "The big bulk of the nearly 13,000,000 veterans who sought employment are now gainfully employed.

"But finding jobs for veterans still remains a major activity of the employment service. One of the biggest tasks before us is assisting veterans who have taken advantage of the educational provisions of the GI bill to secure the right kind of jobs when they graduate or leave schools and colleges. This is not a distant problem. It is with us right now. Each month many thousand veterans leave school for one reason or another and enter the labor market. In January and again next June, large groups of former soldiers, sailors, and marines will be graduated or leave to go to work. Over the next couple of years perhaps a million of these veterans will seek jobs.

"Employers who have been hiring veterans in unprecedented numbers over the last few years have found that these men are premium manpower. They are young, ambitious, anxious to get ahead. The men who have deferred entering the job market to increase their earning ability and usefulness by taking scientific, professional, business and administrative, and other college courses are the cream of the crop.

"Veterans who were graduated from colleges this last year had little difficulty in finding employment. What job prospects will be for the veterans who graduate this coming June and the year following will depend to a great extent upon general economic conditions. If employment remains high, their job problems can be solved through well-planned, vigorous placement programs. If a recession occurs they will face the same problems as other unemployed persons with the added handicap that they have had no previous experience on the job."

Faulkner said the major part which the employment service has taken in securing employment for veterans is indicated by figures showing local employment offices made more than 3,700,000 veteran job placements since the war's end.

So-Called Stabilization of Commodity Prices

EXTENSION OF REMARKS
OF
HON. PETE JARMAN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, December 15, 1947

Mr. JARMAN. Mr. Speaker, in view of what happened on the floor Thursday and all other circumstances, it was but natural for me to have been dumbfounded when I read yesterday that the Republican leadership would probably bring this purely political bill up under suspension of the rules so that it cannot be amended and debate is limited to 40 minutes. Think of bringing legislation relative to at least the second most important question which confronts America today, if not the first, to the floor without hearings—and members of the Banking and Currency Committee have repeatedly stated that no hearings have occurred on this bill—and under a procedure by which it cannot be amended and can be debated only 40 minutes.

The President submitted a program along two definite separate lines. We debated one of them six full days after elaborate committee hearings and what I considered much waste of time. But for the unnecessary waste ample time would have remained to appropriately consider this important phase of the situation which confronts us. Because of it, I suppose, this phase of it now comes to the House for only 40 minutes debate after no hearings whatever. It was my belief that the aid bill was being deliberately delayed to prevent acting to curtail inflation which caused me to loudly criticize the tweedledee and tweedledum which was causing that delay.

On page 11308 of last Thursday's RECORD we find that the majority leader the gentleman from Indiana [Mr. HALLECK] said:

Mr. Speaker, I ask unanimous consent that the Committee on Rules may have until midnight Saturday next to file reports.

Shortly thereafter the gentleman from Virginia [Mr. SMITH] inquired of the majority leader his reason for having indulged in this request. Replying that he would be glad to explain, the majority leader referred to the anxiety to conclude the program in time for Members to reach home by Christmas and said:

Moreover, there is a high degree of urgency in connection with all these matters. If these bills are reported from the Banking and Currency Committee, it will be our plan that the Committee appear before the Committee on Rules and if the Committee on Rules sees fit to grant rules making these measures in order, that they might be taken up early next week.

Why, Mr. Speaker, was not the regular, normal procedure of securing a rule which could have provided for amendment and adequate debate not followed, particularly in view of that statement so recently made by the majority leader? I have no recollection of any measure having come to the floor from the Banking and Currency Committee under such gag circumstances as suspension of the rules during my 11 years as a Member of this body. I am told by those who have served longer that they do not recall one. Consequently, the answer to the question I propounded a moment ago appears to be "politics, politics, politics."

Under these circumstances, coupled with the fact that the average Member of the House has enjoyed no opportunity whatever to familiarize himself with the bill and must simply cast his vote on the basis of what he is told, I cannot get my consent to betray the people of the United States by voting for this legislation which has been referred to by responsible members of the Banking and Currency Committee as so very vicious. I doubt whether the majority of you can and I am quite confident two-thirds of you cannot. I am strongly of the opinion that our Republican friends are well aware of this fact and that this effort is merely a cheap, senseless attempt to

transfer the blame for fiddling while Rome burns from their shoulders to ours. In making it I believe they underestimate the intelligence of the American people, who I predict will not forget.

Termination of Foreign Ministers' Conference

EXTENSION OF REMARKS
OF

HON. GEORGE MacKINNON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 17, 1947

Mr. MacKINNON. Mr. Speaker, because of the importance of the recent termination of the Foreign Ministers' Conference, under leave to extend my remarks, I include the following text of the statements by Secretary of State Marshall at the final session of the Foreign Ministers' Conference in London on December 15, 1947, as reported in the Evening Star, Washington, D. C., December 16, 1947:

TEXT OF MARSHALL STATEMENTS

LONDON, December 16.—Texts of statements by Secretary of State Marshall at yesterday's final session of the Foreign Ministers' Conference, as made available by the American delegation.

General Marshall began the discussion with the following statement:

"The United States came to this conference to work for a comprehensive settlement which would overcome the present division of Germany. It hoped to obtain agreement on a treaty for Austria and the reestablishment of that country as a free and independent state.

"As regards Germany, the United States sought to achieve at this meeting a solution which would revive German economy through economic unity, thus enabling Germans to contribute to the restoration of Europe, which has so grievously suffered from German aggression. The United States recognized that Germany in its present state of destitution would require outside assistance and was prepared to accept a fair share of the burden of such aid until a unified Germany could become self-sustaining.

"The Soviet delegation Friday evening put forth a statement regarding reparations which, to put it in the simplest of terms, is not at all acceptable to the United States delegation. That is the situation as I now understand it."

SECOND STATEMENT MADE

Later in the meeting, after Mr. Bevin had spoken, General Marshall made this statement:

"We have reached, quite evidently, a fundamental difference regarding the question of reparations. Mr. Molotov's last statement seemed to me a repetition of statements which we largely felt were without foundation. Now at the expense of some repetition of the views Mr. Bevin has just stated, I would like to review the situation as it is seen by the United States delegation.

"The United States hoped there would emerge from this conference the beginning of a united and self-respecting Germany which could find its way back to peace and freedom and achieve its own well-being and redemption through cooperative effort with other European countries.

"The United States had even higher hopes for an Austrian settlement.

"It will be useful, I think, at this point to see just where we are."

Cites Soviet claims

"We have failed to reach agreement on a treaty for Austria because the Soviet Union has demanded for itself properties and special privileges in Austria in an amount and to an extent which far exceed any rightful claims and which far exceed what a free Austria can afford. If Soviet claims were admitted it would be at the price of Austrian independence and in violation of past agreements.

"At Moscow the United States, the United Kingdom and France, although differing in some details, found a common basis for agreement on the essential unagreed article in the Austrian treaty—the problem of German assets. The Soviet Union was in disagreement. To resolve our differences we appointed a treaty commission which for 5 months conferred in Vienna last summer. Again three delegations found a common approach. Again the Soviet Union was in disagreement. At the present meeting the French delegation presented a new proposal for a concrete settlement which sought to avoid the problems that had prevented agreement. To three delegations that proposal appeared to present a practical basis for settlement. On December 4 it was rejected by Mr. Molotov, who added that he had no new proposals to make on the subject. Thus the Soviet delegation has persistently blocked agreement by reason of its unjustified demands on Austria."

Unable to agree on frontiers

"As regards Germany, taking first the subject of frontier, we have been unable to agree on what we mean by Germany. Three delegations are in accord that the Saar territory should be detached from Germany and economically integrated with France. The Soviet Union does not agree.

"With respect to the eastern boundary of Germany, the Potsdam protocol clearly provided that the 'final delineation of the western frontier of Poland should await the peace settlement.'

"The United States believes that an effort should be made to establish a frontier which, while it would compensate Poland, would not become a formidable economic barrier preventing Germany access to food and raw materials from this eastern area upon which it has heavily depended.

"Three of the delegations agree that boundary commissions be at once established to examine all frontier questions. The Soviet Union rejects this proposal. We neither agree on what Germany is to be nor do we agree on establishing commissions to study these vital boundary problems."

Disagree on financing

"In examining the discussions on economic principles, we have progressed only in agreeing to procedures without substance.

"We have failed to reach agreement on sharing of the financial burdens. An ostensible agreement on the equitable distribution of indigenous resources is deprived of all meaning by the Soviet demand for continuation of present Soviet withdrawals of current German production for reparations.

"The Soviet Union has refused to furnish vitally necessary information with respect to reparations removals. Thus, we have been asked to reach agreement while information essential to such agreement is withheld by the Soviet representatives."

Won't relinquish German property

"The Soviet delegation has refused to agree to the relinquishment of property interests in Germany unilaterally seized under the guise of reparations. As matters now stand, a large share of the produce of the eastern zone of Germany is drawn off for the Soviet account. An important part of its industry has been placed in a gigantic Soviet trust which enjoys special privilege and which is put above German law, presumably in perpetuity.

"These Soviet practices in eastern Germany have prevented Germany from playing its part in the recovery of Europe. In fact, they have greatly increased the necessity for outside aid provided by the United States and the United Kingdom to enable western Germany to live. Nevertheless, the Soviet representatives have chosen to charge this aid has as its purpose to use western Germany as a 'strategic base against the democratic states of Europe' and to advance 'expansionist aims.' Apart from the complete absurdity of these charges, to discontinue this aid to some 40,000,000 Germans in the United States and United Kingdom zones until they have become self-supporting would doom them to mass starvation."

Rejects Soviet demands

"The Soviet Union demands reparations for itself and Poland of $10,000,000,000 at 1938 values, which is at least $15,000,000,000 today. These reparations payments to an undisclosed degree would take the form of current production over 27 years. This demand is not in accordance with the Potsdam agreement. It is utterly impossible of achievement on practical economic grounds. It implies the establishment of an economic power so comprehensive that it would be in reality a power of life and death over any German Government.

"It was accepted by all at Moscow that full agreement on economic principles was essential to the establishment of political unification. We are unable to agree on what shall be the area of German economy; we cannot agree how to make German resources available to Germany as a whole, a condition prerequisite to the revival of German economy; we are confronted with a demand for reparations in excess of the Potsdam agreement which would make a German government subservient to its reparations creditor. It is therefore clear that agreement can be reached only under conditions which would not only enslave the German people but would seriously retard the recovery of all Europe.

"If real economic unity could have been established the United States would have been ready for the German people to be immediately accorded, under agreed controls, self-government with the authority, responsibility and initiative this entails. But free government cannot succeed under conditions of economic serfdom. True political and economic unity would require a free movement of goods, persons, and ideas throughout Germany and the establishment of a rule of law and political freedom which the occupying powers themselves would respect."

Sees Government powerless

"A German government of any type established to function in present conditions and under the supervision of a control council reflecting these basic disagreements would be powerless. In such circumstances a German government would be only a façade and its establishment would subtract rather than add to a real union of the German people. It is useless to debate the characteristics of a German government when actual governmental power would be elsewhere.

"The simple fact is the present division of Germany has been caused by the policies and practices of the occupying powers themselves. Only the occupying powers can create German unity in the present circumstances. That is why the United States has consistently pressed for certain fundamental decisions by the occupying powers themselves

as the absolutely essential first step for the achievement of a unified Germany.

"Three delegations at this conference have registered their willingness to take these decisions here and now. The Soviet Union alone refused to agree.

"In view of these facts, it seems impossible at this time to make practical progress. Therefore I reluctantly conclude that no useful purpose would be served by a debate on the other points on our agenda and I suggest that the Council of Foreign Ministers might now consider adjournment of this session."

UNITED STATES RELEASES ADDITION

In Washington, the State Department released the following addition to the text:

"Secretary Marshall's proposal was agreeable to the French for adjournment, following which Mr. Bevin raised the question of the Austrian treaty, and whether it should be sent to the deputies for further study.

"It was so decided.

"Mr. Bevin then called for discussion of the motion to adjourn. General Marshall made the following remarks:

" 'I proposed the adjournment and I therefore do not think that I have to express myself again.

" 'When we meet again I hope it will be in an atmosphere more conducive to the settlement of our differences.' "

A Republican Blunder

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, December 17, 1947

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Arthur Krock, from the New York Times of December 17, 1947:

A REPUBLICAN BLUNDER—HOUSE TACTICS EXPOSE LEADERS TO CHARGE OF PARTISAN TRIFLING ON INFLATION BILL

(By Arthur Krock)

WASHINGTON, December 16.—The plan of Senator ROBERT A. TAFT, announced today, to bring before the Senate certain anti-inflation measures, and pass them by the week end if possible, can hardly cancel the blunder of the House Republican leaders yesterday in this same legislative area, even if Mr. TAFT should get his program through the Senate.

The House leaders made their anti-inflation bill and the procedure to pass it so completely political that they split their own membership, produced a solid Democratic front for the first time in many years and failed even to get a simple majority of the House for their proposal. This was that the rules should be suspended to bring up the bill at once and vote on it after 20 minutes' debate without the right of amendment. That required the assent of a two-thirds majority.

The total membership of the House is 434 (there is one current vacancy). Of this only 202, or 16 less than a simple majority and 88 less than a two-thirds majority, stood with the Republican leaders. And they were supported by 58 less than a two-thirds majority of the 390 members who were present and voting.

POT AS BLACK AS THE KETTLE

It would not be surprising, therefore, if the views of these leaders—whose White House spokesmen are Speaker JOSEPH W. MARTIN, JR., and Representative CHARLES A. HALLECK—are now minimized in effect when bipartisan conferences are held on inflation problems. A political command which tries for two-thirds support on the harshest of propositions gives good basis for the charge that, since it could not sensibly have expected to get this support, it was engaged merely in partisan trifling with a situation which is bitterly afflicting the American people.

This is no way to acquire influence in council with an administration of the opposite party. On the contrary, it serves to persuade the administration that Democratic programs can now be more firmly pressed on a Republican majority in Congress whose leaders have exposed it to the popular belief that it is playing politics with inflation. The administration has been accused of that, and with ample justice; also of being largely responsible for the acts and policies on which inflation was nourished. But yesterday's procedure in the House shows the pot to be at least as black as the kettle, and more likely to crack over a hot fire.

NORMAL PROCESS IGNORED

If the majority leaders had wished to make an impressive demonstration of sincerity in their effort they would have sought a rule providing reasonable debate and the right to limited amendment. That is the normal process toward emergency legislation, indicated even more strongly when the subject is complicated. But the course they followed enabled SAM RAYBURN, the minority leader, to rally the Democrats against suspension on these grounds: (1) It was a partisan maneuver designed to put in the hole all candidates under that party label as well as the President with whom they must run for office next November; (2) It gave not the slightest recognition to the rights and dignity of the minority.

These points were so plain, and Mr. RAYBURN made them with such vigor, that the Democrats in the House effected a solid front, virtually unknown among them since 1938 on domestic measures. And 26 Republicans deserted their leaders in the belief that the Democrats would have the better of this argument before the people.

Mr. TAFT may be able to repair the Republican position. Or the Republican chieftains in the House may find some way to do it and put the administration again on the defensive with respect to inflationary controls. But they must act with sincerity and acquire finesse they did not reveal yesterday, if this is to be the end result of the political game both sides are playing with an acute national problem.

Scarce Kilowatts

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, December 17, 1947

Mr. MACK. Mr. Speaker, under authority granted me to extend my remarks in the RECORD and to include a newspaper editorial, I desire to call attention to the present great power shortage in the States of Oregon and Washington.

Despite the great power developments at Bonneville and Grand Coulee, Oregon and Washington during December were using 99 percent of the available power being developed from that river.

Since these two States have no gas or oil and since their coal supply is limited, industries of the region are almost totally dependent upon hydroelectrical energy for the operation of their plants.

If present industries are to expand and new ones enter these two States to provide pay rolls and produce the goods upon which our living standards depend, these States must have more hydroelectric energy as rapidly as is feasible.

In order to make clear to the Members of Congress the urgent need of more power development on the Columbia River, I include in the RECORD the following editorial entitled "Scarce Kilowatts," published December 9 in the Aberdeen World, one of the outstanding daily newspapers of western Washington:

SCARCE KILOWATTS

Guessers on the Northwest's power needs have been badly refuted by peak power demands this week. The Bonneville power administration revealed that Oregon and Washington at 5:30 o'clock Wednesday afternoon were using more than 99 percent of the electricity that can be generated in the two States. The record instantaneous peak at that time was 2,847,000 kilowatts. For comparison, Grays Harbor's peak load is 24,000 kilowatts. That may give some idea of the tremendous power requirements in the two Pacific Northwest States.

Generation capacity in the western division of the Northwest power pool—Oregon and Washington—is 2,853,000 kilowatts, while the generating capacity of the entire Northwest power pool is 3,800,000 kilowatts. At the time of the peak power demand in Oregon and Washington some power was fed into the western division from Idaho and Montana.

Wednesday's record load was even more than that for the day before when there were only 28,000 kilowatts of reserve energy in the power pool's western division. At that time 63,000 kilowatts were "imported" from Montana to build up a reserve of 91,000 kilowatts. This is working on a pretty narrow margin, far too narrow to encourage new industry. In fact, the peak demands this week overshot by 22,000 kilowatts the predictions made a year ago in a Tacoma meeting of public and private power utility experts. They predicated a peak of 2,825,000 kilowatts this month.

Roy F. Bessey, executive secretary of the Interior Department's coordination committee, told a conference of western governers in Portland yesterday that an additional electric power capacity of 7,000,000 kilowatts is needed in the 11 Western States. He said the boost in power production—and 1,800,000 acres more of crop lands—are needed to maintain the vastly increased population of the West indicated by present growth. The additional 7,000,000 kilowatts, he said, will be needed by 1960. We could use a portion of it right now. In fact, industrial growth of the West is based upon electric energy and the West will grow no faster than the available supply.

Radio Broadcast of George E. Reedy

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, December 17, 1947

Mr. KENNEDY. Mr. Speaker, under leave to extend my remarks, I wish to

place in the RECORD the following radio broadcast by veteran commentator George E. Reedy, which contains much wisdom:

Blunt-spoken Senator LANGER, who has never kept anybody in the dark on his stand on any issue, has come out with a statement that is long overdue. It may not make some of his colleagues too happy, but it is in the nature of a real public service.

The statement is aimed at several of his colleagues who have long made the Government worker a No. 1 whipping boy. The Senator thinks it is a practice that should be stopped—stopped by going out and getting a few real facts—for the public.

Everyone who has lived in Washington for any length of time knows exactly what he is talking about. He is referring to Senators and Representatives who fall back on sensational charges against Federal employees—just to make a few headlines.

Since the average civil-service worker is voteless, this is usually a pretty safe way of getting some publicity. The people who are under fire have no way of answering the charges. They can only sit tight and hope the storm will blow over.

As a rule, the accusations are a variation on the theme, that the Government employee, is not doing enough work. He is charged with everything—from chewing bubble-gum, to playing tic-tac-toe on the public's time.

Fortunately, Senator LANGER is in a position where he can do something about the situation. He is head of the Senate Civil Service Committee—and can make a full-scale investigation. He has ordered just exactly that.

It's about time that something was done along these lines. The charges have been a part of every political campaign, from the time that the American Government was first organized. Usually, they crop up during slack news periods

We have all heard the stories. Sometimes they describe offices, where the only work, is a community solution of the daily crossword puzzle. Sometimes, they involve complicated flirtations, between people who should be batting out their daily quota.

Most of us can cite cases where these things have actually happened. They are bound to, since human nature is pretty much the same, anywhere in the world. The real question, is whether the stories describe the typical Government worker.

If they do, the whole civil-service system, should be drastically overhauled. If they do not, then they should be scotched, once and for all time. They should not be left dangling in thin air, for the use of headline hungry politicians.

Over the years, we have reached a point where there is a certain stigma attached to Government service. Federal employees have been slammed and lambasted from so many directions, that they are almost ashamed to admit they are working for Uncle Sam.

To say that this is an unhealthy situation, would be a masterpiece of understatement. It goes far beyond that. If it keeps up, it is going to produce an inefficient class of Federal workers, who take the jobs—because they cannot get anything else.

In the early days of our Nation, this would not have made too much difference. But today, our Government has become a huge, sprawling thing that reaches into the lives of everyone. To staff it with second-raters—would be a major tragedy.

Senator LANGER has promised a really thorough investigation, which will bring all the facts to the light of day. His past record, is insurance that it will be no whitewash. It might well turn out to be, one of the most useful investigations of this Congress.

For Peace in Two Worlds

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 17, 1947

Mr. JOHNSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein an editorial from the Washington Evening Star of December 16.

I believe that the editor is correct in that we may have two worlds instead of one for the purpose of bringing about international security and peace. If Russia continues her obstructive and delaying tactics, I believe we should join with all of the other countries of the world who are willing to join us in trying to find some way of developing a system of international security. Only in that way can we feel certain that we are going to have reasonable assurance of security in the future. In the atomic and scientific age which we have entered we must find some means of avoiding a war. Otherwise, all of us may perish. The article referred to reads as follows:

FOR PEACE IN TWO WORLDS

The London meeting of foreign ministers has ended in a bleak failure for a reason that is at once simple and obvious. As Secretary Marshall has said, France, Britain, and the United States were ready and eager to make it succeed, but Russia was not, and that is the sum of the story.

From the moment the conference opened, Foreign Minister Molotov seemed certain to adhere to a line calculated to kill it. That he did so is not really surprising, but it is instructive. It makes clear beyond doubt that the Soviet Union at this juncture—unless it can have its own way—has no desire to write an Austrian peace treaty or to make a definite beginning on a German settlement.

This policy can hardly be explained as anything but a policy designed to keep the Red army deep in Europe as long as possible and to promote and perpetuate abnormal conditions in order to make it easier for the Kremlin to entrench and spread its dominance as far west as it can. It is not a peace policy; it is a wrecking policy—a policy that the western powers could never accept without surrendering the continent.

It is a policy, moreover, that the Russians appear determined to pursue for a long time to come. It fits in perfectly with their world-wide program of obstruction, noncollaboration, and vilifying propaganda against the United States, Britain, France, and all other like-minded nations. The spirit that animates it is the same spirit that animates the Soviet position in Korea, the Soviet paralysis of atomic control, the Soviet boycott of the Balkan "watchdog" commission, and the violent Soviet opposition to such great undertakings as the projected long-range European recovery program. The collapse of the London Conference serves merely to round out the picture and to indicate that the men of the Kremlin, far from having a change for the better in mind, are bent on following a lone-wolf course, come what may.

In such circumstances there seems little or no reason to hope for a near-future bridging of the gulf between east and west. The idea we must now get used to is that this situation—this grim division of the world—is not likely to end for many years, if ever. The failure at London leaves scant room for doubt that the dream of collective security on a global scale, with all lands working together, is still only a dream, and a very remote one at that. This does not mean, however, that mankind has had its last chance for an enduring peace and has lost it. War is not inevitable by any means. America and the other free and independent countries of the earth have overwhelming power among them, and there are things they can do to insure their common safety.

France, Britain, and the United States, for instance, can now unify their three zones in Germany into a great force for the good of the Continent. The 16-nation European recovery program can be effectuated. We can see to it, through the machinery of the United Nations and our own American efforts, that countries like Greece and Italy are not robbed of their independence. We can cultivate powerful economic and political ties with our friends abroad, and with them we can intensify informational programs designed to spread more and more light behind the iron curtain. Above all, always leaving the door open for an agreement with Russia, we can maintain our military readiness at the level demanded by the present situation.

If a program of this sort is carried out by the United States and like-minded powers, at least part of the world—a large part—will be able to organize its own system of collective security, and it may even succeed in eventually persuading the Russians to come in. The "if" involved is a crucial one, of course, and there is no certainty that it will be met. Assuming the best, however, the cooperating nations can do much to guarantee their own safety even if the Soviet Union chooses to keep the globe split in two. Grave as it is, the London failure does not justify despair. We still can have peace if we work for it.

Waging the Peace

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 17, 1947

Mr. HOLIFIELD. Mr. Speaker, the problem of how to obtain universal peace is the most important one that faces the world. If we are to have an atomic or biological war, we know it will mean practically the destruction of civilization and will probably usher in a new dark age. Intelligent people throughout the country are thinking and speaking on this problem, to their friends and neighbors.

An article written by the Honorable Ralph C. Dills, of the Sixty-ninth Assembly District of the State of California, has recently come to my attention. This article appears in the December issue of the California Teachers Association Record, southern section.

Because of the vital message contained in this article and because it will be read by many of our leading educators in southern California, and because of our high regard for the character and ability of Assemblyman Ralph C. Dills, under unanimous consent I include his article in the Appendix of the CONGRESSIONAL RECORD, as follows:

WAGING THE PEACE

(By Assemblyman Ralph C. Dills, Sixty-ninth District, California)

Blessed are the peacemakers, for they shall be called the children of God. (Matthew 5:9)

Nearly 2,000 years ago the Prince of Peace taught men how to live together as brothers. Yet man has not learned the lesson of the Master Teacher. We have with the centuries learned to wage war effectively; we have made little progress in waging peace.

A glance at the figures showing some of the results of World War II allied air raids demonstrates our warring ability: Killed 560,000 individuals; wounded 1,192,000 individuals; homes demolished or burned, 5,810,000; individuals made homeless, 16,700,000.

This amazing destructive power, however, is now as obsolete as the dreaded German Zeppelin of 1915 to 1918 which in raids over England in those years killed but 435 individuals and wounded 1,069 others.

But what of the future? Listen to the scientists! They tell us that there is no defense against atomic warfare. Even if we could be 90 percent effective in intercepting piloted bombers or pilotless missiles the 10 percent penetrating defenses could wipe out any target.

Bombs now available are fifty times more powerful than the primitive Hiroshima and Nagasaki type and, as if this were not enough to fill our souls with a sense of impending disaster, we learn from Rear Adm. Ellis M. Zacharias, USN (retired), the wartime Deputy Chief of Naval Intelligence, that there are other absolute weapons of chemical, biological, and climatological types capable of exterminating from the face of the earth the last vestige of human, animal, and even vegetable life. They are being manufactured now! They are not an American monopoly and are of such a nature that small nations with limited industrial facilities may develop them. (United Nations World, November 1947.)

Yes, there is no longer doubt of our ability to wage a war which will mean the extinction of civilization. The ordinary person in all lands knows this and his faith in the probability of ending all wars is at an all-time low.

As never before the teacher, the clergyman, the civic leader, the man in public life must teach, preach, and practice the belief that we are on the threshold of everlasting peace. We must understand that peace can no longer be a static or negative thing. We must wage peace in a new and dynamic manner.

A recent survey disclosed that 86 percent of those questioned indicated that they had a direct and active part in some phase of winning the war. Only 36 percent believed they were making contributions toward winning the peace. How can this situation be altered? Here are some suggestions:

First, we must attack the basic causes of war, the sources of irritation and friction. The existence or threat of starvation and want at home or abroad creates a fertile breeding ground for conflicts which grow into major international problems. Lack of food, raw materials, and health facilities must be dealt with on an international scale and with sympathy and understanding.

Second, the problem of ignorance which is the source of the malice, hate, distrust, and misunderstanding that lead to strife and war must be attacked with even greater resources, vigor, and vision than we employed in successful prosecuting the war. The Sermon on the Mount might well be a good guide for future action and attitudes. The elimination of educational inequalities in America which resulted in 350,000 draftees being unable to sign their names—could well be "operation immediate." Only by adequate Federal aid to education can we cope with this problem.

Third, we must believe that war is not inevitable and that man can live in peace. The preamble to the Constitution of the United Nations Educational, Scientific, and Cultural Organization (UNESCO) declares that "since wars begin in the minds of men, it is in the minds of men that the defenses of peace must be constructed." We must have faith in the United Nations organization, in UNESCO, and all of the special organizations established by those who are endeavoring with ever-increasing success to lay a foundation for a new era of peace and plenty.

Fourth, we must undertake as a personal duty and responsibility a study of world problems, international affairs, and international peace organizations. We must daily strive to do something worth while and significant to promote true democracy, good will, and understanding among those with whom we come in contact. Above all, each of us should acquire a sense of personal responsibility for promoting in every conceivable manner the cause of world peace. None of us is too unimportant. We have to face the fact that we are in all-out fight to save our own lives and our civilization. Death and total destruction are the alternatives. An unknown author in the following words has caught the spirit of the need of our times:

"I AM ONLY ONE

"I am only one;
But, I am one.
I cannot do everything
But I can do something.
What I can do, I ought to do;
And what I ought to do,
By the grace of God,
I will do."

The peacemakers of the world cannot draft your services. But what you can do toward waging the peace, they fervently hope you will do.

August H. Scheid: 50-Year Veteran of School Boards

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, December 15, 1947

Mr. WEICHEL. Mr. Speaker, the days of the little red schoolhouse have about ended in Ohio, and I want to pay tribute to a man who has served more than 50 years on boards of education in Erie County, having done much for rural education. I am including a news item from the Cleveland Plain Dealer covering the service of August H. Scheid:

STARTS FIFTY-SECOND YEAR ON SCHOOL BOARDS—OHIOAN ENDED REIGN OF LITTLE RED SCHOOLHOUSES

SANDUSKY, OHIO, November 22.—August H. Scheid, of neighboring Huron Township in Erie County, instrumental in bringing about the abolishment of the one-room little red schoolhouses today is entering his fifty-second year as a member of county and township school boards.

It was in April 1896, that he was first elected to a post in the county educational system and his service of more than a half century is believed to be unequalled in Ohio.

In the same year, he was elected township clerk and he also was ex officio clerk of the board of education. His opponent for the clerkship was the late John C. Drake of Kimball, a former State senator.

Scheid at the November 4 election was again reelected for his eighth 4-year consecutive term to the Erie County school board and of which he is president. He and Dr. E. C. Alexander of Castalia were unopposed at the polls.

CAREER STARTED IN 1896

His first election to the county board came in 1919, and prior to that time he was on township boards. His educational career began with his election as an Oxford Township member in 1896.

He recalled that 50 years ago teachers in the one-room rural schools received a salary of $22.50 a month, and remembers that instructors in those early days were more plentiful than in the present day. At one time he recalls 26 applications for positions as teachers in four one-room schools, 22 more than the number required.

He was instrumental in closing the first one-room school in Erie County, which had only six pupils.

He attributed the recent teacher shortage to the fact that salaries for teachers have not kept pace with those paid in private industry.

Stabilization of Commodity Prices

EXTENSION OF REMARKS
OF
HON. JOHN C. KUNKEL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 17, 1947

Mr. KUNKEL. Mr. Speaker, under permission to extend my remarks, I am including a radio speech made by me on Sunday, December 14, over Station WHP in Harrisburg, Pa.:

Last Thursday, December 11, President Truman held a press conference at which he announced his flat rejection of the Wolcott bill to stabilize the national economy and to aid in curbing inflationary tendencies. He said further that he would send down some specific suggested legislation on this subject within the next few days.

The special session is nearing its close. It could not last longer than early January of next year when the regular session is due to start. It is a legislative impossibility for the Congress to consider and act upon these proposals of the President's during this session. Mr. Truman spent 10 years in the Senate. He knows this just as well as does every Member of Congress. The purpose of his making such statements now—nearly a month after the special session began—can be rationalized only on the ground of being a purely political maneuver. When President Truman vetoed the price control extension bill in 1946 on the day the old law expired, he knew then it was a legislative impossibility for the Congress to enact a substitute bill without a gap during which prices would gyrate and go completely out of hand. As the leader of his party then, he knew his own party was split wide open on many phases of price legislation. He insisted upon disorder. He created it at the sacrifice of the national interest in 1946. He added to the flames when he threw all orderly controls out of the window by his own actions in the fall of 1946.

The Republican proposals in the Wolcott bill contain everything which the many Cabinet members, testifying before our committee, indicated the President would do at this time or in the immediate future. Even if the President were given the most unlimited grant of powers imaginable, the Cabinet members insisted that only voluntary controls would be tried for a considerable period of time. They said that any more drastic

future steps would only be taken if it developed that voluntary controls would not work. From that point on, the suggestions of the Cabinet members became increasingly vague and contradictory. No one could tell just what they meant. They could not tell what they would do, nor how they would do it. Remember this, the present bill does cover completely all that was to be put into effect during the next few months.

Mr. Truman took the occasion of this press conference to demonstrate his complete lack of knowledge of the bill itself. He criticized the provision permitting consultation and agreement between the Government and representatives of industry, business and agriculture in respect to the problems indicated below in the quotation from the bill itself. The President attacked this violently as a complete disregard of the antitrust laws. It might be well to read this provision in full so that you can judge for yourself just what it says and does:

"SEC. 2. (a) In order to carry out the purposes declared in section 1 of this joint resolution, the President is authorized to consult with representatives of industry, business, and agriculture with a view to encouraging the making by persons engaged in industry, business, and agriculture, of voluntary agreements—

"(1) providing for allocation of transportation facilities and equipment;

"(2) providing for the marketing of livestock and poultry at weights and grades that represent the most efficient utilization of grain;

"(3) providing for allocation and inventory control of scarce commodities which basically affect the cost of living or industrial production;

"(4) providing for regulation of speculative trading on commodity exchanges; or

"(5) which will otherwise carry out the purposes declared in section 1 of this joint resolution.

"(b) The President is authorized to approve any such agreement which he finds will carry out any of the purposes declared in section 1 of this joint resolution, except that he shall not approve any agreement unless such agreement specifically provides that it shall cease to be effective on or before March 1, 1949, and he shall not approve any agreement which provides for the fixing of prices.

"(c) Parties to any agreement approved under this section are hereby relieved from the operation of the antitrust laws, and of all other restraints, limitations, and prohibitions of law, with respect to the making of such agreement and with respect to carrying out such agreement prior to March 1, 1949, in conformity with its provisions.

"(d) As used in this section the term 'person' means an individual, corporation, partnership, or association."

You will notice:

1. The representatives of industry, business, and agriculture are authorized to consult with the President or his designated representatives.

2. The President is authorized to approve any such agreement only when he finds it will carry out the declared purposes.

3. He is directed not to approve any agreement which provides for the fixing of prices or which extends beyond the effective date, March 1, 1949.

4. The President is not required to approve any agreement unless he feels it is wise; therefore, no agreement entered into can ever be valid unless the President, himself, approves that specific agreement. The only possible way in which the antitrust laws could ever be infringed upon under this law would be if the President, or his designated authorities, attempted to violate them or connive in their violation. Presumably, the President would designate the Attorney General to perform this duty. The attorney general has the responsibility of enforcing the antitrust laws.

The best comment I have read on this statement of Truman's appeared in the Washington Star, a paper usually friendly to the President. The Star said, "President Truman's do-or-die stand in behalf of the untouchability of the antitrust laws might be touching if he were not so egregiously wrong about it." The President's position is made more ridiculous because Secretary of Commerce Harriman on that same Thursday submitted proposals for compulsory enforcement of priorities and allocations to the Senate Judiciary Committee. In these Harriman proposed industry agreements more sweeping than those permitted under the present House bill.

The present system seems to be for each Cabinet member to bring in some suggestions. The first one was brought up by Harriman on Thursday. Then the Cabinet member makes it clear to the Congress that he is speaking only for himself and distinctly not for the President or the administration. Secretary Schwellenbach proposed some others on Friday and said he would propose some wage controls later. He was careful to describe them as "his personal recommendations," thereby avoiding any possibility of their being construed as administration recommendations. Despite his public statement about sending up suggestions to the Capitol, the President has not done so as yet. He is obviously leaving himself free to repudiate the recommendations of his subordinates if and when they prove unpopular or are found to be unworkable.

The bill also extends export controls and the power to allocate transportation facilities for a year. By adequately using these powers already at his disposal, a great deal of the impact of the foreign aid program on prices could have been cushioned. The bill also permits the President to exercise any authority granted through any department, agency, or officer in the executive branch of the Government. Lastly, it increases the reserve requirements applicable to Federal Reserve Banks from 25 to 35 and 40 percent. This is the same reserve required for years prior to 1945. It was lowered in 1945 at the request of the executive branch of the Government. The President was then openly advocating inflation. As a matter of fact, the inflationary policies of President Truman during the last half of 1945 (although somewhat forgotten today) have more to do with present high prices than any other one factor, with the possible exception of the huge shipments overseas of goods in short supply in this country. It was then he forced the increase in the price of steel, finally resulting in an increase of $5 a ton early in 1946. This price increase was reflected all along the line. It created a major dislocation in the entire price structure which was then under price control.

This reserve requirement provision is intended as an initial step toward "tightening up credit and deterring inflationary pressures." It will have little, if any, present effect except psychologically. It does recognize the dangers in the potential credit availabilities in our Nation. The Federal Reserve Board and many other Government agencies under their existing powers could have taken many steps during the past 2 years to restrain inflation, if they had been disposed to do so. Generally, these steps have not been taken. The usual policy has been to neglect and ignore the use of powers at their disposal, thereby avoiding responsibility for what might happen through the exercise of the powers. The next step was to come up to the Congress and request new and more sweeping powers in order to combat an alleged crisis, the situation having been created or at least made worse by their own failure to carry out judiciously and fairly the duties previously placed upon them.

No one claims this bill is a cure-all for high prices. You cannot pump billions into the spending stream of the Nation year after year and you cannot continue to ship a huge volume of our products out of the country without there being a long, cumulative effect. You cannot offset this in a day. Haste and ill-considered action could easily curtail production here at home, thereby causing far more harm than good. We must maintain and increase production. If our production recedes it will lower the standard of living here and jeopardize any foreign-aid program which we might contemplate. Our standard of living depends upon goods created. Foreign aid depends on goods far more than upon dollars. You could easily slip back to the troubles and shortages of the OPA if you did not avoid the errors of the past which occurred in that program and particularly in its administration. There is a wide difference of opinion on what should be done. The present bill represents what can be done at this special session. The committee looks forward to further action early next year. If certain controversial issues had been included in the proposal, the chances of the passage of any legislation at all on this subject during the balance of this year would have been nil. There is a wide difference of opinion now, as there was in 1945, in both parties on how many phases of this general subject should be handled.

You can summarize the present bill by saying:

1. It is the maximum which can reasonably be expected to go through the Congress to final enactment in the allotted time of the special session.

2. That it gives the President everything which his Cabinet members have decided he would do as of the present and immediate future.

3. It provides the necessary ground work upon which any future action will necessarily rest.

On some of the issues President Truman would probably be opposed by at least one-half of his own party in Congress. You can check this by looking at the votes when these same issues were voted upon in one form or another in sessions of past Congresses. Even the present bill has provoked some argument.

Labor-Management Act of 1947

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 17, 1947

Mr. KEATING. Mr. Speaker, there have been so many exaggerated and misleading adjectives bandied about, regarding the Labor-Management Act of 1947, that it would not be surprising if the public gained an entirely inaccurate picture.

One labor union member of my congressional district, however, voices the sentiments of all working men and women, who thoroughly understand this law, in a letter to the Rochester Times-Union of Rochester, N. Y.

The editorial comment on his letter is set forth below under leave to extend my remarks:

TAFT-HARTLEY LAW BAD FOR WHOM?

Tom Crinnen, of Rochester, wrote the editor of the Times-Union that the Taft-Hartley law "will be a God-send to men and women working for a living."

How different that from the cries of "slave-labor law" raised by some of the big union bosses!

Where lies the truth?

No law is perfect. But the Taft-Hartley law definitely is in the right direction and any faults can be corrected as we go along because machinery is provided for periodic review.

The law aims at equal justice for the lowliest member of a union no less than for the top union official; for the little employer no less than for the man employing thousands.

The self-seeker who says it's all bad should be asked: "Bad for whom?"

Certainly, Tom Crinnen holds, it's not bad for the workingman.

A lot of people, as we've remarked before, are just finding out what the law really is and does. As more and more learn the truth the feeling against those who've been misrepresenting it is apt to be something to see.

Hudson County Bar Association Dinner

EXTENSION OF REMARKS
OF
HON. EDWARD J. HART
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, December 17, 1947

Mr. HART. Mr. Speaker, one of the outstanding functions of the year in the New York metropolitan area is the annual dinner of the Bar Association of Hudson County, N. J. Last Saturday marked the seventieth anniversary of this important and delightful function. There were in attendance more than 900 diners, nearly all of whom were lawyers. The special guests were Hon. John F. Drewen and Hon. Thomas J. Stanton, presiding judges of the Hudson County court of common pleas. The other guests were Hon. Clarence E. Case, chief justice of New Jersey and the remaining members of the supreme court, Hon. A. Dayton Oliphant, the chancelor, and vice chancelors; the lay judges of the court of errors and appeals; the judges of the circuit court; and Hon. Gerald McLaughlin, judge of the United States circuit court of appeals, judges of the United States District Court in New Jersey, Hon. Paul J. Duffy and Hon. August Ziegener, judges of the Hudson County court of common pleas, together with Hon. Thomas J. Brogan, former chief justice of New Jersey, Hon. Luther A. Campbell, the former chancelor, Hon. David Nimmo, judge of the Hudson County juvenile court, Hon. Marshal Van Winkle, Hon. David A. Pindar, advisory masters of the court of chancery, and Hon. Joseph Summerill, Jr., president of the New Jersey State Bar Association.

The toastmaster was Hon. William T. Cahill, referee in bankruptcy and president of the Hudson County Bar Association.

The guest speaker of the evening was the distinguished United States Senator from Illinois, Hon. SCOTT W. LUCAS. He delivered an eloquent and thoughtful address, and received from the large audience, which included many of the most eminent members of the New Jersey Bar, rapt attention and well-deserved applause. At the close of the dinner, Senator LUCAS was the recipient of many congratulatory expressions from those who were moved to admiration by his speech, which I herewith append:

I am delighted at the opportunity of speaking to the lawyers of the Hudson County Bar Association of the State of New Jersey. I am convinced that those of us who are skilled in the arts of the law have a special and peculiar responsibility in helping maintain the blessings of liberty which are being threatened seriously throughout the world.

Our country has enjoyed the advantages of democratic government for over 170 years. Today we are the leaders of mankind in every human endeavor. It is admitted that ours is the greatest and most celebrated form of government in the eyes of freemen everywhere.

As we watch the uncertain and tragic developments in nations of the Old World, it should be a source of great pride to every American patriot that in the Government of the United States we find strength, confidence, and stability. We are proud that we have been able to resist the influences which have altered radically the forms of government in the rest of the world. But, my friends, I sometimes wonder whether we are all awake to our solemn responsibilities as freemen to cherish and defend the way of life we hold so dear. My doubts stem not only from what is going on in Europe and Asia today, but also from what is occurring within our own borders. We know that subversive forces labor aggressively in seeking to undermine our institutions. We see smugness, complacency, selfishness, and greed as a cancerous growth on the body politic.

A cynic once said that people tend to have the form of government which they deserve. Despots and tyrants, on that theory, are the reward of peoples who do not hold liberty dear. Because we were a free people yesterday, because we are a free people today, it does not follow that we shall be free tomorrow. As a people we shall continue to be free only if we are prepared to defend our liberties against encroachment from whatever source, with the same devotion and self-sacrifice as the great patriots who threw off the yoke of England and established the Government of the United States of America.

The ideal toward which those patriots were working was best expressed by John Adams, contained in the bill of rights of the Constitution of Massachusetts, that the American Government should be a government of laws and not of men. This phrase which slips so easily off the tongue is pregnant with meaning. It is a shield against the arbitrary and capricious exercise of power by elected officials of the Government. No action of an individual can be visited with punishment unless a law condemns such action. Each of us can govern his conduct in accordance with the law, safe in the knowledge that if we have truly followed the law we need have no fear of the consequences.

But for lawyers, the expression has a special meaning. A government of laws implies that there will be lawyers to write the laws, and judges who will interpret the laws and try your cases.

But, in all seriousness, without the help of skilled men to provide and to interpret the law, there can be no government of laws. And throughout the whole of American history, the lawyer has played a role of which we today, the inheritors of a great tradition, should be justly proud. The Constitution of the United States, which the English statesman Gladstone, characterized as "the most wonderful work ever struck off at a given time by the brain and purpose of man," and which Macaulay said was "the wonder of the ages," was almost exclusively the handiwork of lawyers. It was not only a noble charter of liberty, which sprang from a deep belief in the dignity of the individual; it was also a set of laws to be interpreted and applied by lawyers and judges. We are in even better position than Gladstone and Macaulay to evaluate the worth of that document. Since that day we have passed through a period of great social and economic change, when new methods had to be devised to meet new crises in government. We have come through two great world wars which shook to the roots the governments of the world. Science in the last few decades has made enormous strides, so that Gladstone and Macaulay would hardly recognize the world in which we live; and science has brought with it changes in our lives, and the prospect of changes, of which we are only now dimly aware. Through it all, the American Constitution has proved itself to be so supple and so hardy an instrument, that only 21 amendments were necessary in the 170 years of its existence to make it conform to the needs of the American people. That it has continued its capacity for growth without serious impairment in our modern and complex society is a glorious tribute to the genius and vision of the founding fathers.

John Marshall saw perhaps more clearly than most the durability of the Constitution and expressed his feelings in the happiest language. In McCulloch against Maryland he spoke of the Constitution as "intended to endure for ages to come and, consequently, to be adapted to the various crises of human affairs." And again, in Cohens against Virginia, he said, "a constitution is framed for ages to come and is designed to approach immortality as nearly as human institutions can approach it." But, in the same case, he gave voice to another truth, which we are sometimes inclined to overlook. "The people," he said, "made the Constitution, and the people can unmake it. It is the creature of their will, and lives only by their will."

You may perhaps think it strange that I should come to you from the Senate of the United States, where matters of world-shaking importance are being debated, to talk about the basic principles of our Government. And yet, as I look about me, and particularly as I review the situation across the seas, it seems to me that we are living through a world crisis which could well endanger our constitutional freedoms before it runs its course. And, because I fear that such a dreadful eventuality could take place, I have taken this opportunity to try to drive home the necessity for constantly examining first these basic and fundamental principles.

The liberties of which I speak are, of course, not absolute. Some liberties must yield to the common good. A man is not free, as Mr. Justice Holmes remarked, to shout "fire!" in a crowded theater, nor indeed is he free to use economic power to crush those whose lot is poorer than his. The basic liberties are those which recognize the dignity of the individual and his inalienable rights. They are based on the concept that we are all children of God and that some part of the Divine spark is in each of us. Unless we cherish the dignity of the least of our fellow citizens, we are not truly devoted to the ideals of our country and its Constitution.

We cannot expect our people to cherish our way of life unless they understand and appreciate the things which make up our way of life. How many of them do you suppose can explain the nature of the relationship between the State and Federal Governments, or the specific guaranties contained in the Bill of Rights, or the basis on which the Supreme Court of the United States has the power to declare an act of the Congress unconstitutional. Or how many have a deep understanding of the momentous proceedings of the Constitutional Convention, when that band of patriots hammered out our Constitution, or understand the constitutional crisis precipitated by the threat of South Carolina to secede from the Union.

In spite of the fact that many lay persons do not have a deep understanding of our history and the political principles which have kept us a great Nation, I venture to say that there is a deep thirst among our people for just such understanding. We have recently been witnessing the thrilling spectacle of the Fredom Train, which, under the auspices of the American Heritage Foundation, has been traveling to the cities and towns and villages of America, carrying aboard its precious cargo, the documents which are the visible symbols of the greatness of our country. The newspapers tell us that people come to see these documents by the hundreds, lining up in the cold, to get a glimpse of those priceless pieces of paper, the Magna Carta, the Mayflower Compact, the Declaration of Independence, the Constitution, and the Gettysburg Address.

They are not thus crowding aboard a train because they are antiquarians, interested in old manuscripts for their own sake. Rather, they go aboard as Americans, interested in the traditions of their country and how they grew—interested to find out how a little group of men who were bound together by the tie of liberty forged out of the necessities of the time a new form of government which has lasted for over a century and a half. Their hunger for information, their interest in these documents is the most eloquent testimony to the deep yearning in the American people for the preservation of American ideals and aspirations.

It goes without saying that our schools and our colleges are the places to begin the process of the education of Americans for the responsibilities which are theirs. This education should come in the most specific terms. Not only should those attending be taught the duties and responsibilities of citizenship, and how those duties and responsibilities came about—they should also be taught the ways in which our liberties are threatened and how they are sometimes violated.

It is of equal importance that our students be taught the facts about the governmental systems which compete with democracy—the twin menaces of fascism and communism. They should learn the origin of fascism and under what circumstances communism arises. We have nothing to lose by making perfectly clear the nature of the governments which compete with democracy. On the contrary, it is only by the most specific understanding of the nature of our Government and the governments of other countries that our citizens will learn to cherish their democratic heritage all the more.

I am not suggesting that our schools embark on a calculated propaganda campaign. I am suggesting only that they tell the honest uncolored truth. Communism within this country the communism abroad have cast their shadow over our beloved country. We must devise methods of dealing with both those dread specters. We can be successful only if our people have learned to love democracy, not only by instinct, but also with understanding. The more deeply they understand what is at stake in the battle against the menace of communism, the more vigorously will they be prepared to meet its challenge. The Communists themselves are finished students of our Constitution. They use it as a shield to protect their un-American activities in the name of personal and political liberty, while in the dark hours of the night they plot to destroy the very foundations of individual liberty.

My friends, I speak as I do because we in America live in the center of a world of terror and turmoil. The countries of Europe have been torn asunder by a devastating war, from which some are slowly and painfully recovering with our help. We see also the great bear of Russia walking over the prostrate life of one nation after another, both by force and by the stealth of political infiltration. In Russia, and her satellite countries, liberty as we know it does not exist. In those countries man is taught that the be-all and end-all of his existence is to serve the state and to glorify the name of the state. France, which was our ally in the Revolutionary War, and which stood at our side in the two world wars, is now locked in a struggle with the forces of communism. Italy is likewise in grave danger of falling into the hands of communism. Only England, the country which, since the Magna Carta, has been devoted to the ideal of individual liberty, has so far escaped the struggle with internal and external communism. But today the English people are worse off economically than they were during the war. "Austerity" is the word heard on every tongue.

To me, our duty under these circumstances is very plain. We cannot abandon Europe to decay and thus inevitably to communism. If we are not moved by our natural humanitarian instincts to spring to the aid of an ally still suffering grievously from the wounds inflicted by a common enemy, then certainly we must be moved by our own self interest. In this atomic age, there is no impenetrable Chinese wall which surrounds our country, and which tells potential aggressors that they may go so far and no farther. However, I am very much afraid that some Americans, including some of our statesmen, are closing their eyes to these fairly obvious facts. From their deportment and demeanor, it is apparent they would rather not live in such a world, but for good or ill, it is the only world we have in which to live.

Fortunately, for our country, the two great political parties have created out of the necessity of showing to the world an America united, a foreign policy which embrances both parties. The men who forged that policy saw clearly that wide differences of opinion, freely expressed, would weaken America's hand at the conference tables and in the foreign offices of the governments of the world. As a result, there is no democratic foreign policy, there is no republican foreign policy, there is only an American foreign policy. That immediate policy requires us to embark on a specific program for the temporary relief of western Europe, on the theory that the people of France, Italy, and Austria shall not suffer the pangs of hunger and the chill of winter for the lack of bread and coal. The passing of this humanitarian program by the Senate and House has had a tremendous psychological effect upon the people of Italy and France. The Communists headed by the Kremlin in Moscow at last realiz that we mean business.

Our long-range policy calls for the enactment of the Marshall plan, on the theory that the 16 nations of western Europe, who propose to participate in the plan, must remain friendly and free, if we are to work out an everlasting peace.

The Marshall plan is not a one-way street. It is a plan for the mutual benefit of all. While we shall loan to these nations some sixteen to twenty billions of dollars over a period of 4 years, it will not be a program of waste and extravagance. The Congress will enact legislation to see that this money is not frittered away.

Candor compels me to admit that what we do under the Marshall plan is a gamble. But, can we afford to do nothing and let the expansion of communism run its ungodly and ugly course throughout Europe and Asia? I, for one, choose to assist those 16 nations devastated by the most disastrous war in all history to retain their right to be free through a program of economic stability.

It is amazing and fantastic to know that in this country many isolationists are agreeing with Communists in their opposition to this program. They are either against any relief at all, or desire to see the appropriation reduced to the point where it would be worse than no appropriation at all. Too little and too late may plunge all Europe into economic chaos and disaster, and that means communistic domination of that continent. Any American who fails to comprehend the grim implications of such a communistic victory is playing fast and loose with the future of this country. In our own self-defense, I respectfully submit that we must do everything within our power to maintain the traditional independence and freedom of the 16 nations included in the Marshall plan. This is a realistic and progressive outlook which will pay rich dividends in future security and happiness. It is an absolute necessity unless we are willing to subject ourselves to world humiliation by beating a cowardly retreat from the dominant and leading position our Nation holds throughout the universe.

My fellow Americans, Congress must soon decide this momentous question. No graver peacetime problem has ever faced the legislative branch of the Government. And yet, most Members of Congress know today whether or not they favor the basic objectives of this plan. The debate upon the issues involved will be lengthy and thorough. All the facts should be presented. However, in this critical hour, there is no room in this debate for the politician. This is truly a great American issue. It is the hour when Members of Congress should rise above the fog in public duty and in private thinking. The ramifications of this program and its implications to the future welfare of our country demand that Congress act upon this measure with all convenient speed. It is not the type of legislation which should meet with emasculating and dilatory amendments. Sixteen to twenty billion dollars to aid in the rehabilitation and reconstruction of the 16 countries in western Europe might mean the difference between peace and another war.

If the Congress had not promptly voted to support the President's proposal for aid to Greece and Turkey, we should now be in serious danger of Communist infiltration or seizure in that part of world. The Government of Greece would now be in the same position as the Government of Yugoslavia—a puppet of the Soviet Government. Turkey would find Communist forces desperately trying to get a foothold in that country. Fortunately for us, the Congress saw the nature of the emergency in those two Mediterranean countries and acted swiftly enough so that we were able to stop the expansion of communism before it took over the strategic spots in the Mediterranean area.

No one in this country particularly enjoys the situation in which we find ourselves. Had we any choice, it would, of course, be better if we could turn our attention to finding the solution to America's problems, and let the rest of the world go its own way, without the necessity for our aid. But there is no choice except to do what we propose to do. So long as the spectre of communism looms as large as it does, we have to meet its challenge affirmatively.

The savage attack made by the Communists on our European policy is the best evidence of the correctness of that policy. The men of the Kremlin understand perhaps better than we possibly can that a Europe which can regain its feet and resume its place in the economy of the world, will not fall a prey to communism. When Russia is firmly convinced of this all-important fact, Molotov may be glad to talk to Marshall, and may even contemplate talking to God. Vychinsky's libels and vilifications of this country could be forgotten, if these two all-powerful nations could find a way to live together in the same world. This old earth is big enough for both.

But, my friends, while, through the Marshall plan, the United Nations organization, and the drafting of treaties, we are seeking to work out the destiny of this country, we must, during all these trying hours, be adequately prepared to meet any act of aggres-

sion that might endanger the peace of America. Our Air Force must be armed, equipped, and ready to strike at a moment's notice. Our Army and Navy must have the latest and most effective weapons of war. We cannot afford to economize with the defenses of our country. We must be everywhere armed, everywhere vigilant, until we are certain that world peace is a fait accompli. Our precious liberties must be preserved at any cost.

I pray we shall never have to call on our arms and our young men to go forth again to defend our country. You and I have lived through two world wars. I wore the uniform of my country in the First World War and I have some understanding which only a soldier gets of the meaning of war in all its dreadfulness. While we must be adequately prepared for attack from any quarter, it is imperative that we continue with the help of God, working night and day toward preserving the peace of the world. I am confident a well prepared, united and informed America wil find its way to peace.

Editorial by Robert N. Kindred

EXTENSION OF REMARKS
OF
HON. KARL STEFAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 16, 1947

Mr. STEFAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial, written by Robert N. Kindred, editor and publisher of the Central City Nonpareil, Central City, Nebr., because it is pertinent and timely:

This column's prime concern, under ordinary circumstances, is with the affairs of central Nebraska. Usually, the affairs of the Nation and of the world are left to those who have a wider field of expression.

Sometimes, however, there is a special occasion on which something needs to be said, and no one else is saying it.

This is one of those occasions.

Calling policemen "cops" in news stories is wrong, according to a letter received by a daily newspaper's editor. The letter writer explains that "cop" is a slang expression and that its use robs the policeman of his dignity. Children, the writer continues, take up the term and then the youngsters grow up having no respect for law and order.

Cartoonist Al Capp has been having trouble over recent episodes in "Lil' Abner." Some readers complained that the public's faith in Congress was being "undermined" when one of Capp's fictitious characters (a make-believe Member of the Senate) was shown as a demagogue and a racketeer.

Movies are under fire for burlesquing businessmen—because to poke fun at any form of private enterprise is "pouring forth Communist propaganda."

Radio is being attacked as "low brow" on grounds that programs are aimed at "the lower levels of intelligence" and have no "uplifting value."

We Americans surely must be sensitive, thin-skinned creatures nowadays. Our dignity and our faith must be awfully fragile, to be so easily cracked.

Either that or our sense of humor is fleeting.

There has been too much reliance on phony dignity * * * too many attempts to convince the people that ordinary mortals become little tin saints, once they're lifted to high places * * * too much effort to teach a lesson through media which should be left to pure entertainment.

After all, you read a newspaper for news, knowledge, and opinion, interestingly presented. You go to the movies or switch on the radio in search of entertainment. If you want a sermon, you go to church, read a religious article or tune in a church-sponsored program.

You know your police officers, lawmakers, and business tycoons pretty well. If they have real dignity, that dignity can withstand kidding. If they do not, no glorification can give it to them.

The do-gooders who are raising most of the fuss now are not really beliviers in democracy.

They are afraid you're such a dope you can't make up your mind for yourself. They want to approve or disapprove what you shall read, or see, or hear, first by improving the quality of newspapers, movies, books, and radio programs, later probably by censorship.

Next, they'll be telling you that you have no right to vote, that they'll have to pick the candidates for you, that they'll have to decide upon your laws.

That's how democracies become dictatorships.

People, as a whole, aren't so dumb.

Most of the troubles of the last 50 years can be traced to wise guys who thought that only they were qualified to solve the people's problems.

The International Workers Order

EXTENSION OF REMARKS
OF
HON. VITO MARCANTONIO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, December 17, 1947

Mr. MARCANTONIO. Mr. Speaker, Attorney General Clark's listing of organizations of alleged questioned loyalty denies every element of democratic procedure and fair play. It has all the earmarks of the police state, in violation of the Bill of Rights. The attempt of the Attorney General to question the loyalty of the International Workers Order is a travesty of justice and a blow below the belt against the distinguished record and achievements of this organization. A fraternal insurance organization which provides low-rate insurance and various vital sick and health benefits to the laboring and common people of the United States, the International Workers Order was conspicuous throughout the war as an outstanding war-service organization.

More than 300 of its members died in the service of our country during the war, while close to 8,000 of its members are honorably discharged veterans of World War II.

Approximately 40 members of the International Workers Order distinguished themselves on the field of battle and received commendations for their heroism, ranging from the Distinguished Service Cross and the Distinguished Flying Cross to the Purple Heart.

Throughout the war the IWO placed the victory of our country above everything else and geared all its activities to the mobilization of its membership for the wide variety of home-front services which were essential for victory. During this period it received scores of letters from the White House, the Treasury Department, the War Production Board, the Office of Civilian Defense, the USO, American Red Cross, the Army and Navy, and governors and mayors throughout the country, commending it for its patriotic war activities.

On December 17, 1941, for example, Secretary to the President, M. L. McIntyre, wrote the International Workers Order, declaring that "the President of the United States wishes me to convey his deep appreciation of the patriotic support which you so genuinely pledge."

The Treasury Department on April 1, 1944, commended the IWO for the sale of war bonds and declared:

> Your organization is fully entitled to the commendation we are delighted to extend for the cooperation evidenced, in recognition of which we are glad to extend the enclosed Treasury Department citation.

The Fraternal Outlook, official publication of the IWO, was listed by the Treasury Department's Third War Loan Roll of Honor of national magazines. The war record of the IWO and its patriotic contribution to victory is well known and it is officially embodied in the records of our Government agencies.

The IWO has a particularly distinguished record as a champion of the rights of minorities and the foreign-born. It is an organization that is composed of the men and women of the diverse national groups, the Slavs, Italians, Jews, Negroes, and many others that comprise the American Nation and are a source of its greatness and strength; the IWO has enhanced the cultural diversity of our Nation. Most of its members are part of America's laboring force and it is evident that the questioning of the loyalty of the International Workers Order is part of the inexcusable attacks upon the foreign-born, the national minorities, and the American labor movement.

As an organization fighting against discrimination and for the rights of America's national groups, the IWO has made a profound contribution to true Americanism and to the realization of the American ideal that all men are created free and equal.

This aspect of the composition of the IWO is also reflected in its unique relief contributions. Many of the members of the IWO have relatives and kinfolk in Europe. Long before our Government agencies even began to discuss relief for Europe, the members of the International Workers Order began to develop intensive relief campaigns, out of a personal interest in their kinfolk and an abiding interest in American aid to Europe without any political strings attached. The IWO has adopted many children's homes in the various European countries and has contributed literally millions of dollars to virtually all the countries of Europe for the relief and rehabilitation of its war-ravished peoples.

The International Workers Order has proven its loyalty with deeds. Its contributions to the struggle for the betterment of the standards of living of the working people of this country will be long, long remembered after its traducers will have been forgotten.

IWO CHALLENGES CONSTITUTIONALITY OF ATTORNEY GENERAL CLARK'S REPORT—PLANS LEGAL ACTION

(Statement by the officers of the International Workers Order)

Without notice or hearing, without charges or evidence, in violation of the Constitution and elementary democratic procedure, Attorney General Clark took it upon himself to question the loyalty of the International Workers Order. The International Workers Order is initiating the necessary legal action against Mr. Clark's attempt at character assassination.

The 188,000 members of the International Workers Order, Negro and white, of 15 different nationality groups, are outraged by this attack upon a legally constituted fraternal insurance organization to which they and their families have entrusted their insurance protection and their fraternal and cultural welfare.

The International Workers Order is proud of its record of loyalty and patriotism, its war effort and service to the people. We have nothing to apologize for. The membership of the IWO will meet this irresponsible attack and will fight back with every means at its disposal to protect its integrity and security.

The IWO has been in existence for 18 years. It is a fraternal benefit organization, chartered and operating under the insurance laws of the State of New York and licensed to operate in many other States. We have paid out 160,000 claims totaling $11,000,000 in benefits. Our members carry $125,000,000 in insurance.

Due to the devotion of our membership and the nonprofit character of our organization, we have achieved a financial stability and integrity which ranks among the highest of all fraternal insurance organizations, as attested by the official reports, examined and approved by the insurance department.

The character of the IWO is unmistakably embodied in our constitution and bylaws which read, in part:

"The IWO provides sick, disability, and death benefits. It organizes for its members medical aid and other forms of fraternal services. It pledges aid and comfort to its members in case of need.

"The doors of the International Workers Order are open to all regardless of sex, nationality, race, color, creed, or political affiliations.

"As an American organization the International Workers Order accepts responsibility for the defense of the democratic institutions of our country."

Mr. Clark's arbitrary and unconstitutional designation of the IWO as an organization of questionable loyalty is contrary to the facts. The laboring and common people who built this organization to answer their need for low-cost insurance protection and other vital benefits will not be intimidated. In the tradition of our long-standing fight for social security, health insurance, democracy, and the equal rights of all Americans, against Jim Crow, anti-Semitism and discrimination, we shall fight for our rights and resist all attempts on the part of reactionaries to destroy the organizations of the people.

In this we are linked with millions of Americans who, in the spirit of Lincoln, Jefferson, and Roosevelt, are battling today to safeguard their threatened liberties and standard of living.

INTERNATIONAL WORKERS ORDER, INC.,
ROCKWELL KENT, *President*,
VITO MARCANTONIO, *Vice President*,
RUBIN SALTZMAN, *Vice President*,
LOUISE T. PATTERSON, *Vice President*.
JOHN E. MIDDLETON, *Vice President*,
PETER SHIPKA, *Secretary-Treasurer*.

IWO MEMBERS CITED FOR HEROISM BY THE UNITED STATES FORCES

1. Sgt. Max Badovinatz, lodge 4313: Airman's Medal for valor in invasion of Sicily; served in North African Air Force Troop Command.

2. Sgt. Mike Baranick, lodge 1562, Akron, Ohio: Gen. Mark Clark pinned Distinguished Service Cross for heroism in action.

3. Sgt. George G. Belous, lodge 3013, Detroit, Mich.: Soldier's Medal for courage, coolness, and disregard for personal safety.

4. Sgt. Leonard Bernhardt, lodge 503, East Boston: Distinguished Flying Cross, Silver Star, and Air Medal with three Oak Leaf Clusters.

5. Tech. Sgt. John Cichon, lodge 3523, Paterson, N. J.: Distinguished Flying Cross, Air Medal with three Oak Leaf Clusters; completed 50 missions as gunner in Mediterranian theater; cited for courageous service and efficiency in aerial combat.

6. Tech. Sgt. David Cohen, lodge 6, Bronx, N. Y.: Citation from Gen. George C. Kenney, Distinguished Flying Cross; was radioman with Fifth Air Service.

7. Sgt. Joseph Evanovich, lodge 4265, McKeesport, Pa.: Bronze Star for conspicuous gallantry and outstanding achievement in bombing missions.

8. Sgt. John Galanos, lodge 974, Newark, N. J.: Bronze Star for valorous conduct in action in Tunisian campaign.

9. Sgt. Bernard Greenberg, lodge 585, Brooklyn, N. Y.: Air Medal, Silver Cluster; turret gunner; squadron received Presidential citation.

10. Capt. Rubin Iden, lodge 42, Detroit: Killed in bombing action; cited for heroism in bombing Japanese vessels in Gizo Bay (Wake Island area).

11. Charles Krut, lodge 1546, New Haven, Conn.: Cited for splendid attitude and exceptional bravery under fire at Wheeler Field, Hawaii, December 7, 1941.

12. Pfc. John Kovach, lodge 1029, New York City: Silver Star, citation reads: "His courage and bravery, plus an unusual amount of initiative, served as an inspiration, and his gallantry reflects the glorious traditions of the armed forces of the United States."

13. Tech. Sgt. J. Kopko, lodge 897, Newton Falls, Ohio: Air Medal.

14. Sgt. Henry W. Kryzak, lodge 596, St. Paul, Minn.: Air Medal, Good Conduct Medal, four Battle Stars.

15. Lt. Alexander Kramich, lodge 3124, McKees Rock, Pa.: Silver Star for heroism in action on Biak.

16. Paul Mucha, lodge 2130, Carteret, N. J.: Silver Star for gallantry in action at Oahu, Hawaii, December 7, 1941.

17. Tech. Sgt. Victor Minkoff, lodge 3120, New Jersey: Air Medal; was pilot for Wendell Willkie's world flight.

18. Tech. Sgt. Edward Mazer, lodge 160, Pittsburgh, Pa.; Distinguished Flying Cross and three Oak Leaf Clusters.

19. Tech. Sgt. Fred Mirochnick, lodge 127: Air Medal and 8 Oak Leaf Clusters; completed 68 missions over France, Italy, and Yugoslavia.

20. Staff Sgt. John Onyszak, lodge 1566, Hammond, Ind.: Distinguished Service Cross pinned on by Major General Doolittle.

21. Pfc Peter Preslipsky, lodge 1504, West Leechburg, Pa.: Distinguished Service Cross for heroism in France; stopped a column of German Mark IV tanks.

22. Tech. Sgt. Donald Sachs, lodge 500, New York City; United States Air Corp Air Medal, with 3 Oak Leaf Clusters; Distinguished Flying Cross; bombing missions in Europe.

23. Staff Sgt. Arnold Solon, lodge 937, Brooklyn, N. Y.: Bronze Star Medal, citation for meritorious service in action beyond the ordinary * * * heroic achievement in action near San Giorgio, Italy, (he) disregarded danger to himself to aid his company commander, his outstanding performance was a vital factor in taking the objective.

24. Lt. Jerry Trauber, IWO general council member, New York City: Maj. Gen. Clayton Bissel, Intelligence Chief, listed Lieutenant Trauber for patriotic and courageous service.

25. Pfc Daniel Varchol, lodge 3618, Korn Kiest, Pa.: Bronze Star, 5 Battle Stars; his brother was killed at Pearl Harbor.

26. Lt. Harry Woliansky, lodge 1026, Newark, N. J.: Killed in action, posthumously awarded Distinguished Service Cross, Silver Star, and Bronze Star. (Died at Leyte).

27. Capt. Lucien K. Wernick, lodge 141, Los Angeles: Distinguished Flying Cross.

28. Corp. John T. Yaksich, lodge 4360, Detroit, Mich.: Navy Cross for heroism at Guadalcanal.

29. Staff Sgt. Andrew Zacharya, lodge 1041, Stamford, Conn.: Medal for bravery.

The above 29 instances of awards and citations are only those of which we have a record. Many were unreported.

United States and Soviet Industrial Production

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, December 17, 1947

Mr. JAVITS. Mr. Speaker, the following article from the December 16, 1947, issue of World Report is referred to in my remarks in the RECORD:

SOVIETS' URGENT NEEDS: FUEL, FOOD, PRODUCTION

RUSSIA'S RECOVERY IS FALTERING—THE RUSSIANS CAN SPARE VERY FEW GOODS FOR OTHER COUNTRIES TO OFFSET THE UNITED STATES SUPPLIES PROMISED BY THE MARSHALL PLAN—A MAJOR BLUNDER IN SOVIET PLANNING IS PARTLY TO BLAME

Russia's own urgent needs are an important factor in the Communists' efforts to wreck the Marshall plan in western Europe. Politically, the Kremlin cannot afford to let the Western World outpace Russia too far in recovery.

Soviet propaganda now tells of a bountiful harvest and humming industries. An end of food rationing is being forecast. Emphasis is all on the farms and factories that are surpassing their quotas.

The realities are somewhat different. Russian recovery is moving ahead. But it is slow and uneven. The chart on the opposite page shows how far the Soviet Union has to go.

Industrial output is only about 77 percent of the prewar level.

Food production still is far short of real needs.

Bottlenecks at many points in the Soviet economy are holding back the nation's entire recovery effort. They show up in official statistics and in press reports from Moscow.

Transportation is one of the worst troubles at present. It has fallen short of the goal set for 1947 by the 5-year plan.

Russia's railways now are carrying about one-fourth less freight than they did before the war.

Main railway lines in western Russia will not be fully restored until next year.

War losses of rolling stock were heavy. But production of freight cars is only three-fourths of the 1937 level.

Truck output lags far behind needs.

River shipping is receiving more attention, but wartime losses still have to be made up.

Food still is a problem, despite larger crops this year than last. The grain crop for 1947 is estimated at about 73,000,000 tons. But that still is 21 percent below the prewar average on the same area. It is not nearly enough to allow the Russians as much to eat as they had before the war.

The Soviet Union probably will export some grain in 1948. But it will not be from "surplus." It will come out of the Russian's own food supply.

Russia probably will not solve its food problems for several years. Acute shortages of farm equipment and horses make it hard to increase production fast enough to overtake rapid growth in population.

Steel production in the Soviet Union is lagging behind planned goods. Lack of steel puts a brake on other industries all along the line.

This year's estimated output of steel is one-fourth less than prewar. It is estimated that the Russians have only about half as much steel for armaments and industry as in 1937.

A vast program of expansion will ease the Russian steel shortage in future years. For the present, however, the program itself is taking large quantities of steel for the building of new blast furnaces and mills.

Even with good progress, the Russians cannot offer their neighbors any help in the way of industrial equipment during the lifetime of the Marshall plan.

Oil output is coming back slowly. The Baku field, Russia's major producer, is running into trouble. There are serious shortages of pipe and of drilling machinery. Imports of such equipment from America have not been adequate to meet the need. Now the United States has stopped shipping these things to Russia.

Lack of housing is a drag on the efficiency of Russian labor. Many workers have to spend from 2 to 4 hours a day getting to work and back, because they can't find homes close to their jobs.

The Soviet Government built housing for only 300,000 people in the first half of this year. Population is increasing at five times that rate.

Consumer goods still are painfully scarce in Russia.

Textiles are in short supply. Russia's mills are producing only two-thirds as much cotton cloth per person as in 1937, and three-fourths as much woolen goods. Even in 1937, supplies were inadequate, and now a bigger share goes to the army.

Shoes were produced this year at a rate that would provide one pair only for every other Soviet citizen. Ten years ago, enough were manufactured to give one pair to each person in Russia.

Household articles are scarce and expensive. The small quantities provided by the Government are sold at prices most Russians can't afford.

Only bright spots in the Soviet economy are coal and electric power. Production of both is above prewar levels.

Coal mining was expanded during the war. New mines in the Urals and Siberia helped make up for the loss of those wrecked by the Germans in the Donbas. From now on the eastern mines are to supply a much larger share of Russia's coal.

Most of the Donbas mines now are back in operation, but their output is one-third less than before the war.

Electric power has recovered rapidly in the last year, as the chart shows. If the present rate of increase can be maintained, the goal set by the 5-year plan for 1950 will be reached.

Power plants are being built in the eastern parts of the Soviet Union. Plants in the devastated areas are being restored with equipment taken from occupied countries.

Demand for electric power in Russia is much larger than before the war. The chemical and aluminum industries, both being expanded, are heavy users. Atomic energy projects are likely to bite deeply into the power supply.

Poor planning is partly to blame for the faltering pace of Russia's recovery. Soviet leaders believed capitalism would collapse soon after the end of the war. They reasoned that capitalist countries, to keep their factories going, would make large loans to Russia. So the Russians held their gold, waited for the collapse.

But collapse hasn't come. The chief prophet of capitalist catastrophe, the economist Varga, now finds himself in trouble. He has lost his job as an editor. But the damage is already done. The urgently needed goods Russia might have bought a year or two ago are no longer available. They will be used in the Marshall plan instead.

Russia's battle against the Marshall plan and European recovery will have to be fought with political weapons alone. Russia, for several years, will have no economic weapons comparable to those of the United States.

Fuel Oil Shortage

EXTENSION OF REMARKS

OF

HON. MONROE M. REDDEN

OF NOPTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 17, 1947

Mr. REDDEN. Mr. Speaker, during the past 24 hours I have received several telegrams and long-distance calls from leading citizens and officials in my district with respect to the shortage of fuel oil. These telegrams have come from men like C. E. Morgan, mayor of the city of Asheville; Arthur Myles Jones, executive secretary of the Asheville Chamber of Commerce; Don S. Elias, vice president of the Asheville Citizen-Times Co.; John C. Vance, member of the Buncombe County Board of Commissioners. The city manager of Asheville, Pat Burdette, also told me over long-distance phone only about 50 percent of the demands for fuel oil in the city of Asheville is being met, and that while old users of fuel oil had a reasonable supply on hand some of the new consumers had less than 2 weeks' supply.

The situation existing in my district is apparently prevalent throughout North Carolina. In the morning press I see that the mayor of Charlotte, together with a large group of citizens, has wired the President to take some action to relieve this critical condition. Also the Charlotte mayor, H. H. Baxter, has asked petroleum dealers to ration fuel oil and allow only 80 percent of the demands to each customer.

No doubt this critical condition is widespread over the Nation. I hear of it from many Members of Congress, and yet we are told by some of the petroleum dealers that there is no shortage of fuel oil that the shortage is in transportation. If this is true the Government of the United States should immediately call into play every ship, privately or publicly owned, and every means of transportation that is capable of conveying fuel oil until this shortage is relieved. I am advised that some of the American tankers are transporting oil to foreign countries on this very day and that others are being loaded in the docks for that purpose. This is not fair treatment to the people of this country and it should not be tolerated by our Government.

This country has been charitable toward the rest of the world, so much so in fact that our charity is becoming almost as impressive as the widow's mite. All that is mighty fine, but it just does not make good sense for us to ship our products to other lands while our people at home subject themselves to the discomfort and dangers of winter weather.

I appeal to the Members of this House to unite in a common effort to see that fuel is made available at once to the American people.

Case of Mr. Pauley

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 17, 1947

Mr. KEATING. Mr. Speaker, reprehensible conduct of those in high places, of which instances are now being almost daily reveaied, has reached alarming proportions.

We sorely need a return to the maxim, "Public office is a public trust."

Under leave to extend my remarks, I include an editorial from the Rochester Democrat and Chronicle of Rochester, N. Y., entitled "Case of Mr. Pauley."

CASE OF MR. PAULEY

When Edwin W. Pauley was a candidate for Under Secretary of the Navy last year, vigorous opposition was aroused on the ground that he was interested heavily in the oil business, and that this would inevitably react upon him as an official of the Navy. Walter Lippmann and others argued so eloquently that a Navy official ought to be above the least taint of suspicion that President Truman finally withdrew the nomination.

Now Mr. Pauley turns up as a special assistant to Kenneth C. Royall, Secretary of the Army, and much the same objections that were made to his association with the Navy apply to his assignment in the Army. For he admittedly has been a heavy buyer in wheat and other commodities and held those holdings while the Army was buying similar commodities in connection with the Government program.

Mr. Pauley insists that immediately upon his appointment to his present post he began to liquidate his holdings in food commodities of something less than a million dollars in value, and that he has got rid of all but about 10 percent. He figures he has lost about $100,000 by this process. He denies, and Secretary Royall supports him in this, that he had at any time any knowledge of Government transactions that could have influenced his decisions to buy or sell.

The disclosure that Mr. Pauley was a speculator in the grain market, even though a legitimate one, is particularly unfortunate coming at a time when speculation of this sort has been condemned by many, including Presiden Truman, as a cause of inflation and soaring prices. If there is any difference between this sort of speculation and plain gambling, the distinction is too slight for most persons to see. President Truman in

his blast at this practice in October evidently did not see it.

Whether Mr. Pauley is any better or any worse than others is not the point. Anyone engaged in large scale commodity speculation has no business in an important Government post. Even if it is entirely aboveboard it still stirs suspicion. The Senate committee which has started this investigation is bound to follow through wherever it may lead.

Western Power for More Production

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Thursday, December 18 (legislative day of Thursday December 4), 1947

Mr. MAGNUSON. Mr. President, a former Member of this body, Hon. Mon C. Wallgren, now Governor of my State, made an excellent address on western power for more production at the Western Governors' Conference in Portland, Oreg., December 12 and 13, 1947.

I ask unanimous consent that the address be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

When the western Governors met in Seattle last May, we found agreement on fundamental propositions regarding western resource development and formulated a unanimous declaration of policy. We had come to take common counsel in the face of a threatened drastic curtailment in congressional appropriations for western power, reclamation, and other projects necessary to build up the productive strength of the region and the national economy.

Our deliberations, placed before the Senate Appropriations Committee, and amplified by testimony in persons of several western governors, had far-reaching effect. The Congress and the Nation were made sharply aware that the West has an economic program which can surmount party differences. We hammered home the point that the West is a vital part of the whole economy and a vast potential producer of goods and services to augment the real wealth of the Nation.

It is fair to say that our efforts were instrumental in persuading the Congress to reconsider its heavy-handed cut in the western budget. We obtained a partial restoration of the Federal funds required to enable the work of the West to go forward.

Our meeting today signified that the objectives we seek in common for the West are still to be won. Immediate and urgent problems remain. The people in my State are looking anxiously to the Congress for prompt action on supplemental appropriations to keep the Columbia Basin project from closing down. Many project workers have been separated from pay rolls. Planning of future reclamation work is hedged around with uncertainty. Operating with limited funds and other restrictions imposed by the present Congress, the Bureau of Reclamation is trying to make the best of a difficult situation.

The unwarranted accusation has been made that the Bureau is trying a "squeeze play" on Congress by speeding up its work in the Columbia Basin. Those who make the charge display a dismal lack of perspective and a shocking disregard of urgent needs in the Columbia Basin.

The consequences of congressional failure to approve sufficient funds for reclamation work were clearly drawn at our last Western Governors' Conference. The Congress was fully apprised of the facts. All persons genuinely concerned with western welfare foretold the danger of short-sighted action.

The recent ill-advised maneuver for a congressional investigation of the Reclamation Bureau was repudiated by individuals and groups in the Columbia Valley regardless of political party. Chambers of commerce, veterans' groups, irrigation district representatives and others raised their voices in protest against an attempt to create confusion and to obscure legislative responsibility for the imminent shut-down of the Columbia Basin project.

The Congress can repair the damage done to the West and perform a real national service by quickly getting about the business of arranging the supplemental appropriations required. Departmental estimates are about to be presented to Congress for funds necessary to carry the work through the current fiscal year. I propose that we draw up a resolution at this conference emphasizing the importance of the supplemental funds required for the western States, and that we collectively urge the Congress to act with the least possible delay.

Time is short. Supplemental appropriations must be made even while budgets are being prepared for the next fiscal year. Some months ago I conferred with President Truman concerning the budgetary estimates for western projects. I am confident that the new budget will take particular account of western potentials in meeting the pressing production problems of the Nation.

This leads me to the important subject of hydroelectric power. Since our last conference, the power shortage has been intensified by growing industrial, commercial, and domestic demands. The power pool that serves the Pacific Northwest is being used to capacity, with nothing to spare. The breakdown of a single generator can cause a brown-out in the Pacific Northwest. As far as industrial expansion and new uses for electrical power are concerned, we have already been forced into a sort of rationing process. Established industries have been put on short rations. New industries are being starved out or shut out.

The acute power shortage throughout the Northwest affects the jobs and incomes and the daily living of the 4,000,000 people who live in this region. The Northwest utilities are burning oil to generate power when that oil should be utilized for gasoline, or heating homes, or other more important purposes. The Mountain States Power Co. has written to all of its 44,000 customers, advising them to expect service interruptions this winter because of the demand for power and stating that there will be little relief until the Federal Government completes McNary Dam by 1951.

In Seattle, City Light has raised its rates on home-heating electricity in order to discourage that use of power because of the shortage. New home owners are compelled to burn scarce oil, or to put in coal or wood burners to use antiquated methods of heating in the electrical age. The Puget Sound Power & Light Co. tells its stockholders that the power shortage is critical and requests industrial customers to curtail the use of power between 4 p. m. and 7 p. m. each day.

The shortages we experience in this region point to a crucial problem of national policy regarding power resources. Today power, no less than steel, is a brake on production.

We all agree that production and more production is needed to combat the dangerously growing inflation at home. We agree further that production in tremendous quantities will be needed to make good our commitments in the foreign-aid program.

Production depends upon power. American industry, large and small, absorbs about 60 percent of the total power supply generated in this country.

Between 1940 and 1946 the total production of electrical energy in the United States increased from 188,000,000,000 kilowatt-hours to 275,000,000,000 kilowatt-hours, or 48 percent. The inventory of national resources, made at the President's request to measure our productive ability in meeting needs at home and abroad, indicates that facilities for power production and distribution must be substantially increased. The Federal Power Commission, projecting national power and energy requirements from 1947 to 1952 on the assumption of continuing high levels of employment and production, estimated a potential increase from 275,000,000,000 kilowatt-hours in 1947 to 376,000,000,000 kilowatt-hours in 1952, or 37 percent.

In other words, for continued high-level production through the next 5 years, the Nation's power plant will have to double the capacity available in 1940. More power capacity will have to be added in the next 5 years than was added in the entire war period of 1940–46.

These estimates, made in connection with the Marshall plan studies give us some perspective on the tremendous power demands that will be made by American industry. The West will play a leading role in meeting these demands. The great river systems of the West contain the potentials for rapid and comprehensive expansion of power facilities. President Truman has pointed out that the West will be counted on to perform a large share of the production job ahead, and we are assured of his all-out support for the hydroelectric projects that must be built.

Development of western hydroelectric potentials is a wise and prudent measure to conserve national resources while increasing production. Water power is conserved by use, wasted by nonuse. The more dams we build to generate hydroelectric energy, the less demand will the economy make on nonrenewable sources of energy. It has been calculated for example, that every kilowatt-hour of hydroelectric energy generated is 1 pound of coal saved. Therefore, development of our water resources does double duty in conservation. New energy is provided to drive the wheels of industry and to do work in farm and home, while older sources of energy are conserved for careful economic use.

The private utilities of this country, for the most part, generate their electricity in steam plants using coal or other fuel. Thus a $5,000,000,000, 5-year plant expansion program for private utilities, announced some time ago by the Edison Electric Institute, will put 95 percent of the additional generating facilities in steam plants. Hydroelectric power, based on the great river systems which cross State and even National boundaries, and requiring huge capital investments for development, is predominantly a Federal enterprise.

This fact by itself means that the West will occupy a prominent place in the national program for more production. What we need for ourselves as a Nation, what we can spare to other nations, can be determined wisely only in the light of production potentials offered by the West. Consequently, our insistence that these potentials be developed in a systematic and comprehensive way is based on the broadest considerations of national welfare.

Those who fail to think ahead, who fight the national good by fighting western power

development, do not comprehend the relation between power and industry. Industry depends upon power, but power cannot follow industry. The facilities must be there in advance, ready and waiting to serve. As Secretary Krug emphasized in connection with the Marshall plan studies, electric power cannot be generated and then stockpiled for future use. Facilities must be provided at the power-generating plants, in transmission lines and substations, and in the distribution systems, to meet the maximum total of power requirements that can be expected from all consumers. These facilities must carry reserve capacity for periods of emergency or repair. New capacity must be provided to anticipate new demands. Building power capacity ahead of industry is good management and sound economy.

It took a war to demonstrate forcefully the relation between power capacity and production. Without the power facilities of TVA, Bonneville, and Grand Coulee, and other great Federal hydroelectric projects, how different would have been the outcome. The war brought congressional approval for completion of the power installations at Bonneville and for one-third of the power capacity of Grand Coulee. With that aid the Pacific Northwest returned to the Nation the products of power—aluminum for one-third of the Air Force, plutonium for the atomic bomb, magnesium for incendiaries, chemicals for fertilizers to produce food for the armed services.

As the production machinery of the Nation is geared to the enormous demands of a peacetime world, the materials that make us strong in military power also provide the sinews of industry. The chemical and metal industries that need low-cost power in abundance are growing more rapidly than most other industries in the United States. They utilize the largest block of industrial power in the Nation. In 1939 they took 22 percent of all industrial energy, but by 1946 they took nearly 28 percent. They produce aluminum, magnesium, copper, zinc, alloys for steel, carbide, phosphorus and phosphate fertilizers, ammonia and nitrogen fertilizers, chlorine, caustic soda, plastics, rayon, and they underlie most other industries.

The Pacific Northwest can be a power arsenal for many of these power-using industries, but they go a-begging while one-third of the undeveloped hydropower in the Nation is wasting away to the ocean. The Bonneville Power Administration informs me that at least seven industrial plants cannot be built or expanded in the Northwest at this time because it cannot provide some 200,000 kilowatts of power. These plants, with their probable power demand and employment, are as follows:

	Kilowatts	Jobs
1. To produce phosphorous for chemicals and fertilizers needed to be shipped to Europe to reduce the demand upon American exports of food	25,000	400
2. To produce ammonia for fertilizers needed to produce food on American farms and in Europe	5,000	250
3. To produce carbide and to produce chemicals from carbide	40,000	1,250
4. To produce ferrochrome and ferromanganese to meet the growing needs of industry for alloy steels	25,000	300
5. To produce abrasives for the machine tool industry and to be used in grinding the saws and finishing the wood products made in plants of the Northwest and California, and to produce refractories for the electric furnaces of many industries, especially to help production so badly needed in the oil industry	25,000	600
6. To produce glass for bottles, principally for packaging industrial products	10,000	500
7. To expand aluminum production, needed especially to meet the shortage of steel, and to produce electric wire and cable	75,000	1,000
	205,000	4,300

These seven plants or expansions would have offered over 4,000 jobs directly in local factories and would have created 6,000 or more jobs in service trades. Virtually they have been legislated out of existence by congressional limitations on our power development.

Aluminum is one of our important new industries using large quantities of power, but the aluminum industry cannot plan for expansion without assurance of adequate power supplies for the future.

Aluminum is a strategic metal in the American economy. For our national security it is absolutely essential to have ample aluminum producing and fabricating facilities. Aluminum goes into thousands of industrial uses, and it will help to break production bottlenecks in many lines by replacing steel and copper which are in short supply. Builders of automobiles, houses, ships, and other important goods are turning more and more to aluminum.

Aluminum is a heavy user of power. Every pound of aluminum ingot takes 10 kilowatt-hours and a single reduction plant may use 1,000,000,000 kilowatt-hours or more each year.

As a result of governmental action which broke the monopoly hold on the aluminum industry, the Pacific Northwest today has one-third of the basic producing capacity for competitive production. For this capacity to be fully utilized and for new fabricating plants to be put into operation, more power is needed. The Permanente Metals Corp. is preparing to bring an aluminum foil plant to the Pacific Northwest from Germany. To supply metal for that plant, and to meet other aluminum needs, Permanente should be operating the sixth pot-line at the Spokane aluminum pig plant. No power is available for that pot-line.

The Reynolds reduction plant at Longview, Wash., is closed down at present. That plant cannot reopen because there is no power.

The Aluminum Co. of America cannot expand its operation at Vancouver, Wash. Yet Alcoa recently announced its willingness to build a wire and cable mill to help meet national shortages of electrical conductor—provided it can get more power.

It must be emphasized that power-using industries which spread their products throughout the American economy cannot locate anywhere at will. Large blocks of power at low cost are essential to their operation. In the face of a Nation-wide power shortage and the imperative need to conserve fuels, comprehensive development of western hydroelectric potentials is the necessary alternative to lowered production.

Nature deprived the Northwest of abundant oil, coal, and gas, but gave us the Columbia River. From the abundance of nature we can produce the lowest cost power in the country. The $17.50 wholesale rate for Northwest power will help pay reclamation costs and will repay the Federal power investment—that has been proven by recognized public accountants in financial reports to the Bonneville Power Administration.

Persons in powerful congressional positions who complain about our low power rates and threaten to raise them, in effect complain that we are trying to use efficiently what nature has given us. More important, a rise in Northwest power rates would halt our industrial operations and strike a blow at the national production effort. One mill, one-tenth of a cent increase per kilowatt would probably wipe out the aluminum industry in the Pacific Northwest.

Increased power rates and insufficient power facilities are two sides of the same coin. Holding back the development of one region will not benefit another. There is too much work to be done, too many things to produce. Opportunities must be made available to all.

The problems before us now are far too important to allow for petty bickering and narrow sectional jealousy. The Nation will go forward as the West goes forward. How to make the West go forward is the question we have tried to answer today.

Veterans' Homestead Bill, H. R. 4621

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 18, 1947

Mr. McDONOUGH. Mr. Speaker, the veteran of World War II of moderate income and without large financial reserves today is faced with increasing difficulty in the solution of his housing problems. Rents continue beyond his means. Building costs are high. And he is having a hard time getting a loan to purchase or build a home even under the benefits extended through the GI bill of rights.

Today lending institutions are becoming more critical in their loan selections, reducing appraisal values, demanding larger equities and favoring shorter terms. Lenders in the larger cities, despite abundant capital for long-term home loans, are reluctant to extend credit on GI Government-guaranteed loans without at least a 10 percent down payment.

From these facts it is apparent that our veterans who are in the lower-income brackets and do not have cash available for a substantial down payment are unable to benefit under present provisions for Government aid to veterans for the purchase of housing, and something should be done now to remedy this situation.

I have introduced H. R. 4621, a veterans' homestead act, for this purpose. Under the provisions of this bill, the veteran of moderate income will be given an instrumentality for securing low interest-rate money through tax-exempt securities on the veterans' own private enterprise projects.

These projects would construct and purchase housing to be sold to veterans for their own occupancy together with their families and dependents. They would also construct, purchase, maintain, and operate housing to be rented to veterans, and they would make loans to veterans for the purchase of housing.

Under my proposed bill, suitable provisions would be made to prevent speculation in the sale or rental of such housing by purchasers or occupants, and project associations set up under the bill would be limited to make new loans and acquire property for sale or rental only for 10 years from the termination of World War II. After that they would

remain in existence for only such period of time as required to liquidate their affairs.

Our veterans need adequate housing, and many of them are unable to get it under existing veterans' housing aid. We should act now to get housing for the veterans at prices they can afford. I urge the Members of Congress to consider my bill, H. R. 4621, which will provide such housing for our veterans.

College Training Among the White Population

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Thursday, December 18 (legislative day of Thursday, December 4), 1947

Mr. JOHNSTON of South Carolina. Mr. President, I request unanimous consent to have printed in the Appendix of the RECORD a table based on the Sixteenth Census of the United States, published in 1940. This table shows the relative standing of the States of the Union as to the percentage of white population 25 years of age or over which has completed 4 years of college training.

This report reflects considerable credit on the States of South Carolina and Arizona, which lead the Nation with 7 percent each. I take pride in bringing this information to the notice of the Senate because my State of South Carolina has been frequently and consistently maligned and abused regarding its educational effort and achievement. I take the opportunity to point out here that South Carolina, a State of relatively low per capita wealth and per capita income, devotes a proportionately large share of her resources to elementary and secondary schools and to institutions of higher learning.

We are proud, not ashamed, of our accomplishments. We recognize more clearly than anyone else our limitations and our deficiencies. We are constantly striving to meet the challenge of greater opportunity for all persons to the fullest extent of our capacity.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Percent of white population 25 years of age or more which has completed at least 4 years of college, 1940

State	White population 25 years or older	Number which have completed 4 years of college or more	Percent of total
South Carolina	523,457	36,395	7.0
Arizona	221,725	15,579	7.0
California	4,235,722	290,697	6.9
Nevada	64,120	4,369	6.8
Florida	806,890	51,022	6.3
Utah	264,597	16,274	6.2
Colorado	627,954	37,465	6.0
Delaware	137,888	7,869	5.7
New York	8,059,984	454,237	5.6
Washington	1,053,810	58,918	5.6
Massachusetts	2,586,813	141,841	5.5
Oregon	667,988	36,560	5.5
Maryland	891,706	48,227	5.4

Percent of white population 25 years of age or more which has completed at least 4 years of college, 1940—Continued

State	White population 25 years or older	Number which have completed 4 years of college or more	Percent of total
Mississippi	554,878	28,743	5.4
Virginia	1,060,487	56,635	5.3
New Jersey	2,403,836	125,516	5.2
Wyoming	134,778	6,940	5.1
Louisiana	790,171	39,792	5.0
Oklahoma	1,099,950	54,573	5.0
Connecticut	1,012,365	49,443	4.9
Montana	307,207	15,022	4.9
North Carolina	1,229,877	60,611	4.9
Texas	2,936,638	142,646	4.9
New Mexico	231,004	10,895	4.7
Kansas	1,007,902	47,004	4.7
Georgia	1,039,087	47,308	4.6
Illinois	4,585,332	211,510	4.6
Idaho	272,046	12,157	4.5
Ohio	3,904,526	177,544	4.5
Rhode Island	417,849	18,825	4.5
New Hampshire	293,427	12,555	4.3
Pennsylvania	5,365,911	231,174	4.3
Nebraska	741,321	31,844	4.3
Iowa	1,460,845	60,857	4.2
Minnesota	1,588,143	68,833	4.2
Michigan	2,877,993	119,231	4.1
Vermont	204,913	8,384	4.1
Alabama	904,646	36,450	4.0
Missouri	2,109,611	85,309	4.0
Indiana	1,931,387	75,039	3.9
South Dakota	335,151	12,969	3.9
Wisconsin	1,796,004	69,915	3.9
North Dakota	323,833	11,625	3.6
Tennessee	1,225,651	42,891	3.5
West Virginia	866,101	29,629	3.4
Maine	479,389	15,935	3.3
Kentucky	1,316,675	40,444	3.1
Arkansas	730,693	20,339	2.8
United States	67,999,523	3,319,785	4.9

Compiled from data of Sixteenth Census of United States.

Adequate American Merchant Marine and Shipbuilding Industry Indispensable to American Security

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1947

Mr. WOLVERTON. Mr. Speaker, in accordance with the consent given by the House, I am submitting for the benefit of the Members an editorial appearing in the Evening Courier, Camden, N. J., under date of Tuesday, December 16, 1947.

The editorial is entitled "Congress Holds the Key to Future of United States Shipping." This editorial should have the careful and thoughtful consideration of every Member of the House. It emphasizes in a logical and forceful manner one of the most important matters concerning the welfare of our people and the security of our Nation.

The editorial to which I have referred is as follows:

CONGRESS HOLDS THE KEY TO FUTURE OF UNITED STATES SHIPPING

In its recent report to President Truman, his advisory committee on the merchant marine called an adequate merchant fleet and American shipbuilding industry "indispensable to national security."

The committee warned that unless some minimum level is set for our shipping and shipbuilding, "the country will lose that vital nucleus of know-how which is essential to meet emergency or wartime needs."

A minimum force of 60,000 men in the Nation's shipyards, the committee said, is necessary if this know-how is to be retained. But the Shipbuilding Council says that total employment in the yards today, both for merchant and naval construction, is only 90,000 and that with the completion of current commercial building by midsummer it will be down to 50,000, below the President's committee's minimum.

Despite the country's need for modern cargo and passenger ships in quantity if we are to retain a competitive position on the seas with other nations, there are now but 32 new ocean-going merchant vessels of more than 1,000 gross tons on the ways, and only two passenger liners under construction, both already launched and now being outfitted at Alameda, Calif.

American shipbuilding today ranks only seventh in the world, with even France and Italy ahead of us.

The reasons why America must maintain an adequate merchant fleet and shipyard industry are so incontrovertible and have been stated so often that there is no occasion to repeat them here.

Why, then, has construction come to a virtual halt, leaving us only a war-built merchant marine which consists of obsolete and obsolescent vessels with the shipyards threatened by almost total paralysis in the next few months?

The answer lies in the failure of Congress to provide a continuing program of subsidies for construction and operation which make it possible for builders and steamship companies to plan ahead with any assurance of meeting costs or making any profits.

The subsidy question is complex at best. The object of the Merchant Marine Act of 1936, however, was to grant long-term subsidies which would enable American lines and yards to compete with foreign countries where costs are lower. Although the President's committee calls this act "wholly inadequate" it is a sort of Magna Carta of the merchant marine.

But the current Congress, acting counter to its main objective, passed legislation which knocked out the revolving fund on which the whole philosophy of the 1936 act was based, and has limited appropriations so that funds are available only on a year-to-year basis.

In the shipbuilding and ship operating industries, this simply will not work. Construction of any major vessel extends over more than 1 year. Operation must be over a period of years to recoup the original investment. If builders and operators cannot plan with a knowledge of how their Government contracts will read for more than 12 months, they cannot plan at all.

The American Merchant Marine Institute has laid these facts before Congress in a move to have revolving fund appropriations restored at the next session.

In Camden, the Camden United Citizens Committee, which was organized about 2 years ago and was effective in having Congress appropriate the money to finish all naval vessels which were 20 percent or more complete on the ways, will join in the campaign.

The committee will work at Washington and resume its activity on behalf of the merchant marine and the shipyards.

Camden's interest in the campaign is vital and immediate. Restoration of the revolving fund would mean that the New York Shipbuilding Corp. will receive contracts for two of five large passenger-freight liners the President Lines is ready to have built. These 2 ships would provide work for 5,000 men for from 2 to 2½ years.

New York Ship is doing everything in its power to obtain work and hold its working force, but with new contracts at a standstill

because of the subsidy tangle the prospects are dark unless Congress acts. Construction now on the ways will be completed in the next few months. The same situation exists in other yards throughout the country.

Here in Camden we appreciate what the shipbuilding industry means to us locally. Its value to the Nation is even more important.

Congress should make the merchant marine one of its first concerns at the regular session, since there is no time for action before the special session ends.

The revolving fund system of appropriations must be restored as the first step in keeping American ships on the high seas and the American shipbuilding industry alive.

Liquor Advertisements in Magazines and Newspapers

EXTENSION OF REMARKS
OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, December 18 (legislative day of Thursday, December 4), 1947

Mr. CAPPER. Mr. President, I send to the desk and ask unanimous consent to have printed in the RECORD the text of an able address by Judge Fred G. Johnson, of Hastings, Nebr., on October 29, 1947, before the Nebraska State convention of the Woman's Christian Temperance Union. Judge Johnson shows why liquor advertisements in magazines and newspapers are not conducive to temperance. I have a bill on this subject before the Senate.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies of the State WCTU, in my few remarks to you I shall try to show you some of the evils that stem from liquor advertisements that are carried in local, State, and national magazines, newspapers, and periodicals.

Those of us who are still possessed of a reasonable degree of common sense, decency, and the virtues of sobriety know from observation, without further presentation of evidence, that the glowing, distinctive, misleading, and intriguing advertisements of beer, liquors, and wines in our magazines and newspapers are not conducive to temperance. But, the object and purpose of the whole program is to encourage drinking by adults and minors.

I noticed an item in last night's Tribune that you are especially interested in the Senator CAPPER bill (S. 265), which was introduced in our last session of Congress. This measure is running true to your policies, and I am happy to see you direct special efforts in that direction. If you have a copy of the hearings before the committee on this bill you perhaps have noticed a letter, which Senator CAPPER received, from the Capital District Liquor Stores, Inc., Albany, N. Y., and is printed in full on page 5 of the report. In this letter they say "Although we are engaged in the direct sale of bottled wines and liquors to the consuming public, we are also pledged to the principle of moderation, and after approximately 14 years of repeal, we are completely satisfied that the high-pressure advertising of today is not conducive to temperance. We are further convinced that such advertising is detrimental to the interest of young people whom the law makes every effort to protect by restrictions against the tavern keeper and package store proprietor. * * * We sincerely trust that you will be successful in obtaining passage of this commendable piece of legislation." The letter is signed by James J. Divine, attorney for the Capital District Liquor Stores, Inc. There really is some consistency in that.

But, when I read a very fine, benevolent, and sympathetic front-page editorial in the largest daily newspaper in the State, written in behalf of the killed and injured and their families who were the victims of a hayrack party and an automobile collision in Douglas County, Nebr., which was caused by the unlawful act of a 19-year-old drunken driver, and in the same issue of this paper, as I turn the pages, I find it is carrying two and one-half times as many squares inches of paid liquor advertisements as it gave the splendid front-page editorial, I said to myself does that make sense? They must know that they are and have been doing wrong and are only trying to appease their conscience. Then they have the affrontery to ask the benevolent public to contribute to a fund to take care of the monetary damages caused by the illegal use of liquor they have been advertising for a price. Such inconsistency would put a whole pack of "wolves in sheep's clothing" to shame. It is still true: "Consistency thou art a jewel," and it is also still true that "The love of money is the root of all evil." And as I tried to sum up in my mind this flagrant inconsistency in this great daily paper I recalled something from Holy Writ about "The Whited Sepulcher" being fair to look upon but full of dead man's bones.

Within the past week a jury in our district court returned a verdict of guilty in a case where the defendant was charged with manslaughter, which was caused by his unlawful act of driving his autotruck past a stop sign onto a highway while he was drunk, right in front of an oncoming car which struck it and one of the men in the car was killed. The deceased left a widow, he had served in World War II, and came home to be killed by a drunken driver of an automobile. The defendant has a wife and five children. From the result of this accident one man is in his grave and one man is on his way to the penitentiary for a term of years. The widow has lost her companion and breadwinner. The mother and five children have lost, for a time, the father and breadwinner for them. That is what liquor will do and is doing every day in the year all over the country, and yet our great dailies, magazines, and periodicals think they should share in the profits by carrying the glamorous, misleading, and intriguing advertisements of the brewers and distillers. Therefore, I say that if they are to share in the profits from this deadly product why shouldn't they with the brewers and distillers pay for the damages, deaths, and injuries caused by it? But they say "no" the people by their vote legalized the manufacture and sale of liquor. Will have more to say about that later.

As youth advances from their early teen ages toward their majority they look more and more to adults as their example in the approaching way of adult life, and also as to what the adults do for distinction and pleasure. They are anxious to grow up. Therefore, when youth reads the highly colored and glowing advertisements of various brands of liquor which are so beautifully and attractively played up to the general public in our national magazines really glorifying the use of beer, liquor, and wines, what more can you expect than that the young people in their late teens will want to try them? And will be tempted beyond their power of resistance, under certain conditions, to in some way obtain those highly advertised brands of intoxicating drinks. The Calvert Liquor Co. put out advertisements carrying the picture of some distinguished looking business or professional man, and tell why he turned to Calvert. Doesn't the average young man, before he is 21 years of age, have the ambition to be a distinguished business or professional man? Then why isn't it very natural for him to want to do the things the adult distinguished business or professional man does? None of the beer, liquor, or wine advertisements I ever saw say it is unlawful for anyone under 21 years of age to purchase or use these very fine products that are so very beneficial to adults.

Newspapers, and especially metropolitan dailies, often boast of their ability to influence the shaping of public opinion, and they can well do so, for they do have a very large part in that very thing. And they could do a world of good if they would turn their powerful influence in the right direction, and since they do boast of their powerful influence on public opinion how can they shirk their responsibilities for the death, injuries, and damages caused by a drunken driver who undoubtedly purchased the liquor, that caused the unfortunate accident, right in the city where their paper has the largest circulation? The magazines, newspapers, and periodicals of America have had their part in so publicizing the deceitful, intriguing and misleading merits of beer, liquor, and wines until now America is recognized the world over as the drunkenest Nation in the whole world. What a reputation. The shaping of public opinion by the newspapers is not only done through their editorial page, or even through front-page editorials, the likes of which I have referred to, but to a very large extent through the advertisements they carry. From my observation for the past three score years, I believe that there are more people of the more easily influenced class, read more of the advertisements than they do, the editorials.

Every person who takes a drink of liquor that puts as much as 5 percent alcohol in his blood and then takes the wheel of an automobile and drives it, is a potential killer until that alcohol is eliminated from his blood, and any paper or magazine carrying an advertisement, that has in any way encouraged this person to drink, is an accessory, morally if not legally, to the crime, if and when the drunken driver kills or injures another.

The commercialized liquor interests years ago undertook to make this Nation "liquor conscious," to use their own words. The following are some of their brazen and disgraceful slogans:

"Teach American women how to drink."

"Invite and welcome them to your barrooms."

"Show young people how to enjoy the delightful wines of America."

The two following are the most dangerous of all:

"Train your publicity to catch the eye and develop the interest of the young generation."

"Make youth liquor conscious—make it smart to drink wines."

I have before me eight full pages of liquor advertisements—seven of them highly colored—the other one is a large colored porter serving liquor. These eight full pages were taken from last week's issue of Newsweek, every one of them designed, and purposely so, "to catch the eye and develop the interest of the young generation" and to "make it smart to drink wines and liquors.

By chance I am a subscriber to Newsweek, that is, I took a chance last December and subscribed for it without seeing a late copy of the magazine. Recently they have been writing me to renew my subscription for another year. So, the other day, I wrote them a letter. I will only quote one paragraph, to wit: "If I had seen a late copy of your magazine last December before I subscribed for it I never would have subscribed. The main purpose of this letter is to urge you

to eliminate all liquor advertisements from your magazine, and the second purpose is to notify you that I am not renewing my subscription until they are eliminated."

Last July three "wolves" in men's clothing liquored themselves up one night, got into an automobile and drove around in the city of Hastings seeking whom they might devour. They accosted three girls in their early teen age, and asked them to take a ride, the girls very foolishly accepted, and they were taken for a ride out in the country for immoral purposes. These men ranged in ages from 21 to 24; two of them were married and had infant children. I haven't time to give you all the details, but the men were apprehended and brought before me for trial. They all plead guilty. One of them was fined $200 and costs, another one was fined $400 and costs, and the other one is now in the Adams County jail serving a term of 6 months, plus the penalty of a $500 fine and costs. These were maximum penalties according to the variations of the offenses actually committed. I am only sorry that the law does not give us more power in such cases.

It is a shame and a disgrace and also an insult to our intelligence to permit this vicious thing that aids and abets so much immorality, lewdness, and vice among our young people to exist. It is also an awful reflection on the moral standards of the personnel of the publications who carry these advertisements and had their part in the sale of more than $8,000,000,000 worth of liquor in the United States of America in 1946, and I am sure no less for this year, and the question then arises in the minds of many of us, how far will they go for a price, if they are willing for a price, to go as far as they have in having a part in destroying the character and demoralizing the youth of today who are to be the citizens of this country tomorrow?

If these publications are so good at shaping public opinion why don't they turn around and do the things that will build good character in youth, and also encourage the development of more wholesome industries to make food products from new and old crops? All the money that is now being used in brewing and distilling intoxicating drinks could soon be converted into channels for building and operating food industries for wholesome life-giving products, and the $8,000,000,000 now spent for intoxicants could be spent for food for hungry wives and children all over the world. And there would be no loss for labor either.

Last March four boys were brought before me for stealing automobiles for joy rides, abusing the autos, and then abandoning them. One had been damaged to the extent of $95 and another up to $165. The boys ranged in ages from 12 years to 19 years. The 19-year-old boy had a bad record previous to this and he was also an A. W. O. L. from the Army. I had to send him to jail for 6 months. I paroled two of the boys to their parents for a while, but later had to send them to Kearney State Industrial School for Boys. The little 12-year-old boy I had to commit to the Kearney institute at once, for his own protection. He was a nice little boy, but (poor boy) his dad was a hard drinker and was in Guam working for a large construction company, doing construction work for the Federal Government, and no provision had been made by the Government for partial payment of the father's salary to the mother for the support of her six children, consequently she received none, and it necessitated her working 7 days a week, away from home, to earn enough money to support herself and the children, which she could do, but she could not be at home and be the kind of a mother the children so much needed, as they ranged in ages from 4 to 14 years. This little boy didn't drink, but the other three boys admitted that they always drank a half pint of whisky before they went on these escapades. I am now taking up this matter of dividing that father's salary and others like him who are working for the Federal Government off the continent, or even on the continent, with our United States Senators, and asking for a Federal law providing that from one-half to three-fourths of the father's salary (which in this case is about $400 per month) be paid to the wife and mother at home for the support of the family, so the mother can be at home with the children.

The only liquor advertisement I ever saw that wasn't too designing and did carry quite a measure of truth with it, was this one: "Once our customer, always our customer." And that is about right, for when youth once begins to use their product they continue to, and the liquor interests know that to be a fact, so, they put out deceitful, misleading statements in their advertising, advising all who drink their products to pay their bills first, not to spend their grocery money for liquor, but learn to drink moderately and sensibly. They know too well that the stuff is concocted with that "come on" thirsty element in it which causes the average person who takes his first drink to soon develop a habit for the excessive use of it, and if that were not true they could never sell enough of it to pay for their highly colored advertisements.

I know of no better, or more essential work for you ladies of the W. C. T. U. to undertake, for the protection of society and youth, and to prevent juvenile delinquency, than to do everything in your power to put advertisements of beer, liquors, and wines, and cigarettes, too, out of our magazines, newspapers, and periodicals, and off the radio and billboards. To read the billboards along the highway as they advertise cigarettes, how beneficial they are to the throat, how refreshing and all, you might think you were coming to a cough-sirup factory, and every one of them is false.

The dispensers of these products think they have a legalized product to sell and that they can advertise it as they please, but, just let us see what the jurisprudence throughout this Nation, including the Supreme Court of the United States, has to say on the law of sales. These are the rules drawn from that jurisprudence:

1. No vendor shall make statements recklessly.

2. He shall not make any false, misleading, or deceptive statements.

3. He shall not create any false or misleading impressions.

4. He shall not tell only a half truth, which, the law says, is the equivalent of concealing the other half.

5. And listen carefully to this one: No vendor shall fail to disclose any known or lurking danger in the use or misuse of the article offered.

Did you ever see any advertisement of beer, liquor, or wines that disclosed the "lurking danger" in the use of them?

Then there is another part of the law for him to obey: He shall communicate his superior knowledge about the article to those with less means of knowledge than himself. Can youth know or be apprised of the dangers from what is contained in these highly colored advertisements glorifying and glamorizing the use of all kinds of intoxicating drinks?

Why do we license the sale of beer, liquor, and wines? It is because we know it is an evil within itself, and there is "lurking danger" in all of them. But, it seems that the American people, especially at the present time, will let you do anything—if you will pay the price—to lower their taxes (or promise you they will)—and educate their children. Such nonsense. Have you noticed any lowering of taxes since the Federal Government, the State, and the cities have been receiving liquor and beer licenses? Haven't you heard the recent cry for money on which to run our schools? We had far more money, accordingly (at least you didn't hear so much hue and cry for it) to run our schools during prohibition than we have ever had under high license. It is the love of money that is at the root of this evil.

"It is as bad as murder or worse." This is a statement made with reference to the drunken driver's part in the hayrack automobile collision at Omaha the night of October 11, 1947, and is included in a rather exhaustive article appearing in the magazine section of the World-Herald, on that accident, in which the writer seems to blame everybody, especially the courts, police officers and the juries for the death, injuries and damages done. He entirely overlooked putting any of the blame or responsibility on liquor itself and the manufacturers of it, which was the basic cause of the whole thing. However, he did mention, and I quote "Perhaps the sellers should be made responsible for the action of minors under the influence of illegally purchased intoxicants." And I would add to that adults also, and then, how about what is called legally purchased liquors, aren't they just as deadly and dangerous in an adult or minor as illegally purchased intoxicants? And, how about linking up the responsibility with the manufacturer and those who aid and abet the selling which would include the newspapers and magazines carrying the liquor advertisements. If they don't aid the selling do you think the liquor seller or manufacturer would advertise?

As long as we are going to permit the selling of liquor at all, I think it would be a smart thing to enact a Federal law to the effect that whosoever sells intoxicating drinks to anyone causing death, injury, or damages to another person shall reimburse the one damaged in property or injured, and shall contribute a sum of $10,000 to the heirs of each deceased person. Provided that, if the individual seller cannot be apprehended and identified within 10 days from the date of the accident, then, and in that event, all retail and wholesale vendors of liquor, together with the newspaper or papers carrying liquor advertisements published in the city, town, or village nearest to the scene of the accident shall be liable for their equal proportionate share of said damages, for property and injuries to the person or persons and the $10,000 to the heirs of each and every deceased person killed in the accident or died subsequent thereto from fatal injuries received therefrom. Then put enough teeth in the law to make it effective and enforceable.

Ladies of the WCTU, in my closing remarks may I admonish you to watch your politics, and never be led astray again by flowery words of oratory and false promises that your taxes will be lower and no more bootlegging if you would just repeal the eighteenth amendment to our Federal Constitution. Now none of you, or anyone else of the common electorate voted direct for that repeal, but someone (and many of them) did vote for the wettest President and the wettest Congress in 1932, that the Nation ever had, and before that Congress was fully organized, a bill was introduced to repeal the eighteenth amendment. It was quickly passed and very soon thereafter ratified by the legislatures of 36 of the States of our Union, which were filled with wet members and some who honestly, or thought they honestly believed, that prohibition wouldn't work. It has never been given a fair trial. In 1934, in Nebraska, we elected the wettest Governor I have ever known, and a legislature, a majority of which was just like him. That legislature did put laws on our statute books for the sale of liquors, wines, and beer, which I think are more harmful to us than the old-fashioned saloon, which the Lord only knows was bad enough, but it didn't make so many drunk-

ards out of women. There was no mandate from the people authorizing that legislature to enact our present liquor laws, and neither you nor I voted for those laws. So, from now on out, I urge you to watch your vote when you are electing men for the high offices in State, Nation, and cities too.

I am of the opinion, which is formed by reason of direct contact, experience, and observation, that our Government, local, State, and national can be and is a tremendous force in the development or the destruction of character in youth and adults, and at the present time is severely to blame for much of the juvenile delinquency that is prevalent in the land today. For it is common knowledge and a common saying among people who have given the subject any thought at all, that character and morals throughout the Nation, in high and low places, are 100 percent lower than they were 15 years ago. But you say, such conditions always follow war. That is true. But nevertheless, let me tell you that politics has more influence on society and war than does your churches and schools. Your churches and schools didn't get you into the war and were not strong enough to keep you out, neither did they develop this terrible beer and liquor-drinking habit and all the associated evils that go with it, which has utterly demoralized millions of what were fine young men and women who are to be the fathers and mothers of the oncoming generation. And our National Capital city, Washington, D. C., now has the reputation of consuming more liquor, per capita, than any other city in the United States, or that might mean the world, since we are known as the drunkenest nation in the world.

How about prohibition not working? Did you know that there are 10 thou shalt nots in the Ten Commandments, and they are used three times in the first commandment, and they are the first words in seven of the commandments? The Ten Commandments were given by God, they were spake by God. They have been broken and nullified many times; but they have never been modified or amended or repealed. Let us continue to make them and the principles they teach the controlling factor in our way of life.

The Postal Service

EXTENSION OF REMARKS
OF

HON. WAT ARNOLD

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 17, 1947

Mr. ARNOLD. Mr. Speaker, under leave to extend my remarks, I wish to include an article appearing in the Wall Street Journal of December 16 on the all-important and much discussed question of the Post Office Department running in the red. This Department of our Government is a big business and, because it is so vital to everyone in these United States, it deserves the cooperation of the Postmaster General, the Congress, and every individual whom it serves, if it is to continue to operate efficiently, and get out of the red:

POST OFFICE, DEEP IN THE RED, HEARS PLAINTS OF SLOWING SERVICE—SO CONGRESS PONDERS VOTING FUNDS, HIKING POSTAGE OR SPURRING EFFICIENCY—CRUCIAL TO MANY BUSINESSES

The Government's 172-year-old venture in big business, the postal system, is deeper in the red than ever before—and some private businessmen contend it's growing a bit senile in its service.

Hardly a company in the Nation can be independent of the mailman. Some—mail-order firms, publishers, direct-mail advertisers—spend millions at the stamp counter, and most think they pretty well get their money's worth. Quirks are noticed nowadays, though. A special-delivery letter often takes longer than an ordinary 3-cent letter. Service may be faster cross-continent or even cross-ocean than locally. Bankers and manufacturers and ad men talk of money lost through mail delays.

Within a few weeks the Post Office Department will reveal that during fiscal 1947 it took in about $1,304,000,000, and spent $263,000,000 more than that. This red sea will drown the mere $148,000,000 loss of last year. And the deficit may get bigger before it shrinks. Some experts on Capitol Hill think Congress next session may well grant $200,000,000 or so in wage hikes to postal workers.

The new Postmaster General, Jesse Donaldson, who after 44 years in the service should know what he's talking about, says the Post Office has been buffeted by storms beyond its control. For instance, this year and the next, many thousands of experienced clerks and carriers hired during the war are being turned out under legislation to make room for new civil-service workers who must learn their jobs. Before the war Congressmen would not appropriate for new trucks, he says, and now that they are willing to do so the trucks can't be bought fast enough—and 66 percent of the Department's vehicles are over 15 years of age.

UP TO CONGRESS

Congress must make some decisions.

It can appropriate the taxpayers' money. The House Appropriations Committee is holding hearings right now on that.

It can boost postage rates—a move of great consequence to business. A bill to do that is stalled for the moment in the House Rules Committee. And the House Post Office Committee is studying the matter afresh; it's talking of tossing the hot-potato responsibility of changing rates to the Post Office Department (which has always been chary about even recommending postage changes) or to an independent agency.

It can try to "modernize" and perhaps mechanize the postal operations. The savings might drive down the deficit. Postmaster General Donaldson, who's hearing a lot of talk about this, says skeptically that he's willing to do it if anybody steps up to show him how.

His department is trying out some new things. Early next year 1,500 stamp vending machines will replace window-work in many post office lobbies. Mechanized money orders, with punch cards and business machines replacing laborious hand work, are being investigated. Big post offices already use conveyors, chutes, and contraptions called omnidenominator machines for rapid parcel post stamping. But Mr. Donaldson doubts any robot will ever displace the manpower which must sort and re-sort the mail repeatedly as it moves toward its destination. In a year this sorting operation is performed over 100,000,000,000 times.

About 1,800 special postal trucks are on order from International Harvester to be paid from a $3,500,000 appropriation of 1947. Mr. Donaldson counts on spending $4,500,000 in 1948, $4,400,000 in 1949, and more in 1950 and 1951, to modernize the truck fleet and cut repair costs.

MORE IDEAS

The House Post Office Committee is bubbling with ideas it thinks might cut costs. It's studying the idea of using trucks instead of trains for much intercity mail movement. It suggests the laborious name signing and record keeping involved in special delivery is a waste; rarely are records used. It talks of halving the 2 percent interest rate on the $3,300,000,000 now cached in postal-savings deposits. It is studying consolidation of small post offices and reorganization of the postal service along regional instead of centralized national lines. It thinks perhaps a research and development division should be set up in the Department.

And it is taking testimony on the idea that the Nation's air lines should be subsidized openly and directly, if at all, rather than through air-mail payments exceeding transport service rendered. That, incidentally, would be fine with Postmaster General Donaldson. By his figuring, the Post Office lost $20,000,000 on air mail in the fiscal year ended last June—and that's counting roughly only airport-to-airport costs, not the costs of gathering and distributing at either end. Under present law the Civil Aeronautics Board is supposed to set air-line mail payments high enough to keep a well-managed line in good financial shape. The railroads, in contrast, get only what the Interstate Commerce Commission thinks is "fair and reasonable" for work performed.

Other cost-accounting practices employed by the Post Office are hotly debated by big mail users.

When the Department's 1947 figures come out, they will assert a profit of about $133,000,000 on first class mail, even including the unprofitable penny postcard. But they'll allege a $160,300,000 or so loss on second-class mail, which includes magazines and newspapers. They'll claim a $74,000,000 loss on third-class traffic, which is largely advertising matter, including circulars and small catalogs. They'll report a $48,500,000 loss on fourth-class, composed of parcel post, books, and large catalogs. There'll be other losses, including free Government mailings. All these figures are still subject to change by the General Accounting Office.

Many publishers and other mail users say the figures are meaningless, arguing they've been obtained by inadequate sampling and unfair apportionment of costs. But they may become the basis for a new effort to raise rates, nevertheless. On the basis of 1946 figures the bill now in the Rules Committee was drafted—with hikes in most all kinds of mail except regular first class. Business is a heavy user of all classes—including first. Even the "poor man's letter"—the Government penny postcard—is now being sold at the rate of two and a half billion per year, and about 90 percent of its use is by business institutions.

THE MINORITY REPORT

Business firms' plaints against present postal service are far from universal, but perhaps are a vigorous enough minority report to deserve attention.

In San Francisco the Atlas Imperial Diesel Engine Co. says mail service is worse this year than last, and last year was pretty bad. Deliveries don't make sense—airmail usually takes a day longer from San Francisco to Seattle than from Seattle to San Francisco. A letter can often move to New York more rapidly than to nearby California plants in Fullerton and Ontario.

The Federal Reserve Bank of Chicago has switched to air express for moving canceled checks and other vital bulk shipments to New York, because the mails proved too slow. And R. L. Polk Co., one of the Nation's largest direct-mail advertising houses, reports anticipation time has been extended to 15 days compared with 10 before the war. "Anticipation time" is the lapse expected before getting returns on first mailings; the growing lag can't be entirely explained by slower answering of letters.

Cleveland's White Motor notes a slow-down in air mail and Thompson Products reports increasing tardiness in special delivery. A special-delivery stamp almost guarantees slower delivery in much of downtown New

York, because the latter is held back for a special messenger.

The Bank of California's branch in Portland, Oreg., regularly sends mail on a train which arrives in Seattle around midnight. For the past 2 months it has not been sorted in Seattle until afternoon.

The New York Herald Tribune contends unjustified delay in handling its copies in and around New York is causing subscription cancellations. Papers mailed Friday often arrive, somewhat stale, on Monday. News magazines, with an equally perishable product, are alarmed. A special Time-Life committee is trying to crack the problem—especially delays in entering New England.

DETROIT'S INVESTIGATION

For 6 months the Detroit Board of Commerce has been getting so many complaints that it has launched quite a probe. Results of test mailings to and from all parts of the land have been tabulated on 20 ledger sheets—with Washington, D. C., showing the blackest record. A letter posted a block from the United States Chamber of Commerce, in the heart of the Capital was postmarked after 13 hours' delay and delivered in Detroit precisely 4 days later.

Similar test mailings by the Wall Street Journal—before the Christmas rush began—indicated the average letter moves pretty speedily—but you can't count on it.

Staff members dumped scores of letters into boxes from coast to coast, and most were delivered promptly. But quirks like these turned up:

An air-mail letter from Santa Monica to San Francisco should arrive overnight—but the test dispatch took 4 days and 5 nights. It traveled via Honolulu. Postal authorities say it evidently was tossed in the wrong pouch at Los Angeles municipal airport. (This mildly recalls the case of a New York finance company, which 2 weeks ago got back a letter it had mailed in January to its branch on Long Island. It had been to Poland.)

Not that Honolulu service is bad. A test letter traveling the 2,095 miles from Hawaii to San Francisco arrived in less time than one trying to make the 20 miles between San Francisco and San Mateo.

On two successive days at 11:59 a. m., a courier dropped a variety of letters in a box at the corner of Wall Street and Broadway, New York, where pick-up is scheduled at noon. On the second day, it was observed that actual pick-up was 35 minutes late. Perhaps it was no prompter on the first, for postmarks at such points as Chicago, Cleveland, and Los Angeles indicated handling of regular 3-cent letters in the New York post office came at 3:30 p. m. Special delivery and air-mail letters were handled even later—at 5 o'clock.

SPECIALLY SLOW

The 13 cents you spend on a special delivery stamp seems no guaranty of delivery posthaste. By congressional fiat special deliveries have been shifted to regular salaried postal employees. They used to be handled by individuals who hustled to earn fees based on the number of letters delivered. When special delivery and ordinary letters were mailed simultaneously in the Wall Street Journal test the one entitled to special, and presumably faster, handling came 15 minutes later to Detroit than did the 3-center.

In the race to Chicago, an ordinary letter broke the tape 22 minutes ahead of the special on the first day and the gap was widened to 53 minutes on the second trial. To Cleveland, the super-charge stamp meant arrival 1½ hours later. To Philadelphia, the special came specially late—2 hours and 20 minutes after the ordinary dispatch.

Lots of businessmen are skittish about criticizing postal service—and some who are most critical are unwilling to be quoted.

"Just what we don't need now is a lot of fuss about Post Office Department inefficiency," said the spokesman for one of Chicago's mail-order houses. "The next thing you know mail rates will be increased all across the board, if you talk of postal inefficiency."

This individual reported his firm has been making constant checks on the speed of mail since the middle 1930's and except for rare cases when something goes wrong, mail time has not varied a whit.

The head of the mailing department of a big retailer, on an absolutely don't-mention-our-name basis, makes this comment:

"We have observed a noticeable deterioration in the postal service, particularly in the last year. Third-class mail (printed matter and packages under a half pound) is the worst—it's off 2 to 3 days from prewar for any distance. Parcel post is now averaging a 24-hour delay from normal, and a slight delay is also evident for first class, air mail and special delivery.

RISE OF THE POST OFFICE

The Nation's postal service is older than the United States Constitution, having been set up by the Continental Congress in 1775. In mid 1941 the Post Office Department had 360,000 employees. Now the number is about 462,000. Wages in the prewar year were $630,500,000—now they are almost doubled, about $1,193,900,000 for 1947.

But laments come from city postmasters and superintendents around the country. In Los Angeles the word is that, "We're starting to use helicopters for intercity service, but we've still got mail trucks left from the 1920's." In Pittsburgh the complaint is of a mass turn-over of manpower. In Portland one-third of the workers are still termed temporary, and then there's that night train from Seattle that stops for every milk can along the route. Chicago's postmaster points to the increasing volume of mail—parcel post has felt the biggest rise in the Windy City, 42 percent above last year.

Laudatory remarks about the mailman are not difficult to glean. They come from retailers like Filene's in Boston, from manufacturers like Koppers Co. and Republic Steel, and from transport companies like the Chesapeake and Ohio. A spokesman for the National Council on Business Mail says: "No branch of Government gives better service to more people than the post office. We occasionally get complaints, but usually the trouble turns out to be the mailer's fault."

A SHAKY SALES TALK

An indignant minority talks of embarrassment and financial loss. A large Pennsylvania advertising agency ("No names, please") is feeling shaky about its own sales talk. "We try to convince prospective out-of-town clients it makes little difference for us to be in another city with the good postal and telephone service. When mail to nearby cities is delayed 2 or 3 days, it makes us look bad."

A Detroit manufacturer sends out about 400 parcel post shipments of drill job bushings—and about 20 percent run into postal trouble. "We'll send out a replacement bushing to one of our customers. About 4 months later we get it back. In that time it has visited 5 or 6 cities—and the post office just explains that the little cloth bags in which we pack our bushings stick to the mail bags. All this costs our customers more than it costs us—they may have their machines down for 3 weeks."

A Philadelphia manufacturer has shifted to railway express because his glass products suffered increasing breakage despite proper packing and plenty of "fragile" markings.

One of New York's biggest banks says delays cause financial loss to its customers. Incoming mail carries checks which are to be credited to the accounts of customers after going through the clearinghouse. But currently customers often have to borrow and pay interest to complete a transaction which was to have depended on an expected check.

The Biddle Purchasing Co., New York, which handles about 10,000 letters daily, has been "forced to the expensive expedient of dictating over the phone or using teletype for ordinary letter information."

Questions in the Minds of the People

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

Thursday, December 18 (legislative day of Thursday, December 4), 1947

Mr. MAGNUSON. Mr. President, following the first session of the Congress this year, I spent as much time as possible in the State of Washington, taking advantage of each opportunity to discuss current problems with people from every walk of life. Among those discussions was one which stands out in my memory. It occurred when I had the pleasure of meeting with the congregation of the First Baptist Church in Seattle, Wash., early in November, and answering as best I could the questions most disturbing to those in attendance. Their questions were written, and because I was struck by this revealing sample of public expression, I request that they be printed in the Appendix. Some Members of the Senate who were on official business abroad may not have had similar occasion to sound out sentiment at home. I commend these inquiries to their attention.

There being no objection, the inquiries were ordered to be printed in the RECORD, as follows:

There is so little the people can do, it seems to me. What can we do to help our Representatives and Senators in Congress? Do letters and wires from the people help you?

There must be a sort of great power in order to maintain order.

Do you think Wallgren will be Truman's running mate for 1948?

Will the Marshall plan generate a division of the world into two armed camps?

Would America be willing to give up some sovereignty to really have peace in the world? We will pay for war; will we pay the price of peace?

Has there been any plan to supervise the distribution of the supplies sent to Europe so they can go to the needy people and at the same time make them understand we do not want to tell them what their political affiliation should be?

Don't you think arming Turkey and Greece is the first step to war?

Because of the increasing seriousness of world affairs, will the bipartisan foreign policy be more united?

On the basis of the report of the committee of Protestant ministers visiting Yugoslavia (that religious freedom had been increased over prewar conditions), do you feel that the thesis that Russia is unalterably opposed to Christianity is correct?

Do you feel there is any hope for the FEPC bill in the light of UN criticism of our racial discrimination, the Civil Rights Committee Report, and the interest in minority rights for people in foreign countries?

Do you think we will have to pay income tax by being in the service?

How can we spread our moral influence in the world?

What is your view on FEPC?

How about Greece? How do you feel about what has been done there?

How can the 70,000,000 Christians help politically to world peace?

What is your opinion regarding the world government as proposed by Einstein and the committee of scientists? Is it possible now? It is probable now.

Will the Marshall plan enforce the UNO?

Assuming that our internal and international affairs are tied to the Congress and the left-right split in public opinion, which of these sides do you fear most in our battle for economic and international security?

What do you feel is a reliable source of information for news, political and otherwise?

Please discuss the probability of passing of a universal military training law.

Do you think it is possible to make the United Nations succeed with the continued obstructionist acts of Russia?

When the four major groups within the United States—namely the educational, agricultural, labor, and church groups—have gone on record opposing universal military training, how can the military interests be justified in spending the public's money propagandizing for it?

Do you think the plan of armament is a "peace sign" to other nations?

Will socialized medicine be discussed at the coming session of Congress?

How can we stop the papers in their attitude on war?

What plan would you suggest to best get the 70,000,000 church people of all denominations to work together for the peace of the world?

New Hope for DP's

EXTENSION OF REMARKS
OF
HON. HARLEY M. KILGORE
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES

Thursday, December 18 (legislative day of Thursday, December 4), 1947

Mr. KILGORE. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an editorial entitled "New Hope for DP's," from the Wheeling News-Register of December 17 last.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEW HOPE FOR DP'S

The plight of Europe's displaced persons has at last attracted the attention of some Americans who are in a position to help relieve it. Two influential Republican Senators, Mr. TAFT, of Ohio, and Mr. SMITH, of New Jersey, have urged that the Government take immediate steps to admit its share of the homeless unfortunates. And farm groups in the Middle West have begun surveys to see what homes and jobs might be available for them.

Why the sudden flurry of interest is not known. The essential facts of the displaced-persons problem have not changed in a year or more. Maybe it is just coincidence. Or perhaps the practical as well as humanitarian aspect of the problem are only now becoming apparent. But whatever the reason, the interest is encouraging.

Senator SMITH, recently returned from a trip to Europe, thinks that this country should admit a reasonable number of displaced Europeans immediately, outside the immigration system. Senator TAFT, who also calls for immediate action, would admit America's share under quotas now unfilled because of the wartime halt of immigration.

There are about 800,000 persons, Mr. SMITH explains, who cannot be resettled. These are the last remnants of the 8,000,000 uprooted by the European war. Driven from countries now dominated by Communists, the 800,000 will not go back home for fear of persecution.

Almost all of them are in the American, British, and French zones of Germany—about 530,000 in the American zone alone. They cannot be left there because, as Mr. Smith says, "the German economy cannot support them and, of course, the United States Army cannot support them indefinitely."

All this has been argued before. But now, all of a sudden, the arguments are being listened to. One reason for the Middle West's interest undoubtedly is the serious decline in our farm population. More than 2,000,000 persons who left our rural areas during the war did not come back when it was over.

With aid to Europe shaping up, American farmers have a big job ahead of them, and they know it. It is not a pleasant job to face when they are short-handed. So the move to bring displaced persons to this country and find work for them is more than an act of charity.

The great majority of these DP's are from the Baltic and Slavic countries. Thousands from those same countries came to America in the last 75 years and settled in the Middle West. They became good farmers and good Americans. There is no reason to believe that their unhappy, uprooted countrymen of today might not do as well.

But before they are given that chance two things must be done: Congress must pass legislation allowing them to enter; and, in fairness to all concerned, there must be a plan for absorbing them gradually—places for them to go which provide comfort, independence, and a chance to do useful work.

With the Senate leader and one of his able colleagues interested in the first step, and farm, labor, and church leaders working on the second, it finally seems that something is going to be done.

Restrictive, Monopolistic, and Racketeering Practices in Housing

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1947

Mr. GWINN of New York. Mr. Speaker, the work of the subcommittee appointed by the Education and Labor Committee to investigate restrictive, monopolistic, and racketeering practices affecting the scarcity and the high cost of housing was interrupted by the special session.

The subcommittee's hearings in the cities of Washington, D. C., New York, and Chicago have uncovered facts, however, that require its chairman to make a statement for the record before the session closes.

While some 80 witnesses were heard in the course of our hearings, there are still several hundred specific cases of complaint bearing upon these matters. Many of these cases have been examined in detail since the conclusion of the hearings on November 15. Others are in process. All will be prepared and documented for the committee, in the hope that future hearings will place in the official record the full-blown picture of monopolistic and restrictive practices burdening the construction industry.

I. MONOPOLISTIC PRACTICES IN HOUSING

So far it has been established for a fact that labor unions acting either alone or in combination with contractors and suppliers of building materials have managed to achieve total monopolistic control over the building construction of whole cities and even of considerable areas adjacent to these cities. In nearly all of our big cities union bosses determine where and when the building craftsman shall work, if at all, what his rate of production shall be, and what the rate of pay shall be. They arbitrarily limit the number who may join the union. That makes workmen scarce and forces wages up. No one can work on new construction unless he belongs to a union. That makes the monopoly of workers complete. The "closed shop" is the rule and practice on every new job. To exclude new craftsmen and apprentices from their city is one of the regular functions of many unions in order to maintain high wages.

We also found that a single union has such arbitrary power over other men as to make them slow down, featherbed, walk off, stand by, boycott or strike. This very fact has engulfed both builders and distributors in such a fear that they stoically pay the labor boss his price for the promise that he will refrain from exercising his arbitrary power.

The labor monopolists hold their ranks together by an iron discipline which is both thorough and complete. Thus, we found that an obligation of membership in the Carpenters' Union was to refrain from attending any meetings for the purpose of making criticism of union officials or representatives except at the regular union meetings, under penalty of expulsion. This restriction on freedom of speech and assembly, we are told, is practically universal in the building trades unions. Thus the formation of any rival union is effectively prevented, because the member objecting to or criticising the rule of the union monopoly in control, would not only be expelled but thrown out of work in his craft. He would, furthermore, automatically be barred from joining his craft union in other big cities, all of which we are told are ruled by the same type of monopoly.

In this manner any American citizen engaged in the building trade knows that if his union card is taken from him, his right to find work in his chosen trade is gone. Thus, even in America a dictatorial labor monopoly system has the power to banish fellow citizens to a kind of economic Siberia.

Of late it has become apparent that even the right to work and join a union may depend solely on inheritance. In at least one case it has been judicially determined that a union excluded all applicants not sons or brothers. It was admitted in our New York City hearings by the representative of local No. 3 of the International Brotherhood of Electrical

Workers that sons and brothers of members were preferred, and that the great majority of members admitted since 1943 were sons or brothers of existing members.

An official of local No. 14 of International Brotherhood of Operating Engineers admitted that new members were enrolled only when in the judgment of the union there was more work in the New York area than could be handled by the existing membership.

Monopoly works in many diverse and unsuspected ways to impose its high hand on the public. For example, the ratio of apprentices to journeymen is customarily fixed by the union in its working rules. The union is the sole judge of whether or not its present membership is sufficient to do the construction required by the people or whether the demand is great enough to permit young men or those outside of the city to come in and live and work. Thus the country is divided into restrictive geographic areas in which workers may not enter and over which the trade-union organizations rule to maintain a scarcity of workers and keep prices up. This power virtually sets up internal control of migration into areas over which the union has jurisdiction. Thus local monopolies join to impose a single body of restrictions on the membership of all the areas they separately control, and on all the people who would like to work in any of these areas. The rule of the closed shop is strictly enforced.

Furthermore, the building unions exercise monopolistic power far beyond the membership of the union. With dictatorial finality they decide what contractors within their city limits may do business and what building materials may be shipped in from the outside to their territory. If they decide that union men will not work for a certain contractor, that contractor is out of business simply because the labor monopolists control all the workers. Likewise, if they put thumbs down on any materials, those materials will not be used. There will be no workers to install them.

Until recently construction has been done on the basis of cost of labor and materials plus a 10-percent fee, more or less, to the contractor. This eliminates the incentive to keep costs down. There is no true employer-employee relationship because freedom of action has been signed away. If, as so commonly charged, there was ever an oppressor and an oppressed, labor and the contractor are now in one combine. There is but one oppressed party; the public. There is the perfect peace of conquest for labor, and capital is fairly content with what the labor leaders gave it and for the protection from competition they provide.

Many unions, of course, are good to their members. They get high wages. But where 100-percent compulsory membership prevails and there is no freedom of contract left there is general exploitation of the public. For example, more than half of the heads of all American families must now work 2½ days to get 1 day's service in exchange of building craftsmen. Most farmers must work a whole week of 70 hours to purchase 16 hours of building craftsmen's services.

This dangerous dislocation of our national economy must be directly attributed to the absolute monopoly which today has strangled the whole American construction and building industry.

The exploitation of the public is without limit because competition within the labor groups or competition within the contractor groups is dead.

The closed shop which was banned by the Taft-Hartley law was normally the result of negotiation between a single union and a separate employer. In the construction industry in the larger cities, however, there is a geographical closed shop arrived at by agreement between all the craft unions and the Building Trades Employers'—Contractors—Association. These agreements determine not only the wage levels but also the allocation of work between the trades, and other conditions of employment. Employers who are not members of such an association and who have had no part in the bargaining leading up to these agreements are nevertheless forced to abide by them. The union leaders control the only source of labor. They will not supply men for, or permit their members to work on, jobs involving wages or working conditions different from those covered by the unions' contracts with the associations of contractors. For example, in New York City, the written contract between labor unions and the contractors' association provides that members of the union council "may work for employers other than members of the Building Trades Employers'—Contractors—Association, provided that, however, such employers meet the requirements of this agreement." Very, very few "meet the requirements." Witnesses were able to remember few cases of outsiders entering the business of building in New York City.

In Chicago the situation is even worse: Nonmembers of the contractors' association are subjected to a fee of over 1 percent, enacted by each building trade-union, on the total contract price for the building, whereas members taken into the association combined pay to the association a single fee of a fraction of 1 percent. The contractors' associations pledge their members to employ only members of the union in return for the unwritten promise of the workers to work only for the contractors who belong to the association. The contractors understand what building materials and what manufacturers throughout the United States the labor bosses of the big cities favor. They refuse or fail or neglect to buy from manufacturers to whom the labor bosses object. All those not a part of this closely knit arrangement subject themselves to intolerable uncertainties as to the fate of their business.

II. RESTRICTIVE PRACTICES IN HOUSING

Wherever a monopoly takes over an industry, it is a logical necessity for the ruling powers to impose all kinds of restrictions both on production and on personnel. Our subcommittee hearings brought out the fact that the present-day American housing is subjected to an almost unbelievable degree by restrictive rules and restrictive practices.

Limitation on daily work, as enforced by the labor unions, now permit a brick mason to lay from 350 to 500 bricks a day, against 1,000 a day in 1940. Similar restrictions apply to lathers, who usually finish their day's work at 2 to 2:30 p. m.—as soon as they have placed 30 bundles of lath or 100 square feet of gypsum board. Under these rules, the workmen draw 8 hours pay for about 6½ hours work, or less.

Two witnesses testified that on their own jobs, still under way or only recently completed in the Chicago area, the on-site labor cost for construction now runs between 65 and 68 percent of the total cost. This compares with a normal prewar average of approximately 35 percent for on-site labor costs. On nonunion jobs, to the extent that they could be found, the costs were much lower and the productivity much higher. On a nonunion building recently completed in New England, we are reliably informed, bricklayers averaged 1,200 bricks a day; on a similar structure, built for the same concern only 8 miles away, union bricklayers were supervised by a union steward and only 500 bricks a day were laid.

In the former case the workmen were free to be paid according to production. Thus, the good workmen received more than the standard union wage scale. And the owner got construction at much lower total costs. In the other case, where the workers were not freemen in any sense of that word they performed like slaves. For every five slaves there was one foreman who did no work but watch his slaves.

In this case the workers actually robbed both themselves and the owner. In the other they gave the measure of a full day's work. In the one case the owner could not foretell what the slow-down, featherbedding, stand-by, walk-off, and striking practices of an arbitrary labor monopoly in complete control would cost him. He was a gambler with the cards all stacked against him. In the other he made a dependable contract knowing what his costs would be. Where the willing buyer and willing seller make contracts then houses are built and prosperity abounds because honesty and confidence prevails.

The labor monopolists force restricted production by prohibiting incentive payments for high individual production. They limit the worker to 35 or 40 hours of work per week. They are pledged to destroy the great American incentive system, that is, the system of individual self-improvement by which each man may advance according to his skill and his capacity to produce. The extraordinarily good and conscientious workman gets no more or less than the dullard and the slacker.

Next, restrictive methods of distribution prevent the true industrialization of the building business and tend to keep it localized and segmentized.

The medieval craft system of the 19 A. F. of L. building trades is reflected in

the subdivided set-up of the subcontractors, each of whom normally employs only one or two of these crafts. These subcontractors charge retail prices for the materials they employ. The pressure of these groups is to keep the building business in the local community and to keep it broken up so that profits on the sale of materials are kept in the local community. Even the largest builder is unable to change this restrictive system. One of the largest home builders in the country, who is building thousands of homes on Long Island with nonunion labor at the comparatively low cost of $7,500, testified that he could build the same house—complete with a refrigerator and a washing machine and on a fully landscaped lot, for $5,000 if he were able to buy his materials at factory prices. He testified that even though the materials he purchased were shipped in carload lots directly from the factory, he nevertheless had to pay in one case a distributor, who had never seen the goods, a mark-up of 53 percent. He would have had to pay another mark-up to the retailer except that in this case he happened to be his own retailer.

The costly piecemeal nature of the building business, maintained by the A. F. of L. monopoly in conjunction with local contractors and material suppliers, in the opinion of several witnesses, can only be changed by the application of modern industrial organization, methods, and distribution shortcuts. Houses are still tailor-made. Some propose to deliver a house to the consumer somewhat as an automobile can be delivered and assembled on the job. Those manufacturers who prefabricate the entire shell of the house are nevertheless faced, in union areas, with the necessity of having their houses erected under the craft system. The A. F. of L. has traditionally opposed prefabricated homes, but on the day the subcommittee opened its Chicago hearings the head of the building trades department of the A. F. of L. announced in Chicago the signing of contracts with 17 prefabricated manufacturers, thus permitting the erection of their homes in unionized areas.

An official of an open-shop concern in Wisconsin capable of producing some 30 prefabs a day testified that their plant is operating at only 10 percent of capacity because of the boycott of the carpenters, assisted by the other trades, which prevents the erection of these houses in Milwaukee, Wis., Rockford, Ill., and other unionized areas. Since he gave his testimony we are informed that the concern has signed a contract satisfactory to the carpenters. Thus, the price to be paid for the industrialization of building through prefabrication appears to be the extension of the A. F. of L. building trades' monopoly from the site in the cities into the factory.

By killing off the pride and the incentives of good craftsmanship, the labor monopoly has fastened upon society the dead level of mediocre performance. Reducing productivity and hours of work while at the same time arbitrarily boosting wages is the devil's work in the building monopoly. It makes no housing for many people.

Above all, even with the severe artificial restraints against the admission of workers to unions and to the building business, unemployment is frequent within the protected circle, and we have no way of knowing how many potential skilled workers, who are not allowed to enter the building trades, could be trained and put to work—at higher annual wages—if the present wastes and restrictions in hiring and in building could be eliminated and freedom of action restored.

III. RACKETEERING IN THE BUILDING INDUSTRY

It will be recalled how the extensive congressional hearings which preceded the Taft-Hartley Labor Act established the tragic extent to which American industry has become subject to violence and racketeering. That chapter of national disgrace has not been ended.

It has become obvious that even the good union leaders are hemmed in by the lawless and threatening acts of the bosses of other unions who exercise unlimited power. It takes only one bad union boss to hold up an entire building operation and all the other unions on the job. For this reason the control of a particular union often results in struggle, corruption, and downright racketeering if not outright purchase. It is worth real money to be able to control one of these key unions.

One form of illegal extortion in the building trade springs from the practice of unions to deny membership in the union while granting "work permits." For permits to work in a given area, payments are made to the union business agents every week. If workers were permitted to join the union, possibly two-thirds of the fees and dues would go to the international office and only one-third would be kept by the officers and business agents of the local. Whereas the whole take for issuing permits to work is kept by the business agents or by the local union officials. The take is enormous. None is accounted for to international headquarters. By keeping down the membership and issuing permits to outsiders to work but not to join, prices can be kept up and also the bosses can the more easily control the elections of themselves and thereby insure their continuity in office. Favoritism goes to the faithful who support them and their tyranny in office.

In Chicago there was not only evidence of this malpractice as well as of the usual featherbedding, make-work practices, slow-downs and other dishonest measures productive of delay and increased cost adduced at our hearings, but also evidence of the use of dummy contractor associations and union activities to further the selfish ends of wicked and notorious mobsters. Contractors not members of the contractors' association could get no labor. These activities while nominally carried on in the name of organized labor, were in fact carried on in the name of the contractors and were illegal conspiracies in restraint of trade. Some of these operations were simple shake-downs or rackets.

Collusion between nominal labor unions and certain groups of contractors was covered in the testimony of seven witnesses who had transactions or relations with the Tuckpointers, Cleaners, Caulkers, Concrete Restoration, Gunnite and Waterproof Association of Illinois. This association charges an initiation fee of $1,000 and annual dues of $500. Contractors who refused to join the association were denied access to union labor. Two of the witnesses told the committee of their efforts to avoid membership in the association, and of the difficulties which beset their business as a result of such refusal. One witness—Mr. Abbott—testified that he carried his charges of extortion to the FBI office in Chicago, on the grounds that he was under coercion to join the association. The FBI responded that such matters were not properly within the Federal province. He next carried his complaint to the State's attorney for Cook County. There he was told by an assistant, he testified, that the initiation fee appeared reasonable and that he was lucky he was not being charged twice as much to join the association.

As a direct result of this and other testimony in like vein before our Chicago hearing, the operations of this association were brought forcefully to the attention of the State's attorney for Cook County by the Chicago newspapers. Before the committee hearings recessed on Thursday, November 14, the State's attorney for Cook County had been compelled to charge an assistant with the duty of preparing the matter for presentation to the grand jury for the purpose of criminal prosecution in the State courts.

IV

Our committee hearings are not finished. We need further development of the facts, further illustrations of the evils of monopoly prices imposed by compulsory groupism. We want to show the reductions in costs that result from a thoroughly protected free economy wherein men and materials may march down freedom road without fear of compulsion, intimidation, violence, or extortion or monopoly controls of any kind in the exercise of the right to work and invent and produce in the building of houses. What it will amount to in dollars and cents certainly reaches 25 percent of present costs. It may reach 40 percent.

To achieve that freedom in the housing field which is the only hope of adequate housing, it would seem clear that an amendment penalizing monopolistic and restrictive practices should be under the Taft-Hartley Act and not under the present Antitrust Acts. The facts and abuses are so different in each case that the law and penalty must be different in the treatment of them. An interim committee report covering the facts developed and the questions raised will be filed shortly and the hearings of the subcommittee will be resumed at the earliest possible moment.

Mr. Marcantonio and the "Party Line"

EXTENSION OF REMARKS

OF

HON. FRANK B. KEEFE

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1947

Mr. KEEFE. Mr. Speaker, the people of America are profoundly concerned because of the very obvious penetration of communistic philosophy into all segments of American life. As one who firmly believes in the fundamental rights of free speech, I am perfectly willing to defend any American citizen in the full exercise of that constitutional privilege. I believe, however, that the insidious practice of Communists to hide their efforts to betray America by deceit and trickery should be completely exposed at every opportunity in order that the American people may know the true source of the utterances of those who pretend to speak in behalf of communistic philosophy as Americans.

It is an uncontrovertible fact that the Communists and the fellow travelers and stooges hew to what is commonly known as party line. This party line finds expression in the statements of Soviet officials and in certain Soviet controlled publications. I listened with great interest to the speech delivered on this floor by the gentleman from New York [Mr. MARCANTONIO]. I have analyzed that speech and have compared it with the party-line utterances emanating from the mouths of officials of the Soviet and expressed in New Times, Trud, Pravda, and Unita, the latter being the newspaper of the Central Committee of the Communist Party of Italy.

The comparison is obvious and in order that there may be a proper appraisal by the Members of Congress and the American people I have set up the speech of the gentleman from New York in one column and opposite that speech in another column, have set forth the official Communist Party line. It will be interesting, I believe, to make this comparison.

I am frequently asked the question, "How can you detect a Communist?" A partial answer might be found in a paraphrase of the age-old truism, "By their words you will know them."

Mr. Speaker, under unanimous consent, I include as part of these remarks the column-by-column comparison which I have heretofore referred to.

The source references for the citations made herein are as follows:

First. A. A. Zhdanov and G. M. Malenkov, delegates of the All-Union Communist Party of the U. S. S. R. to the Conference of nine European Communist Parties which established the Cominform.

Second. New Times, a weekly journal published by the newspaper Trud in Moscow, expressing the Soviet line on questions of foreign policy.

Third. Trud, a Moscow newspaper representing the All-Union Congress of Trade Unions of the U. S. S. R.

Fourth. Pravda, the official newspaper of the Central Committee of the All-Union Communist Party of the U. S. S. R.

Fifth. Unita, the newspaper of the Central Committee of the Communist Party of Italy.

Mr. MARCANTONIO. Mr. Chairman, the adoption or rejection of this amendment will determine for all time, as far as this piece of legislation is concerned, whether or not it is a relief proposal or merely the establishment of another political weapon in order to maintain and preserve economic and political systems and governments which have become satellites of our State Department and which the peoples of these countries definitely do not want.

I want to take this occasion, Mr. Chairman, to quote a man for whom this Nation will always have the greatest of respect, Fiorello LaGuardia, who in his inimitable manner clearly defined the issue that is before us when he testified before the Senate committee considering the Greek-Turkish proposal. He was talking at that time about relief, and said:

"Now, gentlemen, there are many ways of dealing with this problem: The first, that aid should be given on a national basis. Each rich nation should choose the recipient and make its own conditions. This is the old-fashioned imperialist way. This method of making one country dependent upon another was discarded by the world—I hope forever. That isn't why the United Nations was formed. That is not the spirit of the Atlantic Charter or the San Francisco Charter—not as I understand it.

"The second possible arrangement—and look out for this one, please—is for a group of big nations to join together and select recipients of their charity. This arrangement would only be a false front. It is not in keeping with international cooperation. Let us be honest: It is just plain, ordinary, old-time power politics—and the world has had war after war because of power politics.

"The third way is to create an international authority operating under the control of the United Nations and meeting the relief needs, without any consideration of race, creed, or political belief, being guided only by the existence of true need. This is what is known as the new way of the United Nations. But it really is not a new way. It is a way brought to this world nearly 2,000 years ago in the teachings of the Prince of Peace. And a wicked world has, to date, refused to learn the lesson."

Now, Mr. Chairman, I submit that the way that is suggested in this bill is the first way that Fiorello LaGuardia described as the imperialist way. My amendment is the third way. It guarantees aid to the peoples of the devastated nations and secures peace and democracy. It strengthens the United Nations, which is mankind's hope for peace. However, we all realize that this is not a relief bill.

The debates, the amendments adopted, and Under Secretary Lovett's testimony have removed the mask from this bill. Responsible men have brazenly admitted that this is not a relief bill; that this is a war measure in the so-called cold war; that this is a measure to fight communism.

Let us analyze that alleged objective for a moment. In the name of fighting communism we are fighting in reality democracy and the attempts of the masses of the people of Europe to obtain for themselves bread, land, and peace. In the name of fighting communism we have aided and abetted a Fascist government in Greece. In the name of fighting communism we are still aiding and abetting that government, which only last Saturday issued an order making it a capital-punishment offense for anyone in Greece to go out on strike. In the name of fighting communism we are giving support to a minority government in Italy, a government which has not hesitated to devote its entire energies to negate the demands of the Italian people.

* * * * *

(Interchange between Mr. MARCANTONIO and the chairman.)

* * * * *

Mr. MARCANTONIO. Let us see what is happening in Italy. I know something about Italy. My people come from there. A great number of my constituents are people of Italian origin. First of all, we have used some money appropriated by this Congress for Italy in the past. What has happened? Eighty percent of the aid was sold by the government. So, who got that food? We did not aid the people in the villages and the peasants. We did not aid the underpaid workers of Milan, Turin, and Florence. We did not aid the Italians in the slum sections of Rome that so many gentlemen who have visited there carefully omitted to see. We aided the people who own the villas, the people who could afford to purchase in the black market, but deep down nothing ever reached the poor people of Italy, the workers, the peasants, and the children.

The people of Italy want what? The peasants of Italy want land; the peasants who have been working for 6 cents a day for centuries. They suffered 22 years of fascism. They joined the resistance movement and they fought the forces of Mussolini. The peasants of Italy joined with our men to overthrow Mussolini, and when they joined to overthrow Mussolini they did so not only to overthrow a Fascist regime, but they sought to overthrow an economic system, a feudal agriculture that had crushed them

"—American monopoly capital * * * has chosen the path of hatching new plans against the U. S. S. R. and the new democracies under the banner of combatting the Communist menace. The clearest and most specific expression of this policy pursued by American capital is provided by the Truman-Marshall plans." (Malenkov's statement to Cominform.)

"Anticommunism has always been a smoke screen for the most sinister schemes against democracy. Was this not how Hitler began? * * * Anticommunism strikes at the very roots of democracy; its triumph would mean democracy's downfall." (New Times, No. 38, September 17, 1947.)

"What the interference of the emissaries of the dollar in Greece and Turkey has accomplished is now plain for all to see. * * * The Royalist-Fascists, encouraged and supported from across the ocean, have carried their reign of terror to unbridled lengths" (ibid.).

"The antinational, antidemocratic, and antisocial policy of the De Gasperi government is compromising Italy's independence * * * and is condemning the workers to poverty and hunger." (Unitá, November 16, 1947, resolution of plenum of central committee of Communist Party of Italy.)

"Despite the insistent demands of the Communist and Socialist Parties, the Government has postponed the fulfillment * * * of agrarian reforms." (Trud, Oct. 4, 1947.)

for centuries into abject poverty. They wanted the big estates divided and they wanted for themselves, the peasants of Italy, a piece of land. That is what they have wanted for centuries. That is what they fought for. That is what they are struggling for today against a government which has given carte blanche to their former Fascist oppressors and is giving protection to their landlord exploiters. We have taken that government and we have made it a satellite of our monopoly capital-controlled State Department. Now, we are asked to continue to aid that government in its efforts to defeat the will of the Italian people.

Just like the Schuman government in France uses American aid against the workers, the De Gasperi government, aided with American money, employs tanks and bayonets and machine guns to destroy the organized effort of the peasants who are fighting for land; and we, a people dating back to Valley Forge, are now asked to give money not to feed those peasants or their children but so that the government of De Gasperi, a minority government, a satellite of our State Department, can use the funds of American taxpayers to destroy the hopes of millions and millions of people living on the Italian Peninsula.

Let us go a step further. Up north, in Turin and Milan, the industries are owned not only by Italian monopoly capital but monopoly capital which has become more and more possessed by finance capital right here in Wall Street. The workers of Italy are on strike; they want to get a decent living out of those industries. The government fights them. Therefore, the crux of this policy is to suppress the rights, economic and political, of the workers of France and Italy—the two recently acquired economic colonies of the big trusts of these United States. The De Gasperi government, satellite of the State Department, uses all of its resources to destroy the aspirations of those Italian workers, and we here are asked to pass this legislation to implement that program of defeating the aspirations of Italian workers, the partisans who fought up in northern Italy alongside of our men.

Ah, but you say you are doing this to fight communism. What you are really doing is committing crimes against democracy in order to protect the vested interests of our big trusts in Italy and France. Yesterday a superduper Taft-Hartley law was invoked against the workers of France by our satellite Schuman government. Tomorrow what act of repression against the Italian worker? Again, you say all this, all these crimes against democracy are committed to fight communism. Let us tell the truth. All this is being done to protect the economic expansionism of our monopoly capital. This is an imperialist program.

Fight communism, today it is money, tomorrow it is food, and the next day it is what? War. This is part of the imperialist program which will lead to war and depression. We are placing America, gradually, more and more on a basis of a war economy again. War and depression can be the only outcome of this program unless the American people resist it. In fighting so-called communism what you are really doing in Greece, China, Italy, and France is aiding and abetting fascism, restoring to power and control collaborationists, hold-over Fascists, and neo-Fascists. All this, to perpetuate the rule of our big trusts in Europe and Asia. However, you can pour billions into this program, but you will never stop the forward march of the men and women of Europe toward a better day. They have suffered too much and too long under Hitlerism to supinely accept the rule of Wall Street imperialism. They fought to overthrow Hitlerism for a better day. They will reject your Wall Street imperialism in their struggle to obtain a better day.

"The new alliance of Christian democracy, in power with a majority comprising Monarchists and Fascists, has provoked an alarming development of employer and Fascist terrorism which * * * aims to strike a blow at popular democratic organizations and their leaders." (Unitá, ibid.)

"The 'expropriation' of the Italian economy by foreign monopoly capital, chiefly American, has inflicted very grave damage to the economic independence of Italy." (Trud. ibid.)

"The restoration of Italy is retarded by sabotage of the big bourgeoisie * * * and by the political-economic maneuvers of American and British capital. * * * The De Gasperi government submits to the wishes of the U. S. A. in the field of foreign policy silently, but clearly sympathizing, with the 'Truman doctrine.'" (Trud, ibid.)

"For the 5 months of its existence, this government pursuing the path of ever greater subjugation to the will of American imperialism and to the most reactionary social groups of Italy has led the country's economy to the verge of catastrophe and has aided the onslaught of the manufacturers against the workers as well as the rebirth of Fascist terrorist activity." (Pravda, November 18, 1947, resolution of the Plenum of the Central Committee of the Communist Party of Italy.)

"It isn't hard to see why the United States monopolies have decided to give preference to France, Italy, and Austria. They want to prevent the democratic forces from coming to the helm in these countries." (Moscow radio, December 3, 1947.)

"The first inevitable result of the servile policy toward the United States is to give our economy the character of a semi-colonial American market, which fact will condemn us to suffer fatal consequences." (Unitá, August 29, 1947, article by Togliatti.)

"The new gospel of the dollar, which was announced to the world under the cry of combating communism. Stripped of its husk, it is a program of unrestrained expansion of the American monopolies." (New Times, No. 38, September 17, 1947.)

"The cardinal purpose of the imperialist camp is to strengthen imperialism, to hatch a new imperialist war, to combat socialism and democracy, and to support reactionary and antidemocratic—pro-Fascist—regimes and movements everywhere." (Zhdanov's statement to Cominform.)

"The development of Fascist organizations in Italy and their terroristic activity are the result of the anti-Communist policy of American imperialism and its Italian vessels." (Unitá, November 16, 1947, resolution of the Plenum of the Central Committee of the Communist Party of Italy.)

The Late Judge George Donworth, of Seattle, Wash.

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Thursday, December 18 (legislative day of Thursday, December 4), 1947

Mr. MAGNUSON. Mr. President, for a long time in my city of Seattle one of the great and respected Federal judges was Hon. George Donworth. He was appointed many years ago to his position on the Federal bench and recently passed away. A memorial service was held in the United States District Court of Seattle on October 27 last, participated in by all the prominent judges on the Pacific coast, and I ask consent that the proceedings of the service be printed in the Appendix of the RECORD. I have made inquiry of the Public Printer, and he informs me that the matter is estimated to make two and a third pages of the CONGRESSIONAL RECORD, at a cost of $189.34.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

GEORGE DONWORTH—MEMORIAL SERVICES

(Born November 26, 1861, Machias, Maine. Died September 6, 1947, Seattle, Wash.)

(Before the Honorable United States District Judges John C. Bowen, Lloyd L. Black, Charles H. Leavy, Seattle, Wash., October 27, 1947.

(Eulogies by John C. Bowen, senior United States district judge; Lloyd L. Black, United States district judge, northern division; Charles H. Leavy, United States district judge, southern division; Charles F. Riddell, president, Seattle Bar Association; Elmer E. Todd, attorney and publisher.)

Hon. JOHN C. BOWEN. Fellow judges, members of the bar, and friends of Judge Donworth, this session of the court is convened for the special purpose of honoring the life and work of Hon. George Donworth, a former judge of this court, who passed away at his residence in Seattle on September 6, 1947. Life's last moments for him passed peacefully and without pain, after he had announced completion of his mortal tasks and full preparation for his confidently expected life hereafter. By his faith and ours we know his immortal spirit was joyously received in the eternal abode of his Heavenly Father.

On this occasion I shall speak of Judge Donworth primarily as a judge, although I may make brief reference to his legal background. He entered upon the duties of judge of this court on May 27, 1909, and so continued until March 20, 1912, when he resigned for reasons of health, thus serving for not quite 3 years—2 years, 9 months, and 23 days.

After he resigned his judgeship, Judge Donworth regained his health and resumed the active practice of law. To his former splendid record at the bar, he added many years of brilliant service as a leading and distinguished lawyer, not only in the courts of his home State but also in the courts of all rank throughout the Nation. He was esteemed by the courts and judges and members of the bar as being among the ablest and finest lawyers this country has produced.

Great as were the demands upon his energies, he never lost his unselfish interest in the courts, but all his life and right up to the time of his death he unfailingly yielded friendly and wise assistance in the improvement of the administration of justice in the courts. For a number of his later years, he was a distinguished member of the national committee of eminent men who, prior to 1938, drafted the present Federal Rules of Civil Procedure and subsequently have carefully screened all proposed amendments to those rules.

He also delighted to participate informally at conferences which concerned the welfare of the courts and the legal profession. With deep gratitude I recall, as one of his many friendly attentions to this court, the occasion of the laying of the cornerstone of this United States courthouse on July 27, 1940, just before its exterior construction was completed, when he so graciously and ably presided at and directed the public ceremonies celebrating the event. He greatly contributed to the success of that occasion and to the pleasure of the many public officials and other friends of the court who participated in it.

Although the time of Judge Donworth's service on the bench was comparatively short, the scope of his work there was vast and his judicial accomplishments were great. His official jurisdiction embraced not only the United States district court but also the formerly existing United States circuit court which by act of March 3, 1911, during his tenure in office was abolished.

He was skilled in the judicial handling of complicated criminal cases. Perhaps the best example of that was a greatly involved mail fraud trial which was most ably conducted by him shortly before he resigned from the bench.

Many admiralty cases of far-reaching importance came before him and all of them were wisely decided by him with the ready application of his clear perceptions and his keen sense of the equitable considerations which so often underlie the determination of admiralty questions.

Few judges have devoted a greater portion of their judicial effort to the trial of equity cases than did Judge Donworth. One of the most notable of such cases decided by him was a part of the extensive litigation in the national courts involving a dispute between Oregon and Washington as to which State had jurisdiction over the rich Sand Island in the lower Columbia River and over conflicting rights in the salmon fishery in the vicinity of that island. In the case before Judge Donworth his wise and just decision, as between the litigants and others then and later similarly situated, determined the respective fishing rights and regulated the flow of untold wealth in food fish and its products.

Carbon copies of Judge Donworth's formal written decisions and orders have been preserved in two permanently bound volumes now in the custody of the University of Washington Law Library. There are approximately 120 of these written decisions and orders, all made in about the same number of separate litigations, and they comprise about 500 legal-size typewritten pages. These records more clearly reflect what judges and lawyers generally have well known, that Judge Donworth's judicial service contributed much to this country's golden era of equity and admiralty jurisprudence when less of the law pertaining to those subjects was in the form of legislative enactment and more of it rested on the highly respected foundation of the chancellor's and the court's just conscience. In those great fields of the law his decisions may rightly be regarded as clearly marked keystones. In truth, he was among the last of our country's great equity and admiralty judges.

Appeals from 26 of his decisions resulted in 23 affirmances and only 3 reversals, a most extraordinary record.

He was tall and stately in appearance, attractive and pleasing in his personality, friendly in manner, precise and cultured yet modest in speech, and always considerate of the opinions of others. His presence and conduct on the bench inspired and won respect for the court. As a judge he was distinguished for his intellectual strength, his ability to analyze principles, and his sound and just judgment. His opinions are models of directness, forcefulness, and clarity of thought. Never was his judicial honesty or integrity questioned.

He loved his home city and State and his country. His official work, his professional service, and his private life were of the best in the American way of life. When he resigned from his judicial office and when he departed this life, Judge Donworth carried with him the deepest respect and the everlasting affection of the legal profession and all those who knew him.

It is now my pleasure to call upon our esteemed colleague, the Honorable Lloyd L. Black.

Hon. LLOYD L. BLACK. Friends and admirers of Judge Donworth, I agree—as do all of you—with the statements which Senior Judge Bowen has made concerning this fine and good and great man who lived among us so long. We all knew him as a distinguished judge, as an able attorney, as a splendid citizen, as a fine gentleman. I am not going to attempt to tell you as to his outstanding career as a jurist. Just as men's lives are not measured by how long they live, but rather by how well they live, so the career of the jurist is determined not by the length but by the ability of the service. From that standpoint Judge Donworth was truly an outstanding jurist, not only of the State of Washington but of this Nation.

I have before me a book and a pamphlet. In this book, which is entitled "Rules of Civil Procedure for the District Court of the United States," I find an order of June 3, 1935 by the Supreme Court which in part says, "It is ordered * * * the Court will undertake the preparation of a unified system of general rules for cases in equity and actions at law in the district courts of the United States and the Supreme Court of the District of Columbia so as to secure one form of civil action and proceedings for both classes of cases while maintaining inviolate the right of trial by jury in accordance with the seventh amendment of the Constitution of the United States and without altering substantive rights. To assist the Court in this undertaking, the Court appoints the following advisory committee to serve without compensation." And among those named is George Donworth of Seattle, Wash.

The pamphlet I have before me is dated in June 1947. It contains a proposed addition to these Federal Rules of Civil Procedure. Under the date of June 10, 1947, among the names of the advisory committee is still found that of George Donworth.

What men do frequently for their own advancement, for their own betterment—while to be esteemed and admired—is not to be viewed in the same way as we consider what they do for the benefit of others. George Donworth by virtue of his legal skill and particularly his acquaintance with the Federal courts, not only as a judge but as a frequent practicing attorney in the Federal forums, was especially versed in the complexities and intricacies of the Federal procedures and rules as such used to be. And by virtue of that skill and knowledge and experience that he had, it was his opportunity to prevail against others who might not know the Federal system nearly so well.

You gentlemen, members of the bar, know that some time ago many able lawyers who were veterans in State practice felt themselves not capable of properly protecting the right of their clients in the Federal courts. And yet we find that George Donworth in

1935 accepted an assignment for a work which was going to aid others greatly, and would do much toward putting them on an equal plane with him, because he was serving in a committee which was simplifying the rules of the Federal courts. I think that that work was a most commendable service for the bar generally and particularly for the litigants. In the ultimate analysis it is the interest of the litigants which must be most considered. Many litigants do not have the means nor the acquaintance to secure for themselves the able counsel of men like George Donworth. So one of the outstanding works of George Donworth, as I see it, was his unselfish work of serving the people of the United States and doing all that he could to make the Federal courts of the United States the courts that they were intended to be, the courts of the people.

These rules which he did so much to prepare and to have put in force are living memorials to the work and the service and the unselfishness of this great and good man. It was his part to live on this earth a long time—to live long and usefully. George Donworth was. His mortal life is done. But those things that he stood for live in our memories as an inspiration for the bar and for the laity.

"The Moving Finger writes; and having writ,
Moves on: Nor all your piety nor wit
Shall lure it back to cancel half a line
Nor all your tears wash out a word of it."

Hon. JOHN C. BOWEN. We now have the pleasure of hearing our other esteemed colleague on this Bench, the Honorable Charles H. Leavy.

Hon. CHARLES H. LEAVY. Judge Bowen, Members of the Bench and Bar, and friends of Judge Donworth: I think it is quite fitting and appropriate that in this busy, bustling life of ours, we stop for a moment and pay respects by a pause to recognize the memory of a great and good man in this fashion.

It was not my pleasure to know Judge Donworth through the years like many of you here have. I think I first had contact with him in the year 1937 when I, as a member of Congress, met him in Washington. I met him with a high degree of frequency because he was back there representing not only the people of the State of Washington but he was representing the people of all the other cities and States that recognized the community property law. He was there working for something greater than that. He was there working as a champion of the American system of Government.

I do not believe that I have ever had the good fortune to contact any man who had a finer understanding of that delicate balance between State rights and Federal rights. The challenge made to our community property law was a challenge to that balance.

Judge Donworth had appeared before Congress some years earlier; and while he had an able group of assistants from other States that recognized community property laws, he was readily the leader of the group.

One of the most serious assaults made upon that law was made in the 75th Congress in 1937. The Ways and Means Committee was all set to take from people of this State and the other States that had community property laws the rights in the matter of taxation. Judge Donworth spent weeks in Washington carrying on that fight, and being the general that planned the strategy. It was thus that I had an opportunity to have close and rather continued contact with him—not able to render him a great service other than to help him in the strategy that he planned in this great committee of Congress.

I learned then that perhaps no man ever came to Washington representing a cause who had a greater admiration and respect than Judge Donworth did before the Ways and Means Committee. When some of us despaired of being able to win that battle he cheered us on and he carried through the fight. I think if there was one man in America who was qualified to act in a battle of such great significance to our system of government, where we balance rights of the States against those of the Nation, and vice versa, that man was Judge Donworth. He won that fight, and it has never been revived again to a degree where it was serious, until now it has reached the situation where the principle will doubtless be applied throughout the Nation.

His life, his work, his personality, and his character could not help but impress itself upon any who met him. He was an ornament to the bar, to the bench; and I am certain that every member of the bar of this State who had the good fortune to have association with him is a better lawyer, a better judge—every individual who knew him a better citizen by reason of that acquaintanceship. Probably we all might hope and desire that a kindly Providence would permit us to live out a rich and full life, such as he did, in full possession of his mental faculties throughout all of those years, but that is not to be, of course. However, on occasions such as this we can again in recollection go back to that quiet, lovable, dignified gentleman and feel the stronger because he lived and because we knew him. With the poets, we can say: "None loved him nor named him but with praise; and when the call came he wrapped the draperies of his couch about him and lay down to pleasant dreams."

Hon. JOHN C. BOWEN. We will now have the privilege of hearing the address of Mr. Charles F. Riddell, formerly assistant United States attorney and now president of the Seattle Bar Association.

Mr CHARLES F. RIDDELL. Judges of the United States district court, other judges present, fellow members of the bar and fellow citizens: The court is to be congratulated on the atmosphere which pervades this courtroom this morning. Judge Donworth would have been happy in a proceeding such as you and I have witnessed here today.

If we could know that, when we come to die, people would meet as we have met here this morning, with the feeling in their hearts toward us that we now have toward him, we would indeed have a right to be proud.

Judge Donworth had many of the qualities which we associate with the United States district judge. Natively, he had urbanity and ability to listen courteously, a calmness in meeting crises and an elegance of diction, a keen, incisive, legal mind, a quaint and quizzical humor which rippled but never brawled; qualities which he enhanced by wide reading, by travel and by deep thought.

Judge Bowen has referred aptly to the quality of the few judicial opinions which he has left us by reason of his short tenure of office. To me they are polished gems. The ease with which they read belies the labor with which they were prepared. I happen to know that in the preparation of those opinions he wrote and rewrote. He dictated and he dictated again. He changed a word here, he added a thought, he struck out whole passages and started over again; and never filed an opinion until he had reached that perfection of which he thought he was capable. The method with which he prepared his opinion should be an example to us that the accurate settlement of legal problems is a product not only of a keen intellect but also of toilsome labor.

In the death of Judge Donworth, the bar has lost one of its keenest minds, Seattle has lost an outstanding citizen, and the world is poorer by a noble gentleman of the highest character.

Hon. JOHN C. BOWEN. It will now be our favor to hear from one of Judge Donworth's closest friends, and former partner—one who was United States attorney when Judge Donworth was United States district judge; Mr. Elmer E. Todd.

Mr. ELMER E. TODD. May it please the court, ladies and gentlemen: It was my good fortune to be acquainted with Judge Donworth for a period of about 48 years. During 24 years of that time I was closely associated with him in the practice of the law. When I first came to Seattle to practice law, in 1899, as the stenographer and clerk to Mr. W. H. Bogle, who was just opening an office in the Burke Building, the firm of Piles, Donworth & Howe was on the same floor with us.

Judge Donworth had come to Seattle at the age of about 27, and at the age of 30 he became corporation counsel of the city of Seattle; and after he left that office with his assistant corporation counsel, Mr. Howe, he formed the firm of Donworth & Howe, who practiced in the old Haller Building. He told me afterward, humorously, of their hard days in the dark days of the nineties, there; how they had their offices in the Haller Building; how he used to look out on Second Avenue and wonder where they were going to find themselves another client who would pay them $25 a month; how they used to have to go up to the Rainier Club in order to meet people, and eat lunches they could little afford. But they formed a partnership with Samuel H. Piles, later United States attorney; and when I first knew them, they were just coming into eminence.

The three big firms in Seattle in those days were the firm of Burke, Shephard & McGilvra, the firm of Preston, Carr & Gilman, and the firm of Struve, Allen, Hughes & McMicken. They were the big firms, I would say, and employed the most clerks and had the most business. But the firm of Piles, Donworth & Howe was rapidly forging ahead.

I had the good fortune to try a personal-injury case against the firm. Their business was such that both Mr. Howe and Mr. Piles were opposed to me. I won a verdict which was afterward affirmed but never collected. Evidently I had made an impression, because a year later they sent word to me in Alaska, where I was trying to make a living up at Nome, that there was a place waiting for me in the office, and I came back and became associated with them as one of their two clerks. I well remember the different personality in the three partners.

Judge Donworth in those days was a very technical lawyer. I know that well, because I used to have to argue his motions in court on motion day on Saturdays, and coming back, tell him that I had not succeeded in sustaining the motion or the demurrer; and he was always disappointed.

Judge Donworth was very fortunate in his investments. In 1905 he realized on a very farsighted real-estate investment he had made, and realized what was then a handsome fortune. He dreamed a dream. He decided he would enjoy a life of leisure, as well as practicing law. So he retired from the firm of Piles, Donworth & Howe and opened an office next to them. He left his work as general counsel for the Seattle Electric Co., with which he had been engaged for years, and started in to enjoy this life of leisure and practice law as an avocation, shall we say.

The dream didn't come true. He was presently appointed to the United States district court; and never did a judge work any harder than he did. Judge Bowen has spoken of his ill health. His ill health, I think, was brought on by that long, 6-week mail-fraud case which my able assistant, Mr. McLaren, and myself tried before Judge Donworth. Before the trial began, we had about a week of a contempt proceeding growing out of tampering with the jury, in which he had to send two of the detectives over to McNeil Island for 6 months. Then we went into the 6-week trial; and instead of enjoying a life of leisure, for the last 2 weeks of

that trial he drove us to sessions from 10 o'clock in the morning until 9 o'clock at night, 6 days a week. No wonder he had a bad break-down afterward.

He resigned as United States judge. But just before that time, my term had expired and I was not a candidate for reappointment. And I consulted with him about an offer that I had to practice law with some other firm here. He said to me, "I think you can do better than that." He said, "I am planning to enter the practice of the law, and let's practice together." Well, I promptly accepted. I always felt that was one of the highest honors ever paid me.

Well, he still dreamed that dream of leisure. He wouldn't even accept the partnership name at first. We just practiced under the name of George Donworth and Elmer E. Todd until I had put over on him, unbeknownst to him I think, the firm of Donworth & Todd. But instead of leading that life of leisure—he did have some leisure; he traveled widely and read omnivorously—he began to go into public service. He became a very prominent member of the chamber of commerce. He spent a lot of time in the chamber of commerce. He was active in the bar association. He couldn't lead that life of leisure that he had dreamed.

He was a very, very considerate partner. As I said, he had ample income for those days. And, of course, our net profits for the first year were not very much. And I had no other means of income, so he allowed me that first year to draw the whole income for my support. I am glad to say that it was later possible to repay his half to him. But he was of that generous disposition.

I remember one time going to him to explain a very serious mistake I had made in the progress of a case, and he said to me, "Forget it. I buried dozens of them." He had never made a dozen mistakes in his life, but that was his kindly, considerate nature.

His name attracted to us a very good practice from other lawyers. We were called in as counsel by many eminent lawyers in their own cases. I remember Judge Cotton, of Portland, employed us in very important litigation. Walter Fulton associated us in a great many cases, and Francis H. Brownell, formerly of Everett, afterward head of the American Smelting & Refining Co., employed Judge Donworth in many cases. He was always associated by the counsel of Skinner & Eddy Corp. in their famous litigation with the United States Government, after the last war.

But the case from which he should get the greatest renown is the case about the community-property law—the case of *Seaborn* v. *Poe*, reported in the United States Supreme Court as *Poe* v. *Seaborn*. The Attorney General had given an opinion that the wife had the right to make a separate return for half of the community income. But in the State of California they decided the law did not apply—that her interest in the community income was only an expectancy and not vested. So, after that decision of the supreme court in the State of California, the then attorney general wished to have a test case brought to decide the case.

The Secretary of the Treasury had asked him for another opinion. And the test case was brought in the State of Washington. Mr. Seaborn brought the case—paid his tax, paid his assessment, and brought the tax suit against the collector, and it was tried before Judge Cushman, decided in favor of the taxpayer, and taken to the circuit court of appeals, and they certified the case to the Supreme Court of the United States. Judge Donworth argued that case in the Supreme Court of the United States and also filed a brief with the other lawyers from the community-property States. He won the case by unanimous decision, the Chief Justice Hughes and Justice Stone not joining in. The reason Chief Justice Hughes didn't join at—at one time he represented the State of Texas as to community-property questions before Congress, and before the Attorney General's office.

I saw a great deal of Judge Donworth in his private life. He came from the State of Maine. My mother came from the State of Maine, and it gave us a kindly sort of association.

Judge Donworth was a man who lived a happy life. He enjoyed the good things of life. He enjoyed an evening card game, sometimes lasting a little after midnight. He got a joy in a card game that he didn't get in his financial transactions or in his court life. He got away from his inhibition of caution in that way, because he liked to take a chance. And that was the only place he ever had to take a chance was in a card game. His card game was, of course, a card game of bridge whist. But as he expressed it, he liked to "Go out on a limb." He was one of the most friendly of men.

He was an omnivorous reader. He read everything. He always read the advance sheets of the Supreme Court of the United States decisions, the advance sheet opinions of the Supreme Court of the State of Washington, and the advance sheets of the Federal Reporter. He always read those. How he did that, I don't know, except for this reason: He was very devoted to his church. He went to church in town on Sunday morning, and after that I think he went to his law office and read the advance opinions of the courts. But he was always up on them. He kept a little notebook which, when I went to him, he would pull out and he could usually refer me to a recent case.

He was what I call, in the words of Kipling, "one of the strong men of the earth." He was able. He had a vast fund of knowledge. He was devoted to the public service. He never was able to live that life of leisure that he hoped to live, although at times he would take a long trip and have some part of it

I would like to say that I know no epitaph for him as good as that one Kipling wrote: "To those who are cleansed of base desire, sorrow and lust and shame, born on the breath that men call death, my brother's spirit came. Scarce had he need to doff his pride or slough the dross of earth. E'en as he trod that day to God, so walked he from his birth, in simpleness and gentleness and honor and clean mirth. So hand to hand in fellowship, they gave him welcome high, and made him place at the counsel board the strong men raised thereby. Who had done his work and held his peace, and had no fear to die. Beyond the loom of the last lone star through outer darkness hurled, sits he with they who praised our God, for that they served His world."

Hon. JOHN C. BOWEN. The court expresses gratitude to all of those who have participated in the program honoring the memory of Judge Donworth. We also feel that the greatest honor paid to his memory here today is this fine assemblage of present and past public officials and distinguished and representative citizens. That, to my mind, is the most effective memorial. We wish we could hear from many more who are present on this occasion but the committee arranging the program has thought—in view of the urgent demands upon the time of all those present—that perhaps there is not sufficient time left to call upon more of those present.

The addresses made and proceedings had upon this occasion will be entered in the permanent records of this court and a copy of that record will be sent to Mr. Charles T. Donworth, son of Judge Donworth, for the family.

We will now stand adjourned.

The TVA System of Keeping Its Books, Allocating Its Investment Charges, and Posting Its Accounts Has Been Cunningly Devised To Deceive Congress, Milk the Federal Treasury Annually of Millions for Interest Charges, and Completely Cover Up the Fact That It Is, and Has Long Been, Completely Bankrupt

---

EXTENSION OF REMARKS
OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 16, 1947

Mr. DONDERO. Mr. Speaker, this Republican-controlled Congress, upon convening last January, found the fiscal affairs of the Nation in an absolutely chaotic condition. For the preceding decade and a half the ordinary operating expenses of the Government had been met, not alone by increasing the taxes imposed upon our people but by ever continuing to increase the already swollen national debt through the further sale of bonds and other governmental securities, the proceeds being used to meet the deficit-spending program of the New Deal administration.

The message of the President on the state of the Union, delivered last January, contained no single recommendation which, if enacted into law, would tend either to clarify or to ameliorate the conditions then existent.

The Presidential message accompanying the annual Budget likewise clearly presaged another year of deficit spending and increasing national debt.

In sort of a climax the President, in his budget message, informed the Congress:

> The Budget total of expenditures thus comes to 37.5 billion dollars.

Mr. Speaker, the calendar year of 1947 is now drawing to a close. The first session of the Eightieth Congress has completed its task. We are now assembled in an extra session called by the President.

The record of the first session of the Eightieth Congress is replete with factual accomplishments. They comprehend a veritable catalog of constructive, legislative actions, with respect to economies and efficiencies effected in all branches of the Federal Government. That record likewise recites a long list of action programs enacted into law which at this moment reflect improved conditions in the agricultural, industrial, financial, social, veteran, and other fields of national welfare and economy.

Inefficiency, waste, and extravagance were rooted out of Federal agencies wherever found. Despite what has been achieved there is still much left to be accomplished in that program.

More than 300,000 needless and superfluous Government workers have been divorced from the Federal pay rolls and

taken off the backs of the taxpaying farmers and industrial workers during this fiscal year.

Appropriations and Federal expenditures have been reduced by the sum of $4,800,000,000 less than the amount recommended to be expended in the President's budget.

At the same time—through reorganizations, consolidations, and increased efficiency in Government operations—the Nation has passed through the terrible crises which the prophets of doom foretold would wreck our national economy. Better service is already being rendered the public in many Federal agencies.

The rebirth of confidence, stemming out of a business and economy-minded Congress now finds the Nation, with more than 60,000,000 of our people gainfully employed—and at the highest rate of wages ever paid.

It finds us also with our agricultural and industrial production at an all-time high.

It finds our people, in the cities as well as on the farms, with their mortgage debt decreased by billions of dollars.

Our bank deposits total in excess of $158,000,000,000 and we are enjoying an annual income in excess even of that huge sum.

The Government of these United States is now living within its income, inasmuch as the national budget was brought into balance by this Republican-controlled Congress for the first time in 16 years.

There is now a surplus of nearly $3,000,000,000 in the Federal Treasury. This is augmented and backed up by deposits of gold and silver bullion in the amount of $25,000,000,000 buried in the earth at Fort Knox, Ky.

Mr. Speaker, I am justly proud of the accomplishments of the Congress in the year now closing.

I am happy to say that much of this was due to your skilled, adroit, and capable leadership. In that you were supported by the scientific and skilled handling of the work done by the splendid Appropriations Committee of this House in their dealing with all phases of our complicated financial structure.

I know well that the economies which have already been effected in the first session will be continued and made further effective and more extensive in the second session of the Eightieth Congress opening here in January.

As chairman of the House Committee on Public Works, I have been especially concerned with the administrative efficiency and management of such Federal activities as fall within the scope and the purview of that committee.

Prominent among those about whose activities I have especially concerned myself, is the Tennessee Valley Authority.

I am particularly concerned with their activities due to the administration's proposal to establish from seven to nine more TVA's.

I cite the TVA because of the fact that my studied findings disclose that the methods of management made applicable to that great project are highly indicative of the loose manner in which many other Federal corporations and authorities are now being maladministered.

In the pursuit of certain investigational studies which I have been making with respect to the maladministration of Federal agencies, I recently came upon an article disclosing the amount of the annual deficits made by the TVA as well as an impartial disclosure of the system of accounting followed by that gigantic power trust in order to conceal those deficits from this Congress and the taxpayers.

The article was written by an eminent authority—himself long a proponent of Government-managed power industry and the TVA.

The facts presented by this writer are unassailable, I invite their corroboration or refutation by any Member of this House.

The authority is none less than that noted economic and financial analyst—Mr. John T. Flynn—a man well and favorably known to many Members on both sides of the aisle as well as in both Houses of Congress.

The article is replete both with factual data and quotable parts. It is of such importance to every Member of this House that I shall, upon the conclusion of these remarks, submit that article for the RECORD. I am doing so in the hope that every Member will read it. I assure one and all that you will find it a dispassionate, candid exhibition of the TVA—revealing it in its true nature as a New Deal Government power project, which has now been snowballed into one of the most gigantic business industries in our Nation, if not in the world.

A mere perusal of this article will convince any understanding mind that the TVA, financed by this House through the appropriation of funds and supplemented by other funds milked directly from out of the Federal Treasury, now represents an investment of more than a billion dollars to the people of these United States.

That the TVA is now bankrupt and has long been bankrupt has long been concealed and cloaked by a cunningly devised, devious and spurious system of accounting its fiscal matters in a manner which has met with the condemnation of the General Accounting Office itself.

The TVA system of keeping its books, of allocating its investment charges, and of posting its accounts has been especially devised to deceive Congress, milk the Federal Treasury annually of millions for interest charges, and to completely cover up the fact that the TVA is now, and has long been, financially bankrupt.

Mr. Speaker, I now present this article by Mr. John T. Flynn. In doing so, I wish to serve notice on my colleagues that they will hear more and further from me on this subject in the near future.

THE HIDDEN RED INK IN TVA'S BOOKS

(By John T. Flynn)

In 1916 war raged in Europe. To insure a supply of nitrates, Congress voted funds for two nitrate plants at Muscle Shoals and a dam to produce hydroelectric power to run the plants. The dam, finished in 1925, became a Government headache. Finally in 1933 Senator George Norris put through a bill creating the Tennessee Valley Authority to operate the plants for fertilizer and the dam for navigation, flood control, and power.

But TVA is no longer just a plant and a dam. There are 28 dams on 650 miles of rivers running through 7 States. TVA owns 10 steam plants; has built villages, parks, stores; makes fertilizer; carries on forestry, agricultural and recreational operations. Moreover, it is now proposed to establish as many as nine more TVA's all over the country for the Missouri, Columbia, Arkansas, and other valleys.

I strongly advocated TVA. But in the interest of TVA and the country I think TVA's financial picture should be set straight.

Its managers have made extravagant claims. Dr. Arthur E. Morgan, its first chairman, told Congress in 1934: "After a preliminary period * * * this program will be amortized in 25 years." David Lilienthal, its next chairman, said in 1944:

"Even if the total investment in power, navigation and flood control—the entire $700,000,000—were charged against power, revenues would pay the entire cost in less than 60 years."

It cost $762,000,000 to build TVA. The Government borrowed and put up the money and pays interest on it. In addition the plant must be operated. The operation costs over 14 years up to June 1946, including the interest paid by the Government, were $339,000,000. The revenues were $209,000,000. Thus there was actually a deficit of $130,000,000.

But TVA has a different figure. It arrives at it by leaving out of its accounts the $129,000,000 paid by the Government as interest on the loans.

TVA carries on many activities. Power production is only one of them. The figures given above are for the entire program, including power Now let us look at the power enterprise alone. TVA insists it is selling power cheaper than the private companies and doing so at a profit. Let us see.

The total investment in TVA power—using TVA's own accounting assumptions—is $462,000,000. All of this was borrowed by the Government. A TVA propaganda book claims that "the total net profit from power since the beginning in 1933 to June 30, 1944," was $38,000,000. But, alas, this left out the fact that $53,000,000 was paid by the Government as interest on the money borrowed to build the power plants. Hence, a power deficit of $15,000,000.

TVA, of course, will never accept these figures. If one questions its accounts it replies: "Go to our reports. It is all there, verified by a firm of independent accountants." But it is not all there. Nowhere can you find any record of the interest charges paid by the Government. The firm of accountants it cites took particular pains to point this out, saying: "The net results stated for this program do not include any charge for interest." And the General Accounting Office of the United States in an official report expressly calls attention to this same failure and wants it corrected.

The Government has financed hundreds of housing projects. There is a loss of over $4,000,000 a year on these. But the projects faithfully record their interest costs. If, following TVA, they ignored this item, they could boast of a profit of $14,000,000 a year.

On the Government-financed Bonneville Dam project the Treasury charges 2½ percent interest. Why not on TVA's power debt? As a matter of fact, TVA's debt for its power investment alone is split into two classes. There is a small one of fifty-eight million and a large one of four hundred and four million. The Government holds both. TVA does pay 1 percent on the small one but nothing on the big one. Why is the interest on the small debt—however inadequate—a proper

cost item while the interest on the big one is suppressed in its accounts?

If TVA were a private corporation the law would require it to state its debt and interest payments with exactitude. TVA ignores this. Each year it reports its revenues and its expenses (without interest). It calls the difference net income. This is inexcusable in any case. It is doubly so in TVA, which started out as a scientific yardstick to measure public-utility rates. But a yardstick must contain all 36 inches. The interest costs actually amount to more than a third of TVA's annual power costs. What sort of yardstick is it which leaves out a whole foot?

No one need take my word for this. The United States General Accounting Office says:

"Unless all costs for TVA's power operations are included in its income statement * * * it cannot be conclusively shown that the power operations are self-supporting."

It then insists that the interest on the Government loans must be included and that the proper rate is 2½ percent.

The TVA, of course, greatly improved its showing during the war. The whole Valley was turned into a war arsenal. TVA revenues doubled, as did those of many corporations. However, TVA reports its war record for power with the same 2-foot yardstick. It reports net income for the 6 years from 1941 to 1946 at seventy-two million. But what it omits is a bill for fifty-seven million of Government interest on the power debt.

However, these years do show a net power income even when interest is included. At least, they seem to do so. But the General Accounting Office is unwilling to say so. It points in its TVA report to various costs left out, one alone amounting to as much as $500,000 a year, and concludes that "power rates appear to produce gross revenues in excess of costs of power production," but "there can be no consistent showing of whether TVA is self-supporting and liquidating unless every element of cost is recorded on its books and shown in its final statement."

The TVA Act says its power project must be self-liquidating. The GAO says it will never be until its electric rates produce enough to liquidate its debt. The Appropriations Committee of the House says it should liquidate its debt in 40 years. This alone would mean an annual minimum payment to the Government of $11,000,000. Who should pay the cost of the power plant which produces power if not the people who enjoy the use of that power as is done by the customers of every private utility in the land?

The General Accounting Office has said the books do not tell the whole story: It is not all there. All of which recalls the complaint of Dr. Arthur Morgan, first TVA Chairman, who declared that there ought to be an impartial investigation of the "obscure financial record of the power program."

We may now ask: Is TVA selling power at less than it costs? What should power costs include? Obviously, the following: (1) All operation costs. The GAO says all are not included. (2) State taxes. It pays some, but less than a private company of the same size. (3) Federal taxes. It pays none. Other utilities pay large sums. TVA boasts that other utilities pay only a part of their profits in taxes, while TVA pays all its profits. But it has no profits. (4) Interest on the Government power debt to build TVA. (5) Liquidation of the debt incurred to build TVA.

Actually, the estimates of the cost of TVA power given above are probably much too low. They are based on certain assumptions made by TVA directors. Upon these assumptions I have put the debt for power at $462,000,000. I believe, however, that a more rational allocation of power costs would put that debt at not less than six hundred million.

Many of the great dams in the Tennessee River and tributaries are called "multipurpose" dams. It is claimed they were built not only to produce hydroelectric power but to control navigation and floods. The directors of TVA have declared how much of the structure is for power and how much for navigation and flood control. But no one has ever officially checked this allocation. The private accounting firm which audited TVA's books specifically disclaimed any responsibility for the allocation used. And the General Accounting Office has made the same disclaimer.

Competent engineers have disputed TVA's claim and have insisted that the dams are almost wholly for power production and that the element of flood protection or navigation control in them is small. They are supported in this by the leading authority on flood control in Congress, WILL M. WHITTINGTON, a Democrat, former chairman of the House Committee on Flood Control, a supporter of TVA and a Representative of Mississippi, which enjoys a large measure of benefits from TVA. In a speech in the House he declared that "TVA is primarily for the development of power."

There can never be any authoritative accounting of the cost of TVA power until the total amount of the investment in power has been settled. It is this that the General Accounting Office referred to when it recently reported that "the power debt should be finally determined."

I have examined patiently most of the evidence on both sides of this subject and have gone to the TVA country to check on the respective claims. I believe there is no escaping the conclusion that the allocation of power investment and costs made by TVA is arbitrary and that if it is ever audited by a competent board of impartial engineers and accountants, it will be found that the power investment and debt is not $462,000,000 but $600,000,000 at the lowest.

The reason for TVA's claim of lower power investment is plain. The more costs TVA can unload on navigation and flood control the less the costs of power will seem. By the accounting trick here described TVA has cut more than $150,000,000 from the debt due for power. They can also reduce the seeming cost of operating the dams, because now they charge off most of the cost of operating the "common purposes" of the dams to navigation and flood control.

Do I want TVA destroyed? Certainly not. But we must submit TVA to the yardstick which it now tries to forget. Just as we had to have commissions to stop private utilities from soaking the customers, we should have some authority to prevent publicly owned power projects from soaking the taxpayers.

What should be done seems to me inescapable. (1) The outstanding Government debt on the power enterprise should be determined definitely and the TVA should pay the interest on it. (2) The TVA should pay off this debt in 40 years. (3) These items and all other costs should be included in the rates charged for power. (4) The TVA Directors should not be the sole judges of the amount of the investment in power. (5) All the nonpower activities of TVA—agriculture, fertilizer production, forestry, and other projects—should be transferred to appropriate departments of the Government. They should be divorced from the TVA power project to which they have no rational relationship. (6) The costs of these activities should be paid out of authorized congressional appropriations like any other costs of government.

There is an aspect of TVA which disturbs me more than its fiscal vagaries. It has operated as a Federal corporation under a charter which has enabled it to do an incredible number of things and to escape Government scrutiny. The Federal charter is a comparatively new device to enable the Federal Government to expand its powers immensely. Mr. Lilienthal, in his book, TVA—Democracy on the March, calls attention to the vast growth of Federal power. It has become so great that, he says, it cannot be wisely administered from Washington. But the power must not go back to the governors, mayors, legislatures, and councils elected by the people. It must go to great regional areas administered by directors appointed by the President, to a corporation cunningly devised to accumulate power and to elude congressional authority. We will see the country split into a few great regional provinces run by corporate provincial governors. This is what Mr. Lilienthal calls democracy on the march. I think it is democracy in retreat, a return to the European system of centrally controlled provincial governors. With TVA as a beginning, the advocates of regionalism are planning, under the guise of flood, navigation, and forestry control, and other excuses, to blanket America with this new type of government which represents a complete revolution in our political system.

The TVA should be specifically instructed by Congress that it is not a provincial government agency of a regional province but a Government-owned power enterprise. If the people of the United States want to adopt the regional form of government, they should do so—but only after full discussion and a formal decision. I do not think it should be presented to them suddenly as an accomplished fact.

Did We Modernize Congress?

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, December 10, 1947

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I include herein an article written by me and published in the November 1947 edition of the National Municipal Review. The title of the article is "Did We Modernize Congress?" The article is as follows:

DID WE MODERNIZE CONGRESS?

The answer must be a definite no to the question, "Did we modernize Congress?" The newspapers, after the passage of the Legislative Reorganization Act of 1946, carried banners, "Congress Streamlined" or "Federal Legislature Modernized." Indeed, it was a noteworthy achievement, and the members of the La Follette-Monroney committee deserve all the praise that was given them. The partial victory came after an uphill fight in both the Senate and House to shake Congress loose from two decades of inertia that had blocked all real attempts to remedy obvious defects in the legislative machinery.

Senator La Follette and Representative MONRONEY deserve all the credit given them for piloting the bill through Congress. We join sincerely in the applause of a grateful Nation. Yet the authors of the bill would be the first to admit that the job has just begun.

The same is true of the political scientist, Dr. George B. Galloway, who, as staff director for the Joint Committee on the Organization of Congress, directed the research and had much to do with the drafting of the bill. He states: "Taken as a whole, the Legislative Reorganization Act of 1946 took some very desirable first steps toward modernizing our National Legislature. But they are only first steps and deal with only part of the problem. Indeed, if reorganization stops here, some

of the changes may do more harm than good."

The need for a real reorganization of Congress has been pressing for many years. Dropping archaic procedures, eliminating overlapping committees, giving Members more time to work, keeping Congressmen better informed, and improving liaison with the Executive are a few of the problems which have been presented for action through many sessions by various House and Senate Members.

The necessity of a twentieth-century Congress in a twentieth-century world resulted, early in 1945, in the creation of the Joint Committee on the Organization of Congress, headed by the late Senator Francis Maloney and, after his death, by Senator Robert M. La Follette, Jr., with Representative A. S. MIKE MONRONEY as vice chairman.

Unwisely, we think, the scope of the inquiry was limited. Nevertheless, this committee produced one of the most important reports ever placed before the National Legislature. The hearings before the group reveal that Senators and Congressmen presented more than 260 ideas for improving the present functioning of the legislative institution. The hearings, report, and the Legislative Reorganization Act (Public Law 601, 79th Cong.) deserve serious attention not only from students of government and the 3,200 men and women employed to help run Congress but from voters and citizens throughout the country.

The Joint Committee on the Organization of Congress was limited by the act creating it from making many basic recommendations; furthermore, it was unable to agree among its own members on reorganization matters within its jurisdiction; and finally, the limited recommendations it eventually did make were whittled away by the Senate and House through political bargaining and jockeying. These are tough foes to face in any reform movement.

LA FOLLETTE-MONRONEY ACT

Congress did a fairly good job of consolidating and realining its committees. The standing committees were reduced from 48 to 19 in the House and from 33 to 15 in the Senate. The act defines their jurisdiction so as to avoid considerable overlapping, it limits the number of committees on which a member may serve, authorizes larger staffs including professional assistants and adds to their investigative power.

The Revenue and Appropriation Committees are directed to cooperate in analyzing the Federal budget and present a budget of their own.

The act provides for expansion of legislative-reference and bill-drafting services. It requires the registration of lobbyists. Congress is relieved of much detail by the substitution of administrative or judicial procedures for private bills concerning pensions, tort claims, bridges, or correction of military or naval records. Congressional salaries were increased and Members are made eligible for an exceptionally generous contributory retirement system.

It is generally agreed that about 50 percent of the committee professional staffs qualify by experience and education. In many cases clerical personnel or others have been upgraded to these positions as committee experts.

Most of the committees, however, have been careful in selection and many have not permanently filled these career posts. Still others have restricted the pay far below the maximum allowed. One reason for partial failure was the lack of immediately available qualified personnel for these posts. Undoubtedly a training period will be required before the staffing is fully effective.

Some progress was made in reducing legislation on appropriation bills. Amendments in the nature of expenditure limitations are often added. Many are actually legislative in their intent. Legislation of this type was not eliminated but the increasing trend in this direction was reduced.

The requirement providing that all appropriation bills be reported to the House three calendar days before their consideration was observed on most bills, but violated in the closing days of the session. This restriction was to permit the full membership to be informed on the money items in the bill and to make the full hearings available for study 3 days before the bill was considered.

All committees, with the exception of the House Appropriations Committee and its subcommittees, held open hearings. Despite the clear intent of the act, all House Appropriations Committee hearings remained closed, executive sessions. The Senate Appropriations Committee, however, observed the act, as did all other standing committees of the Congress.

A conspicuous failure of reorganization was the failure to carry out, and in most instances even to try, the sections provided to improve the handling of the vast fiscal problems of a $35,000,000,000 Government.

No money can be spent that is not appropriated by Congress, which has full responsibility for final determination on governmental expenses. For years the obsolete methods, inadequate staffs, uncertain and hodgepodge accounting systems have been severely criticized by students of Congress.

FISCAL SYSTEM UNIMPROVED

To correct some of the most apparent deficiencies in the historic system of appropriating, the reorganization act recommended many reforms designed to tighten and improve fiscal control. Few were put into force. Despite this lack of use of the act, it was blamed by many critics within and without Congress for the delay in appropriation bills. Since practically none of the reforms was even tried, this criticism was patently unfounded.

The provision for the legislative budget was an outstanding failure largely because of lack of advance staff work prior to the convening of Congress in January. To make this valuable provision effective, a skilled, expert staff should confer often with agency budget officers while their needs are being formulated and follow through with careful observation until the sums are fixed in the President's budget. With this advance staff work the legislative budget would become more than a pious hope, as it was characterized on the floor of the House.

No evidence was presented that the country did not need to adopt an over-all fiscal policy at the start of each Congress, carefully estimating the total expenditures for the year to be made by Congress, and determining as nearly as possible anticipated income. Despite this, both Houses missed their estimates of expenditures in the legislative budget so far that the resolution adopting it was allowed to die in conference and no final action was taken.

Much of the good resulting from the brave reduction of standing committees was nullified by the creation of select and too many subcommittees. The Senate bill prohibited select committees and, while the House refused to agree, the spirit of the Reorganization Act was to have all investigatory work done by regular committees. After the Senate "broke the ice" by creating the War Investigation Committee, we witnessed the setting up of more than a dozen special groups.

Some regular committees have far too many subcommittees. The result is poor attendance and the same difficulty on the part of members in looking after their various committee assignments. An unwholesome but natural desire on the part of the leadership to give as many members as possible the honor of being chairman of a subcommittee was a principal reason for this contortion of the Reorganization Act.

The La Follette-Monroney Act intended that committee staffs be selected on a merit basis. This policy has not been followed in many cases. The act gives the committee the power of selection. This means the majority in power and usually the exclusive prerogative has been assumed by the chairman. A real merit system with a guaranty of tenure if satisfactory work is done is the obvious answer. The reorganization committee recommended a director general of personnel. This provision was tossed out by the Senate as "dictatorial" or "totalitaristic." It should have been given a trial.

BRIDGING THE GAP

Congress and the Executive should act cooperatively in the formation of legislation, not as antagonists in a struggle for power. Methods must be found to enable the Executive and Congress to have a better understanding of the facts. Nothing was done in this regard by the reorganization measure. Closer unity is especially necessary in the solution of international problems. On the home front, in dealing with domestic issues, there is a desperate need for more direct liaison and for a clearer understanding between the executive and legislative branches. The need is especially pressing when control of Congress and executive departments is divided.

The most effective way to bridge the gap between the ends of Pennsylvania Avenue can be effected by a mere change in the rules of the House and Senate. In the resolutions which Senator FULBRIGHT and I have proposed, a change in the rules of the respective bodies of Congress would permit Cabinet members and heads of agencies to meet Members of Congress face to face and talk things over.

The House resolution provides that not more than 2 hours would be set aside at least every 2 weeks to question administrative officials on the floor. Half the time would be devoted to making a report in answer to written questions which had previously been approved by the proper legislative committee, submitted to the official and printed in the CONGRESSIONAL RECORD. The latter half of the period would be reserved for oral questions by Members of the House, which must be germane to the preceding discussion.

The Speaker would disallow and the Executive need not answer any improper question or one which could not be answered for reasons of national security. The control of time during the latter half of the period would be divided equally between the chairman and ranking minority member of the committee which issued the invitation. The proceedings would be printed in the RECORD for all to read, unless in an executive session.

This method would keep the Members fully and currently informed on the big issues of the day. There is no present system for this purpose. Annual reports of the agencies are lengthy post mortems. Few Members read them. Committee hearings pertain only to a particular bill and do not contain over-all factual reports of the operation of the departments. The plan would be of benefit to the executives. It would require them to know their departments. They would have to make decisions before appearing. It would give them an opportunity of presenting their proposals to the full membership.

This is one way of improving the channels of communication between Congress and the executive branch at a time when our salvation at home and abroad depends on their ability to work together. It requires no constitutional amendment, simply an amendment of the rules of the House or of the Senate. The La Follette-Monroney committee could not consider this proposal because the resolution creating it ruled out any procedural amendments.

POLICY COMMITTEES

Most students of congressional reorganization recommend the formation of Senate and

House majority and minority policy committees. Dr. Galloway, in his report for the American Political Science Association, gives them the names of legislative councils. One of the results of the multiple-committee system is the dividing of legislative leadership among the chairmen of committees. The proposal is to have in each House a majority policy committee composed of the chairmen of the new streamlined committees and a minority policy committee composed of the ranking minority Members. The Speaker, majority and minority leaders would be included as members.

The majority committee should meet regularly. It would coordinate all work of the committee. It should have regular meetings with the President and heads of agencies. A full and free exchange of ideas at these meetings would be of great benefit. The majority committees would be the overall planning group for the party charged with responsibility.

The Appropriation Committee does the spending, the Ways and Means Committee of the House the money raising. There is little coordination between the two. A majority policy committee would be a step toward bringing together their activities. Tom Finletter, in his excellent book, Can Representative Government Do the Job, makes what I consider an unanswerable case for policy committees.

The Senate retained a provision for majority and minority committees. They did good work although their effectiveness was reduced because they did not consist of all chairmen and ranking minority committee members and they were used largely as political strategy groups.

Congress should develop a substitute for the seniority rule for committee chairmanships. Chairmen of committees wield a powerful influence. If the committee does not have a capable chairman, or if his ideas are at variance with the public or congressional will, legislation which must be channeled through his particular committee will bog down or be contorted so as not to meet the needs of the public interest. In three-fourths of the cases, the senior member of the majority party on a particular committee is an acceptable chairman. There is, however, the exceptional case, in which the senior Member, because of poor health, may not be able to serve, or because of incompetency or unfitness he is not able to handle the duties of the position; in other cases he may be completely out of harmony with the desires of the preponderant majority of the Members, both of his committee and of Congress.

I suggest that the senior majority member be chairman unless a majority of the Members on the majority side, in secret vote, decide otherwise. If a majority of the Members feel that another Member should be chairman, it is obvious that the committee would not and could not properly function if the seniority rule for chairmanship were followed. The expression of the majority Members as to the chairmanship should, under the rule, be made at the beginning of each Congress. The selection then made should be for the entire Congress.

DISTRICT OF COLUMBIA

A committee in each House of Congress has jurisdiction over the District of Columbia. Two days a month in each House are set aside to consideration of District bills. Citizens of the District consume a substantial part of the time of all Members of Congress with calls and letters relative to District problems. A system of self-government for the District should be effectuated. Most of the District bills handled by Congress should be acted upon by the government of the District. Failure to relieve itself of the government of the District is one of the glaring shortcomings of the Reorganization Act.

Thus it will be see that Congress has not been modernized. In short, the battle for modernizing Congress is merely beginning. Congress has at least been jolted out of its doldrums, but the gains must be retained and the task completed. Public support must be enlisted for this difficult task.

The objective we urge is not merely a physical face-lifting that will send the Senate snuffboxes to museums and install mechanical devices in congressional offices. We want to give Congress real independence and actual political freedom to enable it to respond quickly and effectively to the will of the millions it represents—the American people.

Upon a more effective Congress, upon a continuation of the noble effort begun in 1946, may depend the preservation of democracy in the United States.

Philosophy and United States Foreign Policy

EXTENSION OF REMARKS
OF
HON. SCHUYLER OTIS BLAND
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1947

Mr. BLAND. Mr. Speaker, pursuant to permission today granted me in the House to extend my remarks on the subject of the one hundred and seventy-first anniversary of the organization of Phi Beta Kappa at William and Mary College, I wish to call attention to the fact that December 5, 1947, was the one hundred and seventy-first anniversary of the creation and establishment of Phi Beta Kappa. The anniversary celebration was held by the Alpha Chapter of the College of William and Mary. A dinner and public meeting was held. New members were initiated and an address was delivered by Walter Lippmann on the subject Philosophy and United States Foreign Policy. The address was philosophical, thoughtful, and a great contribution to the subject discussed. It was my privilege to be present and pursuant to permission heretofore granted, I include in this extension Mr. Lippmann's address entitled "Philosophy and United States Foreign Policy." The address was as follows:

I must suppose that it has occurred to many of you, as you looked at your program and saw the title of my address, that anyone who proposes to discuss philosophy and the foreign policy of the United States has chosen a rather wide and double-barreled subject. But I have been studying a list of the subjects which were debated here at William and Mary by the founding members of our society, and I find that tradition and historic precedents are with me. Phi Beta Kappa never shrank from the discussion of big subjects, or from questions on which the speaker of the day must not have been able to say the last word.

Thus, I find in Dr. Voorhees' History of Phi Beta Kappa that on April 22, 1780, the subject was: "Had William the Norman the right to invade England?" On May 21 the subject was: "Whether the execution of Charles the First was justifiable?" On June 17 our revered founders had a debate on "Whether the rape of the Sabine women was just." On August 27 they asked themselves "Whether all our affections and principles are not in some manner deducible from self-love." And on September 12 "Whether polygamy is a dictate of nature or not."

So I feel I am in good company, and I may say that in coupling philosophy with the foreign policy of the United States, I did not mean to tease you or to mystify you. For if, as our society insists, philosophy is the guide to life, then in philosophy we ought to find the guide to the great difficulty which the American people have experienced—particularly in the past 40 years—in forming a good and workable foreign policy. I have come to think that the root of our difficulty is to be found in our philosophy. And that is what I should like to talk about this evening.

If we study the history of American foreign relations during the past 40 years, we must be struck by an extraordinary paradox. During this period the United States has emerged from its long isolation. It has become one of the leading powers of the world. Not once but twice during this period the American people have had to face the awful issues of war and peace. Can it be said that during this momentous period we have ever succeeded in forming and agreeing on a foreign policy which foresaw correctly and enabled us to deal successfully with the actual course of events? The record is, I think, clear. We have won both wars. But on the crucial issues our diplomacy has thus far always miscarried. It has been unable to prevent war. It has been unable to avoid war. It has not prepared us for war. It has not been able to settle the wars when they have been fought and won.

At no critical phase in this epoch has the actual outcome conformed with our declarations and our expectations. Never has the country been able to achieve any of the principal objectives to which again and again it has been so solemnly and fervently committed.

Thus from 1914 to 1917 the country believed and hoped that it could avoid participation in the First World War. Yet it was compelled to participate. And when it did participate, it was unprepared because it had believed that it would not have to participate. During that war the country hoped and believed that by a victory it would achieve a lasting and democtratic peace. The victory was attained. But the peace which had been promised was not achieved. After the First World War the country again decided to believe that if there were another war, it would be able to remain out of it. Again it did not prepare for war. Once again it was unable to remain out of the war, when it came.

During the Second World War the country again decided to believe that with victory over the Germans there would begin an era in which all the victorious powers would agree and be harmonious and become unanimous on the terms and conditions of a just and durable peace. We have had the victory. But we have not been able to attain that peace.

Now, after two victorious world wars we find ourselves discussing the possibility of a third world war. And so we must ask ourselves whether we have become entangled in a degenerating cycle of wars that breed more wars, each more savage and more inconclusive than the last. It is a grim question. We must however face it, and I believe that we must answer it by saying that if our present estimates and calculations are no more correct than those on which we acted before, during and immediately after the first and the second world wars, then we shall be surprised and disappointed again. Once more

we shall not know how to prevent war, nor how to prepare for it correctly, or how, assuming we win it, to make peace after it. And if a second world war leads to the third, if we cannot make a settlement of the war we have just won, what ground is there to suppose that we could settle a third world war so that it did not lead to a fourth?

Is it not true that in the twentieth century we have witnessed on the one hand the rise of the United States to preeminence among the nations, to a position of great leadership and immense responsibility in shaping the destiny of mankind? And on the other hand, is it not also true that the course of events during the American rise to preeminence is strewn with debris and wreckage of high and hopeful declarations of policy—Wilson's neutrality, Wilson's Fourteen Points, the Covenant of the League of Nations; with the Washington treaties of disarmament and the Kellogg Pact to outlaw war, with the Dawes plan, and the Young plan, and the Hoover moratorium to reconstruct the world after the First World War, with the Stimson doctrine to prevent aggression, with the Neutrality Act before the Second World War, with the quarantine speech of Franklin Roosevelt, and the four freedoms, and Mr. Hull's 17 points, and the Atlantic Charter, and the Yalta declaration, and the so-called Truman doctrine.

Must we not say that it would not have been necessary to improvise in rapid succession so many new plans and new formulae if any of them had worked out as, at the time they were announced, we hoped and believed they would?

When we reflect on this experience of repeated declarations and repeated disappointments, we must be struck by the contrast between our capacity as a people to develop national power and our ability to use it and to manage it successfully.

It is plain that our failures lie in the field of policy—that is to say, in deciding correctly when, where, how, and to what ends we shall exert the enormous power and influence which we are able to generate.

For it cannot be argued that the miscarriages of American diplomacy are due to the weakness of the American Nation. Among the powers of the world the United States is the least vulnerable to invasion, to blockade or, with existing weapons, to decisive assault. The United States has the material resources, and it has the productive capacity to develop enormous offensive power in time of war. And in time of peace it produces a great export surplus—a surplus above and beyond a high standard of life at home—which renders it economically invulnerable in the outer world. Two great wars have proved the valor of American troops, the fortitude of the American people, and the military competence of American military commanders. Our institutions and our traditions are respected. And on the whole our participation in world affairs is welcomed by the great masses of mankind as promising liberty, justice, peace, and plenty.

It is, therefore, a reasonable conclusion, I submit, that we must seek the cause of our diplomatic failures in our own minds. We must look for the cause of trouble not in material circumstances but in our own habits of thought when we are dealing with foreign affairs and with the formation of American policy. Now, I believe that an inquiry will show—that in the period from Woodrow Wilson to President Truman our foreign policy has miscarried so regularly because there is interposed within our own minds, between the outer world and ourselves, a collection of stereotyped prejudices and sacred cows and wishful conceptions, which misrepresent the nature of things, which falsify our judgments of events, and which inhibit the formation of workable policies by which our available means can be devoted efficiently to realizable ends.

We have, I shall argue, brought along with us from our age of innocence, from the nineteenth century when we were isolated, and when we were sheltered from the rivalries of states and empires, an ideological picture of the world, a philosophical framework of preconceptions. We think this picture of the world is real and is noble. In fact it is imaginary and it is false. And because our philosophy of the nature of international life is imaginary and false, all our efforts to play an effective part in world affairs are frustrated.

What then is it in our philosophy which, instead of guiding us, misguides us continually? I think that the question can be answered. The point, as I have already indicated, where our declarations of policy have regularly miscarried is in avoiding war, in preparing for war, and in settling wars. We must ask ourselves whether there is here some common factor of error which confuses all of us on the issues of war and peace. I think there is. I think the error is a refusal to recognize, to admit, to take as the premise of our thinking, the fact that rivalry and strife and conflict among states, communities, and factions is the normal condition of mankind. The popular American philosophy of international life refuses to recognize this fact. It denies that in the world as it is the struggle for existence is fundamental and in the nature of things. This, I am convinced, is the philosophical error which prevents us from forming an effective foreign policy.

In the American ideology the struggle for existence, and the rivalry of nations for advantages, is held to be wrong, abnormal and transitory. Our foreign policy throughout this period has been dominated by the belief that the struggle does not exist, or that it can be avoided, or that it can be abolished. Because of this belief our aim has not been to regulate and to moderate and to compose the conflicts and the issues, to check and to balance the contending forces. Our aim has been either to abstain from the struggle, or to abolish the struggle immediately, or to conduct crusades against those nations who most actively continue the struggle.

Yet in the world as it actually is, the struggle is not abnormal, and it is perpetually renewed. Twice during this period we have sought to abstain from the struggle by declaring our neutrality. We have not been able to stay out of it. Twice we have conducted victorious crusades against the chief trouble maker, believing what was soon disproved by events—that if he could be eliminated, we would then have eliminated all trouble makers. Twice we have sought, by forming universal societies like the League of Nations and the United Nations, to abolish the struggle. They have not abolished the struggle. But our efforts to use the universal society as if the struggle could be abolished has wrecked the League of Nations and may yet wreck the United Nations.

Our refusal to recognize the struggle for existence as the normal state of mankind in international affairs has resulted in the repeated miscarriage of American policies. Our efforts to deal with events, as if they conformed or could be made to conform with our ideological picture of what they ought to be, has been rather like using a map of Utopia to find your way around New York City.

The American refusal to recognize the struggle for existence has in this century crystallized in a recognizable pattern of conduct—a neutrality which assumes that the struggle can be ignored and avoided, in crusades that assume that by defeating the chief trouble maker the struggle for existence will end, in the sponsorship of a universal society which assumes that the struggle can be abolished.

Since 1914 American relations with the outer world have oscillated among these three patterns of conduct. The great debates within this country have turned upon them. But the experience of these 40 years shows conclusively, I think, that if we insist on treating the conflict of States, communities, and factions as abnormal, as exceptional, as transitory, we are unable to form an efficient foreign policy. Our American ideology, which we have brought over from a time when we did not have to play a responsible part among the powers of the earth, distorts our judgment when we deal with the problems of power. It distorts our judgment when we determine our aims. It distorts our judgment when we have to calculate how a balance can be struck between our aims and our power to realize them.

Yet in practical judgments—and diplomacy, when the stakes are life and death, calls for very practical judgments—the criteria are always relative. For there is no such thing as absolute power. Whatever the wealth, the power and the prestige of a nation may be, its means are always limited. The problem of the maker of policy is to select objectives that are limited—not the best that could be desired but the best that can be realized without committing the whole power and the whole wealth and the very existence of the nation.

But if we examine the issues of foreign policy as they are presented to our people, we find an overwhelming disposition to regard the choices before us, not as relative but as absolute. We are disposed to think that the issue is either this or that, either all or nothing, either isolationism or globalism, either total peace or total war, either one world or no world, either disarmament or absolute weapons, either pious resolutions or atomic bombs, either nonintervention or a crusade, either democracy or tyranny, either the abolition of war or wars of annihilation, either disarmament or military supremacy, either appeasement or unconditional surrender, either nonresistance or a strategy of annihilation.

There is no place in this ideological pattern of the world for the adoption of limited ends or limited means, for the use of checks and balances among contending forces, for the demarcation of spheres of influence and of power and of interest, for accommodation and compromise and adjustment, for the stabilization of the status quo, for the restoration of an equilibrium. Yet this is the field of diplomacy. These are the substance and the matter of an efficient diplomacy.

Our ideologists, however, condemn it as power politics and as appeasement. They would exclude it, they would outlaw it, and they would excommunicate those who discuss it. They insist on treating the rivalry of nations as something that could not exist among right-thinking men. They will not regulate the rivalries because they hold that the rivalries ought not to exist. So they are left with our three patterns of policy—to ignore the rivalries by proclaiming our neutrality, or to deny the rivalry and to believe it will disappear if the nations are members of a universal society, or to conduct crusades of annihilation against the lions who do not wish to lie down with the lambs.

You will have been asking yourselves how what I have been saying bears upon the subject which preoccupies us all so anxiously and so profoundly—upon our relations with the Soviet Union, which is today our great rival in the world, with which we are now engaged in a world-wide diplomatic conflict. You are entitled to ask the question, and I must try briefly to answer it by indicating what a true philosophy of international life can do to guide us.

The beginning of wisdom on the Russian question is, I believe, to recognize the historic fact that the division between eastern and western Europe, the rivalry between Russia and the nations of the west, did not begin with Marx, Lenin, and Stalin nor

would it end if the Soviet regime were overthrown or defeated. The cultural and ideological division of Europe is as old as the division of Christendom between Rome and Byzantium. The imperial rivalry with Russia in the Baltic, in eastern and central Europe, in the Danube Valley, in the Balkans, in the Middle East, and in the Far East did not begin with the Communists and will not end with communism. It has been one of the great fields of diplomacy under the czars as it is under the Communists. Rivalry with Russia is a new problem for the United States of America. But the British Foreign Office has been preoccupied with it for a hundred and fifty years. We had better make up our minds that we shall now be preoccupied with it for a very long time to come.

That being the case, we must give up the notion that the choice is between one world, in which the Russians are our partners, and two worlds in which we must annihilate the Russians or they must annihilate us. I do not believe that we must either marry the Russians or we must fight them, that we must have either a perfect peace or a total war. I believe that the best policy is to recognize that the rivalry will remain, and not to expect it to disappear, and not to think it could be abolished by the United Nations and not to think it could be abolished by a victorious war—and having recognized that the rivalry is a permanent fact to use our whole power and influence to regulate it, to keep it within bounds, to establish spheres of influence which limit the rivalry, and a balance of power in the world which checks it.

I do not believe that we can settle the Russian problem once and for all. I do believe we have enough power and influence, if we use them efficiently, to bring about a settlement in this generation with Russia. But it will have to be a settlement which aims not at unanimity, not at ideological harmony, not at the abolition of all our differences and disagreements but at a truce in the cold war, a modus vivendi during which the nations can recover from the great war, at treaties which end in the withdrawal of the armies of occupation in Europe, and the restoration of Europe to the Europeans.

This will not be easy to achieve. It will require the pressure of power—which will offend those among us who do not like power politics. It will require political and economic compromises, which will offend those who regard all compromise as appeasement. But if a truce, and a modus vivendi, and a treaty are hard to achieve by power and by compromise, it is certain that without power on the one hand, and compromise on the other, nothing can be achieved.

If we will not or cannot use the classic procedure of diplomacy—which is always a combination of power and compromise—then the best we can look forward to is an era of disintegration in the civilized world, followed it may be by a war which once it began, would be savage, universal, and indecisive.

That must not happen. And it need not happen, if only our people will abjure their illusions about the nature of the world in which they have so recently become a leading power, and wil permit and assist those who must form our policy, to go forward on the assumption that our aim is not to marry the Rusisans and then to live with them happily ever after, nor to fight them and let the whole world be devastated, but that our aim is to transact our necessary business with the Russians, at arms length, coolly, shrewedly, without fear and without extravagant hope, and with as much justice as may be possible where there is as yet no agreement on first principles and where the rivals do not live in the same moral order.

Music Has No Lobby

EXTENSION OF REMARKS
OF
HON. BRIEN McMAHON
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Thursday, December 18 (legislative day of Thursday, December 4), 1947

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Music Has No Lobby," by Carl E. Lindstrom, published in the Hartford (Conn.) Times of November 26, 1947.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MUSIC HAS NO LOBBY, SAYS CAPITAL CRITIC

(By Carl E. Lindstrom)

Railing at one's home town is a temptation which the critical writer soon learns to resist. If he is smart—realistic—he discovers that things are never as bad as they seem; that critics, of all people, are likely to be impatient; that scolding seldom does any good because the people who need it most aren't listening.

Comes a time, though, when the most conscientious realist finds he must speak up.

A letter from Glenn Dillard Gunn, distinguished critic of the Washington Times-Herald and for many years the music oracle of the Chicago Tribune, contains the following observations, apropos the scene in which he now finds himself.

"Washington is an interesting city, lacking only the vote and, in consequence, that measure of civic spirit that builds opera houses, concert halls, and other cultural monuments." He adds that leadership is in sight under which "it now seems probable that we will acquire them. Under present concert-hall conditions the gross box office of serious music was under a million dollars.

"With the Washington Sesquicentennial celebration scheduled for 1950 we will be ridiculous in the eyes of the world. Congress will do nothing since fine music has no lobby. So an appeal must be made for funds to the Nation at large."

This situation may come as something of a surprise to those of us who base our knowledge of the capital musical scene upon the National Symphony Orchestra. It ranks a high favorite among the great orchestras which play here every year. There is something so heartwarming about one of Dr. Kindler's concerts and during the brief years of its existence the orchestra has shown such remarkable technical gains that we Hartfordians are apt to overrate the state of culture in Washington.

Mr. Gunn has put his finger on the cause: "Music has no lobby."

Because he has commented thus frankly upon Washington conditions it is the more difficult to contain dissatisfaction over Hartford conditions.

We are still without an orchestra and the present inertia has set its brakes upon the question of what kind of music is to be played by a nonexistent orchestra for which nobody has yet put up a nickel.

Meanwhile a scholastic orchestra runs into the necessity of shutting out 2,000 on a cold night and a professional union-sponsored orchestra plays to empty seats. Both were free.

And Wadsworth Atheneum, the largest museum in the State, is in the midst of a campaign for 1,000 new associate members. There are at present about 600 which is about a third as many as Worcester and Springfield each have.

A proposal to build a theater-concert hall seating 600 reopens the whole question of the Hartford Theater—whether we have one or whether we haven't—and why not seat 1,200?

These questions may be unrelated. If they ever are to be related it will take civic spirit and how much of it have we here?

It isn't only in Washington that music has no lobby.

Shining Example

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 18, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an editorial which appeared in the Evening Tribune, Lawrence, Mass., on Tuesday, December 16, 1947:

SHINING EXAMPLE

Speaking on the same program in London, England, last Friday evening, United States Secretary of State George C. Marshall and Great Britain Foreign Minister Ernest Bevin pointed to the growth of British-American friendship and understanding as a pattern for peace in this troubled world and the comparison was a perfect one, because if all nations would compose their differences as well and stand together similarly for the best interests of mankind, there would not be any fear of new major wars and the future would be rosy indeed.

Addressing the members of a society pledged to promote United States-British friendship, they stressed the desire for peace in the world and praised the fine bond between their countries. Secretary Marshall recalled the settlement of British-American disputes in the past and declared that he did not know of any better instance in all history of what nations can accomplish that are willing to negotiate frankly and with a sincere desire to adjust their difficulties. Foreign Minister Bevin added that just as the British and Americans understand each other, so do they desire to make such understanding world-wide and accordingly extend their friendship in the same way to fellow human beings throughout the universe.

The way to the present accord between the two countries has not been smooth or easy. As all students of history know, the American people had to defeat Great Britain in the Revolutionary War to win their status as an independent nation and to make the victory stick had to whip the British again in the War of 1812. Relations were stretched almost to the breaking point once more during the Civil War, when Britain evidenced decided partiality toward the Confederate States. Each remained entirely aloof during this country's war with Spain and the British conflict with the Boers, although there was widespread sympathy for the latter among the American people.

In World Wars I and II, though, American public sentiment was with the British from the outset, and in each instance the United States ultimately became involved on their side, providing the necessary power to insure victory on both occasions. Even now the two great nations have their decided differences on finances and other matters, but always compose them without any undue bit-

terness. Then when the really big matters arise, such as the present endeavor to conclude peace treaties with their defeated enemies of the last global conflict, they stand squarely shoulder to shoulder for the best interests not only of themselves but of the world. If Russia and the belligerent satellite countries it dominates only had the good sense and judgment to follow their lead, universal peace in our time would be assured and the era immediately ahead would be the greatest in the history of the human race.

Price Control

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 18, 1947

Mr. SMATHERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Miami Daily News of December 13, 1947:

IT STILL IS PRICE CONTROL

The more we contemplate the anti-inflation measures which the Republican leaders propose to rush through the special session, the more remarkable the change in the party position appears to be. This surely must put to an end the party talk of an economy uncontrolled by Government. (The Republican tariffs have been for generations an interference by Government with the general economy. The party talk of free economy has never been consistent. Now, surely, it must cease.)

The use of bank reserves as a method of checking inflation is a measure of control which economists have commonly approved. The present inflation is the product of a money supply, based on credit, which outran the goods supply. Restrictions on credit as a means of checking inflation can hardly be criticized. Most radical and most questionable of the measures proposed is the chartering of monopolies to impose price control. The Republicans cannot bring themselves to price control by the Government. That would be regimentation, socialism. They bring themselves, however reluctantly, to price control by chartered private powers. This is the purport of their plan to suspend the antitrust laws to permit business groups to fix prices, the assumption being that the prices will be fixed downward, or at least not increased.

Whichever way you take it, it still is price control. A good many Americans would risk such control by the Government in whose running they have a say rather than vest it in private businesses over which they have no say. The method is debatable. The result is the same—a controlled economy.

So now we see this resort to a controlled economy by the political party which, after 1929, allowed the Nation's economy to sink rather than have the Government interfere to the depths of 1933. That course cost the Republicans a 16-year banishment from power. At last, facing an inflation which a year and a half ago they had guaranteed would not come, they turn about, and attempt their own controlled economy.

The Russians are waiting with a licking of the lips for the predicted repetition here of 1929 and what followed it. With even the Republicans at last agreeing that some measure of economic controls can stabilize business and prevent or at least minimize depression, our prospect for disappointing the Russians is improved.

How Secrecy Can Hurt

EXTENSION OF REMARKS
OF
HON. BRIEN McMAHON
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Thursday, December 18 (legislative day of Thursday, December 4), 1947

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "How Secrecy Can Hurt," published in the Washington Star of recent date.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HOW SECRECY CAN HURT

Speaking in New York the other night, Dr. Karl Compton, the distinguished president of Massachusetts Institute of Technology, made a point that has been made many times before, but it is one that cannot be emphasized too often or too strongly. It is simply this: That despite a widespread American opinion to the contrary, the United States has lagged behind Europe in producing basic new scientific discoveries. We have been uniquely skillful in applying the ideas of others to practical use, but we have been relatively deficient in originating fundamental theories of our own through abstract research and experiment.

By way of illustration, Dr. Compton has reminded us that in the field of atomic energy, "out of say a dozen of the fundamental ideas, some 9 or 10 have come from Europe, including the original discoveries of radioactivity, of artificial transformation of chemical elements, and of nuclear fission." It is true enough, of course, that our scientists, technicians, and industrial managers wrought a gigantic and half-miraculous wonder in converting pure theory into the world's most awesome reality, but the fact remains that they could not have done it had they not had access, first of all, to the basic creative work carried out by others overseas.

This is a fact that speaks pretty much for itself. It means, as Dr. Compton has warned, that the United States, far from feeling complacent about its scientific ability, must undertake a special and continuing program to improve the scope and character of its work in every field of research and experiment in industrial, governmental, and university laboratories. As far as nuclear fission is concerned, the warning is particularly important. More than that, it serves to underscore the peculiar seriousness of the problem of reconciling the need for secrecy with the need for an all-out effort to achieve constant progress in the world of the atom—a vast new world, a world still mostly unexplored, in which man has only begun to toddle.

No one is more aware of this problem than Chairman Lilienthal of our Atomic Energy Commission. On the one hand, as he declared in his recent address to the American Society of Mechanical Engineers, it is absolutely imperative to keep certain information under lock and key; but on the other hand it is equally imperative to have as many good minds as possible working on all phases of the project. As Mr. Lilienthal rightly sees it, the situation demands that the line between the restricted and unrestricted be drawn with wisdom and common sense. What we need to guard against is the emotional and mistaken assumption that secrecy and security are synonymous and that the more we have of the former the better will be the latter.

Nothing could be less sensible. For the fact is, in Mr. Lilienthal's words, that "secrecy, applied in a stupid and hysterical and demagogic way, can actually impair and weaken our security." It can do so by drastically limiting the number of scientists and technicians working on nuclear fission. It can do so by choking off the development of new ideas, ideas that cannot be born in an iron-curtain atmosphere, ideas that we must have if we are to maintain and increase our lead in the field of A weapons. Thus, if we should follow a policy of permitting only 50 good men to know about a project calling for the brains of a hundred, some other country conceivably could outstrip us in the atomic race.

Secrecy, in short, can hurt us very seriously if we carry it to excess. It needs to be applied most carefully. In relation to other lands, our scientific position is not so superior that we can afford to do anything likely to black out or impede new ideas and discoveries. On the contrary, as Dr. Compton, Mr. Lilienthal, and many others have counseled, we are definitely in need of policies designed to expand and improve our fundamental research. Certainly, not the least of these must be a policy of atomic information free enough to insure that we do not blind ourselves in a way that could be our undoing.

The Government of China

EXTENSION OF REMARKS
OF
HON. GLEN H. TAYLOR
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Thursday, December 18 (legislative day of Thursday, December 4), 1947

Mr. TAYLOR. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an interview with Marshal Feng Yu-hsiang, by Robert S. Allen, which appeared in the New York Times of Sunday, December 14, 1947. Since the Marshal is himself a member of the Kuomintang and is in the United States on an official mission for the Government of China, his strong criticism of the corrupt government of Chiang Kai-shek has especial weight.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SCRUTINY OF CHINA SUGGESTED BY FENG—MARSHAL, NOW IN WASHINGTON, SAYS CHIANG'S AIMS, FORTUNES OF HIS KIN NEED SIFTING

(By Robert S. Allen)

WASHINGTON, December 13.—Marshal Feng Yu-hsiang, former Deputy Generalissimo of China's Nationalist armies, today vigorously opposed any new United States loans to China as long as Chiang Kai-shek remains in power.

"I am opposed to the United States giving any more financial aid to the present regime in China," the "Christian Marshal" declared, "because the money will be used to line the pockets of corrupt officials and greedy military officers.

"I am for aid to China. But any aid that the United States does give, if it is to do China any good, must not be turned over to the Chiang Kai-shek Government. That aid must be controlled and administered by Americans.

"It is apparently not realized in this country that Chiang has at least 200 propagandists in the United States agitating for loans and other aid. Most of them work in and

around Washington. It is a matter of great irony to me that these propagandists are financed by the money you Americans have loaned to Chiang. The operations of this propaganda machine to get more money from you are being paid for by your country."

SEES RUSSIA USED AS "BOGY"

Marshal Feng is in Washington to confer with Members of Congress and Government officials. He said he was still a member of the Kuomintang, the ruling party in China.

Marshal Feng flatly accused the Chiang Kai-shek Government of using Russia as a bogy to obtain more loans from the United States.

"The so-called Russian threat to China," he said, "is being used by the Chiang government for its own purposes. I am not a Communist and I am not for Russia. But I know of no proven evidence that the Russians are helping the Chinese Communists. Chiang is constantly raising the cry of Russian penetration, for the sole purpose of setting a trap. The nation that is caught in that trap will regret it.

"The real facts of the matter are that Chiang's armies are being defeated by the Chinese Communists because the Nationalist troops are demoralized. Last month two of Chiang's armies were smashed by the Communists when they captured Shihkiachwang in Hopeh Province. These two armies were equipped with United States weapons. But they were demoralized because they were led by corrupt and incompetent officers. These officers are more interested in graft and stealing the soldiers' pay—in order to speculate in real estate in Shanghai—than they are in fighting and defeating the Communists."

Marshal Feng held that Chiang Kai-shek's position was hopeless.

"The people of China are not worried about finding a successor to Chiang," Marshal Feng asserted. "Chiang's propagandists are trying to convince you Americans that he is the only man who can save China from the Communists. That is not true. In fact, the very opposite is the case. Once Chiang is eliminated a strong and united anti-Communist government will quickly be established. Important steps are already under way toward that end.

HE DISCUSSES ALTERNATIVES

"General Li Chin-sun, commander of the South China Democratic Union armies, has begun arrangements for a new people's government. In the north another Democratic Union army and the Democratic League of China are doing the same thing. And in central China all parties are organizing for the selection of a new government."

Marshal Feng said that before the United States provided any more money for China the foreign investments of wealthy Chinese should be made public.

"Governor Dewey, Senator Brewster, former Ambassador Bullitt, and Representative Walter Judd are vigorously urging a $2,000,000,000 United States loan to China," Marshal Feng remarked. "But I haven't seen one word from these gentlemen about the huge foreign holdings of the Soongs, Kungs, and other millionaire relatives of Chiang. It would seem only reasonable to me that before the United States pours any more money into the Chiang government the foreign fortunes of these wealthy Chinese should be disclosed.

"Both the people of China and the people of the United States are entitled to this information. We Chinese want to know where the fortunes of these people are, and you Americans ought to know to protect your interests. Of one thing I am certain. The Chiang government is not collecting any taxes from these wealthy Chinese on their huge foreign investments in this country."

Marshal Feng came to Washington from Berkeley, Calif., where he is living with his wife, who teaches at the University of California.

Soil Conservation

EXTENSION OF REMARKS
OF
HON. EUGENE WORLEY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 18, 1947

Mr. WORLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the December 4 issue of the Wellington (Tex.) Leader, published by Deskins Wells, on soil conservation.

I commend this very excellent editorial to the attention of my colleagues. It follows:

Today agriculture is bringing us more and more profit from our land, but tomorrow the result may well be another lost empire.

History proves that nations may not only be lost by war but by peace as well. The ancient and rich civilizations of the Mediterranean went down in peace. Their downfall was a result of neglect of the land.

We took a heavy toll of our soil to meet the needs of the First World War and again repeated the performance for the Second World War. Farmers plowed up the prairies and mined their soil in order to cash in on the demand for wheat, food, and feed. They met the plea to help win the war.

Until recently we have considered the soil erosion a private problem of the individual landowner. Today we realize that we, as a nation, demanded a larger and larger production from our land by agriculture as a contribution to our war effort; therefore, it must necessarily follow that we are all responsible for the result. Our agriculture has been depleted and our soil in a large measure ruined, and we, as a nation, are responsible.

During the first 30 years of the twentieth century in America, it has been reported that millions of acres of topsoil have been lost each year. We must do more than merely hold the soil in place; we must rebuild it and restore and maintain its fertility.

Soil is a natural resource upon which the welfare of the Nation is dependent. For this reason, measures to save the soil must have the public interest.

The American soldier, marching across the avalanche of sand in north Africa, saw a first-hand example of the result of a nation that forgot to protect its heritage—its soil. In parts of the world where the importance of joint action of all the people has been overlooked in saving the soil many successive civilizations of great development and culture have perished from the earth.

Soil exhaustion was the long-range cause of the ruin of Rome, Memphis, Babylon, and Athens. It takes only a short period for this ruin to take place. America has no time to lose.

Confirmation of Nomination of Robert N. Denham

EXTENSION OF REMARKS
OF
HON. GLEN H. TAYLOR
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Thursday, December 18 (legislative day of Thursday, December 4), 1947

Mr. TAYLOR. Mr. President, I was unavoidably absent when the nomination of Mr. Robert N. Denham to be general counsel of the National Labor Relations Board was confirmed. Had I been present I would have voted against confirmation. I had prepared a statement which I would have delivered had I been present. I ask unanimous consent to insert my prepared statement in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

(1) As a trial examiner under the National Labor Relations Board, Mr. Denham recommended the dismissal of unfair labor practice charges filed by certain Negro workers, sustaining his recommendation on the ground that the testimony of the white foreman should be accepted, and in that connection stated as follows:

"The key to the evaluation of the testimony reflecting the relation of the Negro laborers to their white overseers and to their white bosses in general was largely supplied by Harlan, who has known and worked Negro labor in the South for many years, and by the testimony of the Negroes themselves. The reluctance of the southern Negro to discuss his personal affairs with his white bosses, particularly where such matters might tend to prejudice him and his tendency to concoct almost any fabrication as an answer in such circumstances is well recognized among the white men of the South. Close and intimate contact with the Negro has taught the white overseers to recognize when a Negro is lying; notwithstanding that the formula upon which such recognition is based appears to be indescribable."

(2) Mr. Denham's analysis of the law seemed to be predicated on his effort to please employers and particularly the National Association of Manufacturers. Thus:

(a) In a speech in St. Louis several weeks ago, Mr. Denham carefully stated that under the law if an employer and a union entered into a collective-bargaining agreement which contained a union-security clause, such act in and by itself did not constitute an unfair labor practice where the union had not had an election under the Taft-Hartley law. Mr. Denham in this connection stated that only in the event an employee were discharged under the union-security clause would there be an unfair labor practice established.

(b) However, when he appeared before the National Association of Manufacturers the other day, Mr. Denham, in his effort to please that organization, found it perfectly easy to change his interpretation of the law. At this time he stated that the mere execution of the contract might well constitute the basis of an unfair labor practice.

(c) How is it possible for employers or unions to know what this law is intended to mean where one of the important officers charged with the duty of interpreting the same could change his opinions as caprice may dictate and where the effort seems to be to please just the National Association of Manufacturers?

(3) The law specifically provides that in most unfair labor practice cases (with the exception of secondary boycotts or jurisdictional disputes), the Board has the discretion of going to the Federal court to get an injunction only after a complaint has been issued. Recently, after the newspaper publishers filed an unfair labor practice charge against the typographical workers union in connection with a strike called by that union, Mr. Denham was quoted by the newspapers as saying that he was contemplating procuring an injunction. This statement was made even though no complaint had yet been issued by the Board.

Apparently Mr. Denham's sole objective under the law is to utilize the same at the behest of employers regardless of what the law may provide and is completely unconcerned about the merits of disputes between

employers and the unions or what the interests of the workers may demand.

(4) The United States Supreme Court has held in several cases that workers at a plant may strike and where engaged in peaceful picketing the same constitutes an exercise of constitutional rights that may not be abridged either by statute or injunction. This was held in the *AFL* v. *Swing* case where the United States Supreme Court upheld the right of the minority group to strike. Yet Mr. Denham has the gall in his speech before the National Association of Manufacturers to hold that where this occurs while he is administering the Taft-Hartley law, a refusal of anyone to cross such peaceful picket line would be the basis of an unfair labor practice under the Taft-Hartley law. Mr. Denham therefore very carefully brushes aside constitutional rights which have been promised protection by the United States Supreme Court.

(5) The Remington Rand Co., under contract with a union, filed a petition with the National Labor Relations Board asking for an election. The Board dismissed that petition on the ground that no election could be held because the union had chosen not to use the facilities of the Labor Board and therefore had not filed affidavits or financial accounts.

Mr. Denham, while attending the National Association of Manufacturers' conference, undertook to say to the press that if Remington Rand were to continue bargaining with the union it would do so at its peril.

As has been stated on the floor of the Senate by Senator PEPPER and Senator AIKEN, such a statement, if made by Mr. Denham, is a clear violation of the law. Mr. Denham apparently feels obligated to do anything he possibly can to assist any employer, even one such as Remington Rand, which has one of the blackest records in violating Federal law in denying rights of its employees.

Present-Day Hysteria

EXTENSION OF REMARKS
OF
HON. GLEN H. TAYLOR
OF IDAHO
IN THE SENATE OF THE UNITED STATES

Thursday, December 18 (legislative day of Thursday, December 4), 1947

Mr. TAYLOR. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a very incisive comment on the hysteria which now surrounds us, contained in a brilliant editorial from the New Yorker Magazine, of December 17, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

Three people have phoned us already this morning, and it isn't 10 o'clock. One said he was writing an open letter to Joe Louis, another said he was writing an open letter to the New York Times, and the third said he was writing an open letter to Stalin. It is a loud, fierce time, this heyday of the open letter. We imagine, though, that, like the plane that goes faster than sound, we shall shortly all be out ahead of our own swift and terrible opinions and shall enter the vast silent realm—outriders of thought, those who have outdistanced their own and everyone else's views on all subjects and have been swept into the peaceable supercerebral region where thought is in conflict with nothing whatsoever, because all ideas are a few hundred yards behind, trying vainly to catch up.

"I went to Washington," said Mr. Humphrey Bogart, "because I felt fellow American citizens were being deprived of their constitutional rights. I see now that my trip was ill-advised, foolish, and impetuous, but at the time it seemed the thing to do." Mr. Bogart's public apology for having rushed to the defense of civil rights belongs with other vital American documents and should perhaps be added to the Freedom Train. We suggest the following display:

"But when men have realized that time has upset many fighting faiths they may come to believe, even more than they believe the very foundations of their own conduct, that the ultimate good desired is reached by free trade in ideas. * * * That at any rate is the theory of our Constitution. It is an experiment, as all life is an experiment."—*Oliver Wendell Holmes.*

"So first of all let me assert my firm belief that the only thing we have to fear is fear itself."—*Franklin Delano Roosevelt.*

"I believe—I may say we believe—that the individual man and woman is the pivotal element in a desirable society. A rich and powerful state would be meaningless to Americans, if it rested on weak and poor individuals."—*Eric Johnston.*

"I went to Washington because I felt fellow American citizens were being deprived of their constitutional rights. I see now that my trip was ill-advised, foolish, and impetuous, but at the time it seemed the thing to do."—*Humphrey Bogart.*

Justice Holmes defined our constitutional theory as an experiment—"as all life is an experiment." A good part of the experiment seems to be in the nature of paradox. Certainly our political faith hangs on the quaintest paradox of them all, that the individual has a sort of natural dignity, and that when two individuals differ and throw their dignity and their opinions at each other, from the clash comes truth, which is itself dignified, although not solidified. This comical situation vexes many an individual who, in the course of life's experiment, might prefer a more rigid society tending to make opposition or difference seem unsubstantial, even mythical—or un-American.

Security is paradoxical, since the only security is risk, or experiment. And the affair of the ten men and the Thomas Committee is essentially paradoxical. The men are cited in contempt of the Committee for refusing to answer the question; the question itself, when the courts take over, may be found to be in contempt of the Constitution. Two negatives make a positive. What do two contempts make—respect?

Hon. Everett M. Dirksen, of Illinois

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1947

Mr. SMATHERS. Mr. Speaker, Ralph Waldo Emerson once wrote, "A foolish consistency is the hobgoblin of little minds, adored by little statesmen and philosophers and divines." That statement by Mr. Emerson has recently taken on real significance for me as we have seen the world and its problems change and multiply and big minds in considering them grow and change in proportion with the problems.

The Miami Daily News, a progressive and outstanding newspaper of Florida, recently wrote an editorial about a great Republican and statesman, our distinguished colleague of Illinois, EVERETT DIRKSEN. The editorial commends Mr. DIRKSEN for having had sufficient mental stature and courage to see the necessity of discarding the ancient theory of isolationism as a foreign policy and substituting therefor international cooperation wherever and whenever possible in order to maintain the peace of the world. I am honored to place into the RECORD this editorial commending an able and outstanding Republican leader:

DIRKSEN A CONGRESSIONAL SAUL

It is easy to think of Congressmen as men who duck and dodge and do nothing except scheme for votes. For an antidote to this too pessimistic attitude take a dose of Representative DIRKSEN of Illinois.

A Republican politician in the State of Illinois is in very much the plight of a Democratic politician in the State of Tennessee. Tennessee has its Boss Crump of Memphis, whose frown can finish almost any Democrat down there; Illinois has its Colonel McCormick who, with his Tribune, carries the Republican Party in the pocket of his vest. The colonel is no easy boss in Illinois. His Senator and his Representatives have a narrow line to walk. They must be of the rigidly conservative, isolationist brand of Republican or out with them. The colonel's Congressmen, including Senator BROOKS, must be his faithful rubber stamps or woe to them.

Among the abler and more energetic of the Congressmen who lived under the colonel's eye has been Mr. DIRKSEN. Through the past years DIRKSEN paid the price which his job imposed. He was of the isolationists in Congress. Then came his trip last summer to the European scene. He comes back a promoter of aid to Europe, a backer of the Marshall plan.

Daily the colonel and his Tribune fulminate against the Marshall plan, against aid to Europe, against anything but the blindest isolation. Now what will the colonel do to the Saul, who, seeing a vision, has turned Paul and risked his political life in doing so.

Representative DIRKSEN will be happy, we guess, no matter what punishment for his "treason" the colonel deals out to him. He has seen a light and followed it. That should be happiness enough for him. More Congressmen than we are apt to admit work for that happiness.

Aid to China

EXTENSION OF REMARKS
OF
HON. CHARLES R. CLASON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1947

Mr. CLASON. Mr. Speaker, yesterday, before the Senate Appropriations Committee, Assistant Secretary of State Willard L. Thorp admitted in his testimony that the State Department has no program for American aid to China today. Former Ambassador to Russia William C. Bullitt, an outstanding Democratic leader, described China's acute financial plight and is reported to have said:

The State Department has had 11 months since General Marshall's return to prepare a Chinese program. It did not prepare one. It based its policy on the completely fatuous

idea that the Soviet Government was a peace-loving democracy and that the Chinese Communists were an agrarian revolt that had nothing to do with Moscow.

He further said that some urgent telegrams from our present Ambassador to China, J. Leighton Stuart, have not been given the courtesy of a reply.

In October, 1947, I had the privilege of attending conferences with the President of China, Generalissimo Chiang Kai-shek, and with Ambassador Stuart. There is no doubt that both of them have brought forcefully and repeatedly to the attention of our State Department the present extremely serious plight of China. It seems obvious that the State Department is lagging far behind both Congress and the American public on the very important subjects of communism in the Far East and aid to the unfortunate Chinese people.

In these circumstances and if an immediate program for expenditure of $60,000,000 for Chinese aid is to be pursued, the following program has been brought to my attention by a person who has interested himself in China as a soldier during the war and as a businessman today. It deals with relief and not with military needs. If carried out under the supervision of the United States Army Engineers, Public Health employees and our own purchasing and distributing officers, it offers a worth-while basis for full consideration of our immediate activities. The plan is as follows:

SOME SUGGESTIONS CONCERNING THE EMERGENCY AID TO CHINA

INTRODUCTION

Of the $590,000,000 authorized by the House of Representatives to be appropriated to provide immediate aid urgently needed by the peoples of Austria, China, France, and Italy, it is understood that some $60,000,000 will be used in China.

The purpose of this aid, as stated in Union Calendar No. 588, H. R. 4604 of Eightieth Congress, is "to alleviate conditions of hunger and cold and prevent serious economic retrogression which would jeopardize any general economic recovery program based on self-help and cocperation."

The amount, however, is so very small for a population of 450,000,000 people that a well-thought-out program should be formulated in order to achieve the maximum good for the maximum number of people and for the greatest benefit to the country as a whole, within the limit of the aid proposed.

It is obvious that hundreds of petitions for aid will be received from all classes of people, farmers, artisans, gentry, and students, as soon as this aid is made known to them. Their needs will all be urgent and real and within the interpretation of the act. How are we going to consider and act on such petitions? How are we going to satisfy everybody when everybody wants aid?

Without going into detail and taking into consideration the number of people represented in the different classes of China's population, the suffering and losses sustained by them collectively during and after World War II, and the relative importance of alleviating their present conditions to the economic recovery of the country as a whole, we must admit that aid to rural China is of first importance and should receive our first consideration.

China is an agricultural country having more than 80 percent of her population engaged in agriculture, and she must be treated as such. Practically everything in China is dependent on agriculture or agricultural production. A bumper crop or a flood affects not only the farmers themselves but the economy of the entire nation.

RECOMMENDATIONS

Based on the amount of $60,000,000 authorized, it is recommended that we break down the aid as follows:

For food	$30,000,000
For medical supplies	4,000,000
For clothing	15,000,000
For fertilizer	5,000,000
For seeds	500,000
For miscellaneous aid	2,000,000
For transportation of supplies and administration	3,500,000

EXPLANATION OF PROJECTS

Food: Since $30,000,000 will buy about 9,200,000 bushels of wheat and since this amount of food is too small for all the farmers in need, it is suggested that it be used only to pay for work on worth-while work projects, such as dike repair, well digging, and road repair, in rural districts. The carrying out of these projects, especially dike repair, will help not only support continuous crop production but also eradicate the danger of floods which are occurring in China today with increasing frequency and severity every year due to the bad condition of dikes protecting rice fields.

If $20,000,000 or 6,325,000 bushels of wheat were spent on dike repair, and if 10 pounds of wheat is paid per day per laborer for 3 cubic meters of earthwork, a total of 115,000,000 cubic meters of earthwork could be done; and that would take care of millions of acres of rice land that are liable to flood. It is said that if all the dikes in Kwangtung Province were properly repaired, at least 3,000,000 acres would be made safe for continuous crop production.

Well-digging will be about the best work project for north and northwest China. One of China's leaders, Mr. Yu Yu-ren, has recently proposed a program of digging 10,000 wells as a means of saving and relieving the desperate condition of the rural population in northwest China. The well-digging project as suggested here could well be considered as part of Mr. Yu's program.

Medical supplies: In giving medical supplies, it is suggested that $4,000,000 be appropriated of which $3,000,000 be donated to 1,000 county hospitals (Wei Sen Yuan) at $3,000 per hospital for medicine and equipment, and $1,000,000 to deserving hospitals in large cities.

Clothing: For clothing, it is recommended that $15,000,000 be allocated and that this may go to all the students and teachers of all universities, colleges, and high schools in the country who have suffered so much during the war and as a result of the economic chaos which followed. It is hoped that this allocation will enable each student to get sufficient material or cash equivalent for a suit of clothes.

Fertilizer: China before the war consumed about 210,000 tons of chemical fertilizers, not considering Formosa. In view of what UNRRA has already done in the way of supplying the fertilizer needs of the country on the mainland, it is proposed to appropriate $5,000,000 for the purchase of about 140,000 tons of ammonium sulfate for the spring and fall planting in the rural districts.

Seeds: It is recommended to appropriate $250,000 for purchasing rice seed for the Kwangtung farmers who have suffered from a severe flood recently, and another $250,000 for the purchase of cotton seeds for farmers in north and central China.

Miscellaneous: Aid to deserving private philanthropic agencies should also be looked after. For this it is recommended that at least $2,000,000 be set aside.

RECAPITULATION

To recapitulate:

Summary of proposed aid

	Amounts suggested
Food:	
(a) For dike repair	$20,000,000
(b) For well digging	5,000,000
(c) For road repair	5,000,000
Total	30,000,000
Medical supplies:	
(a) Rural hospitals	3,000,000
(b) City hospitals	1,000,000
Total	4,000,000
Clothing	15,000,000
Fertilizer	5,000,000
Seeds	500,000
Miscellaneous aid	2,000,000
Transportation, administration, etc	3,500,000
Total	60,000,000

PROPOSED ADMINISTRATION

To insure quick and effective action so that the objective of this aid program, namely, providing the maximum direct assistance to the really needy people of China, will be achieved, it is recommended a Sino-American Commission be organized, composed of Chinese and American experts who really know China and her rural and social problems, and her present emergency needs.

It is understood that the Chinese and Americans serving on the Commission and throughout the organization of the Commission be on equal basis, and that the Commission functioning as an independent agency be given by the executive Yuan the power to cooperate with and to coordinate the functions and duties of all the government and private organizations in the country.

It is important that in the allocation of aid under the categories given above, the question of population and its distribution be carefully considered. Allocation should be based on not only population but also the speed with which the projects could be finished, and the willingness to cooperate on the part of the local people.

In other words, north China with a population of about 150,000,000 people should be allotted 33 percent of the total aid; central China with a population of some 80,000,000 people should be allotted about 20 percent of the aid; and south China with a population of 220,000,000 people should be allotted at least 45 percent of the aid.

Such method of allocation was not carefully considered during the UNRRA-CNRRA operations in China, and as a result there was much dissatisfaction and a lot of unnecessary political disputes which did nobody any good.

There is another point which should be taken into consideration in the administration of the aid, and it is this. Should the project suggested require more than 6 months to complete with no prospect of continuance when the aid fund is finished, it should not be considered. And if the local people or farmers are not willing to supply labor and tools and equipment necessary for the completion of the project, aid should also be withheld. But on the other hand if the farmers are willing to cooperate to the extent of accepting even a lower rate of pay per day for the work done, every consideration should be given to aid such farmers.

Odd Kind of a Chairman

EXTENSION OF REMARKS
OF
HON. BRIEN McMAHON
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Thursday, December 18 (legislative day of Thursday, December 4), 1947

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the Appendix an editorial entitled "Odd Kind of a Chairman," published in the Hartford (Conn.) Times of December 13, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ODD KIND OF A CHAIRMAN

The only thing that seems to be wrong with Senator J. HOWARD MCGRATH as chairman of the Democratic National Committee is that he talks more like a statesman than like an organization politician.

It is so unusual that this should be true that it may take the country, accustomed to other procedure, a little while to get used to it. However, there is something refreshing about it.

Speaking to Maine Democrats at Bangor the other day, Senator MCGRATH declared his belief that the party can win another election "by working for the principles of progressive government, for the advancement of the welfare of the people," but that "success can come only as we build on these principles with men who are willing to cast aside selfishness."

In his viewpoint "the task is simple and the question is whether those not willing to take personal responsibility are willing to support those who are." At another point he offered the view that "there can be no more sacred trust in this hour of world misunderstanding than to dare to speak for one's neighbor."

Still earlier in his career as party leader and spokesman, Senator MCGRATH brought about the rejection of a resolution which would have made a party matter out of supporting the Marshall plan and proposed instead that cooperation between Republicans and Democrats in Congress be the goal sought.

All this may be highly irregular for a party chairman whose duty it is to lambaste the opposition at every opportunity, decry its leadership and its motives, and laud to the skies everything his own party does. However, at any time the Nation can well stand for departure of the old-time custom. At this time—grave hour of world misunderstanding, as Senator-Chairman MCGRATH puts it—it is particularly timely.

Delivery of Lend-Lease Supplies to Russia

EXTENSION OF REMARKS
OF
HON. FRANK B. KEEFE
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 18, 1947

Mr. KEEFE. Mr. Speaker, the Congress and the country have been agitated by conflicting reports as to the delivery of lend-lease supplies to U. S. S. R. after the official termination of lend-lease on VJ-day. The State Department at my request has submitted a factual statement in reference to the matter which I include as part of these remarks. I also include a letter from War Assets Administration in reference to certain lend-lease material which was declared surplus by lend-lease and which, except for the intervention of the Congress, would have no doubt been shipped to Russia. We shall continue to keep close watch of this matter.

THE UNDER SECRETARY OF STATE,
Washington, December 3, 1947.

Hon. FRANK B. KEEFE,
House of Representatives.

MY DEAR MR. KEEFE: In our telephone conversation this morning you inquired as to my reply to your letter to me of November 12 concerning the truth of recent newspaper stories with respect to "pipe line" deliveries under the Lend-Lease Act and the shipment of lend-lease materials to the Soviet Union.

Although the Department has no record of a letter from you dated November 12, I do have your letter of November 19 dealing with this subject and I presume this is the letter to which you have reference. The reply to this letter has been delayed in an effort to obtain information with which to reply to that part of your letter concerning the sale of lend-lease material as surplus property to the Soviet Union. The Department has no information on that subject and I will accordingly transmit your inquiry to the Administrator of War Assets Administration for further reply.

With respect to the remainder of your letter I am pleased to transmit the information which you request. In the paragraphs which follow, I wish to indicate, first, the basis for lend-lease deliveries to the Soviet Government after VJ-day and secondly, the circumstances attending in particular the shipments which have been made since December 31, 1946.

I

Deliveries of lend-lease goods to the Soviet Government and other countries on the wartime basis were ordered halted on VJ-day, September 2, 1945, and no further deliveries were made to the Soviet Government on this basis except for small quantities of goods then in transit to shipside or already aboard ship. The $10,900,000,000 of lend-lease aid delivered to the Soviet Government during the war was covered only by the Soviet Master Lend-Lease Agreement of June 11, 1942, and settlement for aid in this category is now in process of negotiation.

Lend-lease goods provided to the Soviet Government in the postwar period were all delivered under the terms of a so-called pipeline agreement concluded with the Soviet Government on October 15, 1945, by Mr. Leo T. Crowley, then Foreign Economic Administrator. Under this agreement printed in the Twenty-first Report to Congress on Lend-Lease Operations the United States agreed to deliver and the Soviet Government agreed to accept a specific list of articles all of which had been ordered for the Soviet Government under lend-lease during the war and which, on VJ-day, remained undelivered either in warehouses or in production. No combat items were included in the list. This agreement was similar to pipe-line agreements concluded with other lend-lease recipients. Unlike wartime lend-lease to the Soviet Government, which is now the subject of settlement negotiations, the agreement of October 15, 1945, requires payment in 22 graduated annual installments beginning in 1954. Interest at the rate of 2⅜ percent is payable annually.

The agreeement of October 15, 1945, was concluded under the authority of section 3 (c) of the Lend-Lease Act which was amended in April 1945 to read as follows:

"SEC. 3. * * *

"(c) After June 30, 1946, or after the passage of a concurrent resolution by the two Houses before June 30, 1946, which declares that the powers conferred by or pursuant to subsection (a) are no longer necessary to promote the defense of the United States, neither the President nor the head of any department or agency shall exercise any of the powers conferred by or pursuant to subsection (a); except that until July 1, 1949, any of such powers may be exercised to the extent necessary to carry out a contract or agreement with such a foreign government made before July 1, 1946, or before the passage of such concurrent resolution whichever is the earlier: *Provided, however,* That nothing in section 3 (c) shall be construed to authorize the President to enter into or carry out any contract or agreement with a foreign government for postwar relief, postwar rehabilitation or postwar reconstruction; except that a contract or agreement entered into in accordance with this act in which the United States undertakes to furnish to a foreign government defense articles, services, or information for use in the prosecution of the present war and which provides for the disposition, on terms and conditions of sale prescribed by the President, of any such defense articles, services, or information after the President determines they are no longer necessary for use by such government in promoting the defense of the United States shall not be deemed to be for postwar relief, postwar rehabilitation, or postwar reconstruction."

The agreement with the Soviet Government was concluded on October 15, 1945, well in advance of the limiting date of June 30, 1946, set by the act. Its schedules included for delivery only those articles which had been ordered prior to VJ-day "for the prosecution of the present war," and it contained definite repayment terms as required by the act.

In all, goods and services valued at approximately $233,000,000 were delivered to the Soviet Government under the agreement of October 15, 1945. An initial payment in the amount of $4,170,000 on account of interest due July 1, 1947, has already been received.

II

The various situations under which lend-lease articles were delivered into Soviet custody were as follows:

1. The Third Deficiency Appropriation Act, 1946, approved July 26, 1946, provided funds for the continuation and liquidation of lend-lease activities but contained a proviso that none of the funds appropriated thereby could be used "for any expense incident to the shipment abroad of any commodities after December 31, 1946." This provision of the Third Deficiency Appropriation Act, 1946, did not purport, by its terms, to require the United States to cut off shipments under its pipe-line agreements with foreign governments as of December 31, 1946. At the time of the enactment of the Third Deficiency Appropriation Act it was hoped that all deliveries could be completed by December 31, 1946. In the latter part of 1946, however, it became evident that, owing to strikes and other delays entirely outside the control of the procurement agencies of the Government, goods with a value of approximately $30,000,000 could not be ready for shipment

to the 11 countries involved before December 31.

In November 1946, each of the foreign governments was advised that, under the Third Deficiency Appropriation Act, appropriated funds could not be used to pay the administrative expenses involved in the delivery of goods which could not be shipped before December 31, 1946. Each of the governments was requested, if it should desire to receive these goods, to deposit with the United States Treasury Department funds to be used to cover these administrative expenses. The requested deposits were all made before December 31, 1946, including a deposit by the Soviet Government. The use of these funds for this purpose was discussed with the General Accounting Office during the closing days of December 1946. On January 10, 1947, a ruling was received from the General Accounting Office to the effect that these funds could not be used to effect further pipe-line shipments. Consequently deliveries to the Soviet and other governments of all pipeline articles were immediately suspended. The Comptroller General indicated informally that this ruling would be changed should there be an expression of contrary intent by the leaders of Congress and an assurance that clarifying legislation would be enacted at an early date. This Department promptly raised the problem in letters addressed to the Chairman of the Senate and House Appropriations Committees, and presented the details more fully in subsequent hearings.

2. The agreement of October 15, 1945 contains in schedule II, paragraph B, a provision which reads in part as follows: "any article which shall not have been transferred * * * prior to 3 months following the time of signing of this agreement or 3 months following the time of notice to the Government of the Union of Soviet Socialist Republics of the availability of the articles, whichever is the later, shall be deemed to be transferred to the Government of the Union of Soviet Socialist Republics, and the Government of the Union of Soviet Socialist Republics shall thereafter assume complete financial responsibility for the articles."

Provisions to the same effect appear in the pipe-line agreements with several other countries, including the United Kingdom, China, and Australia.

After the suspension of all deliveries on January 10 it was recognized by reference to this section of the agreement that certain articles, for which notices of availability had been issued to the Soviet Government before December 31, 1946, were, when 3 months had elapsed, automatically transferred in accordance with the terms of the quoted paragraph. The Soviet Government had accepted certain other articles prior to December 31, 1946, by the issuance of shipping instructions with respect thereto. Articles in these categories were considered in the circumstances indicated to have become the property of the Soviet Government, which thereupon became entitled to take custody of such articles at any time thereafter. Deliveries to the Soviet Government of articles in these categories were effected from time to time during the first quarter of 1947. All such deliveries were suspended toward the end of the first quarter, pending clarification of the intention of Congress.

Total deliveries of lend-lease articles to the custody of the Soviet Government effected by the Bureau of Federal Supply during the first quarter of 1947 under the situations set forth in paragraphs numbered (1) and (2) above are reported by that Bureau to have totaled $8,393,000. The Bureau of Federal Supply was the sole procurement agent for articles delivered under the situations cited above.

3. Small amounts of supplies procured with funds appropriated directly to the Departments of the Army and Navy were transferred in early January 1947. Such transfers were not considered to be affected by the restrictions of the Third Deficiency Appropriation Act which applied only to articles procured with funds appropriated to the President. Reports from these two Departments indicate their total lend-lease transfers to the Soviet Government after December 31, 1946, to have been $60,000 and $19,300, respectively.

The intent of Congress respecting the pipeline agreements was definitively clarified by the enactment on July 30, 1947, of the Supplemental Appropriation Act, 1948, which specifically authorized the completion of deliveries to 10 named countries, omitting the U. S. S. R. As a consequence, formal directions were given to the procuring agencies to the effect that no deliveries of lend-lease articles should be made to the Soviet Government. The procuring agencies were further advised that all articles remaining undelivered should be disposed of as surplus or used in fulfillment of other United States Government programs. Articles not delivered to the Soviet Government and disposed of, or to be disposed of, in this manner had an original cost of somewhat in excess of $19,000,000.

Export statistics prepared by the Bureau of the Census indicate that lend-lease goods valued at $16,080,000 cleared United States ports for the Soviet Union during the period January through September of this year. Lend-lease articles delivered to Soviet custody before December 31, 1946, or after that date under the circumstances outlined above, passed to complete control of the Soviet Government in the United States. In view of the fact that no lend-lease articles have been delivered to Soviet custody since March of this year, it is evident that any exports over and above the articles valued at about $8,500,000 described above were articles custody of which had been delivered to the Soviet Government before December 31, 1946. There is enclosed for your ready reference a table, Lend-Lease Exports to the U. S. S. R., Monthly, January through September 1947.

Sincerely yours,

ROBERT A. LOVETT,
Acting Secretary.

Lend-lease exports to the U. S. S. R.—Monthly, January through September 1947 [1]

January	$4,724,000
February	3,192,000
March	1,383,000
April	1,788,000
May	3,633,000
June	148,000
July	1,168,000
August	0
September	44,000
October (statistics not yet in)	
Total	16,080,000

WAR ASSETS ADMINISTRATION,
Washington D. C., December 10, 1947.

Hon. FRANK B. KEEFE,
House of Representatives,
Washington, D. C.

MY DEAR MR. KEEFE: This Administration is in receipt of a request from the Honorable Robert A. Lovett, Under Secretary of State, asking that we furnish you information as to the sale of property originally procured under Lend-Lease for the U. S. S. R. and now declared surplus.

Approximately $7,000,000 of this property is in the nature of oil-refining equipment and approximately $12,000,000 is equipment of a miscellaneous nature. Declarations of this property have been received from the Bureau of Federal Supply beginning the first part of October and are expected to be completed this week.

A centralized control has been set up in the Washington Office of this Administration to direct the disposal action on this property in order to carry out the intent of the Eightieth Congress in regard to its disposition. A report of the name and address of each purchaser and the sale price for each item sold will be made to the Bureau of Federal Supply, Treasury Department.

The only portion of this property sold to date consists of a few items taken by Federal Agencies for their own use.

The last paragraph of the December 3, 1947, letter to you from the Honorable Robert A. Lovett explains newspaper reports of recent lend-lease property shipments to the U. S. S. R. Such property referred to was not declared surplus to, or sold by, the War Assets Administration.

Sincerely yours,

JESS LARSON,
Acting Administrator.

House Committee on Un-American Activities and the President's Loyalty Order

EXTENSION OF REMARKS
OF
HON. GLEN H. TAYLOR
OF IDAHO

IN THE SENATE OF THE UNITED STATES

Thursday, December 18 (legislative day of Thursday, December 4), 1947

Mr. TAYLOR. Mr. President, I ask unanimous consent to have inserted in the RECORD a closely reasoned and irrefutable statement, signed by almost all the members of the faculty of the Yale University School of Law, which marshals the arguments against the House Committee on Un-American Activities and the President's loyalty order.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

YALE UNIVERSITY SCHOOL OF LAW,
November 26, 1947.

The PRESIDENT OF THE UNITED STATES,
The SECRETARY OF STATE,
The SPEAKER OF THE HOUSE OF REPRESENTATIVES.

SIRS: It is clear both from the bold and forthright report of the President's Committee on Civil Rights and other facts of common knowledge that the liberties which have so long distinguished our Nation are in danger from within, as well as from without. Irremediable tragedy only can result if the advice of the President's committee is ignored. We the undersigned members of the Yale law faculty take this opportunity to urge immediate and decisive action. This Nation needs not alone to be reminded that our Government is one fashioned for courageous men, who prefer the conceded hazards of living in liberty to the indignities of the police state; it needs also to reaffirm its faith and to secure its freedoms by vigorous and appropriate measures now.

We are not insensible that in a world becoming increasingly divided, our Government must take all rational precautions against acts which threaten or seem to threaten, our national security and existence. Precautions cease to be rational, however, when they defeat the very ends they are designed to secure. We need not create a police state to escape a police state. It can make little difference to the citizen who loses his liberties and dignities as a human being

whether his loss comes from an enemy or from a native oppressor who subverts democratic government in the guise of protecting it.

There is in our history no evidence that our faith in freedom of thought and speech is not well-founded. For 150 years the most violent dissidence of political expression has been allowed, not only as a monument to the safety with which error of opinions may be tolerated when reason is left free to combat it, but in the abiding belief that the ultimate good desired is better reached by free trade in ideas. It is not now apparent why the American people should be so wanting in courage or so skeptical of our foundations as to fall victim to the fears of frightened men either inside or outside the Government. It is, however, unhappily true that America appears to be embarking on an era similar to that which followed the First World War. There are alarming signs that persecution for opinion, if not soon curbed, may reach a point never hitherto attained even in the darkest periods of our history. With it, we may expect racial, religious, and every other kind of bigotry which, if it is to run its full course, can loose such a flood of intolerance as utterly to destroy the civil liberties without which no democratic society can survive.

A pattern of suppression is today evolving at the highest levels of the Federal Government. The more alarming aspects of the situation include the President's Loyalty Order of last spring, the recent "Statement of Security Principles" by the Department of State and the current performance of the Un-American Activities Committee of the House of Representatives. The procedure followed by the committee and that prescribed by the order and the statement are such as to subject the citizen to intimidation and abuse without redress and to expose the Government worker to loss of reputation and livelihood without the opportunity to defend his honor or his job.

It is the right and the heritage of every American freely to form political opinion and to express it, when accused of offense, to be presented with the charges against him, confronted by his accusers and given a fair opportunity to defend himself before an impartial tribunal. Under the cloak of congressional immunity or the cloak of anonymity, high officials of the National Government are today acting in disregard and in defiance of the American tradition of civil liberties and, in our considered judgment, in violation of the Constituton of the United States. It is, we believe, high time that the executive and legislative branches of the United States Government foreswear belief in witches and, by practicing democracy, set an example to those parts of the world which we hope to have embrace its principles. We, therefore, urge (1) that the House of Representatives immediately abolish its Committee on Un-American Activities and (2) that the President and Secretary of State revise their present policy with regard to governmental employees suspected as disloyal or as security risks, so as to bring that policy into conformity with both the spirit and the letter of the United States Constituion.

Very truly yours,

Fred Rodell; Ralph S. Brown, Jr.; Thomas I. Emerson; Eugene V. Rostow; S. E. Thorne; James Wm. Moore; A. G. Gulliver; George H. Dession; F. S. C. Northrop; Walton Hamilton; Fowler V. Harper; Wesley A. Sturgis; Boris I. Bittker; George D. Braden; Henry A. Fenn; Grant Gilmore; Friedrich Kessler; Edwin Borchard; Myres S. McDougal; Addison A. Mueller; David Haber, Fleming James, Jr.

Universal Military Training

EXTENSION OF REMARKS
OF
HON. HOMER A. RAMEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1947

Mr. RAMEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein a petition received from Mr. M. E. Dieringer, Port Clinton, Ohio, concerning proposed legislation to establish a system of universal military training:

PETITION

Congressman RAMEY,
Washington, D. C.:

Peace is worth striving for. Therefore we, citizens of the United States and voters, urge you, our Representative in the Eightieth Congress of the United States, to support and vote for legislation establishing a system of universal military training for American young men, as recommended by the President's Advisory Commission on Universal Training.

Mrs. Robert Babcock, Mrs. Steve Trenshaw, Mrs. George J. Svehla, Mrs. H. A. Hawking, Port Clinton, Ohio; Mrs. Clayton Pettibone, Lakeside, Ohio; Mrs. George King, Mrs. Francis Carter, Mrs. Thomas Keating, Mrs. Eugene Hearn, Mrs. Nellie Steelsmith, Mrs. Earl Brady, Mrs. R. N. Frye, Mrs. Christ Nelson, Jane C. Miller, Mrs. Lillian Miller, Mrs. Martha Swartz, Mrs. Celia Carter, Mrs. Leslie Brown, Mrs. C. R. Cooley, Mrs. Archie King, Port Clinton, Ohio; Mrs. Joseph Banchick, Oak Harbor, Ohio; Mrs. Howard Fritsche, Mrs. James Longe, Mrs. Glenn Dieringer, Mrs. Hazel Boss, Mrs. William C. Faust, Jr., W. W. Chapman, Jack W. Mizener, U. G. Seefert, Carl F. Miller, Ezra E. Hitt, Edward Goldbach, Mrs. Carl Miller, John Miller, Port Clinton, Ohio; Roger Witt, Martin, Ohio; Bertha Goldbach, Jack Miller, Glenn D. Dieringer, Port Clinton, Ohio.

Oil Shales and Lignite Coals Are Our True Reserves

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 16, 1947

Mr. CASE of South Dakota. Mr. Speaker, following the general debate on the third supplemental appropriation bill, I asked permission to place in the RECORD, some data from our hearings and a letter from the Department of the Interior on the reserves we have for the production of synthetic liquid fuels. The letter came to the Appropriation Subcommittee on Deficiencies too late for incorporation in our printed hearings, but is of exceptional interest and importance to the country which is now so concerned over the problems of fuel oil and gasoline.

RESERVES OF THE NOT SO NEAR EAST

During our hearings, the gentleman from Texas [Mr. MAHON] was questioning Mr. Edward B. Swanson, of the Oil and Gas Division, and asked:

This field in Saudi Arabia, which is already proven, if fully developed and exploited; will have a capacity to supply a tremendous quantity of the world's needs. I would like your comment on that.

To which Mr. Swanson replied:

The proven reserves in the Persian Gulf area, which includes the territories of Iran, Kuweit, Saudi Arabia, Iraq, in the aggregate total nearly as much as the proven reserves of the entire Western Hemisphere. They are larger than the proven reserves of the United States.

The CHAIRMAN (Mr. TABER). What are they?

Mr. SWANSON. In the neighborhood of 27,000,000,000 barrels. * * * We are using in the United States slightly over 2,000,000,000 barrels per year, and that represents, roughly, two-thirds of the world's consumption, so that the world would be using approximately 3,000,000,000 barrels of oil per year.

The discussion was also participated in by Mr. Robert E. Friedman, of the Oil and Gas Division, and Mr. William E. Warne, Assistant Secretary of the Interior. Excerpts follow:

BASIC SECURITY LIES AT HOME

Mr. FRIEDMAN. I think it might be well to point out one additional fact, and that is that this year we are producing a half million barrels a day more than we did last year, and it is generally conceded as a matter of fact by the National Petroleum Council * * * that we had a maximum efficient rate of production in the United States of about 5,270,000 barrels per day. Two weeks ago we were producing slightly over that. In other words, we have now reached our maximum efficient rate of production. The Texas Railroad Commission told us that there was no further room for expansion in Texas at the moment. They hoped that there would be in the future. That means, it seems, for the moment we cannot further expand our domestic production, although the demand is rising. We were able to expand it by half a million barrels this year. We doubt the ability to expand it by any such amount next year.

Further, the middle eastern oil, which is abundant and available, unfortunately is on the other side of the world. A number of security problems are raised by the reliance on that oil, of course, and we wish that it were much closer and in the Western Hemisphere. Both the military and we in the Interior Department feel that as important as that oil is, it must not become the basis of our oil security. We would like to get as much as we can while we can get it, but our basic security lies at home.

PROSPECT OF OIL PRODUCTION FROM COAL

Mr. CASE. This $250,000,000 plant that the Standard of New Jersey and some Pittsburgh people are putting in to develop synthetic fuel from coal waste in Pennsylvania—is that going to get into production soon?

Mr. FRIEDMAN. I think those plans of the Pittsburgh Consolidation Coal Co. and the Standard of New Jersey are all experimental. There are no plans at the moment for commercial production. The oil from coal at the moment, I have been informed, is not competitive on a commercial basis with products from crude oil.

Mr. CASE. I think that Mr. Krug told me that it was indicated by your laboratory work that it was competitive with oil at $1.50 a barrel.

Mr. WARNE. Our latest statement, Congressman CASE, on the extraction of liquid

fuels from shales would indicate we are getting pretty close to the point where that might be competitive commercially. Bureau of Mines estimates, based on the oil shale demonstration plant now operating at Rifle, Colo., indicate that shale oil can be produced for about $2 to $2.50 per barrel. This oil is equivalent to a low grade crude oil.

I do not believe the Bureau of Mines feels that the same is true of the liquification of coal at the moment, but some of our experimental plants are still under construction. The runs have not been made as yet.

Mr. CASE. What is the average price of oil today?

Mr. WARNE. It is averaging in east Texas, I think, $2.65 a barrel.

Mr. SWANSON. $2.57 in the Mid Continent.

Mr. CASE. I do not know enough about oil and gasoline to know, but I think Dr. Sayers told me before he left the Bureau their tests indicated it would be competitive with gasoline at 30 cents—retail, I suppose; I do not know.[1]

Mr. WARNE. If some of the rises that seem to be in immediate prospect come about, that makes it pretty close to backing up the statement the Bureau of Mines gave me this morning, which was that synthetic fuel plants are getting closer and closer to a competitive position.

Mr. CASE. When that happens, shales and lignite coals give you reserves that are fantastic in quantity compared with petroleum reserves: do they not?

Mr. WARNE. Oh, yes. There is no doubt we could get liquid fuels from these other sources in far greater quantities. Our problem so far has been one of price and one of techniques. We have been at work for several years on experimental techniques and now, under some of the legislation in the last several years, we have some semi-commercial sized plants going in on a demonstration basis.

Mr. CASE. I recognize our immediate problem here concerns these supplies to meet the situation in the next few months, yet the reference of the other speaker (Mr. Swanson) to the question of security reminded me that this whole foreign-aid program was bottomed upon the problem of security and maintaining contact with oil reserves in the Middle East. But the very fact that line is tenuous means, when you are talking about security, it is important to know how rapidly you are getting along with tapping these practically unlimited reserves of oil shales and lignite coals.

Mr. WARNE. I quite agree with you. And there is the source of energy from water power which might be a substitute for some of the oil used at the present time. And in the shale fields we can say that we can produce usable liquid fuels now at prices that are almost presently competitive.

OIL SHALE ALMOST COMPETITIVE NOW

Mr. CASE. Can you state what the reserves in the oil shales constitute in terms of gasoline?

Mr. WARNE. I have heard it estimated; however, I have not the figure.

Mr. SWANSON. A minimum of 67 years is my recollection of the figure on oil shale at current rates of consumption in the United States.

Mr. WARNE. These are some of the things that are being done; the Bureau of Mines now has a program to process coal, and we have a demonstration plant under construction designed to produce 200 barrels of high octane gasoline. It will be in operation next summer. The present estimate is that gasoline from coal will cost 5 to 7 cents more than the current price of gasoline from petroleum.

[1] Under present conditions if production costs for gasoline from petroleum should rise 5 to 7 cents per gallon, it is estimated the production from coal would be commercially feasible.

Mr. CASE. I do not want to take the time of the committee now, but when you get your transcript will you put in there the percentages of the reserves in oil shales and lignite coals, with the comparative figures of the estimates in petroleum?

Mr. WARNE. We will be glad to do that.

(The matter referred to is as follows:)

"The reserves of oil shale are sufficient to provide a minimum of 100,000,000,000 barrels of recoverable oil. This compares with a known petroleum reserve of 21,000,000,000 barrels. Coal reserves are sufficient to provide for oil combustion uses for over 1,000 years.

Following this, it was agreed that the Secretary's office should supply additional information on the subject, which was done by the following letter:

DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D. C., December 12, 1947.

Mr. KENNETH SPRANKLE,
Deficiency Committee,
House Appropriations Committee,
Washington, D. C.

MY DEAR MR. SPRANKLE: On December 11, 1947, Mr. William E. Warne, Assistant Secretary of the Interior, appeared before the Deficiency Committee and presented testimony relative to the interim European aid program, with particular respect to the commodities of oil and coal.

TWENTY-ONE BILLION CRUDE OIL RESERVES

During this testimony, Congressman FRANCIS CASE, of South Dakota, requested for the record information as follows:

"Congressman CASE: What are the potential crude-oil reserves in the United States?

"What are the potential oil shale reserves in the United States expressed in terms of crude oil?

"What are the potential lignite coal reserves in the United States expressed in terms of crude oil?

"Mr. WARNE: As of January 1, 1947, the crude-oil reserves in the United States are estimated at approximately 21,000,000,000 barrels.

"Synthetic liquid fuels may be obtained from our national reserves of natural gas, coal, lignite, and oil shale by appropriate processes that give the best results with the particular raw material that is to be used.

"NATURAL GAS LIMITED

"Natural gas is the first raw material that will be used in commercial production to supplement motor fuel and fuel oil. A commercial plant of about 7,000 barrels per day capacity is under construction at Brownsville, Tex., and another similar size plant is to be built in southwestern Kansas.

"However, the natural-gas reserves are limited and only the cheap natural gas, far from points of utilization, can be used economically in competition with petroleum. Also, the natural-gas reserves are very limited in comparison with coal and lignite. Therefore, these latter fuels and oil shale must supply the long-term future demands for liquid fuels.

"FIVE HUNDRED BILLION IN LIGNITE COALS

"On a heat-unit basis, about 20 percent of the total coal reserve of the United States consists of lignite. The total tonnage of lignite has been estimated by the Geological Survey of the United States Department of the Interior as 939,000,000,000 tons. It occurs in four States, as follows:

	Billion tons
North Dakota	600
South Dakota	1
Montana	315
Texas	23

"Assuming a one-third loss in mining, the remaining 626,000,000,000 tons would have a conversion value to liquid fuels of approximately 500,000,000,000 barrels, i. e. approximately 25 times the present proved petroleum reserve of the United States.

"NINETY-TWO BILLION IN OIL SHALES

"The oil-shale reserves of the United States have been estimated by geologists as capable of yielding 92,000,000,000 barrels of crude oil. This is about five times the proved petroleum reserve of the United States.

"From a conservation point of view, very serious consideration should be given to oil shale and lignite as sources of synthetic liquid fuels.

"Oil shale has no other known value than for the production of liquid fuels, and lignite does not lend itself to transportation over long distances on account of its relatively low-heating value and its tendency to slack and crumble on exposure to the air. It occurs largely in regions of low-population density and has a very limited market. Its conversion into liquid fuels would constitute wise utilization of the large reserves of low-rank solid fuels, such as lignite and subbituminous coal.

"The liquid fuels thus obtained could readily be transported long distances through pipe lines as is being done with petroleum at the present time.

"On a heat-value basis, lignite and subbituminous coal comprise 42 percent of the Nation's coal reserves. National interest points to their use for conversion to liquid fuels rather than the utilization of metallurgical coking coal and other high-grade solid fuels that are in great demand for industrial and domestic use and will be exhausted long before the lower ranking fuels found west of the Mississippi River."

Kindly see that the above answer by the Assistant Secretary is incorporated in the record of the afore-mentioned committee hearing.

Sincerely,

N. H. COLLISSON,
Special Assistant to the Secretary.

The Bill of Rights

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1947

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the New York Times of December 14, 1947:

THE BILL OF RIGHTS—ANNIVERSARY OF THE FOUNDATION STRUCTURE OF OUR FREEDOMS NOTED

(The writer of the following letter is historian of the Bill of Rights Commemorative Society.)

To the EDITOR OF THE NEW YORK TIMES:

On Monday the Bill of Rights, which is the foundation structure of our American freedoms, will have been in operation and a counterpart of the Constitution for 156 years. By the action of the Legislature of the Commonwealth of Virginia, as the necessary three-fourths of the States for its adoption, the Bill of Rights became part of the law of the land on December 15, 1791.

Within the past fortnight we have read the World Bill of Rights, a concise document of 10 articles and about 400 words, drafted by a committee of the United Nations. It was patterned after our own Bill of Rights, as originally written here in New York, when this city was the Capital of the new Nation in 1789. Our Bill of Rights, while a product

of the people through their legislative assemblies and their elected Representatives in Congress, was drafted under the direction of James Madison, then a Representative in Congress from Virginia, as its master architect.

Madison, who had more to do with the writing of the Constitution than any other man, was well aware of the absence of a bill of rights in the Constitution, and it was he who first brought up the subject of a bill of rights in Congress only 5 days after the Government under the Constitution had come into being, and it was he who engineered its legislation through to its final passage by Congress in 1789 and its necessary ratification by a sufficient number of the States 2 years later.

GUARANTIES OF LIBERTY

Most of the people think of our Bill of Rights as consisting of only the first 10 amendments to the Constitution, but it is much more than that. Since these amendments, collectively known as the Bill of Rights, were first adopted, 11 other amendments have been added to our Constitution, and 6 of them are just as much a part of our Bill of Rights today as though they had been included in the original charter of liberties.

If one will carefully study the last 11 amendments to the Constitution, he will find that 6 of them vitally concern the rights and freedoms of "we the people." They are the thirteenth amendment, the fourteenth and the fifteenth, relating to the abolition of slavery, citizenship, due process of law, equal protection of the rights of the citizens, and the rights of the citizens to vote. These are known as the Civil War amendments. Even the eighteenth and twenty-first amendments relate to the rights and privileges of the people, and are known as the prohibition amendments. The nineteenth amendment, giving suffrage to all citizens, irrespective of sex, certainly belongs to our Bill of Rights. This amendment upset the voting laws in many State constitutions.

Possible exceptions to certain amendments which might be excluded from our Bill of Rights are the eleventh, relating to lawsuits against the States; the twelfth, regarding the method of electing the President and Vice President; the sixteenth, giving Congress the power to levy and collect taxes on incomes; the seventeenth, changing the mode of the election of Senators to the vote of the people; and the twentieth, known as the lame-duck amendment, which changed the terms of office of the President, Vice President, and the Members of Congress and the times when they should take office.

There have been some decisions of the United States Supreme Court which have altered the original intent of some of the amendments. For instance, the meaning and scope of the first amendment, which is the soul of the Bill of Rights. This amendment decrees, in part: "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof." If looked at in the light of its history and the evils it was designed forever to suppress, it is found that it has several times been elaborated by decisions of this court prior to the application of the first amendment to the States by the fourteenth amendment.

RIGHTS OF STATES

Every State in our Union today has its own bill of rights, but of course, the Federal Bill of Rights is paramount to them all. This first amendment did not, in its intent, prevent an individual State from setting up a State church or establishing a State religion, and for many years after the adoption of the Bill of Rights some of the States, notably Massachusetts and Connecticut, compelled the people to support certain religious denominations designated by State statutes. These two States never ratified the first 10 amendments until 1939.

Prior to the adoption of the fourteenth amendment, on July 21, 1868, the first amendment did not apply as a restraint against the States, and even since the adoption of the fourteenth amendment there have been several decisions of our Supreme Court upholding State laws respecting the first amendment and interference by the Federal Government, but in late years this Court, in decisions based upon the due-process-of-law clause in the fourteenth amendment, declares: "Neither a State nor the Federal Government can set up a church. Neither can pass laws which aid one religion, aid all religions, or prefer one religion to another. Neither a State nor the Federal Government can, openly or secretly, participate in the affairs of any religious organizations or groups or vice versa."

This reversed former decisions regarding States' rights. It is interesting to note that church and state were not separated in Massachusetts until the abolition of taxation for the support of religious worship in 1833, nearly half a century after the adoption of the Federal Bill of Rights.

On the eve of the anniversary of the adoption of this great monument of freedoms which we enjoy, let us be reminded of the words of John Adams: "You have rights antecedent to all earthly government; rights that cannot be repealed or restrained by human laws; rights derived from the Great Legislator of the Universe." Although these rights are inherent, it took legislative action to guarantee and secure them to us, and for that reason governments were instituted among men. The Magna Carta of 1215, wrested by the barons from King John, was the first written guaranty of the inalienable rights of man.

At the present time in the world there is a battle waging between one faction to preserve constitutional government, so erroneously called democracy, instead of a republican form of government, and another faction which wishes to sow the seeds of communism throughout the world. We, in this Republic, and those in the other English-speaking nations have a bill of rights, while those who live beyond the iron curtain, and in a land of slavery, have no bill of rights. They are not allowed to know the meaning of the inalienable rights of man. Their freedoms have been buried and every act of their lives has been regimented by the state.

We, here in this land of freedom, must not at this or any other time, forget the words of Thomas Jefferson, inscribed in bronze in Union Square, for the Reds and all others to read, and which say: "How little do my countrymen know what precious blessings they are in possession of and which no other people on earth enjoy."

ELIZUR YALE SMITH.

NEW YORK, *December 7, 1947.*

The Stabilization Bill

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1947

Mr. KEFAUVER. Mr. Speaker, on Monday when House Joint Resolution 273, the Republican stabilization bill, was under consideration, it was vigorously stated by many Members of the House that the antitrust law should not be relaxed. It was pointed out that the small businesses of the Nation would suffer from such an abrogation of the antitrust laws. This view is shared by the National Federation of Small Business, Inc., a great and hard hitting small business association. The views of this organization will be helpful in the further consideration of this and other similar proposals.

In a speech to the House on this subject when the bill was under consideration, I stated that the principal sufferers from emasculation of the antitrust law would be the small businesses of the Nation. It is quite evident that the National Federation of Small Business, Inc., which is always active and courageous in defending the interest of the small businessman, has the same view.

The statement of the National Federation of Small Business, Inc., released by George J. Burger, director, on Monday, December 15, is as follows:

The National Federation of Small Business, Inc., today protested vigorously against antitrust exemption measures reportedly being incorporated in so-called voluntary antiinflation programs. In identical telegrams to President Truman, the majority and minority leaders of both the Senate and the House, and the chairmen of the Republican and Democratic National Committees, Federation President C. W. Harder warned that antitrust exemptions "have always worked effectively to suppress free, competitive enterprise and its practical expression, small, independent business."

In his message, Mr. Harder declared that there is but one difference between the program already presented by the Democratic Party and that reportedly under preparation by the Republican Party. That difference, he said, is one of control. Mr. Harder said that the Democratic Party program "would establish government monopoly control with industry assistance," while the reported Republican Party program "would establish industry monopoly control with government assistance" over the Nation's economy. Both programs, he asserted, would speed this Nation on a sure road away from our present system of free, competitive enterprise, the system on which our present democracy is based.

Mr. Harder asserted that alarm felt by small, independent business over developments in so-called antiinflation programs has been but heightened by failure of the present administration to implement the terms of Senate Concurrent Resolution 14 (which recommends small, independent business representation in Government) and failure of the majority party to take active interest in the measure.

He charged that in considering antitrust exemptions and thereby moving away from the system of free, competitive enterprise, both parties are disregarding the clear lessons of history that free enterprise alone is capable of producing adequately to meet demand. In this respect, he said, the programs will but intensify current inflationary dangers."

Mr. Harder called attention to the fact that the Nation-wide small business membership of the federation, the largest individual membership of any business organization in this Nation, has voted "overwhelmingly against any weakening of Federal antitrust laws, that it has voted overwhelmingly in favor of sincere, consistent, hard-hitting use of these laws." He called attention also to the fact that the federation membership has voted overwhelmingly in opposition to any siphoning off of scarce commodities from our domestic market for use as foreign relief.

Following is text of Mr. Harder's telegram:

DECEMBER 12, 1947.

The National Federation of Small Business, Inc., is greatly alarmed over reports that the Republican Party will sponsor a so-called voluntary antiinflation program permitting industry to enter into agreements to ration distribution of scarce commodities free from fear of Federal antitrust action.

Attention is called to the fact that this reported program is strikingly similar to the program advanced by President Truman November 17, with the only essential difference being that of control. The Democratic Party program would establish Government monopoly control with industry assistance over the Nation's economy. The reported Republican Party program would establish industry monopoly control with Government assistance over the Nation's economy.

In these respects the Democratic program would tend toward ultimate establishment of some form of state socialism, and the reported Republican program toward ultimate establishment of some form of industrial fascism. Both programs would speed this Nation on a sure road away from our present system of free, competitive enterprise, that system on which our present system of democratic government is based. In this regard, attention is called to the fact that antitrust exemptions have always worked effectively to suppress free, competitive enterprise and its practical expression, small, independent business. There is no valid reason to assume that such exemptions will not continue to be so used. The alarm felt over the programs being advanced by both parties is but heightened by consideration of the fact that to date the administration has not moved to assure bona fide small business representation in councils of government as recommended by Senate Concurrent Resolution 14, passed by Congress almost 6 months ago, and that little active interest in the implementation of this resolution has been evidenced officially by the Republican Party.

Attention is called also to the fact that both programs obviously ignore the reality taught repeatedly by history, namely, that free, competitive enterprise alone is capable of increasing production to the point of meeting demand, that any checks on this type of enterprise represent effectively either forced curtailment of production or prevention of its reaching its full potential. In this respect, the programs will but intensify current inflationary dangers. It may be said that proposals for antitrust exemptions represent advantage taking on the part of monopoly-cartel groups capitalizing on groundwork laid by Government bureaucratic and internationalist parties. Responsibility for any resultant damage to individual liberties and freedom of opportunity here must be borne clearly by all factors, Democratic and Republican, who sponsor and approve such programs.

Let it be understood very clearly that the Nation-wide membership of this organization, which is the largest individual membership of any business organization in this Nation, has voted overwhelmingly against any weakening of Federal antitrust laws, that it has voted overwhelmingly in favor of sincere, consistent, hard-hitting use of these laws. Let it be understood also that this membership voted overwhelmingly in opposition to any siphoning off of scarce commodities from our domestic market for use as foreign relief. We urgently request that this great, important segment of our public and this definite cross-section of business be recognized and given consideration in preference to the relatively tractable and relatively small group representing big monopoly enterprise who always run to Government for help in time of danger, and who, when their tactics bring chaos to our Nation again, will run to Government asking to be bailed out just as they have done during previous emergencies.

We are compelled to warn that once the damaging consequences of the proposed programs become evident, it is a certainty that small, independent enterprise and all freedom-loving citizens will rise in arms against their sponsors. We are compelled to warn, too, that the fruits of these programs may well prove a fertile field in this Nation for the growth of communism, that very system of misgovernment and faulty way of life against which we are trying to insulate ourselves.

In all considerations of the twin problems of antitrust exemptions and foreign aid we hope you will ever keep foremost in your mind the following question: What does it profit a nation to attempt saving the world, if in so doing it suffers the loss of its immortal soul?

C. W. HARDER,
President, National Federation of Small Business, Inc.

National Park Service

EXTENSION OF REMARKS
OF

HON. SCHUYLER OTIS BLAND

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1947

Mr. BLAND. Mr. Speaker, the National Park Service celebrated its thirtieth anniversary in 1946. Although a relatively young agency of the Government, the Service now administers a very considerable Federal estate, conservatively valued at around $1,000,000,000. These holdings comprise the outstanding areas of scenic, scientific, and historic interest in the United States.

When the Congress assigned responsibility for the administration and protection of these areas to the National Park Service, it gave specific instructions which continue after 30 years to govern the Service in its policy of caring for this large Federal estate. This policy is set forth in the act of August 25, 1916, to establish a National Park Service in the following words:

> The Service thus established shall promote and regulate the use of the Federal areas known as national parks, monuments, and reservations by such means and measures as conform to the fundamental purpose of said parks, monuments, and reservations, which purpose is to conserve the scenery, the natural and historic objects, and wildlife therein and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations.

The act of 1935, which provides for the preservation of historic sites, declares it to be a national policy to preserve for public use historic sites, buildings, and monuments of national significance for the inspiration and benefit of the people of the United States.

In the travel year which ended September 30, 1947, more than 25,000,000 visitors had been accounted for in the national parks and monuments. This figure compares with 21,000,000 visitors to the parks in the peak year of 1941. Even in the face of this considerable increase in visitation to the parks, the National Park Service is nowhere near as well equipped to take care of the visitors as it was before the war. In 1941 we had the services of several thousand CCC boys, not simply for construction and development, but for a large degree of maintenance. Even leaving this out of account, the funds available in 1948 fiscal year are by no means sufficient to permit staffs or service equivalent to that had before the war. Considering the rise in costs of services and materials there is less now for administration, protection, and maintenance than there has been during past years. Repair and rehabilitation of structures and facilities which was started in 1946 has by no means been completed.

Conditions of the many park buildings, the 5,387 miles of roads and 7,218 miles of trails, are so bad that normal maintenance will not suffice. Major reconstruction is necessary. In view of these conditions little new construction has been possible. Under such circumstances, such normal functions as interpretation, research, and printing of publications for which there are requests by hundreds of thousands has had to remain on a reduced and inadequate scale.

In addition to the conditions which result from inadequate maintenance during the war years, the increased visitation to National Park Service areas since the war, brought about by the popularity of the parks, plus the physical impact of these visitors on the areas themselves, create a serious problem. While it is partly true that scenery is a resource that can be used over and over again without impairment, overuse, especially when aggravated by misuse, can be very destructive. At Yellowstone, for example, the indiscriminate tramping of the feet of 800,000 visitors in the geyser basins as at Old Faithful last year caused perceptible damage that would be cumulative if allowed to continue year after year.

In the same way the home of Franklin D. Roosevelt at Hyde Park, after 1 year in which it had over half a million visitors, the stairways had already started to give way under the strain. In order to protect the national park areas sufficient funds for adequate repair and maintenance of existing facilities are a necessity, as are also allotments for physical improvements and personnel to provide service to the public.

One of the most serious problems facing the National Park Service at the present time is the presence of some 554,000 acres of non-Federal lands within the boundaries of the national parks and monuments. Such alienated lands prevent sound development and economical administration of many areas and constitute a constant threat to their integrity. The Service tries to acquire these lands through direct purchase when funds are available and through land exchanges where possible. The lack of regular appropriations for an acquisition program has been a great obstacle. Such a lack makes many timely purchases on a buyers' market impossible and frequently results either in the Government having to pay a high price for an area under specific appropriation

from Congress or in losing an opportunity to purchase entirely. It is now estimated that between $1,250,000 and $1,500,000 annually for a period of as much as 20 years will be required to eliminate the non-Federal lands in the National Park System.

The areas in the National Park System are truly national in significance. To round them out and to accord them proper protection, impossible with this tremendous acreage of non-Federal land within them, is a national responsibility. Delay in starting a regular orderly program of acquiring these private lands involves at best large increases in costs because of increases in land prices and the expensive developments being placed upon them. At worst it means that scenic and historic resources that should be preserved are destroyed or are so modified as to lose the character that gives them park value. In either event the people of the United States are the permanent losers.

What is true of the National Park Service as a whole is proportionately true of individual areas. The Fredericksburg National Military Park will serve as a good illustration. This park was established by an act of Congress approved February 14, 1927, Public No. 609, Sixty-ninth Congress, which reads:

That in order to commemorate the Civil War battles of Fredericksburg, Spotsylvania Court House, Wilderness, and Chancellorsville, including Salem Church, all located at or near Fredericksburg, Va., and to mark and preserve for historical purposes the breastworks, earthworks, gun emplacements, walls, or other defenses or shelters used by the armies in said battles, so far as the marking and preservation of the same are practicable, the land herein authorized to be acquired, or so much thereof as may be taken, and the highways and approaches herein authorized to be constructed, are hereby declared to be a national military park to be known as the Fredericksburg and Spotsylvania County Battle Fields Memorial whenever the title to the same shall have been acquired by the United States, the said land so to be acquired being the land necessary for a park of the plan indicated * * * and authority is hereby given * * * to acquire * * * the land above mentioned, * * * together with all such existing breastworks, earthworks, gun emplacements, walls, defenses, shelters, or other historical points * * * and together also with such additional land * * * for monuments, markers, tablets, roads, highways, paths, approaches, and to carry out the general purposes of this act. As title is acquired to parts of the land herein authorized to be acquired, the Secretary of War may proceed with the establishment of the park upon such portions so acquired, and the remaining portions of the lands desired shall be respectively brought within said park as titles to said portions are severally acquired.

And further that—

It shall be the duty of the commissioners, under the direction of the Secretary of War, to survey, locate, and preserve the lines of the opposing armies in said battles, to open, construct, and repair such roads, highways, paths, and other approaches as may be necessary to make the historical points accessible to the public and to students of said battles and for the purposes of the park, to ascertain and mark with historical monuments, markers, tablets, or otherwise, * * * all breastworks, earthworks, gun emplacements, walls, or other defenses or shelters, lines of battle, location of troops, buildings, and other historical points of interest within the park or in its vicinity.

Proceeding under this authority the Secretary of War and later the Secretary of the Interior—the obligation having been transferred to the National Park Service in 1933—acquired land, built roads and trails, located and cleared earthwork lines, gun pits, and battery positions, put up markers and maps, constructed a few essential houses—among them a headquarters museum building—and recruited a small permanent staff in order that the park might be afforded a minimum of maintenance, protection, and interpretation. All of this was accomplished prior to 1941. Beginning with that year, due to the end of the Civilian Conservation Corps program, and the preparations for war, a period of retrogression set in. This was due, of course, to the fact that sufficient funds were not at hand with which to pay the costs involved. The staff was reduced; funds were not available to pay the wages of temporary employees nor to purchase necessary materials and supplies; and worn-out equipment could not be replaced. As a result the whole physical plant, houses, roads, markers, and maps, and so forth, fell rapidly into a state of disrepair; the open fields on which the battles were fought grew up; earthworks, gun pits, and battle lines were hidden by seedling pine, weed, and briar growth; and the condition of the national cemetery fell to a new low. By dint of hard work, many overtime hours and some night work for which no extra compensation was claimed, and judicious use of a depleted appropriation, something has been done in the way of a come-back. However, the task now becomes more burdensome month by month and the feeling of never being able to catch up, much less stay abreast, is overwhelming. The truth is unescapable. The purposes of the enabling act have not been carried out. The park has not been developed as fully as was intended, nor can even the present establishment be maintained, protected, and interpreted as it should.

The following data are listed for the purpose of bringing you up to date on the Park's development:

First. There is a total of 2,433 acres. This includes the Stonewall Jackson Shrine—house in which General Jackson died—property of 10 acres which was donated by the Richmond, Fredericksburg & Potomac Railroad; the Wadsworth Monument and site of fifty-seven one-hundredths of an acre, which were donated by Congressman JAMES W. WADSWORTH and his sister, Mrs. Harriet W. Harper; two plots totaling 164 acres on the Spotsylvania field, which were donated by Mr. E. T. Stuart and the Military Order of the Loyal Legion of Philadelphia; 48 acres constituting the Jackson Trail, which were donated by local persons; several smaller gifts by local persons; and in the national cemetery of 12 acres, which was transferred from the War Department.

Second. There are 18 buildings valued at $105,548. These include the Jackson Shrine, which was built about 1845; the Cemetery Lodge, built in 1867; and the Administration-Museum Building, built in 1937.

Third. There are 32.70 miles of roads which were built at a cost of $554,154.

Fourth. There are 21.96 miles of trails, foot, bridle, and fire.

Fifth. There are 13 monuments.

Sixth. There are approximately 200 narrative markers and maps.

These items are the background of the narrative program. There have been 836,847 visitors to the park during the past 10 years. Since there is no guide system in use here, and since the interpretative staff consists of only two historians, the vast majority of these persons received no first-hand service. Visitors, therefore, depend upon the markers, maps, and the threefold leaflet for whatever information they desire.

Seventh. There are approximately 75 traffic and regulatory signs.

Eighth. There are 66 miles of road shoulders to be mown.

Ninth. There are 66 miles of roadsides to be mown.

Tenth. There are approximately 300 acres to be mown.

Eleventh. There are approximately 13 acres of lawn to be mown.

Twelve of these are in the national cemetery, about one-fourth of which is terraced. This adds to the maintenance cost.

Twelfth. There are 6,765 headstones which must be cut around on an average of five times each growing season and cleaned, by hand, once each year.

Shrubs and trees come in for their share of attention also. Altogether the cemetery is the most expensive single maintenance problem. Approximately one-sixth of the entire parks and monuments appropriation goes for this purpose.

Steps needed to carry out the purposes of the act are:

First. Acquisition of approximately 1,750 acres of land:

Fredericksburg, 500; Chancellorsville, 250; Wilderness, 1,000; Spotsylvania courthouse, none. These additions are essential to the interpretation of the fields, but more particularly for protection of the existing park holdings and for the elimination of present and anticipated administrative problems.

Second. Construction of:

(a) Fire hose reel house.

(b) Shops and fire equipment building.

(c) Materials storage building.

(d) Warehouse for supplies.

(e) Equipment storage building.

This would afford a centralized fireproof employee protected utility group from which maintenance activities could be conducted at considerable saving over the present inadequate scattered system. It is necessary from the standpoint of good business and efficient administration. Several of the present temporary buildings would be eliminated and adequate storage and repair buildings would take their place.

Third. An approximate increase of $7,500 in the yearly administration, protection, and maintenance appropriation is needed in order to pay the wages of the employees, necessary to maintain and protect the Jackson Shrine National Cemetery and remainder of the Park.

Acquisition of the needed land and construction of the utility group will not increase the cost of operation. In fact, the elimination of administrative problems and the centralization of maintenance activities will make it possible to do a better job at an appreciable saving.

Construction of Headwater Dams on Ozark Streams

EXTENSION OF REMARKS
OF
HON. PARKE M. BANTA
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1947

Mr. BANTA. Mr. Speaker, thousands of Missouri farmers who live along Missouri's beautiful crystal-clear Ozark streams share with Mrs. Dixon, author of the article published December 11, 1947, in the Van Buren Current Local, the fear that all too soon the proposed program of the Army engineers for building high dams across these streams will make them "displaced persons."

They know what has already happened to those who have been forced out of the areas now inundated, and those soon to be inundated, as a result of the dams constructed and those in the process of construction.

They are doubtful of the value of these projects. They think in most cases they will not be effective flood-control projects; they think, too, that, considering all the factors, they will not prove their worth as hydroelectric projects. They know that these projects will destroy, or at least take from, the present recreational facilities rather than add to them.

They are not unwilling to make all reasonable sacrifices for the public welfare, but they do believe that no projects should be approved by the Congress which do not assure value received for all expenditures, and adequate consideration for those who may be displaced as the result thereof.

I hope each of you will read Mrs. Dixon's article, which follows:

CONTROL DESTRUCTIVE FLOODS WITH HEADWATER DAMS

My home is a farm along the shore of Current River, one of the most beautiful rivers in Missouri. Its water, supplied by many of the largest springs in the State, is cold and crystal clear. It flows along at a very rapid rate as the name "Current" River would indicate.

In the summer's sun it laughs and sparkles. Then we all go to the river where it is cool in the dense shade along its banks—some of us to fish—some to swim or boat ride—some to wade or play in the bright gravel bars. Others just relax and watch fish splash out in the current and the boats go by. Sunday afternoons we expect to meet many of our friends at the river.

The river ripples over shoals where the vari-colored gravel bottom invites one to wade out and play. It swirls and foams around sharp bends, bars, rocks, and "root-wads" (fallen trees that have lodged) making boating exciting and for inexperienced boatmen dangerous. Then there are stretches of quiet water, deep and blue, where good swimmers like to dive and swim but where I have the desire to sit very still and not rock the boat.

Of its many moods our river is never somber. It is lovely flowing between banks draped with summer's deep green—spring's lacy freshness or autumn's brilliant hues, and when winter's snow blankets the shores. When the leaves fall interesting rocky bluffs may be seen more plainly. Bare white sycamore branches decorated with mistletoe, shaggy birches, evergreens and other trees accent the scenes. Even in a gray, drizzling rain or a downpour the river seems alive and dancing.

But in times of flood the river becomes a wild and wicked thing. It roars and foams and tosses great uprooted trees down stream in a tearing hurry. It is then a giant we all look upon with dread, and very few dare go out upon it.

Some people have made plans to harness this giant by building great dams 200 feet and more high up to 3,000 feet long. They had hoped to impound this flood water in reservoirs nearly 50 miles long. Engineers have said this can be done at the cost of many millions of dollars to the people and that some land below the dams would have some protection from floods and some partial protection. They propose a dual-purpose dam to control a "power pool" at 430 feet sea-level elevation and above that a "flood pool" capable of holding water up to 457 feet elevation, or 27 feet higher. Army engineers admit it may take as long as 90 days to let out all the flood-pool water to power-pool level if both Doniphan and Blair Reservoirs become filled. And we may expect floods any time of the year in Missouri.

To many of us this does not seem like a very practical flood-control project because the whole of our Current River Valley would be laid waste by water impounded behind these great dams.

We believe the permanent loss of production by dams exceeds the occasional loss from floods. Engineers admit that they secured no estimate of the annual production from our farmers and forests they planned to permanently destroy. Under their plan all our homes and valley farms would be gone and Congress can allow money to pay for these farms which we would be forced to sell or leave only the cash value set by a board of appraisers, and this sum must be within a certain amount set aside for that purpose. Under present laws we cannot claim nor expect to receive any damage or any other compensation for moving expenses or for any other losses. It is get out or go under. Once Congress has approved these projects there is nothing we can do to save our homes. If it is the only way and really for the public welfare (this has not been proven) our Nation could afford to do better by those who make the sacrifice than this.

Since flood control is no doubt needed there are other methods which can be applied on the entire Current River watershed as well as other watersheds of a similar nature. Some of these methods are gaining Nation-wide notice, such as the great movement for soil conservation. I believe that soil conservation was the first commandment God gave to Adam and Eve when he told them to "dress the garden and to keep it" (Genesis 2: 15). We can use soil conservation measures on all our farms and can reap the benefit from them but unlike many of our agricultural sections like the rolling plains where most of the land surface can be tilled, Current River watershed is made up mostly of wooded hills. Soil-saving practices on our farms alone will not be sufficient in holding water run-off from many square miles of forest. For these wooded regions the idea of ravine reservoirs or check dams and basins in our long, narrow valleys leading down to the creeks which in turn carry water to the river is rapidly gaining favor as a practical measure to halt flood water before it reaches the river at all, thus making the proposed big dams on any river obsolete. Once such a course has been decided upon these small reservoirs could be erected more speedily than the great dams.

Long, narrow valleys, ravines, or hollows run between every one of our ridges of wooded hills. They vary from 1 to 5 and 6 miles in length. All lead to the river, to creeks or to farms. There is no farm land in them. During rains water rushing out of them washes away much farm land and floods the river. Most of the year they are bone dry.

One, two, or any number of cheap earthen dams could cross these narrow valleys. The upland timber should benefit from water held longer in the hill regions in dry seasons. Our farms might possibly benefit from some seepage. Stock and wildlife would be sure to benefit.

There is much fine food for all kinds of game back in the hills but very few water holes. Many small lakes would provide nesting sites for ducks, breeding ponds for frogs and water for deer, squirrel and all other wildlife that now in dry seasons must crowd to the river, migrate or face extinction. Water held back between the hills would also stop many forest fires.

If these small reservoirs ever filled up with silt and blown leaves, new, rich plots of land would be formed. Then the dams might be made higher or others built between or above them.

Not being an engineer, I leave all discussion as to the construction, size, and outlet control of these small reservoirs to others who are trained in work of this kind.

VIOLET M. DIXON,
Member of Current River Chapter, Ozark Protective Association.
BENNETT, MO.

The Housing Shortage

EXTENSION OF REMARKS
OF
HON. WALTER B. HUBER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1947

Mr. HUBER. Mr. Speaker, a great deal has been said and written about the housing shortage in the United States.

I feel the logic contained in Mr. Ketchum's eloquent Christmas greeting sums up the situation better than any statement that has come to my attention:

As I pause to extend greetings, I am conscious the present is not dissimilar to a day nearly 20 centuries ago when a Holy Mother found no room for her Babe in the inn. The shortage of housing was acute then. Centuries have not improved conditions much. Builders' greed, landowners' avarice, and social inequalities still menace the future. Although babes and children are being reared in quonset huts and in hovels, let us look toward a time when there will be room in the inn, and when all our people can have a happy Christmas. As we press hopefully toward this end may we become conscious of a new joy.

OMAR B. KETCHUM,
Director, Veterans of Foreign Wars, National Legislative Service.

The Marshall Plan

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 18, 1947

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith comment on the Marshall plan made in a radio broadcast this morning by Mr. George E. Reedy, news commentator, over the Mutual station, WOL:

The debate on the stopgap foreign-aid bill is all over except the shouting and a slight argument on the money to be provided. In the wake of its passage, however, are very clear indications that the Marshall plan is in deadly peril.

Some of the top political guessers on Capitol Hill claim that it could not pass the House today. It might fare a little better in the Senate, which is traditionally more internationally minded. Even that, however, may be a different picture by spring.

The Marshall plan is bucking one of the strangest coalitions in American history. It has walked into a withering cross-fire from both the right and the left. For once extreme conservatives and Communists find themselves in complete agreement.

Both groups want the Marshall plan defeated. Their reasons, of course, are completely different. Nevertheless, they will find themselves standing shoulder to shoulder when the big debate starts next spring.

The two groups won't find each other comfortable bedmates. There are no signs, however, that this will cause either one to relent. Both are determined to follow their course, and if they find themselves with strange companions, it won't bother them.

The Communists will be the least embarrassed of the two. They have always stood ready to take help from any source, even from those they call their enemies. There are even some cases where they joined with the Nazis during Hitler's early days.

The Reds see in the Marshall plan a stumbling block for their plans for world domination. They are afraid that this country may actually be able to stabilize democratic governments in western Europe. This would be fatal to their schemes.

Of course they put it in a different way. They say that the Marshall plan is a scheme to give the United States imperialistic control over the world. This is a strange charge to levy against a nation that has renounced colonial empire.

The conservatives oppose the Marshall plan from an entirely different viewpoint. First, they do not believe that the Communists can take over all of Europe and then threaten this country. They think the Soviet Union will be stopped before that.

Proceeding from that basis, they believe that the plan represents too heavy a drain on the resources of the United States. Continuous exports of vital goods may weaken this country to a point where it could not resist the Soviet Union, they claim.

Finally, they are worried about the prices that are soaring into the stratosphere at jet-propelled speed. They think that cutting down on exports would put a brake on those prices and send some of them down.

Between the two groups the Communist opposition, of course, presents the least threat to the Marshall plan. If anything, it is likely to improve its chances. The left-wing riots in Italy and France did much to push through the stopgap aid bill.

The Communists may make some major attempt to take over another European government between now and April. If they do, the prospects for passage of the Marshall plan are good. Some observers, in fact, think there are no other prospects.

Whatever happens, the political alinements in the coming debate will be interesting. For once we will watch the left wing and the right wing marching in perfect though uncomfortable harmony. The middle-of-the-roaders could easily get lost in the parade.

Confirmation of Cates To Head Marines Is Urgent

EXTENSION OF REMARKS
OF
HON. GEORGE W. SARBACHER, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 18, 1947

Mr. SARBACHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an excellent and timely editorial from the Philadelphia Inquirer. During my service in the Marine Corps, I had the honor and privilege to serve under Maj. Gen. Clifton B. Cates. He is truly one of history's greatest combat field officers, possessing a distinguished record, both in peace and war.

I am sure his selection by President Truman has met with wholehearted approval by all marines, past and present.

The editorial follows:

CONFIRMATION OF CATES TO HEAD MARINES IS URGENT

Among the important Presidential nominations pending before the Senate is that of Maj. Gen. Clifton B. Cates to be Commandant of the Marine Corps. Because of the vital character of the Corps as the first line of America's military defenses, this nomination should be acted upon without fail before the present special session of Congress adjourns Friday.

This distinguished officer, in his early fifties, is well known in Philadelphia, having lived here during part of the Second World War period. His battle record as a high-ranking general during the war was notable—he led Marines in some of the most perilous landings and through part of the most terrible struggles with the Japanese in the Pacific.

Then a colonel, General Cates commanded the First Marine Regiment in the desperate fighting on Guadalcanal from August 7 to December 15, 1942, and received the Legion of Merit for his outstanding record in that fierce contest with some of Japan's best fighting men.

General Cates served, again with great distinction, as commander of the Fourth Marine Division on Tinian Island in the summer of 1944 and later, at the head of the same division, served under "Howlin' Mad" Smith in the battles for Iwo Jima. He received the Navy's Distinguished Service Medal for the Tinian campaign and a Gold Star in lieu of a second Distinguished Service Medal after Iwo Jima.

Here, then, is a man of extraordinary experience in battle, particularly the amphibious warfare by which the Marines covered themselves with glory in the last war, as in many before it. General Cates, who has been a Marine more than 30 years, was twice wounded in the First World War, at Belleau Wood and Soissons. Recently he has commanded the Marine Corps School at Quantico, Va.

There is work of great importance to be done to perfect the Corps and its reserves as an ultrapowerful striking force. It is appropriate that an officer in the prime of life, of wide administrative and battle experience, should be designated for the place, and it is essential that his nomination should be promptly confirmed and not allowed to lie over until the regular session of Congress.

Ten-Thousand-Dollar Minimum on War Veterans' Homes

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, December 15, 1947

Mr. WEICHEL. Mr. Speaker, when the Congress made the law for the sale and disposition of surplus lands it was not contemplated that those employed in the sale of surplus property should carry on activities that tend to perpetuate themselves in bureaus forever. Such activities as going in the real-estate business for the purpose of perpetuating themselves is not contemplated in the sale of surplus property.

The law enacted by Congress was intended to give war veterans preferred opportunity because they had served our country. But in the administration and sale of surplus property, the War Assets Administration has made it very hard and almost impossible for these war veterans to purchase what they have earned by special services to our country.

Mr. Speaker, the War Assets Administration in going into the subdividing and platting of lands at the Plum Brook Ordnance Works, Sandusky, Ohio, made the following restrictions:

No dwelling costing less than $10,000 as of May 1947 shall be permitted on said premises, and the ground floor square foot area thereof shall not be less than 750 square feet in the case of a one-and-one-half- or two-story structure.

The foregoing restrictions shall be binding and remain in full force and effect until January 1, 1995.

Mr. Speaker, I protest and resent the willful activities of the War Assets Administration in platting lands and having such plats approved as for the best interests of the Government, because it works a special hardship on war veterans by placing a minimum of $10,000 on a veteran in his effort to build a home. Such conduct on the part of the Government bureaus against war veterans is beyond comprehension. The average veteran would have no chance whatsoever of purchasing the land and erect a home costing $10,000. The average war veteran is not able to purchase real estate and a home for one-half that amount. Mr. Speaker, the Congress appropriates money to assist war veterans in building homes for themselves and here we have the War Assets Administration doing everything it can to stop the veteran by placing a $10,000 restriction exclusive of the purchase of the land, lasting until January 1, 1995.

Mr. Speaker, I am asking that the activities of the War Assets Administration with reference to its real estate transactions be immediately investigated and all sales be stopped pending such investigation and amendments to existing law.

Veterans' Housing

EXTENSION OF REMARKS
OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1947

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statements:

REMARKS OF NATIONAL COMMANDER OF THE AMERICAN LEGION, JAMES F. O'NEIL, BEFORE THE HOUSE COMMITTEE ON VETERANS' AFFAIRS ON H. R. 4488, VETERANS HOMESTEAD ACT OF 1948, ON DECEMBER 18, 1947

Madam Chairman and members of the House Committee on Veterans' Affairs, it is a genuine pleasure and privilege for me to appear before you. Your committee is considered by all veterans to be their champion in Congress; not because of the committee's name nor because of its congressional jurisdictional responsibilities, but in fact because of the committee's sympathetic and complete understanding of veterans' problems, and its fair and expeditious handling of legislation designed to assist the veteran in solving the many issues confronting him. I know that this committee will always continue to be the veterans' champion in Congress.

Today the most serious problem confronting our veterans is the subject of housing. This is not a new problem—it has been with us since VJ-day; in other words this problem has been confronting us for 28 months.

I do not mean to infer that nothing has been done during this interval to relieve the over-all housing problem confronting our country. Much has been done by private enterprise as is proved by the number of houses constructed so far during 1947. Present building statistics indicate that over 800,000 new homes have been constructed during the first 11 months of 1947. While the eventual solution of the over-all housing problem is making headway, I am sorry to say we are still marking time in finding a solution to the veterans' housing problem.

In my judgment one of the reasons we are marking time, is that the veterans' housing problem has been injected into politics along with public housing. We believe that the issues must be separated and the veterans' housing plight considered by itself.

As you all know Congress has determined that veterans will and must have priority in the rental and purchase of homes. Despite this intent of Congress, veterans priorities are not being exercised. Why? The American Legion prophesized this last spring when its Housing Committee stated: 'This year (1947) it is not likely to be the shortage of housing that will deprive the veteran of satisfactory homes, as much as it will be the high cost of adequate housing." The veterans are being forced out of the market by high costs despite their priorities. In my judgment this is the problem to which we must find a solution.

Another unfortunate reason for the failure of finding a solution to the veterans' housing problem is the indifference to the problem by the public, and, what is more unfortunate, the indifference to the veterans' housing problem expressed by some Members of Congress. Fortunately only a few Members of Congress do not appreciate and understand the veterans' problem. I would like to cite you a statement made by a Member of Congress which typifies the indifference of the public to this question. This statement was made in connection with a proposed sale of a war housing project, with priorities of purchase first going to veterans. I quote: "There is no good reason for the immediate sale of these projects. There are no subsidies involved. * * * To say that veterans not now residing in these projects should be given first priority in the purchase of these homes would be all fine if there were any place to which we could move the nonveteran families now residing in such projects." In other words the speaker states that the veteran should be obliged to be the one to worry rather than the nonveteran who, in many cases, resided in these homes during the war, earning war wages and who, in my judgment, should be in a much better position to compete in the real estate market under present day prices than is the veteran. This statement typifies the unwitting indifference of many people in this country to the veterans' housing problem.

Since we must be realistic and recognize these facts, the American Legion reevaluated the question and concluded that a solution must be offered so that a veteran who is unhoused or inadequately housed, having an average income, may find a place to live within his ability to pay. We believe the solution must be found for this within the pattern of our American system of democracy. We want the veterans of World War II to assume the leadership in solving their own housing problems once they are given the proper tools; and in my judgment, the veterans want this opportunity

While the American Legion is insistent that over-all price levels must be brought down, we are also equally insistent that the lowering of price levels can best be accomplished through the commonly known economic law of supply and demand. The accomplishment of this objective will take time and we believe too much time has already elapsed. For this reason we believe that this low-cost housing which we are seeking to achieve must be developed within the current economic level of present-day prices. We don't believe, in other words, that you are going to be able to roll back all price levels immediately. Therefore, we have approached this problem by accepting the facts and conditions as they are, and working with them as they are; not approaching the housing problem in a wishful way.

In January of 1947 the American Legion proposed that its posts carry out the American Legion community action program. Simply, this program called for the organization, in the local community, of nonprofit veteran corporations designed to obtain low-cost housing either through construction or purchase. The program was adopted by many American Legion posts throughout the country by enlisting the hard work and unselfish idealism of outstanding veterans, leaders in their own right in their local communities.

The success of those posts that did adopt the program was proof that the technique was one good answer to the veterans' housing problem if it could be formalized and given adequate supervision. The program also brought out into light the obstacles that face such a development; such as the difficulties in obtaining adequate as well as favorable financing, and the acquisition of land and the improvement thereof. It was determined during the operation of these nonprofit corporations that labor cooperated most willingly with the veterans which resulted in substantial savings through increased productivity of the workman. These operations also disclosed that savings were effectuated in the purchase of building materials, for the veterans' corporations found cash offers made such materials much more readily available, and somewhat more reasonably priced, when purchased in quantity. Even with these elusive factors which enter into the over-all cost of a home, some savings can be made through the technique of a veterans' nonprofit corporation. The factor of the speculative builders' profit is eliminated under this plan, and, because of the local public interest developed by the veterans, it was found that cooperation was experienced with building subcontractors, so that this group took a minimum of profit. These savings all added up to dollars off of the veterans' monthly rental of a home or the monthly amortization costs in those cases where the veteran was purchasing a home.

Two of the factors of cost entering into the over-all cost of a home, however, presented real obstacles to our nonprofit corporations. They are cost of finance and cost of improved land.

With reference to the cost of finance, I will not only comment on the cost aspect of finance but the great difficulties encountered by the veterans' nonprofit corporations in making arrangements for the interim financing which is absolutely necessary for the proper functioning of the corporation, as well as for the long-term financing, which is equally important.

I certainly don't want my remarks interpreted by members of the banking world as criticism of their practices and procedures. They have done yeoman service in the handling of loans made under the provisions of title III of the Servicemen's Readjustment Act of 1944, and are to be complimented for it. Statistics from the Veterans' Administration indicate that 1,089,201 veterans have exercised their privileges under title III of this act. But this service is not enough. The veterans' housing problem must be met with broader measures than those techniques employed under business-as-usual methods.

Because of the great increase in the final cost of a home, the vast majority of veterans are finding it impossible to obtain loans through the established channels. Our nonprofit veteran corporations found that it was with great difficulty, and only after furnishing ample collateral, that they were successful in floating large loans to provide the necessary interim financing. In many cases these loans were executed only after obtaining the endorsements on their paper of public-spirited citizens, at interest rates varying from 4 to 6 percent, and in some cases even higher.

Many of us who can remember the interest rates of the twenties feel that banks are now loaning money for housing at a very fair rate in present-day markets. I certainly believe they are. However, have you ever stopped to consider the difference in a 4-percent as compared to a 3-percent interest rate on a $10,000 mortgage. What does this 1 percent lower interest rate actually mean to a veteran in his monthly amortization rate if he is buying a house, or in his probable monthly rental rate if renting? As I have computed it, in this illustration, it would mean a saving to the veteran of $8 per month. This means something to the veteran.

Now let us consider land costs. We found that improved land in most urban areas in this country to be in very short supply and that which is available, has become altogether too costly. Builders of large housing projects tell us that the acquisition of improved land is daily growing more difficult of attainment and although it is still possible to acquire unimproved land there immediately arises the problem of improving the land used for building sites, as well as the even more difficult problem of providing ac-

cess roads, schools, fire stations, etc. They have informed us that the political subdivisions of States are in many cases extremely reluctant in providing these public facilities at their expense and the private developer generally does not find it feasible to undertake these facilities.

As I have stated previously we found that through the formation of nonprofit corporations sponsored by American Legion Posts, that it was possible to erect comfortable homes within the income of World War II veterans. Starting with this device, which has been proven, we developed the bill before you, H. R. 4488, and which we called the Veterans' Homestead Act of 1948. To formulate this technique, to give these associations adequate supervision, to provide a device for the acquiring of favorable financing, and to provide a procedure whereby improved building sites might be obtained at a fair and reasonable cost, the provisions of this bill were worked out.

Preliminary drafts of this bill were discussed with the best brains in investment banking, commercial banking, mortgage banking, real estate, Veterans' Administration, building suppliers, home builders, and other agencies of government and housing industry. I would like to say, however, that none of these people were called in as official representatives of their groups. We got no pledges, nor did we ask for pledges of their support. We merely asked for their ideas as individuals. Some of their ideas we accepted, others were amended and used while still others were discarded. I mention this because I want you to know that months of effort were expended to formalize this bill of 26 pages which lies before you.

I would rather not enter into a discussion of the technical provisions of this bill except to say, that I have studied the bill and am convinced that the provisions therein, if properly carried out, will provide our veterans with the proper tools to solve his own housing problems. I shall leave the technical explanation of the bill to others who will follow me and feel certain that with the information you will so gain that you will come to the same conclusion that I have: That the Veterans' Homestead Act of 1948 is truly a veterans' measure and will solve the veterans' housing problem.

We have been informed by well-qualified housing economists, as well as realty analysts, that the provisions of the bill are workable and that substantial savings will be realized by the ultimate user, particularly the projects that are built for rental purposes. One analyst has informed us that savings to the veteran in rentals will amount to $17 to $25 per month per unit. Savings in sale property should be realized up to 20 percent of capital cost. That is dollar-and-cent savings, not just empty words. The veteran can understand this. Furthermore, the plan will only cost the Government, for its 10-year operational period, $200,000,000 under its provisions for grants-in-aid for public facilities and a $2,000,000,000 contingent liability fund under its long-term financing program. There is, of course, a provision in the bill establishing a $100,000,000 revolving-loan fund for interim financing of the associations. However, this latter fund should not be considered as an expenditure, as the loans will be paid with interest and losses will certainly be at a minimum.

Undoubtedly there will be representatives of some segments of the building and finance interests, yes even some agencies of Government who will appear before you objecting to this bill. They will tell you as they have told us that the Government must make no further extensions of credit, for if it does, its fiscal policies will be vitally affected. Can they be serious—in this period of extensive extensions of credit in both our domestic and and foreign economy? These objections will only emphasize more clearly something the veteran has known for many months, and that is: "Few people are particularly concerned about doing anything real to solve his problem." Government and industry must stop this back-scratching and pork-barreling, for until they do there will be no solution to this problem. I am reminded of a statement I heard not so long ago which goes as follows: "It has been truly said that everyone has had a chance to help himself to a share of the veterans' housing program." Now we of the American Legion, ask Congress to let the veteran help himself, through the provisions of H. R. 4488.

I again wish to express my appreciation to you, madam chairman, and members of the committee, for the opportunity given to me to appear before you today. Thank you.

REMARKS OF WALTER E. ALESSANDRONI, CHAIRMAN, NATIONAL HOUSING COMMITTEE, THE AMERICAN LEGION, BEFORE THE HOUSE COMMITTEE ON VETERANS' AFFAIRS ON H. R. 4488

Madam Chairman and members of the House Committee on Veterans' Affairs, the national housing committee of the American Legion, of which I am the chairman, wishes to express its appreciation at this opportunity to appear and be heard during the hearings on H. R. 4488, the American Legion proposal known as the Veterans' Homestead Act of 1948.

National Commander James F. O'Neil has already discussed the over-all problem facing our veterans today in the field of housing. Housing is the paramount problem facing veterans today. He has called to your attention that the American Legion, through a community-action program, has found one good answer to this problem if the plan could be formalized and arrangements made for favorable financing.

At the national convention of the American Legion in New York City, held during August 28–31, 1947, Resolution No. 869 was adopted, directing the national housing committee of the American Legion to develop a plan which would provide substantial and effective assistance to veterans in the construction of housing which veterans could rent or buy on terms which they could afford. Such a plan was developed by the national housing committee and submitted to the national executive committee of the American Legion on October 29–November 1, 1947. At this meeting a resolution was adopted enunciating the principles now provided for in H. R. 4488.

In developing this plan, the national housing committee of the American Legion took advantage of the experiences that were gained through the development of the American Legion community-action program. I wish to emphasize that portion of Commander O'Neil's remarks which pointed out that the greatest obstacles that the nonprofit corporations experienced under this program were in the field of finance and in acquiring improved land.

The American Legion housing committee, therefore, started with the premise that we must take conditions as they are at this time, work with them as they are and develop a plan which will produce low-cost housing within the current economic level of present-day prices.

Our committee felt it was necessary to start with this premise because to date no one has been able to present a plan with any chance of adoption by the Congress which would produce substantial savings in the fields of labor, materials, and in the builder's profits. To find means to induce such savings is a highly commendable objective, and we are sure the Congress will continue its recent efforts in that direction to attain some of these objectives.

But all this requires time, and the veterans' housing problem is now—it is acute. To force him to wait any longer is not in keeping with the past performances of the Congress which has solved so many other problems of the veteran with dispatch.

Because of these reasons, it was believed that the attack on the over-all cost of a home should be limited in this bill to the financing aspects; the acquisition of improved land and to make it for the benefit of only the veteran of World War II.

That this bill will not solve all the housing problems of the Nation the American Legion readily admits.

But it takes up first things first. It gives the veteran a priority over all other home seekers.

I need not remind the House Veterans' Committee which has been in the forefront of the fight for all forms of aid to the veteran of this intent of the Congress, but, unfortunately, I must give emphasis to this fundamental moral concept because there are all too many in Congress and out who insist on solving the Nation's housing problem and thereby the veterans at the same time. This we would be in agreement with if there was sufficient time, labor, and materials available. That these absolutely necessary items for home building are not in sufficient abundance now, nor will be in the near future, must be taken as an accepted fact.

It is clear to us, therefore, that any program which makes easy credit available to all prospective buyers of homes, thereby stimulates a demand out of reach of the ability of labor and material to supply, and will eventually drive higher the spiral of inflation in homes, with resultant hardship to the veteran in the form of higher costs.

Many housing proposals have not received the acceptance of the Congress because they contained provisions of Government intervention which sufficient Members felt were not in accord with a free enterprise system. In this connection it can be said with certainty that no one can have any fundamental objection to the American Legion's housing plan.

One of the so-called lobbies which has been most active in its efforts to prevent the solving of the housing problem by Government intervention, and a group which may oppose this bill on selfish grounds has said recently in referring to the American Legion Homestead Act of 1948, "any group whose members associate themselves for home ownership is within our concept of the American way of life."

This quotation is the framework of the Legion's thinking. If we are to solve the veterans' housing problem with the least amount of Government intervention we believe this bill offers the only practical solution.

I would like now to briefly discuss various sections of the bill. The first sections, 1600 to 1603, deal with the declaration of policy, definitions, and the separability clause, and are self-explanatory.

Beginning with chapter XVII and sections 1700 to 1703, we find that the Veterans' Homestead Associations are to be federally chartered under the immediate supervision of the Administrator of the Veterans' Administration and that all such associations chartered shall be subject to all the provisions of chapter XVII and the rules and procedures of the Administrator. In order to organize one of these associations, five or more veterans of ability, good character, and responsibility, as determined by the Administrator, must make application for a Federal charter. Section 1703 outlines the primary purpose of the associations, but as these will be covered when I discuss section 1705, I shall pass over to section 1704. Section 1704 provides that the Administrator shall control not only the number of such associations that may be chartered but also the locality in which such associations may be formed. Section 1705 defines the powers

of these veterans' associations, which include the right to construct, purchase, or otherwise acquire housing to be rented or to be sold to veterans for occupancy by themselves and families and dependents; the power to acquire and maintain public facilities reasonably necessary for the housing provided by the association if such public facilities are then not otherwise available for such housing; and the power to make, issue, sell its bonds and notes, and to maintain reasonable and permanent reserves.

I wish to point out at this time that advice was given to us by economists, bankers, and other informed persons that reserves should be established by the association which will aggregate an amount equaling at least 3 percent of the total amount of bonds and notes of the association outstanding at any time. This is believed essential in order that the association may maintain a healthy condition despite temporarily unfavorable economic conditions.

Section 1706 requires certain annual and other reports to be submitted to the administrator. This is another section cloaking the administrator with adequate powers to supervise and formalize the operations of the associations, which supervision we believe is highly desirable.

Section 1707 defines and establishes the procedure through which veterans may obtain membership in an association. The sum of $100 was established as the amount required of all veterans desiring to become members since it was believed that most veterans could easily pay such amount and by reason of their having some monetary interest in the association, even though small, they would develop a greater interest in the operation of such association. The payment is not large but one which when paid would signify the good intent of such member.

Section 1708 establishes and defines the limitations on the cost of housing acquired by associations as well as the number of housing units which can be acquired by associations. We believe this section facilitates the realization of the main objective which we are seeking to obtain, that of providing housing for veterans at a price which veterans can afford to pay. The American Legion Housing Committee attempted, by this section, to set a ceiling on the cost of such housing purchased or otherwise acquired. The committee believed that any veteran who could afford a house valued at more than $10,000 should seek financing and other aid through sources other than the proposed Veterans' homestead associations. The committee also took into account the fact that the average dollar value of mortgages executed for veterans for the purchase of homes averaged a little over $8,500. So the ceiling which has been established appears to be adequate, since most mortgagees are requiring down payments of $500 to $1,500. As heretofore mentioned, this section not only limits the cost of housing, but also limits the amount of housing that can be acquired by these associations. The idea behind this provision is that we did not want these associations to get too deeply involved and go into areas and build a number of houses that no one would want. We desire only to satisfy the market demand of veterans and not have them to go in and compete in the full real-estate market. Because of this, there is written into this section of the bill a provision that no association shall construct or purchase housing costing more than the product of the total number of family units multiplied by $10,000, or to construct housing in excess of the number of veterans in the community who are members of the association. In other words, the association could not acquire or make loans on a total number of houses wherein the dollar value is in excess of the number of eligible veterans times $10,000.

Section 1709 provides strict limitations on the sale or rental of housing acquired by the association. This section requires that the association sell or lease at prices or rents which shall reasonably represent the actual cost thereof to the association. This would include all costs of acquisition; necessary reserves required by this title, interest on its bonds and notes attributable to such housing, direct costs of operation and maintenance of such housing and finally the allocable share of the overhead or indirect cost and expenses of the association fairly attributable to such housing. The section further provides in the case of future sales of these housing units, that the veteran purchaser may not sell or otherwise dispose of such housing within 10 years from the date of its acquisition unless it is first offered for sale back to the association at the original price paid to the association, or if it has been acquired through a loan made by the association at the acquisition cost to such borrower. In connection with this requirement, the housing committee of the American Legion felt that such a provision would serve well as a counterinflationary measure to any inflation which might develop through the extension of credit proposed in this measure. The section also provides for certain checks against those persons who desire to acquire more than one unit through these associations; it also provides that the purchaser of any property may at any time pay the full amount of the purchase price or the full amount of any mortgage then outstanding; and provides that every lease executed by an association shall contain a prohibition against subleasing.

Section 1710 provides for loans by the Administrator of Veterans Affairs to provide for the interim financing of these associations pending the issuance of bonds, which subject is covered in the next section of the bill. These loans would be made upon the nonnegotiable notes of the association, which would bear an interest rate of one-half of 1 percent per annum, payable semiannually. The Administrator is authorized to make loans to associations for the purpose of providing initial working capital, development expenses preliminary to the commencement of actual construction of housing, and funds to make loans to individual veterans for the purchase or construction of housing preliminary to the completion of such purchase or construction. These loans cannot be made for a period exceeding 12 months, unless in the discretion of the Administrator, it would not be to the best financial interest of such associations to issue its bonds at the expiration of 12 months. This technique was devised to provide for the proper functioning of the associations. The organizing expenses that arise in a newly created association of this type, and the development expenses required prior to the actual construction of any project, is very costly, and to turn to private sources to attempt to obtain loans of this type would require these associations discounting their notes at a cost of 5 to 8 percent. In addition, the experiences of these nonprofit corporations developed under the American Legion's community action program indicated that this short-term financing was the most difficult to obtain. An appropriation of $100,000,000 to carry out the provisions of this section has been provided for in the act. This money would be placed in a revolving fund in the Veterans' Administration solely for the above purposes, and there is no reason why any of this appropriated money should be lost to the Government, for we must assume that these associations will honor their notes and, further, the bill calls for the payment of these loans upon receipt of funds realized in the sale of their bonds.

Section 1711 provides for the permanent financing of the association. This is accomplished through the medium of bonds sold by the Veterans' Administration, acting as the fiscal agent of such association. The bonds would be covered by a guarantee of payment by the United States Government as provided in section 1712. The bill limits the total amount of such bonds to $2,000,000,000. This means that when the Veterans' Administration has financed a $2,000,000,000 program it would be necessary to go back to Congress and ask for further authorization before any more of these bonds could be issued. This sum of money is not an expenditure but merely a contingent liability. The interest income derived by the purchasers of such bonds is to be exempted from Federal, State, or local taxation. This provision is covered in section 1713. It should be emphasized that it is only the income that is exempt.

I would like to point out that this is our proposal for attacking the factor of financing costs that goes in to the over-all cost of a housing unit. We have obtained the opinions of experts in the field of investment banking, who have said that bonds of this type would be very attractive investments to the public and that it would enable the "Veterans' Homestead Associations" to obtain money with which to provide housing for veterans of World War II at a very low-interest rate. Several of these authorities estimated that the interest rate would fluctuate, depending on market conditions, between 1¾ and 2¼ percent. This kind of low-interest money, when the advantage is passed on to the veteran of World War II will mean that you are cutting the cost of his financing by at least 25 percent and perhaps greater if you run into favorable conditions.

The remaining sections of chapter XVII deal with the regulation of the operations of each association with regard to the investment of funds of associations, the distribution of earnings, manner of dissolving the associations, regulations of administrator governing the activities of the associations, and defining the criminal provisions of the bill.

In connection with section 1720, I wish to point out that the entire authority contained in this bill is limited to 10 years after the termination of World War II as declared by either the President or by concurrent resolution of the Congress. This limit, of course, is already contained in the bill which is being amended, namely, the Servicemen's Readjustment Act of 1944.

The final chapter of the bill, chapter XVIII, covers the granting of aid to States, political subdivisions thereof, other public bodies, and to associations. Such grants are not to exceed 50 percent of cost of public facilities essential to veterans' housing. The term, public facilities, is defined to include both on-site and off-site facilities. I will cover this chapter briefly, since it is my understanding that you are planning to have the Federal Works Agency testify on this portion of the bill. We believe this agency should be in agreement with the terms of this chapter. However, I am not in a position to say that they will, since we have not formally requested an opinion from them as to their position on this measure. I wish to point out one thing, however, and that is while grants-in-aid may be made to States or their political subdivisions, if they do not agree to take the grant, or do not apply it for the purpose of providing specific improvements to projects sponsored by veterans' homestead associations, then the Veterans' Homestead Association itself can go to the Federal Works Administrator, with the approval of the Veterans' Administration, and secure a direct grant-in-aid from the Administrator for the purpose of providing public facilities essential to the association's housing development. Of course, this would be done with the provision that just as soon as a political subdivision of the State would agree to assume jurisdiction over, and responsibility for, these public facilities, the facilities will be transferred to that political subdivision and not continue to remain in the homestead association itself.

Again, I wish to point out that one of the greatest obstacles that the veterans nonprofit corporations encountered during their past year of experience developed during their negotiations for land and the improvement thereof. I wish to point out that the grant-in-aid device is one which has proven acceptable to the State governments and the people. It is considered a technique that is a proper function of the Federal Government to employ. We are, from our experience, assured that such aid as proposed in this title will result in a savings to the association of approximately 10 percent of the total capital cost of a housing project since we have found that on-site and off-site public facilities on most developments represent about 23 percent of the developments' capital cost. Thus, a substantial saving can be passed on to ultimate users of the housing development through this technique. While this is important there is another factor which is also extremely important to the veteran. Without reasonably priced land to build on, plans for a veterans' project are useless. Generally our experience has been that most of our veteran nonprofit corporations have had to seek unimproved land on which to build in order to come within their budget estimates for low-cost housing. In almost every case great difficulty was encountered in obtaining the essential public facilities to improve this land. In some cases projects had to be abandoned which otherwise would have produced veteran housing. This section would make available the most reasonably priced land that could be had. I am sure the representatives of the Federal Works Agency will discuss the chapter fully when called before you.

This bill envisages the stimulation of local initiative at the community level. We believe that the responsible citizens of the community will participate fully with their experience and advice in assisting veterans to properly organize and operate these associations under the supervision of the Veterans' Administration.

This will all be done through private contractors, with private capital; complying with local labor practices and building codes and ordinances; payment of full real estate taxes to the municipality or local political subdivision with home ownership by the veteran—no other plan provides for solving the veterans' housing problem in this American way.

In summary, we wish to state that we sincerely believe this plan permits the veterans to solve their paramount problem in cooperation with each other. The Federal Government, through the provisions of this bill, places in the veterans' hands the tools which he needs to participate in the solution of his own problem. Properly supervised and in cooperation with his fellow citizens in his own community we don't see how they can fail.

Thank you again, Madam Chairman and members of the House Veterans' Affairs Committee, for this opportunity of appearing before you.

Pay Increase for Government Employees

EXTENSION OF REMARKS

OF

HON. HOMER A. RAMEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1947

Mr. RAMEY. Mr. Speaker, the purpose of my bill to provide a pay increase for Government employees at this time is to aid them, in part at least, to meet living costs which have been rising sharply in recent months.

It is proposed to do this by adding $800 to the basic salary rate of all civil-service employees who come under the Classification Act of 1923, as amended. The pay of employees who receive an hourly rate of pay would be raised 40 cents an hour. This amount would produce an annual increase approximating that which the bill would give to employees receiving a per annum salary. This legislation applies to employees of the Federal Government and of the government of the District of Columbia other than the field service of the Post Office Department, which group is covered by a similar bill.

The addition of $800 to the annual rate is estimated as the amount necessary to bring the average Government salary up to a point where it will have the buying power it had a year and a half ago. Employees who are paid an annual salary had their pay increased July 1, 1945, and again on July 1, 1946. Thus it is 18 months since the second increase.

Neither of the first two increases made it completely possible for Government employees to meet the cost of living. It is estimated that it would require more than an additional $800 to do that, even if the raise is to become effective January 1, 1948. What the $800 raise will do is to offset the rise in living costs since July 1, 1946.

From that date the level of prices paid by Government employees and others has risen about 27 percent, by official and estimated figures. To restore the buying power that the Government employees' dollar had a year and a half ago, it appears that there must be an average increase of about 27 percent. This percentage has been used to determine the amount which must be added to the average salary.

The bill, as drawn, preserves intact the present automatic promotion provisions in existing salary laws. This was done to prevent any possible loss by the employees of the periodic pay increments which the law now provides.

Puerto Rican Migration

EXTENSION OF REMARKS

OF

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1947

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks, I include a radio address I delivered over Station WJZ, New York City, during the recess of Congress:

The newspapers and magazines of Nation-wide circulation have printed a great deal about the alleged problem of Puerto Rican migration. Instead of giving you the facts you have been given a distorted picture. The truth has been concealed and a certain section of the responsible press has joined with the irresponsible press in a campaign of vilification.

The stories on Puerto Rican migration are some more evidence that the press of our Nation is as free as its few owners permit it to be. Our much vaunted freedom of the press is in reality freedom for those who own the press to do and say what they please and to refuse to permit the same space to those whom they unjustly attack. The recent attacks on the Puerto Rican people once again proves that there is no freedom of the press for the people. Freedom of the press exists only for the owners and hence freedom so restricted becomes a ruthless tyranny. Now I know that people of Puerto Rican origin have attempted to tell their side. Have you seen their side printed anywhere? I haven't, and I have followed the subject very closely. Consequently, being unable to have the truth presented to the American people through the press, I have had to resort to these few minutes on the radio to tell you what the press has not told you.

The press has not told you that Puerto Ricans are American citizens by an act of Congress adopted in 1917, and that they have a perfect right to come to New York City to live, to work, and to be treated with absolute equality. They have as much right to come to New York as a citizen of New Jersey has the right to come to New York.

The press has not told you that the island of Puerto Rico, consisting of 3,500 square miles, is a colony, and that the 2,000,000 people who live on that island have been treated as colonials since the United States took possession of Puerto Rico in 1898.

The press has not told you that Puerto Rico in 1898 had an agriculture of its own that afforded its people a fairly decent standard of living. Today 70 percent of the good land in Puerto Rico is owned by 4 large sugar corporations whose headquarters are in the city of New York. In 1898 there were over 60,000 landowners in Puerto Rico. Today there are not quite 5,000 landowners in Puerto Rico. The owners of the 70 percent of the good land are absentee corporations who have been taking out of Puerto Rico millions and millions of dollars annually in profit. Worse than that, they have turned Puerto Rico into a one crop, cash crop, diabetic economy. Because of their ownership of the land Puerto Rico cannot have a diversified crop and raise food for its people. The result is that the entire economy of Puerto Rico is based on the production of sugar. This means that the people are employed only during 3 months of the year, the harvest season on the sugar plantations. The pay during these 3 months amounts to $18 a week. When the harvest season is over, there is nothing to do, so that the Puerto Rican is forced to live on an income of about $300 a year.

Now, you may say, why doesn't the Puerto Rican get a job in industry after and before the harvest period. Again, the press has not told you that Puerto Rico has been unable to develop any industries. Why? Again, the press has not told you that whenever attempts to build an industry are made by the Puerto Ricans, industries up here go down there and dump at cut-throat prices. For example, some time ago the Puerto Ricans attempted to establish a soap factory. One of our soap concerns brought soap down to Puerto Rico and sold it at 4 cents a cake. The Puerto Ricans could not stand this competition. The factory closed down and its workers became unemployed. Now that same United States soap concern sells the same bar of soap at 10 cents a cake. This has happened time and time again. Is it any wonder that the Puerto Rican cannot find work in his native land. Is it any wonder that he and his children are underfed, and that their main diet is dried codfish, beans, and rice. Not even half of the families use milk and those that do get less than a half pint per person. The life of most Puerto Ricans is that of a marginal existence for 3

months of the year, and unemployment for the balance of the year. All this, the press, of course, has never told you.

Now let us see what happens to the Puerto Rican as a consumer. You think prices are high in New York. You and I know that they have reached an all-time peak. However, the press has not told you that in Puerto Rico the people have to pay 30 percent more for anything that we purchase in New York. Why? Because Puerto Rico must buy from the United States. Congress passed laws which place Puerto Rico within our tariff laws. This prevents Puerto Rico from purchasing from other countries at cheaper prices, so that the Puerto Rican receiving no benefits from our tariff has to carry the load of 30 percent more than we have to pay. The press has not told you that Puerto Rico has been placed under the coastwise shipping law. This means that only United States ships can carry goods to Puerto Rico from any port in the United States. The result is that Puerto Rico has been subjected to a shipping monopoly adding to the cost of existence of 2,000,000 Puerto Ricans.

Now you see that the plight of the Puerto Rican is caused by selfish monopolies in the United States. The Puerto Rican is subjected to unemployment, abnormally high cost of living, and a one-crop agriculture making it impossible for him to raise his own food. All this is not the fault of Puerto Rico or the Puerto Ricans. It is not caused by Puerto Rico or the Puerto Ricans. Why doesn't the government of Puerto Rico do something about it? Why don't the people of Puerto Rico pass laws to protect their industries against dumping? Why doesn't the government of Puerto Rico use ships of other nations to break the monopoly? Why doesn't the government of Puerto Rico pass a law to exempt it from the tariff act so that it may purchase cheaply from other countries? You have a right to ask these questions, because the press has not told you why. The press has not told you that Puerto Rico has no sovereignty. It has no power to make any laws with respect to tariff, to protect its own industries, against shipping monopolies, and it cannot for all practical purposes enforce any laws that will liberate it from the tyranny of its present one-crop agriculture. It cannot legislate over basic questions of life and death. It is subjected to the will of the Congress of the United States and to the veto of the President.

The Supreme Court, in describing the status of Puerto Rico, has stated that Puerto Rico is a territory of, but not part of, the United States. Puerto Rico's economic plight, which is the main cause of the migration to the United States, cannot be resolved until Puerto Rico is granted sovereignty. Puerto Rico can never have the sovereignty that it needs to resolve her economic problems caused by selfish interests in the United States, mind you, until Puerto Rico is given her full independence. It has been stated that Puerto Rico would starve if given independence. I can hardly conceive how it can starve any worse than now. What is more, only with independence and a favorable reciprocal trade treaty, which we have given to other countries, can Puerto Rico protect its own industries against dumping, protect its people against the tariff, and develop an economy which will produce food for the people of Puerto Rico. This, again, the press has not told you. And why? The truth would expose what a cruel Wall Street imperialism has caused in Puerto Rico. It would expose that while Puerto Ricans are unemployed, while its industries are destroyed, and while Puerto Ricans have to pay 30 percent more for their food than you and I do, that one share of a sugar corporation stock paid $6 as a dividend last year and $7.35 this year. This, of course, the press has not told you.

The campaign of vilification against the people of Puerto Rico has two purposes:

1. To conceal who is responsible for the conditions in Puerto Rico.

2. By vilification, cause discrimination against the three-hundred-some-odd-thousand Puerto Ricans in the city of New York, and thereby force them into a condition of second-class citizenship and force them into a cheap labor market. I have the proof. The articles in the press have caused me to receive a great number of letters from people throughout the country offering Puerto Ricans work. What is the kind of work they offer? Domestics, servants, represent 97 percent of the offers I have received.

This is the old, old story. The same campaign against the Puerto Ricans was carried on against the Irish when they first came here, the Jews, Poles, and Italians. It is always the game of those whose only interest in our Nation is profit and more profit, to force the newly arrived into a cheap labor market. Puerto Ricans in the city of New York live in slums. That is true. Does anyone want to live in slums? The answer to slums is not vilification of the Puerto Ricans but a genuine slum clearance program, and the enactment of a national housing program for everyone including our Puerto Rican citizens.. The Puerto Ricans are being subjected to discrimination. The answer is not vilification and more discrimination. In our democracy, the answer is the enactment of the Fair Employment Practices Act. Puerto Ricans are the last hired and the first to be fired. Is this the only answer that our democracy can give to these newly arrived?

Universal Military Training

EXTENSION OF REMARKS
OF
HON. HOMER A. RAMEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1947

Mr. RAMEY. Mr. Speaker, under leave to extend my remarks in the RECORD I include therein a petition received from Judge Peter Gulau, prominent Legionnaire of Oak Harbor, Ohio. This petition concerns legislation to establish a system of universal military training.

OTTAWA COUNTY
PROBATE AND JUVENILE COURT,
Port Clinton, Ohio, December 15, 1947.

Hon. HOMER A. RAMEY,
House of Representatives,
Washington, D. C.

DEAR SIR: Enclosed find petitions urging you to support and vote for legislation establishing a system of universal military training for American young men, as recommended by the President's Advisory Commission on Universal Training.

Yours very truly,
PETER W. GULAU,
Chairman, Americanism Committee, American Legion, John A. Fader Post, No. 114, Oak Harbor, Ohio.

PETITION

Hon. HOMER A. RAMEY,
House of Representatives,
Washington, D. C.:

Peace is worth striving for. Therefore we, citizens of the United States and voters, urge you, our Representative in the Eightieth Congress of the United States, to support and vote for legislation establishing a system of universal military training for American young men, as recommended by the President's Advisory Commission on Universal Training.

Harold W. Wott, Paul M. Rounker, Le Roy G. Dirnberg, Ernest Windridge, Peter F. Budde, Charles W. Ravus, Robert W. Reeder, Clarence C. Schutte, Orville H. Baldwin, Paul R. Lockwood, Oak Harbor, Ohio; Charles E. Wehner, Rocky Ridge, Ohio; Eugene Hemminger, Don W. Foreman, Emery Ravas, A. W. Buchanan, Oak Harbor, Ohio; Howard Garner, Edsie E. Kirk, Port Clinton, Ohio; Emery Orman, Oak Harbor, Ohio; Beni Domokos, Jr., Fremont, Ohio; Wm. Hofacher, Jr., Oak Harbor, Ohio; Jesse T. Moore, Sandusky, Ohio; R. R. Warner, C. A. Tolan, Paul Meyer, Donald C. Jerckhe, R. G. Leindorfes, Pauline Wierich, Paul H. Wierich, Guy H. Dicken, Nick Stevens, Albert W. Tilton, Carl Scheuerna, R. L. Bolte, H. F. Fehr, Fannie Kinsel, Carl Kinsel, N. L. Morse, S. Avery, R. S. Heller, R. G. Bassett, Oak Harbor, Ohio; W. E. Hitchcock, Sandusky, Ohio; Wm. Hunkton, R. M. Meizner, A. W. Meizner, Bert Bordeaux, Lloyd W. Hetrick, Walter Hetrick, Frank Schalt, Wm. Sharpe, Oak Harbor, Ohio; John Fuchner, Toledo, Ohio.

Civil Liberty and Government Work

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, December 15, 1947

Mr. WEICHEL. Mr. Speaker, the employees of the Government should be thoroughly investigated as to their loyalty, and such who are Communists or otherwise do not believe in our form of government have no right to employment. I am including an editorial covering loyalty of those who are employed by our Government by Spencer Canary, of the Daily Sentinel-Tribune of Bowling Green, Ohio.

CIVIL LIBERTY AND GOVERNMENT WORK

There is considerable confusion in the minds of many these days regarding the difference of the right of a person to think as he pleases regarding government and

his right to be employed by the Government.

Communists are well understood to believe in overthrowing our representative form of government by force and substituting for it a totalitarian form in which the coercive rule of a few people, like that of Russia, prevails and opposition to measures by the people are not tolerated, prison or death being their fate, if they do protest.

That is an ugly form of control which those who stop to think will resist. But our Constitution provides safety for the Communist, provided he is not caught acting to overthrow the Government. To convict him of treason there must be two witnesses to the same overt act. That provision makes it difficult to combat communism; but it was adopted in the Constitution to prevent encroachments on the civil liberty which was won by the Revolution; and it undoubtedly has prevented encroachments.

But for a Communist to be employed by a government he thinks he would like to overthrow is another thing. He has no guaranteed right to such employment where, because of his position, he would be able adroitly to do things that would harm it and thus possibly result ultimately in making it easy to overthrow.

The oath of loyalty meant nothing to a Communist, for he considers it proper for him to perjure himself in order to be in a position to accomplish his object. The Government to protect itself must observe the person's attitude and associates; and, if these rightly lend suspicion of his loyalty, he must not be employed or must be released from employment.

Of course, injustice may be done by mistake or intent of selfish officials; but it is better that such be the case than that the whole country suffer. "A man is known by the company he keeps"; and it is up to Government employees to avoid suspicious entanglements.

For the Government to assure its own safety it is in the same position as an individual. If a man sought work from you and board and room at your house, you would not employ him, if he were known as a dangerous man and had been suspected of a wish to harm you and your family. You would not be so foolish as to take the chances of his doing so.

You would not deny his right to think as he pleased; but you would not further his suspected plan to act.

The Federal Youth Assistance Bill

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 18, 1947

Mr. JAVITS. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address delivered by me at a dinner meeting of the Washington Heights and Inwood Citizens Committee for Youth, Inc., at the Webb Room of the College of the City of New York on December 5, 1947:

After debating in Congress all day on foreign affairs and trying to envisage the whole world, it is refreshing to come back to our neighborhood—for it is the neighborhood which is the real grass roots of a democracy. It is therefore a privilege to take counsel with you tonight about the problems of our youth.

The basis of youth activities has generally been the avoidance of juvenile delinquency, and indeed following the war we have a new resurgence of juvenile delinquency to deal with. But today the problems of our youth are far more profound than that. But first let us look at the juvenile delinquency picture itself. Criminal cases of youths up to 16 years of age have increased markedly in the New York City courts—they totaled 4850 in 1938 and 7,037 in 1945, showing an increase of about—50 percent. The national increase in the same period was about 60 percent for youth cases, and it is important to note that there has been an 88-percent increase in the cases involving young girls. The FBI reports nationally that arrests of juveniles in the age bracket 19–21 have predominated over the aggregate of the arrests in all age brackets since 1939; while females under 21 arrested in 1946 declined about one-third from the high mark reached during the war years, it still exceeded 1941 by 40 percent.

But the problem is no longer so simple as street fights, vandalism, mugging, petty larceny and other well-known manifestations of juvenile delinquency, nor is it to be found only in the breeding grounds of juvenile delinquency—slums and other depressed areas. New factors, modern factors have arisen in relation to youth, for example the alarming rise in the divorce rate.

One out of every three marriages today in many parts of the country ends in divorce. This means disruption in the lives of the children and of the community. It stems often from lack of proper guidance and education, of proper home and community environment in youth. It is typical of the new problems of adjustment for youth in an enormously complex and busy world. Yet compared to the problems which our youth must face in the next two decades in the 1950's, 1960's and 1970's, even these problems of juvenile delinquency and personal adjustment to an industrialized world are small indeed.

As adults we have a right to assume that during our working years we will be wrestling with the immediate difficulties of our day, i. e., in domestic affairs, with the effort to attain economic security and higher standards of living, with housing, with enlarged social security, with the fight against monopolies and for economic freedom, with the protection of civil liberties, with aid to our veterans. In foreign affairs, with the great implications of the relations between the United States and the Union of Soviet Socialist Republics, with the efforts to lend aid in the economic reconstruction of a war-battered world. All these are enormous problems. Yet we will have to have them settled one way or another before our youth takes over.

But let us consider a few of those problems, which are the problems of the century, and which we shall not have settled during our working years, but are only now discerning on the horizon. Let us appreciate the magnitude of these problems—and how infinitely more challenging will be the education and development of today's youth. Therefore, let us recognize that the extent of the preparation of our youth must, if we are to discharge our obligations to the coming generations, be much more thorough and skillful than our own.

For example, the first of the problems of the century is that of the control of atomic energy. We are in the very infancy of the use of that enormous potential resource. Atomic energy, once developed for peace, may transfer the center of economic gravity of the world from the United States back again to Europe, or to Latin America, Africa, Asia, or Oceania. Atomic energy will revolutionize completely all concepts of the volume of production and its distribution around the world. Were that not enough the use of atomic energy for military purposes will determine whether the human race shall survive or be obliterated in the next century. Somehow or other mankind must control this force. Our youth will have to resolve this question.

As another example, let us consider the basic problem of discrimination due to race, creed, or color. Looking at the national scene, I believe we shall have soon a Federal Fair Employment Practices Act such as we now have in New York; but it is becoming evident in the United Nations that the problem of discrimination will be international tomorrow rather than national, as it is today. The youth of our country will have to determine not how the minorities are to be considered in the United States but how hundreds of millions of peoples of other races in Africa, Asia, the East Indies, and Latin America are to be considered and dealt with. The youth of tomorrow will have to live and breathe social equality, if it is to survive.

Let us take yet another example in the field of our cherished institutions. The institutions of private property and of individual freedom are already under assault as they never have been before. The Communist ideology says that private property must go and that statism is the new way of living in the world—that this supremacy of the state must not only extend to the economic world but to education, art, religion, philosophy, and all cultural activities. The Nazi holocaust, based on statism, has just almost destroyed the world before its defeat. Many feel as I do, that this is stark reaction against mankind's legitimate march forward, but millions fight for the conception of communism.

Finally, let us consider the organization of the world for peace. We see in the U. N. but a beginning of a kind of world law which is the best augury for peace. Already the advocates of a world federal government are opening the discussion. In the adult day of our present youth the discussion of world government will be at its height, and our youth will have to determine to what extent our country is ready to surrender sovereignty to some international body, at first, in limited spheres like atomic-energy control, air transportation, food, and health; later in fundamental economic, social, and political questions.

These are the problems of our youth in the century. You can therefore well imagine how deeply gratifying it is to me that the citizens of my own district have taken the initiative in organizing and working effectively for the cultural development of youth, for its training in citizenship, and for teaching youth cooperation and good will by taking it away from the atmosphere of the streets and gang fights through Youth, Inc.

It is gratifying to work together in a team with such community-conscious colleagues as serve in Youth, Inc. President Harry C. Wright of the College of the City of New York has given of himself generously in this work. He has shown the finest quality of the national leader who is yet deeply concerned with home problems. Mrs. Anna Lee Jacobs who has done such an outstanding job as the chairman of the board, after a brilliant record in the community in social work during World War II, is a guaranty of integrity and high efficiency in the administration of Youth, Inc. Magistrate Anna Kross with a well-deserved reputation in work on the youth problem, has made a magnificent contribution to the work of this organization as well as to other constructive measures on youth in New York and other cities. Prof. Harry Schulman, also of the College of the City of New York, with a national reputation in the field of sociology, has contributed in the most selfless manner to the work on youth problems in our own district. There are many more. I wish I could take your time to go down the list to pay tribute to all the men and women who have been active in Youth, Inc., and who have the deep satisfaction of knowing

that they have worked hard in a great endeavor.

Community after community throughout the United States has this youth problem before it. Parents, teachers, State and local governments, and private agencies are trying to deal with the problem just as we are trying to deal with it here in our district. Some people but dimly recognize its importance, but as we see it outlined here it becomes one of the major problems of our district and our time.

To prepare the youth of our community and our country for these problems of tomorrow having a magnitude and complexity almost beyond our comprehension—that is our job. This contribution by us to the future will guarantee that how we live and what we believe in shall not go down to destruction in this country.

But it takes money to run Youth, Inc. We have a different idea about money today. More and more people feel money is useful for the fine things it can do, the things that give personal satisfaction. We are learning that we can get more satisfaction out of helping a program to make young people better citizens than we would get out of an extra dinner, a new fur coat, or other luxuries. This indicates a fundamental change in our character. As citizens of a world beset with more troublesome problems for the future than mankind in all history has known, we must contribute to the solution of these problems not as philanthropy but in a spirit of sacrifice and sharing. We must contribute more generously than we ever thought of before, but we must also get governmental help for the added funds which the very big job needs.

Accordingly, I have introduced in the House of Representatives today, the Federal youth assistance bill. It authorizes the appropriation of $50,000,000,000 for aid to State, local, and private agencies which are concerned with the problems of youth. It creates a Federal Youth Board within the Federal Security Administration to coordinate all Government youth activities. The administrator of the board is to be the Federal Security Administrator and the three other members of the board are to be designated respectively by the Attorney General, the Secretary of Defense, and the Secretary of Agriculture; and the two remaining members are to be designated by the administrator to represent the Children's Bureau and the Office of Education. The administrator is also authorized to create an Advisory Committee on Youth to include representatives of schools and colleges, social workers, State and municipal governments, local youth organizations, trade and industrial organizations, labor unions, and interested private agencies and outstanding citizens. Federal funds are to be provided on a matching basis with State and local funds for government or private agency youth programs, which meet with the approval of the administrator. Such programs must provide for health services, vocational training, and citizenship orientation courses. The bill also provides that particular youth projects for which Federal assistance is provided may be designated as war memorials. I am hopeful that this bill will be considered during the early part of the coming regular session of Congress.

I am working, therefore, to get the maximum governmental help for all youth activities. To do the immediate job, though, and with the help which is afforded now, Youth, Inc., needs your assistance. The fate of your children and of their children and of all our world holds dear, is wedded to the training and development of our youth. Can we do less than to so adequately finance Youth, Inc., as to feel that we at least have done what human beings can do to protect our heritage for the future. With our new conception of what community work means, this calls for a sharing which comes out of deep conviction and not for philanthropy alone. It calls, too, for taking a personal part in the day-to-day work in Youth, Inc. With such a critically important job and with the goal before us of a century of peace and well-being for all our people, our community will not fail.

America in the Near East

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1947

Mrs. BOLTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

ALEPPO COLLEGE,
Aleppo, Syria, December 9, 1947.

The Honorable FRANCES P. BOLTON,
House Office Building,
Washington, D. C.

DEAR MRS. BOLTON: In the rush and excitement of these days since the decision of the U. N. for the partition of Palestine, I have sought in vain for a few hours of quiet—and particularly quiet of mind—to sit down and put on paper some of the things I wish all people in America knew. Of course I have no way to reach them, so I must write only to those I know.

I thought of writing to President Truman, but I am sure that whatever Secretary might read it would merely file it with "letters received—Syria," remarking that here is one more American abroad "trying to get in solid with his environment," or words to that effect.

So I write particularly to you. That is partly because you are in an official position to make some of the facts known where they may do the most good. Even more, it is because you have been out here recently enough to put full credence in what I say. I trust your visit to Aleppo persuaded you that some of us out here know what we are talking about, and have relatively unbiased views of the whole situation on a nonpartisan basis.

I could write a long story of the past week: of the ominous quiet in the city when the news of the decision was received, of the spontaneous and uncontrollable violence against the property of local Jews, of the deep stirring of anti-foreign feeling (reserved silences from our friends, and a bomb outside the house on the part of those eager to show their hatred for any and all Americans). Let me, however, state the present position in Aleppo in four simple statements. What is true here is true of every part of the Arab world from which we have reports.

1. The anger and disappointment of the Arab world is deep and powerful. That feeling pervades all levels of the population. We anticipated some such outburst in the event of a decision for partition, but even those of us most familiar with this part of the world predicted no more than has happened.

2. The Syrian Government has gone out of its way to protect us, as Americans. Had the Government closed one eye, to say nothing of calling for a thorough boycott of American interests out here, there would have been no more left of the college than was left of the local synagogues and Jewish schools. (There were 15 fires visible in the city at one time, a week ago Monday afternoon).

3. The American Government is held particularly responsible for the decision of the U. N. That feeling is widely held, whether it is correct or not; and the advocates of that view base it on reports of pressure of the United States upon other member states, before the voting; and upon the actual reports of the debate in the Assembly. Those who listened to the broadcasts from Lake Success will never forgive the American representatives the flippant and sarcastic treatment of the Arab delegates and their position.

4. Strenuous and careful preparations for war are going forward, whether that be guerrilla warfare to aid the Arabs of Palestine, or an all-out effort of the armies of the Arab States. As a relatively well-informed long-time resident out here, I see no foundation whatever for the view that the Arab peoples will just shout a while and then forget, as some say they will do. The preparations now going forward, and particularly the cold anger which motivates them, are in deadly earnest and should be given corresponding consideration in any thinking about the present situation in Palestine.

Living in the midst of such facts, with a deep personal sense of the tragedy that impends for all in Palestine—Arab, Jew, and foreigner—one wishes for some hope of reason and reality on the part of those who sit outside and criticize and pass motions and write newspaper headlines. Here are some of the kinds of questions that come to mind:

Must the poor old Near East suffer forever from religious and political strife? As though there were not enough quarrels here without any being injected from outside.

Have we entirely forgotten that the whole pleading for the Zionist cause was done on the basis of the essential common interests of Arab and Jew? And that the building of a Jewish state out here on any other basis is sheer imperialism?

Is it too late for the American Government to admit that it is backing the wrong horse? That its action was based on false information as to the real opposition of the Arab world to partition?

Can the American people afford to throw away the basic good will of all the Arab and Moslem peoples? That question should stand on its own feet, but it can also be asked with particular emphasis in view of the total world situation and the strategic position of the Arab world. Part of the background of feeling now against America is the deep disappointment that they cannot be friendly with the one power that they feel to be democratic, friendly to small peoples, and (apart from Palestine) without any ax to grind in this part of the world.

What can we, as Americans living abroad, make of the persistent and (it would seem) willful disregard on the part of the American Government of the sincere opinion and advice of its own best representatives abroad. You know, as I do, that not only the diplomatic representatives of the United States out here, but the heads of American colleges and universities, missionaries, businessmen, and journalists (save the "specialists" on the Palestine problem) have been steadily and consistently telling any who would listen that the cause of political Zionism has been a lost cause—if not from the beginning, at least since a date in the middle thirties.

If the American Government can so ignore the voice of even its own advisers on Near Eastern affairs (and perhaps similar situations exist elsewhere in the world) are we really fit, as a nation, to carry a responsible part in world affairs?

More specifically, how can we who live out here have any confidence that the American Government will not, in a moment of political exuberance, do something foolish to support the Zionist side in what has become an open war between Jew and Arab in Palestine? Do the responsible authorities think what

such partisanship, in word or deed, would mean for the future of American lives, property, and interests in this part of the world? One can all too well imagine the clamor of Zionist groups in America for American intervention to carry out more swiftly the recent decision of the U. N. And when one sees a Presidential campaign in the offing the temptation to play with foreign issues to win domestic votes will be all but irresistible. Can we, out here, trust the maturity and discretion of the American Government?

Is there no place that one can make the significant facts known to the general public in America?

Can nothing be done, even now, to recall the mistaken decision of the American Government to support partition? Do the lives of thousands of Jews and of Arabs mean nothing to the proponents of partition? Is the Holy Land to be made more holy by blood? Thousands of Jews seek only refuge. Thousands of Arabs seek only to protect their native soil, if need be by their lives. Why must they be thrown at one another's heads?

But enough. You have been out here and know how we all feel. I hope you will show copies of this letter to those who were here in the congressional committee and its party. You are also free to use this letter anywhere and in any way that you think may be useful for the cause of understanding and peace in this part of the world.

Very sincerely yours,

ALFORD CARLETON,
President of Aleppo College.

Universal Military Training

EXTENSION OF REMARKS
OF
HON. HOMER A. RAMEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1947

Mr. RAMEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following petition received from Mrs. Amelia Stoisoru, Toledo, Ohio, concerning proposed legislation to establish a system of universal military training:

Peace is worth striving for. Therefore, we, citizen's of the United States and voters, urge you, our Representative in the Eightieth Congress of the United States, to support and vote for legislation establishing a system of universal military training for American young men, as recommended by the President's Advisory Commission on Universal Training.

Let Us Have Peace

EXTENSION OF REMARKS
OF
HON. ARTHUR V. WATKINS
OF UTAH
IN THE SENATE OF THE UNITED STATES

Friday, December 19 (legislative day of Thursday, December 4), 1947

Mr. WATKINS. Mr. President, on November 14 of this year J. Reuben Clerk, Jr., former Under Secretary of State, former Ambassador to Mexico, and for many years Solicitor of the State Department, delivered a very significant address. One may or may not agree with what he said, but I think the substance of his address should be brought to the attention of the American people. For that reason, I ask unanimous consent that it may be published in the Appendix of the RECORD. I have had an estimate made, and the speech will occupy four pages of the CONGRESSIONAL RECORD at an estimated cost of $284.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

LET US HAVE PEACE

(By President J. Reuben Clark, Jr.)

(The following is the full text of the address by President Clark given November 14. 1947, at Chicago, Ill., before the Agency Management Association:)

Mr. Chairman, gentlemen of the convention, you confer upon me a great honor by inviting me to speak before this great convention, which represents a vast body of missionaries preaching to the people of this country the gospel of caring for the bereaved widows and orphans who are amongst us. I cannot put out of my mind the words of the ancient apostle:

"Pure religion and undefiled before God and the Father is this, To visit the fatherless and widows in their affliction, and to keep himself unspotted from the world."

Because what you need most for the success of your great missionary labor, what the Nation and the whole world needs more than anything else, is peace, I have taken as my text today the famous dictum of General Grant: "Let us have peace."

Appomattox came 4 years almost to the day from the fall of Fort Sumter. It marked the end of one of the bloodiest fratricidal wars of history. As always in such cases, passions had run high on both sides; both sides had been guilty of excesses; great amounts of property had been destroyed; the war cost a million men; there was mourning and suffering throughout the land. A seedbed had been prepared where hate could have been sown for recurring crops of war and misery during long generations to come.

SURRENDER AT APPOMATTOX

Having surrounded Lee's army, Grant, moved by lofty motives of humanity, opened negotiations to stop "further effusion of blood." Lee, moved with a like motive, accepted the approach. Grant suggested a desire for peace stating the one condition he would insist upon,— "that the men and officers surrendered shall be disqualified for taking up arms against the United States until properly exchanged." Lee responded stating his earnest desire for peace and asked if Grant's proposals would lead to that end. Grant answered he lacked authority for such negotiations, but assured Lee that he was equally desirous with Lee for peace, and so was the whole North.

Lee then proposed the surrender of his army. Grant, the victor, asked Lee, the vanquished, where he would like the interview between them to take place. Lee chose the house of McLean, in the village of Appomattox. Grant appeared dressed as were his private soldiers, save for shoulder straps that indicated his rank. Grant, seeking to cause as little humiliation as possible, began the interview with Lee by recalling their joint service in Mexico.

They so conversed pleasantly for a short time, when Lee brought up the subject of their meeting, asking Grant for his terms. Grant repeated those he had already given, adding that all arms, ammunition, and supplies were to be treated as captured property.

Grant, still anxious to avoid Lee's unnecessary humiliation, began to talk in a pleasant vein about the prospects of peace; Lee again returned to the subject of the meeting and suggested the terms be submitted.

Grant then wrote out the formal proposals. As he came to the term covering arms, ammunition, and supplies, he glanced at the handsome sword Lee carried and, still urged by the desire to cause as little humiliation as possible, he added a provision that officers should retain their side arms, horses, and baggage. Grant finished the terms with the provision as to the parole of officers and men.

Lee read the terms and observed, "This will have a very happy effect upon my army."

Grant asked if Lee had any suggestions to offer as to the form of the terms. Lee observed that in his army cavalrymen and artillerists owned their own horses and asked if they would be permitted to retain their horses. Grant said the terms did not cover this. Lee's face showing some anxiety, Grant said the subject was new to him, but, while the terms would stand as written, he would give orders that all men claiming horses would be permitted to take the animals to be used on their farms. To this generous, unrequested kindness by Grant, Lee observed, "This will have the best possible effect upon the men. It will be very gratifying and will do much toward conciliating our people."

Lee informed Grant that he had no food either for his own men or for his prisoners. He asked Grant if he might return the prisoners. Grant said yes, and asked Lee how much food he needed for his own men. Lee did not know. Grant asked if 25,000 rations would help; Lee replied that this "would be a great relief." Meanwhile, news of the

surrender reached the Union Army, who began firing salutes. Grant ordered these stopped at once, declaring: "The war is over, the rebels are our countrymen again, and the best sign of rejoicing after the victory will be to abstain from all demonstrations in the field." The men in blue mingled together around common camp fires with the men in gray, often eating from a common mess. The war was actually over.

Grant and Lee met as gentlemen; they negotiated as gentlemen; they parted as gentlemen. The next day Grant made a formal call upon Lee and they visited together for half an hour. There was no bitterness, no hatred. They, for themselves, buried the past.

Grant's terms for Lee's surrender became the terms for the surrender of all the southern armies.

There was no indemnity. While under the law, the war was rebellion and its wagers traitors, no one suffered a traitor's punishment.

At his last Cabinet meeting, held on the morning of the day of his assassination, Lincoln, as reported by his Secretary of Navy Welles, said:

'No one need expect he would take any part in hanging or killing these men, even the worst of them. Frighten them out of the country, open the gates, let down the bars, scare them off,' said he throwing up his hands as if scaring sheep. 'Enough lives have been sacrificed; we must extinguish our resentments if we expect harmony and union.'"

I believe that God's mercy and love brooded over that meeting of Grant and Lee, victor and vanquished; that He manifested His design and purpose that, the Union preserved and slavery blotted out, this Nation should not be cursed with a blight of hate, but that it should feel and live the divine principle voiced by Jesus Himself—"Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy strength, and with all thy mind; and thy neighbor as thyself"; and that Lincoln came near the divine standard of loving your enemies when he declared "he would not take any part in hanging or killing these men, even the worst of them."

A few years later, in accepting the nomination for the Presidency, Grant, returning to the spirit of Appomattox, exhorted his fellow countrymen: "Let us have peace."

Peace has been the pearl of great price, coveted, searched for by man during all the ages.

Appomattox showed the temper of this people of ours, not in the course of a long period of growth, advancement, and peace, but at the close of a bloody, fratricidal war, where literally father fought son, and son father, and brother fought brother—a kind of war that makes more and deeper wounds than any other kind of conflict. Yet this temper and concept, this high idealism and lofty purpose of Grant and Lincoln, seemingly fostered by the tragedies of the war, followed us for a half a century thereafter.

INTERNATIONAL RELATIONS

With the only great trained military force in the world at the end of the war, and able to work out our will, we patiently dealt with England and France in the matter of their invasion of Mexico and the French attempt to set up a Mexican monarchy under the Austrian Maximilian. We might then, with comparative ease and complete success, have waged war, driven out the invaders, conquered Mexico itself, and annexed it. There were none in the world then ready to say to us nay. But we forebore. We loved peace.

Britain during the Civil War, had aided the South, in sympathy not only but by credits and the building of Confederate cruisers and furnishing of armaments. The war was taxing our strength. The Confederate cruisers—Laird's Ironclads—built at Birkenhead, were about to take to sea. Adams, our Minister to Great Britain, renewed at this point his representations against this violation of neutrality, and solemnly declared, "It would be superfluous in me to remind your lordship that this is war." His lordship stopped the sailing, but this, with the depredations of the *Alabama* and other British-built and outfitted Confederate cruisers, left us with a feeling of deep injury. Our property loss had been enormous.

Yet, when the war was over and we were where we could speak boldly and use, if need be, the strong arm, we patiently dealt with England for a peaceful adjustment of our claims. We went to arbitration and won. And let it always be said to Britain's credit, and to ours, that the then two strongest nations in the world solved their differences by the friendly method of arbitration instead of by war, even though the vital interests and honor of each were involved. Again we sought peace.

In the 1860's we forbore war with Spain, declaring her intentions to annex Santo Domingo, and to repossess certain Peruvian islands.

We were equally restrained in 1895 in the boundary dispute between Venezuela and Great Britain, which threatened a violation of the Monroe Doctrine. It was in the course of his great discussion with Lord Salisbury, that Secretary Olney voiced his striking dictum: "Today the United States is practically sovereign on this continent, and its fiat is law upon the subjects to which it confines its interposition." This boundary was peacefully adjusted.

A like restraint marked our course in 1903 when France, Germany, and Great Britain instituted a pacific blockade against Venezuela. The injuries of which the powers complained were settled by peaceful means.

PEACEFUL SETTLEMENT OF INTERNATIONAL DISPUTES

From the Jay Treaty with Great Britain of 1793, until the recent past, we have encouraged and sought to secure the settlement of international difficulties and disputes by friendly means—by arbitration where we were concerned, and by arbitration and mediation where others only were involved.

Beginning with arbitrations under the Jay Treaty between ourselves and Great Britain, where we adjusted claims arising out of our Revolution, we have entered into numerous treaties, conventions, and protocols for the adjustment of our disputes with other nations, involving indemnities for injuries arising out of wars, involving sovereign rights and title to our national territory, damages for outrages to our citizens and for the despoliation of their property, our rights in the Northeastern Coast fisheries, and to the fur seals of Alaska, our rights under the laws of neutrality.

The three great exceptions to the peaceful adjustment of our international disputes, prior to World War I, were the War of 1812 with Britain, which was the culmination of a long series of injuries and treaty violations that did not yield to friendly solution; our war with Mexico of the 1840's, where we were the aggressor—our motives for waging that war will scarcely stand objective scrutiny, either as to altruism or unselfishness; and our war with Spain of 1898, where we intervened to stop further oppression and bloodshed, really to abate an international nuisance.

MEDIATION

We have more than once mediated to stop wars between other countries; the outstanding example of this is our mediation under President Theodore Roosevelt of the war between Russia and Japan. We have repeatedly exercised our good offices to adjust differences between other countries, particularly in the Latin Americas. In these the peace motive guided our course.

In the two Hague Conferences of 1899 and 1907, while other nations busied themselves mostly with conventions dealing with war, our emphasis was placed on perfecting conventions for the specific settlement of international disputes. This was in line with the lofty purpose of our national diplomacy until after the last Hague Conference. In all these, peace with other members of the society of nations motivated our course.

Nor should we overlook the special efforts of Secretaries Olney, Hay, Knox, and Bryan to negotiate both general and special treaties to promote peace, nor the Kellogg-Briand Pact for the Outlawry of War.

Nor should we end this brief catalogue of some of our efforts without calling attention to the Rush-Bagot notes by which the United States and Great Britain accomplished the limitation of armament on the Great Lakes, an informal agreement that has robbed our Canadian border question of all threat of trouble for more than 130 years.

That gentlemen, is America's record, the greatest record for peace made thus far by any nation in the world. Future generations will so appraise it. It is a record that made every man, woman, and child proud of his American citizenship and heritage.

CHANGING OUR COURSE

But it seems to us of the common people that all this is about to change. Uninformed, we know we must appraise our condition with caution and reserve; we must recognize we may be wrong. Yet, the facts we are permitted to know shock us with their threat of world-wide disaster through another gigantic global war. It seems clear to us that we have forsaken or are ignoring the ideals and concepts of the past; that we are neither planning nor seeking peace; that our actions and policies will not lead to peace, but, on the contrary, they are breeding and fostering that hate, suspicion, and fear which are always the begetters of war, near or remote.

We are not unaware that this estimate will be denied. We shall be assured that what is really sought is peace, and that nothing is done or planned that has not peace for its ultimate aim and end. But we may properly look at the facts we have, and reach our own conclusions thereon, faulty though they may be. Our lack of full information leaves us no other course.

It looks to us as if in our dealing with our conquered foes, we of America have forgotten Appomattox; we have turned our backs on the idealism and lofty conduct and purpose of our whole history; we have with us neither the vision nor the humanity that were the controlling element of our past. We seem to have turned back the hearts of men more than 2,000 years, and to be back into paganism.

LESSONS OF APPOMATTOX

Since our action at Appomattox was the embodiment of our lofty concepts and high idealism, let us contrast its essentials with those of the course we have pursued and are now pursuing, to see how far afield we have gone.

EFFUSION OF BLOOD

Grant's first concern at Appomattox was to stop the shedding of blood. Lee was equally concerned.

How have we acted?

It has been affirmed since the war that the underground party in Germany offered to cooperate with us to stop the further shedding of blood and to end the war, and that we refused to follow. I do not know the influence that led us to refuse that humane offer, if it was made, and so save further slaughter of our own sons, but when the curtains are drawn back and the whole picture is shown, I shall not be surprised if we shall see that our bloody course was inspired by the German political refugees and their American friends, who, safe on our shores and behind our defenses, were quite willing

that American blood should be shed till their thirst for revenge for ills they had suffered, but for which we had not even a shadow of responsibility, was slaked.

During the war, the slightest hint that we should treat with the German underground always called forth a tirade of scorn, ridicule, and defamation, poured out to a credulous public by the smearers and passed from mouth to mouth by the Communists, the fellow travelers and their sympathizers, and political emigres. These war mongers built such an odium about the word "appeasement" that men shrank from doing or saying anything that might draw upon themselves that opprobrious epithet. So thousands upon thousands of our boys were sacrificed.

Stopping the effusion of blood is one element of Appomattox that has had no place in this World War II. Never forget Nagasaki and Hiroshima.

RELIEVING SUFFERINGS OF WAR

You will recall that at Appomattox, dealing with a foe he could easily and quickly have crushed to the point of extermination, Grant was most careful and solicitous. He let the Confederate officers and soldiers retain their private property; he immediately provided Lee's army with food; the men immediately fraternized together, often eating at the same messes; he paroled all officers and men.

What have we done and what are we doing?

First, it may be said that apparently many, many enemy troops, it may be as many as 2,500,000, are still in detention camps, probably at forced labor.

The reports that appear in the press and that come from observers, leave no alternative but to conclude that we, to some extent, and some of our allies to greater extent, are deliberately following a course that will lead to the starving of great numbers of people, perhaps nations; that we allies are robbing them of the means of recovery not only, but of indispensable sustenance; and that we are not letting them produce the food, fuel, shelter, clothing necessary to preserve life. We are destroying their industrial plants. A credible source charges "It is mainly American policies that have made mendicants and parasites of the peoples of Europe."

All this may be pursuant to a policy and plan we years ago announced, not yet, I believe, repudiated, for destroying a whole national life, and remaking it to suit the plan said by some to have been devised under the influence of political emigres who think their best selfish interests will be best served thereby, and their revenge satisfied. All this makes for hate, and peace and hate never live together.

CONDUCT OF OUR TROOPS

Private reports too numerous to ignore and too constant to admit of real doubt affirm that our occupying forces are quartered under luxurious conditions that are breeding an intense hatred against us. Certainly not discouraged, and some say encouraged, very many of our own men are reported to be living lives of debauchery of which American troops, en masse, have never before been guilty, and which some of us think are unworthy of, and indeed disgraceful to, American citizenship. Some of our allies are accused without successful contradiction, of deliberately and designedly violating every woman, young and old, maid and wife, within their occupied areas. This means more and more hate, with peace in hiding.

For all this we are at least partly to blame. In the estimation of the oppressed peoples, we shall be held most to blame, first, because we are coparticipants in the imposition of the oppressions, and, next, because they believe we could prevent it if we would. And they are right as to the planning and beginning of it, for if, during the war, our own spokesman had said no at the right moment, most, if not all, of this would never have happened.

I note all this here because all the cruelty and mistreatment we visit upon the peoples of Europe, in whatever form, builds a hate and a fear which will not bring peace, and which, the tables turning, will bring swift retaliation upon ourselves.

UNITED STATES VERSUS RUSSIA

Thus far I have spoken of our late enemies. It may be said, probably justly, that they are so thoroughly beaten, so nearly destroyed that they are no longer a threat, but we must not forget they recovered and returned in one generation after World War I. But grant their impotency for generations to come, yet are we faced with the gravest danger in our history.

Between ourselves and our late ally Russia, we are building a jealousy, a fear, a rivalry, and a hatred that unless halted will take us into the direst tragedy in the history of the world, in its magnitude, in its physical destructive force, and in its intellectual and spiritual degradation, and possibly even to our annihilation. Russia is powerful, largely unimpaired by the recent war. Under her present leaders, she is aggressive, militant, seemingly fearless. Her course compels the conclusion that she deliberately plans and plots world conquest. The ideology for which she fights is polar to ours. Fascism in Italy was never the shadow of a threat; nazism in Germany was a world-old malady showing some new symptoms, we knew its cure. Communism in Russia is a new poison-plague for which we of the modern world have yet developed neither antidote nor cure. But in world history it is old. There is this difference between nazism and communism—the first leaves private property and individualism, however much appropriated and curtailed to meet the immediate crisis; the second destroys both private property and individualism, making the state all-pervading, all-absorbing, a god of human mind.

We alone in all the world challenge Russia's aims. She hates and fears us. We hate and are fearful of her. Thus far the two powers seem to plan and scheme only in terms of force. Battles on land, on sea, in air, are to settle the matter. So far as we of the public know, the two sides have never worked together honestly trying by peaceful means to reach a mutual live-and-let-live understanding. We do not know of even an effort on the part of both parties together, mutually to concede, mutually to put out of view the intent to use force to gain the end sought. Such an effort may have been made, but we do not have the facts. Indeed, we must regretfully admit that our own military establishment seems to be now deliberately planning and preparing for another great war, it must be with Russia, since of the whole world she alone has the power and resource to challenge us, which war both sides plan, it is said, to make the most terrible and destructive of all recorded time.

OUR MILITARY ESTABLISHMENT

Furthermore, I regret to say, indeed I am almost ashamed to say, that at the moment, our military branches seem in almost complete control of our own Government. They appear to dominate Congress, and under the circumstances, we may assume they are in sufficient control of our foreign relations to be able to set the international scene. To us who do not know, it looks clear that we are today getting the same sort of propaganda of half-truths, told in the same evasive ways, with equivalent hints and dark forebodings that preceded the last war. We are not justified in doubting, on the facts we have that we of the United States are, for the first time in our history, under a real threat from our military arm, and that if the plans of the militarists carry, we shall become as thoroughly militarized as was Germany at her best, or worst. Certain it is we are being generously dosed with that sovereign narcotic, which designing militarists have in the past always administered to their peoples, the doctrines that to ensure peace we must maintain a great army and gigantic armaments. But this ignores, indeed conceals, the unvarying historical fact that big armies have always brought, not peace, but war which has ended in a hate that in due course brings another war.

Our militarists will no more be able to let a great army lie unused than they were able to withhold the use of the atom bomb once they had it, even though some military men are now quoted as saying the war was won before the bombs were dropped on Nagasaki and Hiroshima. Under the threat that Germany was perfecting such a bomb, we were justified in perfecting ours. But it may well be a distaster to civilization for us unnecessarily to have initiated its use. Some of us think it was shameful.

All this is not the way to peace, but to war.

LINCOLN AND NUREMBURG

How far indeed have we traveled from the gentle spirit, the humanity, indeed the brotherly love of Grant at Appomattox, and of Lincoln in the Cabinet meeting. That spirit brought a peace that has lasted for 85 years, with yet no signs of war. And may we not here place on one side Lincoln's declaration at the Cabinet meeting—"'no one need expect he would take any part in hanging or killing these men, even the worst of them,'" and on the other side place Nuremburg, where report says men were tried and convicted for acts which, when committed, were not contrary to the law of nations, but declared so after they were committed, thus violating one of our fundamental constitutional concepts that ex post facto laws are not tolerable. If we shall ever be the under dog, which pray God we never shall be, Nuremburg will rise to condemn us, and to argue justification for the same procedure against us.

Thus we have wandered far from the ideals, the concepts, the faith, and the works of our fathers, and from the international gospel which guided them. We are the center of a great balance of power operation, a principle in the condemnation of which in the not too distant past we exhausted our full lurid vocabulary. We no longer may move as seems to us best for our interests and safety, but must join in measures that our partners think are for their interests and their safety, and they are not without ambition, and greed is not wholly absent. How true this is may be learned from a glance at the scheming, brawling, word-mauling United Nations, which seems now to be worth no further consideration than mere mention.

THE POLICY OF THE FATHERS

The international gospel of the Founding Fathers was forecast by Jefferson in 1793. It was voiced by Washington in his Farewell Address in 1796, when he declared we should have "as little political connection as possible with Europe," because Europe had a "set of primary interests" with which we had "none or a very remote relation," wherefore "must be engaged in frequent controversies, the causes of which are essentially foreign to our concern; * * * why, by interweaving our destiny with that of any part of Europe, entangle our peace and prosperity in the toils of European ambition, rivalship, interest, humor, or caprice? It is our true policy to steer clear of permanent alliances with any portion of the foreign world." The Monroe Doctrine, declaring against the future colonization of the American Continent by Europeans, against the extension therein of their political system, against interposition by European powers to control the destinies of the Latin Americas, implemented the principles of the address. And Jefferson, commenting in 1823 on the Monroe Doctrine, and the complete political separation of Europe and the Americas, solemnly affirmed: "Our

first and fundamental maxim should be, never to entangle ourselves in the broils of Europe; our second, never to suffer Europe to intermeddle with cis-Atlantic affairs."

Nor may we overlook that great doctrine of neutrality set up under Washington himself and Jefferson and Hamilton, which was aimed at and brought about the localizing of international armed conflicts, and the preservation, under prescribed rules, of peacetime intercourse between belligerents and nonbelligerents. War was to curse as few people as possible. This has been jettisoned for the concept that every war should involve all nations, making all suffer the ravages of a global war.

Until the last quarter of a century, this gospel of the fathers was the polar star by which we set our international course. In the first 130 years of our constitutional existence, we had three foreign wars, the first merely the final effort of our Revolution, which made good our independence. During the century that followed we had two foreign wars, neither of considerable magnitude. During the next 23 years, we had two global wars. While the gospel of the fathers guided us we had peace. When we forsook it, two great wars engulfed us.

It is not clear when we began our wandering, nor is it necessary to determine the time. President Theodore Roosevelt was hinting our straying when he uttered the dictum, "Speak softly and carry a big stick." We were to force others to do our bidding. President Wilson had the full departure in mind when he declared: "Everybody's business is our business." Since then we have leaped ahead along the anciently forbidden path.

In our course under the new gospel of interference with everything we do not like, we have gone forward and are going forward, as if we possessed all the good of human government, of human economic concept, of human comfort, and of human welfare, all of which we are to impose on the balance of the world—a concept born of the grossest national egotism. In human affairs no nation can say that all it practices and believes is right, and that all that others have that differs from what it has is wrong. Men inflict an unholy tragedy when they proceed on that basis. No man, no society, no people, no nation is wholly right in human affairs; and none is wholly wrong. A fundamental principle of the operation of human society is to live and let live.

Yet, to repeat, we have entered into new fields to impose our will and concepts on others. This means we must use force, and force means war, not peace.

COST OF OUR APOSTASY

What has our apostasy from peace cost us? In men our two recent adventures have cost in casualties, dead, wounded, and missing, 1,402,600, with almost as many saddened and crippled homes.

In money it has cost in World War I some sixty-odd billion dollars; and World War II cost us some four hundred-odd billion dollars, including increased civilian help, in total, almost a half a trillion, the great bulk of which we still owe.

In spiritual values it has brought great numbers of our youth and older men to the very depths of desponding atheism. Our whole social structure seems undermined. We are becoming a blaspheming, unchaste, non-Christian, godless race. Spiritually we seem ripe for another war.

In values of government and law these wars and the interminglings of men of different concepts of freedom and human rights have brought into our own system the despotic principles of European systems, against which the fathers warned, though they came to us through doors the fathers did not see. Many and influential persons amongst us, of alien concepts and sometimes of alien birth, no longer admit that man possesses the inalienable rights of the Declaration of Independence and the fundamental precepts of the Constitution. Our courts no longer guarantee these rights and enforce these principles. We have and are aping and adopting the policies and the legal theories of Europe. Colonel House records that when President Wilson hesitated to launch us into the First World War, because he did not know what measures to take to wage the war, he, Colonel House, assured the President that it was simple. All he had to do, said Colonel House, was to do the things Europe had already done. And so we proceeded, and from then till now we have constantly and more and more adopted European governmental concepts and laws, to the loss of liberty and of the happiness and security of our people.

All this takes us into a situation that places our destinies largely in the hands of those who appear to be urging us toward war, not peace.

It is time we returned to the political faith and work of the fathers. It is indispensable that we do so if we are to have peace. I believe in the old faith and the old works, under which we had so much of peace. I am a political isolationist in the full sense of the term and am not fearful in declaring it.

I am a political isolationist because—

I fully believe in the wisdom of the course defined by Washington, Jefferson, and other ancient statesmen. The whole history of America before and since the Revolution proves the truthfulness of their assertions. All during our pre-Revolutionary history we were at war, we were robbed, plundered, and massacred because of European wars, in the issues and causes of which we had no concern. History is repeating itself.

I believe American manhood is too valuable to be sacrified on foreign soil for foreign issues and causes.

I believe that permanent peace will never come into the world from the muzzle of a gun. Guns and bayonets will, in the future as in the past, bring truces, long or short, but never peace that endures.

I believe President Wilson had the true principle when he spoke of the strength and power of the moral force of the world. Moral force in a nation fructifies industry, thrift, good-will, neighborliness, the friendly intercourse of nations, the peace that all men seek; whereas force is barren.

I believe America's role in the world is not one of force, but is of that same peaceful intent and act that has characterized the history of the country from its birth till the last third of a century.

I believe that moral force is far more potent than physical force in international relations.

I believe that America should again turn to the promotion of the peaceful adjustment of international disputes, which will help us retain the measureless moral force we once possessed, to the regeneration and salvation of the world. We now speak with the strong arm of physical force—we have no moral force left.

I believe we should once more turn our brains and our resources to the problem, not of killing men, women, and children, combatant and noncombatant, but of bringing to them more of good living and high thinking.

I believe political isolation will bring to us the greatest happiness and prosperity, the greatest temporal achievement not only, but the highest intellectual and spiritual achievement also, the greatest power for good, the strongest force for peace, the greatest blessing to the world.

THE SAME OLD WORLD

I am not shaken in my convictions nor frightened by the assertion of many good people and fostered by the Communists and "new thoughters" that the doctrine of the fathers is outmoded and that we are in a new world. All the age-old forces are still peering out at us—greed, avarice, ambition, selfishness, the passion to rule, the desire to enslave for sordid advantage of the enslaver. Not a single wanton face is missing and the visages of some are more hideous than ever. While radar, the radio, the telephone, the airplane have facilitated our talking and visiting with our neighbors, they have not made new beings out of us nor out of them, nor changed either our characters or theirs. We are just as we were, with the possibility of a little more back-fence gossiping and quarreling, and a little more brawling among the children. But the households remain essentially as they were. We still have oceans between us; we live on different continents, under different conditions; we can and should mind our own business and let others do the same.

In my view our whole international course and policy is basically wrong, and must be changed if peace is to come. Our policy has brought us, and pursued will continue to bring us, only the hatred of nations now—and we cannot thrive on that, financially or spiritually—and certain war hereafter, with a list of horrors and woes we do not now even surmise. If we really want peace, we must change our course to get it. We must honestly strive for peace and quit sparring for military advantage. We must learn and practice, as a nation and as a world, the divine principles of the Sermon on the Mount. There is no other way.

WHAT WOULD YOU DO?

Someone will, at this point, play the ace question, with the smug finality that always accompanies it: What would you do?

I frankly answer, I do not know, for I do not know the facts. Furthermore, a critic with no authority or power in a situation, and from whom is withheld a knowledge of the facts, is under no obligation to propose an alternative. He may rest by pointing out defects in policy.

On the other hand, I say, give us the facts, all of them, hiding nothing, and we shall tell you what to do. As one American citizen, I dare Government to give us the facts, all the facts, including what kind of war they think the next war will be, what kind they intend to wage, and how many lives it will cost, including the aged, the infirm, and women, and children.

We, the common people, have not been told the facts for years, since long before the last war broke. We are not now being told the facts. We can only surmise. But give us the facts and we will answer. And in our multitude of counsel you will find wisdom.

In conclusion, I will hazard one suggestion: Unless all history is reversed and its lessons and principles all blotted out, it is inconceivable that any system can be set up by a personal despot or by an oligarchy either of intellectuals or of cruel, heartless, ambitious men, that can permanently rob men of their freedom and put them in slavery. This never has been done. Sooner or later such a system has always broken down; it always will break down, because, despite what atheists and scoffers say or think, man is child of God, who planted in man's soul certain eternal concepts and urges that are stronger than mortal life or any of the intellectual or physical incidents of mortality.

Among these elemental concepts is the love of freedom; it is found in man not only, but even in the brutes. Man and beast rebel against slavery. They yield to it only under compelling force.

Another elemental, eternal concept is belief in God, which may ripen into a knowledge of God. Normal man ultimately demands this belief to make mortality tolerable.

Modern communism as explained by Communists who are in places where they speak their real minds, deny God, declare that other men are beasts that must be tamed and worked as beasts. This is an enemy that threatens us within and without. This is not a Godless world.

But men cannot be led indefinitely, nor driven by a savage despotism, down this road to an intellectual and moral abyss. They may follow along for a generation or two. But they will one day rebel against the rule of liquidation. No group can permanently maintain itself by murder, as history proves from the days of the hideous proscription lists of Sulla till now. Fear and ruthless cruelty can rule for a time, but the spirit of liberty ultimately breaks forth and sweeps away everything that lies in its path.

So it will be with communism, which now on a world scale may well be only doing the work of the Paris mobs in the French Revolution. There are fields of human endeavor where the power of birth and station still afflict man's growth and development.

But the great truth announced by the Prince of Peace, "I am the light, the life, and the way," ultimately reaches the mind and heart of men, and then they demand freedom. It was so planned in the creation. God gave to ancient Israel a law under which there came, at regular intervals, a year of jubilee and freedom, when men were freed of bondage, financial and physical. Paul told the Corinthians, "Where the Spirit of the Lord is, there is liberty."

So the light of the Master will ultimately break through the darkness of the infidel, and all men will return to freedom and free institutions and to the worship of Almighty God, for such has been the course of man since he came to this earth, and ultimately every knee will bow and every tongue confess that Jesus is the Christ, and then will come the peace of the world.

Meanwhile, if we shall follow our own destiny, America will work for peace by peaceful means, not by force. We Americans should meet our present problems not as if we are to inflict the punishment that Samuel commanded Saul to inflict upon the Amalekites—we have no such commission—but we should solve our present problems as a developing but passing phase, still pending a final solution. In our dealing with our international challenge we should adopt the tactics of Washington in the Revolution, which he took from the old Roman, Fabian. We must be alert, make no false moves, take no position we cannot hold, and await the internal solution which history assures us will come to enslaving groups of great peoples. The spirit of liberty will ultimately break forth among them and will sweep away everything that lies in its path.

Meanwhile, let us each set his own house in order. Let us each do a little repenting of our common sins. Let us each recast his own life to fit the example and teachings of the Master. We stand today not too far from the moral and spiritual place where Lincoln stood during some of the darkest days of the Civil War, when in a Thanksgiving proclamation he said:

"We have been the recipients of the choicest bounties of heaven; we have been preserved these many years in peace and prosperity; we have grown in number, wealth, and power, as no other nation has ever grown. But we have forgotten God. We have forgotten the gracious hand which preserved us in peace and multiplied and enriched and strengthened us, and we have vainly imagined, in the deceitfulness of our hearts, that all these blessings were produced by some superior wisdom and virtue of our own. Intoxicated with unbroken success, we have become too self-sufficient to feel the necessity of redeeming and preserving grace, too proud to pray to the God who made us."

How terrible that arraignment! How well it fits us today! Let us not forget God, nor forget that remembering Him means worshipping Him and keeping His commandments.

That we may hereafter live a free people and in peace, let us return to the basic principles that we observed in the first century and a quarter of our existence. But above and beyond that, I again say, that if we want peace, we must return to the faith and principles of Him who alone can give peace; we must return to the worship of Christ and to the life He marked for us. If you will bring the world to Christ, you will have peace, and it will come in no other way. If you unify the intellectual and spiritual forces of the world, the political forces of the world will become one.

In closing, I return again to the high calling you have as missionaries preaching the gospel of caring for the bereaved widows and orphans of the people. This great labor will prosper or decline depending upon how many people you reach and convert. There are now more than 70,000,000 life-insurance policyholders, in the United States, whose policies amount to over $174,000,000,000. One-half the people of the United States have life-insurance policies. In the great economic factors of our civilization no other body gives a more important service, indeed, having in mind the nature of your work, no other economic body equals yourselves in the spiritualizing influence your service spreads among the people. You are the cornerstone of the whole insurance edifice. You have the greatest stake in our peace and welfare of any group in the world. If you shall weaken, the whole structure will fall. These are not mere words, but solemn truths.

I am sure you appreciate that every time you sell a policy you not only give explanations, but you make promises; you become a moral guarantor of your promises.

To make good your guaranty, the country must prosper, and for the country to prosper we must have peace. No human mind can fathom the abyss into which another war will plunge us. The Communists plan that they will be down in the bottom, organized to exploit and enslave us. None of us must leave any act undone that could avert this.

Tens of millions of dependents the country over look for their sustenance to the promises you made. You are the benefactors of all these. Your benefactions come to them when the need for food, clothing, and shelter is most pressing. Your help eases the heavy load of sorrow that burdens their hearts and that saps the clarity of their minds. They call down upon your heads blessings that only the Almighty can bestow. Thus, you may be the instruments that, in God's wisdom, shall help to keep their Nation a body of freemen.

With Grant, in his reverent petition of three-quarters of a century ago, we common people, we who bear the burden of war, cry out to our leaders, "Let us have peace."

Albert W. Alexander

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Friday, December 19, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therein an editorial eulogy on the life of Albert W. Alexander which appeared in the editorial column of the Electrical Union News published weekly by Local 201, United Electrical, Radio, and Machine Workers of America, of Lynn, Mass., edited by Frederick M. Kelley.

Albert Alexander was one of the serious, conscientious and hardworking members of that organization. He was one that devoted his life for the betterment of others so that they would enjoy better living conditions by assisting in the improvement of the hours of work, the salaries and wages paid and the conditions under which employees work in industry. He was not only active in the business of the union but spent much of his time outside of working hours to better the lot of the families of the workingmen in the General Electric in the city of Lynn.

His passing will be a loss not only to the organization for which he labored so long and well but to the individual employee and the families of the workers and to the people of greater Lynn, who respected, admired and loved this man who died rendering service to his fellowmen.

The editorial follows:

ALBERT W. ALEXANDER

This is the hardest article I have ever attempted to write since my appointment as editor of this paper. For 2 days now, I have pondered over the fact that this Union has suffered a loss from which it can never completely recover but how do I get this on paper? I am no nearer a solution now than I was 2 days ago.

How do I explain to the community that here was the true example of a good trade unionist? Here was the type of man who formed and joined unions in order that they might be dedicated to the betterment of the community in which they exist. Blood banks, U. S. O. parties, hospital drives, Boy Scout troops and Community Funds are his monuments. I want to make sure that the good will not be interred with his bones, but I don't know how to say it.

How do I tell disinterested members of this local that Albert Alexander literally sacrificed his life for them? While the immediate cause of his death was over-exertion in connection with the coming Christmas party for our members' children, the real cause was over work on all functions of this union ,during the past month. While the great bulk of our members were pursuing their personal pleasures after working hours, this man gave nights, Saturdays and Sundays, week in and week out, in order to insure that every undertaking of this union would be a success.

How should I approach the real reason for this article—the extending of solace to the Alexander family? It would be fruitless and feeble on my part to tell them that their husband and father laid down his life in a good cause—the bettering of the lot of his fellow-man. Fruitless and feeble, because they know that this death need not have happened had every member of our union participated and shared in his good work.

How do I ask that the family treat this death as one of the natural events in the law of God and thus lessen their burden? Too many have tried that down through the ages and failed miserably. Benjamin Franklin came the closest to it, however, when he wrote: "it is the will of God and nature, that these mortal bodies be laid aside, when the soul is to enter into real life." This is rather an embryo state, a preparation for living.

A man is not completely born until he is dead. Why then should we grieve, that a new child is born among the immortals, a new member added to their happy society? We are spirits. That bodies should be lent us, while they can afford us pleasure, assist us in acquiring knowledge, or in doing good to our fellow creatures, is a kind and benevolent act of God. When they become unfit for these purposes, and afford us pain instead of pleasure, instead of an aid become an encumbrance, and answer none of the intentions for which they were given, it is equally kind and benevolent, that a way is provided

by which we may get rid of them. Death is that way. We ourselves, in some cases, prudently choose a partial death. A mangled painful limb, which cannot be restored, we willingly cut off. He who plucks out a tooth, parts with it freely, since the pain goes with it; and he, who quits the whole body, parts at once with all pains and possibilities of pains and diseases whch it was liable to, or capable of making him suffer.

Our friend and we were invited abroad on a party of pleasure, which is to last forever. His chair was ready first, and he is gone before us. We could not all conveniently start together; and why should you and I be grieved at this, since we are soon to follow, and know where to find him?

Albert Alexander could truly have used the text from the Fourth Chapter of Timothy II: "I have fought a good fight, I have finished my course, I have kept the faith."

FREDERICK M. KELLEY.

Rights of Congressional Committees

EXTENSION OF REMARKS
OF
HON. J. HARDIN PETERSON
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Friday, December 19, 1947

Mr. PETERSON. Mr. Speaker, I have been furnished, by Capt. James P. McGovern, a letter dated December 11, 1947, together with a statement by the Honorable Edward A. Alexander, of the New York bar, with reference to certain interesting legal phases of the rights of congressional committees, which I include herein:

WASHINGTON, D. C., *December 11, 1947.*
Hon. JAMES HARDIN PETERSON,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: I am enclosing herewith letter published in the New York Times of this date which you may deem worthy of being included in your remarks for the CONGRESSIONAL RECORD. Mr. Edward A. Alexander, who wrote it, is a distinguished member of the New York Bar. He is a life-long friend of mine and it would please me were you to see your way clear to give the people of our Nation an opportunity to read what this truly great lawyer has written on the above subject through the official publication of their Congress.

With assurances of high esteem and personal regards, I am,

Very sincerely yours,
JAMES PATRICK MCGOVERN.

HEARINGS ON COMMUNISM—INVESTIGATION OF HOLLYWOOD WRITERS BY THOMAS COMMITTEE DISCUSSED

To the EDITOR OF THE NEW YORK TIMES:

In quite a few of the articles appearing in the press, including editorials, there seems to be a lot of confusion concerning the issues arising out of the refusal of the 10 Hollywood writers to answer the simple question as to whether or not each of them is or is not a Communist.

For instance, in your issue of November 23 there appears a special to the New York Times, written by Lewis Wood, entitled "Legality of Communism is Undecided by Courts; No Law Against Party Membership, but New Test Cases Are Pending." The very title shows a misconception of the issues involved.

Whether or not the Communist Party is or is not legal is entirely immaterial. The first question involved is whether Congress has the constitutional power to obtain information for the purpose of framing laws, and as an incident to that power to compel witnesses to attend and testify. If the Constitution gives Congress that power, then it had the right to exercise it by subpenaing these 10 Hollywood writers and asking them any questions it saw fit.

OBJECTION TO REPLY

Each one of these writers as a witness has the personal privilege, under the Constitution, to object to answering any question on the ground that his answer might furnish self-incriminating evidence against him or, as it is sometimes put, tend to incriminate him. His right to object on that ground is a personal privilege and may be waived. No one of these witnesses, however, from all the accounts I have read, did object on the ground that his answer might tend to incriminate him. Therefore, when each of them refused to answer whether he was or was not a Communist, without exercising his personal privilege by interposing his objection that the answer would tend to incriminate him, he had no excuse or reason for not answering it.

In the first place, if it is not a crime under the laws of any State or under any act of Congress to be a Communist, a witness cannot interpose his objection that his answer will tend to incriminate him. A congressional committee would not have to pass on the question as to whether the Communist Party is a lawful political party if the witness does not raise the question that a Communist is a criminal and that he will not, therefore, answer as to whether or not he is one on that ground.

However, in the opinion of this writer, the Committee on Un-American Activities not only acted well within its constitutional authority but also acted in the interests of a sound public policy in attempting to find out whether or not a means of communication, such as that of the moving-picture industry, was being influenced to bring about public opinion in favor of changing the United States Government, a representative republican Government, into that of a Communist Government.

If the congressional committee discovered in the course of its investigation that the Russian Communist Government is attempting to influence Hollywood through the employment of Communist scenario writers and others, to create through innuendos or otherwise, by other and different subtle means, moving pictures for the purpose of influencing the youth of America in favor of communism, they would violate their duty to the American people if they did not fully expose such a situation to the public.

ESSENTIAL STEP

As one of the steps toward that end it is absolutely essential to know whether these writers are or are not Communists. Numerous articles appearing in the press contain immaterial matter tending to confuse this issue.

Now I do not attribute to Mr. Lewis Wood anything but the best intentions in writing his article, but it seems to me that it is based on a misapprehension. Take one of the statements he made merely as one illustration. He says: "Charges of contempt of Congress, specifically, refusing to answer the House committee's question on membership in the Communist Party, would have nothing to do with Communist activity itself. Under Federal statutes there is nothing illegal about being a Communist."

From that statement anyone would get the impression that the congressional committee, in asking each witness whether he was a member of the Communist Party, was asking an immaterial question. In any investigation it is necessary to ask questions which tend to prove the objective which the interrogator seeks.

It is certainly immaterial whether the Communist Party is a criminal organization in the United States or not. If a witness is not a Communist and it is charged against him that he wrote moving pictures which, through subtle innuendo, tend to influence the people of the United States against the existing capitalistic system, there is reason to believe that he did not write such pictures at the request of the Communist Party. If, however, he admitted that he is a Communist, it would tend to prove that he wrote such pictures for that reason, and perhaps it would carry some weight on conflicting testimony, if such existed, that he may have written them at the request of the Communist Party in the United States.

I have always contended that no nation, whether it be Russia or any other nation, has the right to meddle in the internal affairs of any other nation, large or small. In the case of the United States the meddling by any other nation into the domestic affairs of the United States, with the object in view of changing our form of government, is a violation of the Monroe Doctrine.

We should pass a Federal statute prohibiting any such intermeddling. The United States has the right to preserve its existence as a free representative Republic (sometime erroneously called a democracy) founded upon a belief in God and the free-enterprise system.

If the United States Government should consider passing such legislation, any one of its congressional committees has the full power to elicit from witnesses whether any other nation, as a nation, has caused propaganda to be issued in the United States which would tend to destroy our form of government and our free capitalistic system, and as a step toward that objective to ask any witness whom it proposes to question further concerning his activities in that direction whether he was or was not a member of the Communist Party. If the Committee on Un-American Activities did not ask such questions as a necessary preliminary to eliciting further information on the subject, the committee itself would not be American.

EDWARD A. ALEXANDER.
NEW YORK, November 26, 1947.

Tribute to Gen. A. A. Vandegrift, Commandant, United States Marine Corps

EXTENSION OF REMARKS
OF
HON. GEORGE W. SARBACHER, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, December 19, 1947

Mr. SARBACHER. Mr. Speaker, under leave to extend my remarks, I desire to call the attention of the House to the fact that our country this month will lose the active services of one to whom we partially owe our freedom at this moment—one of our military leaders whose personal courage and determination rose above a fanatical and equally determined enemy, a general who helped turn the tide, not merely of a battle or a campaign, but of the Pacific war itself.

Gen. Alexander Archer Vandegrift, now retiring as eighteenth Commandant of the United States Marine Corps, is that man.

One by one, our war leaders have stepped down. To each of them—to Admirals King and Nimitz, to Generals Marshall and Arnold—the Nation stands in measureless debt, as it does indeed, to the sailors and soldiers whom they led. And yet, Mr. Speaker, just as we think of our Marines as an elite corps entirely apart from the other services, so also do we remember General Vandegrift with particular thankfulness. He too has served his country in a special way: the Marines' way.

It typified General Vandegrift, as it does his corps, when he once told a congressional committee:

> Remember that $50 a month was not the consideration that led men to die storming Iwo Jima or to crash in flames over Tokyo.

All his service career has been devoted to the task of leading marines to do things which could never be bought.

It is little more than 5 years since August 7, 1942, when the First Marine Division landed on Guadalcanal with General Vandegrift in command. In those days most American citizens had never heard of Archer Vandegrift. They did know, however, that his marines were ready for battle; they did know, perhaps, that although not a single United States Army division was ready to face the Japanese in the South Pacific, the Fleet Marine Force could be relied upon to stem the tide; they soon realized that, despite even MacArthur's prophecies of disaster, the Marines were on Guadalcanal to stay. Soon they began to ask, "Who is General Vandegrift? What kind of man is it who has stopped the Japanese?"

Curiously enough, the answers seemed almost meager. General Vandegrift, it appeared, was a quiet man; a steady sort of individual who refused to be rattled as he thought through a problem. Harmony, teamwork, and honest firmness were the attributes of his command—coupled, of course, with a marine's willingness to "go" rather than to "send." For example, when Henderson Field was the "hot spot" of Guadalcanal, there you found General Vandegrift's command-post, located on a bull's-eye.

Guadalcanal has receded a little in our memories nowadays. You could have lost it in the Bulge or in Normandy. But remember this, gentlemen, Guadalcanal, in August 1942 was the first offensive of the Allies, and it was by all odds our first success. Remember that, from Guadalcanal on, the Japanese never again advanced. And remember, finally, that it was General Vandegrift and his gallant troops who brought this to pass.

For General Vandegrift, however, Guadalcanal was only a beginning. Wearing his well-earned Congressional Medal of Honor, on New Year's Day, 1944, General Vandegrift relieved General Thomas Holcomb as Commandant of the Marine Corps. From that point on, many of you here in the Congress came to know him well. We knew him as the honest spokesman of a corps which had no more to offer than its courage and its discipline; we knew him as a wise and firm leader who commanded the respect of statesmen as well as of soldiers; and we soon found out that when you sought a straight answer, you could get just that from the Commandant of Marines.

Probably it is owing to General Vandegrift and his small band of ex-Marines here in Congress that the corps at this moment retain their integrity and vigor as a key arm in our Military Establishment.

It would be a cliché—although a very grand one—to close these remarks with the Marines' motto, the Semper Fidelis which has sustained every one of them, Archer Vandegrift included, in so many hard-fought battles. Equally close to the mark, however, if not so well known, is the judgment which Secretary Forrestal passed upon General Vandegrift a few months ago, when the former stepped upward to become Secretary of National Defense. Of the Marines' Commandant, wrote the Secretary who had himself braved Japanese fire with Marines on Iwo Jima:

> He has vigorously and effectively acted in the interest of the Marine Corps and has maintained the high spirit which has come to be associated with that organization. He has been successful in his mission of keeping the Marines ready at all times for any emergency. His deep devotion to his country provides an example for his associates and for all who follow him.

Tribute to Gen. A. A. Vandegrift, Commandant, United States Marine Corps

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Friday, December 19, 1947

Mr. SMATHERS. Mr. Speaker, I am sure the Members of the House of Representatives, without exception, feel a profound regret at the retirement of Gen. Alexander Archer Vandegrift, eighteenth commandant of the Marine Corps.

Most of us, I believe, link the names of Vandegrift and Guadalcanal in an insoluble bond. We think back to those days of 1942 when allied forces were retiring or being forced slowly backward on all fronts, and when the Japanese were in turn driving toward Australia and New Caledonia. And then, Mr. Speaker, the events of August 7, 1942, come vividly to mind, for it was on that day that General Vandegrift landed his First Marine Division in the Solomons in the first allied offensive of the war.

It was a supreme tribute to our Corps of Marines that they alone were ready for amphibious warfare in this hour; and it was equally a supreme tribute to the indomitable leadership of General Vandegrift, in a most critical and doubtful moment for our fortunes, the marines, elite, courageous, and disciplined, responded in face of all discouragements and hardship to hold the southern Solomons for the United States.

The firm and serene Virginian who commanded at this moment, however, was also the same Lieutenant Vandegrift who had been commended for coolness and courage under enemy fire at Vera Cruz; the dogged and fearless officer who had faced savage Haitian bandits to win still more laurels; and the north China marine commander who had never hesitated, even in the late 1930's, to set his face against the Japanese about Peking. At a time in our history when events were so finely balanced as they were on Guadalcanal, we had good reason, indeed, to be thankful for Archer Vandegrift and all that his past record as a marine had made him.

It was a very different matter, Mr. Speaker, when General Vandegrift came to Washington in 1944. We have all seen field commanders—even very great ones—who were unable to survive "The Battle of Washington"; and there is a moral courage and clearheaded firmness which is as greatly needed here as ever on the field of battle. How would Vandegrift of Guadalcanal measure up to the records of previous great commandants? Would Washington dim the lustre of this great fighting man?

I think you know the answer, Mr. Speaker. I think that every Member of this Congress who has ever seen General Vandegrift in action knows his forthright integrity and his willingness to stand courageously for his beliefs. We had a fine example of this only last year in the now-happily resolved service unification discussions when General Vandegrift supplied the leadership to those exmarines in the Congress who, working together, were able to convince the Congress of the necessity of granting to marines the sanction and protection which all marines believed necessary.

To recite General Vandegrift's entire record and his accomplishments would consume more space than even the RECORD could grant. We know all this, we know that "great deeds" and "high honors" are synonymous with the name "Vandegrift," just as is the word "marine," synonymous with the highest in courage, discipline, and fighting ability. Mr. Speaker, so long as the Marine Corps is able to produce such men as Archer Vandegrift, I have only confidence in the outcome of whatever military battles may lie ahead.

Gen. Albert C. Wedemeyer

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, December 19, 1947

Mr. DONDERO. Mr. Speaker, I should like to call the attention of the House to the illuminating statement made by Lieut. Gen. Albert C. Wedemeyer before the Appropriations Committee of the Senate on Wednesday. As you all know, General Wedemeyer was called as an expert witness to testify upon the urgency—from the American point of view—of aiding the Republic of China in its struggle against communism.

General Wedemeyer is more than an expert on China. He served in an unique capacity first on the periphery of China

and then within China itself. As Chief of Staff to Lord Mountbatten during the difficult Burmese campaigns, he attained an intimate understanding of what China's independence means to the Far East as a whole. Then, as Chief of Staff to Chiang Kai-shek and commander of the American forces in China, he gained a thorough understanding from the inside of the difficulty of China's struggle against the Communist menace. More recently, he was sent by President Truman as his personal representative to examine the findings of earlier observers on the complex Chinese situation.

General Wedemeyer was better fitted than perhaps any other officer in the United States Army to consider the Chinese situation as a part of the world picture. Prior to his service in China, he was the recognized American authority on the German army and the military and industrial affairs of Hitler's Germany; he was one of the few American officers to graduate from Germany's West Point, the Kriegsakademie. He was one of the first to see first-hand the dangers of nazism to world democracy, as he is today one of the very few qualified from personal knowledge to speak about the extreme gravity of the Far Eastern situation.

Because of his extraordinary experience, both military and diplomatic, East and West, General Wedemeyer is today especially valuable as the chief of the operations division of the United States Army. There he finds himself daily face to face not with theoretical situations, but with reality.

It is gratifying that General Wedemeyer's testimony has received almost unanimous approval. It is most unfortunate, however, that one of Washington's newspapers, the Washington Post, which has for some reason consistently followed an antiaid to China policy, has chosen to take General Wedemeyer to task for his frank and fearless testimony. I have had the pleasure of personal acquaintance with the General for a number of years and can say from my own experience that there is no more objective, disinterested, and courageous servant in American Government.

A Veto-Proof Tax Bill

EXTENSION OF REMARKS

OF

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, December 19, 1947

Mr. KNUTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me on introducing the bill to reduce personal income taxes for the year 1948:

A VETO-PROOF TAX BILL

1. It removes an estimated 6,000,000 taxpayers from the tax rolls by increasing the present $500 per capita exemptions to $600.

2. It provides tax reductions for married couples ranging from 57 percent in lower brackets to approximately 10 percent in upper brackets. These are the 9,500,000 taxpayers who can take advantage of splitting their income for income-tax purposes.

3. Provide an additional exemption of $600 for those people 65 years of age and over. This exemption affects an estimated 3,700,000 returns and removes about 1,400,000 taxpayers from the tax rolls.

4. Increase the present $500 allowance for the blind to a $600 exemption and give effect to this in the withholding tables. There are approximately 250,000 blind people in this country.

5. In addition to the advantages to married couples through splitting income for tax purposes, it provides a percentage reduction which affects taxpayers according to the size of their present tax. It in effect divides them into four groups as follows:

GROUP A

Those with incomes (after deductions and exemption) which do not exceed $1,000 receive a 30 percent reduction in their tax. This is the same reduction granted last year. In this group there are 29,200,000 taxpayers.

GROUP B

Those with incomes between $1,000 and $1,396 receive a reduction ranging from 30 percent to 20 percent, which is the same as last year. In this group there are 14,500,000 taxpayers.

GROUP C

Those with incomes between $1,396 and $4,000 receive a 20 percent reduction, which is the same as last year. In this group there are 9,100,000 taxpayers.

GROUP D

Those with incomes in excess of $4,000 receive a 20 percent reduction on the tax applicable to the first $4,000 of their income, and 10 percent on the tax applicable to the remainder of their income. In this group there are 1,700,000 taxpayers.

6. Repeals the provisions of the Revenue Act of 1942 which discriminates against residents living in the community property states in the payment of estate and gift taxes. A provision putting residents living in non-community property States on the same basis as residents living in community property States for estate and gift tax purposes is being drafted and it is hoped will be ready to put in the bill when reported out by the committee. Due to complications and difficulties in the preparation of such a provision, it was not possible to have it ready for incorporation in the introduced bill.

The estimated percentage distribution of the individual income-tax liability and taxpayers under present law compared with the estimated distribution of total tax reduction under the bill introduced today are as follows:

Taxable net income class (after personal exemption and credit for dependents on basis of $600 per capita exemptions)	Percentage distribution of—		
	Total taxpayers	Total tax paid under present law	Total reduction under new bill
$0 to $1,000	53.6	18.3	28.1
$1,000 to $1,396	26.6	19.7	25.2
$1,396 to $4,000	16.7	23.0	23.8
$4,000 and over	3.1	39.2	22.9
Total	100.0	100.0	100.0

Thus 77 percent of the total reduction will go to taxpayers with taxable incomes under $4,000, and 23 percent to taxpayers with taxable incomes of $4,000 and over.

Without allowing for increased tax collections, which have always been a result of reducing personal income taxes, the bill would reduce Federal revenues from personal income taxes by approximately $5,500,000,000, including a provision for estate and gift-tax relief for residents of non-community-property States, which will be ready to include in the bill when reported out by the committee.

Comparison between the tax burden under present law, H. R. 3950, and plan for reducing the individual income-tax burden

SINGLE PERSON—NO DEPENDENTS [1]

$30,000	11,381	9,105	6,977	2,276	4,404	20.0	38.7
$50,000	24,111	19,289	15,986	4,822	8,125	20.0	33.7
$100,000	62,301	49,841	44,224	12,460	18,077	20.0	29.0
$300,000	233,700	193,895	189,226	39,805	44,474	17.0	19.0
$500,000	406,600	348,425	343,940	58,175	62,660	14.3	15.4
$1,000,000	838,850	735,175	732,966	103,675	105,884	12.4	12.6
$2,000,000	1,703,350	1,508,675	1,511,014	194,675	192,336	11.4	11.3

[1] Under the plan the present $500 per capita exemptions are increased to $600.

[2] The new bill provides for equal division of income and deductions between husband and wife, and $600 per capita exemptions.

The Soviet Union Should Not Be Called "Russia"

EXTENSION OF REMARKS
OF
HON. MILLARD E. TYDINGS
OF MARYLAND
IN THE SENATE OF THE UNITED STATES

Friday, December 19 (legislative day of Thursday, December 4), 1947

Mr. TYDINGS. Mr. President, I ask unanimous consent to have printed in the RECORD a statement by my friend, the Reverend Dr. Joseph F. Thorning, Associate Editor of "The Americas" and "World Affairs," about the importance of the distinction between the Soviet Union and that nonexistent body politic, "Russia." This explanation was published on the editorial page of the New York Times on September 20, 1947. It contains suggestions that may be of special interest to radio commentators, newspaper editors, educators, authors, and lecturers. Correct terminology can promote understanding, because precision makes for clarity.

I consider it a significant fact that Mr. Arnold J. Toynbee, in a recent article in the New York Times, on Sunday, December 7, 1947, employed exactly the phraseology advocated by Dr. Thorning.

Mr. Toynbee, it may be added, is the Director of Studies at the Royal Institute of International Affairs and Research, Professor of International History of the University of London. It is interesting to note that Professor Toynbee and Dr. Thorning agree on the need for accurate expression in the domain of world affairs.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

When an educator like Dr. George D. Stoddard, president of the University of Illinois (the New York Times, September 7, 1947), in an otherwise excellent article uses an admittedly incorrect term, "Russia," four times in succession, readers have a right to inquire about the reasons which may motivate such phraseology. The question is important, because all democratic, freedom-loving peoples have an obligation not to identify the Russians with their totalitarian masters.

Can it be that slovenly newspaper practice is responsible for the careless language of some educators? Too many editors and news commentators forget that "Russia" went out of existence in 1917, when a new body politic, eventually to be known as the Union of Soviet Socialist Republics, was established. The name which the original totalitarians selected brings out clearly the international character of the Marxist police state. "Russia," with its necessary connection with the Russian people, simply does not have the connotations which are present in "the Soviet Union." Why do journalists, who like to pride themselves upon their accuracy, continue to use an outmoded, unhistorical vocabulary?

To be sure, some newspaper folk as well as a few of the professors try to justify themselves by pointing out that they are merely following "common usage." This seems to be a weak apology. In point of fact, the more alert foreign correspondents usually lead off their pieces in this field by mentioning "the Soviet Union" and then occasionally employ "Russia" as a variant.

On the other hand, Messrs. Henry A. Wallace, CLAUDE A. PEPPER, and their supporters almost invariably introduce talk about "Russia" and "the Russians." Naturally these words, with their aura of courage and glory, elicit immense sympathy and admiration for the valiant Russian people.

Does any thoughtful reader imagine that this choice of language is not deliberate, although incorrect? With such radiant diction, Marxist apologists in the United States plead the cause of the clique which runs the Soviet Union. The interests of the Russian people and those of the Soviet Politburo, it may be noted, do not often coincide.

Why not be realistic as well as exact in this sphere of semantics? The distinction between tyrants and their slaves can and should be recorded each time that we mention "the Soviet Union" and "the Russian people."

Is it not significant that the statesman identified as X, who wrote the widely quoted piece on the surviving totalitarians in "Foreign Affairs," spoke clearly and consistently and correctly about "the Soviet Union"?

Recommendations along these same lines have often been made by Mr. Alexander Kerenski, onetime Provisional President of a democratic Russia.

Truth depends upon accuracy of expression. Furthermore, fairness to all concerned demands that there be no name calling. This is a case where the rulers of the Soviet Union have themselves chosen their own titles and descriptions. They are the self-proclaimed leaders of a federation which not only has fifth columns everywhere but also, avowedly, aims to embrace the world with its peoples. That is in the nature of world revolution. The Constitution of the U. S. S. R. was drawn up with explicit provisions for the incorporation of all other political entities.

It is a practical measure of self-defense to employ the nomenclature selected, not by non-Marxist adversaries but by the Soviets themselves. At any rate, some citizens of this country will protest every time a mistaken terminology is employed.

Marshal Feng Yu-hsiang's Attitude Respecting Aid to China

EXTENSION OF REMARKS
OF
HON. GLEN H. TAYLOR
OF IDAHO
IN THE SENATE OF THE UNITED STATES

Friday, December 19 (legislative day of Thursday, December 4), 1947

Mr. TAYLOR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "China's Generals," published in the Washington Post of December 12, 1947, commenting on Marshal Feng Yu-hsiang's position with respect to aid to China; an article entitled, "Paradoxical General Has a New Lease," by Edward Rohrbough, published in the Washington Post of December 14, 1947, and an article entitled "General Feng Calls United States Aid to China Useless and Dangerous," published in the Washington Post of December 12, 1947. General Feng is now visiting the United States.

There being no objection, the editorial and articles were ordered to be printed in the RECORD, as follows:

[From the Washington Post of December 12, 1947]

CHINA'S GENERALS

The Capital at the moment is entertaining a distinguished visitor from China who could enlighten the many Members of Congress who are constantly asking for truth and not fiction about China. He is Marshal Feng Yu-hsiang, the famous "Christian general," who is visiting America for the first time—on a mission of inquiry into river conservancy. Actually Marshal Feng is in the doghouse so far as Chiang Kai-shek is concerned, but Chiang was so constrained by Feng's prestige with the people and the armies of China—all of them, Communist as well—that he gave him a mission abroad and a high-sounding title as the mark of his displeasure. Feng's "crime" is that he refused to participate in Chinese killing of Chinese. In other words, he was opposed to the civil war, and, in protest, resigned his post as vice generalissimo of the Kuomintang armies under Chiang Kai-shek.

In this country Feng has been an unremitting critic of the generalissimo and the misconduct of affairs by the clique around him. But, instead of rebukes from Nanking, all he has got so far is the extension of his commission in America. Renowned in China as a blunt man, he is calling a spade a spade in Washington, and recently, when he read that the venerated Li Chai-sun had been read out of the Kuomintang for criticism such as Marshal Feng is indulging in, he blandly cabled to the generalissimo that he felt "humiliated" that he had not been consigned to outer darkness along with his friend, Li.

The news he bears from China is that, with the declining fortunes of Chiang Kai-shek's war machine, graft and irresponsibility are in the ascendant in Chiang's domain. Commandeering of men and things has become so shocking that Chinese progressives are refusing to have anything to do with Chiang. The generalissimo is making things worse by such acts as the proscription of the Democratic League, which comprises the very men that Secretary Marshall, when he left China, looked to for salvation. In these circumstances any aid that this country extends to China will simply go into the coffers of the Chiang oligarchy. As for arms to Chiang, they would simply perpetuate the civil war, and make the name of America execrated. As it is, the American origin of most of Chiang Kai-shek's arms is advertised far and wide by Chiang's henchmen after they have been employed against Chinese villages, and then lost to the opposing armies.

It is wrong to think that the present war is a war between Chiang Kai-shek and the Communists. It is a gigantic melee in which many factions and dissidents, as well as the Communists, are engaged against Chiang Kai-shek. A bare chance remains of mediating this fratricidal strife, but if this is impossible, and, furthermore, if Chiang is defeated, any new regime in Nanking would certainly not be Communist. Marshal Feng, whose view this is, merely confirms what most sober observers of the confusion in China report.

[From the Washington Post of December 14, 1947]

CHIANG CRITIC—PARADOXICAL GENERAL HAS A NEW LEASE

(By Edward Rohrbough)

Marshal Feng Yu-hsiang, China's "Christian general" and wartime vice generalissimo, who has played many important roles in the turbulent political drama of his country, is enacting still another today—a role that seems strangely contradictory to Americans.

For a year the marshal has been in this country as head of the water conservation division of the Nanking government, sent

here by Generalissimo Chiang Kai-shek to study the Tennessee Valley Authority and similar projects. But while carrying out his mission for Chiang, he has become one of the outspoken leaders of the conservative or non-Communist, opposition to Chiang.

He has frequently spoken out against the generalissimo's prosecution of the war, against American aid to China and against the police suppression in China of students, newspapers, and groups who oppose the civil war.

Adding to the irony of the situation is that, although Kuomintang newspapers in the United States have denounced him as "China's first traitor" and have demanded revocation of his passport, the Chiang government recently extended his mission another year.

DR. SUN'S TACTICS

Recently Marshal Feng accepted the chairmanship of a new organization known as the Overseas Chinese Association for Peace and Democracy in China. The organization's expressed aims are opposition to American military and financial aid to Chiang, but there are those who see it as having more direct political significance in Chinese affairs, as did various groups organized by Dr. Sun Yat-sen in foreign countries for the purpose of opposing the Manchu Dynasty.

Speaking individually, Marshal Feng has been critical of the Generalissimo's war policy for some time, but now he has come out with two opinions more extreme than any he has uttered. They are:

1. The United States cannot expect any payment for loans of money or military equipment to Chiang Kai-shek's government from a future Chinese coalition government.

2. Neither the Generalissimo nor "the reactionary elements which have helped him pursue the civil war" should be included in such a coalition—a proposal being frequently mentioned by the Chinese radio.

In spite of this opposition the Chiang government has taken no step publicly to silence the marshal or to remove him from his position in the government or on the standing committee of the Kuomintang Party. A Chinese who moves in high Kuomintang diplomatic circles sought to explain Marshal Feng's immunity by saying, "He is our elder statesman. He is the only one of us who can say things like that."

The "elder statesman" status, however, is only one of several reasons. Another is probably the fact that no one can plausibly accuse Marshal Feng of being a Communist. He has opposed the Communists too often and he has been China's most famous convert to Christianity for too long.

SOLDIER'S SOLDIER

The "Christian general's" military background is even more important. Almost alone of China's military leaders during the last three decades, Marshal Feng represents the common soldier.

Of all the generals in the days of the Peiping Government, he was the first to command a large Chinese military force which cultivated amicable relations with the people. He became known as an excellent military teacher and an equitable disciplinarian, and his army earned the reputation of being the only one in which a common soldier of intelligence and merit might rise to a position of high command.

In the war against Japan, Marshal Feng's training methods showed their effectiveness. The Battle of Taierchwang in Shantung, the first important Chinese victory over the Japanese Army, was won by men he had trained.

After VJ-day, however, Marshal Feng showed a pronounced reluctance for fighting the civil war. The loss of three Kuomintang divisions to the Communists a few weeks ago is attributed by some observers to the arrests of former Feng officers in the army of Gen. Sun Lienjen. After the arrests it is said the three divisions surrendered without much more than token resistance, and it is not improbable that any action against Marshal Feng might bring widespread defection among the troops his officers command.

RESTAURANT MAN

At 67 Marshal Feng is still a physical giant by Chinese standards, and, although he admits his public utterances might result in his eventual arrest, the possibility does not worry him.

On the other hand, he says "there may come a time when Mr. Chiang and his associates are arrested themselves and bound on the table for trial by the people."

In spite of his leadership in the opposition to Chiang, Marshal Feng disavows any political ambitions except the achievement of peace in China.

"As for myself," he said, "I should like to retire and run a restaurant and spend my declining years in peace."

[From the Washington Post of December 12, 1947]

GENERAL FENG CALLS UNITED STATES AID TO CHINA USELESS AND DANGEROUS

China's famous Christian general, Marshal Feng Yu-husiang, said in Washington yesterday that any American help to China at this time would be useless and dangerous.

Relief supplies, he said, were sure to fall into the hands of Chiang Kai-shek and his lieutenants, and some would find their way into the black market at Shanghai. As for military supplies, the marshal predicted they would be captured by the Communists and prolong the civil war.

Already, he told an interviewer, the Communist armies are equipped to a large extent with American weapons they have seized from government troops.

The marshal, an almost fabulous figure in Chinese history for 35 years, was unsparing yesterday in his attacks upon the Chiang regime, although he is still a member of Chiang's Koumintang Party and is in the United States on an official mission for Chiang to study improvements in China's water supply. Until recently he ranked second to Chiang as vice generalissimo.

He has held aloof from the present civil war with an attitude of "a plague on both your houses." He urged yesterday that the United States immediately stop all forms of military assistance to Chiang, and follow up its action by a renewed offer of mediation in the civil war.

If any Chinese should offer mediation, he said, Chiang would at once brand him a Communist and an enemy. Therefore, he argued, mediation must come from outside.

He thought Chiang was losing the civil war, but that the Communists would never succeed in controlling China. The Communists forces, he said, included moderate and democratic elements, which would never let the Communists "paint China red."

One reason for Chiang's lack of success, he said, was the existence of 72 different grades of rank and pay in his army.

Another was that most of Chiang's divisions were far under the regulation strength of 15,000 men; those headed by Chiang's close lieutenants, he said, had a strength of only 3,000 men, but the generals collected pay and supplies for 15,000.

The Marshal has long had the reputation abroad of being an efficient military commander and administrator.

In the struggles with the war lords 20 years ago he brought honest government and order to many turbulent areas. Although he is 67, he looks 20 years younger, a big and powerful man who is reported to hold the loyalty of many thousands in both armies in the present civil war.

He was last in Washington a year ago, when he visited the Seventh-Day Adventist General Conference Headquarters at Takoma Park and renewed old friendships with many Adventist ministers who had served in China.

European Recovery Program

EXTENSION OF REMARKS

OF

HON. JOSEPH H. BALL

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, December 19 (legislative day of Thursday, December 4), 1947

Mr. BALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the European recovery program, which I delivered last night, December 18, over the Columbia Network.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The genesis of the Marshall plan was two sentences in a speech by Secretary Marshall at Harvard last June, in which he suggested that it was about time Europe tried to help itself, and that then we might feel better about helping them. Sixteen nations met at Paris and did two things. First, they decided on a level of living standards for the 200,000,000 people in their countries for the next 4 years and a level of production they would like to achieve by the end of the 4 years, in most cases considerably above prewar levels. Then they estimated how much of the materials to reach these goals they could supply themselves. The deficit, $22,000,000,000, is the Marshall plan, so-called.

Of course that is not a plan at all, in the sense that it includes any specific and detailed projects to increase Europe's production. Reports are that the first figure was twenty-nine billions. Will Clayton persuaded the nations to lop seven billions off, and our own Harriman committee cut it several billions more. But there is still no plan that anyone can get his teeth into. What is sought, apparently, is authority for the administration to spend from four to six billions a year for the broad purpose of European recovery.

Although I am critical of such a vague proposal to spend more American billions in the same way that twelve billions have been spent unsuccessfully in the past 2 years, let me emphasize here that I have no quarrel whatever with the fundamental premise of the Marshall plan.

A free and economically solvent Europe is a sound objective of our foreign policy; it would be tremendously to our advantage, and if substantial assistance from us stands a reasonable chance of achieving it, then the expenditure is justified on the basis of national self-interest. But I do want assurance that our expenditures stand at least a 50–50 chance of achieving results, and I am very certain that if the administration is left free to pursue the policies it has pursued in the past, it will fail again. Therefore, I believe Congress must insist on some severe restrictions and conditions on any future grants of funds or authority.

One of the major arguments by the proponents of this plan is that unless we extend this aid, Europe will be taken over completely by the Communists. In other words, we must buy off Communist aggression with American dollars.

Granted that severe economic distress provides more fertile ground for Communist treachery, that argument still does not jibe with facts. Nowhere have the Communists ever taken control of a country through the free choice of the people, whether the people were hungry or not. Always the Communists have been a minority, usually a small one, which seized power by naked force, usually with the backing of the Red army. Then the Communists proceed to exterminate all political opposition, liqui-

date freedom, and bleed that country to the limit for the benefit of Soviet Russia. The people are always worse off than before.

That is what has happened in one country after another in eastern Europe. With that horrible example of what Communist dictatorship means right next door to them, is it logical to assume that the peoples of Italy, France, or any other country will freely choose that course out of their troubles, regardless of how serious these may be? I cannot believe it. That is like saying that a man whose house is burning will pour gasoline on the flames unless you help him carry water.

I agree completely that Communist dictatorship and aggression are the most serious threat to both world peace and recovery today. But it is a threat based on power and force. The fifty-odd Russian divisions in eastern Europe have a lot more to do with it than economic problems in western Europe. Like the Nazi dictator, the Communist dictator will be finally stopped in his aggressions by the presence, or if worst comes to worst, by the use of superior force. It is just as dangerous and wrong to try to fool the people into believing that we can buy off Communist aggression with dollars as it was to try to appease Hitler.

No aid program can be put on a humanitarian basis, deeply as we may feel about Europe's plight. Congress has no power under the Constitution to appropriate public money for charity abroad and we would violate our oaths if we acted on that basis. Likewise, our assistance cannot by any stretch be termed an economic investment. If conditions in Europe were such that these expenditures would be a sound economic investment, there would be no need for Government to step in. Private capital would do the job.

The only basis on which Congress can act is that our aid to Europe will advance the interests, national welfare, and security of the United States. This is a political program, and must be such to be constitutional. Therefore it is perfectly sound to attach to it any conditions which we believe are necessary to achieve those political objectives, with the recipient countries always free, of course, to turn down our help if they don't like the conditions.

What should those conditions be? I can suggest a few. It is now costing American taxpayers at the rate of over $700,000,000 a year to support the economy of the British and American zones in occupied Germany. All studies of the problems there agree that an integrated economic and political administration of at least the three western zones in Germany is essential if German production is to be increased enough so its economy will at least be self-supporting, let alone repay these sums or pay any reparations. France so far has opposed unification of Germany. We can understand her fear of a strong Germany, but our own generals are convinced they can prevent any rearming of Germany while increasing her production so she is self-supporting. Shouldn't we insist that France, as a condition of participating in future aid, go along with us on an integrated administration of Germany?

Britain would be one of the heaviest participants in the Marshall plan under the Paris report. Personally, I am convinced, and the record bears me out, that a free economy will always outproduce and provide a higher standard of living for all the people than either a socialistic or government-planned and controlled economy. I believe that when economic freedoms are liquidated, the other freedoms are in jeopardy and the socialists have always had too much in common with the Communists for my taste. I don't know how long Britain's socialist government can continue to fool their people by subsidizing their cost of living at the rate of $1,600,000,000 a year, and I rather resent it that some part of our loan has gone into that kind of fiscal legerdemain. But I would not dream of trying to tell the British people what kind of government they should have or even making that a condition of our help.

However, its own production is absolutely essential to Europe's recovery. Even at best, we can carry only a small fraction of the load. One of the key bottlenecks to European recovery is lack of coal, and a major part of it is due to the fact that where Britain used to export ten or fifteen million tons of coal a year to seaports on the continent, she is now a coal importing country. America has to make up part of the European deficit, and our coal delivered costs us $26 a ton. The rest is taken from the current low production in the Ruhr, requiring long rail hauls over a transport system that is near the breaking point. In the opinion of many, a resumption of British coal exports to the continent is absolutely essential to the success of any European recovery program. Why shouldn't we then insist that as a condition to participation in an aid program, Britain supply, month by month, a million tons of coal a month for export to the continent of Europe? We would not tell Britain how to mine the coal. That is her problem. But we would insist that somehow she achieve the production essential to the success of the whole program, so that our help stands at least some chance of succeeding.

Another bottleneck to European recovery is the foreign-exchange situation. The legal exchange rates in many countries are 50 percent or more below the actual buying power of the local currencies as reflected in the free (or black market) exchange rate or that in Switzerland, which has a free exchange market. This means the foreign importer must pay double or more the true value of any goods he buys, in terms of his own currency, and that prices most goods out of the market. This at a time when it is urgently necessary for Europe to build up its exports to pay for food and raw-material imports. Shouldn't we insist on an immediate correction of that situation as a condition to our further assistance?

These and other conditions of a similar nature, all aimed at achieving the increase in domestic European production which is essential to the success of any aid program, should be part of the law.

I voted to reduce the program for interim aid to France, Italy, and Austria. I did so for two reasons: First because I was very doubtful whether we can supply the volume of grains scheduled for export, and second, because the justification for the amounts proposed was inadequate.

Great emphasis has been laid on the thorough screening given the requests of France, Italy, and Austria for interim aid by the State Department. Under Secretary Lovett testified that the request by France had been reduced $131,000,000, from $459,000,000 to $328,000,000. But then he went on to explain that the reduction included an item of $80,000,000 for balance of payments of debts between France and Belgium, another of $20,000,000 for an old debt to England which the French were going to pay in dollars although they held $200,000,000 of blocked sterling, and finally an item of $15,000,000 which also was an old foreign-exchange debt. These three items, which are pure paper padding and had nothing to do with urgent needs for food and fuel, total $15,000,000 of the $131,000,000 cut out of the French request, making it apparent that her request for actual commodities could not have been reduced at all materially. Since applicants for either gifts or loans seldom pare their requests to the bone, we are justified in questioning whether the State Department's screening of these requests are too vigorous.

On the other question, America's ability to spare the 570,000,000 bushels of grain exports at which the administration is aiming without very dangerous repercussions on our own economy, the testimony before the Appropriations Committee raised grave doubts in my mind. The five major grains—wheat, corn, oats, barley, and rye—are tied together in our economy, being to some extent interchangeable as human food or livestock feed. This year our total production of these five grains is 5,395,000,000 bushels, which is 703,000,000 bushels less than our total domestic consumption and export last year of 6,098,000,000 bushels. Expert witnesses before our committee were very doubtful, in view of these facts, whether we could export the 500,000,000 bushels of wheat planned by the administration without driving the price of wheat up to $4 a bushel and leaving us with a dangerously low carry-over.

For 7 years in the Senate I have supported consistently every major foreign-policy proposal of the national administration. I agree that a free and healthy Europe is a sound objective of our foreign policy.

But these few examples, plus the repeated past failures of this administration's foreign-policy proposals to achieve promised results, demonstrate the necessity for a thorough and critical examination of the Marshall plan. If these additional billions asked of American taxpayers are not to go the same way as the twelve billions spent in the past 2 years, then Congress must attach conditions which will assure the new aid program at least a minimum chance of success.

Thank you and good night.

Presentation of Pennsylvania Gold Medal to General Eisenhower

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, December 19 (legislative day of Thursday, December 4), 1947

Mr. MARTIN. Mr. President, last Saturday night, December 13, the Pennsylvania Society of New York presented to General of the Army, Dwight D. Eisenhower, its gold medal for distinguished service. I had the honor to present the medal to the General. I ask unanimous consent to have printed in the Appendix the remarks I made on that occasion.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

Mr. President, members of the Pennsylvania society, and my fellow Americans, the Pennsylvania society, year after year, has presented its gold medal to soldiers, statesmen, and industrialists.

The selection of the recipient of the award for the forty-ninth annual meeting will meet the enthusiastic approval of all Americans.

It is one of the highest honors of my life that you have selected me to present the medal.

Tonight, with utmost pride and gratitude, we add our full measure of praise and tribute to an American soldier, a modest American patriot, whose service to our country and to the world ranks in magnitude with that of the great captains of history.

The great prairie State of Kansas rightfully claims Dwight Eisenhower. But we of

Pennsylvania boast of his Pennsylvania Dutch background and the God-fearing Pennsylvania pioneers who were his forebears.

To that devout religious background we can look for the makings of his strong character, his deep humility, his devotion to duty, and his sturdy Americanism.

Fortunately for America our real leaders have been men with deep religious convictions. We find all these things in Dwight Eisenhower. That could be expected. One of his biographers has quoted him as saying:

"I practically had to memorize the Bible when I was a kid."

That training in truth, righteousness, and Christian principles gave young Eisenhower splendid guidance on his journey to greatness. That training likewise is the source of the humility with which he has received the world's acclaim and the magnificent honors he has so thoroughly deserved.

It is part of our priceless American heritage that a long list of men coming from humble and obscure places have led this Nation to great heights.

In no other country of the world does youth look ahead with brighter hope or greater opportunity. The poor boy, reared in humble surroundings, faces the future with an equal chance for success in life with those more advantageously placed.

That is the essence of America—equal opportunity to rise to the highest places in government, in the Army or the Navy, in commerce or industry, in the educational world, in the professions, or as leaders in the spiritual progress of our country.

The boys from the humble Eisenhower home in Abilene, Kans., may be pointed to as outstanding products of this great American asset. Dwight Eisenhower and his brothers, without influence or social position, solely by their own efforts and ability, and the inspiration of devout, God-fearing parents, gained distinction in a wide variety of careers.

For them, as for every other American boy, the doors of opportunity were wide open. Freedom of opportunity is probably the most precious of the freedoms we enjoy. It must be sacredly guarded and preserved. The light of American liberty will shine less brightly should freedom of opportunity be denied or restricted in any generation.

Thorough preparation for the task ahead was one of the early characteristics of young Dwight Eisenhower. He won competitive examinations for both the United States Military and Naval Academies, but circumstances directed his course to West Point.

Time does not permit a recital of his varied duties as a young officer. Let us move forward to March 1918. Our country is at war. Great fleets are carrying troops and supplies to the battlefields of France. Training camps at home are preparing young men for war. Industrial plants and farms are working at top speed to produce the munitions and food for the front lines.

Back to the soil of Pennsylvania, young Eisenhower is given command of Camp Colt at Gettysburg, a tank-training center.

Here it was necessary to solve the problem of training men for tank warfare without tanks. For this most difficult job he was awarded the Distinguished Service Medal.

At Gettysburg he displayed the zeal, foresight, and administrative ability that was to make him the ideal man to command the greatest army in the history of the world.

The years of peace that followed World War I were years of further study, training, and preparation. He attended the Command and General Staff School, the Army War College, the Army Industrial School, and served in the office of the Chief of Staff.

Once more we move forward to another time of national peril, the dark days of World War II. The mighty Nazi war machine sweeps across Europe, crushing all opposition by the power of its mechanized strength. Japanese treachery at Pearl Harbor electrifies America into feverish activity.

Eisenhower, then a lieutenant colonel stationed in the field, received orders to proceed to Washington for duty as Chief of the War Plans Division of the General Staff.

His job was to draft plans for other men to execute in military operations around the world. When it was decided to establish a European theater of operations for American troops, General Eisenhower proceeded to draw up a directive for the theater commander, whoever might be selected.

Little did he dream as he worked far into the night that he had already been picked for that tremendous responsibility. It never entered his mind that a few months later he would be designated Commander in Chief of the Allied Forces in North Africa. Nor did he imagine that a year and a half later, he would be chosen Supreme Commander of the Allied Expeditionary Forces, the largest and most powerful army the world has ever known.

The vast mobilization of military might under his command included soldiers of 12 Allied nations. Through his leadership they were the best trained, best equipped, best fed, and best led army in world history. They did not drive for conquest or national gains in territory or treasure. They fought to safeguard civilization, to preserve liberty, to crush tyranny, to liberate the enslaved, and to expand the area of the earth where men might live in freedom.

Tonight we are proud to honor the small-town boy from Abilene, Kans., who rose by his exceptional ability to command the greatest military power in history. Victory for civilization was fabricated out of his genius for organization, planning, cooperation, and his inspiring leadership.

The career of General Eisenhower is an epic of Americanism. His record of achievement points directly to the Bible and its teachings as the only true guide for human conduct.

If America is to attain spiritual leadership in a world of peace and good will we must strengthen the moral fiber of our people. We must renew our spiritual strength by hard work, thrift, helpfulness, tolerance, and love of God.

Those qualities guided Dwight Eisenhower to brilliant success. We can be better Americans by following his stirring example. General Eisenhower, in grateful recognition of your leadership in defense of civilization and your vast contribution to the preservation of American liberty, we are proud to present to you, sir, the gold medal of the Pennsylvania Society.

Christmas Radio Address by Hon. Alexander Wiley

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Friday, December 19 (legislative day of Thursday, December 4), 1947

Mr. WILEY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD the text of a Christmas address by myself which is being broadcast over the radio stations of Wisconsin.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AMERICA'S AND THE WORLD'S REBIRTH

This is a happy occasion for me to visit with you in this hallowed season of the year. I am grateful to this station for making this visit possible through the means of transcription.

Although I am speaking from Washington, D. C., Mrs. Wiley and I, in spirit, are back in Wisconsin with our loved ones and our friends. All of our Christmases from childhood, except two or three, have been spent in Wisconsin, and this year we shall live all of them over again in memory.

CHRISTMAS IN WASHINGTON

In Washington, D. C., there are joyful scenes, much like the scenes in our home State. Everywhere you can hear the lovely notes of Silent Night, Holy Night, and O, Come All Ye Faithful. There are Santa Clauses with tinkling bells on the street and children, as in our day, gaily follow in Santa's wake and with wondering eyes, seeking to learn the meaning of Noel. All around town, Christmas wreaths can be seen in the windows, together with gaily lit trees in both homes and stores. There are special church services, crowded with holiday worshippers, postmen knocking at the doors, bringing armfuls of Christmas cards and packages—tokens of remembrance and affection. There are carolers also. These are Washington scenes, which are being reenacted throughout the land in cities, hamlets, and isolated farms.

THE CHRISTMAS STORY

Old and young never tire of hearing this tale—Christmas and its story of the shepherds in the field watching over their flocks by night, when the angel of the Lord came upon them and the glory of the Lord shown around about them, and the story of the Wise Men following the star and seeing the Babe in the manger.

As we grow older, the spiritual significance of Christmas becomes more apparent. We do not let the human festivities and gift-giving crowd out the real spiritual meaning of Christmas to the human race.

The birth of the Christ Child, the coming of the way-shower to mankind, the light of the world—this is what we celebrate. This coming of the Messiah has well been described as the single most important event in the history of the human race. The message that the angels brought that day has become, in the minds of men throughout the globe, the most significant words that have ever been spoken:

"Behold, I bring good tidings, for unto you is born this day a Savior, who is Christ, the Lord."

These words spoke of the coming of Him who embodied "the way, the truth, and the life."

They marked the coming of Him who was to bring the most significant truths ever uttered to mankind—truths which when understood and lived would bring to benighted humanity joy, peace, and the love of God and mankind.

The Teacher said, "Fear not; rejoice always," and again, "Peace I leave with you; My peace I give unto you." Also, "The kingdom of God is within you," and, "If ye continue in My word, ye shall know the truth and the truth shall set you free."

And He taught mankind that the greatest was he who served best.

As man assimilates His truths, the Christ-child is reborn in man's heart and reflected in his deeds. It has been well stated, "Christianity not applied is denied." It has been stated, too, that every day can be a Christmas Day. Every day, rebirth takes place in us, if we follow Him.

MEMORIES OF YORE

Christmas is a season of memories. It brings back those recollections of our child-

hood, of parents who've gone on ahead in the journey we all must take, of brothers and sisters and other loved ones. It brings to mind the scenes of family reunions when we gathered at the old hearthside to rejoice with one another, to celebrate additions to the family, new adventures in life.

It brings back the scenes of the old homestead with the fireplace and the crackling logs, the table piled high with Christmas delicacies, the reminiscences of the older folks, the laughter and the music, the voices of the younger folks. It brings back visions of dearly loved faces, of warm hands that clutched ours and warm hearts that went out to meet ours. It brings back the sweetest thoughts in the hall of memories. Thus, for each of us Christmas opens a personal memory album, which brings a smile to our lips and a tender feeling to our hearts.

PARTICULAR MEANING OF THIS CHRISTMAS

This particular Christmas is one which is of special interest to our own state. Christmas is, of course, the season of joy in which we herald the coming of the Prince of Peace. In our minds, too, Christmas blends with the approaching new year. It, in turn, symbolizes the birth of 365 new days of golden opportunity. January 1, 1948, will also mark a particular birth for the people of Wisconsin, for on that day we will usher in the second century of Wisconsin progress—the second hundred years since our admission into the Union as a State. How we have mightily grown since Noel was first celebrated by Father Allouez over 275 years ago on the shores of Chequamegon Bay in the then wilderness of the Badger country.

To be sure, Wisconsin Centennial Day, as proclaimed by our Governor Rennebohm, will not be celebrated until January 5. But all of these fine events and inspiring occasions will blend as one. This is a holiday season of birth and rebirth, and it is on this subject that I would like to spend the few remaining moments with you—America's rebirth and the rebirth of the world. I do hope that I may have the benefit of your frank comment on this little chat. As you know, I am always delighted to get the benefit of the judgment of the folks out home.

CHRISTMAS DEDICATION

My friends, you and I know that we who love America and her great freedoms and human and spiritual values—we must seek to comprehend the meaning of Christmas and become more adequate in our living; yes, more spiritually adequate to meet the great problems and challenges facing us.

In this holy season, as the new year approaches, Americans need to be reborn and rededicated to the job before us. It is up to us to live the principles of the Prince of Peace in our homes, around the conference table when labor and management meet; in our offices and in the factories where we can display the Christmas mood and the Christmas message to our associates; in the stores, on the farms, and, indeed, everywhere where we meet others; in meeting the problems of high prices, foreign relations, foreign aid, high taxes, national security, educational problems, health needs, housing shortages, the need for the St. Lawrence waterway.

Yes, there is plenty of room to apply the principles taught us by the Prince of Peace. "Blessed are the peacemakers," He said. We have countless precedents for applying spiritual law to the solution of human problems. Men and women in all ages did that very thing. In our own land, Washington and Lincoln always sought the know-how from God.

APPLYING THE CHRISTMAS MESSAGE

Wherever there are in our land people without shelter, that is where it is up to us to apply the principles of the Good Shepherd in assuring adequate shelter for them. Wherever in this land there are people who are suffering, it is up to us to balm their needs in accordance with the principles of the King of Kings. In our foreign relations, it is up to us to apply His Golden Rule to deal in a spirit of justice and fraternity with all peoples—both former enemies and former allies. The spirit of the way-shower can vitalize whatever we do.

In fact, on any right issue, it is His spirit that "maketh alive" whatever we do. On this issue of high prices, for example, whether you believe in strong Government controls or in a voluntary program, you know that no program will succeed unless the spirit of the people stands behind it. In fact, all legislation can be but a dead letter unless there is behind it the will, the purpose, the intent, the spirit on the part of all our people for its fulfillment. It was Paul, you recall, who said, "The letter killeth, but the spirit maketh alive."

Throughout all this world, war has unfortunately left a bitter heritage of hate and fear and doubt and jealousy. It has left broken minds, bodies, hearts, and national economies. The spirit of Christmas can restore human beings and nations and can solve these problems.

The peoples of the earth can find in the spirit of Christmas the inspiration for their own recovery. They can find in the Christ-Way the way of salvation, the desire for work, industry, initiative, invention, vision—in a word, the adequacy necessary to find the way out—the solution. "With God, all things are possible." We of Wisconsin and of the Nation, with grateful hearts for our blessings, sit at the feet of the Way-Shower and learn from Him to renew our minds with His mind and ideas.

CONCLUSION

There is one particular Christmas greeting which comes to mind and with that, I conclude my greeting to you:

"I salute you: There is nothing I can give you which you have not; but there is much, that, while I cannot give you, you can take. * * *

"No heaven can come to us unless our hearts find rest in it today. Take Heaven. * * *

"No peace lies in the future which is not hidden in the present. Take peace. * * *

"The gloom of the world is but a shadow; behind it, yet within our reach, is joy. Take joy. * * *

"And so at this Christmas time I greet you, with the prayer that for you, now and forever, the day breaks and the shadows flee away."

Mrs. Wiley and I, for our children and grandchildren, wish for you a Christmas and a New Year rich in blessings.

The Corporation and the Rights of Man

EXTENSION OF REMARKS

OF

HON. JOSEPH C. O'MAHONEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Friday, December 19 (legislative day of Thursday, December 4), 1947

Mr. O'MAHONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject "The Corporation and the Rights of Man," delivered by me before the Mineral Section of the American Bar Association, in Cleveland, Ohio, September 23, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE CORPORATION AND THE RIGHTS OF MEN

Never in the history of civilization was production more needed than it is now—not even during the war. The winning of the fighting war with all its expenditure of blood and treasure, will have been a complete anti-climax unless we also win the peace. The peace cannot be won without production because the war through which we have come was a total war involving the destruction of the productive capacity of mankind upon a scale never before approximated.

We know now that the devastated areas of the world cannot be restored to prewar standards of production without great expenditure of time and capital, because modern man depends no longer upon the simple handicrafts which were sufficient in centuries past, but upon the complex discoveries and inventions of the twentieth century. Modern efforts of millions of workers and the raw materials of many areas must be brought into harmonious action under expert management. The basic organization to make this possible is essentially the work of the lawyer, for what is needed is the overall framework of law to enable all branches of the economy to function efficiently in freedom and unity.

THE HONOR OF THE LAWGIVER

The rules by which mankind has been able to function in social units have always been laid down by the members of this profession, and mankind has always reserved its highest rewards for the lawgiver. From the time of Moses the greatest honors that men can pay have gone to the leaders who have had the vision and the courage to frame the law by which all the elements of society could cooperate to the best advantage of the greatest number in the business of daily living.

Since I am a lawyer I may be forgiven for saying to a group of my own profession that the modern lawyer has failed as yet to provide the rule of order the modern world requires. Within the past 40 years the scientist and the engineer have given us a wholly new world, but the lawyer has lagged behind. He fills our legislative assemblies, both State and national, just as he filled the Constitutional Convention in 1787, but he has not yet devised the rule of order whereby the complex parts of the modern economic machine may be geared together to serve the welfare of men. Not since the Federal Constitution itself was drafted have the lawyers of any generation had a greater opportunity than we have now to provide the legal system within which the whole modern world may operate to advance the freedom and the standard of living of all.

FREEDOM THE BASIS OF OUR SYSTEM

Every American lawyer is loyal to the Federal Constitution and to the principles of human liberty upon which it was based. Every lawyer knows that when that instrument was signed and submitted to the people of the States for ratification, a great fear arose that the new Central Government might become so powerful as to encroach upon the liberty of the people, and because of this fear the Constitution was ratified only upon condition that a Bill of Rights should be adopted to make it perfectly clear that the new Government would be an instrument to serve the people but not to rule them. Every lawyer knows that the civil liberties of the individual in his economic and political life constitute the basis of our system of government. It is personal liberty that is now threatened everywhere.

If I were to ask any lawyer at this convention the question, "Is man made for the state or is the state made for man?" the answer

would be unanimous; the state is made for man and is his servant, not his master.

If, however, I were to ask another question, "Is man made for the economic system, or is the system made for man?" the answer would neither be so clear nor so prompt, because the truth is there are many lawyers, as there are many businessmen, who, if they do not actually believe that man was made to serve the economic system, sometimes talk and act as if they did.

THE NATURAL AND THE ARTIFICIAL PERSON

A curious error has crept into our thinking as lawyers. We have failed to differentiate between the natural person, man, and the artificial person, the corporation. We go about our daily business in our law offices and in our legislative offices confusing the rights of the corporation with the rights of man. The consequence is that the modern corporation, in some instances, has become more powerful even than the state.

I shall undertake to prove that statement in a moment, but for the present I want to demonstrate how even thinkers who are completely loyal to the fundamental law of our society that all men are created equal and are the source of all authority which may be exercised over them, can nevertheless place the corporation upon an equality with man.

There was recently published a thoughtful and stimulating book on the corporation written by a man of great ability, who, a few years ago, was invited by General Motors to make a report upon the organization and the managerial policies of that corporation. I refer to Mr. Peter F. Drucker. His book, Concept of the Corporation, professes faith in the political institutions of America. He recognizes that the business of business is to produce the goods and services the people demand, and that the corporation is an instrument designed of production for people. One cannot read his book without realizing that he believes in the Bill of Rights, but, nevertheless, his premise is that the corporation is an autonomous unit which stands upon precisely the same footing as society itself. This is the concluding sentence of his first chapter:

"Both our statesmen and our business leaders have to find solutions to the problems of industrial society which serve at the same time equally the functional efficiency of the corporation, the functional efficiency of society and our basic political beliefs and promises."

Obviously if this sentence represents the philosophy of its author, he places the corporation on exactly the same plane with society itself and with our basic political beliefs if indeed he does not give it priority.

I hope I am wrong in this interpretation. My message to this group, however, is that we shall not be able to solve the fundamental issue of our time until we realize that the modern corporation must be recognized for what it is—the servant of the people, just as the State is.

The task of the lawyer in the current political and economic crisis is to produce the rule of order which, in the modern world, will preserve the benefits of corporate organization—and they have been very great—while at the same time making certain that it shall not become the master of the people. We must begin by recognizing the indisputable fact that the modern corporation comes into existence solely by reason of a grant from Government. The corporation has no life except that which it obtains from some State, and since the State is the servant of society and derives its power by consent of the governed, so also must the corporation be content to be the servant of the same people who are the authors of government itself.

CORPORATIONS MORE POWERFUL THAN STATES

Can there be any doubt that the modern corporation has become more powerful, economically speaking at least, than the States which have brought it into existence?

The American Telephone & Telegraph Co. employs 704,381 individuals. Its stockholders also number almost 700,000. On the basis of the number of employees alone, it is an economic unit with a population greater than that of each of 12 States in the Federal Union. On the score of assets, however, there are only 6 States within whose borders the total assessed valuation of all real and personal property is greater than the $7,381,000,000 at which A. T. & T. fixes the value of its assets. Stated in another way, all the property in each of 42 States is assessed at less than the asset value of A. T. & T.

But the telephone company is a natural monopoly and must serve the whole country, so it is only to be expected that it would rank high even in comparison with the States. Let us, however, take a corporation which is not a natural monopoly, like United States Steel or General Motors. The asset value of United States Steel exceeds $2,000,000,000 and that of General Motors is almost $2,000,000,000. There are only 21 sovereign States which outrank either United States Steel or General Motors in wealth. Here again more than half of all the States rank below either United States Steel or General Motors in the assessed value of their property.

It may be conceded that in many States, if not in most, property, both real and personal, is not assessed at full value. The moral, however, remains the same. The economic power of these units is unquestionably greater by far than that of most of the States and cities in which the people attempt to govern themselves and make their living.

It is in the impact of the modern corporate organization upon the ability of men to make their living that the principal modern problems of government and economics arise. No one will more readily acknowledge than I that the modern corporation is an essential unit in modern society. Indeed, I go further. The modern industrial corporation is the characteristic economic institution of our time. But because as lawyers we have failed to provide the rule of economic order within which it shall serve the people, it is now concerned primarily in serving itself first, and therein lies the heart of all modern turbulence and disorder. People make and unmake governments in order to live. Economic systems are not immune.

PRODUCTION RESTRAINED

Let us refer again to United States Steel as an example of corporate power. We all know now that production is being restrained because we do not have enough steel. We know that the fiscal managers of United States Steel recently raised prices. We know that even General Motors has curtailed the production of automobiles in the Cadillac, Pontiac, and Chevrolet factories for lack of steel. We know that a score of industries scattered across the entire face of the country, including the oil industry, are unable to get the steel they want. And so we have posed two conflicting objectives—the objective of the people who want more steel and the objective of the fiscal managers of the corporation who want more profit. The people, the businesses, and the industries which want more steel have no recourse because an exceedingly small group of corporations, United States Steel and nine other companies, account for 68 percent of all the capital investment in steel producing facilities in the country.

Four of these corporations on January 1, 1945, held almost 63 percent of the total American steel ingot producing capacity. Thus the managers of concentrated steel ownership can tell our whole society how much of this basic commodity we may have. Surely it is clear that the very existence of such a power to control a commodity so essential to our whole structure demonstrates the need of a new adjustment between the people and the economic organizations that were created to serve them.

Now, as lawyers we know that a great industrial corporation like any of these steel companies depends wholly upon two grants of privilege from the governments of the people. They depend, in the first instance, upon the grant of the corporate charter which brought them into existence. In the second place, they depend upon the grant of patent rights made by the people's government under the authority of the Constitution of the United States.

What consideration should they offer in return for these essential favors they have received at the hands of the people? Certainly they should produce at a price that will help to expand the economy. And certainly the country sadly needs a system that will permit such expansion.

I do not say that the managers of the giant corporations do not recognize their social responsibility, but I do say that because of the confused thinking of which I have spoken, by which the rights of man are mistaken to be the rights of the corporation, the modern American corporation and its legal advisers are failing to realize the supreme necessity of our time for a law which will gear our great industrial and commercial organizations into the economic system that will serve the needs of the people in the new age of science and technology.

Those of you who this morning had the privilege of hearing the inspiring address of Mr. Yellot and the able and lucid address of Mr. Newcomb, will understand the situation I am trying to describe. Mr. Yellot told us of wonderful new possibilities of human advancement which science has discovered in coal, and Mr. Newcomb discussed the conflict of laws which arises over the inadequacy of statutes drafted when business was largely individual and largely local for the present era in which so much of it is national and international.

The failure to lay down this rule of social responsibility, the failure to draft the frame of harmony within which modern economic organizations must work, like the state, for the benefit of the people, is the cause of the agitation for the establishment of totalitarian political power. It is the cause of the appearance of the national labor union. It is the cause for the demand, whenever it comes, for broader powers in government.

CORPORATIONS CONTROL THE ECONOMY

Thus it has become clear, if only we are willing to take off the blinders of our daily habits of thought, that the modern corporation for lack of a rule of economic order has gained control over the materials by which men live, and is able to hand them out or shut them off as the managers of the corporation desire.

Many of you gentlemen gathered here today know much about the oil business. Many of you have appeared at committee meetings of the Senate at which I also was present. Many of you no doubt have heard me praise the petroleum industry for the manner in which it cooperated with the Government to produce the oil that was necessary to win the war. I am ready to repeat those compliments anywhere. The patriotism of the executives of the oil industry, and the patriotism of the executives of every other American industry is not to be questioned. What is lacking is a comprehension of the basic fact that the modern economy bequeathed to us by the engineers and the scientists is an economy of organizations, for which we as lawyers have not provided the necessary frame of harmony.

PETROLEUM CONCENTRATION

Let us look at the facts with respect to petroleum, just as we have looked at the facts with respect to steel. There has been such a concentration of ownership of the oil reserves of the world that a few companies now have the power to turn on or off the flow of oil that both the people and their Government need, and the power to state at what price the people may obtain that oil. The armed services of this country still lack commitments from the oil industry for the delivery of oil that is necessary to maintain our fleet, our Army, and our Air Force, even for the balance of this year. This, I understand, is largely a question of price. Let us not forget that if the power to tax is the power to destroy, the power to fix prices is likewise the power to destroy. When concentrated economic power fixes prices to serve its own purposes without public responsibility, it undermines the very foundations of society. "The man who writes the price tag," Robert Wood Johnson, the industrialist, tell us, "controls the throttle of business."

Back in October 1939 when the late President Farrish of the Standard Oil Co. of New Jersey appeared before the Temporary National Economic Committee during its study of the concentration of economic power, he testified that "the 20 largest producing companies in the business own 65.26 percent of the 16,700,000,000 barrels of oil" then estimated to be the magnitude of the petroleum reserves in the United States.

A few years later when I was conducting a hearing on petroleum for the Senate Committee on Public Lands, evidence was presented that petroleum reserves in the United States had increased some 3,000,000,000 barrels, and that the major companies which in 1938 had 65.26 percent of 16,700,000,000 barrels, in 1942 had 70 percent of 19,589,000,000 barrels.

Today the concentration is even greater. Now our petroleum reserves are estimated at 20,800,000,000 barrels. The major companies now own 81 percent of the reserves which are greater by 4,000,000,000 barrels than the reserves of which they owned 65 percent 9 years ago. That, gentlemen, is the progress of concentration of ownership of a natural resource without which our standard of living and of business would be impossible.

But the story is not yet told. There are great reserves in Latin America and across the sea in the Near East. In Iran, Iraq, and Saudi Arabia there is a greater total proven reserve than here at home, and a half-dozen corporations control these reserves also.

Let there be no misunderstanding. These reserves, so essential to the progress of the world, would not be known if it weren't for the oil corporation, its management, its scientific staff, its trained technicians, and its workers. All credit goes to them, and as an American I am proud of the fact that the discovery and the development of these reserves is primarily an achievement of American resourcefulness and skill. It remains true, however, that the petroleum situation in the Near East demonstrates beyond any possibility of contradiction that the modern oil corporation has taken on the functions and the power of government itself. It is hard to draw the line where one begins and the other ends.

THE NEW INDUSTRIAL SERVITUDE

Do I need to tell this audience that Standard of New Jersey and Socony-Vacuum are equal partners with Anglo-Iranian, a British Government-controlled corporation in the Iraq Petroleum Co.? Do I need to tell this group that Standard of New Jersey, Socony-Vacuum and Standard of California now exercise control over petroleum reserves in the Near East greater by far than the resources of the old Standard Oil Co., the dissolution of which was ordered by the United States Supreme Court back in 1911 for violation of the antitrust laws?

It was Justice Harlan who in that case declared that although the Nation had rid itself of human slavery, "the conviction was universal that the country was in real danger from another kind of slavery sought to be fastened on the American people, namely, the slavery that would result from aggregations of capital in the hands of a few individuals and corporations controlling, for their own profit and advantage exclusively, the entire business of the country, including the production and sale of the necessaries of life."

The ratification of the petroleum treaty between the United States and Great Britain has been delayed through two sessions of the Congress because of the apprehension of independent oil operators that it would bring about a union of the giant petroleum corporations with Government to the great disadvantage of the small producer. The small operator does not want to have his economic life marked out for him by the exercise of discretionary power by either the expert managers of a few large corporations, or the experts who may be employed by Government. This illustrates again how important it is for the lawyer to cooperate now to draft the rule of economic order, the frame of cooperation for men and organizations within which freedom for the individual, scientific advancement, and economic expansion may be preserved and stimulated.

THE INTERNATIONAL CARTEL

The story of the encroachment of the modern corporation upon the function of government is not yet complete without a glance at the international cartel. The Swedish Government has just made public a study of the oil cartel which operated in that country before the war, a cartel in which four American corporations, a British subsidiary of Anglo-Iranian, and a locally owned Swedish organization were involved. I shall not go into the details of these revelations. Suffice it to say there was shown to be in existence a memorandum which purported to lay down a private rule by which the members of the cartel sought to influence selling prices, commercial margins, rebates, and the allocation of business. The memorandum was not signed, but it apparently was in operation during the thirties and perhaps after the war.

A London attorney, Mr. Bryan Trench, representing two British concerns in the cartel, testified at the hearing that "representatives of British companies in Sweden discussed these agreements as cautiously as possible in order that their American colleagues might not be caused any inconvenience." Pressed for an explanation, he answered that he did not know the precise reason which guided the British members of the cartel in this cautious attitude, but he said he thought one of the American concerns "had been alarmed by certain investigations into conditions by the American Government."

One thing was clear in the Swedish Government study, the cartel was controlled from London and the separate company managers received advice from headquarters. Is the cartel an instrument of competition? Is it an instrument to expand production? Or is it an instrument to control production for the private purposes of those who sit in the driver's seat?

SEPARATION OF OWNERSHIP FROM MANAGEMENT

Spokesmen for the modern American corporation sometimes delude themselves into the belief that it is a thoroughly democratic organization. Just a few months ago during the Telephone Hour on the NBC radio program, the commercial announcement, written for and doubtless approved by A. T. & T., pointed with pride to the fact I have already mentioned, that the number of its stockholders approximate 700,000:

"In that great crowd of stockholders," the announcer purred, "you'd see school teachers and nurses, bakers, and grocers, farmers, housewives, bankers, salesmen, and many others; more than one-half of them would be women. You'd see citizens from every State in the Union—from Maine and Oregon, Illinois and Texas, Maryland and North Dakota. Five States have more than 50,000 stockholders each. Twenty-six States have more than 5,000, and no State has fewer than 500."

All this is true, but the significance is all contained in the next sentence. I quote:

"More than 650,000 of these stockholders have less than 100 shares each, and no one of them holds as much as one-half of 1 percent of the total stock."

This is characteristic of the giant corporate organizations which carry on the interstate and foreign commerce of this country. It is true of Standard of New Jersey. It is true of General Motors. It is true of United States Steel. The average stockholdings are small, but if we were to determine the median ownership instead of the average, we would find a much more remarkable situation. The average holding of the Standard of New Jersey is only 167 shares, but one-half of the 164,000 stockholders own less than 30 shares each. The average holdings of United States Steel is only 51 shares, but one-half of the 243,674 stockholders own less than 14 shares each.

This makes it clear how it is that in the modern corporation ownership and management have been completely separated. Far from having a typically American institution, we have an institution the very nature of which requires a planned economy in the formulation of which neither the stockholders nor the people of the United States have any effective participation.

THE PROLETARIAT

These corporations employ millions. General Motors alone has 300,000 employees; United States Steel, 266,000; Bethlehem Steel, 143,000; General Electric, 143,000—more workers than there are people in most cities and in many States. These are people without economic freedom because in the first place they lack the tools with which to support themselves, and, in the second place, they exercise no influence in determining the economic policy to which they must submit. Whatever we think about it, however we may feel about it, in this crisis of civilization when the whole world seems to be trembling upon the very brink of chaos, we must remember the solemn fact that the proletariat is nothing more nor less than a population without economic freedom.

When the American Constitution was written and the Bill of Rights passed, the lawyers of America believed that they were establishing what Abraham Lincoln at Gettysburg called a government of, by, and for the people. During the whole first 80 years of the existence of this Republic every President at one time or another referred to this Government as an experiment. They called it an experiment because never before had there existed upon earth a government in which the people had made themselves the masters.

Now we are facing the crisis these early statesmen had in mind when they referred to our Government as an experiment. They were fearful that the time might come when for one reason or another the people would in fact lose control and the Government pass into the hands of some group, or class, or man.

The danger they foresaw is here now for the American lawyer to see and to avoid. He understands nothing about the new shape of things in the world who does not realize that the pressure for arbitrary totalitarian government has one prime cause, namely, the

loss of economic freedom by the masses, their subjugation in their economic lives to policies determined by private managers without participation by the people, that is to say, the rise of the proletariat.

THE LAWYER'S GREAT OPPORTUNITY

This, then, is the great opportunity for the modern American lawyer—to organize the economic system so that it will be the servant of the people and not its master.

Ten years ago, with the late Senator Borah, of Idaho, I introduced a bill to provide Federal standards of responsibility for national corporations. Neither Senator Borah nor I wanted to give government new discretionary control over business, but rather to provide the rule of social responsibility by which organized business could be freed from discretionary government controls, and thereby as autonomous but responsible units freely serve the public interest.

Every lawyer knows the various tricks and devices by which upon occasion the insider in a modern corporation may utilize the property of the stockholder and the power of the corporation to his own advantage. Every lawyer knows that no antitrust prosecution was ever initiated except upon the complaint of some businessman who felt that his business was being restrained. Every lawyer knows how advantage has been taken of the loopholes allowed by blanket State corporate charter laws under which are created the organizations that carry on the interstate and foreign commerce, the regulation of which was committed by the framers of the Constitution to the Congress of the United States.

The concentration of economic power now evident on every side has taken place because inadequate existing law has been exploited by those who have not realized that in building up the modern collectivist industrial corporation they were laying the basis for collectivist government. If we would avoid a planned economy enforced upon us by the managers of the collectivist state, then we must find a way to avoid the planned economy of the managers of the collectivist corporation.

A PROGRAM TO PRESERVE CAPITALISM

I have never pretended to say precisely what provisions should be written into a law to establish national standards for national corporations. Senator Borah and I were content to try to close some of the loopholes by which abuses have arisen, like the interlocking directorship, the lack of responsibility in officers and directors for the acts of the corporation, the manipulation of corporate assets for the payment of dividends out of capital, the reimbursement by the corporation of expenditures by directors or officers for corporate policies or programs in violation of the law, and the continued elimination of competition by the multiplication of mergers both integrated and nonintegrated. This, however, is not the place to discuss the details of social responsibility to which the modern corporation should adhere. It will be sufficient to say for this occasion that if we would prevent the final merger of our whole economy in one central merger in government we must act now to prevent piecemeal mergers which are depriving the people in the States of economic independence.

We must draft a national law to define the powers, the duties and responsibilities of all economic organizations. Failure to do it will mean only continued conflict between management and labor, and a growing demand for Government action which can end only in disaster for the American system.

If we are to keep economy free and in the spirit of American institutions maintain a system that will prevent it from being restrained by either private or public power, we must reform our tax laws so as to provide an incentive for the investment of private capital in new independent enterprise. I would even provide an incentive for the expansion of the production facilities of big business by changing the tax laws to accelerate amortization, but I would ask enterprise in return to recognize its responsibility to the whole people to maintain a pricing system that will not exploit the consumer. We must rigidly enforce the antitrust laws so that when new business is established it will not be restrained by conspiracies and combinations prohibited by the spirit and the letter of the law.

If we do this we shall be releasing the energies of the American people to produce the things that are necessary to win a peace firmly founded on freedom. We produced for the purposes of the war by giving the Government almost complete power over all our resources of men and materials. That was a system which was made necessary by the compelling immediate crisis. We abandoned it after the war. We lifted Government controls, but we shall have gained nothing if, in exchange, the people must submit to private controls, private rationing, private restraints, all of which limit production. The world needs expanded production now more than it was ever needed before, even at the height of the war, and the American lawyer who believes in the fundamentals of the Bill of Rights, who realizes that people come first and organizations afterward, can now make his most effective contribution to the production which the world needs by cooperating to draft the rule of law by which all the complex parts of the modern economic machine may be made to work in harmony for the benefit of all.

If capitalism would save itself it must first help to save democracy. The writing of the rule by which this can be achieved is the task of the modern lawyer if he would take a place of honor in the memory of his countrymen with the framers of the Constitution.

The International Labor Organization

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES

Friday, December 19 (legislative day of Thursday, December 4), 1947

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address which I delivered at the National Conference on Labor Legislation, sponsored by the United States Department of Labor held in Washington, D. C., December 9 and 10, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE INTERNATIONAL LABOR ORGANIZATION

The International Labor Organization came into being in 1919 under provisions in part XIII of the Treaty of Versailles, and even though the United States did not become a member until the International Labor Organization had been functioning for 15 years, it played an important role in its creation. President Wilson at the Paris Conference was very much aware of the need for an organization within the peace-keeping machinery which would assure social justice as a basis for peace, and through his efforts Samuel Gompers, then president of the American Federation of Labor, was appointed chairman of the committee of the conference which drafted the constitution of the ILO. The first International Labor Organization conference was held in 1919 in Washington, with Franklin D. Roosevelt, then Assistant Secretary of the Navy, attending as United States delegate. I was in Washington at this time and visited the meeting to observe.

For the next 1½ decades, the United States as a nonmember Nation sent observers to all conferences until in 1934 when, pursuant to a joint resolution passed by the Senate and House of Representatives, the United States became a member. Since 1934 the United States has played an ever increasingly important role as one of the strongest supporters of and most active participants in ILO work. During World War II, United States support and influence were extremely important in enabling the International Labor Organization to continue its work and enter into the postwar era as the only official international agency which includes in its policy-making body representatives of workers and employers on a par with those of governments, the only organization of governments created after World War I which is still functioning, and the only one dedicated to promote social justice as an essential to the maintenance of peace, and where there is direct representation from the people. It was this type of representation some of us, including President Roosevelt, wanted to see incorporated in the United Nations organization.

The only conventions of the International Labor Organization the United States has been able to adhere to, because of the nature of our Government, I have taken through the Senate. The new constitution of the ILO was carried through by me in 1947. Under the provisions of an agreement with the United Nations, the ILO takes its position in the United Nations in somewhat the same way as it did in the League of Nations, but in many particulars it still remains independent. The constitutional amendments implement the relationship.

Some members of the United Nations are not members of the International Labor Organization. Russia is an example. Under the terms of ILO membership Russia cannot consistently be a true member as long as she remains a single-will state. In a single-will state, government is both government and employer and for that reason the tripartite form of representation as we have it in the ILO could not stem from such a governmental set-up.

The ILO is completely democratic in all of its aspects. This was best illustrated in 1945 when the conference by unanimous vote rejected the credentials of the Argentine worker delegate and his adviser. The ILO constitution presupposes political liberty and requires that governments name worker delegates after consultation with free trade-unionists. The credentials committee felt that the constitutional requirements had not been complied with in this instance and the conference voted to sustain the recommendations of that committee. This was the first time that a doubt had survived, after inquiry, to the point of excluding a designated representative.

But the ILO has established other precedents for political techniques which can be used as patterns by other international organizations. In 1945, the International Labor Organization again lived up to its ideal of uniting peoples rather than dividing them when it admitted Italy back into the sisterhood of nations. This we did without condoning all that we abhorred which took place during the war. The Italian Government sought membership in this Organization in order to solve the social problems of the country on democratic lines. And by forgiving a people without condoning we found a way of admitting a former enemy state into international organization.

These are the types of procedure I have witnessed, which have been successfully consummated, and which build up my faith not only in the ILO but in the thesis that we can have one world through international organization built upon democratic principles for the purpose of uniting peoples in the pursuit of peace.

At the Montreal Conference in 1946 I was chairman of the Dependent Territories Committee. We prepared conventions where nations agreed that dependent territories would be governed or administered for the benefit of the peoples of those territories and not for their exploitation. When nations literally live up to those conventions, the revolt against poverty will be a peaceful one.

The job of the International Labor Organization today is to protect the welfare of all peoples and their families in this critical economic period. The ILO must endeavor to insure full employment insofar as is possible, for I believe that full employment is basic to making democracy work.

We have learned through bitter experience that not only is war of universal concern but also that chaos, poverty, and starvation breed chaos, poverty, and starvation. We know that disorder and anarchy produce disorder and anarchy, that order and prosperity beget peace; and we realize that these are of universal application. Today the theory of "freedom from want" has become a part of our external obligations.

In May 1944 at the Philadelphia conference the ILO began considerations of how national governments were to develop economic policies and social institutions so as to maintain high levels of employment. The result was the declaration of Philadelphia. A basic for government responsibility for world-wide full employment is that high employment levels require high production rates and large purchases on the part of all people everywhere.

I became a sponsor in the Senate of the full employment bill which was later passed as the Employment Act of 1946. This act does a new thing for our Government. It provides for the President's submitting to Congress an economic budget as well as a fiscal one. Private employment, private property, free enterprise, individual initiative, all of those things which make America what she is, are the considerations which enter into the economic budget. One of the hardest-headed economists of the United States asserts that the Full Employment Act of 1946 represents the spirit of 1776 at its best. The hope is that distress, inactivity, loss of wealth, financial panic, and depression can be avoided. The spirit of the Full Employment Act is as much the spirit of 1776 as are the words, "life, liberty, and the pursuit of happiness."

If it is to be a force for peace, the ILO must depend for its support upon the people of the member countries. Through the machinery of the International Labor Organization these people who are interested in labor welfare can promote higher all-around standards. It is true that Americans have been less affected than the people of some other countries by the work of the ILO, because our standards of living have been comparatively higher. Even so, in a number of instances the statutory standards in the United States are below those set down in ILO conventions. Also, America has the problem of raising the sectional standards within her own boundaries so that differentials can be equalized, not by reducing standards to meet lower levels but by bringing standards up to our highest level.

It is easy for some of us at home to underestimate the importance of the International Labor Organization. That would be a disastrous mistake. In the line-up today between democracy and totalitarianism, the ILO plays a role of vital importance. It provides one of the rare international forums where ideas can be exchanged by men and women outside the government service. It brings together practical, experienced people who are primarily interested in the welfare of all people rather than political expediencies. If America does not give its fullest cooperation in keeping world standards high in this era of world trade, it will be forced into competition with cheap labor. Also, an improved world-wide living standard means a greater market for the products of American labor. But in addition, improved world-wide living standards are needed to absorb the expanding world labor market.

In 1917 three great peoples, the Indians, the Chinese, and the Russians, numbering 800,000,000 souls were 85 percent small-time farmers. The people of those three countries accepted poverty as a principle of life.

By the time of the Second World War, Russia had moved into the position where 68 percent of her people were agriculturists, and the 68 percent were sustaining the 190,000,000. This meant the leaving of 25,000,000 people for other things than agriculture. That 25,000,000 people probably was the straw that broke Hitler's back in Russia.

In the United States it takes only about 30 percent of the people to feed the rest of the country and furnish our food exports.

The fight against poverty has taken root. The International Labor Organization has the machinery by which we can make this revolution against poverty a bloodless one and through which democratic processes can solve the social problems of the nations of the earth. The ILO can be an effective force for world peace in the postwar period. Industrial peace is one of the fundamental requirements of a free world, and only in the ILO are disruptive labor conditions considered and acted upon by the three groups most vitally concerned—by governments representing the community interest and responsibility, by employers and workers representing those most directly concerned and fully informed. Among those working closely with the many new international organizations the feeling is widespread that in attempting to judge the possible future effectiveness of such organizations, the record of the one permanently successful international agency, the ILO, must be carefully studied. As Trygve Lie, United Nations Secretary General, has stated, the United Nations looks to the ILO as an "organization of proved efficiency to carry out one of the most important branches of work of attaining the positive economic and social aims of the United Nations Charter," and aided by the 27 years of ILO experience, the United Nations can step forward on certain ground.

American Veterans Committee Planks on Labor

EXTENSION OF REMARKS

OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, December 18 (legislative day of Thursday, December 4), 1947

Mr. KILGORE. Mr. President, I ask unanimous consent to have inserted in the RECORD the planks on labor which have been adopted by the American Veterans Committee (AVC).

While AVC is opposed to any activities by employers or employees which would tend to undermine the effective operation of the collective bargaining process, it also recommends to union leadership recognition of its obligation to foster standards of maximum efficiency and an ever-increasing production of goods and services to provide a progressively higher standard of living.

While the AVC opposes the Taft-Hartley Act as being destructive of peaceful and constructive employer-employee relationships, it also recommends that union officials be elected at regular intervals, and that unions permit no discrimination as to race, color, or creed, with regard to membership.

While the AVC recommends such measures as a guaranteed annual wage, and an increase in the minimum wage to 75 cents an hour, the AVC urges labor to set up machinery to implement the prompt settlement of jurisdictional disputes.

The objective, as AVC sees it, is full employment and full production. If we keep our eye on these fundamental objectives rather than attempt to legislate for or against a specific group, we will be nearer to attaining the goal of a sound national prosperity.

There being no objection, the planks were ordered to be printed in the RECORD, as follows:

LABOR

FULL AND FAIR EMPLOYMENT

108. We want no legislation that imposes upon labor crippling controls, which heightens inequality in bargaining power, or which takes from working people the hard-won advance they have made toward a still distant economic security. We favor the initiation of all necessary measures by business, employee organizations, and government to insure full employment which shall provide for each worker not only employment but also a real wage sufficient to sustain the level of consumption necessary for both the promotion of a progressively higher standard of living and the purchase of the goods and services our fully employed economy can produce.

109. We stress especially the need for immediate and positive governmental action in the form of a clearly defined fiscal program in order to attain full employment. We favor amendments to the Federal Fair Labor Standards Act to extend its coverage to all employees and to provide a minimum wage of 75 cents per hour as well as the enactment or amendment of State laws to provide an equivalent minimum wage for all employees not subject to Federal legislation. We favor a permanent Federal employment agency system with adequate facilities for vocational guidance and counseling.

WANT GUARANTEED ANNUAL WAGE

110. We favor the principle of a guaranteed annual wage and the adoption of steps to bring about its introduction.

111. We approve of and support the Economic Advisory Council as a beginning step in a direction of progress and urge that its activities be expanded and its powers broadened so that it may become the dynamic force its potentialities indicate. However, we do not think this is a real substitute for genuine full employment legislation, which should be enacted.

112. We favor equal pay for equal work.

UNEMPLOYMENT

113. As long as unemployment resulting from the lack of employment opportunities does exist, we favor a comprehensive system of unemployment insurance with provision for uniform Federal unemployment compensation at a minimum rate of $25 per week for

a period of 26 weeks per year, including time lost in labor disputes.

EMPLOYER-EMPLOYEE RELATIONS

A. Collective bargaining

115. We advocate the collective-bargaining process as the most effective and democratic method yet devised for the stabilizing and improvement of employer-employee relations, and to this end we reaffirm our support of the National Labor Relations Act without amendment.

116. We oppose any activities by employers or employees which would tend to undermine the effective operation of the collective-bargaining process, whatever form such action might take, and we oppose such legislation as the Taft-Hartley bill as being destructive of peaceful and constructive employer-employee relations. We urge labor unions to set up machinery to implement the prompt settlement of jurisdictional disputes. We oppose legislation designed to abolish the union or closed shop. We oppose legislation designed to abolish industry-wide bargaining.

B. Labor unions

117. The aims and aspirations of veterans organized in AVC are identical, in almost all respects, with those of men and women organized in trade unions. From the ranks of trade unions came millions of our comrades in the war, and those who stayed behind provided us with the tanks and guns and ships we needed to finish the job. Trade unions have been the most powerfully and successfully organized groups fighting for a greater measure of economic security and social equality. It is the achievement of these goals that will best serve the needs of the veteran. Unlike the old veteran organizations that have either been viciously hostile or, at best, neutral to labor, AVC seeks active cooperation with the organized-labor movement; to support labor's struggles to organize and remain organized, and in turn seek labor's support in building AVC and in supporting our program.

118. We recommend to union leadership recognition of its obligation to foster standards of maximum efficiency and an ever increasing production of goods and services to provide a progressively higher standard of living for all.

119. We especially recommend that union officials be elected at regular intervals and that unions permit no discrimination as to race, creed, or color with regard to membership. We recognize democracy in the conduct of the internal affairs of labor unions as a basic precept of organized labor and a fundamental responsibility of union leadership.

119–A. We recommend that Government pursue a policy of avoiding coercion when in the settlement of labor disputes and oppose the use of armed forces in labor disputes, military conscription of striking employees, compulsory arbitration, and any relaxation of the statutory limitations on the use of the injunctive process against labor.

120. We call upon all States which have not as yet ratified the proposed constitutional amendment prohibiting employment of persons under 18 years of age, to ratify it.

121. We recognize the right of Government employees to belong to unions of their own choice and oppose laws limiting the exercise of their collective-bargaining rights. This does not constitute an official endorsement of any action in violation of any existing statute.

122. In order to give Government workers full civil rights and take away the present status of "second-class citizens," we call for the appropriate modification of the Hatch Corrupt Practices Act to carry out this purpose.

Reclamation and World Recovery

EXTENSION OF REMARKS
OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, December 19, 1947

Mr. HORAN. Mr. Speaker, the world crisis in foods has placed the farmers of western United States directly into the international spotlight. And the problems faced by American agriculture have become the problems of the world.

On this premise, Mr. Speaker, I called the attention of the Joint Committee on the Economic Report to the fact that conservation of our presently cultivated soil and the reclaiming of new fields demands a top priority in any program of aid to foreign nations or domestic stability. I am firmly convinced, after several months of study of all available evidence on the subject, that full development of western resources is an essential prerequisite to the performance of our world recovery commitments.

Our American farmers, like American industrial workers, performed miracles of production during the war and postwar years in feeding the millions who fought the war or lost their normal crop yields due to the ravages of war. To accomplish this they have been working fertile lands overtime, they have plowed up millions of acres which should have stayed in grass, they have had to skimp on fertilizer, and, due to shortage of machinery and labor, have had to forego some important conservation practices.

As a result, the West may be heading straight for another dust bowl—a calamity whose impact in the next few years would be immeasurable.

THE "HORAN-STRAUS LETTERS"

The possibilities seemed to me so ominous that I recently asked various Federal officials for a survey of the present trends in soil conditions, an accounting of measures being taken to prevent undue erosion and means of gaining fullest use of all available land to avoid overtilling of American farms.

Last week I reported to the House on the efforts being made to preserve and improve the Nation's rangelands. That report is printed in the RECORD for December 15, 1947.

During this same time I have had correspondence with the Commissioner of Reclamation, Mr. Michael Straus, regarding the role reclamation could play in providing the foodstuffs necessary to implement any American long-range plan for European aid. These letters, which were made part of the hearings of the western subcommittee of the Joint Committee on the Economic Report, December 8, 1947, have attracted such wide attention that I now ask permission to have them reproduced in full in today's RECORD, so that they may be available to the public at large.

The series consists of four letters, two signed by me dated November 19 and 21, respectively, and two from Commissioner Straus to me dated November 22 and 28, 1947.

The letters follow:

HOUSE OF REPRESENTATIVES,
Washington, D. C., November 19, 1947.

Mr. MICHAEL W. STRAUS,
Commissioner, Bureau of Reclamation, Department of Interior,
Washington, D. C.

DEAR MR. STRAUS: In line with our telephone conversation this morning, I believe it would be beneficial for everyone who has an interest in the Grand Coulee-Columbia Basin project to take a "new look" at the investments and our objectives at this time. In a period when we are wearing out our country's farmland faster than we are replacing it, it would seem to me wise for us to determine just how quickly we can afford to bring reclamation projects like the Columbia Basin into production.

Consequently, I would like to have you answer a few questions:

1. What is the total Federal investment as of this date in (a) Grand Coulee Dam; (b) Columbia Basin?

2. What is the present estimated total funds still needed to complete the project?

Since it is obvious that there will be no compensation for this investment so far as the land itself is concerned until the project is completed and production on the land begins, my next question is:

3. At the present construction schedule, when will the first large unit, Quincy Flats, begin to produce?

It seems to me that the major consideration leading to a decision of policy at this time should be the answer to the question:

4. At what rate of construction can the project be completed most economically?

I understand you have already stated that the most economical schedule would bring Quincy Flats into production in 5 years or less. If this is so, I want to know:

5. What additional amounts will be needed to complete the project as far as Quincy Flats in 5 years or less? I would like to have the answer to this question stated, if possible, in percentages of the total cost, rather than in dollar amounts. My reason for saying this is that I believe we tend to get mired down when we attempt to make decisions in terms of specific sums rather than considering the objective to be achieved by any expenditure of funds.

I believe if we could definitely agree upon a date of completion that we would have less trouble with the specific appropriations of each fiscal year leading to this achievement.

I trust that these questions will not be too difficult to answer.

Sincerely,

WALT HORAN, M. C.

DEPARTMENT OF THE INTERIOR,
BUREAU OF RECLAMATION,
Washington, D. C., November 22, 1947.

Hon. WALT HORAN,
House of Representatives.

MY DEAR MR. HORAN: In response to your letter of November 19, I am setting down the information which I think will give you the picture of the Columbia Basin investment you wish. It is arranged and numbered in the same order as listed in your letter.

1. You asked about the Government's total investment in (a) Grand Coulee Dam, (b) Columbia Basin. Grand Coulee Dam and the reservoir behind it are the two principal items in that section of the entire project which we group under the heading of "Joint Facilities." The Government's investment in Grand Coulee Dam and the reservoir was, on June 30, 1947, $117,410,000. The investment in construction costs for the entire Columbia Basin project was, on that date, $209,467,000.

2. The following tabulation will show in capsule form the figures you need relative to project costs. By way of explanation, we subdivide these projects into three groups—the already mentioned (a) "Joint Facilities," which includes: Dams, reservoirs, camps, and buildings, etc. (b) "Power Facilities," which includes: Powerhouse structure, generating units with associated facilities, such as bus structure, circuit breakers, transformers, and other accessory equipment, and (c) "Irrigation Facilities," which includes: Canals, laterals, pumping plants, drainage systems, permanent buildings, equalizing reservoirs, where necessary, etc.

Feature	Total estimated cost	Cost to June 30, 1947	Balance to complete
Joint facilities	$146,858,000	$135,123,000	$11,735,000
Power facilities	87,009,000	52,954,000	34,055,000
Irrigation facilities	377,018,000	21,390,000	355,628,000
Total construction costs	610,885,000	209,467,000	401,418,000

3. The Quincy district, which consists of 298,000 acres, will first come under irrigation in April 1952 if the Bureau's proposed schedules for 1949 and subsequent years are approved, when water is scheduled to be available for the first 68,500 acres. Eighty thousand acres more are scheduled to receive water in April 1953, 100,000 acres in April 1954, and the 49,500 acres remaining will probably receive water in 1955. This is an optimum schedule dependent on substantial appropriations.

4. The schedule of funds required on basis of present-day costs, to produce an economical rate of construction progress and also to bring in the land to be irrigated on the east district and south district, are as follows:

	Amount	Percent
1949	$37,845,000	11
1950	54,133,000	16
1951	48,180,000	14
1952	45,789,000	14
1953	36,296,000	11
1954	21,223,000	7
After 1954	90,502,000	(1)

[1] About 27 percent.

Total acreage to be available during each of those years, including Quincy District, would be:

	Acres
1952	210,000
1953	205,000
1954	250,000
After 1954	357,339

You will note from the first tabulation that the joint facilities program is practically complete and that approximately $20,000,000 will be needed to complete the power facilities so that the sums listed above in the second table, as being required for future years, will be devoted almost entirely to construction of the irrigation facilities.

5. At the presently scheduled rate of construction, the entire project should be completed by 1959. The results in acreage are, of course, entirely dependent on the action of the Bureau of the Budget and the Congress with respect to the necessary appropriations. The figures given above are our estimates only, geared to the acreage schedule, and have not been approved by the Budget Bureau or officially submitted to the Appropriations Committees.

I want to add a word about revenue. From the beginning of operation until June 30, 1946, the gross income from the Columbia Basin project power operations was $22,450,995. We estimate other fiscal years' electric revenues as follows:

1947	$5,510,000
1948	5,860,000
1949	6,210,000
1950	6,597,570
1951	7,897,570
1952	9,332,570
1953	9,332,570
1954	9,332,570
Total	82,523,845

As you know, we are at present in difficulties on the project due to insufficient funds to meet the earnings of contractors working under contracts awarded prior to this fiscal year. The story behind this situation is of interest.

With the cessation of hostilities the Bureau of Reclamation proposed resumption of a normal construction program on the Columbia Basin project. A request for an $11,000,000 appropriation was submitted in connection with the First Deficiency Appropriation Bill, 1946. Congress responded with a $10,275,000 allowance which, added to the $6,000,000 appropriated in the regular bill, made a total of $16,275,000 available for the 1946 fiscal year.

The plan presented to the Congress set forth a speeded up program of irrigation development that would make approximately 1,029,000 acres available for veterans' settlement within 10 years. On the basis of the demand for food created by the tremendously increased population in the Northwest during the war and the urgent need of land for veterans' settlement, a 10-year development period was considered essential.

The Bureau's plan called for the initiation of a large amount of irrigation construction that would bring into production, sometime in 1947, Pasco pumping unit of 6,000 acres in the south part of the project. It was estimated that by late 1950 or 1951 about 400,000 acres would be watered in the western and eastern parts of the northern section of the project. The success of this program was dependent upon the availability of adequate funds in 1946 and succeeding years. The scheduling of operations was fitted tightly and any reduction in funds from the amounts requested would be reflected in a corresponding reduction and postponement of scheduled land openings for settlement.

For fiscal year 1947 the Bureau requested an appropriation of $30,000,000 to continue the program outlined in the supplemental request for fiscal year 1946 and virtually endorsed by the Congress when it voted the funds requested. It was on this basis that the Bureau proceeded to award contracts so that its program could be accomplished on schedule. When Congress voted only $18,000,000 in additional money to finance the 1947 project program, irrigation development on this project was rescheduled to reflect the delay and the award of contracts for several key irrigation structures had to be deferred.

The program proposed to the Congress for the fiscal year 1948 appropriation estimate of $27,500,000 represented the bare minimum of expenditure required to meet existing commitments during the fiscal year, estimated at $25,000,000, and to initiate a very limited amount of additional construction work. The Congress voted an allowance of $17,500,000.

No additional contracts could be awarded for primary irrigation works since estimated earnings on the existing contracts carried over from prior years and the funds required for installation of generating units and related work set aside by the terms of the conference report would exceed funds available for such purposes.

In this connection the workings of the Anti-Deficiency Act are of importance. It should be understood that the Anti-Deficiency Act makes a distinction between appropriations made for contingent or other general purposes and appropriations made for the fulfillment of contract obligations authorized by law. With respect to contingent or general appropriations, administrators are required by the act to apportion expenditures of appropriated funds throughout the full 12 months of the fiscal year. With respect to this type of expenditure, a deficiency estimate may be submitted only for unforeseen new conditions such as emergencies or unusual circumstances which could not be anticipated at the time of making such appropriations. With respect to appropriations for fulfillment of contract obligations authorized by law, which include construction and supply contract obligations, the administrator is not required to apportion these funds throughout the entire fiscal year except for that portion required to meet administrative expenses. These funds, except the part required to meet administrative expenses, must necessarily be available to meet the earnings of the contractors, on the force account work in progress, as such earnings become due.

The Bureau has conformed to the Anti-Deficiency Act by apportioning over the entire fiscal year funds required for administrative and supervisory expenses. The balance that remains from the appropriation made by Congress after this proration just is not adequate to meet the estimated earnings of contracts in force at the beginning of the year. All Bureau of Reclamation contracts contain a "contingent on appropriation" clause to protect the United States in the event funds are not available to meet the estimated contract earnings. Consideration was accordingly given to possible expedients to meet this situation. In order to avoid early and disorderly shut-downs of construction work on the Columbia Basin project, which would probably result in substantial losses to the Government, the Bureau arranged with several of the large contractors to slow down operations so as to extend the work as far as practicable into the fiscal year.

In the event additional funds are not provided prior to the exhaustion of funds now available for continuation of construction, work must necessarily cease upon such exhaustion, so that no obligation will be incurred for which funds will not be available. This we believe constitutes compliance with the Anti-Deficiency Act.

In addition to taking all steps necessary to conform to the Anti-Deficiency Act, the Bureau of Reclamation has filed with the Bureau of the Budget estimates of funds required to keep the Columbia Basin project in an active status until the new fiscal year. While the amounts involved in the budget presentations are not available for release until transmitted by the President to the Congress, I can state frankly that work will have to stop on the irrigation features of the Columbia Basin project probably some time in February.

For your information, the Bureau expects, insofar as practicable, to keep contractors informed concerning the status of funds as their depletion progresses. This will permit contractors to carry out their operations in the light of such information.

You can appreciate that the situation is an unusual one as Congress in the past has never failed to provide funds essential to meet contract commitments. One result of the shortage of funds has been action on the part of at least one major contractor to attempt to cancel his contract. As most of the contracts involved were acceped at a time when prices were somewhat lower than today's prices, the Government will lose advantage of these prices if it has to readvertise. There is also the question of damages

and the interest on the investment of the United States is an uncompleted project.

There is attached a tabulation of the contracts in effect on the Columbia Basin project, and the status of funds required to meet their earnings.

I appreciate having the opportunity to present this information to you and if there is anything more you need, please let me know.

Sincerely yours,

MICHAEL W. STRAUS,
Commissioner.

HOUSE OF REPRESENTATIVES,
Washington, D. C., November 27, 1947.

Mr. MICHAEL W. STRAUS,
Commissioner, Bureau of Reclamation,
Department of the Interior,
Washington, D. C.

DEAR MR. STRAUS: With reference to my letter of November 19, regarding construction schedules for the Columbia Basin project, I should like to add the following question to the list already asked:

Granting that sufficient appropriations were forthcoming, to what extent could the Nation's reclamation program be speeded up in order to make more food available for participation in the Marshall plan?

a. How many new acres could be made additionally available for food production within the span of operation of the Marshall plan? On which project and how much land per project?

b. What estimated amounts of additional food could be provided on these extra acres?

c. What other benefits of value in fulfilling obligations assumed under the Marshall plan would be obtained through faster completion of feasible projects within the time period?

d. What additional expense (above normal expected cost) would be involved in speeding up construction schedules to the limit?

e. To what extent, if any, would accelerated use of critical materials on speeded-up projects divert them from other essential uses?

I need this information for consideration by the Joint Committee on the Economic Report regarding America's potential ability to meet the new demands for foreign aid presented to this Congress.

Sincerely,

WALT HORAN, M. C.

DEPARTMENT OF THE INTERIOR,
BUREAU OF RECLAMATION,
Washington, D. C., November 28, 1947.

Hon. WALT HORAN,
House of Representatives,

MY DEAR MR. HORAN: Your letter of November 21, 1947, asked to what extent could the Nation's reclamation program be speeded up in order to make more food available for participation in the Marshall plan.

The span of operation of the Marshall plan, under which it is granted that extraordinary efforts must be made to meet the demands of Europe in addition to those of our own country, is comparatively short in relation to the long-range objectives of reclamation. It is understood that this span is approximately 4½ years from now, or until June 30, 1952. Accordingly, an analysis of bureau projects that are now under construction, or that can be placed under construction relatively soon, has been made to determine which projects can be producing food within this period. This analysis proves that substantial additional contributions can be made, under an accelerated program on certain projects, provided additional funds are made available immediately. The following sections correspond alphabetically to the points raised in your letter.

A. ACRES OF ADDITIONAL LAND

The total acreages of land that can be placed in production each year on these selected projects in the Western States (exclusive of reclamation by drainage in the Gulf States), together with the estimated annual crop yield, and the estimated additional funds required, are as follows:

Fiscal year—	Land (acres)	Annual crops (tons)[1]	Additional funds required
1948	331,801	792,000	$53,707,054
1949	562,305	2,193,950	384,344,586
1950	1,351,258	4,810,595	401,095,706
1951	2,480,850	9,572,689	339,781,239
1952	880,790	10,793,963	187,854,136
Total	5,607,004	28,163,197	1,366,782,721

[1] Estimated production each calendar year corresponding to the fiscal year in which the land is made available.

A list of these selected projects, showing the above amounts for each project, is enclosed. It is our belief that this list is conservative. Each of the projects has been found to be justified on the basis of benefit-cost studies and each is a part of the long-range program of the Bureau. On those projects which are not yet authorized, some difficulties are to be expected that may require changes in the program if it is to be carried out successfully. In this respect the list is not rigid. Neither should it be considered the maximum development that reclamation is capable of producing. Many thousands of acres can undoubtedly be added if the Bureau organization is expanded immediately and the Congress determines that such a course is desirable. Because of the many intangible factors present, it is not considered practicable to place a maximum upper limit on the program, but to indicate only those projects on which there is reasonably certainty the necessary schedule can be met without unusual or extraordinary costs.

B. ADDITIONAL FOOD

The Marshall plan calls attention to the urgent need for bread grains, consisting of wheat and rye. Other grains, fats and oils, meat, dairy products, and fruits and vegetables will also be required for shipment abroad. Irrigated land can be depended on to produce large quantities toward meeting the goals for these groups of food products. In addition to the foodstuffs which will be needed for the aid program, we must maintain the American standard of living for an increasing population. In some sections the irrigated land can best be utilized by growing specialty crops for home consumption. This would permit acreages in other sections of the country to be placed in wheat, which is not considered a good irrigated crop, as well as corn, which cannot be grown in large quantities on irrigated land in northern areas where the growing season is short. Total crops, as herein estimated, include alfalfa and other feed and forage crops that are converted into meat, eggs, and dairy products. It is emphasized that the western irrigated areas are important segments of the livestock industry, providing pasture and alfalfa for winter feeding. Development of additional feeding areas means more pounds of meat and butter and more eggs and milk on tables at home and abroad.

The total amount of crops resulting from this accelerated program is substantial, resulting in a maximum annual figure of over 10,000,000 tons in 1952, a part of which would result from the normal construction program of the Bureau. However, it would be a mistake to consider this amount the total of the food contribution, or that need for such production would disappear in 1952. If it is true that Americans are consuming 25 percent more food now than before the war, and that trends from agricultural to urban pursuits are continuing, the need for greater production is apparent. Many of the projects of the Bureau take a long time to build, even at the most accelerated rate, and many are excluded from this program because the time for construction is too short, or because nature will not fill the required reservoirs in time to be effective by 1952. Thus failure to plan now, and to accelerate the program now, is only to invite a continuation of short food supplies long after direct aid to Europe has ceased. During the year 1946, all irrigated farms in the United States produced 40,000,000 tons of crops. This figure can be doubled several times before our water supply is fully used and it cannot be denied that the need is urgent.

It is doubtful if the bumper dry farm crops of recent years can continue to exist. For several years, the great farm lands of our country have enjoyed better than normal precipitation. We may be entering a drought period in our Western States that would increase the value of irrigation many times its already important contribution to our food supply. Such a crisis must be foreseen to be prevented. Important, too, is an analysis of the contribution of irrigation to the world food shortage, is the type of food produced. Many of the crops are of a type on which production cannot be increased economically except by irrigation, and which occupy an important place in our needs. These foods will become increasingly critical as available supplies of grains are reduced by exports.

C. OTHER BENEFITS

It is probable that irrigation investment is one of the few ways, if not the only way, in which aid to Europe and to ourselves can be met without nonrecoverable grant from the Federal Government. The repayment nature of reclamation is well known. Not so well known is the indirect manner in which the Government is repaid many times through broadening the base for taxation. The secondary benefits of power, industrialization, and supporting communities, cannot be evaluated here, but studies show that they may far exceed direct repayments in returns through taxation. Flood control, soil conservation, recreation, and fish and wildlife benefits are likewise important. In short, the benefits that accrue from the normal reclamation program will be accelerated by an accelerated program.

While food—the primary requisite for success of the Marshall European recovery plan—is the first concrete benefit resulting from farms brought into production through reclamation construction, other benefits are substantial. Whenever reclamation projects are constructed new homes are built and new job opportunities are created; new villages and towns spring up, either on the projects or adjacent to them, with more homes and jobs. New industries and business come into being to serve the new population or to process and distribute its agricultural production. Already established industry and trade near the projects are stimulated.

In the West where the growth of population has been so much faster than the remainder of the country, this combination economic escape valve and spark plug resulting from reclamation projects is a benefit of great importance. Population pressure is reduced, and the possibility of social unrest and economic instability is alleviated.

Power, one of the specific benefits of irrigation projects, is included, where feasible, as a feature of the projects listed. Sufficient additional power will be developed to provide for irrigation pumping, rural use, and the many related demands that will result from irrigation development.

D. ADDITIONAL EXPENSE

The funds shown as required by fiscal years for each project in the accelerated plan are based on the latest estimates of costs at 1947 prices, assuming a normal construction schedule for each project. No attempt has been made to reestimate any project individually on the accelerated rate.

In expediting each project to the maximum practical limit, the amount by which its total cost would be increased cannot be foretold with any degree of accuracy. Undoubtedly, some of the wartime conditions would prevail, although shortages of material and manpower should not be acute. The principal factor increasing costs would be the resorting to speed-up methods of contracting, such as cost plus a fixed fee, which might be necessary in some cases, and to the use of untrained employees, assuming that material prices and wages do not materially increase. Otherwise, in high-speed construction, such as building a 4-year project in 2 years, there are many savings, principally in overhead and investment charges, that tend to offset increases. Taking all of these factors into consideration, it appears to be a reasonable assumption that increased costs would probably not exceed 25 percent of the normal expected cost of the project.

E. USE OF CRITICAL MATERIALS

Reclamation projects are ordinarily classed as heavy construction. That is, work involving massive masonry, earth-moving operations, and the like, as opposed to the light construction of buildings, homes, industrial plants, etc., that require relatively large amounts of processed material in their construction. In dam construction, earth- and rock-fill types predominate. Concrete dams use locally processed cement, which is not believed to be of significant export importance, and the aggregates are usually found at or near the site. Structures such as canals consist almost entirely of excavation.

A study made in the spring of 1946, in cooperation with the Civilian Production Administration, disclosed that the Bureau did not use significant amounts of building materials in relation to total national production. Items such as brick, wall board, structural tile, clay and cast-iron pipe, gypsum board, etc., are incidental. Lumber is used to a greater extent for concrete forms and for temporary buildings but is now considered critical in the western areas. A study of our requirements in connection with national resources and foreign aid by Secretary J. A. Krug, report dated October 9, 1947, indicates that some trouble might be expected in the following items:

(a) Reinforcing steel.

(b) Electrical materials.

(c) Construction equipment, especially automotive cars, trucks, tractors.

(d) Gates, valves, and other heavy machinery and control devices.

The extent to which our needs for the above items would conflict with other essential uses can only be estimated on their relation to the total production of such items. If it can be safely assumed that uses more essential than food will not absorb the entire production, then no serious problem would be presented.

In any discussion of production capacity it is well to bear in mind the specialized nature of reclamation work. That segment of the construction and manufacturing industries engaging in Bureau work generally do not compete with so-called consumer items. Contractors engaging in large earth-moving operations and their equipment are not readily adapted to light work. This is also true of manufacturers whose plant capacity for turning out large equipment units is not easily converted to other items, although both draw on the same sources of raw material.

RECLAMATION BY DRAINAGE

Any estimates of additional land that could be placed into production by the Bureau of Reclamation within the next few years would not be complete without reference to the desirability of reclaiming land by drainage. In many areas of the country, particularly in the south central and southeastern States, where rainfall is ample, there exist many thousands of acres of fertile land that can be placed into production in a short time by drainage projects. This land is now waterlogged and unproductive. In December of 1944, the Committee on Irrigation and Reclamation of the House of Representatives held hearings on H. R. 3787, which was a bill to amend the Reclamation Project Act of 1939 for the reclamation of lands by drainage and for other purposes. A number of years ago the Congress directed the Bureau of Reclamation to make a special study of this matter and considerable survey data exists as a result.

The States of Arkansas, Louisiana, Mississippi, and Florida are typical examples of States where tremendous possibilities exist for reclaiming waterlogged land and placing it to the production of food. The State of Louisiana is estimated to have in excess of 10,000,000 acres of excessively wet lands that might be reclaimed. The States of Arkansas and Mississippi probably have in excess of 5,000,000 acres each, and the State of Florida is estimated to have nearly 20,000,000 acres of such lands. These figures undoubtedly include land that, because of salt and other reasons, would not be practical for immediate development, but practically all of the States of the Union have some lands that could be reclaimed by drainage. The warm, humid belt extending from Louisiana to the east, with its fertile soils, appears to have the most attractive possibilities.

Drainage of lands in some sections of the country has been carried out in the past by private capital. However, it is clear that any extensive developments of this type must have Federal interest-free money to be successful. The work required in reclaiming lands by drainage is very similar to that of reclamation through irrigation. The Bureau of Reclamation has a nucleus of trained engineers and hydrologists that could be quickly expanded to undertake this work. As an agency of the Department of the Interior it has ready access to the technical skills of the Geological Survey and other agencies that would be required to construct such projects. Information is not available on which estimates of costs could be prepared at this time, but it appears certain that projects could be established involving many thousands of acres that would be economically feasible and would easily return all of the investment of the Federal Government in a reasonable period of years. We believe legislation should be enacted by the Congress that would enable the Bureau of Reclamation to make surveys and to prepare plans for such projects and authorize their construction upon a finding of feasibility in each instance. In a number of cases the principles of irrigation would be combined with drainage to provide ideal conditions for the production of certain important crops, of which rice is a typical example in the States of Arkansas and Louisiana. Plans for increased food production both in the present crisis and in later years should not overlook this tremendously fertile field of operations. In addition to repayment, all of the other benefits of reclamation by irrigation, such as increased taxation, decentralization, settlement opportunities for veterans, and others, would undoubtedly accrue were such drainage projects to be undertaken.

ASSUMPTIONS

That the reclamation program can be accelerated to the extent shown is based on a number of assumptions. Chief of these are that the necessary funds will be made available within the next few months; that existing restrictions on personnel, methods of contracting, force-account work, Denver office design work, and similar items will be lifted; and that an administrative organization will be permitted that can carry out such a program in an efficient and expeditious manner. It is assumed that the Congress, if it determines that the Bureau should embark on an accelerated program, will implement the necessary funds with legislation necessary for its accomplishment.

Sincerely yours,

MICHAEL W. STRAUS,
Commissioner.

Operating the American Merchant Marine

EXTENSION OF REMARKS
OF

HON. ALVIN F. WEICHEL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, December 19, 1947

Mr. WEICHEL. Mr. Speaker, there have been many opinions expressed covering the operation of the American merchant marine, including those of the National Federation of Shipping which have been given to the Members of Congress, and today Philip Murray has presented his views as president of the Congress of Industrial Organizations, which are as follows:

FACTS SUBSTANTIATING THE CIO PROGRAM ON THE MERCHANT MARINE

1. In the recent months the active United States merchant marine has declined rapidly and American shipbuilding is virtually nonexistent. Today's merchant marine is less than half its wartime size. The total number of Maritime Commission vessels on active charter status on November 15 was 1,082, a decline of 372 vessels from July. Only 28 seagoing vessels of over 1,000 gross tons were on the ways as of October 1, 1947.

2. As a result, approximately 16,000 maritime jobs have disappeared since July. On December 1, 1947, private shipbuilding and ship repair employment was estimated at 105,700, of which only 31 percent, or less than 33,000 men, were employed on new construction. The wartime peak employment in ship construction in private yards was more than 42 percent times greater. There is serious and growing unemployment among seamen. Unemployment insurance payments to seamen were five times larger in October than in July. Employment in the allied maritime industries has declined as a result of the large lay-up of vessels.

3. The loss of jobs and the lay-up of vessels are the result of a combination of causes. An important cause is the rapid recovery of the European merchant marine brought about by large-scale transfers and loans of American vessels and by a large European construction program made possible by steel exports from this Nation.

4. The Paris report admits that as of mid-1947 the 16 European nations had 1,400,000 dead-weight tons more dry-cargo shipping of over 5,000 gross tons than before the war; a total fleet of large vessels of 20,000,000 dead-weight tons. In addition, as of December 1, 1947, there are in the United States laid-up fleet 1,339 vessels, nearly all of which are over 5,000 gross tons.

The European fleet has been increased materially by launching and by further transfers of United States-flag tonnage in recent months. Nationals of these European nations have, in addition to the 20,000,000 dead-weight tons, many hundreds of thousands of tons of shipping under Panamanian and other flags.

Nonetheless, according to the Harriman report, as of March 31, 1947, there were 69 vessels under construction in western Europe of type similar to those presently in the American laid-up fleet. Yet we are being requested by the 16 nations to transfer between 100 and 200 additional dry-cargo

vessels to them. Such transfer would mean a double blow to the American merchant marine; the loss of 100 to 200 vessels directly and the inevitable laying-up of another 100 to 200 vessels once the transferred vessels are placed into competitive service.

5. The Paris report of the 16-nation Committee of European Economic Cooperation, if brought into effect, will mean mass unemployment among American maritime workers. The report envisages United States-flag vessel carriage of about 20 percent of our foreign trade by 1951. We are asked to transfer additional vessels from our active fleet and from our reserve fleet to foreign flag. We are asked to export steel for shipbuilding, although our own shipbuilding program was brought to a standstill 2 years ago because of the scarcity of steel. Meanwhile, in the European nations, scarce resources and scarce manpower are being diverted from other production in order to build ships, which are in long supply.

An example of the European manpower shortages is contained in the November 12, 1947, issue of the Shipping World, which states:

"Lately there has been much discussion about the manning of the growing Norwegian merchant fleet. The Norwegian Shipowners' Association formed a committee to investigate the matter. The report of this committee shows that the manning situation will be one of the greatest, if not the greatest, problem for the shipping industry here in coming years. A serious shortage of qualified engineers is already felt."

6. Alleged dollar shipping costs are not sufficient to justify the strain on the United States economy and steel resources required for the European nations to further expand European fleets in the next 4 years.

As the Harriman report states:

"In considering the possibility of dollar freight savings through the transfer of additional American vessels to the sixteen nations, we should bear in mind that the gross dollar freight data are misleading. Even on the assumption that such transfers were to be outright grants-in-aid, a maximum of only 75 percent of the gross dollar freights would be saved by the participating nations. Since the vessels would presumably remain in the dollar trades, they would continue to disburse dollars for fuel, stores, and other items purchased in American ports. To the American taxpayer the dollar savings would be even less. On the transferred vessels we would lose income taxes now collected by the Treasury, charter hire now collected by the Maritime Commission, and earnings recaptured also collected by the Maritime Commission under the terms of the bareboat charter. Only the charter hire, which would probably exceed 15 percent of the gross freight, can be estimated with close accuracy, but it is safe to say that the net savings to American taxpayers would approximate 50 percent of the gross freights on any tramps transferred to the sixteen nations on an outright grant basis.

7. As of November 31, 1947, the Maritime Commission had approved the sale of 1,644 vessels under the Merchant Ship Sales Act of 1946. Nearly two-thirds, 1,090 vessels, were approved for foreign-flag operation. Only 554 were approved for American-flag operation. Thirteen hundred and forty vessels had already been turned over to purchasers; 951 went to foreign owners and 389 to United States-flag operators.

During hearings on the Ship Sales Act in 1944 and 1945, the CIO maritime committee supported the sale of vessels to our wartime allies on terms as favorable as those granted to our citizens. Our reasons were:

(a) A moral obligation to aid our allies regain their prewar position.

(b) A desire to prevent a wasteful shipbuilding race of duplicate tonnage.

We have more than met our moral obligation. Such shortages as do still exist are in small vessels for local European trades and in special types of vessels of which we have none. Unfortunately our desire to share our merchant fleet resources on an equitable basis with our allies has not provoked a similar response overseas. Shipbuilding is going on at a feverish pace in the 16 European nations.

8. Nearly 3 years ago President Roosevelt projected a "bold and daring" plan for the construction of 11 American passenger liners. Despite the desperate need for passenger-vessel construction in this country both from the viewpoint of the merchant marine and from the dire necessity of maintaining our shipbuilding industry, all major construction in American yards has been indefinitely postponed in an effort to save critical materials. Yet the British are building 10 major passenger liners with steel exports from this country.

There were 3,968,893 gross tons of merchant ships under construction on September 30, of which 2,112,669 gross tons, or 53 percent were being built in Great Britain and Ireland. Less than 5 percent was under construction in the United States. Sweden, France, Italy, and Holland were all building more tonnage than the United States. Less than 400,000 gross tons in British yards, or under 20 percent of the British construction, were tankers, yet tankers represent the major vessels in short supply.

The British contend that steel should be made available to them for shipbuilding on the grounds that shipbuilding is an export industry with them, which enables them to close the balance of payments gap. Yet of the 2.1 million gross tons under construction in British yards, nearly 75 percent is for the British Empire. The bulk of the remaining tonnage is being built for Norway, Portugal, France, and other European countries which cannot supply dollars.

9. What is the effect of the foreign demands for steel, aggravated by unnecessary shipbuilding, on the American economy?

The report of the Council of Economic Advisers on the Impact of Foreign Aid upon the Domestic Economy presented the following table for examining the effects of steel exports:

TABLE 8.—*Total production and exports of rolled-steel products, 1929–47*

[1,000 short tons]

Period	Production			
	Total	For domestic use	For export	Percent exported
1929	45,998	43,790	2,208	4.8
1939	34,955	32,427	2,528	7.2
1946	53,073	48,273	4,800	9.0
1947, first half annual rate	62,344	55,786	6,558	10.5

Source: Department of Commerce.

The report also goes on to say:

"This table shows that the annual rate of export of rolled steel products was almost three times as great in the first half of 1947 as in 1929, and that the percent of total production exported was more than twice as great. Nonetheless, due to the great increase in domestic production, the amount available for domestic use was at an annual rate about 27 percent higher during the first half of 1947 than in 1929, and about 72 percent higher than in the last year before the war.

"While it is clear that we would have had more steel available for domestic use if we had exported less, the felt shortages of steel in this country to date have been due mainly to a lag in the steel industry's output compared with the present size and character of our national economy. This shortage in supply is aggravated by difficulties in domestic distribution.

"Turning to a consideration of the steel-supply problem in the near future, the most important factor to be considered is the large domestic demand. It is presently so great that large premiums are being paid for some items in a gray market. Public and private building projects are being shelved because it is known that steel is not available and these requirements do not even appear on the order books. The makers of essential railroad and industrial equipment, as well as automobiles, are operating below their capacity because they cannot get steel. While there are some offsetting influences, such as the declining rate of inventory accumulation, domestic demand is expected to continue strong if the general economy remains at high levels of operation.

"Superimposed upon this domestic demand for steel, though only a minor fraction of the total, is the foreign demand which, according to the estimates of the Paris Conference Report, will increase in the case of rough and finished steel, and also in the form of indirect demand for steel in industrial and transportation equipment.

"In the near future, there is little prospect that the supply of steel can be increased in amounts even approximating increasing domestic and foreign needs. Up to the present time, the steel industry has followed a conservative program of expansion. Even if the industry were now to make its plans upon the assumption of an economy continuing to operate at maximum general levels of employment and production, additional programs for enlargement in capacity and supply would be too late to affect the situation this year or in 1952, and the use of steel for that purpose would accentuate the current shortage.

"Furthermore, production is cramped by shortages of coke, scrap, pig iron, and transportation facilities. With respect to scrap, the shortage is so serious that sending scrap abroad as requested by the Paris conference is illogical.

"The inflationary threat in the steel situation is not, however, confined to the higher price of steel. The shortage of steel has the effect of creating supply shortages in the other steel-using industries. Such shortages create shortages of other products, as, for example, the shortage of freight cars and its effect on coal production. These various supply shortages, in the face of high demand, would cause upward price pressures at numerous points even if the price of steel had not increased. The foreign demand for equipment, though low in relation to total product, adds to these pressures."

10. Let us now examine the primary purpose of transportation (external transport) in an economy. Transportation is necessary as a means of bringing in supplies not otherwise available within a country. It is not necessary, except as such means, to the proper functioning of the internal economy of the country. That is, external transportation does not mine coal, does not produce steel, does not grow food, does not weave clothing. It brings to a country those articles which the country itself does not have, and which such country may require for the proper functioning of its internal economic processes. If the world is at peace it does not matter, except in the problem of balance of trade, which country owns, furnishes, and services external transport. In other words, if the goods are brought to the European countries by America, the fact that the goods are not brought in the nation's own ships will not adversely affect the in-

ternal condition of the nation, except in affecting the amount of the debt owed America and the amount of the European national's dollar balance, which we have shown is negligible.

It is very important always to be cognizant of the fact that external transport is the gilding of the lily. If the goods are brought, the people can eat—whether or not the goods are brought in the ships of one national to another.

Since steel is a terrific shortage item and since steel is the most important requirement for building external transport it would seem important that transport building might be postponed. This would not be possible if we did not have presently at our disposal the United States war-built emergency fleet. Since we do have this surplus dry cargo tonnage at our disposal, it is, in the final analysis, a wastage of steel for Europe to build cargo carrying ships when steel is short.

11. Tanker tonnage requirements for the 16 European nations alone will jump 50 percent by 1951, requiring an additional 6,100,000 dead-weight tons from mid-1947.

Our own country is now facing heavy gasoline and fuel oil shortages because of lack of tankers. Yet only 1 tanker is now being built in American yards.

12. Despite the availability of American ships and American seamen, the policy of our Government to date has been to misdirect scarce foreign resources and labor into work which America can perform at little expense to itself and at none to the rest of the world.

In defiance of the intent of Congress as expressed in Public Resolution 17, approved March 26, 1934, which states that cargoes resulting from United States Government loans should be carried in United States flag vessels; and as further expressed in the Merchant Marine Act of 1936, the State Department and the Army have been fostering the use of foreign flag vessels. Mr. Herbert Hoover proposed, and the Department of National Defense has endorsed, a revival of the merchant marines of Germany and Japan. Pending congressional action in this regard, the United States Military Government in Germany is now seeking to have British vessels carry all of the cargoes between the United States and Germany. The State Department has ordered Greek and Turkish vessels to be used in carrying cargoes between their respective nations and our country whenever they are available. In practice this has meant almost exclusive carriage in foreign flag vessels.

13. The percentage (by weight) of American exports and imports carried in the United States-flag vessels declined from a monthly average of 60.3 in 1946 to 50.1 in August 1947. The percentages by area varied from 63 in the Bayonne-Hamburg range, to 60 in the Mediterranean to 42 in the Baltic-Scandinavian area, down to 32 percent in the United States-United Kingdom trades.

14. The large "run-away" fleet trading under the colors of Panama and Honduras should be brought back under the true flags of its owners. The latest available tabulation, as of early 1947, shows 2,293,100 dead-weight tons under the Panamanian and Honduran flags, of which 1,008,800 dead-weight tons were American owned, and 1,184,300 dead-weight tons were owned by nationals of other countries. Virtually none of this fleet is owned by Panamanian and Honduran citizens.

The American-owned fleet under these flags does not employ Americans nor pay taxes to the United States Treasury.

The foreign-owned fleet under these flags (largely Greek, but a sizable proportion is British and Scandinavian) does not provide income for the devastated nations of Europe.

Tears Your Heart Away

EXTENSION OF REMARKS
OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Friday, December 19, 1947

Mr. BARTLETT. Mr. Speaker, Secretary of the Interior Krug launched last spring a program in cooperation with the American Medical Association for study of the health conditions in Alaska and other areas representing acute problems under the jurisdiction of the Department of the Interior.

The American Medical Association team, composed of Drs. Harry Barnett, Jack Fields, George Milles, Joseph Silverstein, and Arthur Bernstein, completed an outstanding report on Alaska, and it is published in the American Medical Association Journal of October 25.

I simply want to footnote this learned, searching report with a human story that may make it more real to you—one "that tears your heart away," as the visiting nurse observed in her report of her visit to Tetlin, Alaska.

This story is in the letter from Assistant Secretary William E. Warne, of Interior, the memorandum of Dr. C. Earl Albrecht, Territorial commissioner of health, Juneau, Alaska, and the editorial of the San Francisco Call-Bulletin of November 10, which I include as a part of my remarks:

UNITED STATES
DEPARTMENT OF THE INTERIOR,
Washington, D. C., December 16, 1947.

Hon. E. L. BARTLETT,
House of Representatives.

DEAR MR. BARTLETT: When you and I were discussing with Governor Gruening of Alaska the terrible situation revealed by the report of the American Medical Association team, I remembered that Dr. C. Earl Albrecht, Territorial Commissioner of Health, was due in Washington on official business in a day or two. I brought up the report in a discussion with him of this subject which is so important to every American who feels a responsibility to his country.

Dr. Albrecht told me again, as Mr. Don C. Foster, who represents the Indian Service and is head of the Alaskan Native Service, had told me previously, that we had found many more cases of tuberculosis than we could care for with facilities available to us. The report of Mrs. Naomi Talbitzer, itinerant public health nurse, who takes a mobile clinic over the few Alaskan highways, had just been received by Dr. Albrecht. I am attaching it for your information.

I hope that we are not now preparing just to "talk, talk, talk," as some of the Eskimos have appraised our past efforts.

Sincerely yours,

WILLIAM E. WARNE,
Assistant Secretary.

UNITED STATES
DEPARTMENT OF THE INTERIOR,
DIVISION OF TERRITORIES
AND ISLAND POSSESSIONS,
Washington, D. C., December 11, 1947.

Memorandum.

To: Assistant Secretary Warne.

From: Dr. C. Earl Albrecht, Territorial Commissioner of Health, Juneau, Alaska.

Subject: Hospital situation in Alaska.

Today, I received from my office in Juneau the narrative report of Mrs. Naomi Talbitzer, itinerant public health nurse, who is working as a Department of Health and Alaska Native Service field nurse, both agencies equally sharing the cost of her services.

It is felt that the contents of this letter and report of Mrs. Talbitzer are pertinent, direct facts which indicate the tragic situation existing in many communities throughout Alaska with reference to the horrible effects of uncontrolled tuberculosis.

Mention must be made of the fact that the department of health, in the summer of 1946, did a case-finding study of the communities now being served by Mrs. Talbitzer, which gave the information as to who needed hospital care for tuberculosis. No patients have been hospitalized, because of the lack of funds in this and many other areas.

It is most discouraging for these people who are rightfully looking to the agencies responsible for some help from this plague that is killing them. The most recent report of our field physician visiting this same community this past summer reported: "I wish you could have seen the look in Andrew's face when he said, 'My three babies die, and now my boy sick. All we get is talk, talk, talk, no doctor no hospital.' It is very hard for us to offer any solution to these pitiful situations. If we don't act soon we won't have to worry about the people in Tetlin for they will all have died of just plain neglect."

These are the facts upon which the American Medical Association team of doctors, the United States Public Health Service, the Alaska Native Service, and department of health officials have been pleading for the establishment of sufficient beds for the treatment of tuberculosis without any further delay. It is the basis upon which I made the statement that I consider it the most immediate health measure to be taken by the Federal Government.

As substantiating evidence of the situation, here follow excerpts from the report of Mrs. Talbitzer, itinerant public-health nurse, who travels the highway system of Alaska—she has recently come to the Territory, so her observations are not colored, but are straightforward and factual:

"I spent a week in Tetlin. The Alaska Native Service teachers with their 4-month-old baby are the only white people there. The night before I arrived, a 3-year-old child died. If they could have sent a message, I could have gone in sooner as I was at Northway. It's questionable whether I could have done anything to save the child but at least it would have been a comfort to them to have had some help. When I called on the young mother she said to me, 'I lose my whole family, mother, father, three sisters and brothers. I am only one left. I sure hate to lose my kid.'

"The amount of illness and the death rate there is appalling. Since January 1947 there have been 10 deaths, 9 of which were children, and 2 births. Six of the deaths were in the first 3 months of the year, three of them on consecutive days.

"Mr. and Mrs. Matt, the ANS teachers, are doing a fine piece of work among the natives. The school enrollment is 16. Mrs. Matt has been giving excellent care in cases of illness and is interested in helping the women improve their bead and leather work. Mr. Matt has influenced the village to start having council meetings for the first time in several years. He also plans to help them dig a well.

"As far as food is concerned, the Tetlin natives are in deplorable condition. For the past two summers the river has been high and there have been very few fish. Only two families have fish dried for the winter. The council has passed a ruling that no liquor be allowed in the village and anyone bringing any in for his own or anyone else's consumption is liable to a fine of up to $50. It

is not unusual to go into one of the homes and have them point to the cupboard and say no grub and there actually is no grub. When you go into a home where there is a case of tuberculosis who is running a temperature of 103 and hear that statement, it's heart breaking. How can you, under circumstances like that, give advice concerning a nourishing diet? You feel ashamed to even mention food.

"Out of a population of 70, there are 10 diagnosed cases of tuberculosis and 7 suspected cases.

"In another home a boy with active tuberculosis, whose temperature varies from 102 to 104, has his own bunk, one of the two in the cabin. Also living there is his uncle, his old grandmother, his sister and a cousin, aged 6, who has tuberculosis. Both of these cases have been recommended for hospitalization. More than once when I was in the home, the only sign of food was some flour from which the grandmother made biscuits. She gets aid for dependent children but a little money will buy just so much food and no more.

"One man shook his head sadly and said, 'I lose three kids last year, 3 months in a row. This year I lose one. If I lose this kid,' pointing to a 16-year-old boy who is dying of tuberculosis, 'it tear my heart away.' In addition, to the boy he will lose, his family consists of a 14-year-old daughter with a diagnosis of moderately advanced tuberculosis, a 3-year-old boy with primary active tuberculosis, a 24-year-old daughter whose X-ray reports read only 'pleural changes' and a wife who sits tiredly on the floor sewing her bead work.

"It certainly tears your heart away."

Please use the material of this letter in any manner that you see fit which will bring about a solution to this tragic situation existing under the American flag.

A pertinent editorial from the Call-Bulletin of San Francisco is also attached.

C. EARL ALBRECHT, M. D.

[From the San Francisco Call-Bulletin of November 10, 1947]

PROBLEM IN ALASKA—MEDICAL COMMITTEE SURVEY SHOWS SERIOUS DEFECTS IN TERRITORY PUBLIC HEALTH, SANITATION

Recently a committee of the American Medical Association, serving the Department of the Interior in an advisory capacity, made a reasonably thorough inquiry into public health conditions in Alaska.

In surveying this area, strategically important, rich in resources, and one-fifth the area of the entire United States in size, members of the committee interviewed doctors, nurses, patients, and public officials; examined statistics; inspected hospitals, sanitation facilities, and such. In all, the group covered 4,500 miles.

Here are some of the things they found and on which they reported:

Deaths from tuberculosis, which the committee described as the most serious and urgent problem which faces the Territory at present, are nine times the TB death rate in the United States.

Threat of epidemics of communicable diseases has resulted in a situation which is potentially dangerous.

Sanitation is very poor throughout Alaska.

General hospitals are grossly inadequate to meet the current medical needs of Alaska, and, if a sudden emergency were to arise, the situation would be catastrophic.

There is an acute shortage of living quarters throughout the Territory.

In commenting on the tuberculosis problem in the Territory, the committee observed pertinently that Alaska is an important cog in the defense of the United States, but only if its people are healthy.

We have spent billions to ease the anguish of Europeans.

We have spent billions more to assuage the sufferings of Asiatics.

We have had bureaucrats in Washington whose hearts bled for the Hottentots.

Can't we use some of this money and compassion on our own people?

There is more to this problem than going mercifully to the rescue of some 100,000 people in what might seem to many the remote, bleak, vast, and desolate Far North.

Alaska is part of our own country—is, as a matter of fact, seeking actual statehood—and Alaskans are every bit as much American as Californians.

What is more, the Territory is of the utmost importance to our national defense, as military experts, noting its proximity to Soviet Russia, have been remarking with increasing frequency and emphasis.

Whether the Territory becomes a valuable part of our country and a sturdy bastion of national defense, or whether it becomes a Territorial sore spot and a weak point in our armor, depends upon whether it is intelligently cultivated, developed, and exploited, or ignored and neglected.

Science and the National Welfare

EXTENSION OF REMARKS
OF
HON. WILLIAM F. KNOWLAND
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES

Friday, December 19 (legislative day of Thursday, December 4), 1947

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Science and the National Welfare," delivered by E. U. Condon, Director of the National Bureau of Standards, before the American Council of Commercial Laboratories, in Washington, on December 8, 1947. I had the privilege of hearing the address and commend it to the thoughtful consideration of every American citizen.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Society is at this moment at the threshold of an undreamed of mastery of our material environment, for science, which provides that mastery, is in its golden age.

In particular, achievements in nuclear physics promise incredible advances in the years ahead. Energy from atomic power plants has been much talked about, but even more important are the tools provided by nuclear physics for research in other fields. Radioactive isotopes, for example, will permit us to explore the structures and constitution of molecular aggregates, for such isotopes can be introduced into a system as scientific detectives. They will behave as the usual atoms of the particular element behave, but they can be traced and studied by means of the radiation they emit. Tracer studies of this kind will unravel secrets in biology, physiology, medicine, chemistry, and metallurgy.

The combined effect of tracer studies, of a variety of sources of radiation, of various sources of high-intensity, highly accelerated subatomic particles, and fundamental knowledge of the nucleus means that spectacular advances in many fields are at hand. The problem of curing fatal diseases will be successfully attacked; fundamental biological and physiological processes will be understood; new types of therapy will be developed in medicine; better control of intricate chemical manufacturing processes will be feasible; new products, like petroleum fuels and metals with unusual properties, will be possible; and even new forms of plant life can be created. The speed with which these possibilities are realized depends primarily on how much effort we put into such activities. For there is no question that the impetus of the new knowledge in nuclear physics, in conjunction with steady advances in other fields of science during the last 50 years, means a general efflorescence of the physical and life sciences.

But if we are to profit from this happy situation, there are major problems to be solved, and their solution will not wait. From one point of view life today is a race—a race between knowledge in the physical sciences which gives material mastery, and general ignorance which retards or rejects mastery of our environment. Rejection means no more and no less than destruction of civilization as we know and cherish it.

The problems confronting us, approaching them from the standpoint of the sciences, exist on several planes, two in particular, the specific problems of science as science and the question of these sciences in relation to the other activities of man.

PROBLEMS OF SCIENCE

The problems arising within the sciences themselves are extremely practical ones, and on the whole they are not complex. Several axioms are at once apparent. First, science is universal. Second, science is unlimited in its material. Third, the rate of scientific progress depends on the amount of effort put into science. These axioms are important: they mean that no individual and no nation has a monopoly in science, that science affords an inexhaustible mine of valuable knowledge and discoveries, and that we must be willing to support science appreciably if we expect to gain heavily and to maintain leadership.

THE STEELMAN REPORT

A comprehensive and cogent analysis of the problems of science is to be found in Dr. John R. Steelman's report to the President, Science and Public Policy. Taking into account the three major groups engaged in research and development activities—the universities, the industrial laboratories, and the Federal research agencies—Dr. Steelman points out that each of these groups is "especially adapted to the performance of a particular type of research and each can make a unique contribution to our total research and development effort," with university emphasis on basic research, industry on development, and Government laboratories engaged in both.

As a basis for our progress against poverty and disease and as the basis of national security, the Steelman report analyzes the present scope of our scientific effort, the deficiencies now present, and the needs in terms of a broad program. The main recommendations of the Steelman report are eight in number, and I would like to discuss them briefly.

1. It is recommended that expenditures for research and development be expanded as rapidly as facilities and trained manpower can be provided. A suggested goal is that by 1957 1 percent of the national income should be expended in research and development in university, industry, and Government laboratories.

The report shows that a little over 1.1 billions are being spent this year for research and development, excluding the social sciences. With a national income of $200,000,000,000, this is an expenditure of little more than ½ percent. Only about 110 millions, or less than 10 percent of the total, is spent for basic research. Almost half, that is 460 millions, enters into the development of military weapons and needs, not including the amount spent for atomic-bomb development now considered to be a civilian activity.

2. It is recommended that heavier emphasis be placed in the future on basic research and on medical research. More spe-

cifically, it is recommended that the total research and development budget be doubled, coincidentally quadrupling basic research activity and tripling research on health and medicine.

3. It is recommended that support for basic research be provided for the Federal Government at a progressively increasing rate, reaching an annual rate of 250 millions by 1957. The present rate of total expenditures for basic research is 110 millions while quadrupling would require 440 millions; so that this proposal leaves ample scope for large-scale and expanding support of basic research by private groups and State governments.

4. It is recommended that a National Science Foundation be established with a Director appointed by and responsible to the President to administer the program of grants in support of basic research. It is also recommended that the Director have a board of advisers half of whose members should come from Government laboratories in order to provide for proper correlation of the work with that of the Government laboratories.

5. It is recommended that a program of Federal scholarship aid to university students be developed in order to provide for the proper training of the increased number of scientists needed and that this program be a part of a general program of assistance to university students in all fields of interest.

6. It is recommended that suitable Federal assistance be given to colleges and universities in developing their scientific research facilities and that this should be administered as part of a broad program of aid to universities in all fields.

7. It is recommended that the work of the several Federal research establishments be better coordinated by the establishment of an Interdepartmental Science Committee, by a coordination of all scientific research programs through the Bureau of the Budget, and by the assignment of a member of the White House staff to devote himself to problems of liaison at the top policy level of the Federal Government.

8. Lastly, it is recommended that aid to the reconstruction of European scientific research be made part of our European recovery program. This recognizes, first, that science is universal in that its truths are part of the universe accessible to all investigators; second, that we gain as much by original discoveries made elsewhere as by those which we make; and, third, that the progress of other nations in science and technology is necessary if they are to become self-sufficient again.

The program outlined in the Steelman report is splendidly conceived, and every point is vital if we are to live up to the responsibilities with which we are confronted by our good fortune in natural resources and freedom from war devastation.

One of the great difficulties about a major program of expenditures on basic research is that it is so difficult to explain to an appropriations committee—and even to management in private business—precisely what the program will accomplish with that degree of definiteness expected and demanded in other fields. It is necessary to entrust funds for research programs on faith, on the competence of the leaders of such programs, and the trust must be maintained for a sustained period of time. It is characteristic of most fundamental research that several years are required for the completion of any work of importance and that the end result may be difficult to evaluate by anyone except specialists. What, for example, is the cash value of Einstein's discovery of the relation $E=mc^2$? No doubt it is an astronomically large value now. But what was its worth at the time of its formulation? And who was qualified to make the evaluation? The point simply is this: Pure knowledge cannot be evaluated in cold cash, and pure knowledge is independent of such evaluations.

Unfortunately, appreciation of this fact is not as widespread as it should be, which suggests the story of two partners who had long operated a chemical manufacturing business. They finally decided to employ a research chemist. Along about 11 a. m. of the first day of his employment one partner said to the other, "Shall we go see whether that research chap has discovered anything?" "No," replied his partner, "it's a little too soon. Let's wait until after lunch."

ZONES OF DANGER AND WEAKNESS

One of the dangers facing us in the present situation is overconfidence. The United States has led the world in technological progressiveness and in the techniques of mass production. We are, without question, the most powerful nation in the world. In these very facts lies the essential danger, for overconfidence is a product of precisely this set of circumstances. Illustrations of pride preceding fall fill the pages of history, and civilization after civilization has perished in this fashion. We need glance backward no farther than the recent war to see a once scientifically, sophisticated power lose leadership and initiative—Germany. For many years, during the latter half of the nineteenth century and the early twentieth, science in Germany was in a position of international prominence, and yet we now know how misguided and superficial were their efforts in the direction of atomic energy. I believe that two factors were at play here: First, the Nazi leaders eliminated the truly first-rate scientific leaders and installed second-rate party men in positions of scientific leadership. Second, there are obvious evidences of overconfidence on the part of the scientists as well as the nation in their scientific ability and achievement. Thus, after the revelation of our work in atomic energy, we had the spectacle of, first, the German refusal to believe that accomplishment, and second, childish attempts to pretend that they had not wanted to develop an atomic bomb but that they really had progressed in atomic research and that their researches were to be devoted to peacetime uses. The rationalizations would be merely amusing were they not also sardonic.

Again, we have the spectacle of England's dilemma in this century. Prior to the twentieth century, the English had led the world in technology, one of the consequences of their early industrialization. This leadership had lulled the British into accepting this preeminence almost as a law of nature, and progress in modernization of facilities and in mass-production technique was not pursued vigorously. The result was that England fell behind Germany and the United States. A reluctance to accept scientific advances, in the face of obsolescence, is thus dangerous.

The obvious lessons of the past, as far as science is concerned, indicate that competent leadership must be fostered in science—remember that for every thousand scientists adequate to contribute in a rather routine way there is only one with great and inspiring creative ability—and we must never take for granted future achievements on the basis of past performances. This thought leads to another danger confronting us: as a nation we have been outstanding in applying science; we have not been outstanding in basic scientific discoveries or theory. If we are to attain our goals, it is imperative that basic research be supported on a large scale.

In atomic energy, for example, we were essentially dependent upon the work of European scientists for our basic knowledge, and European scientists in this country contributed heavily to our success, in particular Fermi and Szilard. Again, during the first half of the war, we were dependent on British research and development in radar for our own program, and it was not until the latter portion of the war that we contributed in a basic way to this field. Then our contributions, particularly in microwaves, were significant.

SCIENCE AND MAN'S OTHER ACTIVITIES

Science does not function in a vacuum, divorced from everyday life. It is a preeminently practical thing, dealing with crucial problems affecting industry, business, the Nation, and the world. It costs money and it demands the efforts not only of scientists but every segment of our population. Too often science is pictured as an "ivory tower" affair with no or little relation to reality. On the contrary, it is concerned immediately with the nature of the universe. It is the cause of our industrial economy, and it operates within the full context of social existence, and it deals with practical problems as much if not more than with theoretical ones. One of the discouraging attitudes widely prevalent in the contemporary world is the high regard placed upon what is called "practical" and the low esteem granted the "theoretical." In point of fact, the two differ only in time, relative to applications; and pure, fundamental knowledge precedes applied knowledge.

The operations and progress of science can therefore be understood fully only in terms of the framework of our general society and in relation to the other activities of men. This context is particularly significant when we consider that science has now placed in our hands tools that are equally potent for good or evil. I have been talking for the most part about the good, but actually the potential evil is more important, because of what value is this growing potential of good if science is used to destroy the civilization from which it has sprung?

It is fashionable to cry down the so-called pessimist who suggests this dangerous possibility, partly because no one loves a pessimist, partly because man is largely a hopeful creature with a belief that at worst he will muddle through, and largely because the dangers are difficult to group and appraise as a consequence of the staggering difference in kind and degree of present dangers in the form of scientific warfare. It is sufficient to say for my purposes that science has presented us with several weapons, each of which unleashed can mean almost, if not total, destruction.

The question, then, is how to prevent such a situation. The answer is not to be found in the physical sciences. It is to be found in other realms of man's activity—in economics, in sociology, and in political science. Man's conduct in the physical sciences is rational; in these other fields it is largely arbitrary.

RESEARCH IN THE HUMAN SCIENCES

It is often said that irrationality is a consequence of the fact that economics, sociology, and political science are not sciences, that they are merely individual judgments and personal opinions. Now, this is palpably untrue, even at present, for much is known about cause and effect in their fields, and such statements are made only because habit, custom, tradition, and heritage tend to make us cling to whatever we know rather than to reexamine the data cooly and critically. So far no readily demonstrable experiments exist in what I shall call the humane sciences as exist in the physical sciences.

Admittedly, these humane sciences are younger than the physical sciences. Moreover, the variables to be accounted for are vastly greater than those we deal with in the physical sciences. But these are not adequate reasons for belittling the humane sciences and denying them support. On the contrary, these are compelling reasons for supporting them, and the present state of civilization demands that they receive this support. As a matter of fact, since the physical sciences have outstripped man's capacity for using them wisely, sanely, religiously, it is of the utmost urgency that we attempt to forge ahead in the humane sciences lest all be lost.

And this is the time for intensified activity in these fields, not only because of the urgency of our need but because now that physical sciences have two tremendous tools to contribute to the humane sciences, tools that will permit scientific analysis of data having a large number of variables.

The first of these tools is statistics which provides the theoretical, mathematical basis for analysis, the mathematical techniques for handling data, and the criteria for evaluating results. Mathematical statistics is now a substantial and well-developed discipline, and it does, in fact, offer these tools. Automatic electronic computing machines, on which many laboratories and companies are at work, constitute the second tool shortly to be available to the humane sciences. These machines will permit the handling and analysis of data rapidly and comprehensively. Until the present, one of the major problems in fields where vast amounts of data are obtained has been the handling and classifying of the data. Literally thousands of man-days are needed in even relatively simple problems. This means that research is expensive, and the humane sciences have not usually been able to afford such luxuries. As an example of the labor involved in handling data of this type consider a relatively simple problem. At the present time, a typical census problem involving 100,000 pairs of five-digit numbers, representing statistical data, takes approximately 12 working days exclusive of card handling and data punching. An electronic digital machine will handle the same sequence in 10 minutes at the most.

The Steelman report does not consider research in the economic, social, and political sciences. The study of the physical sciences in itself was a major effort, requiring five volumes of summary findings. It is to be hoped, however, that a smilar analysis of the humane sciences will be made in the near future and that a program for these sciences will be mapped out and implemented.

RESEARCH IN THE MENTAL SCIENCES

Just as there is a disparity in the evaluation of research between the physical and the humane sciences, so too there appears to be an analogous disparity in the attitude of most people toward research between the medical and the mental sciences. Like the physical sciences, the medical sciences produce what are called tangible results—for example, new drugs, new clinical techniques, and so on. Like the humane sciences, the mental sciences do not appear to produce materialistic results, and have suffered similarly in the support granted them for research. This, too, is a situation that needs remedy. Psychology, psychiatry, and psychoanalysis are disciplines pertinent in the solution of current problems. Aside from the statistical fact that 3 out of every 7 beds in the hospitals of the United States are occupied by the mentally ill—a vast drain in terms of lost manpower and cost—and that untold numbers of borderline cases permeate the entire social structure, we need to know more about the workings of the mind. For there is little doubt but that nonevident factors affect human behavior profoundly, factors like frustrations and fears.

These factors affect every activity of man, his personal, social, political, and even scientific life. From the standpoint of science, we can say not only that science affects individuals and nations but that these individuals and nations affect science. Even from this restricted approach, then, what has happened or happens to men's minds and spirits is of interest if we have scientific objectives in view. We have seen how entire nations have apparently succumbed to a schizophrenia that has led to the espousing of mad, undemocratic, bestial beliefs. We have seen at least one nation despoil its scientists as a result of such an abberation.

Compartmentalization in the sciences and in other fields is inimical to a coordinated attack on the problems of man. This compartmentalization is actually breaking down in the sciences. The distinction between chemistry and physics, for example, has almost vanished. Competent research in the social sciences now depends on mastery of mathematics, and on the utilization of the electronic tools. The complexity of modern life depends on specialization for progress in particular fields but, for over-all progress and for a solution to the dilemma of unbalances, integration and coordination are essential. In short, education of a comprehensive nature, embracing many fields, is needed for the survival of our civilization.

The sciences, like those other truth-seeking activities of man, require a free environment, an environment above all free of fear, petty arbitrariness, and tyranny. The pursuit of the sciences is fundamentally nothing more—or less—than the pursuit of truths. In the last analysis, all of man's activities are subservient to what happens to his spirit—to his spiritual welfare. "For what shall it profit a man, if he shall gain the whole world, and lose his own soul?"

You Are In Error, Mr. Secretary

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, December 19, 1947

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter received from Mr. W C. Mullendore, president, Southern California Edison Co., Ltd., in which he points out an incorrect statement made by Assistant Secretary of the Interior William E. Warne (then Assistant Secretary-designate) in the course of hearings before the Committee on Public Works on H. R. 3036. Page 186, hearings on H. R. 3036, records Assistant Secretary Warne as saying:

The Bureau of Power and Light of the City of Los Angeles, which is a municipally operated utility, alone made it possible to build the transmission line to Hoover Dam.

Mr. Mullendore, in his letter, points out that this statement is not correct. I regret that the Assistant Secretary misinformed the committee on this point, as it tends to cast a shadow upon all his testimony.

It is incumbent upon officials in the executive departments, and witnesses generally, to make completely truthful statements in their testimony before the committees of Congress. This is not the first instance where there has been a detour from the facts in testimony presented to the Committee on Public Works.

Mr. Mullendore's letter is as follows:

SOUTHERN CALIFORNIA EDISON CO., LTD.,
Los Angeles, Calif.

Hon. GEORGE A. DONDERO,
Chairman, Committee on Public Works,
House of Representatives,
Washington, D.C.

DEAR MR. DONDERO: I have read the hearings of June 4 to July 7, 1947, inclusive, and particularly note the testimony of William E. Warne, Assistant Secretary of the Interior, page 186, in which he stated:

"The Bureau of Power and Light of the City of Los Angeles, which is a municipally operated utility, alone made it possible to build the transmission line to Hoover Dam."

This testimony of Mr. Warne neglects the important contribution that the Southern California Edison Co. and other citizen-owned, tax-paying public utilities made in the preliminary negotiations and toward the final support of this project.

In order that your committee may be fully informed and the record be correct, I beg leave to submit the following factual data:

On May 19, 1930, Secretary of the Interior Ray Lyman Wilbur, appearing before the subcommittee of the House Committee on Appropriations—hearings, second deficiency appropriation bill of 1930—in presenting the request for the first appropriation for construction of the Boulder Canyon project, stated (pp. 919–920):

"All conditions required by the Boulder Canyon Project Act to be performed prior to appropriation for such construction have been fulfilled. There are four such conditions, as follows (p. 919):

"4. As required by section 4 (b) of the Boulder Canyon Project Act, I have made provisions for revenues by contract in accordance with the provisions of the act, adequate, in my judgment, to insure payment of all expenses of operation and maintenance of the dam and power plant incurred by the United States, and the repayment within 50 years from the date of the completion of said works of all amounts advanced to the Colorado River Dam fund under subdivision (b) of section 2 of the project act for such works, together with interest thereon made reimbursable under that act."

"CONTRACT FOR POWER PRIVILEGES, ELECTRICAL ENERGY AND WATER

(See pp. 1128–1153, 1205–1219)

"These contracts are two in number: (1) A contract for lease of power privilege executed severally by the city of Los Angeles and the Southern California Edison Co. (Ltd.), and (2) a contract for electrical energy executed by the Metropolitan Water District of Southern California. In addition, under authority of section 5 of the act, I have executed with the Metropolitan Water District of Southern California a contract for the delivery of water to be stored in the Boulder Canyon Reservoir.

"True copies of the two power contracts required by section 4 (b) of the act, and of the contract for delivery of water, are submitted to the committee herewith" (p. 920).

Further testifying, Secretary Wilbur said (pp. 965–6):

"We had here the problem of constructing a very large enterprise and of doing it in such a way that it would return in 50 years to the Government all money advanced, with 4 percent interest, except a certain amount of flood-control money, $25,000,000, which could be delayed and for which interest has not as yet been determined. In order to do that, we thought we would take the greatest factor of safety possible, to see whether we could build the dam and return all the cost in 50 years with 64 percent of the power sold, so that we could practically set the Metropolitan Water District contract to one side and still make good with the Government. By agreements with the Southern California Edicon and associated companies, and the city of Los Angeles, which operates its own power bureau, we have contracts that make it possible, and obligat them, to buy 64 percent of the power, which will return to the Government within 50 years all of its expenditure.

"Certain margins that are possible for payments to the States of Arizona and Nevada and for the Colorado River fund would not be met under those conditions if there should be a failure on the part of the Metropolitan Water District to fulfill its agreement. But the investment of the United States Govern-

ment would be repaid. Our contracts with the city of Los Angeles and the Southern California Edison Co. provide a sufficient obligation to meet the whole thing."

And further (pp. 981–982):

"May I make this statement in that connection, which, I think, will make clear the situation that formed the background of these contracts: The problem here was one largely of the allocation of the power among the applicants who were seeking it. The essential factor in the whole plan was the pouring of water on the California plains. If they were without the possibility of getting that water, we would have had no possibility of putting this dam project through, for they are making power in southern California at the present time at a lower figure than we have in our contracts for the sale of power. The Southern California Edison Co. only came into this largely because of a sense of community responsibility. They wanted to have a share in getting this water on to the plains.

"In working the thing out, my general conception was that, while that was a most essential and important thing, if we were to return this money, we must pay for it with power, and, therefore, that we must get obligations, as we did with the city of Los Angeles and the Southern California Edison Co. to take that power."

Secretary Wilbur on June 16, 1930, addressing a communication to the Committee on Appropriations, United States Senate, recommending an initial appropriation for $10,660,000 for construction on the Boulder Canyon project, said in part:

"As required by section 4 (b) of the Boulder Canyon Project Act, I have made provision for revenues by contract in accordance with the provisions of the act, adequate, in my judgment, to insure payment of all expenses of operation and maintenance of the dam and power plant incurred by the United States, and the repayment within 50 years from the date of the completion of said works of all amounts advanced to the Colorado River Dam fund under subdivision (b) of section 2 of the project act for such works, together with interest thereon made reimbursable under that act.

"These contracts are two in number: (1) A contract for lease of power privilege executed severally by the city of Los Angeles and the Southern California Edison Co. (Ltd.), and (2) a contract for electrical energy executed by the Metropolitan Water District of Southern California. In addition, under authority of section 5 of the act, I have executed with the Metropolitan Water District of Southern California a contract for the delivery of water to be stored in the Boulder Canyon Reservoir.

"True copies of the two-power contracts required by section 4 (b) of the act, and of the contract for delivery of water, are submitted to the committee herewith.

"With particular reference to the power contracts, I wish to advise you that—

"(a) The power contracts between the United States and the Metropolitan Water District of Southern California, the city of Los Angeles, and the Southern California Edison Co. (Ltd.), are adequate in my judgment to insure payment of all expenses of operation and maintenance of the dam and power plant incurred by the United States and the repayment within 50 years from the date of the completion of said works of all amounts advanced to the Colorado River Dam fund under subdivision (b) of section 2 of the project act for such works, together with interest thereon reimbursable under that act. This finding applies to the contracts both as originally drawn and amended as suggested before the House Committee on Appropriations."

I respectfully submit this information in the interest of keeping the record straight, and may I request that at a convenient opportunity this letter be included in the proceedings on H. R. 3036.

Very respectfully yours,

W. C. MULLENDORE,
President.

Fuel Oil Shortage In New England

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, December 19, 1947

Mr. HESELTON. Mr. Speaker, in accordance with permission unanimously granted to me today to extend my remarks in the Appendix of the RECORD, I wish to report to the House, and particularly to the members of the New England delegation, the fourth recommendation made yesterday by the oil-industry committee in connection with our fuel-oil shortage in New England. It is as follows:

The military and other Government agencies should be requested to reduce their fuel-oil requirements during the next 3 months to the minimum levels necessary to maintain operations and to attain such desired stock levels as they may be aiming at, later on in the year. Notification by Government agencies of whatever they can do along this line should be given to contract suppliers of the Government so that they will know how much stock they formerly had allocated to Government agencies would be available for civilian consumption. In addition, the Government should release from present stocks, wherever possible, any excess quantities of oil they may have over current needs.

In the Appendix of the RECORD, pages A4764–A4765, will be found a copy of a telegram sent on Saturday, December 13, to the President with recommendations by the subcommittee from New England and the gentleman from Minnesota [Mr. O'HARA].

In view of the similarity of the recommendations and of the vital urgency for prompt and vigorous action, the New England subcommittee decided to send a further telegram to the President this morning. That telegram is as follows:

We are advised New England weather continuing cold and averaging 6 degrees colder than last year. Although governors and State agencies doing everything possible to meet the crisis, suppliers throughout New England are daily reporting their supplies of heating oil rapidly approaching exhaustion. In view of fourth recommendation of industry committee filed yesterday, we respectfully request your advice as to whether our suggestion in our telegram to you of December 13 met with your approval. We sincerely believe the emergency conditions confronting the industries and the people of New England require the interest of and most vigorous possible action by their Federal Government.

ANGIER L. GOODWIN,
ROBERT HALE,
JOHN W. HESELTON,
THOMAS J. LANE,
WILLIAM J. MILLER,
EDITH NOURSE ROGERS,
ANTONI N. SADLAK,
Members of Congress.

Interim Aid

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, December 19, 1947

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of December 19, 1947:

NOT EVEN GOOD POLITICS

The House of Representatives was not supposed to kill interim aid for France, Italy, and Austria, and it did not. But a majority of the House Members seem to have felt that if interim aid went through unscathed some of their dignity would be lost. They whittled $67,000,000 off the administration's estimates, which the Senate Republicans had accepted as substantially accurate. Then they added $60,000,000 for China, which up to that time had not been included in the present program. Then, when the appropriation stage was reached this week, they threw out their own proposal for aid to China, with the withering comment that it had not yet been justified. Next they deepened the cut by eliminating $81,000,000 which would have replaced funds used by France and Italy to balance debt payments. With China omitted, the appropriation bill emerged as $509,000,000. Then the House reduced the amount asked for occupation costs of our troops in Europe and the Orient by 53 percent. It did this just as the United States was arranging to take over British responsibilities in western Germany at an estimated extra expenditure of $400,000,000.

The House majority may have anticipated that the worst features of their amendments would be eliminated in conference. They certainly must have known that there would be no real saving in occupation costs—the bills would roll in and be met later. The most one can say is that they were performing a sort of sacred dance before the altar of what they took to be political expediency. They may not be correct in their assumption, for their gyrations were irresponsible, eccentric, and foolish.

Interim aid will now proceed. But the treatment it has had by the House Republicans stirs misgivings as to what will happen to the far more fundamental program of European recovery, which will be placed before Congress and the American public today by President Truman. Congress is going home for the holidays. The best hope is that its constituents, most of whom read newspapers and listen to the radio, will ding into its multiple head some of the economic facts of life. It may be that the show the House majority has been putting on is not the sort that will win votes next fall.

Veterans Economic Development Corporation Act

EXTENSION OF REMARKS
OF
HON. EDWIN C. JOHNSON
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Friday, December 19 (legislative day of Thursday, December 4), 1947

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to

insert in the Appendix of the RECORD a letter addressed to me by Ray H. Brannaman, commander in chief of the Veterans of Foreign Wars, in the interest of early passage of Senate bill 1652. It is my firm conviction that the commander's views on this measure as stated in the letter are extremely important, and should be studied diligently by every Member of Congress, and by every one interested in the tremendous job of rehabilitating American veterans.

Ray H. Brannaman comes from my State, and is a man of sound judgment, courage, and vision, and he is devoted to the welfare of every veteran of this great country. I join him in his endorsement of Senate bill 1652.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

VETERANS OF FOREIGN WARS
OF THE UNITED STATES,
Washington, D. C., December 19, 1947.

Senator EDWIN C. JOHNSON,
Senate Office Building,
Washington, D. C.

MY DEAR SENATOR JOHNSON: The recent national encampment of the Veterans of Foreign Wars of the United States accorded me the high honor and privilege of serving the organization for the ensuing year as commander in chief. It becomes my duty and responsibility to vigorously press for the accomplishment of the objectives of our organization in the interest of national security and the welfare of veterans and their dependents.

Of paramount importance in the current program of the Veterans of Foreign Wars is the enactment of S. 1652, the Veterans Economic Development Corporation Act, introduced by you and 18 other Senators as a bipartisan measure. It is my personal belief that this measure is one of the most constructive pieces of veteran legislation ever introduced in the Congress of the United States.

The Veterans Economic Development Corporation Act is intended not only to provide employment opportunities for our veterans but to expand our entire national economy and develop hitherto untapped natural resources and industrial activities which will benefit the entire Nation. In addition certain aspects of the bill will have a wholesome effect upon cur foreign relations and our efforts to establish lasting peace because it will assist qualified veterans to engage in useful and profitable enterprises, services, professions, or trades in other countries, "thereby cultivating those countries to become increasingly our customers and friends."

The inventory we are taking in our 48 States and Territories reveals that there are many useful and worth-while projects which could be developed under this proposed legislation. In addition, the bill would provide gainful careers for our veterans and benefit our national economy. It is significant and important to note that, under the provisions of this legislation, no appropriations would be required and the Corporation would be operated without cost to the taxpayers of the United States.

I am hopeful that S. 1652, and its companion bill H R. 157, can be brought up for early and favorable consideration when the Congress reconvenes at the beginning of the second session in January 1948. The need for early action is urgent as there are no comparable private or Government agencies in existence to do the job proposed under this legislation. It is the one measure that I can think of which would provide any reasonable insurance against another depression and secure prosperity for the people of the United States.

Sincerely yours,
RAY H. BRANNAMAN,
Commander in Chief.

Food for a Hungry World

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 18, 1947

Mr. CURTIS. Mr. Speaker, the most needed item in the world today is food. Food is one of the greatest factors in bringing about peace and an orderly world. The production achievements of American agriculture have never been equalled in the history of the world. Americans have had access to an abundance of food and millions of starving people outside of America have sustained life because of the accomplishments in production by the farmers of this country. We should be grateful to a Beneficent Providence for several years of extraordinary good crops, and we should be grateful for the patriotism, hard work, endurance, stick-to-itiveness, and intelligence of America's farm families.

At the present time the world needs food as it has never needed food before. This will be true for some time in the future. In order that this country might make the maximum contribution in food production, the Government of the United States should:

First. Curtail the export to foreign countries of steel, farm machinery, and fertilizer so that an adequate supply is available for the farmers of America.

Second. Promote a sound soil-conservation program.

Third. Provide the farms of America with the benefits of rural electrification.

Fourth. Speed the development of irrigation at the greatest rate possible. Thousands of acres of land are going out of production yearly and with our rapidly increasing population it is imperative that we increase our irrigated acres.

Fifth. Have in readiness a support-price program so that the farmers of America will know that a reasonable support price would prevent a sudden and disastrous slump in farm prices.

Hebrew Nation Versus Jewish State

EXTENSION OF REMARKS
OF
HON. DENNIS CHAVEZ
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Friday, December 19 (legislative day of Thursday, December 4), 1947

Mr. CHAVEZ. Mr. President, there seems to be quite a difference of opinion among Jewish organizations in the United States that are interested in Palestine.

A most lucid presentation of the distinction between Hebrew as a nationality and Jewish as a religion was published by the New York Post on December 17, 1947. Written by Peter H. Bergson, chairman of the Hebrew Committee of National Liberation, it shows us how we can avoid the dangers which an international Jewish set-up implies, and the way to secure the most beneficial results from the great opportunity which Palestine presents today.

I ask unanimous consent to have this article inserted in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FAVORS A HEBREW NATION RATHER THAN A JEWISH STATE

(By Peter Bergson, Hebrew Committee of National Liberation)

Much as we are concerned with the violence in Palestine, it must not be permitted to distort the issue nor obscure the full significance of the United Nations decision.

Irrespective of what our reactions to the partition plan may be, the decision of the United Nations is a compelling fact. It poses questions which can no longer be ignored.

What does a Jewish state mean? Will it be a religious, a theocratic state, as its very name implies?

Will the Jewish Government represent the Jews of the world?

Will all Jews eventually move to the Jewish State or will they belong to a special international nation? If not the Jewish nation, then to what nation does the new state belong?

We of the Hebrew Committee of National Liberation have been concerned primarily with defining the human boundaries of the new state.

EXERCISED SELF-DETERMINATION

This entire issue was raised to the level of an urgent international problem when the people involved—the Hebrews—began exercising their right of self-determination. The underground fighting in Palestine was a revolutionary expression of that right. By their heroic conduct the *Exodus* passengers also sought to affirm their right to Palestine.

The Hebrew committee opposes the design of a world Jewish nation which strives, through the Jewish agency, to establish a Jewish state in Palestine. We say that whatever the term "Jewish people" means, whatever may be its religious, cultural, or historic significance, it should not be defined as a political entity which has a state.

Since more than 10,000,000 Jews live outside of Palestine, not in DP camps or in danger but enjoying full citizenship in many lands, to insist upon a world Jewish nation is bound to ensnare millions of good Americans, Frenchmen, Englishmen, etc., who are Jews, in an unnecessarily difficult and confused situation.

MUST MAKE DISTINCTION

The Hebrew Committee proposes, therefore, that in carrying out the United Nations decisions on Palestine, a distinction should be made between the 3,000,000 Jews of Palestine, Europe, and the Middle East, who need Palestine to live in and want to belong to it, and the 10,000,000 Jews all over the world who do not intend to move there and who in a sense need Palestine in order to make sure they do not belong to it.

The reestablishment of Palestine after centuries of abnormal existence of the Jews all over the world cannot be accomplished without these guiding principles:

There must be applied the principle of separation between state and church. The term "Jewish" today denotes three things: a religious affiliation, an origin, and now also a nationality. We propose that these be separated and that the newly created nation be known not as Jewish but as Hebrew.

The term "Hebrew" will thus denote a nationality just as does the term American, Irish, or Dutch. The term "Jewish" will denote only a religious affiliation. Thus we propose the creation not of a Jewish state but of the Hebrew Republic of Palestine, in which Jewish, Christian, and Moslem citizens will have fullest equality and opportunity under the law of the land.

AMERICANS OF HEBREW DESCENT

Under this structure, a new emphasis will come to the Hebrew ancestry of American Jews who should be known as Americans of Hebrew descent and Jewish faith, just as there are Americans of Irish ancestry and Catholic faith or Americans of Dutch ancestry and of the Protestant faith. The relationship of the French-Americans to France or of Greek-Americans to Greece should be the pattern for the relationship.

The present abnormal situation in which Rabbi Silver and Dr. Neumann both appear as Jewish statesmen representing "the Jewish nation" vis-à-vis the American and other governments can now come to an end. The Hebrew nation must now be represented by its own citizens and not by Americans.

Hebrews and Jews are not synonymous. They describe two different elements. That is why two words are necessary to define them. We did not invent anything; we merely propose giving the reborn nation a name of its own and not one to which 10,000,000 people who are outside this nation also answer.

A PROBLEM OF STRUCTURE

It must be emphasized that this is not only a problem of semantics; it is a problem of basic structure. We want to forge, in these coming months, a normal, modern and liberal Hebrew republic, and not merely a religious, cultural, and political center for world Jewry called the Jewish State or Judea.

World anti-Semitism feeds mainly on the fact that the Jews are an unique entity. It was this fact that created Zionism. We are neither Zionists nor anti-Zionists; we are post-Zionists. We recognize the great merits of that movement in the past, and in a free Palestine monuments and highways will be named in its honor. But the Jewish agency has now become an archaic body which would perpetuate the Jews as an unique entity.

We propose immediate steps which would establish the unity of the Hebrew nation with Palestine and eliminate the present contention that Palestine is the national home of the Jews of the world:

1. The immediate establishment of a provisional government of the Hebrew Republic of Palestine. This government should request the United Nations Commission to recognize it under the United Nations plan.

2. All those regarding themselves as Hebrew nationals should have the right to apply immediately for Palestinian citizenship. The provisional government should make no restrictions or quota and should immediately dispatch special consular officials to issue Palestinian passports as an emergency naturalization procedure to all Hebrew DP's in former Axis countries.

3. The immediate appointment and dispatching of diplomatic emissaries of the Hebrew republic to the various capitals of the world who will assume de facto representation even prior to June 1, 1948, when the Hebrew republic will be formally recognized.

The State Department and Our Synthetic Rubber Program

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1947

Mr. CURTIS. Mr. Speaker, under leave to extend my remarks, I wish to include a statement made by me before Subcommittee No. 3 of the Armed Services Committee of the House of Representatives on December 11, 1947. That statement is as follows:

Mr. Chairman and members of the committee, it is a distinct pleasure to appear before your committee to discuss a matter which is of deep concern to me and to explain some points that I fear may have been overlooked in past testimony.

I congratulated the members of this committee on the interest they have shown and the work they have done in order to prevent this country from a repetition of the near catastrophe of 6 years ago. The synthetic-rubber industry is a vital one. It has great potentialities and if properly handled may be one of the great industries of the country. My interest was demonstrated almost a year ago when I introduced a concurrent resolution to give it protection and to provide employment and benefit for the farmers and laborers of the country. Had that resolution been passed or had some similar bill or resolution been adopted, we would not find ourselves in the embarrassing position which is the reason for my appearance here today.

May I explain?

Our State Department has recently concluded a trade agreement involving a number of other countries. Among those countries was the United Kingdom. British controlled areas for many years supplied almost all the rubber consumed in the United States, England, along with the Netherlands, controlled the production of natural rubber and regulated world prices by limiting the amount that could be exported from the producing areas. When this combination was formed, the price of natural rubber rose in rapid steps from less than 3 cents to over 22 cents a pound. In prior years, before the Netherlands Indies became an important source and the British alone controlled the market, the price ranged from 20 cents to well over a dollar a pound.

During the negotiations preceding the pending trade agreement which, by the way, is expected to be signed within the next few days and made effective January 1, 1948, the United States made great and valuable concessions to the United Kingdom. These concessions consisted of reductions in duties and of binding or freezing of items on the free list. In return, the United States received some concessions from the United Kingdom. Those concessions may be best explained in the language of the State Department in its Analysis of General Agreement on Tariffs and Trade. On page 112 of that document, you will find the following statement:

"Of the items on which the United Kingdom made concessions approximately 274 tariff items, involving a larger number of individual products were of principal interest to the United States. On 111 of these concession items, duties and with few exceptions margins of preference, were reduced. On 10 items the margins of preference were completely eliminated."

Note here that on well over 100 items the margins of preference were reduced or eliminated. This was advertised as a great victory by our State Department. Now, how does this involve a program for the continuation of our very vital synthetic-rubber industry?

You have heard testimony from industry and from Government departments which points to the absolute necessity of maintaining a synthetic-rubber industry. You have heard that it is essential that the United States continue to use that synthetic rubber so that "know-how" may be maintained. The Interdepartmental Committee under Mr. Batt's direction sometime ago recommended a continuation of the use of one-third synthetic rubber to two-thirds natural rubber. You have heard testimony that a minimum consumption is vital to the welfare of this country.

When the United Nations published the trade agreement which is soon to go into effect, they did not include the following important information in the section listing the concessions made by the United States. You will find it buried in small print on pages 83–84 of schedule XIX, volume 4 of the General Agreement on Tariffs and Trade. I know of no other place that this information has been made available, but I quote to you from that document:

"2. The reductions of preference provided for in paragraph 1, above (those which I just mentioned as granted by the United Kingdom) shall come into effect at the earliest practicable date and in any event not later than December 31, 1949, but may be made inoperative during the whole of any calendar year which immediately succeeds a calendar year in which the quantity of general purpose synthetic rubber required to be consumed in the United States of America under internal quantitative regulations applied pursuant to paragraph 4 of article III of this agreement exceeds 25 percent of the total consumption in the United States of America of natural, synthetic, and reclaimed rubber."

Gentlemen, this means exactly what it says; namely, during any year, regardless of the emergency, regardless of how good our synthetic rubber is, regardless of how cheap it may be, we are not allowed to produce more than 25 percent of our total rubber consumption without giving the United Kingdom the prerogative of abolishing all the imperial preference concessions which our negotiators worked so hard to obtain.

Now, of course, we still have the privilege of producing some new type of general-purpose synthetic rubber and we are spending millions of dollars every year in research directed toward that end. Furthermore there is no law now in effect which says we cannot use more than certain proportions of our domestically produced rubber, but when we do so our exporters are to be penalized by the reapplication of restrictive measures on the part of one of our principal markets. It is probable, gentlemen, that your committee is cognizant of these embarrassing conditions and ramifications forced upon it by the agreements secretly negotiated by our State Department and that they have been taken into consideration in a study of permanent legislation. May I go to point No. 2?

One of the concessions made by the United States in the Geneva Agreement was the binding of natural rubber on the free list. Our Government is thereby estopped from putting a duty on imports of natural rubber. The protection of our synthetic rubber industry cannot be accomplished by means of a tariff unless we completely outlaw the agreement we have made with a number of other countries. I feel very strongly about this and it was over my strenuous objections

that the hands of Congress were thus tied by our negotiators from the State Department. Although this agreement has not yet been proclaimed by the President, it appears that some other means of protecting our synthetic rubber industry will have to be devised.

I have covered points 1 and 2 in my discussion because they are affected now by negotiations already consummated and I doubt whether this committee or Congress itself will be able to prevent the President from making the trade agreements effective on January 1, 1948. The other points, which I will discuss briefly, concern the proposed International Trade Organization which our State Department is now promulgating and which is in the process of being voted upon by some 60 nations in Habana, Cuba.

It is presumed, in fact assumed, by the State Department and the President that these negotiations will be successful and that the United States will be committed to a program of still lower tariff duties and still further restrictions on domestic free enterprise. The charter of the ITO, if agreed to at Habana, will be tentatively accepted by our delegates which include members of the House and the Senate. Representatives of the State Department testified before the Senate Finance Committee and the House Ways and Means Committee that this charter would be brought to Congress for adoption, ratification, or rejection. By that time the United States will have been committed by its negotiating officials and rejection by the Congress may prove to be very embarrassing.

While I do not agree that the adoption of the ITO is certain, I do wish to present to you some evidence that the State Department has already committed this country to a regimented program and that if the ITO is adopted any formula which this committee prescribes for the preservation of our synthetic rubber industry must conform to that so outlined or it will be outlawed by the ITO.

The ITO Charter is one of the most intricate and involved pieces of literature ever compiled by any individual or group of individuals. I have not read it through. I dare say none of you has read it through. I do not pretend to understand it in all its details. My point is that it affects any program that you may decide to adopt for our synthetic-rubber industry.

Article XX of the ITO Charter requires the general elimination of all quotas. Certain exceptions permit export quotas on products that are in short supply and there are certain exceptions for promoting the standards of quality in connection with price control. The use of a quota on imports of natural rubber may not have been given much serious consideration, but it is one of the possibilities, and I mention it here for the purpose of showing that the committee would be embarrassed if any part of its recommendations were to specify quotas on imports of crude rubber or of rubber products. May I designate this, then, as point No. 3, that even as a last resort quotas will not be permitted if the ITO is adopted.

Article XXV of the ITO Charter reads as follows:

"If any member grants or maintains any subsidy, including any form of income or price support, which operates directly or indirectly to increase exports of any product from, or to reduce imports of any product into, its territory, the member shall notify the Organization in writing of the extent and nature of the subsidization, of the estimated effect of the subsidization on the quantity of the affected product or products imported into or exported from the territory of the member and of the circumstances making the subsidization necessary. In any case in which it is determined that serious prejudice to the interest of any other member is caused or threatened by any such subsidization, the member granting the subsidy shall, upon request, discuss with the other member or members concerned, or with the Organization, the possibility of limiting the subsidization."

This article does not specifically prohibit the use of a subsidy to keep our synthetic-rubber industry alive. A subsidy, however, would tend to "reduce imports" of natural rubber into the United States. According to this article, if this country does adopt a subsidy, it must "discuss" with the members affected the possibility of "limiting the subsidization." The United States, then, if it would adopt a subsidy, would need to get an O. K. from the United Kingdom and the rest of the nations of the world, or, in Mr. Clayton's words, "stand convicted of insincerity."

Articles 18 and 19 of the Charter restrict the use of internal taxation and regulation as a means of providing the equivalent of tariff protection. My bill H. R. 2704 is of this type. Protective devices which apply to imports but not to like domestic articles are absolutely prohibited. The testimony before this committee indicates the trend of thinking; both in industry and in Government agencies it is toward the use of internal regulative devices which would guarantee the continuation of the use of certain proportions of synthetic rubber in finished articles. If the ITO is adopted, will a regulation similar to R–1 be allowed? It is an important question. May I quote from the official and excellent analysis of the ITO Charter prepared by the United States Tariff Commission.

"The Charter would permit a regulation, such as the present R–1, requiring the use of specified percentages of synthetic rubber in making rubber articles in this country, but the regulation could not be more restrictive of the use of natural rubber than that which was in effect on April 10, 1947, and must be subject to negotiation for its relaxation. However, the provision of R–1 requiring imported rubber articles to contain percentages of synthetic rubber equal to those specified for domestic manufacturers could not be continued under the Charter. Although this provision was in force on April 10, 1947, it is not a measure of internal quantitative control permitted under article 18. Rather, it is a quantitative import restriction of a kind forbidden by article 20, and the Charter contains no exception to permit its continuance. It is a measure for the protection of domestic manufacturers, intended to offset the disadvantage of the requirement that they use a certain proportion of synthetic rubber. Being inconsistent with article 20, it could not be continued as an enforcement measure under article 43, paragraph I (d), discussed hereafter."

I understand that the negotiations in Geneva concerned the trade agreement as well as a revision of the ITO charter. During these negotiations the State Department and the War Department carried on a running exchange of cables and letters on the subject of rubber. We must admit that there was some attempt on the part of our negotiators to leave at least one loophole through which we might, in an emergency, salvage our synthetic-rubber program. Whether the attempt was successful and the United States will be able to continue the present regulation controlling the amount of natural rubber which may be used in a product is a matter of interpretation of the charter. It would take some time for me to read and to attempt to interpret article 18 which covers that subject. I might suggest that the committee read the article and obtain an official ruling as to its meaning. It was under that article that the State Department hoped to provide the one means by which our synthetic-rubber industry could be continued. Even if they were successful, it appears that the one method by which we may continue our synthetic-rubber industry is definitely outlined and prescribed by the Department of State and Congress has no alternative.

It is my understanding that it would be unconstitutional to directly force the manufacturers of rubber goods to use any proportion of synthetic rubber. The same result, however, has been accomplished in a constitutional manner by limiting the use of natural rubber. Under the ITO, the United States would not be permitted to require that imports of rubber articles contain a maximum percentage of natural rubber. In other words, R–1, which applies to domestic production, could not legally be applied to imports. Thus, domestic producers would be at a decided disadvantage if the American public preferred imported goods composed entirely of natural rubber. The attempt of the State Department to overcome this section was rather a feeble one. Referring back to the general trade agreement and not to the ITO, the State Department inserted a clause which would reserve to the United States the right to withdraw from the agreement the concessions which it made to the United Kingdom on most rubber articles. This, they maintained, would give the United States the right to revise tariffs on articles composed of natural or synthetic rubber. Such an impractical scheme may be better than nothing, but I do not wish to take the time of the committee to explain all the details that would be necessary in order to make use of this exception. It is only my purpose to call to the committee's attention one of the dubious loopholes through which the committee must plan this vital program. In conclusion, gentlemen, may I summarize:

1. If your program should at any time call for the use of general purpose synthetic rubber in excess of 25 percent of our total rubber consumption, this country stands to forfeit the concessions on imperial preference granted in the recent trade agreement.

2. A tariff on natural rubber has been made impractical, if not impossible, the same being true of any tax which would have the effect of a tariff.

3. Quotas are specifically prohibited in the ITO Charter and no exception exists by which the United States could promote a domestic industry by putting a quota on imports of natural rubber.

4. A subsidy of the synthetic rubber industry would be contrary to the ITO Charter and would have to be discussed with the other countries which were members of the Organization.

5. It is not possible to directly require domestic producers to use synthetic rubber.

6. The only possible method left is a continuation of the present limitation on the use of natural rubber.

7. That limitation could not be applied to imports even though the country is left free to devise tariffs which would effect those imports.

Gentlemen, it appears to me that almost any program you may devise for the continuation of our synthetic rubber program will be hampered, if not endangered by the pending trade agreement or the adoption of the ITO Charter. I wish it were not so. I do not pretend to know the answer. I merely wish to be sure that this committee is clearly aware of the intricacies of any program which will not be contrary to our foreign commitments.

When the People of the United States, Through Their Government, Give Billions of Dollars to Other Countries, We Have the Right To Fix the Terms on Which the Gift Is Made and How It Is Used by Those to Whom We Give It—Our People Do Not Wish To Use Their Money To Advance Communism in Europe or Anywhere

EXTENSION OF REMARKS
OF
HON. JOHN JENNINGS, JR.
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, December 19, 1947

Mr. JENNINGS. Mr. Speaker, the House on Thursday, December 11, after having rewritten, through amendments, House bill 4604, took from the Speaker's desk Senate bill 1774 and substituted the House bill for the Senate bill and passed the Senate bill as amended. The bill, as thus finally passed by the House, authorized the appropriation of $597,000,000 for the relief of the Austrian, French, and Italian Governments. Neither the bill as first passed by the Senate nor the bill as reported to the House by the House Committee on Foreign Affairs contained any provision requiring the President promptly to terminate and end all aid under this act to countries dominated by the Communist Party or by Russia.

The House on Wednesday, December 10, amended section 7 of the House bill by adding subsection C thereto, so that section 6 of the bill as passed by the House provided:

SEC. 6. The President shall promptly terminate the provision of aid under this act for any country whenever he determines that such country is not adhering to the terms of its agreement entered into in accordance with section 5 of this act; or (b) whenever he finds, by reason of changed conditions, that the provision of aid under this act is no longer necessary or desirable; or (c) whenever he finds that the government of such country is dominated by the Communist Party or by the Union of Soviet Socialist Republics.

This amendment requiring the President to end all aid to any country when he finds that the government of such country is dominated by the Communist Party or by the Union of Soviet Socialist Republics, that is, by Russia, was adopted by the House by a vote of 78 in favor of the amendment to 37 votes against it. After the bill was thus amended so as to require the President to stop the sending of aid to any of these countries when its government became dominated by the Communist Party or by Russia, I stated that I would vote in favor of the bill.

There being a difference between the bill as passed by the Senate and as finally passed by the House, the House requested a conference with the Senate, and the Speaker appointed as managers on the part of the House Representatives EATON, of New Jersey; VORYS, of Ohio; MUNDT, BLOOM, and KEE. The managers on the part of the Senate were Senators VANDENBERG, CAPPER, WHITE, CONNALLY, and GEORGE. These gentlemen agreed upon a conference report which in two vital respects changed the bill as passed by the House. First, by cutting out the House amendment requiring the President to terminate and stop all aid to any country when he finds that such country is dominated by the Communist Party or by Russia. Second, by requiring the President to see to it that not less than 150,000,000 bushels of wheat are kept in this country for the use of our own people to protect them against a shortage of wheat for bread and domestic uses and to prevent the further rise in the price of wheat, flour, and bread, unless the wheat crop in 1948 is estimated by the Department of Agriculture as of May 1, 1948, to be 700,000,000 bushels or more. This provision of the House bill with respect to carrying over 150,000,000 bushels of wheat for the protection of the people of this country was watered down and made less effective by the conferees of the Senate and the House in the bill which was finally passed.

On Monday, December 15, the bill as agreed upon by the representatives of the House and Senate was considered by the House, and when the membership of the House for the first time learned that the representatives of the Senate had prevailed over the representatives of the House with respect to the amendment providing for the carry-over of 150,000,000 bushels of wheat into 1948 to protect the people of this country against a shortage of wheat and further increases in the cost of flour and bread, the spokesman for the House conferees, Mr. VORYS, stated:

We did the best we could to carry out exactly the principle contained in the gentleman's amendment.

Mr. AUGUST H. ANDRESEN, the able representative from Minnesota, stated:

I am glad the conferees made that effort, because I should like to have the Congress and the country understand that in the event of a short crop of wheat next year the responsibility is on the President of the United States if he lets that carry-over fall below 150,000,000 bushels.

Then with respect to the action of the conferees in cutting out the provision of the bill as passed by the House requiring the President to stop furnishing aid to any country when he learns that its government is dominated by the Communist Party or Russia, the following occurred:

The gentleman from Ohio [Mr. VORYS] who was in charge of the Conference Report yielded to the distinguished and able Representative from Georgia, Judge E. E. COX, who then stated:

Mr. COX. Let me say to the gentleman that I was completely astounded when I learned that his committee had so easily yielded on the anti-Communist amendments to the bill. You make it possible that the aid you are extending be used as relief has heretofore been administered, that is doing something for the people whose war upon us makes necessary our doing something to resist.

In other words, with these amendments eliminated from the bill, it will change the entire character of the measure, because if this is not an anti-Communist move on the part of this body, then it is pretty much of a swindle and you give excuse and afford solid ground for votes against the bill.

Mr. VORYS. The conference report eliminates reference to the Communist Party and to the Soviet Union. The action on that was not unanimous. But let me point out that the Conference Committee labored hard to formulate appropriate words to refer to the Communist Party, which happens to be a lawful party in the United States, and happens to be the party which has the largest representation in the French Chamber of Deputies. We could not find such a formula. The conferees also felt that perhaps the only time when it is appropriate to refer in a hostile manner to a foreign nation by name is in a war resolution.

The following then occurred between myself and the distinguished gentleman from Ohio [Mr. VORYS].

Mr. JENNINGS. Mr. Speaker, will the gentleman yield?

Mr. VORYS. I yield.

Mr. JENNINGS. Does this mean that when I vote for this aid bill, I am voting to hand over $590,000,000 of the money of the people of this country to a nation that is dominated by the Communist government or which has a Communist government or is dominated by Russia? That is what I want to [illegible].

Mr. VORYS. I think the history of the past year and the way we proceeded with reference to Poland and Hungary is an answer to the question of the gentleman.

Mr. JENNINGS. You have not answered my question.

Mr. VORYS. Of course, we are not going to write into law for the benefit of the Communists and their agents just when, or how, or why, or in what way then can stop us from carrying out our own foreign policy.

Mr. JENNINGS. But I cannot square that with my conscience, and I cannot square it with what has heretofore been said on the floor of this House with respect to stopping this aid whenever a country turns Communist or falls under the dominion of a Communist government. I do not see how anybody could do it.

Although I supported the bill as written by the House, when the representatives of the House and the representatives of the Senate struck out the provision requiring the President to promptly cease sending aid to any country whenever he finds that the government of such country is dominated by the Communist Party or by Russia, I could not in good conscience vote for the measure.

I supported the United Nations relief bill for the aid of European and Asiatic countries and the appropriation of almost $4,000,000,000 to carry out said relief. This is what became of billions of said funds: $248,366,000 furnished under UNRRA went to Russia, almost a quarter of a billion dollars. In addition to this vast sum turned over to Russia under UNRRA, Albania obtained $25,882,000; Czechoslovakia $261,553,000; Finland, the only European country that made an honest effort to pay us back what we loaned her during the First World War, only $2,422,000; Hungary $4,411,000; Poland $473,303,000; Yugoslavia $409,622,000. It is thus seen that

these Russian satellite countries obtained under UNRRA, most of which was advanced by this country, $2,618,028,000, and that Russia and these countries controlled by her obtained a grand total of $2,866,394,000.

It must be remembered that the funds authorized to be advanced to the Governments of Austria, France, and Italy will be turned over to them by the State Department. The relief goods consisting of food, clothing, farm machinery, gasoline, and fuel oil will not be given directly to the people of these countries. It will be turned over to the Governments of Austria, France, and Italy, which will in turn sell these relief goods to such of their people as are able to pay for them. When this relief measure was considered by the House, an effort was made to have these goods distributed to the peoples of these countries by the American Red Cross or by some religious organization. This effort was defeated. I am of the opinion that the only practical way to distribute this relief is through the governments of these countries. In this way, it is hoped, relief will be extended to the people and support will be given to the governments in their fights against Russian-inspired Communists.

Let it be remembered that this vast sum of $597,000,000 is not a loan. It is a gift. Not one cent of it will ever be repaid to the people of this country.

By an act of Congress it passes forever from the taxpayers of this country to the Governments of Austria, France, and Italy. They will use it within the next 90 days. But the American people will not be able to earn and pay this sum in the next 90 days. It will be added to the backbreaking debt of $250,000,000,000 that our Government owes its citizens, and which our taxpayers must pay if it is ever paid.

I felt then and I feel now that when we give millions to other countries we should have the right to fix the terms on which the gift is made. Certain it is our people do not want to finance communism in Europe or anywhere.

The House, therefore, spelled out its will that these funds should no longer be sent to either Austria, France, or Italy, if any one, any two, or all of them passed under the control of the Communist Party, or under Russian control. When the will of the House was defeated by the bill as finally written by the House and Senate conferees, I voted against it. I know it is not the desire of my people to support communism anywhere in the world.

American Ships Should Repatriate Hebrews to Palestine

EXTENSION OF REMARKS
OF
HON. ANDREW L. SOMERS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, December 19, 1947

Mr. SOMERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a statement expressing the determination that the United States should repatriate Hebrew displaced persons in the American zone of occupation by providing for their transportation to Palestine, in support of House Resolutions 408 and 409.

In Public Resolution 73, Sixty-seventh Congress, second session, and Senate Concurrent Resolution 44, Seventy-ninth Congress, the Congress of the United States favored assistance for the rebuilding of Palestine under the terms of the League of Nations mandate. After many years of travail and slaughter the rights of the Hebrew people to sovereignty to Palestine has been recognized by the United Nations and at the same time the British Government has been called upon by the United Nations to evacuate a seaport in an appropriate area of Palestine not later than February 1, 1948, in order to facilitate the free entry of Hebrews into their country.

We know that there are some 250,000 Hebrews in the Allied zones of occupation in Germany, Austria, and Italy living under deplorable conditions. Considerations of humanity and justice dictate that these survivors of Nazi brutality, who lost 6,000,000 of their kin, should be assisted to resume a new and dignified life. The United Nations decision on Palestine now makes it possible to repatriate these survivors to that country. This can be done quickly and without much difficulty. The organizational genuis and efficiency of the United States Army succeeded in repatriating immediately after VE-day 7,000,000 European displaced persons to their countries of origin. It is reasonable to assume, therefore, that the United States Army could act likewise for the 250,000 Hebrews still in Europe. This normal procedure has long been advocated by the Hebrew Committee of National Liberation.

On October 4, the President of the United States publicly announced that preparations for this movement have already been made by the United States Government and that the Government is ready to lend its immediate assistance for the purpose of transporting displaced persons to Palestine. Such an evacuation of the Hebrew displaced persons from Europe would not only enable these people to build their lives anew in peace and in dignity but would have a beneficial effect on the stabilization of Europe which our Government now seeks to achieve. This, too, would constitute a tremendous financial saving to the occupation authorities. The expense of the continuing maintenance of these displaced persons in the European camps is far greater than the single cost of their repatriation to Palestine.

At present the 210,000 Hebrew DP's in the American occupation zone cost the United States $32,000,000 to maintain, not counting millions of dollars in private assistance. The cost per person to the United States was $153. Under my proposal the total cost of transporting all Hebrews in the American zone to Palestine would be less than $15,000,000. The experience of the International Refugee Organization indicates that it would take $70 to move a person from Europe to Palestine.

Mr. Speaker, I have given this problem a great deal of thought and have studied all of its ramifications and possible solutions. I have come to certain conclusions which I have today submitted to the House in the form of a resolution. I understand that my honorable colleague, Mr. HUGH D. SCOTT, JR., of Pennsylvania has introduced a similar resolution. We feel that the sense of these resolutions expresses the sentiments of a great number of the members of both political parties.

Every authoritative report indicates that Palestine has room for all the Hebrew DP's now. In 1935 the British registered 61,743 new settlers, not counting thousands of so-called illegal immigrants, all of whom were speedily absorbed. In the past 12 years the economic growth of the country has expanded and it can now absorb much larger numbers.

I feel compelled to sound a very serious warning. The recent United Nations decision will come to naught if the people arrive in driblets. The original mandate failed when Britain insured an admission policy of "too little and too late." The U. N. program will go the tragic way of the mandate if the people do not get in. Today the only way to secure Palestine against Arab aggression and bolster the U. N. decision is by reenforcing it with population. By so doing the United States would be clearly demonstrating that we are not only in favor of the Hebrews in principle, but that we are ready to back their right of self-determination with ships and facilities. This was proposed by President Truman on October 4, 1946, and was blocked by the British. Today only our own inertia can stop it.

The text of my resolution, House Resolution 409, follows:

Resolved, That it is the sense of the House of Representatives that the President—

(1) Should direct the appropriate agencies of the Government to take action to remove from the American Zones of Occupation in Europe all Hebrew displaced persons and to assist in their repatriation by transporting them to Palestine prior to October 1, 1948, in order that camps and settlements for Hebrew displaced persons in the American Zones of Occupation may be closed by such date;

(2) Should direct the proper authorities in the American Zones of Occupation to undertake immediately the program of repatriation of such Hebrew displaced persons in order to reduce the heavy financial burden on the United States occasioned by the maintenance of such camps; and

(3) Should authorize the employment of such facilities of the United States (including vessels and land-transport facilities) as may be necessary to accomplish such repatriation as expeditiously as possible.

Broadcasting and Drew Pearson

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, December 19, 1947

Mr. HOFFMAN, Mr. Speaker, when Hannegan was chairman of the Demo-

cratic National Committee, he read of various appointments to key government positions in the newspapers. The White House palace guard made the selections. McGrath, the new chairman, keeps posted by tuning in on Drew Pearson. This is the same Pearson that President Roosevelt labeled a chronic liar. Time was when appointments were made through the ranking national committee. That sort of thing is just a memory. After Pearson announced Coy's appointment to the FCC, and for good measure added that it was a splendid choice, the radio trade publication picked it up; and Carroll Reece, chairman of the Republican National Committee, issued a stinging statement in which he said:

It has been somewhat disturbing to note published reports that President Truman was considering the appointment of a man who has been closely associated with the left wing of the Democratic administration since its very inception and who is a graduate of the Indiana Democratic machine in the days of the notorious 2-percent Club. A man with that background might well experience difficulty in convincing the public that he would be an impartial administrator.

What part did Drew Pearson play in this appointment, you may well ask. Why this deep interest in appointments to the FCC? Could it be that his action ties in with his desire to take from Hearst the important station WBAL in Baltimore? Pearson is an applicant for these facilities and it surely would be worth his every effort to put this one over.

Pearson's accuracy as a reporter is reflected in a blistering speech on the floor of the other body on December 15, 1947, by a Member of that body, who branded the columnist as a liar and declared Pearson was a disgrace to his profession. His intense interest in appointments to the FCC will bear careful watching.

So that the President may know that we are watching very closely the developments down at the FCC, I am inserting in the RECORD some of the newspaper and editorial accounts of the mess down at the FCC:

[From the Washington (D. C.) Times-Herald of December 6, 1947]

INVESTIGATE THE FCC

(By Frank C. Waldrop)

For once in his life, Clifford Durr, of the Federal Communications Commission, has done a public service. Out in Chicago a few weeks ago he indicted the good faith of the Federal Bureau of Investigation and thereby stirred up enough people to cause a demand in the United States Senate for investigation of the FCC. Senator HOMER CAPEHART, Republican, of Indiana, who has a reputation of not starting a thing unless he intends to finish it, accuses Durr of being derelict of his duty and declares:

"I believe that Congress * * * should make a thorough investigation of the Durr affair, an appropriate committee should question all members of the FCC, Director J. Edgar Hoover of the FBI, and any other persons who may be able to give pertinent testimony."

It is the plain duty of Congress to do just that. The Federal Communications Commission is notoriously the most incompetent, quack-brained organization ever devised by the New Deal. From the time it was formed in 1934 down to this very day it has never been out of trouble and what is more, trouble of its own making.

This Durr performance is a typical example of what the taxpayers get for their money down at the FCC.

As everybody in official Washington knows, and anybody outside official Washington can easily imagine, the Federal Bureau of Investigation every day receives a flood of tips, rumors, information, and advice about what is going on all through the Government.

Some of that enormous stream directs the FBI toward violations of laws the FBI is supposed to enforce on its own. A tip that somebody is violating the Federal kidnaping law is an example.

The FBI evaluates such a tip, investigates it, and acts accordingly.

But, of course, also, the FBI gets an enormous amount of stuff about branches of the Government that are supposed to look out for certain things on their own. For instance, the FBI once during the recent war got an anonymous letter that a wartime major general in the Army Air Forces by the name of Bennett E. Meyers was a crook.

It is common sense and the lawful responsibility of the FBI to pass on any such tips to the agency concerned for it to evaluate and act on as it thinks fit.

In the Meyers case the FBI naturally sent the anonymous letter to the Army and the Army, being busy with a war, did not follow it up. Today, the Army wishes it had and so does everybody else.

Well, the FBI for years has been sending to the FCC whatever it happened to accumulate that might bear on the FCC's business.

And the FCC's business, its authorized business that is, couldn't be simpler. It is supposed to regulate interstate telephone and telegraph service and to license radio operations, according to "public interest, necessity and convenience."

As to telephone service, the FCC has little to do, for the American Telephone and Telegraph Co. gives the world's best service at the world's lowest cost and is unqualifiedly the world's best operated corporation.

The FCC has spent millions of dollars, taxpayers' dollars, trying to get something on the A. T. & T., but no luck. It hasn't been able to make any dent big enough to brag about in 13 years of trying.

In the matter of telegraphy, however, the FCC has accomplished something big. It managed to force a merger of Western Union and Postal Telegraph, with the result that today telegraphic service in the United States of America is worse than it was a generation ago.

Rates are up, employees are sore and talking about strikes, and beyond all, the customer takes a shoving around. Yes, the FCC has advanced telegraphy backward by at least 20 years.

But you don't get the full treatment until you get into radio. There the achievements of the FCC are truly notable for abuse of power in public office.

The FCC has managed to reduce the broadcasting phase of radio, for instance, to a multibillion-dollar idiocy. Broadcasters are so scared of the FCC that they crawl on their bellies for its favor and have long since abandoned any will to resist its dictatorship.

How has the FCC managed to domineer over the radio business? By menacing every station with the authority Congress gave it to withhold or withdraw licenses to broadcast.

Plainly, the FCC fully abuses the intent of Congress, which was merely that licenses should be granted to lawful American owners in such a way that one station would not conflict signals physically with another, and then let the broadcasters compete for public attention on their own.

Instead of doing that, the FCC has begun to meddle with the traffic, that is the content of programs, and definitely to play politics with licensing, as between qualified Americans.

That is how Durr has got it into trouble. For the FBI, in regular order of business has sent the FCC tips, leads, and information concerning applicants for broadcasting licenses.

The FCC has neglected to follow up those tips as it should have. And the files full of neglected work are getting heavy, dangerous, and explosive.

Durr, in Chicago, tried to intimidate the FBI from sending over any more tips by a slippery suggestion that the FBI had been making unsupported accusations of communistic activity by FCC employees and applicants for license.

Of course, the fact was as above outlined, merely that the FBI was passing on to the FCC leads for the FCC itself to evaluate. And the responsibility for nonaction was burning.

Durr hoped to frighten Hoover, but instead he exploded the FCC itself into openly repudiating him and inviting Hoover to continue sending on said tips.

He has also roused up congressional notice. That notice should not die. It should bring the whole conduct of the FCC from its beginning to the present into full congressional review and reform.

The FCC today is the most dangerous enemy of free speech in America next to the Communist organization, which said Communist organization is doing its best to break into the FCC for manipulation of radio to Communist ends.

Health Insurance

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Friday, December 19 (legislative day of Thursday, December 4), 1947

Mr. MURRAY. Mr. President, Lowell Mellett, the very able columnist, contributed a few days ago an interesting and informative article on the subject of national health insurance. The article appears in the Washington Evening Star of December 16, 1947. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ON THE OTHER HAND—HEALTH INSURANCE ADVOCATES CITES PHYSICALLY FIT ORPHANAGE BOYS

(By Lowell Mellett)

Nearly everybody is familiar with the fact that 40 percent of the American men called up for service in the recent war had to be rejected because physically unfit. (There was about the same percentage of rejections of young women who applied for enlistment in the WACS and WAVES.) In some States the showing was much worse. The rejection rate in North Carolina, for example, was 56.8.

Yet, in that same Tarheel State it was also demonstrated how a high record of physical fitness could be achieved. The story is related in a book just published under the title, "140,000,000 Patients." The author is Carl Malmberg, formerly with the United States Public Health Service and the Senate Subcommittee on Health and Education.

CAME OUT AT HEARING

As Mr. Malmberg tells it, the story came out at a Senate committee hearing. It seems that five North Carolina orphanages became

curious concerning their graduates. Investigation revealed that out of a total of 1,138 former students called in the draft only 16 failed to qualify for military duty. The rejection rate was only 1.4 percent. Less than 1½ per hundred for the orphan boys, as against nearly 57 per hundred for the State as a whole.

The explanation given the committee by Dr. Clarence Poe of the North Carolina Hospital and Medical Care Commission was: "* * * these orphanages are supported by poor people and the boys are not coddled, are not given luxuries. They are given sound nutrition and reasonably adequate medical and hospital care."

The author proceeds: "When these children needed medical attention, they got it. Nothing fancy and nothing very costly. But whenever the doctor was needed, he was there. Like most other school children, these youngsters were given periodical physical examinations. But there was one important difference between the orphanage examinations and those given in most schools. When the orphanage doctors found remediable defects they corrected them. If teeth were decaying, they were filled.

"The child was not sent home with a card advising his parents to 'take him to see a dentist,' a recommendation which they might not be able to follow, or which they might neglect to follow even if they could afford to do so. If eyeglasses were needed they were provided. No notice to the mother suggesting that she take Johnny to an oculist or optometrist. If infected tonsils, or a mastoiditis, or a hernia, or a fever of mysterious origin was discovered, the child was sent to the hospital promptly, operated on if necessary, and cared for until fully recovered.

NINETY-EIGHT OF ONE HUNDRED MET TEST

"No surgeon's fee, no nursing charges, no hospital bill. And no serious consequences because of delay in getting proper treatment. In short, there was never any question of payment for medical care. * * * And when the time came for these youngsters to fulfill their duty as citizens, more than 98 out of every 100 met the test."

The book is worth the reading of every American citizen. It should be required reading for Members of the Senate and House, since it summarizes the information Congress will need in order to act intelligently on proposed national health legislation during the coming regular session.

Mr. Malmberg is a warm advocate of the bill introduced last May by Senators WAGNER, MURRAY, PEPPER, THOMAS of Utah, CHAVEZ, TAYLOR, and MCGRATH, and by Representative DINGELL, following a list of recommendations made earlier by President Truman. The essential feature of this bill is provision for a national health insurance plan, an extension of the Social Security System. The so-called Taft bill, sponsored by the American Medical Association, according to the author, would merely preserve the present state of affairs while appearing to do something constructive.

Economy in Government

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, December 19, 1947

Mr. POULSON. Mr. Speaker, I believe in giving credit where credit is due. Being one who believes in economy in government, I want to commend Mr. Fanning, the postmaster of Los Angeles, Calif. The enclosed office memorandum is at least evidence of Mr. Fanning's desire to stay within his allotted budget. I hope this will be an example to many of our other departmental heads whose intentions along that line I sometimes doubt.

All Agencies, United States Post Office and Court House; All Sections, Main Office:

The Fourth Assistant Postmaster General has notified us that our appropriation is so low that we are very much in danger of exceeding our allotted amounts for electricity and power.

He has requested us to make it each activity head's personal responsibility to see that the use of lights and electric fans is held to the absolute minimum in order that this economy program will be successful, and the necessity of asking for additional funds will be eliminated.

This is most imperative and your cooperation is urgently requested.

MICHAEL D. FANNING,
Postmaster-Custodian, Los Angeles, Calif.

Will Dollars Save the World?

EXTENSION OF REMARKS
OF
HON. ROBERT A. GRANT
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 18, 1947

Mr. GRANT of Indiana. Mr. Speaker, there has come to my desk a book by Mr. Henry Hazlitt entitled "Will Dollars Save the World?" It should be read by every American, and particularly by those of us in the Nation's Congress who will soon be called upon to consider additional billions of dollars for the world.

The following editorial appears in the current issue of the Ave Maria published at Notre Dame. It comments on the worth and the timeliness of Mr. Hazlitt's valuable book.

The editorial follows:

TEXTBOOK FOR AMERICANS

We hope every man and woman in America who understands direct English speech will read Mr. Henry Hazlitt's Will Dollars Save the World? The statement of the author's contacts and economic experience printed at the beginning of this booklet of 69 pages is a testament to his right to speak on the implications of the proposed American money loans to Europe. It is a book of facts, not of assumptions and special pleading. We cannot even begin to summarize what is so compact in reasoning, so thick-spaced with economic and political situations in European areas. Here are just a few points from Chapter X—Summary and Conclusions—by way of indicating the whats and wherefores of this fact-pursuing search book.

"As the United States produces only 12 percent of the world's food supply America cannot feed the whole world. * * * The need for help to restore Europe's capital structure has been greatly exaggerated. * * * Food relief and financial help from the United States will be futile, unless the country helped discontinues policies which discourage trade and prevent production. * * * The bulk of our past and prospective "loans" are thinly disguised gifts. * * * Making loans and gifts to Europe is not the most effective way to fight communism. * * * It is not true that the United States needs foreign loans to keep full production and employment at home. It is not true we get rich by giving our goods away."

Keep in mind that these are just samples from a list of discussed subjects. We know of no document which gives so much simplified economic spelling on America's money gifts to Europe from tax-groaning Americans.

Manufacture of Distilled Spirits Should Be Prohibited During Emergency

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, December 19, 1947

Mr. KEFAUVER. Mr. Speaker, Secretary of Agriculture Anderson has announced, after a conference with representatives of the various distillers, that he was unable to get them to agree to voluntarily desist from further manufacture of distilled spirits during the emergency. In view of the fact that grain is so badly needed for food at home and to prevent starvation abroad, its use for making distilled spirits cannot be justified. Ordinarily the distillers use 55,000,000 bushels of grain annually. During October, up to the shut-down on October 25, it was estimated that the distillers used 10,800,000 bushels to pile up more stocks in anticipation of the shutdown. The distillers are reported to have on hand a sufficient supply of spirits for domestic use until June 1950. Under these circumstances, inasmuch as it is impossible to get a voluntary agreement, Congress should give the President power to prohibit the use of grain for purposes of making spirits until the emergency is over.

I have introduced bill H. R. 4799 which would give the President this power. It is as follows:

A bill to amend the Second Decontrol Act of 1947

Be it enacted, etc., That the Second Decontrol Act of 1947, approved July 25, 1947, be amended by adding to section 3 hereof a new subsection 1501 (b) (1) (G) to read as follows:

"(G) Grain or grain products for the production of distilled spirits for beverage purposes which shall not be used for such purposes unless the President or the Congress by concurrent resolution shall find that the amount of grain available for more essential domestic uses and for export to carry out the foreign policy of the United States is such that grain can safely be made available for distilled spirits, in which event the President may authorize the use of grain from time to time for the production of distilled spirits for beverage purposes for limited, specified periods of time. In considering the relative essentiality of uses of grain, consideration shall be given to the availability of adequate supplies of distilled spirits."

I was very happy to note that the Senate in passing Senate Joint Resolution 167, the so-called stabilization bill, included provision which would enable the President to prevent the use of grain for spirits as long as the supply was short. If Senate Joint Resolution 167 is enacted, it will of course not be necessary to enact the bill which I have filed.

Stabilization of Commodity Prices

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, December 19, 1947

Mr. WALTER. Mr. Speaker, I am voting for this resolution primarily because it contains section 4 (b), which will give the President the power to deny any allocation of grain to the distillers for the month of January thereby insuring that the so-called voluntary shut-down which expires on Christmas Day will continue through the end of January. On the basis of figures which have been given the various committees of this Congress it is clear that the so-called distilling holiday will not have effected any actual savings of grain unless it is continued beyond Christmas Day. According to the official figures the distilling industry used 8,500,000 bushels of grain in the first 25 days of October as against a normal consumption for the industry of about 3,500,000 bushels per month. The plain indication from these figures is that the industry used in October its normal quota of grain for almost the entire last quarter of this year.

We should not, however, suppose that section 4 (b) of this act is adequate for dealing with the problem of the allocation of grain to the distilling industry. It is, to begin with, a provision which will expire within less than 30 days after the new session begins. We shall accordingly be faced with the necessity of enacting further legislation immediately after the first of the year. Section 4 (b) is defective, moreover, in that it fails to provide the clear and definite standards contained in H. R. 4626, which I introduced on December 2. The provisions of H. R. 4626 should be enacted at the new session so that the President may have clear and definite standards by which to exercise the authority he needs for controlling the allocation and use of grain by the distillers.

It is especially necessary that grain should be saved in view of the crop report released by the Crop Reporting Board of the Department of Agriculture on December 16. This report, the final estimates of the Department for the present crop year, reveals that the total grain crop for the country is 105,000,000 bushels less than was estimated on the 1st of November and casts very grave doubts upon our ability to meet the grain export goals set earlier this year by the President and his advisers as necessary for implementing our foreign policy.

The continuation of the distilling holiday through the month of January, which section 4 (b) of this act now insures, will make it possible for the President to save the 2½ to 3½ million bushels of grain which the Secretary of Agriculture has felt it necessary to offer to the distillers in his unsuccessful attempt to secure their agreement to some voluntary restriction of production. The savings of these 2½ to 3½ million bushels for the month of January are a very small part of the total savings which are now made doubly necessary on the basis of the December 1 crop report to which I have referred.

As I indicated in the statement I made at the time I introduced H. R. 4626, grain must be saved in the interest of both domestic and our foreign needs. Of all the consumers of grain, the distillers are best able to forego their consumption of the basic foodstuff needed both here and abroad. The information presented by the Secretary of Agriculture to the Senate Committee on the Judiciary to the effect that the distillers have now in stock several years supply of whisky and at least 6 months' supply of neutral spirits for blending purposes insures that grain can be spared by the distillers without any injury to themselves or the country. The refusal on the part of some distillers to cooperate with the Government in its efforts to conserve the supply of grain at this critical moment is very disturbing to those of us who are opposed to national prohibition. It was the same sort of conduct that brought prohibition before and may well result in its return. I am therefore voting for this anti-inflation bill because its passage, while not offering very much, does insure a saving of many bushels of precious foodstuff.

I include the following editorial from this morning's Washington Post:

WHISKY SPREE

The brusque rejection by distillers of the administration's proposal for a voluntary limitation on grain consumption is precisely what Secretary Anderson termed it—a mandate for compulsory controls. Plainly, this is a matter on which self-restraint is not enough. The figure suggested by Mr. Anderson of 2,500,000 bushels a month was generous in the extreme. The inability of distillers to agree to even this reduction—only half the representatives invited to Wednesday's meeting even voted—makes action by Congress imperative if a mockery is not to be made of our food-saving efforts. The Senate already has evidenced its support in the anti-inflation bill passed Thursday; it is now up to the House to follow suit.

How essential these formal limitations on grain usage are was made dramatically evident by Wednesday's crop report showing a further 105,000,000 bushels decline in the 1947 grain crop. Even with all the conservation measures at this country's command, the Nation will be hard put to meet its winter goal of 500,000,000 bushels of wheat for export; if a mandatory 150,000,000-bushel carry-over is voted, the goal will be all but impossible of attainment. These new complications lend additional merit to the Department of Agriculture's request for authority to purchase the entire wheat crop if necessary.

On anything more than superficial examination, the suggestion of one group of distillers for a 3,500,000-bushel monthly quota is a bad joke. Although this year's consumption of grain by distillers has averaged 4,600,000 bushels monthly, during September, the last normal month before the 60-day voluntary shut-down, use had declined to 3,000,000 bushels because of the excess of production of liquor over demand. With an estimated 6-year supply of liquor on hand, it is foolish of the distillers to talk of hardship, even of sacrifice, in agreeing with Secretary Anderson. Moreover, compliance with the voluntary shut-down has not been universal. Some distillers have refused to cooperate altogether; several are reported to have bought large quantities of grain in preparation for reopening. Obviously these factors, coupled with the effects of the 8,000,000-bushel binge immediately before suspension, threaten to wipe out the entire gain made under the voluntary program.

Senate action on the anti-inflation bill, including a provision giving the Secretary of Agriculture authority to allocate grain to distillers up to January 31, has paved the way for a similar timely response by the House today. This is one responsibility in which the House must not fail before it adjourns. To allow a whisky spree at the expense of our obligations to a hungry world would be to condone a kind of sabotage.

Fuel Oil Shortage

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, December 19, 1947

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters:

OFFICE OF COORDINATOR
OF INFORMATION,
HOUSE OF REPRESENTATIVES,
Washington, D. C., December 9, 1947.

Vice Adm. WILLIAM W. SMITH,
United States Navy, Retired,
Chairman, United States Maritime Commission, Washington, D. C.

DEAR ADMIRAL SMITH: A critical shortage of fuel oil appears to be developing in New England.

A meeting of the New England congressional delegation was held Friday, December 5, to determine possible measures to avert such an emergency shortage. The Honorable JOHN W. MCCORMACK, chairman of the Committee on Maritime Commission, in connection with this threatened oil shortage has requested the Coordinator of Information to get answers to the following questions:

1. How many tankers suitable for use in the threatened emergency are in operation under the American flag?

2. Does the Maritime Commission have authority to order these tankers to carry oil to New England ports in event of a declared emergency?

3. If not, why not?

4. What legislation, amendatory or otherwise, would be necessary to empower the Maritime Commission to procure cooperation of privately owned, United States documented tankers, to aid in such an emergency?

5. How many tankers have been sold to foreign nationals since VJ-day to date?

6. Are such tankers documented under the American flag?

7. Can the Maritime Commission impose as a condition of sale that these tankers shall, in event of a declared emergency, carry oil to New England ports?

8. If not, why not?

9. How many tankers, and of what type and capacity, are yet to be sold?

10. Could these tankers, if and when sold, be subject to conditions that they shall, under direction of the Maritime Commission, aid in carrying oil to New England ports in event of a declared emergency?

11. If not, why not?

12. Could such tankers as remain on the list of those to be sold be chartered to carry oil to New England ports in event of a declared emergency?

13. If not, why not?

14. What legislation would be necessary to make such conditional charters possible?

15. Are the tankers listed for sale presently seaworthy for the purposes contemplated in these inquiries?

16. If not, why not?

17. What legislation would be necessary to enable the Maritime Commission to make them seaworthy?

18. Could these tankers be made seaworthy in time to help avert the critical New England oil shortage this winter?

19. How many tankers are in lay-up?

20. What types among them would be suitable for the purposes contemplated herein?

21. Are these tankers seaworthy now?

22. If not, why not?

23. Could these tankers be broken out of lay-up, overhauled, and made fit in time to meet the threatened emergency herein referred to?

24. If not, why not?

25. What legislation, if any, would be necessary to enable the Maritime Commission to make these laid-up tankers fit, if they can be made fit, in time to meet the situation herein contemplated?

26. What subsidies or other payments would be necessary to enable the Maritime Commission to procure the services of as many tankers now in operation, pending sale, or lay-up, in time to avert the threatened critical oil shortage in New England?

27. What suggestions can the Maritime Commission offer to meet this threatened situation?

The request from Chairman McCORMACK to the Coordinator was coupled with an urgent instruction that this information be procured for the House of Representatives as rapidly as possible. In view of that, I would very greatly appreciate it if you could advise me as to about how long it will take to get the answers to these questions, and also to give me the answers at the earliest possible moment.

It is my impression that it is very urgent that this information reach Mr. McCORMACK and his committee considerably before the date set for the adjournment of the special session of the Congress.

Thanking you in advance for your cooperation in this matter, I am,

Very sincerely,

J. FREDERICK RICHARDSON,
Coordinator of Information.

UNITED STATES MARITIME COMMISSION,
Washington, D. C., December 17, 1947.

Mr. J. FREDERICK RICHARDSON,
Coordinator of Information,
Office of Coordinator of Information,
House of Representatives,
Washington, D. C.

DEAR MR. RICHARDSON: I have your letter of December 9, 1947, in which you refer to the concern of the New England congressional delegation over a prospective shortage of fuel oil in the New England States and list a considerable number of questions on this situation. Brief answers to these various questions are listed hereunder, the responses being numbered to accord with the listing of the questions shown in your letter:

1. As of November 30, 1947 there were approximately 345 operating tankers (of 1,000 gross tons or more) privately owned and registered under the American flag, practically all of which are suitable for use in domestic service. In addition, there are some 140 Commission-owned tankers now in operation, the great majority of which are already employed in United States North Atlantic service.

2. Only in the event of a national emergency declared by the proclamation of the President, pursuant to section 902 of the Merchant Marine Act, 1936.

3. The emergency declared May 27, 1941, was terminated so far as section 902 is concerned by Public Law 239, approved July 25, 1947.

4. See 2 above. No legislation would be necessary in the event of a declared emergency. In the absence of such a declaration, to empower the Commission to control or allocate the use of privately owned tankers, additional enabling legislation would be necessary such as making requisition authority effective without a declaration of emergency, or allocation or priority authority such as provided in wartime by the Ship Warrant Act of July 14, 1941 (55 Stat. 591), now repealed.

Attention is called to the naming by the Tobey subcommittee of the Senate Interstate and Foreign Commerce Committee of an oil industry committee to study the east coast fuel shortage with a view of attaining industry solution of the threatened oil shortage.

5. 133 T-2 and 7 T-1 tankers have been sold or allocated for sale to foreign governments or foreign nationals under the Ship Sales Act of 1946.

6. No.

7 and 8. The Merchant Ship Sales Act, section 4 (c), expressly prohibits the imposition of any restriction on the lawful or proper use or operation of the vessels sold. Vessels documented under foreign flag cannot be operated in the coastwise trade as private vessels.

9. All tankers of the Commission have been sold or earmarked for sale except a few T-2 type tankers which are seriously damaged, and 13 small (T-1) type tankers. Also available for sale are two special type tankers and a few small former naval auxiliaries.

10 and 11. See the answer to question 8. In connection with questions 7 and 8 and 10 and 11, it should be noted that if a national emergency should be declared by the President, the requisition power of the Maritime Commission could be invoked as a means of controlling the use of the citizen-owned tankers.

12. On the assumption that this question refers to general agency operations, such tankers (already allocated for sale) could be so operated if withheld from delivery to purchasers and put in suitable operating condition.

13 and 14. See answers to 9 and 12 above.

15 and 16. No; because of having been laid up for considerable periods of time, and requiring moderate to extensive repairs and reconditioning. Since virtually all of these tankers, except overage vessels and the small T-1 tankers, have been allocated for sale, it is to be presumed that the many vessels in process of sale will be withdrawn from the laid-up fleet and repaired for operation as quickly as possible by the purchasers.

17. No legislation necessary. (See, however, the reply to question 25.)

18. It is probable that a considerable number of the laid-up tankers recently sold will be repaired and put into operation in time to be of great help in relieving the prospective shortage of petroleum products in the New England area during the winter months.

19. There are 119 tankers (of more than 2,000 tons gross register) in lay-up or otherwise immobilized. Of this 119 vessels in lay-up, or immobilized in damaged condition, there are 56 of the large T-2 type, 37 ZET-1 (Liberty) type, 12 small T-1 type, 12 overage vessels, and 2 of special type.

20. All of the T-2 and Liberty types would be suitable for the purpose contemplated. However, it is to be noted that all such vessels which can be repaired or reconditioned for service within any reasonable period of time have already been sold.

21. No.

22. Because of having been laid-up in Reserve Fleet sites for considerable periods of time or because in damaged condition. (See answer to (16) also.)

23. See answer to 18.

24. See answer to 18.

25. See answer to 18. The Commission is proceeding as rapidly as possible to make these tankers available through the sales program, as it does not have sufficient funds otherwise to do it.

26. Since all vessels considered reasonably suitable for the transportation of bulk petroleum and its products to the New England area are either in operation or have been allocated for sale, it does not appear that any subsidy or other payments to or on the part of the Maritime Commission would aid in meeting the prospective critical oil shortage in New England. This for the reason that it may be assumed that the purchasers of those vessels not now in suitable condition for operation will promptly set about repairing and reconditioning such vessels so as to get them into operation at the earliest possible moment in their own interests.

27. The Commission believes that the prospective shortages of bulk petroleum and its products and of tanker-transportation facilities are industry problems and require solution by the industry itself, subject, of course, to such assistance as can be extended by this Commission and all other agencies of Government. As is mentioned in our response to question 4, above, we understand that Senator TOBEY'S subcommittee of the Senate Interstate and Foreign Commerce Committee has appointed an industry group to study and report back to the subcommittee as quickly as possible their recommendations for relief of this threatening situation. We believe this is a very important step in the right direction and trust that some means will be found, as a result of the recommendations of the industry group, to set up some temporary centralized organization which will be in a position to keep in touch day by day with the developments in the States most directly concerned with oil-shortage problems and can accordingly give interested agencies of Government their views as to the steps most necessary to take in meeting the situation.

All industry advice to date indicates that the only real and continuing relief in situations of this nature lies in getting into operation at the earliest possible moment tanker tonnage now idle. This objective is being quickly accomplished by the steps which have been and are being taken by this Commission, under its tanker-sales program, to get the ships out of lay-up, repaired and reconditioned, and into operation at the earliest possible time.

Sincerely yours,

RAYMOND S. McKEOUGH,
Vice Chairman.

NAVY DEPARTMENT,
OFFICE, CHIEF OF NAVAL OPERATIONS,
Washington, D. C., December 10, 1947.

Hon. G. J. BATES,
House of Representatives.

DEAR CONGRESSMAN BATES: In confirmation of our telephone conversation today I am pleased to furnish the following information which indicates the substantial contribution which the Navy has made toward meeting the current critical situation with respect to tanker transportation for civilian requirements.

On October 1, 1947, the Navy Department was called into conference with certain other agencies of Government by Mr. Steelman to discuss the serious deficiencies in petroleum supplies for civilian consumers which threatened to develop during the approaching winter.

At that time the most effective and obvious action which could be taken to alleviate this situation was agreed to be the restoration to active service of all remaining large tankers in the Maritime Commission's laid-up fleet which were not committed to any sales program. The tankers potentially available in this category numbered 50 vessels of the T-2 type. Because of the cost of this undertaking, it was further agreed that only the Navy and Maritime Commission jointly could share this burden and that upon completion the tankers would be operated by the Navy to meet the world-

wide needs of the military services. These requirements considerably exceed the capabilities of the Navy's own tanker fleet of 36 vessels which are also employed for that purpose and generally average 45 tankers chartered monthly on a voyage basis from the Maritime Commission's active fleet.

The program of readying for service the 50 available large tankers in the Maritime Commission's laid-up fleet as of October 1, 1947, has been vigorously prosecuted. To date 6 of these have been completed and are on the point of sailing from loading ports. During December a total of 16 of these tankers is expected to be in operation. By late January or mid-February all 50 vessels should be completed. As these vessels go into service, an equivalent number are released from those which the Maritime Commission now allocates monthly from its active fleet for purely military purposes. The tankers so released are, of course, available for sale or for meeting the needs of the civilian economy.

In expectation of the readiness during December of 16 out of the 50 tankers abovementioned the Navy Department has already informed the Maritime Commission that the previously requested December allocation of 43 tankers on voyage charters for use of the military services can be reduced to 27. The Maritime Commission presumably will reallocate the 16 tankers so released for the use of private industry or sell them to United States purchasers from whom a large backlog of applications are now on file.

In answer to your specific inquiry as to whether any of the 50 tankers being readied for use of the military services might be employed initially for short periods to relieve the critical fuel situation in the New England States, I regret to advise that such a plan does not appear to be feasible. The reduced demand on Maritime Commission tankers for the current month (43 to 27) was made on an optimistic estimate that 16 replacement ships would be available from the 50 tankers being reconditioned. There is no positive assurance that this schedule can or will be met. It is much more probable that by late December or early January the Navy will encounter difficulty in meeting the tanker transportation needs of the three services with the ships under its control.

Assuring you of my desire to be of such further assistance in this matter as you may wish.

Sincerely,

W. M. CALLAGHAN,
Rear Admiral, U. S. N.,
Assistant CNO (Transportation).

NAVY DEPARTMENT,
OFFICE, CHIEF OF NAVAL OPERATIONS,
Washington, D. C., December 15, 1947.

Hon. G. J. BATES,
House of Representatives

DEAR CONGRESSMAN BATES: I regret that some of the information submitted to you in my letter of December 10, 1947, must now be revised in light of the unfortunate casualties sustained by two of the tankers which the Maritime Commisison is reconditioning for use of the military services Severe cracks in the welded structure of these two ships, the *Ponaganset* and the *Cahaba*, has necessitated the decision to strengthen all tankers of the 50-ship program before placing them in service. An exception has been made in this decision to permit the sailing of two tankers from the west coast which are otherwise completed and available for loading. These two tankers will be strengthened upon return from their initial voyages.

While reports from repair yards are not yet sufficiently complete to warrant precise estimates of the delays which will be involved in accomplishing the additional work on 48 of the 50 tankers, it is believed that all of these will be reconditioned and strengthened by February 15, 1948. The most adverse effect will be on the 16 tankers expected to be ready during the month of December. It is probable that not more than four or five will be completed during the current month.

Because of your vital interest in the New England supply situation, I realize that you are primarily concerned with what action the Navy had to take in requesting the reallocation of the 16 ships which were released to the Maritime Commission in expectation of the original reconditioning schedule being met. I am happy to advise in this connection that we have cut our requirements to the bare minimum and have asked the Maritime Commission for the return of only 7 of the 16 tankers previously released for the month of December. Only three of these tankers will be required from those available to the Maritime Commission in the Atlantic area.

In the hope that the foregoing information will be of assistance to you in keeping posted on the tanker situation,

Sincerely,

W. M. CALLAGHAN,
Rear Admiral, United States Navy,
Assistant CNO (Transportation).

COPY OF LETTER APPOINTING SPECIAL COMMITTEE TO PRODUCE RESULTS FROM THE OIL CONFERENCE HELD BY THE INTERSTATE AND FOREIGN COMMERCE COMMITTEE OF THE SENATE ON DECEMBER 9, 1947

DEAR SIR: Yesterday, it was the privilege of our Subcommittee on the Oil and Coal Shortage to sit down with you and other leaders in your industry and discuss with you the shortage of fuel, particularly heating oil, and our discussion centered more or less on New England and the Eastern States where the distress seems to be the greatest.

While we did not cover all the ground we had hoped to, nevertheless a great amount of information was developed and I personally felt that the conference was a very satisfactory one. You heard about the shortage of oil in various localities, the problem of tankers, the problem of steel so that more wells might be drilled, of the difficulty the Federal Government itself is encountering in securing oil to heat its facilities throughout the country, and of the situation confronting fuel dealers who are unable to secure adequate supplies from their normal sources of supply. Transportation, apparently, is one of the keys to the situation.

The committee which I hereby appoint is as follows: R. G. Dunlop, president, Sun Oil Co., Philadelphia, Pa.; B. Brewster Jennings, president, Socony-Vacuum Oil Co., New York, N. Y.; M. J. Rathbone, president, Standard Oil Co. of New Jersey, New York, N. Y.; Clyde G. Morrill, executive director, Independent Oil Men's Association of New England, Boston, Mass.; Reid T. Westmoreland, Jr., Lampson Oil Co., Providence, R. I.; John W. Scott, Buckley & Scott Utilities, Watertown, Mass.; John P. Birmingham, president, White Fuel Corp., South Boston, Mass.; J. C. Richdale, Junior Vice President, Colonial Beacon Oil Co., Boston, Mass.; James P. Patterson, Pan-American Petroleum & Transport, New York, N. Y.; Martin Ryan, Esq., Bridgeport, Conn.

You will note that I have not presumed to name a chairman, but leave the group to effect that themselves when they meet. I have, however, taken the liberty of asking Mr. M. J. Rathbone, president of Standard Oil Co. of New Jersey, the operating company, to take upon himself the responsibility of calling the committee together.

If I may suggest, it would seem to me in the scope of the matters to be considered and be reported on in view of the discussions yesterday, manifestly, these are some of the salients:

1. As to an ample supply being available.
2. Whether there is actually a supply now in storage at Gulf ports which only needs transportation to make it effective for relief.
3. The actual net situation regarding tankers which was somewhat blurred over in the confusing testimony and which should be made clear.
4. The possibility of blasting out some of the tankers and making them available and cutting red tape to that end.
5. Whether or not on the facts submitted yesterday, the Navy could not, with their own tankers manned by commercial crews as pointed out is being done, be used to transport this oil for a period of 60 to 90 days.
6. Evidence offered indicated that "spot buyers," so-called, cannot get oil at the present time through normal channels and their customers are left high and dry. Therefore it is obvious that the committee should give thought to providing ways and means whereby those customers can be taken care of. They are part of our wards also.
7. The needs of the New England district and New Jersey and Pennsylvania and New York were all stressed yesterday, where the situation is acute, so that your attention is particularly called to these areas.
8. The committee should, in its over-all findings, make a clean-cut presentation which the people of the shortage areas will understand and which will hold before them not only hope for betterment but steps which would effectuate betterment and allay present apprehension.

Let me assure you that the subcommittee of the Interstate and Foreign Commerce Committee of the Senate will be delighted to cooperate with you and advise with you if you care to counsel with us. This is only an offer and in no sense is it an obligation on your part.

In view of the seasonal situation and the urgency of the needs, I hope it is not asking too much to request that this committee meet in the near future and be able to formulate its remedies and have them in my hands in Washington not later than Thursday noon, December 18.

On behalf of the members of the subcommittee, I express my gratitude at your willingness to thus cooperate, at your presence yesterday, and I await your report with very real and sincere interest.

Sincerely yours,

CHAS. W. TOBEY,
Chairman, Subcommittee
on Oil and Coal Shortage.

A Program for More Production

EXTENSION OF REMARKS
OF

HON. ROBERT A. GRANT

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, December 19, 1947

Mr. GRANT of Indiana. Mr. Speaker, under leave to extend my remarks, I include herewith an address which I delivered on December 13 last, before a Know Your Government conference at the University of Illinois.

The sessions were sponosored jointly by the University of Illinois and the Junior Chamber of Commerce of that State.

The address follows:

Mr. Chairman and gentlemen; students of governmental affairs, like all American citizens, are, of course, constant readers of newspaper stories emanating from Washington. Presumably, these stories should give

the readers a working understanding of the prospects of future legislation. Many readers of these newspaper stories, however, do not stop to consider the separate role of the three branches of Government and, consequently, do not properly evaluate the content of the stories. You who are students of governmental affairs, as is the case with those of us who are in Government in Washington, do differentiate between predictions of legislation made by administrative officials and similar stories emanating from the Halls of Congress. In no field is this basis distinction of source more necessary than in the field of taxation.

The original constitutional source of tax levies is the House of Representatives of the Congress of the United States. This is a very important and a very jealously guarded power. Since the very beginning of history, individual freedom has been based upon the power of the purse in the hands of the people. The committee on which I have the honor to serve has been called the most powerful committee in the House of Representatives. It is sometimes called Congress' Constitutional Committee, that is, when toastmasters are introducing members of the committee.

Membership on that committee brings with it long and arduous hours of work. But with it all comes the opportunity to lend our feeble efforts to do something for a system of freemen and freewomen—living together and working together under a system of free competitive enterprise.

We, of the majority side, today find ourselves somewhat in the position of disciples. As such, however, we are not advocating, defending, or advancing any new or untried concepts. We very briefly are attempting only to preserve the one remaining example to the peoples of the world of the philosophy of individual liberty with its concomitant individual reward for services well done.

I need not explain to you that we are firmly convinced that taxation is the cornerstone of the American free enterprise system. If we are disciples, we are disciples not of a new era but of a return to the traditional American concept of free enterprise and individual reward which has made American productive economy the greatest and most efficient the world has ever known.

One of the most succinct statements in connection with this philosophy of free enterprise has been stated recently by the chairman of the Ways and Means Committee, the Honorable HAROLD KNUTSON, who is certainly one of the most influential architects of tax policy that can be found today. Chairman KNUTSON said:

"One of our most important concerns must be the maintenance of existing and the creating of new jobs and independent income. * * *

"May I remind you that it requires an investment of $8,000 to create a new job. The average person who receives a small income does not create the job through which he gets that income. Someone else has made that job possible through his decision to provide capital, assuming a business risk, or take on managerial responsibilities. Any plan of tax revision which does not give at least proportionate recognition to this basic reality of our economic system would be gravely deficient."

Since the beginning of the Eightieth Congress—11 months ago, we in Congress have been attempting to explore our American economy in an effort to find legislative determinations of basic policy, which would show the way to industry, labor, agriculture, and capital. We who serve on the Committee on Ways and Means have heard from nearly 500 witnesses, representatives of all segments of American life. We have received almost as many corrective suggestions respecting the present tax law.

The Secretary of the Treasury in Texas last Saturday night advised the Nation, through the headlines, that this administration desired revision of the corporate tax structure before individual income-tax reduction. I can assure you that the majority members of the Tax Committee of the House of Representatives heartily subscibe to Secretary Snyder's belief in the need for tax revision but we do not agree with his priority list. Further tax relief to corporations should not take precedence over individual income-tax relief.

Seventy-five percent of the taxes collected by the Federal Government are received from corporate and individual income taxes. This percentage of collection exists today, nearly 3 years after the termination of the greatest war in history. There has never been a time in history when a nation prospered on high wartime tax rates carried over into peacetimes. In attempting this operation since 1945 this administration is gambling with the solvency and the productive capacity of the entire Nation. Incentives, and not penalties, should be the goal of our Federal system of taxation.

The Tax Adjustment Act of 1945 made cash quickly available to corporations, for the purpose of continuing employment during the reconversion period, by means of cashing in their unused amortization allowances, their postwar refund bonds, and their estimated carry-back refunds. Under that tax law, the corporations of the United States have received at least $6,000,000,000 of benefits since the taxable year of 1945. They also have been relieved from the wartime excess profits' tax of 95 percent. The individual tax payer, on the contrary, has received only a 5 percent across-the-board reduction from the wartime peak tax. The majority of the Ways and Means Committee does not believe that the first thing to be done is to further reduce the corporate tax contribution. Inequities in the corporate tax structure do exist. They should, of course, be corrected. This revision is currently under way, but it will be months before the tremendous undertaking can be completed.

Accordingly, we believe that the first correction of the distorted tax collection picture must be made in the field of individual taxes. The twice-vetoed individual tax reduction bill, which the Congress passed last year, shows pretty clearly the method by which we in the majority hoped to achieve relief for the individual taxpayer. The arguments pro and con on this program of relief are familiar to all of you. We believe, therefore, unlike the Secretary of the Treasury, that before any additional relief is given to corporate taxpayers, relief must be given to some 50 million individuals. We believe that such a bill for individual income tax relief should contain the following provisions:

1. The exemption from taxable income for all taxpayers should be increased. The amount of increase which can be justified in the light of revenue needs is debatable, but no less than a 20-percent increase in exemption can be justified in the light of the increased cost of living since the exemption was enacted. This, of course, would mean a $100 increase in exemption, i. e., from $500 to $600. The Joint Committee on Internal Revenue estimates that the cost in revenue to the Government, by this provision, would be $1,600,000,000.

2. A percentage reduction, varying according to income brackets, should likewise be enacted. Although the percentage reduction of 30, 20, and 10 percent, provided for in the two vetoed bills, is the maximum amount that can safely be enacted, I certainly would subscribe to any reduction in the maximum which can be enacted, on the theory that half a loaf is better than none.

3. There also should be corrected, as promptly as possible, the glaring inequality between American taxpayers which results from the application of the theory of split income. The application of the principle of community property creates an inequality based entirely upon the geographic location of the domicile of American citizens. The collection of Federal income taxes should not vary between these taxpayers because of the accident of location. Accordingly, individual income-tax payers in non-community-property States should receive the same privilege of splitting their Federal income as is enjoyed by the residents of the community property States. That, of course, would carry with it the repeal of the 1942 amendments on estate and gift taxes that were aimed at residents of the community property States.

It is the belief of the majority of the tax committee of the House that these three minimum-relief measures should be promptly enacted for the benefit of individual taxpayers.

Assuming that the individual income-tax relief is enacted, the Ways and Means Committee also believes that basic revision of the corporate-tax structure is necessary if America is to secure greater productivity of wealth and a resultant increased standard of living. Greater productivity can be obtained in one of two ways, by involuntary servitude, or by incentive rewards for the creators of wealth, whether that be labor or management.

Incentives take different forms for different groups. Each group is but a spoke in the entire wheel. Providing proper incentives for one group without doing the same for others is a half-hearted attempt to solve a problem. There is no shortage of effort today to provide incentives for labor and for agriculture. Management is presently somewhat neglected.

Well-intentioned, but misguided, Government officials seem to believe that maximum production can be achieved with a lopsided wheel. These Government officials have attained some success toward their lopsided goal. Our tax laws are probably the best example of these successes. The individual income-tax returns are now, and, even if the majority's relief suggestions are adopted, will continue to be, at a level which was not even considered approachable by the Socialists 25 years ago. Other provisions of the Internal Revenue Code are either phrased or interpreted by the Bureau of Internal Revenue to have the effect of penalizing success.

This Socialist concept of the impact of taxation is firmly embedded in our laws and, in our opinion, must be routed out before any technically perfect revenue code can be enacted. In his address at Houston a week ago the Secretary of the Treasury said:

"One of the most effective steps we can take in Government toward fiscal soundness would be an equitable revision of our tax structure. * * *

"During the past years * * * adequate attention could not be given to consideration of equity and to the incentives which would be needed after the war for the expansion of American industry and trade."

It seems practical, therefore, to those of us who serve on Ways and Means to join forces with the Secretary of the Treasury, if his latest statement is his policy, to correct some of these concepts which penalize success before we attempt to enact a modern and technically perfect revenue code.

Everywhere, except in some government and labor circles, it is recognized that, in order that one factory worker may be employed, an average capital investment of $8,000 or more is required; that without capital investment factory workers will not be employed, and that without wage earners there will be no production, with the result that our present economy will cease to exist.

A peaceful revolution bringing about an alteration of the form and nature of our present economy seems to have been at least one of the objectives of those who are, and will be, the most resistant to any proposals to provide incentives to management. But these incentives are necessary, and, if they

are not provided, then those who pay only lip service to the profit system will truly succeed.

Though the situation would probably best be remedied by a complete revision of the income-tax laws in one fell swoop, considerable basic improvement would occur, in my opinion, if five major cnanges were made:

First, a substantial further reduction in the individual income-tax rates, for example, a reasonable ceiling on the amount of taxes to be collected from any individual taxpayer; second, postponement of the tax on the income received by the exercise of a stock option granted to an executive of a business; and, third, enactment of some sort of tax equalization on differing forms of doing business, familiarly called the "elimination of double taxation of dividends"; fourth, a thorough review of the excise-tax structure; and, fifth, a thoroughgoing liberalization of the depreciation provisions of the revenue law and the Treasury's regulations thereof.

The first would be an inducement for additional capital investment—risk capital, if you please—thus providing greater employment. It would also encourage greater efforts by business executives. There was a time when salary increases and bonuses were a sufficient inducement to spur on a good man to higher endeavors and to greater responsibilities. Not now. Here is an example: An executive with two dependents will pay, at present rates, a tax of $4,047 on a net income of $15,000. A $5,000 well-earned raise in salary will give him only about half that amount after the tax slice, since his total tax will jump to $6,934—the salary raise amounting to a net of only $2,653.

Another example is that of an executive receiving $30,000 who gets a raise to $40,000. The $10,000 increase in salary shrinks to $3,872 after paying the additional taxes.

Can an executive be expected to put forth his best efforts and to willfully assume greater responsibilities, with the attendant heavy burdens and headaches, when his reward amounts to little more than a whispered "Thank you"? Humans and human and all strive harder when the prize is considered worth while.

During the war the Congress adopted a "limitation of effective tax" theory in an effort to lighten the restrictive burden of the 95-percent excess profits tax rate. This limitation theory, already proved effective and capable of administration, should be applied now to the harmfully burdensome individual tax rates, particularly those in the higher brackets. It is from the individuals in those brackets that risk capital, or executive skills, are obtained, and, I believe, they can be obtained only if the reward is increased from its present "purely nominal" size. Such incentive would be appreciably increased in those relatively few instances, taxwise, where it is vitally needed to start the flow of either risk capital or additional assumption of responsibility. It can be done by assurances, written into the tax law, that the Federal Government will never take more than a given share of the proceeds from the risk as its fair share of the individual's reward for increasing production, employment, and profits. In short, it is my opinion that a sound "corrective-surgery technique" would be one that limited the amount of taxes collected by the Federal Government in peacetime to a definite maximum of, say, 60, or even 50, percent of the taxable income received by any individual.

The second essential change in the tax laws (postponement of the tax on income received through the exercise of executive stock options) would go far in providing permanent and continually increasing incentives to management. One of the best inducements for an executive to put forth his best efforts is to make it possible for him to acquire an interest in the business, to become one of the owners, and to provide for his family and himself when his own efficiency decreases.

To revert to the illustration of the $15,000-a-year executive, if the stock of the corporation which employs him has a market value of $25 per share and he is given an option to purchase 500 shares at $20 per share, the executive has (under existing law) an immediate additional taxable income of $2,500. The tax to him on this additional amount would be approximately $1,216. His tax bill would then amount to $5,263, leaving him a net "take-home pay" for the year of $9,736, instead of the $10,953 he would have had if he rejected the opportunity to obtain a stake in the enterprise. What inducement is there for an executive to work harder when his reward will result in less net income than he had before?

The third change which I believe would materially improve the basic tax policy on which the free enterprise system is dependent is that which would equalize the tax burden imposed on competitive forms of doing business. Today there is, obvious to all, one type of business enterprise, the cooperative, which enjoys an advantage over private enterprises in the freedom from income taxes on much of its corporate earnings. This inequity of burden must, and should, be corrected. It is particularly true when the failure to correct the burden stifles the growth or menaces the life of private enterprises either because of unfair competition, of a drying-up of sources of capital, or even an inability to secure executives, because of inability to meet the rewards offered by the cooperative.

I believe that the enactment of a policy of eliminating the present double tax on private enterprise's distributed earnings (dividends) would go far toward removing the inequality complained of by free enterprises. In addition to equalizing the burden, such elimination would not only increase the returns to executive (if the second basic change mentioned heretofore were successful) and make them more nearly commensurate to the benefits received by the whole economy, but also insure the investors of risk capital that their returns on the capital invested would be commensurate with the profits realized from that capital.

This suggestion would not, of course, wholly equalize the tax impact on differing forms of doing business, but it would enact the policy of equality of burden, and would result in increasing incentives to executives. These two results are both fundamental and necessary if we are to continue successfully to compete with other forms of government or economy. If the double taxation of corporate dividends is eliminated, the other corrections needed to fully equalize burdens between free enterprises and cooperatives are simple. They relate to the form in which earnings are distributed, and the amounts of earnings which may be accumulated without review by the Government.

Fourth, the need for a thorough review of the excise tax structure is, I am sure, apparent to all. During the war excise taxes were levied wherever and at such rates as would bring in the most revenue to the Government. In fact, some of them—called the Henderson taxes—were urged for the express purpose of diverting critical items away from the manufacture of articles then considered to be non-essential. Today, we need incentives, not penalties. Wherever excise taxes either interfere with production or create inequities, they must be decreased or eliminated.

The fifth essential step in the revision of the tax structure is that which would liberalize the present day provisions for depreciation.

On December 4, I introduced in the House of Representatives H. R. 4637 entitled "A bill to encourage increased production," and I believe it would do just that. This bill makes provision for a 5-year amortization of capital investments hereafter made.

We experienced that effect during the war when a 5-year amortization provision applied to needed production plants. In that short period more than $6,500,000,000 were invested in production facilities, which meant the difference between victory and defeat.

A similar result from this bill would mean the difference between inflation and possible collapse of the free-enterprise system and a strong, prosperous republic of freemen.

One of the most significant products of economic research in the past 20 years has been the definite demonstration of the relationship between new investment and business prosperity.

Fluctuation in expenditures of plant and equipment have been recognized as an important influence contributing to prosperous business conditions, as well as to major downswings in economic activity.

Capital outlays by private business provide a market for the savings of individuals and corporations, channeling an important component of the national income into uses which increase the efficiency of the business community as a whole.

In a period in which rising prices threaten the stability of many markets, this increased efficiency and the investment which creates it are of the utmost importance.

By such stabilization of industry and production we naturally stabilize employment.

We can fail to check today's soaring prices. Or we can smash right into the cause of inflation.

It is a simple matter to put the finger directly on what is causing the present crisis of inflation. Prices are out of hand because our factories and farms are not producing enough things to meet the demands of the people. Dollars are chasing goods. In a free market, prices will keep on rising until supply begins to match demand.

The solution, then, aside from a reasonable control on exports, depends on more production; more things for more people to buy.

This same program of accelerated amortization accomplished gigantic productive expansion for war; it can do the same in peacetime. But it can do even more—it can stop the fluctuation of industrial costs, thereby stabilizing production and employment for the future.

The aim of this bill is to meet the emergency by stimulating American industry to invest $10,000,000,000 in 2 years to increase production.

The immediate effect of this bill would reduce the Nation's corporate income tax for a limited period.

But further consideration of the over-all effect of the act on tax revenues is necessary in order to obtain a true picture of the situation created by the change in depreciation rates.

First, insofar as price increases are halted, revenue requirements are less than they would be were inflation to continue.

Second, because new investment activity tends to increase national income, increased yields of all taxes may be anticipated. Specifically, net income before taxes of business corporations will increase and therefore afford an offset to the decrease resulting from higher depreciation changes.

Roswell Magil, former Under Secretary of the Treasury, headed a committee of civilians appointed to assist the House Ways and Means Committee in current study of tax revisions. That committee said in its report on November 4, 1947:

"There is much futility and needless expense in controversies about depreciation, since in any event the taxpayer will only recover the cost of the asset; and if he takes too much or too little depreciation this year,

the overage or deficiency will necessarily be adjusted in future years."

An essential fact should be realized: If a taxpayer takes his full rate of amortization under this act, he merely hastens the time when he will not be permitted a tax deduction for depreciation. The Government is only postponing the tax in order to encourage plant expansions that otherwise would not be consummated at this crucial time.

It is my opinion that this bill offers the most concrete answer to shortages and rising prices; it is the greatest weapon at our command with which to defeat inflation and to forestall depression.

Shortages exist today in many industries because of the lack of production facilities to meet the demand. Steel shortages are hindering construction in many fields. Lack of box cars and other types of transportation equipment are threatening fuel shortages throughout the country this winter.

Expanded plants are needed to produce the materials necessary to a world that is rebuilding from a destructive war. More machinery is required with the expansion of the plants.

With amortization of both the factory and machinery over a 5-year period industry will have greater incentive to move toward expansion.

Billions of dollars, now being withheld from investment in capital assets because of the strain of heavy taxation against early operations of the plant, would be poured forth to meet world demands for American products.

This bill, in my opinion, offers the veteran and others their best chance of gaining a start in business, because in the 5-year amortization period the new businessman can meet the early hurdles of the enterprise by plowing the profits back into the business.

It would permit the amortization of new rental units to meet the tremendous demand by millions of families seeking shelter at reasonable prices.

This proposal is important not only to our domestic economy. It is, as well, important to America's position in world affairs.

Over and over again we hear it said that the forces of communism in the world are awaiting the day when deflation and another great depression might strike the United States. Then it would be that communism would try to strike the final and fatal blow at free competitive enterprise.

Production and more production is the crying need of the hour. If only we could send out to the world the message that the construction of new businesses, the expansion of existing concerns, and the construction of rental homes and apartments had taken a big upswing in America, we would knock the props from under the arguments of the Communists. Furthermore, we would tremendously strengthen America's position in foreign affairs.

Great production—and expanding, virile economy—like great military strength—is the kind of language that dictatorships understand.

In conclusion, may I sum up the eight points hereinbefore urged:

1. An increase in personal exemptions.
2. A reduction now in individual rates.
3. Enactment of the principle of split income.
4. A percentage ceiling on the amount of taxes an individual must pay.
5. Postponement of the tax on the income received by the exercise of a stock option.
6. Elimination of double taxation of dividends.
7. Revision of excise taxes, and
8. Provision for accelerated depreciation.

All of these point toward only one goal—production and more production—more jobs and increasingly greater productivity per worker. Incentives and not penalties must become the theme of America's internal-revenue laws.

Speech of Hon. William F. Knowland, of California

EXTENSION OF REMARKS
OF
HON. ERNEST K. BRAMBLETT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Friday, December 19, 1947

Mr. BRAMBLETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech given before the California State Chamber of Commerce by the Honorable WILLIAM F. KNOWLAND, Senator from California:

Mr. Chairman and fellow Californians, for a month and a half, I have visited a number of key nations both outside of and within the iron curtain. In some of these nations in Europe, I had served while a member of our Army during World War II. Some of these countries and others in the Middle East I had visited in January 1946 during a 30,000-mile trip by air around the world investigating the disposal of Army and Navy surplus property overseas. In these I had some basis for comparison between conditions then and now. Other countries I visited for the first time.

Today, I want to give you impressions of what I have seen. I traveled from nation to nation and twice across the Atlantic by air to make full use of my time. However, I wish to make crystal clear that I do not, as a result, claim to be an expert returning with pat solutions to complex problems, nor do I intend to write a book!

But what I observed and heard caused me to have great concern regarding the peace of the world and the security of this Nation. I have crossed the continent to outline the picture as I see it to this representative gathering of citizens of the State I represent and I do so on my responsibility as a member of the Senate of the United States.

European style capitalism presently appears to be sinking into a coma except a few cases of secondary importance. Today in most of Europe, the $64 question is, "Will it be socialism under parliamentary government or communism under a police state?"

Private enterprise has done an outstanding job in helping to create, develop, and advance the standard of living in the United States. Unfortunately, in Europe, much of industry has been private but not enterprising. Part of this condition grows out of monopolistic trade practices. In cartelizing industry and building gigantic monopolies, European style capitalism built the gallows for its own execution. Its lack of economic statesmanship has made difficult, if not impossible, the functioning of free institutions as we know them.

As President Grover Cleveland once said, "A condition and not a theory confronts us." Nations I visited have turned their backs on a European style capitalism, largely, in my opinion, because many of those in responsible positions did not seem to comprehend that no system can survive which does not recognize the basic fact that both economic and political systems, if they are to be successful and enduring, must exist for the purpose of serving the people as a whole. When they do not discharge this responsibility, they give way to other systems, even though the cure may sometimes turn out to be worse than the disease.

I found the western European nations, even though they have turned to socialism of varying degrees, still have a strong desire to maintain human freedom and parliamentary institutions. As long as this holds true, there always remains the opportunity for the people to follow new paths when they become convinced that the particular program that the government at the moment is following no longer holds a hope for a brighter future. For this reason, I believe that we should make a mighty effort to prevent western Europe from going behind the iron curtain. Once a communistic police state is permitted to be imposed upon these nations, the people no longer will have a free choice.

The great export out of Russia today is fear. The execution of Petkov in Bulgaria, the sentence to life imprisonment of Maniu in Rumania, the flight of Mikolajczyk from Poland are all part of the same pattern. The Communist program is to strike down or drive out those who dare to hold to the doctrine that the state is a servant and not the master of the people.

I have heard men in nations which are in the unenviable position of having the hot breath of the bear blowing down their neck say to me, "Senator, it will be small consolation and little help to have your government send a 'strong note,' as in the Petkov case, when we are hanging from the gallows."

The peace is not yet lost, but the sands of time are rapidly running out. I returned from Europe with a deep conviction that our people must have the facts upon which to base judgments of far-reaching importance to this and future generations of Americans. Yes, peace can yet be saved, but not without sacrificing, not without risk, and not without courage on the part of the people. It is definitely not the type of a situation that can be met by hysteria or by squirrel-cage thinking. What we need is the same type of keen, cool, intelligent determination that gave us the Declaration of Independence and the Constitution of the United States and the will to preserve our Nation whenever it was threatened from within or without.

If we follow the road that leads to and from Munich, war is almost inevitable. I am convinced that the peace cannot be saved by appeasement. It is essential for all the law-abiding nations of the world to make it clear now and not next year that the threat to territorial integrity and independence of small nations anywhere is a threat to the territorial integrity and independence of all nations everywhere.

Just so there will be no misunderstanding in the minds of my listeners today, at home or abroad, I want to emphasize that I have specific reference to Greece, Turkey, and Iran, as well as to any other nation that may be threatened by an overt attack from a neighboring power.

Those in charge of the Kremlin today are following the same system of international blackmail that was followed by Nazi Germany. Sacrificing the rights of small nations as a tribute to such extortionists will not buy peace any more than the sacrifice of Ethiopia to Fascist Italy, Manchuria to militaristic Japan, or Austria and Czechoslovakia to Nazi Germany brought peace a few short years ago. To the contrary, it merely increases the scope of demands by such aggressors.

The problems which face us are of such a grave nature that I hope neither the administration nor the Congress will approach solutions in any narrow partisan sense or to gain any party advantage. If we are to achieve bipartisan support for American foreign policy, there must be full consultation between the President and the Congress. This consultation is not adequately discharged by merely calling Members of Congress to the White House and giving them a short preview of what is already a determined policy.

From both the short- and long-term point of view, the United Nations must be strengthened and supported. Our ultimate aim must be a system of international law and order that both the strong and the weak nations will respect. Only by the ultimate development of a system of collective security will

it be possible to build a satisfactory and lasting peace.

Freedom for the individual and sovereignty for nations cannot be saved for the people of Europe by the United States alone. These are not items that can be delivered like two cans of soup from a grocery shelf. There must be a vigorous, indigenous determination to preserve such liberties by the people themselves. They must be willing to risk their lives if need be in reaching their objective. I found such a determination in many of the countries I visited.

The first measure before the Congress deals with emergency aid for Austria, Italy, and France. For this reason, I shall discuss these countries first and then within the limited time we have, go on to give you some observations of other nations.

Austria was the first victim of Nazi aggression. It is a small nation, having approximately 7,000,000 people. As Germany neared defeat, Austria was first occupied by the Russians. Later, lines of demarcation were established with the Russians occupying the East, and England, France, and the United States the western part. The Soviet zone has about 40 percent of the population, with most of the industrial economic wealth. The American, British, and French zones have about 60 percent of the population and very little industrial capacity. When the Russians first occupied the country, they set up a Communist-dominated government. With a great feeling of confidence and after some considerable prodding by the other allied powers, they allowed elections to be held in the fall of 1945. These elections were a shock and a disappointment to the Russian authorities, for they gave the People's Party 55 percent of the vote, the Socialists 40 percent, and the Communists 5 percent. The Parliament elected at that time and still in being contains 171 non-Communists and 4 Communists.

Not being able to dominate the government, and not being able to coerce the Ministers, the Russians have endeavored to disrupt the economic recovery of the nation. Taking advantage of a loosely-worded section of the Potsdam Agreement which allowed the Russians to take reparations from German assets as such, the Soviet authorities have enlarged their interpretation to make it cover Austrian assets which had been temporarily taken over by the Nazis during the German occupation. In no sense were these German assets, unless one is willing to consider that property taken at a gun point is a legal transfer to and a rightful asset of the bandit.

To date, the Austrian Parliament has refused to give legal sanction to the taking over of these basic industries in the eastern section of the country. To protect Austrian interest, the government has nationalized all such properties. However, with Russian troops in the eastern part of the country and without a peace treaty, Austria is in no position at the moment to exert its authority over these plants.

The leadership in Austria is excellent. Both the Peoples Party and the Socialist Party are working together to preserve the independence and sovereignty of their nation. They are facing the problem with courage and with ability. The nation is in the unfortunate position of having its capital city, Vienna, as an island in the Russian sea of territory which surrounds it.

These people are hard working, courageous and have a fine tradition of democratic ideals. They are entitled to assistance in helping to overcome the hurdles which are in their path as they seek to gain and then maintain complete economic and political independence.

The conditions in Italy are not good. With a population of 45,800,000, this country has a large and active Communist Fifth Column who are apparently determined to try to undermine the legal government and to disrupt the shaky economy. Italy has limited foreign exchange resources and will need immediate assistance as the small resources they have will run out before the first of the year.

While Italy did not suffer the same type of destruction visited upon Germany, there was enough destruction of key power and industrial plants and transportation facilities to make difficult the full rehabilitation of the nation's economy.

In addition to the other problems, Italy, as is the case of most European countries, is faced with a serious inflation. The lira, when I was in Rome, had an official rate of 461 to the dollar and an open-market rate that varied between 575 and 600 to the dollar. It is one of the few currencies that has improved its standing in relation to the dollar during the last 6 months. In Rome, the stores are filled with consumer goods and food, but the prices are high even by American standards and the wages are far lower than those in our country. Conditions outside of Rome, both in northern and southern Italy, are reported as being far more acute. I drove by automobile from Rome to Anzio and then to Naples. Along that particular route, there was a great deal of farm land that was not put into productive use this year because of the damage that had been done to the farmhouses by the fighting. In almost every instance, however, the farmers were busily engaged rebuilding their homes and there is every reason to expect that they will be prepared to plant and harvest their crop next year. In several of the smaller cities we passed through on the way to Naples, Communist meetings, of considerable size, were being held in the public square and the Red flag of communism with its hammer and sickle was flying from the headquarters building.

There are definite indications, however, that communism has reached its high-water mark in Italy and is now receding. The recent municipal elections tend to confirm this and it probably accounts for the desperate attempt of the Communists to upset the government by illegal means prior to the elections next year that will probably confirm the fact that they are losing rather than gaining strength.

If Italy is saved from communism, it will be largely due to the help the United States has already given the unhappy country and to the increase in Italian morale that has come from the emergency aid and long-term rehabilitation program which is now before the American Congress.

France is facing, in addition to everything else, a serious parliamentary crisis growing out of the division of strength between the De Gaulle forces on the right, the moderates in the center and the Communists on the left. Because of the strains and stresses, the Ramadier Ministry fell and former Premier Leon Blum was unable to form a government because he lacked nine votes of having the parliamentary majority. The present Schuman government under existing conditions can be considered to be merely a caretaker government until changes are made in the French constitution or new parliamentary elections can be held.

As in Italy, the French Communist Party appears determined to undermine the legal government and to wreck the nation's faltering economy. I am inclined to believe, however, that with the help that has been rendered and the prospects for the future, that a substantial majority of the French people will not willingly allow themselves to be taken behind the iron curtain. Whether they can prevent it by constitutional parliamentary means, without France having to go through the fires of a bitter civil war, is something that only time will tell.

Germany is a major factor in the economic recovery of western Europe. The Potsdam agreement contemplated that Germany would be treated as an economic unit. The Russian Government has consistently and persistently blocked the efforts to carry out this policy, while at the same time claiming the benefits of reparation payments which they secured under that same Potsdam agreement.

It is my very strong belief that when Russia first showed its resistance to carrying out the terms of the agreement, that we and the other western powers should have immediately stopped shipping plants as reparations into the Russian area. It just does not make sense to continue to deliver to them under one section of the agreement, while permitting them to ignore other sections that place some obligation upon them.

Until you have been to Germany, it is difficult to grasp the tremendous dislocations that have taken place. I served in that country during the war. I was back there again in 1946 and on my return this time, I could see some improvement but not enough to yet make the country a going concern.

In all of the perimeter nations, I had the question raised as to whether or not in rebuilding the economy of Germany, this country wasn't contributing to her military potentialities.

My answer to the Poles, Czechs, Frenchmen, Austrians and others who have raised the question, was this: "Twice within a quarter of a century the United States had to send its men and resources to help defeat first the Imperial Germany of the Kaiser and secondly the Nazi Germany of Hitler. It is my belief that neither the United States Government nor the people of this country desire or intend to place Germany in a position where she can again threaten the peace of the world. If in order to make certain that Germany will not convert from a peacetime to a wartime economy, it is necessary for the western powers, including the United States, to keep a constabulary force together with a group of industrial engineers and accounting experts who can check on what is being done, then we should be prepared to do so for a period of 20, 30, or 40 years."

I did make clear to them, however, that Germany could not remain an economic vacuum. If it were allowed to completely collapse, it would not only be a cancerous growth in the heart of Europe, but it would be a focal point out of which communism might spread into other sections.

There is a general agreement among economists and political leaders in various parts of Europe that Germany must be allowed to once again become a self-supporting nation and to earn the respect of the world. It must also be allowed and encouraged to make a contribution to the economic rehabilitation of western Europe.

There has been very little visible construction in many of the bombed-out cities of Germany. There is a considerable amount of minor repair, but people are still living in the basements of destroyed buildings and in crowded bunkers and air raid shelters. I was personally disappointed that more work had not been done in the cleaning away of rubble and the rebuilding of some of the cities.

Part of the reason for this is the shortage of food with its effect upon the energy of the people. Part of it is due to the shortage of labor and the necessity for working elsewhere. However, I cannot help but believe that with more prompting on the part of the occupation authorities and more energy on the part of German municipal officials that much greater progress could have been made. From a psychological point of view, as well as from the necessity for the housing that could be furnished, I believe that it would be a value to clear away the rubble and the ruins as rapidly as possible and it would give the people a considerable lift in morale to see such work being done.

While I was in the Ruhr area inspecting both operating and nonoperating steel plants, coal mines and other industries, I found almost without exception that the lack of adequate food was considered the number one problem. It is not the only problem by any means. The lack of sufficient fuel, labor, and transportation have been major contributing factors in holding back the productivity that is so desperately needed. In addition, there has been the important factor of a lack of a stabilized currency, which is one of the problems found everywhere in Europe, but which reaches fantastic proportions in Germany.

As an example, when I was checking up on the rate of absenteeism among workers, I found in one plant that a survey had been made as to the reasons for employees being absent. One particular worker in question earned 10 marks a day or 60 marks for a 6-day week. Upon checking up, it was found that he worked 2 days a week in order to get his heavy-worker ration card and was absent from his job 4 days a week. This particular worker owned a hen. The hen laid five eggs a week and the worker ate one egg in order to augment his meager diet. The remaining four eggs he traded for five cigarettes each, which gave him 20 cigarettes. The 20 cigarettes he in turn sold for 8 marks apiece, which gave him 160 marks. Thus his hen was earning more than two and a half times as much per week as he could earn by working 6 days. Hence, he only worked long enough to get his heavy-worker ration card. Then the remaining days he went out into the country where he traded his labor to farmers in exchange for feed for his hen and potatoes for himself.

Under the circumstances, it is not difficult to understand in a "cigarette economy" of this kind why it is most difficult to have the rehabilitation which is so desperately needed. The price-control system in operation does permit the worker, even with his low wages, to buy his limited legal ration and to that extent the mark has a real value. But once he has purchased his legal ration and desires to go out and augment his diet, the mark has very little value in getting him the things that he would like to buy.

This, of course, is one of the reasons why the farmer is not enthusiastic about selling his crop for marks. If he accumulates marks, even at black-market prices, there are limited amounts of consumer goods that the farmer and his wife can purchase when they go into town. As a result, the farmer is more inclined to barter with city dwellers who come out into the country with various household necessities and luxuries to trade for food.

Coal is the key to the industrial recovery of western Europe and in order to get sufficient coal, it will be necessary for both the British and the German miners to greatly augment their present production. In the Ruhr area of Germany various incentive plans are now being tried to encourage the increase of productivity of the individual miner and of the entire industry. These incentives include the feeding of one hot meal and one sandwich meal to the miners at the pit head. I am told that it is the usual practice for the miner to eat the hot meal but instead of taking the sandwich meal below ground, he sends them home by one of his youngsters. These children can be seen in great numbers around the distributing point when food is being given out.

The Council of Foreign Ministers is now meeting, and until that body adjourns it will not be possible to tell whether there can be an agreement on the German peace treaty. However, I am convinced that basic decisions will have to be made promptly by the British, French, or ourselves whether there is a final German peace treaty at this time or not.

Since this Government is going to have to supply substantially all of the funds to "prime the German pump," we are the ones who must make the major decisions. These policies will include currency reform, new incentive plans for both labor and management, and a clear understanding that we will stay to see the job properly done.

With regard to reparation payments, I wish to make it clear that, so far as war plants are concerned, I am in thorough accord that they should be removed from the German economy. Frankly, I also feel that within limitations there is considerable equity for Germany to replace plants in France, Belgium, England, Holland, and Luxemburg that her bombers destroyed. If Russia had lived up to the terms of the Potsdam Agreement and treated Germany as an economic unit there would have also been an obligation growing out of that agreement to supply Russia and some of the eastern countries with reparations in kind. I do feel, however, that in view of the Russian violation of the Potsdam Agreement further shipping of plants to that nation should not take place.

Whatever the policy of the governments of the western areas is to be, it should be carried out forthwith and the indecision ended. It is very difficult to encourage increased production when management and labor have over their heads the fear that their plant and their job may be summarily taken out from under them.

My trip into Poland was my first look behind the "iron curtain" and the first time that I had been into that country. I was greatly impressed by the energy of the Polish people and their intense feeling to be a truly independent and sovereign power. Over the centuries, the Poles have been in the unhappy position of being sandwiched between Russia on the east and Germany on the west. On numerous occasions they have been overrun by first one of these countries and then the other. Through the entire period, however, they have retained a strong national spirit and have proven to be as indigestible to the Russians as they have been to the Germans.

The Government is largely Communist dominated and at the time I was there, I felt that the "iron curtain' had already descended about 75 percent of the way, but was not yet all the way to the ground. Since I left, the opposition leader, Mikolajczyk and other members of his party have found it necessary to flee the country and some of them have been arrested. This destroys the only opposition party that remained. I feel certain that Poland is in for an unhappy period. However, both the religion of the people and the large rural population make Poland an unfertile field, in my opinion, for communism to take any deep and lasting hold upon the masses of the Poles.

There are still an estimated 100,000 Russian soldiers within Poland and as long as they remain, it may be difficult for the spirit of free Poland to reassert itself. Some day they will have to leave and when they do, I feel certain that a free Poland will once again reassert itself and will call to account those who have abused their power and sought to fasten a police state upon a people who overwhelmingly want no part of it.

Regardless of party, I found the Poles generally felt that they were entitled to compensation in the west for what Russia had unilaterally taken from them in the east. Personally, I believe that the Polish nation is entitled to this consideration, regardless of the fact that we may not approve of the policies of the government which is temporarily in power.

Czechoslovakia has retained more freedom of action than any of the other nations within the Rusisa orbit. The Czechs have a good background of democracy. There are at the present time no Russian troops stationed in their country. They do, however, border on Russia and her satellite countries, which places them in an unfortunate geographic position, to say the least.

The people of Czechoslovakia are hard working and have an intelligent and practical outlook on today's world problems.

While the Poles have nationalized all industries with more than 50 employees, the Czechs have limited themselves to nationalizing their public utilities, together with industries having more than 500 employees. Many Czechs in responsible positions recognize that they have probably bitten off more than they can conveniently chew. One of their major problems, of course, is getting a sufficient number of trained people for management in order to efficiently operate the industries which have been taken over. There is also a recognition that without proper incentives for management and labor, productivity will suffer.

You may recall that when the Marshall plan was first proposed, the Government agreed to attend the Paris Conference. It was not until after the Soviet Union voiced its displeasure, in no uncertain terms, that the Government which had unanimously (including the Communist Ministers) voted to go to the Paris Conference, then unanimously revoked its prior decision. It was at least a clear indication that both the non-Communists and the Communists in the Czechoslovakian Government recognized the fact that the economic stability of Czechoslovakia depends, to no small extent, upon trade with the West.

Freedom of the press is still maintained in Czechoslovakia and opposition political parties are active and not hesitant about expressing their views when they disagree with the government in power.

Elections are scheduled for next spring and if the Czechs have a free voice at that time, the returns will probably indicate that communism is on the downgrade, rather than the upgrade in that country.

When one considers the fact that the wetern European powers joined in sacrificing part of Czechoslovakia to Nazi Germany at Munich in the forlorn hope that such action might bring "peace in our time," it seems to me that we should take a sympathetic attitude toward the working out of the difficult problems confronting the Czechoslovakian people.

Greece suffered greatly from the Italian and German occupation as well as by internal civil war. The Greeks are still handicapped by the active armed opposition which exists in various parts of the Nation and it will be most difficult to bring about the economic rehabilitation of the country until law and order is reestablished. It does not do much good to rebuild railroads or highways, bridges, or other public works if they are apt to be blown up within a week or two of completion.

There has been some considerable evidence of lack of efficiency in some of the Greek Ministries and our Appropriations Committee was shocked at finding large quantities of UNRRA supplies which had been in depots for a year, or in some cases 18 months, without having been distributed to the Greek people. Part of this was due to the UNRRA organization, but a large part of responsibility must also be shared by those who were then occupying positions of responsibility in the Greek Government.

I personally went out and inspected several depots and saw plows, tractors, harrows, butter churns, Diesel engines and pumps, shovels, pitchforks, refrigerators, and fishing boats that had not as yet been distributed and many of these supplies had been greatly damaged by lack of proper care.

Turkey has shown tremendous progress during the last quarter of the century. Unlike the Greeks, the Turks do not have any internal disturbances to divide them. I am convinced that the Turks will fight to maintain their independence, whether they get any help from the rest of the world or not. I am also convinced that these people are entitled to the support of the law-abiding nations of this world in maintaining their

territorial integrity and their independence as a nation.

Iran was occupied during the war by Russians, British, and American troops. With the end of the war, these powers agreed to withdraw their forces. The British and American troops were withdrawn but the Russians delayed and attempted to stir up strife in the Province of Azerbaijan. They attempted to force an oil concession from the people of Iran. The week before I arrived in Tehran, the capital, the Majlis or Iranian Parliament, by a vote of 102 to 2 rejected the proposed agreement.

These people also have a determination to maintain their independence and I believe that they have the same claim for the support of the law-abiding nations of the world as does Greece and Turkey.

The last country that I shall discuss today is Great Britain. I had some first-hand knowledge of what the British people went through with the air raids and V bombs and wartime shortages. It looked to me as though the British people had more food restrictions now than they had then and while the air-raid warnings have ceased, the austerity program goes on. Under the government of the day, Great Britain has a regimented economy. Most of the wartime controls are there and a few mor besides.

Personally, I have grave doubts as to whether or not Great Britain can solve her problems by following out her present policy. It is, I believe, not without significance that the steel industry and the shipbuilding industry, neither of which is nationalized, are both showing much higher productivity than the activities which have been taken over by the government.

As I have already pointed out, coal production is undoubtedly the key to the recovery of Europe. In the prewar year of 1939, Britain exported 40,000,000 tons of coal. This compares with 80,000,000 tons of exports in 1913. Today, coal is being sent from the United States to Great Britain. It is the unfortunate fact that it is now necesssary to "carry coal to Newcastle."

Historically, conditions in the British mines have not been good by our standards. The change from private ownership to public ownership has not greatly improved the lot of the miner. He gets 4 pounds 10 shillings a week as an above-ground worker or 5 pounds a week under ground. The men who work at the face of the coal vein operate on a piecework basis and some of them earn approximately 8 pounds a week. While the official rate gives a pound value of slightly over $4, the actual value of the pound is nearer $2.59.

To show what has happened to Britain's coal production, you will be interested to know that prewar production amounted to approximately 240,000,000 tons a year. The lowest level of production was reached in 1945, when it dropped to 180,000,000. In 1946 there was an increase to 186,000,000 and the responsible officials hope to get the 1947 production up to 192,000,000 tons. The drop in production is due to a number of factors, but probably the most important was the loss of manpower. A large number of the most productive men were taken into the army. With the wages paid, the work is not so attractive as to make them want to go back to mining.

When the labor government came to power there was a move toward the 40-hour week where formerly they had been on a 48-hour week. Now the responsible Ministers in the labor government recognize that production is the key to meeting Britain's current problems. In the coal mines they have changed from a 5-day week to a 5½-day week and in the steel industry they are operating on a 7-day week. In addition, the original hopes held out by the government for a vast construction program has had to be sharply curtailed. This applies to that which was being publicly financed and that which was being privately financed. They have found it necessary to cut their capital investment by £200,000,000.

The British have also put into effect what is known as the control of engagement order. All men between the ages of 18 and 50 must register and all women between 18 and 45. Individuals can only be hired under this order through the employment services and the government has the power to determine that a business is nonessential to close it up and to reassign the workers to essential industries.

The Achilles heel of the policies of the government will be, I believe, the lack of incentive to both labor and management. Many things can be done during wartime, when the people recognize a need of winning the war, that cannot be carried on year after year during peacetime.

If the British worker, after having labored a long day in the mines, on the railroad trains, or in the factories and offices, is to be denied the relaxation that came from attending a moving-picture show, joining his fellow workers at the local pub for a glass of beer, or having a few cigarettes, I believe that it will be difficult to gain and sustain the productivity without which there is little chance for Britain to meet the shortages and expand exports which are essential to economic recovery.

Yet with it all the British are stout allies and they deserve our understanding and constructive assistance. Though we may violently disagree with the economic policies being followed today, I have no doubt in my own mind that those in charge of the British labor government are as determined to defend human freedom and parliamentary government as is any person within the sound of my voice.

Western Europe is faced with as grave a threat as she has confronted in modern times. Whether human freedom and parliamentary institutions survive will largely depend upon the course of events during the months immediately ahead.

I firmly believe that it is in the best interests of world peace and the security of our own Nation to have the rehabilitation of their war-torn economy. This should take place under governments that will permit the people to exercise a free choice in determining who their officials will be and what policies will be followed. If western Europe goes behind the iron curtain that free choice will be denied them and the whole productive potential of that section of the world will fall into the Russian orbit and be at the disposal of those who run the Kremlin.

If such a thing should happen the repercussions upon our own domestic economy would be so terrific that there should be no doubt in anyone's mind as to the necessity and desirability of extending every reasonable assistance now that would prevent a general economic collapse in western Europe. It is generally recognized now that peace is indivisible and when war or the threat of war develops any place it must be of concern to every law-abiding and peace-loving nation on the face of the earth.

The realization is also growing, I believe, that human freedom is also indivisible. When our Nation was younger than it is today, and prior to the development of airplanes or nuclear science, Abraham Lincoln clearly saw the picture. He said: "Fellow citizens, we cannot escape history * * * the fiery trial through which we pass will light us down in honor or dishonor to the latest generation. * * * We, even we here, have the power and bear the responsibility * * * in giving freedom to the slave we assure freedom to the free. * * * We shall nobly save or we shall meanly lose this last best hope of earth."

Interim Aid to Europe

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, December 19, 1947

Mr. WOLVERTON. Mr. Speaker, today we complete congressional action with respect to interim aid to Europe. The bill that appropriates over half a billion dollars for relief of France, Italy, Austria, and China is unmistakable evidence that the heart of America is sympathetic toward those who are hungry and cold. I am glad to give my support to the measures designed to make it effective.

However, the time is fast approaching, and, in the opinion of many, is now here, when our Nation, no matter how charitably inclined it may be, must give serious and careful consideration to the extent of our resources and how much longer we can afford to continue to give away our resources. After all, there is a limit even to Uncle Sam's resources and ability to give away to others. There are some who do not seem to believe this, nor are they willing to consider even the possibility of there being a limit. Furthermore, there is a limit to the amount and the period of time that American taxpayers should be taxed to carry on foreign governments.

We must not overlook the necessity of maintaining the strength and stability of our own American economy. If America fails, then the whole world will collapse. We owe it to ourselves and the rest of the world to keep America strong. To accomplish this we must use all our resources with due regard to maintaining the strength of our own American economy, as well as rehabilitating the economy of other nations. World peace needs a strong America. A weak America endangers world peace. Let us keep America strong.

Rent Control

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, December 19, 1947

Mr. KEATING. Mr. Speaker, communications which I have received tend to indicate that abuses exist, either as a result of the provisions of the Housing and Rent Act of 1947, Public Law 129 of the Eightieth Congress, or interpretations which have been accorded its provisions by those charged with the responsibility of administration.

These facts, I feel, should be brought to the attention of the Committee on Banking and Currency for their consideration when they face the problem of the extension of rent control, now expiring by law on March 31, 1948.

In Section 202 of the law as enacted, additional housing accommodations, which were created by conversion of existing structures after February 1, 1947, were exempted from the operation of the rent-control law. In other words, if a man made a two-family house out of a single dwelling after this date, he could charge for the resulting housing whatever the traffic would bear, and was not subject to any control whatever in fixing his rental.

One constituent has written me about what was done in the apartment house where she lives. In the first place, she says, the landlord, upon recent acquisition of the property, applied to raise all of the rents—in her case, from $47 to $85 per month. He was granted permission only to make small raises of from $2 to $8 per month.

Thereupon, in April, the tenants received notice that the semidetached dwelling with 8 housing units was being converted into one with 24 apartments of 3 rooms each, under a contention that this would give additional housing which is so badly needed.

When one of the tenants went to the rent-control office to inquire about the matter, my constituent relates, he was told that the owner had represented that the new housing accommodations would have 90 rooms, whereas the fact was that there would be 62 rooms, including small attic rooms. When the head of the office was asked why an investigation and inspection of some kind was not made in order to verify the statement of the landlord the reply was: "Wait until it is finished and we will attend to it." With irony, my constituent adds, "Some efficiency!"

She then goes on to point out that four of the completed apartments have been rented to well-to-do widows and a fifth to a spinster, all of whom are able to pay whatever rent the landlord sees fit to charge. She points out that 38 tenants have been evicted, among whom are 14 ex-servicemen.

She states that the number of people housed in the new accommodations after they are completed will not exceed and may be less than the number who were accommodated before this conversion took place.

Of course the motive actuating Congress at the last session in providing an exemption from control for newly converted living quarters was to make greater housing accommodations available and to encourage construction and conversion of old buildings for that purpose. Apparently, however, it has been possible, perhaps because of administrative laxity, for this objective to be thwarted and for landlords to take advantage of this provision of the law in order to obtain unconscionable increases in rentals without any corresponding benefits to the general housing situation by providing greater accommodations.

It is suggested, therefore, that, either by amendment of section 202 (c) (3), or otherwise, if this exemption of newly converted dwellings is to be continued, some limitation should be imposed to require that substantially more people be housed by the reconversion or other appropriate steps be taken to put an end to such abuses as have here been pointed out.

My attention has been called to another inequity in the provisions of the law or its administration. Under section 204 (b), if a landlord and tenant voluntarily entered into a written lease expiring on or after December 31, 1948, they could agree to an increase in existing rental of 15 percent or less, which must be recognized by the Housing Expediter. Once this arrangement has been entered into, the premises covered by it are no longer subject to control at any time.

Thus, if rent control should be extended, we would be presented with this anomalous situation. Apartment A would be occupied by a tenant who had agreed to—let us say—a 15 percent increase in his rent and apartment B by a tenant who had been unwilling to enter into such an agreement. After December 31, 1948, unless the provisions of this law, or at least its administrative interpretation is changed, Apartment A would be completely free from control and the landlord permitted to charge any amount, while right beside it duplicate apartment B would still be subject to a controlled rent.

This is an obvious injustice which it seems to me should also be the subject of careful study by the Committee on Banking and Currency when they start hearings in the next session regarding possible changes in the rent-control law.

Plight of Small Businessman

EXTENSION OF REMARKS

OF

HON. ELLSWORTH B. FOOTE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, December 19, 1947

Mr. FOOTE. Mr. Speaker, the high cost of living is the burning issue of the day. Shortage of production is primarily the cause of it. Today we have scarcity, not much competition, not enough production, laws, rules, regulations, and bureaus which cause a general stranglehold on small business. We have uncertainty, high taxes, frequent warnings of probable scarcity of items to come, which in turn make scarcity of those items and lend color to the return of the old OPA, and give a general lack of confidence in the future. Big business can get along but even it is continually raising prices. It is truly a vicious cycle. The common man and the small businessman has not much chance to improve. Everyone who analyzes the situation knows that we do not need more controls. We do not need freezes. Price fixing does not increase production. When prices are fixed legitimate producers run into difficulties making ends meet and naturally take no risk of expansion. Hence, the products become more and more scarce and find their way by resale into black markets. Economy in government will help, but that alone is not enough.

We do not need to fall back on the Government to prime the pump forever. We must straighten this mess out by standing on our own feet. Eminent economists and leaders of labor and industry say we need more production. It is true that increased production is inflationary until such time as it reaches the point of meeting the demand. But we should think of creating production in terms of also creating competition, which, as surely as the sun rises, will lower present price levels. Small business can produce, if given a chance, as well as big business. Small business was absorbed by big business during the war, as statistics so prove. The Small Business Committee of the House has done much to aid, assist, and inspire the small businessman. However, it is true today that any small corporation or business group desiring to expand or to engage in new business is hesitant to do so because of the uncertainty of the future. With an opportunity for all legitimate enterprises to expand and produce, it would almost surely follow that every legitimate company would advance and produce more in order to meet competition, and thus bring prices of commodities down.

Character is the basis of credit. It has been demonstrated that in the long run a businessman of good character and integrity is a better financial risk than one who may have more financial backing but lacks those qualifications. If it is proven that the small corporation has men in control of it who are of high character and business integrity, and the project a legitimate one, then they should be able to obtain funds to finance the same without the cold legal restrictions now placed upon them by the Securities Exchange Act and other Federal regulations.

It has been recommended by Secretary of Commerce Harriman and leaders of both parties that the temporary suspension of the antitrust law would be beneficial and would permit industry in this emergency to enter into voluntary agreements for joint action. Governor Bradford, of the great Commonwealth of Massachusetts, in appearing before a congressional committee the other day, stated that such action would help very much to solve the fuel shortage that now exists in the New England area, and which it is indicated may grow more severe as the winter progresses. By so doing, it would authorize oil distributors to pool their information and supplies, just as they did during the war without any violation of the antitrust law. By the same token, a suspension of the rigid requirements of the Securities Exchange Act would be beneficial and permit risk capital and the small corporation controlled by worthy individuals to produce and compete, thereby bringing down prices of commodities. By this suggested suspension of the Securities Act so that the small, legitimate business can get new capital for plant and labor through a stock issue under a simplified manner, I do not mean that it should be done without supervision. A truly bipartisan board might be created in each State, which would pass on all applications for stock issues on the sole ground of whether or not the petitioners are men of good,

moral character and have legitimate aims. The banks are loaded with money of depositors for investment purposes if this situation could be arranged. In addition thereto, we should change the tax laws so small business as well as big business would have an incentive to expand. If these changes could be brought about, they would create more production, more competition, lower prices, confidence in business and in our present and future economy. I expect to introduce a bill at the opening of the second session of the Eightieth Congress which will carry out these proposals.

Inflation and High Cost of Living

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, December 19, 1947

Mr. WOLVERTON. Mr. Speaker, there is no question of a domestic character that calls more strongly for solution than the present high and inflated cost of living.

I gave my support to the legislation proposed by the House Committee on Banking and Currency. I voted for the bill reported by that committee when it was before the House. I did so, however, not because I believed it to be a cure-all for our present difficulties, but, because it was all that the House had before it at that time. I thought at that time, and, continue to think, that the legislation should have been much more comprehensive.

Today, we have before us the Senate bill dealing with the same subject. It likewise falls far short of what is necessary to be done. In my opinion it would not be even as effectual as the House bill would have been. This is very unfortunate. The most that can be said for it is that it is a step toward solution. Even that is doubted by some. With its passage, however, Congress may be said to have at least started to do something to solve the problem.

When Congress convenes on January 6, next, immediate consideration should, and must, be given to finding a remedy that will deal with the problem in a broad and comprehensive way. To delay action will add to the difficulty of solution.

Joel Chandler Harris

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Friday, December 19, 1947

Mr. DAVIS of Georgia. Mr. Speaker, 1948 will mark the one hundredth anniversary of an outstanding American, a gentle and beloved character, who was one of the gifted writers of all times, whose literary creations will live and be popular as long as there are children in the world. I refer to Joel Chandler Harris, creator of Uncle Remus and his characters, Br'er Rabbit, Br'er Fox, Br'er B'ar, and all the other Uncle Remus characters which have delighted not only the children of the world, but men and women of all ages in every country. So popular are the Uncle Remus characters and stories, that they have been re-created in motion pictures, and comic strips based on Uncle Remus stories are carried daily in many newspapers which depict the humorous sayings and antics of the Uncle Remus characters.

Joel Chandler Harris was born and lived in Georgia. However, his fame and popularity, and his lovable, gentle character, have made him a citizen beloved not only in the State of Georgia, not only in the United States, but throughout the world. His stories have been translated in nearly every language of the world, and great men and women from practically every country have made pilgrimages to the Wrens Nest in Atlanta, to pay homage to him while he lived, and to his memory since he has passed away.

It will be a most fitting recognition of the genius of this great American to issue an Uncle Remus Memorial Stamp in 1948. In the Atlanta Journal of December 14, 1947, there appeared an editorial urging that such action be taken. I join wholeheartedly in this proposal, and pursuant to leave previously granted, I insert the Atlanta Journal editorial herewith:

UNCLE REMUS STAMPS

What could be more fitting than an Uncle Remus postage stamp next year in observance of the one hundredth anniversary of the birth of the great Georgia writer? We think there should be a complete series of them adorning the various denominations. Not only should there be a portrait of the beloved author, but there should also be shown Uncle Remus himself and the Little Boy and all the critters, to say nothing of Mis' Meaders an' the Gals.

They are part of the lore of all the world now. Br'er Rabbit's adventures with Br'er Fox, Br'er B'ar and the Tar Baby are known to the Russians, the Germans, and the French almost as well as to us Americans. A series of stamps depicting Joel Chandler Harris and the creatures into whom his genius breathed the breath of life would be something of a force for international understanding and amity.

Sound Money Is First Requisite for World Peace and Economic Recovery

EXTENSION OF REMARKS
OF
HON. JOHN SANBORN
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Friday, December 19, 1947

Mr. SANBORN. Mr. Speaker, I ask unanimous consent to extend my remarks by having printed in the Appendix of the RECORD an article from the Spokane Chronicle of Spokane, Wash., and a letter from John McBride:

[From the Spokane (Wash.) Chronicle of December 10, 1947]

BOOK INTERESTING TO MINE LEADERS

Mining industry leaders will be interested in a 250-page book, Money Makes the Mare Go, written by John McBride, clerk of the House Committee on Coinage, Weights, and Measures, and published by the United States Government Printing Office. The treatise now is being distributed.

An outspoken advocate for return to bimetallism, McBride pulls no punches in criticizing the debauchers of currency. A rapid perusal of his book shows he has no love for managed currency and the men who argue for a planned economy based on paper money.

"Karl Marx said, and Lenin demonstrated, that the surest way to overturn the social order is to debauch the currency, because this action enlists all economic laws on the side of destruction and does it in such a way that not one man in a million will see," he asserts. "The truth of this has been proven right here, where, for 13 years, the debauching of our currency has been carried on to such an extent that our dollar and all fixed dollar value securities have lost 63 percent of their value.

"The technique of debauching the currency is quite simple. It has been resorted to by dictators from time immemorial. When a government wishes to embark on a spending spree it first must deprive the people of the right of redemption of its currency at face value, on demand."

His solution, whether his readers will agree or not, is right down the mining men's alley.

"The remedy lies in restoring to the people the right of redemption of currency at face value, on demand," he argues. "And since there is not enough gold to supply an adequate monetary reserve, silver must be joined with gold in return to bimetallism, the legally established monetary policy of the United States."

Hon. JOHN SANBORN,
House Office Building,
Washington, D. C.

DEAR MR. SANBORN: The present vicious cycle of rising prices with the resultant demand for higher wages was precipitated when Public Law 84 (1945) permitted monetary reserves to be reduced from 40 percent to 25 percent or less. This depreciated the dollar 37½ percent and caused commodity prices to advance 60 percent.

Theoretically, this situation could be corrected by restoring monetary reserves to 40 percent and this apparently was the objective of House Joint Resolution 273, which was introduced on December 10, 1947. But once the dollar has been unhinged from value it becomes much like the fabled broken egg in the nursery rhyme and "all the king's horses and all the king's men couldn't put Humpty Dumpty together again." To arbitrarily restore reserves to 40 percent would be fine for those who have large bank deposits because it would increase the value of such deposits 60 percent, but it would be disastrous for those who have assumed mortgages or other indebtedness during the past 2 years, for it would increase these debts 60 percent. For example, veterans who have bought homes during this 2-year period and assumed mortgages of $5,000 or $10,000 would, in effect, have their $5,000 mortgages increased to $8,000 and $10,000 mortgages increased to $16,000.

To attempt to stop inflation or bring economic recovery to Europe is a waste of effort until a sound monetary policy is adopted. You cannot mess around with stopgap legislation; you must decide on the value at which the dollar is to be fixed, and then permanently peg it there. This is a relatively simple matter, but great care must be exercised in fixing this value. To attempt to restore the dollar to its 1933 value, or even its 1944 value, would cause dangerous repercussions to our economy. Based on the present purchasing power of the dollar, the price of gold should be $56 per ounce, and since there is not enough gold in the world to supply an adequate, redeemable monetary reserve, silver will have to be joined with gold at a

proper ratio (14 to 1) which would necessitate the pegging of silver at $4 per ounce. Probably the most equitable plan would be to peg the price of gold at $50 per ounce and silver at $3.50 per ounce. This would lower commodity prices 11 percent and increase the purchasing power of the dollar 18½ percent. However, before any decision is made, there should be full and complete hearings before appropriate committees of the Congress; but, in the interval, all gold and silver owned by the Treasury should be frozen. To permit any gold or silver to be sold at present monetized prices constitutes a betrayal of the American people.

It may surprise many to know that both the Republican and Democratic Parties carried the following planks in their 1892 platforms; and that the following legislation is still on our statute books and is a part of the United States Code Annotated:

"SOUND-MONEY PLANK IN REPUBLICAN PLATFORM

"The American people, from tradition and interest, favor bimetallism, and the Republican Party demands the use of both gold and silver as standard money, with restrictions and under such provisions to be determined by legislation as will secure maintenance of the parity of values of the two metals, so that the purchasing and the debt-paying power of the dollar, whether of silver, gold, or paper, shall be at all times equal.

"The interest of the producers of the country, its farmers and its workingmen, demand that every dollar, paper or coin, issued by the Government shall be as good as any other.

"We commend the wise and patriotic steps already taken by our Government to secure an international conference to adopt such measures as will insure a parity of value between gold and silver for use as money throughout the world.

"SOUND-MONEY PLANK IN DEMOCRATIC PLATFORM

"We hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver without discriminating against either metal or charge for mintage, but the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value, or be adjusted through international agreement, or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals, and the equal power of every dollar at all times in the market and in payment of debt; and we demand that all paper currency shall be kept at par with and redeemable in such coin.

"We insist upon this policy as especially necessary for the protection of the farmers and the laboring classes, the first and most defenseless victims of unstable money and a fluctuating currency.

"POLICY OF THE UNITED STATES AS TO BIMETALLISM

"The Congress carried out these party pledges by enacting, on November 1, 1893, the following legislation, which is still in effect and a part of the United States Code Annotated (ch. 8, 28 Stat. 4):

"'SEC. 311. Policy of the United States as to bimetallism. It is hereby declared to be the policy of the United States to continue the use of both gold and silver as standard money, and to coin both gold and silver into money of equal intrinsic and exchange value, such equality to be secured through international agreement, or by such safeguards of legislation as will insure the maintenance of the parity in value of the coins of the two metals, and the equal power of every dollar at all times in the markets and in the payment of debts. And it is hereby further declared that the efforts of the Government should be steadily directed to the establishment of such a safe system of bimetallism as will maintain at all times the equal power of every dollar coined or issued by the United States, in the markets and in the payment of debts.'"

England's refusal to go along with us is the only reason that bimetallism was not put in operation at that time. This tragic decision is responsible for the depressions and wars that have afflicted the world since that time. Have we had enough?

Sincerely yours,

JOHN MCBRIDE.

WASHINGTON, D. C.

Poland in the Postwar World

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, December 19, 1947

Mr. SADOWSKI. Mr. Speaker, I have just read the following address by Jozef Winiewicz, Ambassador of Poland, delivered on December 12, 1947, at the City Club of Portland, Oreg. Here are expressed Polish hopes and Polish fears. I believe that it should be read by every Member of Congress:

Thousands of miles separate Poland from the Northwest territories of the United States. Your history and the history of my country followed entirely different paths. It is not strange, therefore, as Ambassador of Poland, I come here with the best intention to most faithfully present to you in my talk the joys and cares of my nation. I promise to give you a true picture of Poland, and I shall endeavor to fulfill my task in such a manner, that after my departure from Oregon there will be more friendship for my country than there was before my arrival.

I am in Oregon for the first time. I cannot arouse your sympathy by belonging to that group of persons, who were able to climb to the beautiful summit of Mount Hood, which towers above your magnificently developing city. I cannot boast of owning a home in Council Crest. I have, however, read in a book, that "Oregon is the land of man-sized men and happy homes.

"It is the absolute truth that no one ever heard an Oregonian speak evil of another Oregonian."

It is my great hope that this characterization of the citizens of Oregon may also embrace Poland and that it will be possible for me to so explain the problems of my country that no one here will ever speak evil of the Polish people.

Before the war, Poland was a country with a population of 35,000,000 within an area of 150,000 square miles. Since the war Poland has only 120,000 square miles and 24,000,000 inhabitants, the decrease in population being due to the fact that during almost 6 years of occupation, the Germans murdered 6,000,000 persons. I repeat—6,000,000 persons, the majority of whom died in concentration camps, by poisoning in gas chambers. The gas for the murder of millions of Polish people was furnished by the great German chemical trust, the IG Farbenindustrie, the directors of which are now being tried in Nuremberg, as war criminals. In accordance with the Yalta and Potsdam decisions the boundaries of Poland have been changed. Sixty-nine thousand square miles of the eastern territory of Poland, inhabited before the war by national minorities of Ukranians and White Russians were ceded to the Soviet Union. In the west, however, Poland came into possession of 39,000 square miles of territory, which before the war belonged to Germany.

The Potsdam agreement mentions that Poland has received these territories as compensation for those ceded in the east. However, every Pole will tell you, that the areas obtained in Potsdam are regarded by Poles as regained western territories. In the past they were part of the Polish state, which happens to exist already for a thousand years. A few hundred years ago Poland had the same boundary on the Oder and the Niesse Rivers, as she has at present. I may add here, that not only the Polish Government but every man of the street in Poland, regards this boundary decision as an accomplished fact. We cannot agree to any changes of our present western boundaries. The territory obtained in the west has been settled by Polish citizens, there are no more Germans and its econmic life is pulsating fully, motivated by Polish effort.

Poland, the first country to oppose German Nazi aggression, Poland, in whose defense other countries belonging to the United Nations took up arms, is today a smaller country than before the war. However, I wish to assure you that, despite this, none of us Poles considers that our historical common responsibility toward the questions of peace has in any way diminished. The Polish nation and the Polish Government are aware that, together with other nations, they are responsible for the future of the world.

At the end of hostilities in 1945, the first task which faced Poland within the sphere of foreign politics, of which I wish first to speak, was the normalization of diplomatic relations with other countries. Poland joined the United Nations Organization and from that time on the existence and meaning of the United Nations Charter for the cause of peace has become a part of the basic program of the foreign policy of the Polish Government. We also belong to nearly all international agencies which form an organizationally healthy complement to the U. N. O. Permit me to add that Poland is a member of many such organizations in which the Soviet Union takes no part—International Bank, FAO, and ILO, for instance.

Another principle followed by the Polish Government in the field of foreign policy is the maintenance of especially good and friendly relations with the great powers, whose contribution toward the defeat of the common enemy in the last war was the greatest. We desire cooperation and friendship with the United States and my government has so declared many times. The circumstance that we often do not share all political actions or opinions of the United States does not lessen this fact. We regard this as a difference of views among friends. Even among friends there can be disagreements which in no way alter the principle on which friendship is based. Poland, for instance, does not share American policy in respect to the so-called Marshall plan. However, this does not mean that Poland is against the United States. The Marshall plan is at present the subject of discussion of your Congress and is now a question of your internal legislation. As an ambassador of a foreign state, I do not wish, in view of this fact, to discuss this question. I therefore stop at my basic statement: We desire close and friendly relations with your country. These same remarks relate also to Great Britain and to France. With both these countries we have definite trade agreements. In addition, Poland a few months ago concluded a cultural treaty with France, thanks to which there exists between our two countries an exchange of scientists, scholars, artists, and thoughts. We do not have a similar treaty with Great Britain, nevertheless English art is widely propagated in Poland. Our theaters lately arranged a great Shakespearean competition. We were also visited by an English ballet, British musicians, and other artists.

In the Marshall plan 16 western and north European states are taking part. With 14 of these Poland has normal diplomatic relations, as well as duly concluded trade agreements and the exchange of trade between us continues in an uninterrupted stream. We desire to maintain these relations.

A great problem of Polish foreign policy after the last war was the implementing of best possible relations with the Soviet Union. The Soviet Union is our largest and closest neighbor. Our boundary with the Soviet Union is the longest sector of the Polish land frontier. For centuries a constant feud existed between our two neighboring countries. We therefore consider, that the greatest achievement of Polish policy in the first years following the second World War, was the establishment of friendly Polish-Soviet relations. We believe it to be an important foundation for European peace. If such good relations did not exist, uneasiness and tension would prevail as was the case after the first World War, when we had a bloody war against the Soviets. With your kind permission I shall cite a historical example which I trust you will fully understand. Mexico was for some time at war with the United States. There were serious territorial disputes between Mexico and your country. One could not consider a continuation of a state of enmity between the United States and Mexico as a normal situation. Just as the other American countries are satisfied with and proud of their good relations with the United States, so Poland believes that it serves the cause of world peace—to have her relations with the Soviet Union based on a good-neighbor policy.

Germany has been and is our western neighbor. The German problem is for us of particular importance and I desire to devote one or two arguments to it—especially since the German problem is being discussed at present in London by the Foreign Ministers Council.

Our interest arises from two sources: Firstly, during the last few centuries the growth of Prussian power, and later of the power of a united Germany, continuously menaced our independence. It threatened not only the independence of the Polish state but also menaced the existence of Poles as a separate nation. Every aggression and invasion coincided with the attempt of Germany to germanize the masses of the Polish people, and to destroy those who did not submit to germanization. Secondly, Germany in the last war caused such great destruction in Poland that only a peace enduring for several generations, and not only for 20 years, as was the peace following 1918, can allow us to make up our losses.

During the last century Germany has provoked several wars in Europe, all of which were dictated by the imperialistic aims of territorial, political, and economic expansion of power. In order to cause these five wars the leaders ruling Germany at the given time always had the absolute support of wide masses of the German population. I do not wish here to enter deeper into the ideological premises of this statement. May I only mention in short that the entire philosophy and all political literature of Germany during these last 100 years was built upon the conviction of the natural superiority of the German nation over all other nations. It is equally a historical truth that the standpoint of German thinkers as well as politicians, always based the method of ruling Germany not only on the principle of Herrenvolk but also on the glorification of the powerful and autocratic authority of a totalitarian state.

I would like to support my statements by several quotations from American literature touching this subject, not because I lack any arguments of my own. It is, however, asserted in many circles that the Poles are not objective judges of German problems because they approach them too emotionally—with hatred. Let me assure you that, despite all the great suffering caused by Germany, the Poles are able to think of the solution of the German problem objectively and without emotional stress.

During the last war in 1943, the United States Government Printing Office in Washington issued an official publication on National Socialism. This publication gives the following characteristic of German aims: "the glorification of the (Volk) nation, the adulation of the strong leader, and the tendency to concentrate power in an autocratic totalitarian state led naturally to the imperialistic foreign policy (of Germany) which was vigorously pursued after the establishment of the Empire."

James W. Gerard, the former United States Ambassador in Berlin, who served there during the first World War, appraised the German people as follows: "All Germans as a matter of fact through pride of conquest and great industrial success, had to come to believe themselves to be supermen, delegated by Heaven to win the world. Treitschke and Nietsche were simply affected in their writings by the universal poison of overweening vanity."

I ask myself, however, what is being done today in order to do away with the spirit of the past. The information we Poles have from Germany indicates, that a new underground movement is working there, which is based ideologically on the same principles, which led Germany to aggressive wars in the past. Articles—in the French press—confirm these observations. A most remarkable observation to the same effect has been made by a most reliable American newspaper correspondent and eminent author, William Shirer, when he stated: "The German people blamed the Nazis not for starting this incredibly destrutive war, but merely for having lost it. As a German woman, kept saying: 'If only Hitler had let the generals run the war; if only we hadn't attacked Russia, or, if after we had, you Americans had not come in to help them, we might have won and been spared this.' The German people, I fear, have not—by a hell of a long way—learned the lessons of this terrible war. They have no sense of guilt and are sorry only that they were beaten and must now suffer the consequences. They are sorry only for themselves; not at all for those they murdered and tortured and tried to wipe off this earth."

We in Poland know this and we are concerned about our own peace; we know this and we are alarmed for fear that the rebirth of the aggressive German spirit will lead to a new world war. For we must agree with the opinion of one of the leading American political writers, Walter Lippmann, who once asserted "that the behavior of nations over a long period of time is the most reliable, though not the only, index of their national interests. * * * We can most nearly judge what a nation will probably want by seeing what over a fairly long period of time it has wanted; we can most nearly predict what it will do by knowing what it has usually done."

These pertinent remarks should warn the world to observe the greatest caution with relation to a nation which started five wars during the past 100 years. One war in 1864 against peaceful Denmark, with the purpose of appropriating for itself Schleswig and Holstein; another war in 1666 to humiliate and break the power of Austria, which stood in the way of Prussia, in her attempts to form a second German empire under Prussian leadership; the third war in 1870, in order to enlarge the area of Germany in the west by robbing France of the rich provinces of Alsace and Lorraine; then the war of 1914, entered into with the aim of securing political and economic supremacy over all of Europe, and finally the war of 1939, whose aim was to create out of Hitlerite Germany a great power, capable of dictating, together with imperialistic Japan, terms to the entire world.

The lesson of the past indicates that Germany is not dangerous so long as there exists against her a united and closed front of all peace-loving nations. Thanks to the close coalition of the United Nations, Germany was defeated in the last war. The first principle then, which should be observed in order that the German aggression cannot be repeated, is unity of action of the United Nations, and especially close cooperation of the great powers, whose enormous war effort was the most essential foundation of the victory in 1945. As long as harmonious friendly cooperation of the United States, the Soviet Union, and Great Britain exists no German politician and no German can dream of the rebirth of German imperialism. One of the principles of Bismarck, creator of German power in the nineteenth century, was never to permit a simultaneous political action by Germany against both its eastern and western neighbors. For he knew very well that with the east and the west politically united the imperialistic aims of Germany could not be realized. This principle was forgotten in 1914 by William II. It was also disregarded by Hitler—and both lost their ways.

It is for these reasons that Poland looks with some anxiety at the present state of relations between the great powers. In their unity we see the guaranty of peace, in their unity we also see our own safety. Let us all trust that the unity of the great powers and the unity of the United Nations, which endured through the last war with such fruitful results, will be preserved. No one in this world desires war. The only sinister forces who seem to be plotting for a new war are certain German circles, who are impelled by the hope that German imperialism could again make profit out of the disunity of the great alliance of the last war.

Obviously, someone may realistically answer me at this point, that Germany is at present defeated, destroyed, and weakened. I reply with the greatest emphasis that the same situation existed after 1918. The organization of the German State fell apart. The German Empire gave place to the Weimar Republic. Inflation in Germany undermined the foundations of her economic life. And despite this, in 1939 Germany again undertook another adventure, which—if it were not for the unity of the efforts of the great powers—would have given Germany sway over the entire world. Already in 1926 there were 8,000,000 people in Germany, belonging to diverse paramilitary organizations, preparing themselves for military revenge. Already in 1928 Germany had an economic boom and German exports had reached the enormous figure of 15,000,000,000 marks, which figure was never attained afterwards. At that time Germany, instead of exporting, began to lay aside supplies for the coming war. In 1918, as today, no one thought that Germany would have the power to fight another war. And everyone knows what happened some 20 years later.

The restoration of German imperialism after 1918 became possible due to two circumstances. After 1918 the political unity of those great powers which brought about the November defeat of Germany ceased to exist. Great Britain began a diplomatic struggle (maintaining every outward appearance of good relations) with its wartime ally, but also its competitor on the continent—France. The United States withdrew from European interests. The Soviet Union was isolated. Germany started her intrigues among the disunited members of the former anti-German coalition. The Germans today are also speculating on the disagreements among their former enemies. Nothing would give them more pleasure, than an open break among the great powers,

a rift among the United Nations. Nothing would suit Germany better, than a separate peace concluded between the western German zones and the western Allies, which some impatient people are advocating. I dare to call them impatient, because only patience and mutual understanding can result in a right solution of the German problem, a most complicated problem the solution of which needs time.

The second circumstance which after 1918 favored the restoration of German aggressiveness and which by comparison could favor the restoration of German aggression at the present moment, is strictly economic. After 1918 assistance began to be given the economic life of Germany by numerous credits from abroad because of the principle that the Germans also must live. This rendered possible the rapid rebuilding of German industry, control of inflation difficulties, which I spoke of above and the renewed establishment of Germany as an economically powerful central European state.

Germany is not a country rich in raw materials. The only raw material Germany has in abundance is coal. Iron ore must be imported, there is a lack of colored metals. Germany also is not and was not in 1939 an agriculturally self-sufficient country, the best proof of which were the large grain and meat imports from the Western Hemisphere, going yearly to the great German ports of Hamburg and Bremen, as well as the great food imports from Poland and other eastern European countries. Nevertheless Germany was able to expand into a great economic power. In 1871, as a result of the victory, Germany deprived France of its entire supply of gold and all its wealth by imposing such high reparations that no one expected that France would be able to survive. On the basis of this wealth taken from France, German industry was built. During the 25 years preceding the first world war, the production of German steel rose by 1,335 percent. Within the same time steel production in the United States increased only ninefold, and in England by 154 percent.

After 1918, despite its defeat, the development of Germany was not halted. Poor Germany received credits from the United States and was successful in having her industry before 1939 become the most modern industry in the whole of Europe, competitively threatening the exports of the very United States, from where all her credits came. Prewar Germany, occupying 9 percent of the area of Europe (with the exclusion of the Soviet Union) having 20 percent of Europe's population and 9 percent of iron ore production, was already producing the following percentage of Europe's entire production: 49 percent of pig iron; 48 percent of steel; 50 percent of automobiles and trucks; 64 percent of machinery; 35 percent of electric energy; 54 percent of azotate fertilizers.

Germany, at the same time, gained economic preponderance over other European countries, especially those of eastern and southeastern Europe. Such countries as Hungary, Rumania, Bulgaria, and Greece, were before 1939 economically almost entirely dependent on Germany. Economic supremacy over these countries made it possible for Germany to obtain political supremacy. Dependence of other European countries on Germany was not so great but still considerable. Belgium and the Netherlands were economically dependent on German transit, Poland had to purchase machinery from Germany. These facts must not repeat themselves. Therefore Poland and many other nations look with such anxiety upon certain moves of the western powers, who are again strengthening Germany with economic aid and again endeavor, as after 1918, too quickly to reconstruct German industry. Our prescription is different.

There should be no haste in the rebuilding of German industry. Germany must not have priority in economic reconstruction before other nations, before those who were the victims of German aggression. And in our opinion, haste in rebuilding German industry is not at all necessary to reestablish European economy.

Accept, please, my critical remarks on the policy of the western allies in Germany as an objective criticism, dictated solely by a true interest in peace and the interests of my country. I would wish that this criticism be accepted in the same sincere and friendly spirit, as moved me in its utterance. The United States and even Great Britain do not have the long experience which Poles and other Europeans have gone through with Germany. It would be well, if a part of our experience, an experience which should not be slighted, would be taken under advisement when your plans in relation to Germany are being worked out. And the Polish fears are not the only fears. Archbishop of York, Dr. Garbett, a prominent leader of the Church of England lately visited Czechoslovakia. Upon his return he spoke of the attitude of the Czechoslovak people concerning the German problem as follows: "One of the things that struck me most is the great fear of a German revival. All of us in Great Britain feel, I think, that for a very large number of years we have nothing to fear from Germany. In Czechoslovakia I found myself in a totally different atmosphere. It is not hatred of the German people, but fear." I could not find a better expression also for the attitude of the Polish nation.

Another reservation which I wish to make is the remark that neither the Polish people nor the Polish Government want Germany to starve. We had the opportunity of formulating our standpoint in this matter at the January London Conference of Deputy Ministers of Foreign Affairs of the Great Powers, where the Polish representative declared, that it is the aim of the Polish Government to cooperate economically in the future with Germany. In this year, for instance, we concluded trade agreements with western occupation zones of Germany. We intend to export potatoes there. The German nation, if it is willing to have good relations with Poland, will not have to starve. Germany was our natural market for agricultural products. As soon as Poland can rebuild its agricultural production, damaged by the war, she shall as formerly export to Germany. I do not say that Germany must be ruined economically, but I stress that Germany should not be reconstructed sooner than other countries of Europe, she should not be given privileges in the economic reconstruction of Europe. Because these privileges are deserved first of all by those nations who were the victims of German aggression.

The Germans abuse the assistance which they now receive from the west. In the United States and in Great Britain people are worried that the "poor Germans" are starving. In the meanwhile, on the German black market everything which one desires is obtainable. Lately the correspondent of the American weekly, World Report, stated that "the German farmer is the worst waster of food in Germany * * * much food hoarded for black markets spoils before it reaches the consumer." The already quoted writer, Walter Lippmann, who shortly returned from a trip around Germany, stated that a great part of the food Germany receives from Great Britain is lost on the black market. Polish observers assert that every dollar which at this time is spent by the occupation authorities for feeding Germany is a total loss as long as the German black market is not done away with, as there seems to be enough food there to feed western Germany without greater aid from outside. There is further the problem how to get the Germans to work hard. All Europe is working hard on a much more meager diet than the Germans. However, we read in the papers only about the discontent of German workers with their food. Who ever worries whether the Polish worker has enough bread?

Poland received after the war a great deal of aid, mostly through UNRRA, and the Poles knew that 72 percent of the whole contribution to UNRRA came from the United States of America, from the American taxpayer. We have endeavored to utilize this aid in the best way, so as to restore our war damages as quickly as possible. We wanted simply to get on our feet economically at the earliest moment, as we fully realize that our economic power is the best guaranty of our independence. You can no doubt realize how a country whose material losses exceeded $50,000,000,000, and who lost 6,000,000 of its citizens, appeared at the close of the war. You may imagine what psychological wounds Poland suffered through the terrible experience of this war if you keep in mind that from one crematorium only, near the building occupied by the Gestapo in Warsaw, 20 tons of human ashes were taken, proving that in this place almost 40,000 persons were murdered. The energy and vitality of our nation, however, enabled us to quickly overcome our difficulties.

The most important problem which Poland had to overcome in the first few months of 1945 was to rebuild our State administration, which during the war years was entirely destroyed by the Germans, who imposed on us their own German administration. Then we approached the problem of building the political structure of our State. The constitutional structure of Poland is built on the principles of the old democratic constitution of 1921. It was on these principles that elections were held in Poland in January of this year, in which the one-chambered Polish parliament was elected, with seven political parties. Our parliament consisting of various parties, as in France, is different from your Congress and from the British Parliament, which are dominated by two parties only. Four of our parties have created a coalition government, which is at present in power and which I have the honor to represent. The first act of the new parliament was to declare an amnesty, which put an end to the underground movement aiming at overthrowing the Government by force. The second important move of the new parliament was to enact the declaration of citizen liberties. They include: Equality before the law, regardless of nationality, race, creed, sex, origin, social status and education; liberty of person, life and property; freedom of conscience and of worship; freedom of scientific research; freedom of press, speech, association, assembly, public meetings, and demonstrations; the right of instituting court actions; protection of family life; relief in case of unemployment and incapacitation; etc.

The Polish economic structure was built on the correlative existence of the nationalized heavy industry, of commercial cooperatives, and free enterprise mainly in the field of retail trade and in smaller manufacturing. Agricultural property is in the private possession of the peasantry, and it is our aim to build the agricultural structure of Poland on the pattern of Danish agriculture, in which private property is united by a widely developed network of agricultural cooperatives. We do not have in Poland anything like the Soviet system. There is instead the endeavor to build our State on socialistic principles, but in accordance with our own Polish standards. I believe it was your Senator MORSE who gave utterance to

the following saying, which can be used to emphasize the Polish attitude: "I will not wear another man's collar."

During the time following the end of hostilities, we continuously were increasing the area under agricultural cultivation. It did not, however, protect us from a large deficit of grain, which for the crop-year from July 1947 to July 1948 will amount to 850,000 tons, as confirmed by the FAO mission which came to Poland at the invitation of the Polish Government. In 1945 we produced 27,000,000 tons of coal. In the current year we will produce 60,000,000, and in 1949 we count on the production of 78,000,000 tons. The prewar production of the Polish mining district amounted to 69,000,000 tons; therefore, we have now nearly reached the prewar level of production. And in 1949 we shall exceed it. This year Poland exported 20,000,000 tons of coal; in 1951 we want to export 35,000,000 tons. Two-thirds of our export goes to Scandinavia, France, Italy, Austria, and other western European countries. Our industrial production has already exceeded 90 percent of our prewar production. No such results have been achieved in Germany, in spite of millions of dollars spent for occupation costs.

The example of Poland shows that by helping the countries who were the victims of German aggression, one can better, more efficiently, and more rapidly assist the economic reconstruction of Europe than by giving excessive help to Germany. And it is also assistance for the preservation of peace.

There is at the present time in this world a great deal of ill will and much intrigue, the victims of which, unfortunately, are always the weak and the innocent. Poland is only too often the subject of slanderous propaganda. This anti-Polish propaganda unfortunately is active against us also in the United States. We Poles have no possibility or means each time to correct the untruths of this propaganda, although our nation, contending with great economic and political difficulties, is in need of as much friendliness and sympathy as possible. I appeal to you for this sympathy and friendliness.

The United States have in Poland a good friend, a friend, who cherishes the principles which enabled the United Nations to defeat nazism, fascism and the savage imperialism of Japan. I want the American people to understand and realize this. Remember that in Poland, whenever we discuss problems of international life, we always strive to discover those principles which unite people, and ideas which bring them together; we seek to forget the differences which tend to divide. Possibly, it is due to this fact, that we are optimists as regards the future of the world, which is said to be passing at present through the atomic phase of its development. We, Poles, visualize this atomic phase of world development as a long period of peace and prosperity, in which atomic energy will be of service to humanity, and will not be a means of destruction.

In order to show you the spirit which animates Poland, I will close by repeating the words of the President of the Republic of Poland addressed to an American journalist: "We want only the right to live; we do not want to rule any other nation; we want no colonies or dominions, but we insist upon independence. By this we do not mean illusory independence, but effective independence with a sound economic basis." Such is the spirit of Poland. Would you then ask me, according to your Oregon custom, to give you a 12-word slogan, to be put on ballot about Poland. I recommend the following:

"Poland. Many sufferings. Friend of America. Great peace lover. Devoted to independence."

I do not offer you a slogan about your speaker for today. It is up to you to say what you think about Mr. Winiewicz.

Britain Sabotages United Nations Decision in Palestine

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 18, 1947

Mr. CELLER. Mr. Speaker, it is absolutely imperative that the Security Council of the United Nations take action to prevent the British from sabotaging the United Nations decision for the partition of Palestine.

Britain seeks to do by indirection what she could not do directly. Obviously siding with the machinations of Arab riot leaders, Britain is belieing her own statement that she will be responsible for the maintenance of law and order in Palestine until withdrawal. Adequate police protection is not afforded the Jews and permission is denied the Jews to use defensive weapons of their own. Haganah has been penalized for attempting defense against riots, while there is no instance of Arabs being arrested or fired upon by British police for participation in such riots or for carrying arms. Haganah is being punished for doing the work Britain pledged herself to do, that is, keep peace and order in Palestine until she gets out.

The British Colonial Secretary, Mr. Arthur Creach Jones, under the thumb of Ernest Bevin, has stated that it would be undesirable for the United Commission on Palestine to get to Palestine until a short time before the mandate ends. That would most certainly impede the setting up of the proper administrative machinery, and stymie the work of the Commission. It is obvious that Mr. Bevin is still smarting under the defeat he suffered at Lake Success.

In the meantime the road between Jerusalem and Tel-Aviv is not open to peaceful travel. Jewish convoys are still proceeding unescorted, and revolver licenses refused, although Arab attacks continue. Last week Arab Legionnaires actively attacked transports in Yazur. The other day attacks took place at Beth Nabala Camp and on the road to Ben Shamen. Yet the Colonial Office refuses either to protect the Jews or to permit them to protect themselves. There are numerous cases of British police intervening on the Arab side in the exchange of shots between Arab attackers and Jewish defenders.

There is no question that Britain is seeking to exploit the current situation in Palestine to solve her own problems in the Middle East. Britain is attempting to aid the Arabs in defeating partition and maintaining the status quo in Palestine. Conversations between Brigadier Clayton, of Britain, and Sir Charles Smart have been reported, as well as discussions with the criminal ex-Mufti of Jerusalem.

It is of immediate importance that the Security Council recognize the tactics employed by Britain to sabotage its decision. The United States must take the same initiative and forceful leadership within the Security Council as she did in the General Assembly. Britain must not be permitted to continue her behavior in defiance of the United Nations decision.

Need of Spur to Housing Held Urgent

EXTENSION OF REMARKS
OF
HON. WILLIS W. BRADLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, December 19, 1947

Mr. BRADLEY. Mr. Speaker, a day or two ago the House passed legislation increasing the authorized guarantees under title VI of the Federal Housing Act so as to permit a continuation of building homes under FHA. In view of this, and to indicate the soundness of the action taken by the House, I include here an article from the Long Beach Press-Telegram of Long Beach, Calif., which was published on December 2, 1947.

NEED OF SPUR TO HOUSING HELD URGENT—GAIN OF 100 PERCENT REQUIRED TO MEET POPULATION RISE

A nearly 100 percent boost in construction rate of dwelling units is needed in Long Beach if enough housing is to be erected within the next 5 years to accommodate a population of 300,000.

That was revealed today in a report filed with the Chamber of Commerce construction industries committee by Earl B. Miller, chairman.

It is necessary to build 6,677 dwelling units a year for 5 years to care for approximately 40,000 new residents by 1952, and some 56,000 old residents who will need new housing by that time due to obsolescence of existing units.

NOW AT 260,000

The current population is about 260,000, according to the report, which quotes the regional county planning commission figure of 257,925.

At present new dwelling units are being constructed in Long Beach at the rate of 3,430 a year. This is 3,247 fewer than is needed each year for the next 5 if the anticipated influx of new population is to be housed satisfactorily, the report said.

It was also disclosed that 86,374 units of existing private housing fall short of present requirements. At a prewar standard of 2.81 persons a unit, as prevailed in 1940, the present facilities can house only 242,710.

ADDITIONAL ALLOWANCE

In addition, allowance must be made for needed replacement of 6,980 units of temporary housing, about 9,305 units of older substandard dwellings, and a minimum of 3 percent normal vacancy factor of 3,691 units, the report says.

In conclusion, the report stated: "It seems reasonable to assume that at least 50 percent of all units built between 1900 and 1919 or earlier are now substandard and should be replaced, along with trailers and all Government housing, to avoid development of slum areas. The county assessor's replacement schedule for frame buildings is 33 years, and for brick and masonry construction 37½ years."

Unification Politics?

EXTENSION OF REMARKS
OF
HON. HENRY J. LATHAM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, December 19, 1947

Mr. LATHAM. Mr. Speaker, this morning I read with deep concern a newspaper article in the Washington Post, stating that the Navy choice for Vice Chief of Naval Operations is Vice Adm. Arthur W. Radford, but that he may not be appointed because he had testified before the House Committee on Expenditures in Executive Departments giving his personal views on the unification bill when it was under consideration.

Admiral Radford was not opposed to unification of the armed services, but his views were in some respects at variance with the compromise plan agreed upon by the Secretaries of the Army and the Navy.

Admiral Radford is the leading exponent of naval aviation, and has been largely responsible for building our great naval air striking force, which in my opinion, more than any other branch of the service, contributed toward winning the war in the Pacific. Admiral Radford has the full confidence and support of naval aviators and is most representative of that great fighting group.

I want to say that it is to Admiral Radford's everlasting credit and honor that he alone, when the unification bill was being considered, had the courage to come to Congress and tell what he thought was best for naval aviation and for the defense of his country, in spite of the fact that everyone knew that the "wraps had been put on."

Mr. Speaker, it will be a sad day for the people of the United States when military leaders of our country cannot come before the people's chosen representatives and express their honest opinions concerning the defenses of our country without fear of reprisal.

It will be a sad day for our armed services and the defenses of our country when courage and honesty in our military become a detriment to advancement.

Unification was intended to eliminate jealousies and reprisals in the armed services and between the various branches of the services.

This is a direct challenge to the Commander in Chief of the Armed Services, the President of the United States.

The Republican Plan To Do Nothing

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, December 19, 1947

Mr. MULTER. Mr. Speaker, as one of the newer Members of this body I had sincerely hoped to be able to cast my vote at least once during this special session in favor of a bill, or bills, directed at curbing inflation. I even dared to hope to be able to vote in favor of extension of rent controls—and I mean rent controls that limit rents—and in favor of a bill that would at least curb the runaway prices of the necessities of life, if the bill did not actually roll the prices back so as to put foodstuffs within the buying power of the low-income groups of our country.

Unfortunately, however, those matters of such tremendous importance to our country are not to be treated on the basis of what is good for the country, but rather on the basis of what the majority of this House should do in order to elect a Member of their party as the next President of our country.

Apparently even as to matters concerning which there is little or no disagreement, those in control of this Congress are insistent on keeping them from enactment lest President Truman be given credit therefor.

Although it seems to me that a majority of both Houses of Congress are in favor of extension of rent controls, and in favor of extension of export controls, and in favor of extension of the provisions for the allocation of transportation facilities, these matters are not to be presented by bills permitting them to be separately enacted.

Instead, rent controls for this session are definitely thrown into the discard. Tenants, who are being bludgeoned into signing "voluntary" rent increases (thereby losing the benefits of the present law) are to take solace from the promise of a Republican Presidential hopeful that the housing situation will not improve for at least 3 years, and that next year we may expect extension of rent controls for another year. Price curbs are not to be considered at all. Consumer credit controls likewise are not to be considered.

Export controls and allocation of transportation facilities and Federal Reserve requirements may be had, but at a price. That price is that we take the Republican proposals in those respects exactly as submitted without adequate explanation or discussion, and without any possibility of amendment, coupled with a fantastic scheme to lift all restrictions against monopolistic practices now condemned by law. Of course, our Republican friends urge that the restrictions of the antitrust laws, the restrictions of the Robinson-Patman Act, the protections that have been written into our laws after hard-fought battles to protect cooperatives and the small independent merchants cannot be waived unless the President approves the proposed agreements.

Obviously, their plan is to try to pass the bill and then say to the President, if he does not approve an agreement, that inflation was not curbed because of his lack of approval. On the other hand, if he should be entrapped into approving an unfortunate agreement, the same people would then blame him for countenancing violations of these laws.

No hearings have been conducted by any committee, so far as I know, to determine the impact, if any, such a bill would have upon our economy or upon the persons who would be most affected by the lifting of the prohibitions now on our law books. The bill as submitted on a "take it or leave it" basis is so bad that it must be rejected.

If and when this bill comes before the House under a rule permitting full discussion and amendment it may be enacted with the bad parts thereof eliminated.

I repeat, however, that each of the various items of this bill should be the separate subject matter of an independent bill, as should also each of the other items by which inflation is sought to be curbed.

There is no cure-all and there can be no all-inclusive bill that will effect a complete cure. Each of the various elements are in and of themselves sufficiently important to warrant separate treatment.

Until so presented, the Congress is justified in refusing to consider this bill.

The Calhoun Lane GI-Housing Project

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Friday, December 19, 1947

Mr. MANSFIELD. Mr. Speaker, I am inserting in the Appendix of the RECORD the story of the Calhoun Lane GI-housing project in Billings, Mont. I feel that this material should be considered by the Congress and the proper Government agencies so that this problem can be settled in the most equitable manner as quickly as possible.

Mr. Speaker, under unanimous consent granted to me I am inserting various news letters and letters pertaining to this project:

HELENA, MONT., *November 8, 1947.*

The Gorman investigating committee of the Billings Veterans of Foreign Wars held another public meeting in their hall Thursday night, October 6. The purpose of this meeting was to review the evidence uncovered by the committee's investigation of the business troubles of the Calhoun Lane GI's. A large delegation of GI's and their wives were present and approved the following resolution adopted at this meeting:

"RESOLUTION ASKING NATIONAL VA OFFICIALS TO TAKE OVER

"Whereas that 21 GI's bought homes in the Calhoun Lane subdivision in Billings, Mont., from real-estate promoters for a contract price of $8,000, which had been raised from $6,150 to $8,000, presumably covering all improvements. Certain contracts stated as much, and all of the GI's were assured by the real-estate promoters that the contract price covered all improvements. Later the GI purchasers discovered that the county was assessing them for the improvements in addition to the regular taxes on the $8,000 taxes.

"Whereas the GI's asked the promoters and the Security Bank, who financed the loans, to explain the additional taxes, and they replied that the procedure was legal and nothing could be done about it. They then appealed to the State offices of the VA and

the FHA, which appeal was completely ignored. Later this situation came to the attention of the VFW, who proceeded with investigations. The VFW investigating committee tried repeatedly to have the State VA and FHA offices meet with the loaning agency, the real-estate promoters, the bank, and the purchasers to see if the differences could be straightened out. The four groups concerned made various vague excuses why they could not meet openly with the GI's to discuss the problem.

"Whereas on October 6, 1947, the VFW investigating committee asked that a Federal investigation be made of the operations of the Montana VA and FHA agencies; also, the State and district offices of the VFW concurred with the local VFW investigating committee to continue pressing the investigation.

"Whereas a Mr. Hoffman, Chief of the Loan Division at Seattle, Wash., of the VA, made a complete investigation of the case and discovered that the double charge on the improvements were in his opinion correct, but the legal minds who drew the contracts, financed the loans—including the approval of the State VA and FHA—informed him it was all legal and proper. Mr. Hoffman suggested a remedy. He stated that 'If I could get Federal permission, the contracts would be refinanced a 100-percent GI loan.' In this suggestion the double charge would be absorbed in a longer term and at a lower rate of interest. Naturally, this was not acceptable by the GI's or the VFW committee.

"Whereas the VFW committee asked Mr. Hoffman, of the VA, that his department withdraw the Government guaranty on the VA portion of the loan, to which Mr. Hoffman replied, 'It is not my opinion nor within my power to do so.' Stating further that 'Future GI loans would be jeopardized if the Government took this action.'

"Therefore, be it further resolved that this VFW investigating committee ask Mr. A. W. King, Chief of the Federal Loan Division of the VA, to withdraw the Federal guaranty on their portion, inasmuch as future loans for GI's would be definitely jeopardized with this sort of promotion running free and being sanctioned by State VA and FHA agencies.

"And, furthermore, copies of this resolution be sent to Gen. Omar C. Bradley, Chief of the VA, and the National Chief of the FHA; also, the two Representatives and two Senators from the State of Montana and to Mr. Tom Clark, Attorney General; also, all VFW posts and newspapers in Montana. The Gorman committee would appreciate a copy of any paper commenting on this GI problem.

"FRANK J. GORMAN,
Chairman,
"W. W. WESTWOOD,
"G. SANDSMARK,
"A. R. MEYER,
"B. W. POEHLS,
"Investigating Committee, Post, No. 1634, VFW."

The above resolution was unanimously approved by the GI's who attended the VFW investigating committee meeting held Thursday, November 6, 1947.

BILLINGS POST NO. 1634,
VETERANS OF FOREIGN WARS,
OF THE UNITED STATES,
Billings, Mont., November 26, 1947.

Hon. MIKE MANSFIELD,
United States Representative,
Washington, D. C.

Hon. Representative MANSFIELD: The Gorman VFW investigating committee were handed a letter signed by all the GI's and their wives in the Calhoun Lane subdivision with the request that this committee seek the proper authorities in Washington, D. C., to thoroughly investigate that which appears to be discrepancies in the purchase price of their homes.

I have enclosed their letter of November 15, 1947, with Mr. Mitchell's letter which shows the action of the Gorman VFW investigating committee on November 22, 1947.

The VFW committee appreciate the many big problems that are constantly before you and are thankful for the interest you are taking and the opportunity you have in vital assistance to our GI problem in Billings.

Local newspaper publicity does not exist. However, two dailies and several weeklies throughout the State are regularly carrying the Mitchell news letter.

To further publicize this case would it be possible for you to have inserted in the CONGRESSIONAL RECORD a copy of the GI's story of the Calhoun Lane project, together with appropriate remarks you might make?

I personally believe that publicity will finally break this case.

Thanking you for your considerate interest, I am

Respectfully yours,
FRANK J. GORMAN,
Chairman, VFW Investigating Committee.

HELENA, MONT., *November 22, 1947.*

ASKS CONGRESS TO DEMAND INVESTIGATION OF BILLINGS CALHOUN LANE DEALS

The following statement from the Gorman VFW investigating committee is directed and sent primarily to Senators Murray and Ecton and Representatives Mansfield and D'Ewart, and to United States Attorney General Tom Clark, so that they can demand an immediate investigation of the operations of the VA and FHA in Montana.

"The Gorman VFW committee in investigating the Calhoun Lane subdivision disclosed serious discrepancies where certain charges have been made after contracts were signed and down payments accepted. These discrepancies were pointed out to Hartwig and Tingle, the promoters and contractors, to the Security Trust and Savings Bank, the loaning agency, and the FHA and VA at Helena, Mont., who guaranteed the payment of mortgages from Government funds. The FHA being represented by Ben S. Hill and the VA by John McLaughlin.

"It has been over 8 weeks since these VFW investigations started and the only attempt to offer a remedy came from Mr. Hoffman, Chief of Loans of the Seattle division of the VA, who suggested that the 21 GI's absorb the double charge in a long term through a straight GI loan, which of course, was not acceptable to the GI's nor the VFW committee.

"The FHA, the Security Bank, and Hartwig and Tingle, the promoters, have offered no remedy; all are satisfied that the deal is legal and proper but the 21 GI's by their statement of November 15, 1927 are not satisfied.

"There must be a thorough Federal investigation. GI's must not be victims where Federal agencies are supposed to be their safeguards. If the laws are inadequate, let us change them. If the administrators are derelict let's remove them.

"This practice must not go on unchecked. There must be some law makers and some administrators who believe in fair play.

"The un-American activities referred to in the press each day must not and will not be allowed, however, if the 14,000,000 GI's are given the same treatment and disregard of their rights as the 21 GI's in the Calhoun Lane subdivision in Billings, Mont., have been given, a perfect ground work will have been laid in disillusionment, disregard and disrespect for the principles those boys fought to preserve.

"Copies of the Mitchell news letters issued weekly and covering Calhoun Lane deals have been sent regularly to Senators Murray and Ecton, Representatives Mansfield and D'Ewart, United States Attorney General Tom Clark, and the heads of the national VA and FHA agencies.

"FRANK J. GORMAN, *Chairman,*
"G. SANDSMARK,
"B. W. POEHLS,
"FRED L. PENROD."

This action of the Gorman VFW committee is endorsed by committees from Yellowstone Trades and Labor assembly, the AMVETS, and the GI's of Calhoun Lane.

The Billings VFW Post-assisted by other VFW Montana Posts, the Yellowstone Trades and Labor Assembly, Billings AMVET Post, Eagles, and several individuals have financed this special news letter and the mailing list includes all VFW Posts and newspapers in Montana, and a number of American Legion Posts.

HELENA, MONT., *November 15, 1947.*

The parties whose signatures are hereto attached have handed this letter to the Gorman Veterans of Foreign Wars investigating committee with the request that they forward a copy to the proper authorities in Washington, D. C.:

"THE GI'S STORY OF THE CALHOUN LANE PROJECT

"We, the undersigned veterans and home owners in the Calhoun subdivision of Billings, Mont., do hereby request that the National Federal Housing Authority, Washington, D. C., make an immediate investigation of the situation now confronting us, described herewith.

"In returning from the armed forces of these United States and finding no space available contacted the Hartwig & Tingle real-estate promoters to purchase one of the newly constructed homes of Calhoun Lane.

"Upon contacting Hartwig & Tingle we were advised that the entire project was being handled and financed by the Security Trust & Savings Bank of Billings. All homes in this subdivision to be purchased through this bank only. Contacting this bank, we were advised that we could move in should we fulfill the credit standards required in obtaining a FHA and VA loan and have the $500 to $1,000 down payments. Unpaid balance to be financed by an 80-percent FHA mortgage and a 20-percent VA mortgage. Taxes, as stated by both parties, Hartwig & Tingle and the Security Trust & Savings to be about $60 per year, increasing somewhat if we were taken into the city limits of Billings.

"As presented in individual affidavits, taken by and now on file with the VA, and appearing in some of the contracts between Hartwig & Tingle and the purchaser, these also being in the hands of the VA, it was so stated by Hartwig & Tingle and the Security Trust & Savings Bank and understood by the purchasers that the $8,000 included all improvements, viz, streets, sewer and water, with no outstanding taxes.

"In financing these homes under the FHA guaranty the purchaser's ability to pay was thoroughly investigated, using the monthly payments then set up on the unpaid balance as the basis, these payments running from $54 per month, not exceeding $60 per month, varying according to cash paid down.

"On or about September 5, 1947, some time after the last home was contracted for, we were informed indirectly that a special improvement tax assessment of $883 per home had been levied against this subdivision, same to be paid over a period of 10 years at 6-percent interest. We immediately contacted the bank, requesting their reason for not possessing this information, and were told it was news to them. The bank is withholding $5 monthly in a trust fund to cover our taxes, which now amount to $235 yearly.

"This was then taken to the VFW, American Legion, American Vets, and Yellowstone

Trades Union, which formed a committee to investigate. At once it was disclosed that though none of the homes were completed the FHA had made the final approval of these loans. It was also disclosed that faulty materials had been used, and in checking we find that three (3) inspections were required and were to have been made by the FHA. To our knowledge, no inspection has been made of these homes, which are still not completed.

"With these facts disclosed Mr. Ben S. Hill, State FHA director, has been repeatedly asked to meet with us and iron out those problems. His only reply is that his office is taking no definite action in this matter, though he has stated that he is of the opinion that these taxes should not be paid by us.

"In view of Mr. Hill's attitude, we are again requesting that your office make an immediate and thorough investigation of this case.

"Mr. and Mrs. I. F. Hutchins, 116 Arden Avenue; Mr. and Mrs. LeRoy D. Jensen, 110 Arden Avenue; Mr. and Mrs. J. H. Nickerson, 114 Arden Avenue; Mr. and Mrs. Charles Kuhne, 122 Arden Avenue; Mr. and Mrs. Leonard W. Noyes, 126 Arden Avenue; Mr. and Mrs. Leonard Apps, 125 Arden Avenue; Mr. and Mrs. E. R. Bahn, 121 Bruce Avenue; Mr. and Mrs. John C. Wade, 120 Bruce Avenue; Mr. and Mrs. Roy W. Hodge, 123 Bruce Avenue; Mr. Mrs. Roy H. Watne, 118 Bruce Avenue; Mr. and Mrs. Louis Studer, 119 Bruce Avenue; Mr. and Mrs. Merle R. Price, 118 Arden Avenue; Mr. and Mrs. H. A. Potter, 114 Bruce Avenue; Mr. and Mrs. H. A. Walter, 115 Bruce Avenue; Mr. and Mrs. R. M. Stearns, 120 Arden Avenue; Mr. and Mrs. J. R. Derden, 113 Bruce venue; Mr and Mrs. F. J. Newman, 117 Bruce Avenue; Mr. and Mrs. A. R. Marquardt, 122 Bruce Avenue; Mr. and Mrs. Gene Elery, 110 Bruce Avenue; Mr. and Mrs. R. R. Bailey, 116 Bruce Avenue; Mr. and Mrs. Anderson, 112 Arden Avenue; Mr. and Mrs. R. B. McGinnis, 124 Bruce Avenue; Mr. and Mrs. R. J. Gardner, 127 Bruce Avenue."

The Gorman VFW committee would like to know why the Montana FHA and VA stand by their guaranty of Federal funds, when it is a known fact that the $883 improvement tax per home was included in a contract price of $8,000? How can the Federal FHA and VA reconcile the agreed payments per month at the time the contracts were signed with the suggested increase of $883 on those homes? These are some of the questions the VFW committee would like answered. The VFW investigating committee against is asking that the proper Federal authorities be instructed to make a thorough investigation of the Montana FHA and VA agencies.

HELENA, MONT., *November 22, 1947.*

ASKS CONGRESS TO DEMAND INVESTIGATION OF BILLINGS CALHOUN LANE DEALS

NOVEMBER 25, 1947.

Hon. MIKE MANSFIELD,
House of Representatives,
Washington, D. C.

DEAR MR. MANSFIELD: Your letter of November 17, 1947, relative to a situation which has developed in connection with homes purchased by a group of veterans in Billings, Mont., and the resolutions which were adopted by Post No. 1634, Veterans of Foreign Wars, Billings, with regard thereto, has our consideration.

For several weeks our loan guaranty officer at the Fort Harrison, Mont., regional office and investigators from our Seattle branch office have been assembling the facts in the case and trying to accomplish an adjustment of an unfortunate situation. At this writing an equitable solution is not in sight and we have so advised commander of the department of Montana, VFW, John W. Bonner, of Helena, who has been in contact with this office with respect to the matter. For your information we enclose a copy of a letter which the director of the loan guaranty service addressed to Mr. Bonner on November 19, 1947.

Briefly, the facts in this case are that the veterans who purchased homes in the Hartwig-Tingle housing project at Billings claim that they were promised by the builders that the prices which they paid for the houses purchased would include installation of public sewers, street paving, and curbing. However, special assessments have been laid against each property for a proportionate part of the cost of the aforesaid three improvement items by the county, and the builder refuses to pay the costs thereof and denies that any agreement was made to do so. The final solution may have to be determined by court action as the parties are adamant in their viewpoints. The Veterans' Administration guaranteed second-mortgage loans under section 505 (a) of the Servicemen's Readjustment Act in these cases, the primary mortgage loans having been insured by the Federal Housing Administration.

As our letter to Mr. Bonner indicates, we are still studying the question of whether or not the lender has lost his right to guaranty of the secondary loans by any failure to adhere to the act and regulations, but any action by the Administration toward voiding the guaranties would not provide the relief which the veterans seek, namely, elimination of the liens for street and sewer improvements.

Very truly yours,

F. W. KELSEY,
Assistant Administrator for Finance.

HOUSING AND HOME FINANCE AGENCY,
Washington, D. C., December 17, 1947.

Hon. MIKE MANSFIELD,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN MANSFIELD: Further reference is made to your letter of December 2 pertaining to an investigation being conducted by the Gorman committee of the Billings Veterans of Foreign Wars relative to 21 GI's who purchased homes in the Calhoun Lane subdivision in Billings.

A report on this matter has been secured from Mr. Ben S. Hill, State director for the Federal Housing Administration in Montana. Mr. Hill's particular attention was invited to that part of the News Letter which stated in effect that appeals to the State office of the Federal Housing Administration to meet with representatives of the veteran purchases to discuss this matter were completely ignored, and he was requested to comment on this phase of the release, as well as other remarks. In reply, Mr. Hill stated that he had been asked to attend a public meeting to be held in Billings, September 28, 1947. This invitation was extended to him by Mr. Gorman, chairman of the investigating committee, on September 24. The following day Mr. Hill, by letter, declined because of a prior commitment to be present at the annual meeting of the Montana Building and Loan League at Havre on the same day but mentioned that he had been in close contact with the situation through some of the interested parties and had taken steps to arrange a meeting so that the difficulties existing in connection with the properties might be composed.

Subsequently, at Mr. Hill's suggestion, a meeting was held in Billings on October 6. The entire matter was discussed and the sponsors agreed that they would finish the uncompleted items and a later meeting would be scheduled to ascertain whether a satisfactory solution of the entire problem could be worked out.

On October 29 the meeting decided upon at the conference of October 6 was held in Billings and the matter of the special assessments, the crux of the whole dispute, was discussed. All interested parties, as well as an attorney representing the veteran purchasers, were present.

The records of the Montana office of the FHA disclose that Hartwig and Tingle originally filed applications requesting priority assistance to construct homes in Billings. Then the Security Trust and Savings Bank

submitted applications for mortgage insurance on 27 houses which were then partially constructed. The information accompanying the applications for insurance, as well as prior data submitted, did not indicate that any special assessments would be levied against the properties. It was not until 23 cases had been insured by this Administration that Mr. Hill was informed by the mortgagee, who had heard through one of the recent purchasers, that a special improvement district had been created and special improvement bonds amounting to $1,400 per dwelling unit covering sewer, water, streets, gutters, and curbing had been sold and were about to be assessed against the individual properties. The only items not previously covered in submissions to the office were gutters and sewers. Apparently, no one other than Hartwig and Tingle had any knowledge of the establishment of the special assessment district.

At the meeting of October 29 when this matter was again discussed, the attorney for the builder would agree to no concessions whatsoever and, in fact, advised that his clients had no legal responsibilities. It was then proposed that an effort be made to recall the recent bond issue dealing with the special assessment for the purpose of establishing a larger improvement district and issuing bonds for 20 years at 3 percent rather than 10 at 6 percent which had been done. The adoption of such an approach would have reduced materially the amount of the special assessment on each dwelling recognizing, of course, the improvements resulting from the installation of curbs and gutters. The attorney representing the veteran purchasers stated that he would recommend acceptance of this proposal.

You may be assured that Mr. Hill is continuing his efforts to effect a solution to this problem which will be satisfactory to all concerned.

Sincerely yours,

RAYMOND M. FOLEY,
Administrator.

GI Subsistence Allowances

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, December 17, 1947

Mr. MONRONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to have printed a telegram from the combined veterans' organizations from the University of Oklahoma regarding the urgent need for an increase in subsistence allowance for GI students attending school:

NORMAN, OKLA., *December 6, 1947.*
Congressman MIKE MONRONEY,
House Office Building,
Washington, D. C.

THE HONORABLE MIKE MONRONEY: I am the duly elected and endorsed delegate of the majority of veterans of the four main campuses of the State of Oklahoma, to the National Council of Veteran Trainees that is to be held in Washington on the 19th and 20th of this month. The purpose of said conference is to secure the passage of legislation that will increase the subsistence allowance for veterans attending school.

The program is outlined as follows:

Each delegate is to determine the attitude of the Congressmen from his State toward the legislation desired by the veterans in that particular State. In Washington the State program will be coordinated and we hope to come out with a unified, reasonable, and over-all program that will fit the needs of all of the veterans in school. The final step, of course, will depend on you in Congress during the next session. By extensive surveys taken here in Oklahoma on the various campuses it has been determined that the present subsistence allowance is very inadequate, and we feel that unless some action is taken immediately many students under the present program will be forced to drop out of school for financial reasons.

We in Oklahoma feel that since the people through their Government have shown such an interest in the veterans as to devise a program whereby from $5,000 to $7,000 will be used to educate a veteran, that failure to provide a very small amount in addition and thereby save the principal investment is bad business. Certainly, if the veteran cannot complete his education the amount of money spent toward that end is a bad investment. We feel that by adding a little more the profits to the people as a whole will be much greater.

On the other hand, we do not feel that the subsistence should be increased so much as to allow the veteran to turn the campus into a country club. Therefore we recommend the passage of S. 1394 that increases the single veteran's allowance $10 or to $75, and increases the married veteran's allowance $15 or to $105, and an additional allowance of $15 for more than one dependent. This we do not feel is unreasonable nor unjustified.

It is realized that at this time you are very busy with important world affairs, but since time is short for us, we would greatly appreciate your immediate action upon this matter. To briefly state the action required, we would like to have a letter from you stating the above-mentioned program, quoting the figures listed and your atitude toward same. We would like to have the letter as soon as possible due to the fact that I am to leave for Washington the 17th of this month.

JOHN WHEATLEY,
Oklahoma Delegate to National Council of Veteran Trainees, University of Oklahoma.

Danger in Conferring Authority To Regulate Exports on a Price Basis

EXTENSION OF REMARKS
OF
HON. HOMER R. JONES
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, December 19, 1947

Mr. JONES of Washington. Mr. Speaker, it would be a serious mistake for this body to consider the merits of this legislation—Senate Joint Resolution 167—without calling attention to one of its provisions. I refer to that portion of the bill granting the Secretary of Commerce authority to regulate exports on a price basis. It is not my intention to defend practices of certain elements in the foreign trade field. I have no doubt that some have taken full advantage of the world situation; have charged all the traffic could bear at a time when commodities are scarce and foreign demand is tremendous.

But I am concerned with what this authority, placed in the hands of an administrative body, will mean to thousands of our small businessmen. It is my concern, and should be yours, to know what effect this price fixing power will mean to the many hundreds of exservicemen who today are struggling to establish a business in the export field and, under present policies and regulations, already find themselves fighting a desperate battle.

Big business already enjoys a near monopoly in the export trade. Under existing policy, so-called traditional shippers, comprising mainly the large manufacturers, mills, and producers, are granted 85 percent of our foreign trade by Commerce Department policy. The thousands of small exporters, many of them with little or no historical background in the export field and many of them former servicemen who have entered business since the war, scramble desperately for the remaining 15 percent. That, also, is the policy of the Commerce Department. Mr. Speaker, it is obviously a vicious, arbitrary policy which furthers big-business monopoly to the detriment of the small exporter.

There is a serious question in my mind that authority to place price controls in the export field will not finally and conclusively smash the small businessman in this field. And this, of course, means the former GI's who are gambling their savings and their futures in an effort to establish their own enterprises.

If you will investigate, I think you will find the Department of Commerce and its Office of International Trade are already in bad repute with the vast majority of small exporters. The small businessman finds himself limited to a few, pitiful crumbs while his big competitor exercises a virtual monopoly. And the small man collects the crumbs only with the greatest difficulty and by wading through a maze of conflicting, senseless and arbitrary red tape.

What happens to the small businessman if you now give to the Commerce Department this additional powerful and dangerously restrictive authority?

Frankly, he does not know. But he suspects and fears, as I do, that it will ruin him. He believes it will afford the big operator, big manufacturer, and big producer to clamp down entirely on his meager supply sources. He knows he cannot buy from that same big producer, ship his commodities overseas and sell it at the same price level as his big competitor.

It is my personal conviction that Congress would do well to look into this whole matter of our export trade. It is also my conviction that we should consider cautiously the granting of authority which could, and I am convinced probably would, destroy thousands of our small businessmen.

And I question the wisdom of singling out one small segment of our economy and inflicting on it price regulations, when we are unwilling to assume the same burden and restrictions for everyone. It seems to me the small exporter, in this instance, is being made the whipping boy.

Small business is the lifeblood of our national economy. We profess to have its interests at heart.

We should reflect on the grave import of this action before we grant powers, the implications of which are all too clear.

Rat Holes in Europe

EXTENSION OF REMARKS
OF
HON. HUBERT S. ELLIS
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, December 19, 1947

Mr. ELLIS. Mr. Speaker, under leave to extend my remarks, I include an article by Samuel B. Pettengill, a Democrat and former Member of this House:

INSIDE YOUR CONGRESS
(By Samuel B. Pettengill)
THE RAT HOLE OF ZLIN

Let's measure the Marshall plan with a yardstick we can understand. Let's apply it to what was once the largest shoe factory in the world—the Bata plant in Czechoslovakia. This plant was founded by a poor shoemaker's son in the tiny village of Zlin. He started with a capital of 800 florins. But he had something else. He had elbow grease and freedom. His plant grew until its 12,000 employees, making 75,000 shoes a day, had a world-wide market.

Last year, the Socialist government of Czechoslovakia took over the Bata plant. In 10 months, cash reserves of 1,000,000 crowns were wasted. Its debt was increased 300,000,000 crowns. Its directors, superintendents and foremen—2,000 men with the "know-how"—were kicked out. Shoe prices were raised out of reach. The morale of the workingmen was destroyed. It now takes four men to produce what one man had done.

Is General Marshall to pour his money and ours down that rat hole? Are American shoemakers to be taxed to make good the ruin caused not by the war, but by Socialist politicians?

MISERY COMING BACK

Jan Bata, a descendant of the shoemaker's son, wrote the Socialist Minister of Finance: "What we gathered in 52 years, the government has wasted in 10 months. * * * Your government is now asking for a loan from the United States of America to be able to meet the nationalization losses. * * * We built up the factory to chase misery and hunger from Zlin and country. * * * Now I see misery and hunger coming back to Zlin and its people. * * * I feel almost a physical pain as I watch the waste. I am still a son of the people."

How many American dollars will it take to stuff that rat hole? And keep it stuffed?

No one can understand $18,000,000,000. No one can understand Europe with its 25 nations, its 400,000,000 people who have hated and killed each other for centuries. But everyone can understand the rat hole at Zlin. It is only one of thousands. How do you help these 12,000 Bata families? How do you keep them fed as long as they have to live under the same government that ruined them?

Yet our State Department says we must not ask these Socialist governments to get off their people's backs as a condition for our aid. We might offend them, they say.

So, while these governments continue to redistribute the jobs to their armies of political retainers, are we to stuff the rat holes as fast as they dig them? (The increase in the number of bureaucrats under Attlee in England is one-third the number of her coal miners.) Are we to rebuild the trains blown up by their strikers? Fill their coal bins as they reduce their working hours?

WHAT IS PROSPERITY?

What does our prosperity consist of? Is it our automobiles, bathtubs, gadgets and dollars? No. These are only yardsticks. But these things are not the cause of our prosperity. They are the effect. The source of our prosperity is something far different. It is the American spirit, our initiative, our risk-taking, private property, and our Constitution which protected from confiscation those who have sweated and saved during 150 years. If all the gadgets were burned, the American spirit, if we retain it, could rebuild them in a few brief years.

Europe could rebuild, too, if it had the American spirit. Without it—fill in the answer yourself.

Are we to fill rat holes in Europe, and go socialist at home?

Universal Military Training

EXTENSION OF REMARKS
OF
HON. GEORGIA L. LUSK
OF NEW MEXICO
IN THE HOUSE OF REPRESENTATIVES
Friday, December 19, 1947

Mrs. LUSK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following petition received from the American Legion post in Ruidoso, N. Mex., concerning legislation to establish a system of universal military training.

PETITION

Hon. GEORGIA LEE LUSK,
House of Representatives,
Washington, D. C.

Peace is worth striving for. Therefore we, citizens of the United States and voters, urge you, our Representative in the Eightieth Congress of the United States, to support and vote for legislation establishing a system of universal military training for American young men, as recommended by the President's Advisory Commission on Universal Training.

Inflation and High Prices

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, December 19, 1947

Mrs. ST. GEORGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter written by my distinguished colleague, Hon. HOWARD BUFFETT:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., December 18, 1947.

Mr. EARL BUNTING,
President, O'Sullivan Rubber Co.,
Winchester, Va.

DEAR MR. BUNTING: I have read with interest the advertisements published by the National Association of Manufacturers concerning the No. 1 national problem—inflation and high prices.

Your ad is good reading, and it includes many constructive suggestions that should receive careful congressional attention in the months ahead.

But—and in the minds of the Members of Congress, this is a big "but"—the people of America are crying for action on spiraling prices right now.

In other words, the heat is on Congress—and unless something is done soon to lessen the pressure on the inflation accelerator, you can expect that OPA, with or without trimmings, will be back around the neck of business in 6 months or perhaps much sooner. At least, that's the way it looks from here now.

But, Mr. Bunting, there is one step your group can take that would almost surely prevent this calamity, and here it is:

Let the National Association of Manufacturers vigorously record itself in favor of postponing action on the so-called Marshall plan until our own financial house is in order.

Your manufacturers know better than anyone else how gigantic exports are sparking the rise in prices. If your group would take the lead in urging a postponement of the Marshall plan, you may find that by that act you have saved yourselves and the free-enterprise system of America from destruction.

If American business—tempted by the prospect of export profits—is committed to do the impossible—then business is behind the eight-ball. And the inflationary Marshall plan puts you in exactly that spot.

Don't you see the position business (and Congress) is in? If gigantic exports continue prices will stay high or even go higher. If this happens, the millions of average Americans who are taking the beating from high prices are going to become frantic—if they aren't already. When the American people get that way, Congress can easily be stampeded—and when I say stampeded—I mean back into a peacetime OPA.

But if the word went out to the country that the Marshall plan was going on the shelf until our domestic economy was stabilized, well—I'll bet you a new hat that commodity prices would start to skid before tomorrow's sundown. And if a good settling back in prices takes place, all this OPA talk would evaporate—and business would have a chance to give customers—both domestic and foreign, full value for their money.

Very truly yours,

HOWARD BUFFETT.

A National Institute of Industrial Training for Negro Youth

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Friday, December 19, 1947

Mr. MILLER of Nebraska. Mr. Speaker, World War II brought forcibly to our attention the dearth of trade and industrial training among young people in the United States. This is particularly true of Negro youth most of whom, because of the lack of adequate training, are in the lower wage brackets. To increase the earning power of the Negro and make him a more valuable economic asset to the Nation, the Booker T. Washington Birthplace Memorial is establishing a National Institute of Industrial Training for Negro youth. The headquarters for agricultural and industrial training will be at Booker Washington Birthplace, Va., but field services will be extended to other parts of the United States where there is a substantial Negro population.

It is planned to establish a school for the training of hotel employees and kindred services in Washington, D. C., and to secure buildings for this industrial training school, the following bill has been introduced by me:

H. R. 4664

A bill to provide for a National Institute of Industrial Training of Negro Youth

Be it enacted, etc., That the Commissioner of the Public Housing Administration and the Defense Homes Corporation is authorized and directed to convey Slowe and Carver Halls, defense housing projects, in Washington, D. C., to the Booker T. Washington Birthplace Memorial, to be utilized exclusively by them as a National Institute of Industrial Training for Negro Youth, including Negro veterans of World War II, who, because of limited education, are not eligible for college training under the GI bill of rights. Upon transfer of this property, the Government shall be relieved of all maintenances and other expenses in connection with this property which will be assumed and paid by the Booker T. Washington Birthplace Memorial. No Government appropriations are to be authorized to carry out the provisions of this act.

Mr. Speaker, incidentally, it might be added, the Government will be indirectly reimbursed for these buildings since the net profit to the United States Treasury on the 5,000,000 Booker T. Washington Memorial half dollars will be $1,619,394. This is possible because the silver used to mint these coins cost the Treasury only 47 cents per ounce and is bringing the Treasury a return of $1.38 per ounce.

The Booker T. Washington Birthplace Memorial is fortunate in having for its President, Dr. S. J. Phillips, who has dedicated himself to the perpetuation of the ideals and teachings of Booker T. Washington. Dr. Phillips believes that the problems of the Negro are largely economic and that they can be solved by making available trade and industrial training for the Negro youth of America.

Appended is a brief outline of the plans and objectives of the Booker T. Washington Birthplace Memorial:

A PROPOSAL TO USE SLOWE AND CARVER HALLS AS A NATIONAL INSTITUTE OF INDUSTRIAL TRAINING WHICH SHALL CONSTITUTE A UNIT OF THE FIELD SERVICES OF THE BOOKER T. WASHINGTON BIRTHPLACE MEMORIAL IN ITS PROGRAM OF TRAINING WORKERS OF LOW EDUCATIONAL STATUS FOR SERVICE AND INDUSTRIAL OCCUPATIONS

"Let us make ourselves reliable in our method of labor; if we do not, the time will come when people with another skin and another religion will take from us the great blessing we now enjoy." (Booker T. Washington.)

(By Booker T. Washington Birthplace Memorial, Rocky Mount, Va.)

I. INTRODUCTION

Millions of America's people, especially Negroes, are of low educational status. Service occupations offer large fields of work for this group of citizens. These occupations make a direct contribution to the smooth, efficient running of our national machinery. Because this is true, opportunities should be provided for making of these fields scientifically guided areas in which training and organization will play a greater part than our present educational set-up permits, in bringing about results mutually beneficial to employer, employees, and the general public.

We believe that greater and better service will be rendered, and greater good will be engendered in the fields of service occupations, if the following principles are observed:

(a) If more thorough training is made possible to workers who plan to enter the service field, thereby making possible to them a greater amount of respect for the jobs they fill, and a higher wage for the efficient service they render.

(b) If workers, through a training program, can be taught to appreciate clean, wholesome environment, healthy bodies, and high ideals of service.

(c) If the entire field of service occupations can be raised to a level in keeping with the strides that have been made by other branches of labor—through a well-planned program of the type advocated herein by the Booker T. Washington Birthplace Memorial.

We believe, too, that these provisions will help to insure intelligent service, more efficient labor, better personal relationship, and wholesome loyalty in service occupations. We further believe that this committee has the opportunity to help make all of these things possible by making available Slowe and Carver Halls to be used as a national institute of Industrial Training which shall constitute a unit of field services of the Booker T. Washington Birthplace Memorial in its program of training workers of low educational status for service and industrial occupations.

"We have doctors, lawyers, and professional men, but I want to say that your success depends upon the success and prosperity of the hard-working, laboring class of our men and women; when they fall you fall in the professional and business careers of life." (Booker T. Washington.)

II. THE BOOKER T. WASHINGTON BIRTHPLACE MEMORIAL

In the words of Booker T. Washington, "Ignorance is more costly to any State than education, and the highest education is that which fits an individual to live successfully in the community where his life is thrown."

Believing that millions of Negroes of low educational status can be given trade and industrial training to the extent that they can live more successfully in the various communities where their lives are thrown, and also make large contributions to local, State, and national welfare, more than 2 years ago the Booker T. Washington Birthplace Memorial was brought into existence. This is an organization made up of a number of outstanding white and Negro leaders of America. Its objectives are:

(1) To establish a service memorial at the birthplace of Booker T. Washington in Franklin County, Va.

(2) To make this service memorial serve as headquarters for a national program of trade and industrial training for Negroes below high-school level.

This program is based on the same fundamental teachings of Booker T. Washington and has been endorsed by the 48 Governors and the Seventy-ninth Congress of the United States. It covers a field of training for which very little provision has been made in our present national educational set-up. The recent war indicated the grave need for such a program.

Field service

As planned, the Booker T. Washington Birthplace Memorial program will reach Negroes over the country by means of a field service which will operate in the various towns and cities of America. This proposal is an appeal to give us the opportunity to acquire Slowe and Carver Halls to be used as a unit of field service in this gravely needed program.

III. NEED FOR NATIONAL INSTITUTE OF INDUSTRIAL TRAINING

"One should learn to do the common things in an uncommon way." (Booker T. Washington.)

1. Low educational status of the masses of Negroes: According to figures compiled by the Bureau of the Census, more than 90 percent of America's more than 13,000,000 Negroes are below fifth-grade level. Other groups have a lower percentage, but in the main there are millions of people in our country who are of low educational status. This vast group must be given the opportunity to earn a living in keeping with the American standard if our country is to continue in its role of world leadership. Further, this group must also accomplish enough to make its contribution to national welfare. In order to achieve both of these ends, this large number of American citizens should be given opportunities for training so that they might be able to make the most of all of their potentialities.

2. Negroes employed in service occupations: The last census listed nearly 6,000,000 Negroes gainfully employed in the United States. Of this number, approximately 50 percent were engaged in domestic services—a larger percent than any other field of employment except agriculture. While these percentages run abnormally high for the Negro, it is a fact that domestic and service occupations offer a large outlet for the services of unskilled labor in all groups.

3. Common occupations neglected in educational planning: The large number of American citizens who have to depend upon domestic and service occupations for a living, as well as the millions of Americans whose larger functioning in national life depend upon a well-fed, clean-housed and smooth-running domestic machinery, more than justifies the need for giving attention to the field of training in industrial arts—a field which has been, to date, sadly neglected in our educational planning.

4. Negro workers are untrained: Provisions for such training for the Negro worker especially are at present practically nil. He learns by experience if he learns at all. The public suffers while the untrained worker is learning by the hit and miss method, and thousands of dollars in time, food, and material are being wasted. Such conditions

could be remedied, particularly in the Nation's Capital, if Slowe and Carver Halls could be used as a National Institute of Industrial Training for workers in industry and domestic service—with emphasis upon hotel and restaurant workers especially.

"Industrial education teaches the Negro how not to drudge in his work." (Booker T. Washington.)

IV. HOW THE FACILITIES OF SLOWE AND CARVER HALLS COULD BE USED TO ADVANTAGE AS A NATIONAL INSTITUTE OF INDUSTRIAL TRAINING

1. Use of present physical plant: Any program of industrial training includes housing quarters up to the American standard; a sanitary, convenient kitchen and pantry set-up; modern dining-room facilities, bath rooms; lounges; rest rooms; recreational parlors, etc. All of these are established in Slowe and Carver Halls and could be used to great advantage in a training program. There is, too, ample room for units of instruction since recreational rooms could do double duty as classrooms as well as serve as practice laboratories for training.

2. Maintenance of high living standards: The intelligence and living standards of the Negro population of Washington are, in the main, above the average of that of Negroes over the country. This standard should be a goal toward which the Negro population of America should work. To this end standards of living, of behavior, of personal appearance, of public actions, of Christian morale—of students and inmates of the National Institute of Industrial Training will be kept exceptionally high. Students and workers who cannot or will not measure up to the established standards will not be permitted to remain in the institute.

At least 85 percent of the present personnel of Slowe and Carver Halls will be retained if this request is granted. This will make it easily possible for present standards to be maintained. Ideals of behavior, of cleanliness, of thrift, of service, of living, etc., advocated by Booker T. Washington will be firmly implanted in the minds of both personnel and student body.

"Nothing ever comes to one, that is worth having, except as a result of hard work." (Booker T. Washington.)

V. GENERAL METHODS OF OPERATION

1. Student service: Recently the Booker T. Washington Birthplace Memorial made a limited survey to ascertain how many adult learners would be interested in enrolling in training classes designed to prepare a better class of labor for industry's needs. As a result of this survey, we have on file more than 6,000 applicants who are eager to enter such classes. A large number of these are people who wish to qualify to work in hotels, restaurants, laundries, and other service occupations. A similar survey will be made in the district area. Applicants from these two sources will serve as an immediate student list.

2. Number of students and types of instruction: The facilities available in the buildings under discussion would make possible training quarters for 300 students at a time. These will be kept in training for 3 months. During this time the following qualities and subjects will be taught:

(a) Efficiency in those branches of service required of waiters and other hotel and restaurant employees;

(b) Personal cleanliness, courtesy, and the right attitude toward work;

(c) Promptness, regularity, accuracy and dependability;

(d) The high ideals of service, of thrift, and citizenship as stressed by Booker T. Washington.

3. A safeguard to public health: The question of health will be particularly stressed in this program. Disease germs are no respecter of class or color. Millions of service workers—cooks, waiters, laundresses, maids, bellhops, etc., daily prepare food, wash dishes, clothes and other materials, used by those for whom they serve. If these workers are not clean and healthy—particularly free of social diseases; if they are not taught to live under sanitary conditions themselves, the disastrous effect upon the public whom they serve will be inevitable. This particular service alone is of sufficient importance to the health of our Nation to justify a training center at the Nation's Capital of the type that Slowe and Carver Halls can make possible.

4. Intern work—Washington hotels and restaurants: The hotels and restaurants of Washington will be asked to cooperate in this movement to train a more efficient labor supply for service occupations. After students have been trained at the National Institute of Industrial Training, they will serve their interneship in hotels and restaurants in Washington and neighboring areas. Hotel managers and those responsible for the supervision of these workers will file with the National Institute of Industrial Training any complaints, lack of efficiency, or shortcomings that these trainees may have. These will be taken up with the workers personally with the view of making them highly desirable workers in every respect for hotel and restaurant service throughout the country. As time goes on, larger areas will be serviced by workers from the National Institute of Industrial Training. Thus will this unit gradually render a national service for hotels, restaurants, laundries, and other service occupations and the American home.

5. A program of service for the National Capital: Under such a set-up, the hotel and restaurant service in the Nation's Capital will become the best in the country. This is as it should be. Those who are responsible for the running of the world's greatest Nation should surely have smooth-running, efficient headquarters in which to live. Making possible the establishment of this National Institute of Industrial Training in Slowe and Carver Halls will insure the existence of such conditions. In addition, hotels, restaurants, and homes over the Nation will also be benefitted by giving us the opportunity to acquire the buildings under discussion.

6. Better workers' institutes: At given intervals better workers' institutes will be held as a part of the program of the National Institute of Industrial Training. These will consist of a series of short courses designed to give the worker on the job a larger vision of the importance of industry in general and of his own job in particular. These institutes will serve, too, as a measuring rod by which workers may judge their own efficiency. Attendance at these institutes will be stimulated by awards of merit for good work and newspaper publicity for outstanding services. A trip to the Nation's Capital by the ordinary workingman will, in itself, be a stimulant to greater and better service.

7. Sanitation institutes: The Sanitation Research Foundation of Louisville, Ky., has accumulated a wealth of experience and material that can be made to contribute in a large way toward national health and industrial efficiency. This foundation has agreed to cooperate with the Booker T. Washington Birthplace Memorial in its field services. Sanitation institutes will play an important part in the program of the National Institute of Industrial Training.

8. Certificates of attendance: Workers attending the National Institute of Industrial Training, and measuring up to given standards, will be awarded certificates of attendance at the close of their training periods.

"I believe that when one can grow to the point where he loves his work, this gives him a kind of strength that is most valuable." (Booker T. Washington.)

VI. FACULTY AND PERSONNEL

All persons serving as faculty or personnel members will be expertly trained for the jobs which they are selected to fill. In addition to this, they must be in thorough sympathy with the workingman's problems, must have first-hand knowledge of labor routine, and must have a respect for the ideas of "glorifying and dignifying labor and putting brains and skill into the common occupations of life." Like Booker T. Washington, they must be sincere in their efforts to help the man farthest down.

"There is nothing so trying and discouraging to any man who has control of any business or who is responsible for anything as to be surrounded by a number of persons who are continually giving excuses instead of service." (Booker T. Washington.)

VII. OVER-ALL CONTRIBUTION THAT THIS PROGRAM CAN AND WILL MAKE TO NATIONAL EFFICIENCY AND WELFARE

1. Effect upon the Negro: At least 95 percent of America's adult Negro population must sell its labor in order to earn a living. If this labor is to command a price sufficient to earn a livelihood in keeping with the American standard, it must be trained. Under our present educationa set-up, but little consideration is given to offering training to workers of low educational status. The program of the Booker T. Washington Birthplace Memorial is designed especially for workers of this type. The use of Slowe and Carver Halls as a national institute of industrial training will, by making training opportunities possible to thousands of these people, help them to sell their labor to the best possible advantage. These, in turn, will be better fitted to bear their share of local, State, and National responsibility.

2. Effect upon industry: Food-serving industries, service occupations, manufacturers, and similar industries use a large percent of unskilled labor. If a better supply of labor can be supplied for these industries, the effect will be both profitable and far-reaching. The Federal Government, in helping to make possible facilities to train a better trained supply of workers along lines indicated, will contribute to the well-being of these industries and through them to the Nation in general.

3. Dining-car service: Thousands of Negroes are employed in this occupation. Each summer thousands of young Negro boys work in this service to earn money to attend school. If these workers can be given short, intensive courses in the National Institute of Industrial Training, the traveling public will be better served, food waste will be cut down, and the public health more closely safeguarded.

4. Pullman service: Transportation systems of the country take care of a large number of workers in their Pullman services. A large percent of the people who use such services are important—that is, they are business men and women, lawmakers, professional people, etc. These people are of sufficient value to the country to be given the benefit of efficient service. The training offered at the National Institute of Industrial Training would give to this industry a large supply of better trained workers.

"There is little hope in this world or in the other world for any people until the people of this world have learned the disgrace of idleness and the dignity and beauty of all kinds of labor." (Booker T. Washington.)

VIII. THE INSPIRATIONAL AND MORAL EFFECT OF THIS UNDERTAKING

Lucy Diggs Slowe, in whose honor Slowe Hall was named, and George Washington Carver, world-famed scientist, whose name Carver Hall bears, were both untiring workers who believed firmly in Booker T. Washington's idea of glorifying and dignifying labor. To use these buildings to carry out Booker T. Washington's idea of helping the masses of Negroes to help themselves to the extent that they can be proud and make their race and Nation proud of them will be an

inspiration to Negroes everywhere. Humble workers who can come to the Nation's Capital and get the spirit of these two fine Americans will go back home fired to the extent that they can pass on to the people of their villages and towns a profound and abiding interest in our National Government and its interest in the welfare of its humble working people.

"The average person going to work becomes a regular machine, never giving the matter of improving the methods of his work a thought." (Booker T. Washington.)

IX. SOURCE OF SUPPORT FOR NATIONAL INSTITUTE OF INDUSTRIAL TRAINING

1. Industry: Because the program of the National Institute of Industrial Training is one that specifically meets today's needs in many occupations that affect thousands of people, there is no doubt of the support that will be given it. Hotel organizations, transportation services, owners and operators of service occupations, and industry in general will support this movement in proportion to the facilities that are made available to help in the doing of this job.

2. Permanent and transient guests: Revenue from permanent and transient guests in the buildings will be another source of support. The buildings under discussion have room space to accommodate 300 guests with sufficient space remaining to be converted into housing quarters for 300 or more students.

3. Scholarship: Since the work of the National Institute of Industrial Training will affect such a large and varied field, many individuals can be induced to give scholarships as a source of support.

4. Fraternal organizations: J. Finley Wilson, grand exalted ruler of the I. B. P. O. E. of W.; Ligon Wilson, deputy grand master of Negro Masons; the grand chancelor of the Knights of Pythias, are all members of the board of trustees of the Booker T. Washington Birthplace Memorial. All of these are deeply interested in this project and will give their support and that of their organizations to this undertaking.

5. Religious groups: Dr. D. V. Jemison, president of the 4,000,000 members of the National Baptist Convention; Dr. Henry Allen Boyd, secretary of the National Baptist Publishing Board; Dr. G. Lake Imes, field representative for the Presbyterian Church and Christian Missions, are all members of our board of trustees. The bishops council of the Methodist Church is deeply interested in the undertaking.

6. The Booker T. Washington memorial half dollar: The Seventy-ninth Congress authorized the coinage of 5,000,000 Booker T. Washington memorial half dollars to be sold at a premium to help in the program of the Booker T. Washington Birthplace Memorial. Through the establishment of the National Institute of Industrial Training, which will affect such a large segment of the American people, the sale of the memorial half dollars will be stimulated, a greater number will be disposed of, and thus greater income assured.

7. General solicitation campaign: On the basis of the number of people affected by this program, the general public will be called upon for its support.

8. Campaigns in special fields: Because of the nature of the work done in the National Institute of Industrial Training, both employers and employees will contribute.

9. Negro industrial training fund: A fund will be established to make possible: (1) an endowment fund; (2) a maintenance fund.

10. Wills and bequests: Many worth-while causes are included in wills and bequests. This program will work toward being so included.

11. Foundations: Efforts will be made to secure the support of both national and private foundations.

12. Federal and State aid: Since this program will contribute to both State and national welfare, Federal and State aid will be sought in connection with this undertaking.

"The world is looking for the person who is thoughtful, who will say at the close of work hours, 'Is there not something else I can do for you? Can I not stay a little later, and help you?'" (Booker T. Washington.)

Inflation

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 17, 1947

Mrs. DOUGLAS. Mr. Speaker, Walter P. Reuther, president of the UAW-CIO, speaking yesterday at the National Press Club, charged that both Congress and industry are failing to meet their responsibilities for halting inflation and failing to get the production needed by our own and other peoples.

Noting striking parallels between the needs in the present crisis and the pre-Pearl Harbor days of 1941, when industry insisted on being let alone and doing business as usual and reaping profits as usual, Mr. Reuther warned that to wait for another economic, political Pearl Harbor at this time might mean that we will be forever too late with too little.

He challenged both the NAM, which recently held its own private congress of American industry, and the Congress elected by the American people to act even at this late hour to get the raging fever of inflation out of the economic system and to apply the allocations, price control and expansion of production facilities that are essential to production.

Speaking of profits, which I discussed yesterday in my remarks, Mr. Reuther pointed out that:

During the first half of 1947, corporation profits before taxes were running at an annual rate of $29,200,000,000.

In the same period, wages and salaries ran at the rate of $77,500,000,000.

If corporations had raised their wages and salaries 18 percent, they would still have had profits before taxes of $14,100,000,000. This would have left them with profits after taxes of $8,500,000,000.

Such profits are equal to the most profitable prewar (1929) and are more than double their profits in the years 1935–39, which the excess-profits law treats as normal profits.

Applying this record of profits to price reduction, Mr. Reuther stated that, if, instead of raising wages, corporations had applied half their profits before taxes to cutting prices, they would, on the average, have cut the cost of all goods and services to consumers by $14,000,000,000 a year. This would have been a price cut of 8 percent.

Amendment to Title VI of the National Housing Act

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, December 19, 1947

Mr. MULTER. Mr. Speaker, ordinarily I would not take time to speak in support of a measure which has been unanimously reported out of the committee of which I am proud to be a member, and the passage of which bill seems assured. I do so, however, in this instance for reasons which will at once become apparent. The bill will permit the continuance of the present program, which is making available some housing facilities. It by no means will relieve the housing situation entirely.

I believe that the early enactment of the Taft-Ellender-Wagner bill will aid considerably in accomplishing that end. That, too, however, will be but one more step in the desired direction. Unless and until substantially more building materials, at substantially lesser prices, become available, no real progress can be made in relieving the housing shortage.

At this moment it seems unlikely that any legislation to that end will be accomplished at this session. The enactment of such legislation, coupled with legislation implementing the program as outlined by the President, should be made the first order of business when Congress reconvenes in 1948.

While voicing my support of this bill, I believe it imperative that the attention of the authorities be directed to the fact that complaints are increasing from all quarters that houses are being sold to veterans at greatly inflated prices, and that already these houses are showing the effects of bad materials and sloppy workmanship. Increased costs of new houses has been blamed by many upon increased wages. The fact is, however, that the percentage of increased costs of materials since the end of the war has been almost three times that of labor costs.

Unless there is stricter supervision and inspection of these houses, and more stringent appraisals, we may find many of these houses reverting to the mortgagees within the next 3 or 4 years.

Accidental Death Rate in Connecticut

EXTENSION OF REMARKS

OF

HON. ANTONI N. SADLAK

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, December 19, 1947

Mr. SADLAK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article which appeared in the Hartford (Conn.) Daily Courant

on Sunday, December 14, 1947, concerning the death rate in Connecticut. I want to call your attention to the fact that on January 21, 1947, I had inserted in the RECORD an editorial from the Hartford Daily Courant entitled "Infant Mortality," which indicated, according to the records of the United States Public Health Service, that infant mortality in the United States had declined 38.3, the lowest in history, and was bettered only by Australia with 29.4 and Sweden 29.6. Connecticut's record was far superior to most sections of the country with an infant mortality rate of 29.9. This excerpt shows that Connecticut is not only an excellent State to be born in, but it is a good State to live in, as it leads all the States, according to the report filed with the State highway safety commission by the National Safety Council, in that it has the lowest rate for all accidental deaths, in spite of the fact it has substantially increased in population since the last decennial census.

The article follows:

STATE HOLDS LOWEST ROAD DEATH RATE—RATIO OF 48.3 PERCENT WELL UNDER 70.5 FOR UNITED STATES, SAYS COMMISSION

Connecticut continues to lead the country in lowest rate for all accidental-death experience, according to a report filed Saturday with the State highway safety commission by the National Safety Council.

The Connecticut rate of 48.3 violent deaths per 100,000 population just shades the rate of 48.4 for Massachusetts. The national rate is 70.5, emphasizing the comparatively low rate recorded by Connecticut. Out of 40 States reporting all types of violent fatalities to the National Safety Council, only Connecticut and Massachusetts registered a rate below 50 deaths per 100,000 population.

INCLUDES ALL FATALITIES

The report includes all fatalities caused by violent experience in any form in any place in the State. Connecticut reported 732 such deaths for the first 9 months of this year compared with 750 cases for the same period last year. The decrease of 18 cases is slightly less than a 3-percent drop. The National Safety Council reports an estimated 9-month violent-death toll for the country of 75,800 as compared with 72,800 for the same period last year—an increase of 4 percent.

It looks like a record-breaking year for Connecticut, according to William M. Greene, director of the highway safety commission, who says that information from the bureau of vital statistics, State department of health, gives reason to believe that the 1947 total of violent deaths in Connecticut may be less than 1,000, which would be a new low total for the State.

Constitution of AMVETS

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, December 19, 1947

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following constitution of AMVETS—the only World War II veterans' group chartered by Congress—as amended October 2, 1947:

CONSTITUTION OF AMVETS (AMERICAN VETERANS OF WORLD WAR II)

PREAMBLE

We, the American veterans of World War II, fully realize our responsibility to our community, to our State, and to our Nation, associate ourselves for the following purposes: To uphold and defend the Constitution of the United States; to safeguard the principles of freedom, liberty, and justice for all; to promote the cause of peace and good will among nations; to maintain inviolate the freedom of our country; to preserve the fundamentals of democracy; to perpetuate the friendship and associations of the Second World War; and to dedicate ourselves to the cause of mutual assistance, this by the grace of God.

ARTICLE I—NAME

The name of this organization shall be AMVETS (American Veterans of World War II), and it shall be hereinafter referred to as AMVETS.

ARTICLE II—AIMS

The aims and purposes of this organization are as follows:

1. To serve our country in peace as in war; to build and maintain the welfare of the United States of America toward lasting prosperity and peace for all its inhabitants.

2. To encourage, in keeping with the policies of our Government, the establishment of a concrete plan to secure permanent international peace and to assist in the maintenance of international peace.

3. To inspire in our membership a sense of responsibility, and to develop leadership for the preservation of our American democratic way of life.

4. To help unify divergent groups in the over-all interest of American democracy.

5. To train our youth to become purposeful citizens in a democracy with full knowledge of the responsibilities as well as the privileges of citizenship.

6. To cooperate with all duly recognized existing veteran organizations in the furtherance of the aims of World War II veterans.

7. To insure the orderly return of the veteran to civilian life by protecting his rights as an individual while he is still in uniform.

8. To expedite and assist in the rehabilitation of the veteran by maintenance of employment services, sponsoring educational opportunities, and providing counsel on insurance, housing, recreation, personal problems, hospitalization, and veterans' benefits.

9. To act as a liaison agent between the veteran and the Government.

10. To provide an organization to encourage fellowship among all veterans of World War II.

11. To keep the public forever reminded that the veterans of World War II fought or served to preserve peace, liberty, and democracy for their Nation.

ARTICLE III—ORGANIZATION

SECTION 1. AMVETS shall be organized with a national headquarters, located at Washington, D. C., and a department in the District of Columbia and in each State and Territory of the United States. Local posts shall be formed within such departments, and intermediate administrative groups may be created by the national executive committee and the department executive committees, to function within their respective jurisdictions, where such action is deemed advisable.

SEC. 2. The national headquarters shall be composed of the national officers, both elective and appointive, and the members of the national executive committee. It shall be the duty of the national officers to advance the cause of AMVETS, to carry out its aims and purposes and to provide the machinery for realization of the plans and policies established by the mandates of the national convention.

SEC. 3. The United States is divided into the following districts:

District I: Maine, Vermont, New Hampshire, New York, Rhode Island, Massachusetts, Connecticut, New Jersey; subdistrict A: Maine, Vermont, New Hampshire, New York; subdistrict B: Massachusetts, Connecticut, Rhode Island, New Jersey; subdistrict home offices: New York City and Boston.

District II: Pennsylvania, Maryland, Delaware, West Virginia, Virginia, North Carolina, Kentucky, Tennessee, District of Columbia; subdistrict A: Pennsylvania, Maryland, Delaware, West Virginia, Washington, D. C.; subdistrict B: Virginia, North Carolina, Kentucky, Tennessee; subdistrict home offices: Harrisburg, Pa., and Arlington, Va.

District III: South Carolina, Georgia, Florida, Alabama, Oklahoma, Mississippi, Louisiana, Arkansas; subdistrict A: South Carolina, Georgia, Florida, Alabama; subdistrict B: Mississippi, Louisiana, Arkansas, Oklahoma; subdistrict home offices: Miami, Fla., and New Orleans, La.

District IV: Ohio, Indiana, Illinois, Missouri, Iowa, Michigan, Minnesota, Wisconsin; subdistrict A: Ohio, Indiana, Illinois, Missouri; subdistrict B: Iowa, Minnesota, Wisconsin, Michigan; subdistrict home offices: Chicago, Ill., and Detroit, Mich.

District V: Kansas, Nebraska, South Dakota, North Dakota, Wyoming, Colorado, Montana; subdistrict A: Kansas, Nebraska, South Dakota, North Dakota; subdistrict B: Colorado, Wyoming, Montana; subdistrict home offices: Omaha, Nebr., and Denver, Colo.

District VI: Texas, New Mexico, Arizona, Utah, Nevada, Idaho, Oregon, Washington, California; subdistrict A: Texas, New Mexico, Arizona, Utah; subdistrict B: California, Nevada, Idaho, Oregon, Washington; subdistrict home offices: Dallas, Tex., and San Francisco, Calif.

ARTICLE IV—MEMBERSHIP

SECTION 1. Any person who served in the armed forces of the United States of America, or any American citizen who served in the armed forces of an allied nation of the United States, on or after September 16, 1940, and before December 31, 1946, is eligible for regular membership in AMVETS, provided such service when terminated by discharge or release from active duty be by honorable discharge or separation. No person who is a member of, or who advocates the principles of, any organization believing in, or working for, the overthrow of the United States Government by force, and no person who refuses to uphold and defend the Constitution of the United States, shall be privileged to become, or continue to be, a member of this organization. The right of membership is reserved to those members in good standing, who entered the service after December 31, 1946.

SEC. 2. Honorary memberships shall not be granted after the adoption of this amendment. In lieu thereof, certificates of merit may be awarded by a suitably inscribed award given to those rendering distinct service to the community and to veterans of World War II. Such awards may be made by posts, internal administrative groups, State departments, the national executive committee, or national conventions. Awards by posts and internal administrative groups must be approved by department executive committees.

ARTICLE V—NATIONAL CONVENTION

SECTION 1. A national convention shall be held annually, prior to October 1, at a time and place fixed by the previous convention,

and shall constitute the legislative body of AMVETS.

SEC. 2. The national convention shall comprise the following delegates:

(a) Each local post shall elect one delegate and one alternate.

(b) Each department shall choose one delegate and alternate at its convention, to be held at least 30 days prior to the national convention.

(c) Each member of the national executive committee shall be entitled to one vote at the national convention, but the national commander shall vote only in case of a tie.

SEC. 3. Each delegate shall be entitled to one vote. Alternates shall have all the rights and privileges of their delegates, except they shall vote only in their delegate's absence.

SEC. 4. No post or department delegates shall be seated at the national convention unless the respective posts or departments which they represent shall be fully paid up in all their accounts with the national headquarters, and their accounts duly audited and membership certified 30 days prior to the national convention.

SEC. 5. Two hundred of the voting delegates registered at the national convention shall constitute a quorum.

SEC. 6. This article shall not become effective as amendatory of the original constitution prior to the adjournment of the national convention at which it is adopted. Pending such adjournment, article V of the original constitution shall have full force and effect.

ARTICLE VI—NATIONAL OFFICERS

SECTION 1. The national convention shall elect a national commander, one vice commander at large who shall be a woman, finance officer, provost marshal, judge advocate, surgeon general, and a national chaplain. At the convention, the delegates from each district shall elect a national vice commander from each district. No elected commander or vice commander shall succeed himself or herself in office.

SEC. 2. All the elective national officers shall be members of the national executive committee, but the national commander shall vote only in case of a tie.

SEC 3. The national commander, with the consent and approval of the national executive committee, shall appoint a service director, a legislative director, a public-relations director, an inspector general, a national historian, a membership director, and an executive director, whenever vacancies occur in such offices.

SEC. 4. (a) No appointed officer or employee may be discharged or reduced in salary without the approval of the personnel committee which shall be composed of the national commander, the two immediate past national commanders and two members chosen by the national executive committee at the first meeting of the committee following the annual national convention.

(b) The national commander shall have power to suspend any appointed officer or employee for cause and to appoint an acting officer or employee to perform the duties of the suspended officer or employee until the next meeting of the personnel committee. At the time of such suspension the national commander shall set forth in writing the cause for such suspension and shall forward this to members of the personnel committee and the suspended officer or employee. Such written cause shall constitute the complaint upon which the personnel committee shall pass in determining whether the suspended officer or employee shall be removed from office. An appointed officer or employee shall not receive salary during the period he is suspended from the performance of his duties.

(c) An elective officer may be removed from office only by a two-thirds vote of the national executive committee after written charges against such officer shall have been preferred and furnished by registered mail to the officer concerned and to the members of the national executive committee. A full hearing shall be held by the national executive committee on charges preferred by an elected national officer or by three members of the national executive committee. Such hearing shall be held within 30 days after the charges are preferred and mailed.

(d) Procedure for removal from office of elected officers shall be prescribed by the national executive committee upon recommendation of the national judge advocate.

SEC. 5. A candidate for public office shall resign his national elective office. A national officer in AMVETS shall not hold any paid public office. National officers elected at a national convention shall be installed in office at the same session at which they are elected.

SEC. 6. The national executive committee shall, at its initial meeting following each national convention, establish the line of succession to the post of national commander in the event of a vacancy in that office, from among the national vice commanders.

ARTICLE VII—NATIONAL EXECUTIVE COMMITTEE

SECTION 1. The administrative power between national conventions shall be vested in the national executive committee, which shall be composed of the national commander, the retiring past national commander, the seven vice commanders, all other national elective officers, and one national executive committeeman from each State and Territory, to be elected by the respective departments in annual convention. An alternate shall be elected by each department to serve in the absence or disability of the department committeeman. Each of the above members shall be entitled to one vote, and in case of his absence or disability to participate in the proceedings of the committee, the duly elected alternate may cast his vote.

SEC. 2. Each national executive committeeman shall take office upon the adjournment of the department convention at which he is elected, and serve until his successor is duly elected and qualified. "Each such national executive committeeman shall serve for a term of 2 years, one-half of the departments electing committeemen each year."

SEC. 3. Members of the national executive committee shall be delegates to the national convention, each entitled to one vote.

ARTICLE VIII—NATIONAL ADMINISTRATIVE COMMITTEE

SECTION 1. At its first meeting the national executive committee shall elect from its membership seven executive committeemen to serve on an interim committee to be known as the national administrative committee, of which the national commander shall be chairman ex officio. The members of this committee, by their assent to serve, obligate themselves to attend substantially all of the meetings of the committee and participate actively in its work. Seven alternates shall also be elected and in the event of the inabiltiy of one of the delegates to attend, his alternate shall do so. Five members present shall constitute a quorum.

SEC. 2. The national administrative committee shall carry out to the best of its ability all the powers and functions delegated to it by the national executive committee and assume the general responsibility of the executive committee to pronounce AMVET policy on questions of current interest and in cases of emergency arising between meetings of the national executive committee.

SEC. 3. No powers specially delegated to the executive committee by this constitution or the bylaws shall be assumed by the national administrative committee without the specific delegation thereof by the executive committee. A stated meeting of the national administrative committee shall be held at least once in every 60 days, and the office of any member of this committee who shall be absent from two successive meetings thereof may be declared vacant and a successor be elected by the executive committee from its membership.

ARTICLE IX—DEPARTMENTAL ORGANIZATION

SECTION 1. Each State or Territorial area of the United States shall constitute a department which shall be organized in a manner similar to the national organization. New departments shall be chartered by the national commander upon the approval of the national executive committee. Each department shall submit a copy of its department constitution and bylaws to the national judge advocate for approval and any amendments to such constitution and bylaws shall likewise be submitted to the national judge advocate at each national convention. The recommendations of the national judge advocate shall be submitted to the national executive committee for its approval. Each department shall conduct its own convention, to be held not less than 30 days before the annual national convention, at which time it shall elect a department executive committee, and delegates to the national convention and the national executive committee.

SEC. 2. It shall be the duty of each department to aid in the organization of local posts, and to carry out the plans and policies delegated to it by the national headquarters in adherence to the provisions of this constitution.

ARTICLE X—POST ORGANIZATION

SECTION 1. Local posts may be formed by 10 eligible individuals by making application to their department, and if there be no organized department, by making application directly to the national headquarters. If the department approves, the application shall be forwarded to the national headquarters and a charter shall be issued.

SEC. 2. Posts shall be governed locally by their own officers chosen according to their own constitution and bylaws. They shall be subject and subordinate, however, to the jurisdiction of the national and department headquarters; and any provision of a department or post constitution found to be in conflict or contrary to the provisions of this constitution, shall be null and void.

ARTICLE XI—FINANCES

SECTION 1. All national finances of AMVETS shall be under the control of the national executive committee, which shall delegate sufficient general and specific authority to the finance committee to carry out the usual duties of the office. The finance committee shall make periodic reports at all stated meetings of the national executive committee, and an annual report at the national convention. Revenue shall be derived from annual dues and other sources approved by the executive committee. The regulation of annual dues shall be set out in the bylaws.

SEC. 2. An annual budget shall be submitted for approval at the first annual meeting of the executive committee. It shall be prepared by the retiring finance committee, who shall have received proposed budgets from the retiring heads of national departments, and shall have consolidated the same. In the event that the budget is not approved, a finance committee shall be appointed, consisting of three members of the executive committee, by the new national commander, to prepare such budget for presentation to the executive committee.

SEC. 3. The finance committee shall consist of three members, one of whom shall be

appointed by the new national commander, one by the retiring national commander, and the finance officer. The finance officer shall be the chairman of the committee.

ARTICLE XII—DISCIPLINE

SECTION 1. Disciplinary rules relative to local posts shall be prescribed by the departments.

SEC. 2. The national executive committee, after notice and hearing before a subcommittee, may cancel, suspend, or revoke the charter of any department for good and sufficient cause to it appearing. Procedure for such action shall be prescribed by the national judge advocate. In the event of the cancellation, suspension, or revocation of any charter of any department, the suspended body shall have the right of appeal to the next national convention.

SEC. 3. In the event of such action, the national executive committee is empowered to take over the operation of the department whose charter is suspended or revoked until the next department convention, but is bound by the constitution and bylaws thereof. At the next department convention, new department officers must be selected to carry on the work of the department.

ARTICLE XIII—POST TRANSFERS

SECTION 1. Any member in good standing may change his post or department, and may join a new post without repaying the current annual dues.

ARTICLE XIV—AUXILIARIES

SECTION 1. AMVETS recognizes a subsidiary organization known as the AMVETS auxiliary.

SEC. 2. Membership in the auxiliary is limited to mothers, wives, daughters, and sisters of regular members of AMVETS; and mothers, widows, daughters, and sisters of deceased veterans who would have been eligible to join AMVETS. The term mother shall be construed so as to include any female member of the family of or any female guardian of such person or deceased veteran who has or is exercising the care and responsibility for the rearing of such person or deceased veteran.

SEC. 3. The auxiliary shall be governed in each department by such rules and regulations as may be prescribed by the said department and approved by the national executive committee.

SEC. 4. (a) Every auxiliary shall be affiliated with an AMVETS post, and carry the corresponding number of that post.

(b) No auxiliary shall be formed when no post exists.

(c) Wherever auxiliaries presently exist where there are no posts they shall proceed to organize posts as one of their present objectives.

(d) At the time of the next convention, if auxiliaries still exist where there are no posts, they shall be established as branches of an auxiliary to a post, and entitled to representation through that auxiliary so there will be no more delegates from the department than the number of AMVETS posts which have accredited auxiliaries.

ARTICLE XV—SAD SACKS

SECTION 1. AMVETS recognizes a subsidiary organization known as AMVETS Sad Sacks of American Veterans of World War II.

SEC. 2. Membership in Sad Sacks shall be limited to members in good standing of AMVETS.

SEC. 3. Sad Sacks shall be governed by a constitution and bylaws approved by the national executive committee.

ARTICLE XVI—PUBLICATIONS

SECTION 1. All publications bearing the name AMVETS, published by the national organization, State departments, posts, auxiliaries, Sad Sacks, or any other branch or affiliate of AMVETS shall be under the supervision of the national executive committee, which shall delegate sufficient general and specific authority to the publications committee to carry out the necessary duties.

SEC. 2. The publications committee shall consist of three members, one of whom shall be appointed by the new national commander, one by the retiring national commander, and one elected by the national executive committee. The new national commander shall designate the chairman.

ARTICLE XVII—AMENDMENTS

SECTION 1. This constitution may be amended by a two-thirds vote of the total authorized delegates present at any AMVET national convention. Proposed amendments for action of a national convention must be submitted by a department convention, department executive committee, or the national executive committee to the national commander, and by him to the several departments and members of the national executive committee, by mail, at least 30 days prior to the convening of the next national convention. This constitution may, however, be amended at any national convention without notice, by unanimous vote.

BYLAWS OF AMVETS

ARTICLE I—NATIONAL EXECUTIVE COMMITTEE

SECTION 1. In case of death, resignation, or removal by his respective department of any national executive committeeman, or alternate, the successor shall be selected as such department shall determine and shall serve for the remainder of such unexpired term.

SEC. 2. Stated meetings of the national executive committee shall be held (1) within 24 hours after the adjournment of the national convention, (2) at least once on a date approximately midway between national conventions, and (3) within 36 hours before the next national convention. Special meetings may be held upon reasonable notice at the call of the national commander. The national commander shall call a meeting of the national executive committee upon the written request of the national executive committeemen from at least 25 percent of the organized departments.

SEC. 3. A majority of the members shall constitute a quorum of the national executive committee.

SEC. 4. The national commander shall name such committees as he shall deem advisable, subject to ratification by the national executive committee at its next meeting succeeding the appointment, or by the national administrative committee, if such powers are delegated to it by the national executive committee. Such committees shall serve during the pleasure of the administration appointing them, and shall terminate upon the inauguration of a new national commander. No provision of this article shall be construed to prejudice the reappointment of the national executive committee.

SEC. 5. The national finance committee shall be charged with the preparation of the annual budget, and the handling of funds, subject to the approval of the national executive committee.

SEC. 6. The national executive committee shall approve the appointment and employment of proper officers and employees for the administration of the affairs of AMVETS and prescribe their duties and compensation.

SEC. 7. Any national officer may receive compensation for his authorized activities on behalf of the organization, such compensation to be fixed in amount by the vote of the national executive committee.

SEC. 8. All questions affecting the eligibility for office and conduct of national officers shall be referred to and determined by the national executive committee. All questions affecting the eligibility for office and conduct of the national executive committeemen, department officers, or members of department executive committees may be referred to and determined by the executive committee of the department involved.

ARTICLE II—DUTIES OF OFFICERS

SECTION 1. National commander: The national commander shall be the executive head of AMVETS, with full power to enforce the provisions of the national constitution, the national bylaws, and the will of the national convention. He shall be the chairman of the national convention and the national executive committee. He shall appoint all necessary committees, subject to the ratification of the national executive committee, and shall perform such other duties as are usually incident to the office.

SEC. 2. National vice commanders: The national vice commanders shall act as representatives of the national commander in all matters referred to them by him, and shall upon his request preside over the meetings of the national convention or national executive committee, and perform such other duties as are usually incident to the office.

SEC. 3. National executive director: The national executive director shall be charged with the administration of the policies and mandates of the national convention, the national executive committee, and the national commander. He shall supervise the activities of all divisions at national headquarters, issue such directives as may be necessary to departments and posts, act for the national commander during his absence from national headquarters, and perform such other duties as are usually incident to the office. He shall serve at the pleasure of the national commander and the national executive committee.

SEC. 4. The national finance officer: The national finance officer shall be custodian of the funds of the national organization. All checks disbursing the funds of the national organization shall be signed by two or more persons as designated by the national executive committee, and the finance officer shall make reports of the condition of the national treasury when called for by the national commander or national executive committee. The national finance officer shall furnish a surety bond as hereinafter prescribed. He shall perform such other duties as are usually incident to the office.

SEC. 5. National judge advocate: The national judge advocate shall advise the national officers and the national executive committee and national administrative committee on all legal matters, including the construction and interpretation of the national constitution and bylaws, and shall perform such other duties as are usually incident to the office.

SEC. 6. National service director: The national service director shall be the service and welfare officer of the national organization. He shall be responsible for the proper handling of claims of veterans, and their dependents or survivors, before the Veterans Administration; employment problems; prosecution of rights under the Servicemen's Readjustment Act and Selective Training and Service Act; civil-service questions and other legislation concerning veterans' affairs; and the answering of individual requests for assistance or information from members, posts, and departments. It will be the duty of the national service director to formulate a rehabilitation program and to direct the activities of staff members charged with implementing the program. A part of this program will be the formation of a staff of trained national service officers and their assignment to the various regional offices of the Veterans Administration.

SEC. 7. National legislative director: The national legislative director shall be responsible for preparing the national legislative program in accordance with the mandates of the national convention, the national executive committee, national administrative committee, and the national legislative committee. It is his further responsibility to draft the necessary bills in connection therewith and to cause such bills to be introduced in Congress and actively urge the consideration of legislation thus proposed. He shall at all times be fully informed when hearings are to be held on bills in which AMVETS is interested and be prepared to present testimony before the committee or committees handling such bills. It shall be his duty to maintain close liaison with Members of the House and Senate in order to secure the enactment of the AMVET program. He will make every effort to cooperate fully with other groups favoring proposed legislation which is supported by AMVETS, and it shall be his responsibility to maintain adequate legislative information when requested by individual members, posts, or departments of AMVETS. He shall serve at the pleasure of the national commander and the national executive committee.

SEC. 8. National public relations director: The national public relations director, under the direction of the national commander, shall be responsible for the planning, formulation, and development of a public relations program, including publicity, organizational publications, etc. He shall be responsible for efficient and proper liaison with all public relations media—press, radio, newsreels, periodicals—and all forms of advertising. He will be kept currently informed by the other national officers of all matters affecting his department and keep the public constantly advised of declared and established AMVET policy and activities. He shall serve at the pleasure of the national commander and the national executive committee.

SEC. 9. National chaplain: The national chaplain shall perform such divine and nonsectarian services as may be necessary, adhering to the appropriate ceremonial rituals, and discharge the other duties incident to the office.

SEC. 10. National historian: The national historian shall compile from year to year all records of historical value and interest for the national headquarters of the AMVETS. He shall also assist department and post historians so as to coordinate and unify the work of these officials, and perform such other duties as the national commander and the national executive committee shall prescribe. He shall serve at the pleasure of the national commander and the national executive committee.

SEC. 11. National provost marshal: The national provost marshal shall maintain order at all meetings and conventions. He shall perform such other duties as may be requested by the national commander.

SEC. 12. The surgeon general shall perform such special duties as are assigned by the national commander, as well as the usual duties incident to the office.

ARTICLE III—CHARTERS

SECTION 1. A department executive committee may suspend, cancel, or revoke a post charter and such action shall be final and conclusive, unless an appeal is taken to the national executive committee within 30 days from the date of said suspension, cancellation, or revocation. Action taken by the national executive committee upon appeal shall be binding, pending appeal to the next national convention.

A post charter which has been thus suspended may be reinstated by action of the department executive committee if the post purge itself of the offense within 60 days of its suspension. If the delinquency is not cleared to the satisfaction of the department executive committee within 60 days, appropriate action shall be taken by that committee to effect revocation or cancellation of the charter.

In the event that a department fails or refuses to discipline a post after the national commander has requested such action, it is violating the rules of the constitution and bylaws. After demand has been made upon said department for action, the national commander may suspend the charter of such post by notice, accompanied by written notice, a copy of which shall be forwarded to the department and to the national executive committee. The determination of whether the charter shall be cancelled shall be considered at the next meeting of the national executive committee.

SEC. 2. Any post failing to meet the obligations imposed upon it by the constitution and bylaws, or ceasing to function for 6 months as a post of the AMVETS or voluntarily ceasing to function as a post, or merging with one or more other posts, or refusing or failing to pay the department and national per capita dues within 60 days after collection by the post shall, upon order of the department executive committee, surrender its charter.

SEC. 3. Upon revocation, cancellation, or suspension of the charter of a post in any department of AMVETS, said post shall immediately cease operation, and upon revocation or cancellation shall turn over its charter and assets to its department commander or department executive committee. The department executive committee is authorized, empowered, and directed by and through its duly authorized agent to take possession, custody, and control of all records, property, and assets of said post. So much of the said assets as are required for the purpose shall be applied to any indebtedness of the said post: *Provided, however,* That nothing herein contained shall be construed as requiring any department to take over or to assume any financial responsibility of such post. Said department executive committee may provide for the transfer of the members in said post to other posts of their choice, subject to the approval of such other posts.

SEC. 4. The national executive committee shall provide a uniform code of procedure to be followed in the revocation, cancellation, or suspension of post charters, and a method of appeal to the national executive committee.

ARTICLE IV—DISCIPLINE OF POSTS AND POST MEMBERS

SECTION 1. Each post of the AMVETS shall be the judge of its own membership, subject to the provisions of the constitutions and bylaws of the national and department organizations.

SEC. 2. Members may be suspended or expelled by a post, upon a proper showing of cause. Written charges shall be based upon disloyalty, neglect of duty, dishonesty, and conduct unbecoming a member of AMVETS.

SEC. 3. Any member who has been suspended or expelled has the right of appeal to his department executive committee, according to the provisions in the bylaws of such department. The decision of the committee shall be final with the right of appeal to the department convention.

SEC. 4. A member whose dues for the fiscal year have not been paid by January 1 shall be classed as delinquent. If his dues are paid on or before April 1, he shall be automatically reinstated. If he is still delinquent after April 1, his membership in AMVETS shall be forfeited.

SEC. 5. Nothing contained in this article shall be construed to limit in any way the powers conferred by section 1 of article III of the bylaws.

ARTICLE V—MEMBERSHIP

SECTION 1. Membership in AMVETS constitutes membership in the national organization of AMVETS through post affiliation. Hereafter all AMVETS shall, prior to their acceptance as members, pledge allegiance to the United States of America and its Constitution, and certify that they have read, or have had read to them, the AMVETS declaration of principles, and that they accept and subscribe to the same, and they shall not advocate or belong to any group or organization advocating the overthrow of the United States Government by force.

ARTICLE VI—MONEYS AND COLLECTIONS

SECTION 1. All national, department, and post officials handling AMVETS funds, shall be properly bonded with a good and solvent bonding and surety company, acceptable to the United States Treasury, as surety to cover the average amount of AMVETS funds handled by such individuals in a single year. In case of delinquencies in the payment of amounts due department or national headquarters, action shall be taken at once by the proper officials to bring about an immediate and complete settlement. The bonds provided by national officials shall be approved by the national executive committee, and those provided by department and post officials shall be approved by the department executive committee.

SEC. 2. No contracts involving expenditure in excess of $1,000 of national AMVETS funds shall be negotiated without inviting a reasonable number of competitive written bids, and where the required products are of equal quality the contract shall be awarded to the lowest bidder.

SEC. 3. Any contract for solicitation of donations where the amount involved is in excess of $500 shall be subject to approval by the department executive committee and national executive committee or national administrative committee.

SEC. 4. All posts and department accounts shall be kept in accordance with a uniform accounting system established by national headquarters. The accounting system forms are to be provided by national headquarters to the posts and departments at a nominal cost.

SEC. 5. The minimum annual membership dues shall be $4, payable to the post, of which $2 shall be forwarded to the national headquarters, $1 forwarded to the department headquarters, and the remainder retained by the post. University and college posts may be formed on the campus, with dues of $1.50 per year, payable to the post, of which 50 cents shall go to the national headquarters, 50 cents to the department headquarters, and the remainder retained by the post. Any veteran who is eligible to join AMVETS and who is in full-time attendance at a university, college or trade or technical school under the Servicemen's Readjustment Act (GI bill of rights) and Public Law No. 16 of the Seventy-eighth Congress may join any post for the $1.50 membership fee per year. The method of forwarding dues to national and department headquarters shall be prescribed by the national convention or the national executive committee.

ARTICLE VII—DEFINITIONS

SECTION 1. The word "he" wherever it shall appear in either the constitution or bylaws of the AMVETS, shall be construed as referring to both sexes.

ARTICLE VIII—RESTRICTED USE OF ORGANIZATION

SECTION 1. AMVETS, or any component part thereof, shall not be used to promote

the interest of any individual who is a candidate for public office, or to promote otherwise, any individual, organization, political party, faction, or product. Any violation of this provision shall be sufficient cause for disciplinary action against the offending post or department.

ARTICLE IX—MEETINGS

SECTION 1. All business meetings of this organization shall be conducted under Robert's Rules of Order.

ARTICLE X—NATIONAL FLOWER

SECTION 1. The national flower shall be the four-leaf white clover, meaning "think of me."

ARTICLE XI—DIVISION OF INTERNATIONAL AFFAIRS

SECTION 1. There is hereby created a Division of International Affairs of AMVETS. The division shall be composed of three directors, one of whom shall be the executive director and the other two shall be associate directors. The directors shall be appointed by the national commander with the consent of the national executive committee.

SEC. 2. The directors shall serve at the pleasure of the national commander and the national executive committee.

SEC. 3. It shall be the duty of the directors to be informed on matters of international affairs, perform research and investigation in such affairs, inform the national executive committee and the membership of the organization of all matters found to affect the peace, and make recommendations thereon, and provide representation at any peace conference, subject to the approval of the national executive committee. Funds shall be provided upon approval of the executive committee for the operation of this division.

ARTICLE XII—ACCOUNTING FOR MONEYS

SECTION 1. All moneys received by this organization shall be strictly and accurately accounted for, and a report shall be made available annually to all members, showing the sources of all such income and the expenditure thereof. All posts, department, and national accounts shall be kept in accordance with a uniform accounting system as established by national headquarters.

ARTICLE XIII—POLICY

SECTION 1. The policy of AMVETS shall be fixed (a) by the national convention as reflected in the resolutions adopted, and (b) by the compilation of the result of periodical polls of posts on current issues. Departments, posts, subsidiaries and auxiliaries shall be notified by national headquarters of policy so fixed.

SEC. 2. No member of AMVETS shall represent or purport to represent any department, post, auxiliary, or subsidiary of AMVETS in opposition to, or other than in complete consonance with policy so determined and notified.

ARTICLE XIV—AMENDMENTS

SECTION 1. These bylaws may be amended at any national convention by a majority vote of the total authorized representation thereat, provided that the proposed amendment shall have been submitted through the national executive committee by mailing or delivering the same to it at least 30 days prior to the convening of the next national convention. The said bylaws may also be amended by a two-thirds majority vote of any national convention without prior notice.

SEC. 2. No proposed amendment shall be submitted through the national executive committee or considered by the national convention, as provided in section 1 of this article, unless said proposed amendment shall have been first submitted by a department convention, department executive committee or national executive committee.

TVA

EXTENSION OF REMARKS
OF
HON. ROBERT E. JONES, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Friday, December 19, 1947

Mr. JONES of Alabama. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

STATE OF ALABAMA,
COOPERATIVE EXTENSION WORK IN
AGRICULTURE AND HOME ECONOMICS,
Auburn, Ala., November 29, 1947.

Hon. GEORGE D. AIKEN,
Senate Committee on Agriculture,
Washington, D. C.

MY DEAR SENATOR AIKEN: This is to state some facts regarding the cooperative work of the Tennessee Valley Authority in agriculture and rural life in the Tennessee Valley area of Alabama, which includes 14 of the 67 counties in this State.

In that area the Alabama Extension Service, the Tennessee Valley Authority, farmers, and others have one agricultural program for all farmers. It is, therefore, a cooperative program, so created and so administered.

So the Tennessee Valley Authority has no agricultural program of its own. Their work, as defined by Congress in creating the Tennessee Valley Authority, requires research, education, and action in agriculture. Instead of performing these services the usual bureaucratic way the Tennessee Valley Authority works in cooperation with county and State institutions. It is, therefore, cooperative rather than competitive.

Their agricultural research work and their agricultural extension work in Alabama is done respectively through the experiment station and the extension service of the Alabama Polytechnic Institute which is the land-grant college for Alabama.

Stated differently, the Tennessee Valley Authority pools its contributions with the land-grant college and works on a team through the democratic processes of cooperation rather than going direct from Washington to individual farmers on their farms. In this way the Tennessee Valley Authority employs a public institution instead of individuals. This, I believe, is a departure in government.

A very important fact about the Tennessee Valley Authority is that farmers and others in that area are overwhelmingly in favor of it. Seldom, if ever, do we hear anyone in that area speak critically of the Tennessee Valley Authority.

The secret of their success is the fact that they're working with local and State agencies rather than in competition with them.

And greater progess in soil and water conservation and use, plus agricultural improvement as a whole, has been made in that area than elsewhere in Alabama. And the cost in attaining these outstanding results has been very low compared to the competitive way; that is, by each agency working independently and competitively.

Congress required that the Tennessee Valley Authority do certain work with fertilizer. This includes development of new processes in the manufacture of fertilizer and also improvements of its use on farms.

At the outset the Authority began experiment to produce improved fertilizer, doing this research work with the colleges at the plant at Muscle Shoals, which was erected during the First World War for the production of explosives.

In this cooperative program the unit test demonstration farms (UTD farm) were established. Neighbors select their UTD demonstrators, who in turn were furnished limited amounts of phosphate fertilizer to use in testing this fertilizer; and also to make the information known to their neighbors and others.

Each UTD farmer pays freight, handling charges, keeps accurate records, and makes available his farm for demonstration and other uses. The number of UTD farmers averages around 1 percent of the farms in a county which, of course, is a very small number; and each one receives only a limited amount of fertilizer, or just enough for testing purposes, including demonstrations. So it is not "free fertilizer."

When this work was started fertilizer people felt that TVA was going into fertilizer production to "give it away," which, of course, was erroneous. Instead, it was for better fertilizer, better use, more of it.

An impressive fact as to the effectiveness of this procedure is that from 1937 to 1945 the use of commercial fertilizer in these 14 valley counties increased 48 percent. During the same period the increase in fertilizer use in the other 53 counties of Alabama was only 18.5 percent. Another convincing fact as to the effectiveness of this procedure is the increase in winter legumes. Acreage planted in winter legumes in 1936 was 76,930; in 1945, 323,713 acres in the 13 counties, or an acreage increase of 325 percent.

In that area, therefore, where a relatively small amount of fertilizer was used for testing and demonstrating the increase in use was almost thrice that of all other counties of Alabama as an average. I believe that every UTD farmer in Alabama is now buying far more commercial fertilizer than he was prior to becoming a UTD farmer. Most of them are buying two or three times as much.

This proves conclusively that the type of fertilizer program in which TVA is engaged does not hurt anybody but helps everybody. The whole industry is better and farming is better, much better.

In this cooperative program there is no dictator. We all work together. It's true that the Extension Service employs personnel in the counties to engage in the cooperative program, but we have never tried to dictate to TVA and they have the same constructive feeling toward us. There is mutual understanding, cooperation, teamwork.

This avoids competition, duplication, confusion, delay.

Our workers in that area name other advantages to this procedure. They are:

1. Farmers have a big voice in the program. Each county has its soil conservation association with its active officers. This takes the program back to the land and the people on it. It gets active participation and cooperation.

2. It takes the results of our experiment station immediately to the farmers for their use; first, on these UTD farms and immediately thereafter on the farms of their neighbors. This is revealed by the fertilizer figures used above. The experiment station, therefore, becomes a vital matter immediately and not something that is still far distant from the farmers.

3. It recognizes that the first and foremost need of farmers is a bigger income in cash while, at the same time, the land is being improved. Therefore, it combines better land use with wise conservation of land so that land serves farmers better while they're serving it.

4. It has resulted in more diversification in farming. An illustration of this in one county is that each of the farms is now growing alfalfa, none of which was growing alfalfa at the beginning of the program. Cotton production in that area, as another illustration, is now more than it was before TVA, but the amount of land in cotton is far less, about half. This has enabled farmers to add livestock in a big way. Many have added seed crops and are increasing their income sub-

stantially this way. Corn and all other crops and livestock have improved.

5. Farmers like this cooperative program because it is close to them. They feel that they are a part of it. Their voice is always audible and is recognized.

6. It makes the county agent the dean of agriculture in his county. He is in no sense a dictator but a leader for all the people of his county. This is proper since the county agent is a part of a State institution (land-grant college) with a research program to guide its extension workers in their teachings; and the county agent is also a county employee.

7. The cost of this cooperative program is much less. I don't have figures for comparison but I'm sure that one man working in this cooperative program as an assistant to the county agent accomplishes far more than is accomplished otherwise, or by an agency working independently. I believe that there is evidence to show that $1 this way will accomplish as much as three or four dollars the other way.

Often, both verbally and in writing, I've said that the No. 1 demonstration of the Tennessee Valley Authority is not with fertilizer, as great as this is; nor is it with electricity, or with flood control. It is in democracy in government. TVA is a democracy; not a bureaucracy.

This is illustrated by what happened within the Authority itself soon after their work started. At Muscle Shoals the number of children in school increased beyond local buildings and facilities because of TVA work.

One member of the Authority wanted the Authority to build a school and operate it. Another member insisted that instead of building and operating a school they should assist the local school boards in building a school and in operating it, being sure that it was a local school, not a TVA school. The third member of the Authority agreed on the latter procedure, which proved to be an historical decision and a very wise decision.

The same procedure is used in agriculture. I believe that the same procedure, if followed by all public agencies in agriculture, would eliminate confusion, duplication, conflict, excess costs, and other evils.

I, therefore, recommend this TVA pattern to you for your careful consideration.

I have found it very easy to work with TVA. I believe they would say the same about the Alabama extension service, as well as other land-grant college connections in the Tennessee Valley area.

Sincerely yours,

P. O. DAVIS, *Director.*

Family of Four

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 17, 1947

Mrs. DOUGLAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post:

FAMILY OF FOUR

No family head who has been struggling to pay for 85-cent eggs or children's shoes at $7 a pair needs statistics to convince him that living costs have soared through the roof. What he knows from his personal experience is only confirmed by the testimony of Ewan Clague, Commissioner of Labor Statistics, before a congressional subcommittee Tuesday, showing that the cost of a modest budget for a family of four in Washington had risen from $2,985 in March 1946, to $3,458 in June of this year. The chief value of these statistics is that they afford Congress concrete examples of what inflation is doing to moderate-income families—most of whose incomes have by no means kept pace with living costs.

It is no consolation to residents of this area that for a family of four Washington is the most expensive city in the country, running 2 percent above Seattle and 4 percent above Boston. The chief factor explaining this situation is the outlandish cost of housing in Washington. Housing here costs 9 percent more than in the next most expensive city, Chicago, and 35 percent more than in New Orleans. Aside from these more obvious differentials, however, the most remarkable thing about the 34-city survey made by the Bureau of Labor Statistics is the similarity it discloses in the general cost increases. Whereas the modest budget rose $473 in Washington during the 15-month interval, it also rose $431 in New Orleans, the least expensive city surveyed. In other words, the inflationary pressure is almost the same in all large urban centers. Moreover, it is continuing; costs have jumped an additional 3 percent since June, according to Bureau of Labor Statistics estimate.

Lest anyone think that the $3,458 figure for Washington represents a luxury budget, it is important to point out that it makes provision for a new overcoat for the head of the family only once in 7 years and allows a movie only once every 3 weeks for three members of the family. The people the study is talking about are the people who already have foregone dollar butter and 79-cent bacon. While the budget is not precisely spartan in that it provides adequate standards for diet and health, neither is it generous. As Mr. Clague observed, "As the prices rise more, without offsetting increases in incomes or methods of reducing the costs of the budget, the hardships are greater because the greatest concentration of budget-level families of four is probably in the $3,000–$4,000 income group, even now—at 1947 prices." Until the political parties stop political buck-passing and take concrete action to salt run-away inflation, the family standard of living will continue to be subjected to a tighter and tighter squeeze.

Stabilization of Commodity Prices

EXTENSION OF REMARKS

OF

HON. CLIFF CLEVENGER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1947

Mr. CLEVENGER. Mr. Speaker, painfully we are finding that "we cannot give our cake away and have it, too." To halt rising prices and restrain inflation, we stop inflationary practice. We cannot feed the fires of inflation with all our food and fiber, all our money and credit, and escape the pains of inflation.

We need less expenditure, more production, and restoration of financial sanity in America. Senate Joint Resolution 167 can accomplish none of these things, but under section 7 opens the doors to hundreds of millions of expenditures by the Commodity Credit Corporation all over the world. I cannot add my support to another wild scheme of theirs. With no limitations imposed, the cure can be worse than the disease.

Loyalty Cases

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, December 19, 1947

Mrs. DOUGLAS. Mr. Speaker, under permission to revise and extend my remarks in the RECORD, I include the following article from the Washington Post of Thursday, December 18, 1947:

LOYALTY CASES

A COMMUNICATION

(EDITOR'S NOTE.—The following communication is identical to one submitted to the New York Herald Tribune by the author, Mr. Benjamin V. Cohen. Mr. Cohen sent a copy to the Washington Post because of its interest in the loyalty cases.)

The New York Herald Tribune is to be congratulated upon the fine service rendered by its correspondent, Mr. Bert Andrews, in his reporting of the recent Government loyalty cases. Mr. Andrews' stories were also published in the Washington Post.

There is still danger, however, in the thought which seems widespread that all the difficult problems presented by the loyalty cases can readily be solved by the provision for fair hearings before a loyalty board or a loyalty review board. Too little attention has been given to the question of how the requirements of the Government for security and the requirements of the individuals concerned for fair play can in practice be reconciled. It is important to avoid confusing the two separate but related problems which are involved in these loyalty cases. One is the problem of protecting the integrity of the Government services where the security of the United States may be affected; the other is the determination of individual guilt or shortcoming.

Where the security of the United States is really concerned, any reasonable doubt ought to be resolved in a way that will protect the integrity of the Government service. While it should not be possible to drive an official from public service simply by spreading rumors that he is a Communist or an associate of a Communist, there may be cases even where the responsible head of a department or the department's loyalty board is convinced of the trustworthiness of an individual and still the cloud of substantial suspicion that hovers about the individual makes it highly inexpedient to continue that individual in a strategic security position.

On the other hand, no individual should be stigmatized as disloyal or even as a poor security risk if there is any reasonable doubt as to his culpability. The branding of an individual as disloyal or a poor security risk may affect his life and livelihood no less seriously than his conviction for a serious crime.

A fair hearing in itself provides no easy way of reconciling the vital interests of the Government and the vital interests of the individual. We must deliberately seek to develop procedure which will make it possible to protect the integrity of the service without stigmatizing individuals as disloyal or untrustworthy or even as being reasonably suspected of disloyalty or untrustworthiness.

The branding or punishment of individuals for disloyalty or breach of trust should be left for the court where the accused, in accordance with our common-law traditions, can be given the benefit of a jury trial and of every reasonable doubt.

Any individual in the Government service who is satisfactorily performing his duties

ought to have the right to resign without prejudice unless the evidence of disloyalty is such as to warrant prosecution by the Department of Justice. The duty of responsible administrative officials is to protect the integrity of the Government service, not to punish guilt or to proclaim suspicion.

If the responsible administrative head of a department or agency receives evidence of the disloyalty or untrustworthiness of an employee in a strategic position—that is, an employee who has power to make or influence decisions or has access to information which may affect the security of the United States—he should, of course, before taking final action, fully inform the employee of the charges against him and give him the opportunity to be heard with an appeal to a review board if the employee wishes it. But such proceedings, like grand-jury proceedings, should be secret.

If the individual under suspicion is able to satisfy the administrative head that the charges against him are unfounded and that his continuance in the service would not be inimical to the best interests of the service, that should, of course, settle the matter. But if the individual under suspicion cannot meet this obviously onerous burden and the evidence against him is not such as to warrant prosecution by the Department of Justice, he should be given the right to resign without prejudice. If he does not do so, he should be transferred to a clearly nonstrategic position or his employment should be terminated without prejudice.

Unless some such procedure is adopted, it will be difficult to protect adequately the security of the United States and at the same time protect adequately the traditional rights of the individual.

The Government employees in strategic security positions may be fairly large in absolute numbers and they may range through segments of quite a number of departments and agencies, yet they are a relatively small part of the total Government personnel. Individual investigation of the loyalty and trustworthiness of employees in strategic security positions is not only warranted, but is necessary. It is extremely difficult, however, to see the need for individual loyalty investigations of the myriads of other Government employees who clearly do not fall within that category. The annulment of Civil Service Rule I, adopted in 1884, forbidding inquiry into the political opinions or affiliations of applicants is regrettable.

Every Government employee now takes an oath of loyalty. If he swears falsely he can or should be subject to prosecution for perjury. Dragnet efforts to determine by administrative process individual loyalty offends the spirit if not the letter of the Bill of Rights.

The present oath of loyalty requires disavowal of membership in any organization which advocates the overthrow of the Government of the United States by force or violence. No express disavowal of membership in the Communist Party is required, and there may be some doubt whether a member of the Communist Party would be adjudged guilty of perjury in taking the oath. If the Congress is willing to leave that issue to the courts, well and good. But if the Congress insists on going further and intends to make membership in the Communist Party or knowing and active participation in its work an absolute bar to Government employment, it should require an express disavowal of such membership or activities in the loyalty oath. In any event, violation of the oath should be judicially and not administratively determined. No administrative tribunal should be given the right to adjudge an American citizen disloyal to his country.

We must see that those to whom matters vitally affecting the security of the United States are entrusted are unquestionably loyal and trustworthy. But let us take care that in the name of security we do not walk roughshod over the Bill of Rights and exclude or drive from Government those with inquiring, nonconforming minds. In these critical days we need in Government men and women who are not only loyal and trustworthy but who are alert and resourceful. Let us not wholly ignore the wise admonition of Thomas Jefferson, even though in his day he might have been accused of evil associations: "If there be any among us who would wish to dissolve this Union or change its republican form, let them stand undisturbed as monuments of the safety with which error of opinion may be tolerated where reason is free to combat it."

BENJAMIN V. COHEN.

WASHINGTON.

Universal Military Training

EXTENSION OF REMARKS

OF

HON. GEORGIA L. LUSK

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Friday, December 19, 1947

Mrs. LUSK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following petition received from Mr. Neil E. Jones, adjutant of the Tatum, N. Mex., American Legion Post, concerning proposed legislation to establish a system of universal military training:

PETITION

Mrs. GEORGIA L. LUSK,

United States House of Representatives, Washington, D. C.:

Peace is worth striving for. Therefore we, citizens of the United States and voters, urge you, our Representative in the Eightieth Congress of the United States, to support and vote for legislation establishing a system of universal military training for American young men, as recommended by the President's Advisory Commission on Universal Training.

Barron-Beadle, Neil E. Jones, V. R. Burnes, Mrs. V. R. Burnes, J. C. Clay, Mrs. J. C. Clay, Lyle Coppersmith, Mrs. Lyle Coppersmith, W. P. Whitley, Mrs. W. P. Whitley, H. D. Cooper, Mrs. H. D. Cooper, Henry Rutherford, Mrs. Henry Rutherford, Mrs. O. Frier, Mrs. T. J. James, Mrs. H. F. Whitley, H. F. Whitley, Adrian L. Fox, Mrs. Adrian L. Fox, Mrs. W. B. Baum, W. B. Baum, Mrs. Zach Jones, Jack Jones, V. N. Six, Mrs. V. N. Six, Bill Whitney, D. W. Pulture, Mrs. Ethel Hagan, Bill Holt, Dick Taylor, Gary Benfield, Mrs. Bennie Craig, Mrs. Roy Peveler, Mrs. Leroy Peveler, Ernest Gilman, Walter Moorpoise, Billie Patterson, Wade Travis, W. S. Townsend, Alta M. Tutt, Mrs. Edd Rackley, Mrs. J. E. Wildman, Mrs. W. S. Townsend, Mrs. H. D. Cooper, Ben Ed Epperson, Mrs. M. Johnson, Jr., Mrs. J. W. Peveler, G. E. Edwards, F. W. Peveler.

Mrs. A. F. Hight, Jr., Mrs. Cecil Nickell, Mrs. J. W. Rosenburg, Mrs. Virginia Duhl, Carrie B. Travis, Escola Travis, M. R. Anderson, Mrs. Bill Holt, Raymond Patterson, Mrs. Zack Taylor, Mrs. B. R. Young, Charles R. Rathroi, M. E. Wall, Frank J. Carrell, Mrs. Raymond Patterson, D. Sudduth, Mrs. James Simpson, Mrs. Jesse Richardson, Zack Taylor, Mrs. Dick Taylor, Bill Rutherford, R. L. Harris, P. H. Harris, C. E. Goodwin, Mrs. W. D. Dunlap, Jr., Mrs. J. B. Selmas, W. O. Dunlap, Jr., W. D. Caster, C. D. D. Coff, P. D. Caudle, C. B. Markham, Jr.; J. P. Nordon, D. W. Patton, L. Z. Whismant, A. C. Whismant, Frank Wyckoff, Rev. J. W. Riley, L. A. Greenfield, H. G. West, M. F. Toliver, Mrs. E. T. Gilman, H. L. McWhorter, L. L. Derrick, Mrs. Lula Simpson, C. F. Boyer, C. L. Emison, M. R. Biss, E. M. Green, Mrs. E. M. Green, T. J. James, D. P. James, Neta E. James, A. J. Chilton, Mrs. G. J. Williams, Mrs. Brick Roark, Mr. Clem Brechoa, J. B. Selman.

John Peter Altgeld

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, December 19, 1947

Mr. PRICE of Illinois. Mr. Speaker, under leave to revise and extend my remarks, I feel it fitting to insert in the RECORD an editorial appearing in the December 15, 1947, issue of the East St. Louis (Ill.) Journal. This editorial is a fitting tribute to John Peter Altgeld, first Democratic Governor of Illinois (1893–97) after the War Between the States. Altgeld did much to foster the true spirit of democracy. I personally have always felt he contributed far more than people realize to our great American freedom, and I think it commendable that his memory will now be honored and revered, as it should be. The editorial follows:

FORGOTTEN EAGLE REMEMBERED

A Justice of the United States Supreme Court will be the principal speaker at a banquet in Chicago on December 30 commemorating the one hundredth anniversary of a man who 50 years ago was scorned and abused as the "foreign born" governor of Illinois who "freed" the haymarket "anarchists."

John Peter Altgeld was born in Germany He came to the United States when a boy and worked at any job to be had to win a law education. He became successful as a lawyer and real-estate operator in Chicago and in 1892 was elected Governor of Illinois. During his term of office he initiated many reforms and was a particular friend of the University of Illinois.

But he doomed his public career by pardoning three men who had been sent to prison following conviction of complicity in the May 4, 1886, rioting in Haymarket Square, Chicago, during which several policemen were killed by the explosion of a bomb thrown by parties yet unknown. Of the eight men convicted of the Haymarket killings, four were hanged and another took his own life in prison. Altgeld knew exactly what he was doing when he pardoned the other three. He died, practically penniless and with few friends, in 1902.

Poet Vachel Lindsay, who lived next door to the executive mansion in Springfield, reminded his fellow Americans of Altgeld's courageous fight for tolerance in the poem "The Eagle That Is Forgotten" and in recent years several books have told the true story of the Haymarket affair, the travesty on justice that was the "trial" of the suspects, and Governor Altgeld's deep interest in the case.

A relatively few Illinoisans will attend the December 30 banquet in Chicago. All residents of the State—or any State—who prefer truth to prejudice, even if a half century late, can pay tribute to the memory of "The Eagle That Is Forgotten" by reading an objective account of what really happened in Haymarket Square and of the even more shameful proceedings in a court of law.

President's Policies Responsible for High Cost of Living

EXTENSION OF REMARKS
OF

HON. CHARLES W. VURSELL
OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, December 19, 1947

Mr. VURSELL. Mr. Speaker, in representing the people of my district for the past 5 years, I have always tried to tell them the truth. If the people return me to Congress in the new twenty-fourth district, I shall resolutely follow the same course. I believe the people are entitled to the truth at all times on legislation coming before us. Today I want to give to the Congress and the people some true facts that have brought about the high cost of living.

Mr. Speaker, while the President tries to blame the high cost of living on the Republicans for taking off OPA controls in 1946, the facts prove that the action of the President and his policies of urging wage raises and exporting so much of everything out of the country are the real causes of present high prices.

If the administration had permitted the OPA Act to be amended with a slight raise in certain prices that would have offset advances in costs and brought about greater production, which the Republican Congress passed, and he vetoed, price controls at that time, in 1946, would probably have maintained for another year. He vetoed the bill and all controls were off for over 30 days. He insisted on another bill which the Congress passed and he signed. If the President had appointed men of ability and common sense who would have administered the act with some respect for the people instead of using gestapo tactics, the people would have endured further price controls. Their bad enforcement really killed the act.

You will recall that producers and farmers had become so enraged that we had meatless days almost 6 days a week throughout the country. This last OPA bill gave the President the power to take off controls whenever supplies justified such action.

This was in the election year 1946 and the people were tired of OPA. The majority leader, Congressman McCORMACK, and Mayor Kelly, of Chicago, when they later saw that an enraged people were going to defeat the Democratic Party, rushed down to the White House along with National Committeeman Hannegan, and urged the President to throw the OPA ballast out of the political ship before it sank. The President, politically minded then, as he is now with another election approaching, began rapidly to take off controls. But it was too late to fool the people. His party was voted out of power. Before the Congress met he decontrolled everything to beat a Republican Congress to the draw.

Mr. Speaker, then what happened? His party leaders realized that to fasten the blame on a Republican Congress the cost of living should go up. The shipment of food and commodities of every kind to Europe and the other nations was the answer. The Commodity Credit Corporation stepped into the market and began buying up countless millions of dollars worth of grain and foodstuffs. Ships were chartered on every hand and during this year 611,000,000 bushels of grain and food were shipped out of this country, most of it given away to the European countries. In fact, since VJ-day in Europe this administration has shipped and given away in loans and grants to other countries, $21,000,000,000 mostly for food, oil, steel and practically every commodity in this country whether or not it was in short supply. The result is that with the expenditure of over $20,000,000,000 since VJ-day, they have now brought about a shortage of food and other items the people want to buy, to the extent that the cost of living is indeed very high today and we are in a period of the greatest inflation ever experienced in this country.

Mr. Speaker, in the face of these facts, the President, time and again, has told the American people, that the shipping and giving away of these billions of dollars worth of foodstuffs has had little or no effect in causing the price of living to rise. There is hardly a schoolboy, laboring man, farmer, or a businessman in the Nation who does not know that the shipping out of this country this vast amount of foods and materials, is the reason for the dangerous and high prices that are now disturbing and alarming the people.

Mr. Speaker, to get a better idea of how much 611,000,000 bushels of grain and food is, let me put it this way: It took 480,000 American boxcars to haul that food to the seaports for loading into ships. If those 480,000 boxcars of food had been broken down into trains of 52 cars each, with 90,000 pounds in each car, there would have been nearly 10,000 trainloads of grain and food with 52 cars in every train. By putting those 480,000 boxcars into one train we would have a train 3,861 miles long that would reach from Washington to Paris and part of the way back. Yet the President says these huge shipments in 1 year have little effect on raising the cost of living.

In the face of these facts, which are only a part of the story, the President and his political leaders still insist that the Republican Congress is to blame for the high cost of living. The President now threatens to bring back OPA with all of the agony of controls, regimentation and black markets that will follow.

"Plow 'Em Under" Henry Wallace, who killed the pigs under a former administration, and plowed under every other row, has really become a piker in history compared with the manipulations of the present administration.

Mr. Speaker, they smile with satisfaction, however, in these most serious times with this high cost of living and dangerous inflation, in the belief that with their 23,000 paid propagandists here in Washington, they can make the people believe that the Republican Congress is responsible for the high cost of living right up until the election next fall and continue themselves in power.

I do not believe they have fooled the people. I place a higher value on the people's intelligence, common sense, and good judgment. I feel certain that the American people know that you cannot ship out of this country 40 percent of the wheat, and other billions of dollars' worth of food and merchandise, bringing about a scarcity of these commodities here, without causing the price of living to go higher, higher, and higher.

Mr. Speaker, and this is not all. Through the Commodity Credit Corporation, they have gone into the market and bought millions of bushels of wheat at critical times forcing the market up. About the time the Luckman committee was appointed, 3 months ago, the Commodity Credit Corporation stepped into the market and in just a few days bought 55,000,000 bushels of wheat when it already had millions of bushels on hand. What happened to the price? Wheat rose in a few weeks from $2.50 per bushel to over $3.20 per bushel. Government buying forced the price up.

Mr. Speaker, not only wheat, they bought potatoes by the millions of bushels and took them off the market, dumped them, burned them or left them in the fields to rot at a time when they were shipping wheat and foodstuffs of all kinds and giving it away to Europe and other countries. They have kept the prices of potatoes so high that the poor people here in America could not buy them. They have bought and now have in storage, 1,800,000 cases of eggs. They have bought food through the Commodity Credit Corporation in everything from peanuts to prunes, much of it deteriorating and being held off of the market with prices going higher and higher.

Mr. Speaker, then their experts figure out the next move. In order to give the people a first-class show the bright boys who believe in the philosophy of spending and taxing, recommended to the President that the people should be made self-conscious through the medium of the press and the radio toward the saving of food. They launched the European crisis. A great publicity and radio campaign would soften the people up and get them ready for the 20-billion-dollar Marshall plan of further spending.

To do this job they got a young man in his thirties of soap-opera fame, Charley Luckman, to sell our people meatless, eggless, and poultryless days. Mr. Luckman was just the type of man who could rub elbows with the ordinary and unsuspecting decent American folks. He knew what sacrifice and hunger meant because at this early age his salary at the head of the great Lever world soap and fat combine, with head offices in London, was only $300,000 a year.

Now, Chuck Luckman spent several hundred thousand dollars of the taxpayers' money to put on his meatless, eggless, and poultryless days. The whole thing turned out to be just the farce any sensible person knew it would be. No results obtained, but the campaign was very successful, as usual, in the waste of several hundred thousand dollars to the taxpayers and annoyance to the hard-working farmers who struggle long hours

without too much complaining to produce the eggs and poultry so much needed to feed the people. The facts are the only egg saved was the egg that Chuck Luckman laid on the White House doorstep just before he suddenly gave up the campaign and rushed back to Boston to sell soap at a salary of $300,000 a year.

Mr. Speaker, the campaign was doomed to failure because the President picked someone who knew nothing about agriculture, who did not even know the difference between a rooster and a capon. He selected a person whose only experience with chickens was gained when he ordered chicken at the corner restaurant. He was not nearly so competent by past experience as "Plow 'Em Under" Henry Wallace when he started out on his crusade to raise the cost of living by killing off the chickens, pigs, cattle, and so forth. Henry knew that to kill them off would make scarcity.

With a meat shortage predicted for next year, Luckman and the administration put on the same sort of a program of scarcity to raise less chickens and thereby less eggs. They said we must do this to save grain to be shipped to Europe. It was a determined effort against the interest of the farmers and the people in the cities who need the food and to bring about a shortage of poultry and eggs which would further raise the cost of living to our own people. Fortunately the program was so silly that it did not do too much harm and the campaign blew up.

Mr. Speaker, as cheerful Chuck laid the "Eggless day program" on the White House doorstep and went back to selling soap, the unmindful hens, according to the Agriculture Department, are pouring out more eggs than ever. One is led to believe when you see the figures from the Department of Agriculture which say that in October egg production was 3,457,000,000 or about 8 percent above the figures of a year ago, that the faithful hens of America knew more about the business than Chuck knew, and, if left alone and not controlled, they will do more toward feeding the American people and bringing down the high cost of eggs to the housewives than the efforts of cheerful Chuck and the thousands of dollars of the taxpayers' money the administration has spent.

Mr. Speaker, if Luckman is called in by the Administration to put an another egg and poultry campaign, he will most likely then tell the people they should have double egg days instead of no eggs; that they should be happy to eat eggs instead of meat which will be in short supply next year according to present Government estimates. The shipping of grain and food out of this country has raised the price of corn, oats, and wheat so high, there will be less pork and beef for 1948. We will then be glad that Chuck's program to reduce poultry production failed.

Mr. Luckman's English firm and American subsidiaries, like the Procter & Gamble Co., almost have a world monopoly on soap, fats, and oils. During the 3 months' reign of the Crown Prince Luckman to save grain, soaps, fats, and oils went up 150 percent. While this $300,000-a-year man was raising the big noise about saving wheat, pushing the hens around and trying to muffle the crowing roosters, the products his company deals in did pretty well in their advancement in price. A raise in soaps, fats, and oils of $3,000,000 a day, in cost to the consumer and a like amount in profit to someone was not bad.

Mr. Speaker, a man by the name of Pauley came into the news in the last week or so and a little comment on him in connection with the rise of cost of grain might not be amiss. You will remember Pauley was the oil man of California who, in the last campaign was treasurer and the fund raiser of the Democratic National Committee.

You will remember that shortly after the campaign, President Truman appointed him as Assistant Secretary of the Navy. Some question arose when he came before the Senate for confirmation and Harold L. Ickes, then a member of the Cabinet, appeared before the Senate and gave very damaging evidence against him in which he alleged that Mr. Pauley sought to make a deal that would be very advantageous financially to him in securing control of the tidelands for oil on the west coast. Mr. Ickes in substance testified before the committee to that effect, and the committee did not confirm him. The President finally had to withdraw his name. Later on, he was appointed to some high Federal job and spent quite a bit of time in China, Japan, Manchuria, and in Europe looking into reparation matters for the administration. Last September he was appointed to the position of Special Assistant to the Secretary of the Army. You know the Army buys many millions of bushels of grain and food.

Mr. Speaker, recently the President sought to lay the blame for the high cost of living to a considerable extent on what he termed "the greedy speculators in the grain markets." Following this charge by the President the news leaked out somehow that Mr. Pauley was a heavy buyer on the grain market.

Mr. Pauley was called before the Senate committee and admitted he held about $1,000,000 worth of grain and commodities when he took the Army position. He told the Senators that he did rather well in commodity trading during this year 1947. He admitted that at one time he held 500,000 bushels of grain. That is a lot of wheat for an official to hold when it is scarce. Mr. Truman referred to the greedy speculators in his speech against the grain operators and now we find, in this key position, Mr. Pauley, who admits that he was one of those speculators and who says he has no intention of resigning his position.

To show the lack of sincerity of this administration in attempting to reduce the price of living and the type of showmen they bring in to mislead the people, I want to point out that recently, after Chuck Luckman closed his program of meatless and eggless days he gave a dinner at the Statler Hotel here in Washington a few days ago that for its lavishness has probably not been exceeded since the spending days of Harry Hopkins.

Mr. Speaker, Mr. Luckman entertained 100 guests, members of the great Lever Bros. combination, with a few of his administration friends also invited. It must have been a big check that cheerful Chuck picked up at the close of the festivities.

The party was preceded with a happy hour of cocktails mixed from the choicest beverages to sharpen their appetites for the feast to follow. And you will note from the menu following there were two kinds of meat in addition to fish and fowl. Certainly Chuck had forgotten the great campaign he had just tried to put across to save food.

The following is the menu which I believe will be of interest to the good, solid, honest American people who the propagandists in Washington, over the air, and through the press are constantly trying to influence and at times try to deceive: Shrimp cocktail, fried oysters, crabs, shrimp and lobster gumbo, curried chicken, roast turkey, baked ham, roast beef, string beans au gratin, fried apple rings, pickled walnuts, celery, olives, pickles, rye rolls, assorted ice cream, assorted finger rolls, coffee.

Mr. Speaker, this is only one page of current history that the administration continues to unfold in Washington week after week. Their policy of crisis after crisis, their policy of propagandizing the people in an effort to control their thinking is a continuous performance. I still have confidence that the sound, solid honest American people have the intelligence to see through the mist of fog and confusion and to separate the truth and facts from fiction and falsehoods. Such people have builded and preserved our proud Nation to date. Their immediate responsibility and for the future is to be alert, watchful, and on guard in an effort to help preserve our Government and direct its course in the best interest of all our people.

"Insiders" Charged in Stassen's Doylestown, Pa., Address

EXTENSION OF REMARKS
OF
HON. GEORGE MacKINNON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, December 19, 1947

Mr. MacKINNON. Mr. Speaker, on December 10, 1947, former Gov. Harold E. Stassen of Minnesota delivered an address at Doylestown, Bucks County, Pa., in which he charged "insiders" in the present administration with "profiteering in food." Edwin W. Pauley, special assistant to the Secretary of the Army, was specifically named. Subsequent disclosures have proved the truth of the charges made with respect to the special assistant to the Secretary of the Army, and this House today designated a special committee under the chairmanship of Representative AUGUST H. ANDRESEN to further investigate the charges.

Because of the Nation-wide repercussions which followed the Doylestown speech, I include the full text thereof,

under leave to extend my remarks. I also include the full text of a bill I have this day introduced to make it a criminal offense for persons having access to "inside" information on governmental purchases to speculate in commodity futures:

ADDRESS OF HON. HAROLD E. STASSEN, OF MINNESOTA

Mr. Chairman, fellow citizens, the No. 1 problem in America today is the "too high prices of the necessities of everyday life. Prices are already out of reasonable reach for millions of people and cause difficulty in almost every home in the Nation.

Postwar world-wide shortages of food and clothing and materials inevitably cause a problem of high prices. But prices are unnecessarily higher than they should be, due to six major derelictions and mistakes of the present national administration.

I charge that the national administration has failed to use its power of export controls to safeguard American prices and permitted needless extreme competition for scarce American food.

I charge that insiders in the national administration have engaged in profiteering in food which has raised the price of food to the American people.

I charge that the departments of Government have been guilty of hoarding scarce commodities in a manner that has increased prices.

I charge that the administration has carried on its own purchasing program under a method which has placed extra pressure on prices.

I charge that the President by his veto of the first OPA extension law ended controls too quickly and too suddenly.

I charge that the President misled American labor in his postwar addresses claiming that wages could be raised without higher prices and thereby set off a heavy round of strikes with vital loss of production and increased inflation.

I know that this is strong language, but frankly I have become disgusted with the petty political tactics of the administration in trying to shift the blame to the Republican Party for the current high prices.

I have today written to the majority leader in the House of Representatives of the Congress, the Honorable CHARLES HALLECK, urging that a major public investigation be conducted by the appropriate committee of Congress of the actions of the administration and of officials and insiders of the administration in the price situation to bring out all the facts as a basis for corrective legislation.

It is necessary that there be an official investigation with power of subpena as we cannot otherwise get at the exact facts. In support of the necessity of an investigation to bring out the facts, I quote to you an exchange of telegrams which I have had with Edwin W. Pauley, an assistant to the Secretary of War and the former treasurer of the Democratic National Committee.

On November 17, 1947, I wired Mr. Pauley as follows:

"I have received persistent reports that you have made substantial purchases of wheat, substantial sales of wheat, substantial purchases of other food commodities, and heavy sales of other food commodities during the year 1947. I request a telegraphic reply, collect to me, at my St. Paul, Minn., office, 707 Pioneer Building, as to whether or not any one of these four reports is true and including any other comment which you wish to make up to 1,000 words in length."

On November 20, 1947, he replied as follows:

"Following telegram bearing your signature received at my office Tuesday: 'Personal; I have received persistent reports that you have made substantial purchases of wheat substantial sales of wheat, substantial purchase of other food commodities, and heavy sales of other food commodities during the year 1947. I request a telegraphic reply, collect to me, at my St. Paul, Minn., office, 707 Pioneer Building, as to whether or not any one of these four reports is true and including any other comment which you wish to make up to 1,000 words in length.' Please wire whether this was sent by you and, if so, in what capacity and why.

"EDWIN W. PAULEY."

On November 21, 1947, I responded as follows:

"In reply to your telegram of November 20 and in response to your questions, I did send the telegram which you quote. I sent it in my capacity as a citizen to you as a prominent official in the Government for the purpose of ascertaining the truth. Will you send me your answers by telegraph, collect to my St. Paul, Minn., office, 707 Pioneer Building."

And to this hour I have received no answer.

Let me emphasize the importance of this investigation upon American prices by reporting to you a few instances of the manner in which governmental action has affected prices.

On February 13 the Department of Agriculture suddenly overnight granted Great Britain a special allocation of 1,200,000 hundredweight of flour for the second quarter of 1947. Futures of wheat advanced 3½ cents a bushel the next day, and the advance was soon reflected in the cost of flour.

On March 1, 1947, before the market opened, the President, in a meeting of the Cabinet Committee on Food, issued a report calling for maximum grain and flour shipments in the months of May and June, and the March futures that day advanced 7 cents.

On September 8, 1947, an official of the Commodity Credit Corporation was quoted as saying that Government officials handling the export program were resigned to $4 wheat in the spring of 1948, and the next day the market advanced 8¾ cents.

In nearly all instances these inflationary statements were preceded by an unusual amount of speculation buying. When this occurs, the prices are pushed up an additional and unnecessary amount.

I am confident that we can level off and bring down prices if these steps are taken:

1. A prompt thorough investigation of all food market operations of the Government and of all officials and insiders of the Government.

2. The enactment of a law prohibiting the buying and selling of commodities for their personal account by any official or employee of the State, War, Commerce, or Executive Departments, and providing for penalties for its violation.

3. The extension of export controls and placing them in the hands of a new American agency for the handling of the entire Marshall plan.

4. A new inventory control power to be given to the Government to use against hoarding and profiteering and monopolies of scarce items, and requiring the return of excess inventories held by Government or by private companies to the market place.

5. The reinstatement of consumer credit controls to slow up installment and credit buying.

6. Temporary restrictions on the commodity exchanges.

7. Encouragement of buyer resistance, conservation, and savings.

America should not make the mistake of dislocating our economy and upsetting our excellent production by enacting the overall price and wage and rationing controls recommended by the President.

A bill to prohibit certain officers and employees of the United States from engaging in transactions involving contracts of sale of commodities for future delivery

Be it enacted, etc., That no officer or employee of the Executive Office of the President, the National Military Establishment, the Department of State, the Department of Agriculture, and no member of the military or naval forces of the United States shall directly, or indirectly, through an organized commodity exchange, engage in any activity involving any contract of sale of any commodity for future delivery unless such activity is incident to the disposition of commodities grown or produced on land owned, rented, or leased, by such officer or employee. As used in this section, the terms "contract of sale," "commodity," and "future delivery" shall have the same meaning as when used in the Commodity Exchange Act, as amended.

SEC. 2. Whoever violates the first section of this act shall, upon conviction thereof, be punished by imprisonment for not more than 3 years or by a fine of not more than $10,000, or by both such imprisonment and fine.

SEC. 3. This act shall take effect on the thirtieth day after the date of its enactment.

Radio Address to My Constituents

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, December 19, 1947

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address:

Dear friends of the Triple Cities and my congressional district, thanks, everybody, for all the letters you've been writing me lately, expressing your feelings about these heavy questions Congress votes on now and then. They help no end, because you give me the thoughts of the folks back home. I can do a much better job if I am fortified with the knowledge of what you think.

So keep those letters coming.

I am sorry to have to tell you that apparently not enough people in Congress are interested in joining me in the battle against inflation. At least not enough voted last week to pass the price-control bill which was offered.

You are aware, of course, that I was the first, the very first, to call for positive action against inflation and high prices. You recall that my demand that Congress come back into session as early as last fall was based on my worry over what might happen if those prices continued unchecked.

I have continually, both on the House floor and on this program, called attention to the necessity for immediate action by Congress to bring prices down. Therefore, I repeat, I am sorry to have to tell you that there just weren't enough votes cast this week to bring the action on prices which everybody had so urgently hoped for so long.

While I am depressed over the failure of Congress to do anything to lick inflation this session, my own conscience is perfectly clear. I have lobbied, I have agitated, I have coaxed,

and I have warned what dire peril the country is now approaching. Sadly enough, my pleas and protests have fallen on deaf ears.

The bill which the majority leadership wanted to put through was a step in the right direction. It was positive action. It was the beginning of a war against inflation.

I am not going to quarrel over whether or not it contained all the power the President asked for. I'm not going to argue over the fact that some of the President's requests were in it, because they were.

But when Congress voted the anti-inflation bill down this week, the door was closed to all attempts to fight the high prices which are impoverishing the Nation about as fast as anything possibly can.

When a bill comes up in Congress I may not see eye to eye with all of it. But if some of the things I want are contained in it, I vote to consider the entire bill, because there is always a chance to improve any legislation.

Unfortunately, the House turned thumbs down on the whole works, so that no action can be taken until Congress comes back next month.

As your representative, I want you to know that I brought all the influence I could to bear. The high cost of living is the foremost issue in the country today and we cannot deny it. Only it goes a lot farther than some would have you believe.

Yes, it goes a lot farther, and I am terribly afraid if the prices we are forced to pay go much higher our great American system is going to suffer thereby.

While the responsibility rests upon the shoulders of us all, it should rest most heavily on the consciences of those who have deliberately allowed the prices of food, clothing, and other necessities to go away out of sight.

The situation is so serious that plenty of families in America are going without the vital things they must have to live. They cannot buy enough to eat and wear, because they just haven't the money to pay the price.

How long can we tolerate a condition which creates poverty and want in the Garden of Eden and brings sorrow and despair to millions of Americans who have every right to expect happiness under our form of government.

I say to those responsible for the high prices we Americans are compelled to pay, it is up to you. Your stake in this country is as much as ours. Your profit could not be made under any other system. Let patriotism prevail over greed. Let your love for this country cause you to forget the passion for power and love of money and save America.

The Communists are on the sidelines watching. They gloat over every fresh inflationary trend. They laugh with satisfaction whenever butter jumps another nickel, meat goes higher, whenever the prices of clothing and other commodities make another gain.

So I direct my warning tonight to you men who make the wheels go around, you who control the finance, the business, the enterprise of this mighty Nation. We are all dependent upon your will in this matter.

If you want to keep our American system, if you want to preserve freedom, if you want to see other isms stamped out, then in heaven's name come forward and volunteer.

Volunteer to thrust aside all thought of high profits. Volunteer to do away with all factors that make for inflation. Volunteer to knock down the prices of things our people need to live.

Do not allow this vicious cycle to spiral skyward any longer. Do not, like blind Samsons, pull down the walls of the temple upon your own heads and upon the heads of us all.

Thank you.

Stabilization of Commodity Prices

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, December 19, 1947

Mr. KENNEDY. Mr. Speaker, I voted against this Republican bill because it sends a boy to do a man's job.

Its effect on high prices will be negligible.

The Congress must pass a worth-while anti-inflation bill that will contain the important powers requested by the President.

State Asks Easing of Couples' Taxes

EXTENSION OF REMARKS
OF
HON. RALPH A. GAMBLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, December 19, 1947

Mr. GAMBLE. Mr. Speaker, yesterday the House granted permission for the insertion in the CONGRESSIONAL RECORD an article in the New York Times of Sunday, December 14, 1947 under the headline "State asks easing of couples' taxes" and quoting Governor Dewey as stating he will act in 1949 unless the joint property law is extended by the Congress. I introduced a bill which proposes that married couples in non-community-property States divide their income for Federal income tax purposes: H. R. 4416.

I am delighted to know that my Governor favors the enactment of this proposal.

The article referred to follows:

STATE ASKS EASING OF COUPLE'S TAXES—DEWEY SAYS HE WILL ACT IN 1949 UNLESS JOINT-PROPERTY LAW IS EXTENDED BY UNITED STATES

ALBANY, December 13.—Governor Dewey announced today that unless Congress and President Truman acted in 1948 to permit married couples in New York and other non-community-property States to divide their income for Federal income-tax purposes the State would be "forced to modify its laws to protect its citizens as best it can from the present discriminatory situation."

The Governor opened the door to adoption in New York State of an admittedly undesirable community-property law in making public a report by Alger B. Chapman, president of the State Tax Commission, on whether such a statute would be advisable.

Both Governor Dewey and Commissioner Chapman frowned upon such a state law, but the latter declared in his report that New York should not permit a continuation of the "existing discrimination" in the Federal income-tax law, even if its elimination required the prompt adoption of the community-property system for the State in 1949.

Commissioner Chapman estimated that married couples in New York State were paying $170,000,000 additional income tax annually as a result of the differential in favor of community-property taxpayers.

Commenting on the report, the Governor said he would like to point out that:

"1. The existing discrimination against married couples in non-community-property States is an indefensible defect in the Federal income-tax law which should and, I earnestly hope, will be corrected at the next session of the Congress.

"2. Adoption of a community-property statute in New York would not only disrupt the whole foundation of our legal system, but would also involve questions of constitutionality which might severely limit the adequacy of such a statute.

"3. If the Congress and the President fail to take action in the coming year, the State will be forced to modify its laws to protect its citizens as best it can from the present discriminatory situation."

New York is one of 35 States which do not have community-property laws. Married couples in the 13 States which have such laws save millions of dollars annually by dividing their income for income-tax purposes.

Commissioner Chapman estimated that if married couples in all the States were permitted, by amendment of the Federal income-tax laws, to divide their incomes the saving to them would be from $700,000,000 to more than a billion dollars a year.

He said there were strong indications that the Federal law would be so amended at the 1948 session of Congress, adding:

"In view of the real probability that the existing tax discrimination will be eliminated in 1948 by Federal legislation and the near-catastrophic disturbance of property rights that would result from adoption of a community-property-law system, New York State should not adopt a community-property law at the present time.

"New York should, by all appropriate means, urge upon Congress and the President that the existing discrimination against New York State taxpayers be eliminated in 1948 by a correction of the Federal income-tax law.

"New York State should not permit a continuation of the existing discrimination, even if its elimination requires the prompt adoption of the community-property system for the State in 1949, if the Federal Government does not end such discrimination in 1948.

"In contemplation of the possibility that such action may become necessary a committee of experts should be appointed to prepare in advance an adequate community-property law, so that at least some of the serious complications that other recent community-property States have experienced may be avoided.

"Such a committee would, of course, have to give serious consideration to the hazards created by the Pennsylvania supreme court's decision in the Wilcox case which held the Pennsylvania community law invalid."

Commissioner Chapman mentioned, as an example of discrimination between States having community-property laws and those lacking such laws, the case of a husband earning $5,000 whose wife had no income.

In a common-law State, such as New York, the husband would pay a Federal tax on his income and his wife would pay nothing. In a community-property State his income would be split with his wife, each reporting $2,500 and thus receiving the benefit of lower surtax rates.

The New York couple would pay $798 Federal income tax, while the community-property State couple would pay $760. The difference in tax on a $10,000 income is $342 and on a $15,000 income $893.

"The discrimination starts with incomes in excess of $3,000," Mr. Chapman said, "and in the higher income-tax brackets the tax difference broadens rapidly until in some cases the tax of non-community-property taxpayers exceeds that the community-prop-

erty taxpayers having the same income by over 40 percent."

"The high Federal surtax structure of recent years has accentuated the tax differential in favor of community-property taxpayers until it is now estimated that from $700,000,000 to a billion or more of additional tax is paid annually by the taxpayers of the common-law States. In New York alone the additional tax is estimated at $170,000,000. Discrimination of such a substantial character in a tax imposed on all citizens and residents at the national level, supposedly on the ability to pay, cannot be tolerated by the common-law States."

The report emphasized the State's desire for a correction of the Federal law rather than for a community-property law.

"The second alternative, to adopt the community-property system," it stated, "represents a step to be taken only in desperation to avoid an intolerable tax discrimination resulting from a failure to solve the problem properly.

"Nevertheless, the fact remains that the Federal tax law has not yet been corrected and the annual cost to New York taxpayers thus goes on. Certain States have recently shifted to community property as a matter of self-defense."

The report described defects of the community-property system and the effect adoption of such a system would have on New York State.

The commissioner said it was impossible to point to a single existing community-property system which might be safely adopted substantially "as is" by New York. He added that it would be a mistake to assume that, of all the plans, a community-property system necessarily would produce the most favorable result; that the community-property system magnified the record-keeping burden of taxpayers, and that there would be the danger of running into constitutional objections, as with the 1947 community-property law enacted in Pennsylvania.

"If tax considerations were excluded," he continued "it is clear that a shift to the community-property system would not be seriously considered in New York. It is so alien to the common-law heritage of the State and so complex in nature that it could not be established except at the prohibitive cost of a very long and painful period of readjustment. The difficulties encountered would inevitably be enormous.

"This has been and is the experience of the several common-law States which have recently enacted community-property legislation. In at least one of these States a repeal is being considered, even though the tax discrimination is not eliminated by Federal law, and Pennsylvania's new community-property law has recently been declared unconstitutional by the State supreme court."

You Can't Fight a Conflagration With a Bucket Brigade

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, December 19, 1947

Mr. KLEIN. Mr. Speaker, when an oil well catches fire a blast of nitroglycerin is used to snuff the roaring flames. The oilmen do not throw a handful of sand on that roaring inferno and pretend they are blowing it out.

This bill, which apparently represents the high mark of Republican assumption of responsibility for the public interest in halting inflation, reminds me of another fire-fighting story which is very apropos.

A guest in a small hotel telephoned the desk for a glass of water. He asked the bellboy to bring him another glass of water at once, then another and another.

Finally the bellboy said, "Excuse me, mister, but you are just about the thirstiest man I ever saw. How can you drink so many glasses of water?"

"Oh, I'm not drinking it," the guest replied. "The room is on fire and I'm trying to put the fire out."

INFLATION IS HERE NOW

Mr. Speaker, that is what the majority leadership is trying to do with this bill—put out a roaring fire with a few glasses of water.

Inflation is not something that may happen in the future. Inflation is something real and deadly which is here right now. This is not a partisan political issue. It is not a straw man to be beaten down with feathers. It is a clear and present danger to the American way of life.

And what does the Republican leadership do to meet this emergency? It fans the flames with words, while tossing in a few glasses of water to make the fire sizzle.

"FREE" PRICES HAVE SHOT UP

By any scale of measurement, your "free" or uncontrolled prices have shot up since the end of price controls in June 1946.

Individual incomes have crawled painfully after them.

Mr. Speaker, I ask you to consider what has happened to the cost of living and to workers' incomes in the last 18 months. You must bear in mind that the individual incomes of wage-earners and of salary earners, and of the people who live on annuities or insurance and retirement benefits, or on investments in securities, are under control. They are controlled by those who pay them their wages, or by union contracts, or by the terms of their insurance policies or the stated interest rates on their bonds. The salaries of Federal employees are controlled by laws which we make here. Furthermore, even the collective bargaining efforts of organized labor have been placed under partial controls by the Taft-Hartley Act, which encourages employers to hold out against wage increases—or even to cut wages, as was done in the shoe industry this very week.

NO CONTROL ON PRICES

But prices are free; the manufacturers of the commodities which people must have to live are controlled only by the limits which people will pay, and apparently these manufacturers are trying to find how wide that limit is.

Workers must eat, every day; manufacturers can, if necessary, stop making goods for a time. Already, to sustain the high prices, production in some lines has been reduced.

In the first 12 months without price controls, from June 1946 to June 1947, statistics show that, taking June 1946 as 100, average weekly earnings in manufacturing industries equaled 117 persent; but the prices on 28 spot commodities—those which enter into every housekeeping budget—equaled 170 percent. The prices on 12 key foodstuffs equaled 186 percent.

WILL VOTE FOR BILL

Mr. Speaker, I am going to vote for this bill before us because a little is better than nothing, and because it contains the irreducible minimum of the President's requests on controlling inflation. I voted a few minutes ago against the rule and for recommitment because I should rather have had a chance to vote on a measure with teeth in it.

To return to my earlier figure of speech, I wanted a chance to vote for a modern trained fire department to fight this conflagration of inflation, and not for four glasses of water to splash on the edges of the fire.

FIFTY WEEKS, 40 HOURS A WEEK, AT $1.75 AN HOUR TO SUPPORT A FAMILY

Today butter is selling in the stores in my congressional district in New York at $1 a pound.

This very week the Commissioner of Labor Statistics gave the Committee on the Economic Report the results of a study of living costs. Those figures showed that in New York City a family composed of a man and his wife and two children had to have an annual income of $3,347 to live in minimum comfort and decency—an increase of $527 in the preceding 12 months. To earn that amount the man would have to work 40 hours a week 50 weeks a year at $1.57 an hour. The national average of hourly earnings in the manufacturing industries is $1.25 an hour.

The same man would have to earn $1.75 an hour to support the same family here in Washington.

Mr. Speaker, by jamming through this inadequate legislation the Republican leadership may have exhibited political cunning, but it has certainly failed in its responsibility to the Nation, and the people know it. I do not think that this Republican majority will be here in the next Congress.

United States Is Losing Out on International Trade Organization Board Plan

EXTENSION OF REMARKS

OF

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, December 19, 1947

Mr. KNUTSON. Mr. Speaker, the efforts of our State Department to trade away our industries and to establish free trade have been partially successful. However, the United States delegation to the United Nations Conference on trade and employment now in session in

Havana is discovering that other countries are not too anxious to become enmeshed in a free-trade system unless they are allowed the privilege of protecting their young and struggling industries. The United States is being outvoted on every major issue.

Very few people know what is likely to happen to our country if this ITO should be adopted. The smaller countries are more aware of its potentialities and are rightfully fearful that if they are not allowed to protect their infant industries they will continue to be economically subservient to the more powerful nations. I am not too sure that the Charter in its present form would not tend to do that.

It may cheer some of the less developed countries to know that many Members of the Congress of the United States are opposed to any international organization that would even make it possible for larger nations to dictate in any way what might be done with the vital industries of any country. The spirit and acumen of the delegates from some of these small neighbors of ours is to be commended.

The following article taken from the New York Times of December 18 shows that the free-trade efforts of certain delegations are not meeting with too much success:

UNITED STATES IS LOSING OUT ON INTERNATIONAL TRADE ORGANIZATION BOARD PLAN—SMALLER NATIONS FIGHT SPECIAL PLACE ON THE EXECUTIVE, A FACTOR IN VOTE PLAN DEAL

(By Russell Porter)

HABANA, DECEMBER 17.—The United States delegation to the United Nations Conference on Trade and Employment today seemed to be losing its fight on the method to be used in determining the composition of the executive board of the proposed International Trade Organization.

When the United States accepted the one-country-one-vote plan of the smaller countries and abandoned the struggle for an International Trade Organization voting system weighted in proportion to the comparative economic strength of the member nations, which would have given the United States heavy voting strength, this concession was made conditional on prevalence for our ideas on the executive board and some other major issues. However, at today's meeting of the organization committee it was announced that of 44 delegations that have spoken in the debate on the executive board only 7 support the proposal favored by the United States.

This is one of the issues left unsolved by the Geneva Conference of the 18-nation preparatory committee which submitted the draft charter for the approval of the 58 delegations here with 3 possible courses on the composition of the executive board.

EIGHT MEMBERS NAMED

The first proposal specifically names the United States and seven other nations of major economic importance among the 18 board members, assuring 8 countries of permanent seats. It also assigns certain seats to geographic areas—Latin America, the Arab states, and Scandinavia. Only three delegations have spoken for this plan.

The second course merely says that holders of 7 of 15 seats shall be eligible for immediate reelection, the remainder of the seats rotating, but it does not assure the United States or any other country of a permanent place. Twenty-seven countries have spoken in favor of this.

The third proposal, supported by the United States, says that eight states of chief economic importance, as determined by the conference, shall be entitled to membership on a board of 17.

Although the United States delegation feels that it is inconceivable that a permanent seat would be denied to this country even if the second course were adopted, the possibility is foreseen that the small and undeveloped countries, which are in a numerical majority, might deny executive seats to other larger and more industrialized nations.

Since the undeveloped countries are insistent on the right to use import quotas, other quantitative restrictions and preferential tariffs to protect their new and infant industries against competition from more highly industrialized countries, it is feared in some quarters that the second course might enable them to nullify the charter objectives for the gradual elimination or reduction of barriers against international trade.

Canada and Brazil, which desire permanent executive board seats on the basis of their economic importance, supported the United States at the economic development committee meeting today against the joint attack of Argentina, Chile, and Venezuela.

J. J. Brignoli, of Argentina, argues against so much power in ITO, saying that it should be able to make recommendations only. Otherwise, he said, nations would have to give up the conduct of their economic life, "one of the vital elements of sovereignty" to a "supranational body."

Dana L. Wilgress, for Canada, said that the Argentine proposal would violate the most-favored-nation principle regarded as one of the vital elements of the charter. He said that prior approval was necessary to weigh the advantages that preferences might bring to some countries against injuries to others, which might include certain undeveloped countries themselves.

The general committee, after a 3-hour debate tonight adopted a resolution directing subcommittee chairmen to make full and informative statements to the press after each private subcommittee meeting in collaboration with the United Nations Department of Public Information. The resolution was moved by Clair Wilcox, of the United States. Ten voted for it, one against, and there were four abstentions and three absentees. The negative vote was cast by Cuba.

Control of Consumer Installment Credit

EXTENSION OF REMARKS

OF

HON. E. WALLACE CHADWICK

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, December 19, 1947

Mr. CHADWICK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

PHILADELPHIA, PA., *December 17, 1947.*

Hon. E. WALLACE CHADWICK,
House of Representatives,
Washington, D. C.

DEAR MR. CHADWICK: This letter is written on the assumption that you would welcome an expression of opinion relative to the move to have Federal controls again imposed on consumer installment credit as a means of checking inflation. I think I am in position to speak in a disinterested manner since I have nothing to do with granting credit.

Since a good deal of my work throughout Pennsylvania is done on behalf of so-called necessitous borrowers, I ask the privilege of speaking for low-income families who must occasionally seek cash credit to meet emergencies. You can readily see that the money they borrow has little or no influence toward inflation, and that to further restrict their sources of credit would be to impose an injustice.

When loans granted annually by State-licensed and regulated lenders in Pennsylvania are classified according to the major purpose for which the money is obtained, the largest grouping is headed, "Medical, dental, and hospital bills," and includes between 15 and 20 percent of the total. The class next to the top is "For consolidating overdue bills," and includes another 15 percent of the total. Other classifications are "Funeral expenses," "Fuel," "Moving expenses," "Mortgage payments and interest," "Insurance." It is reliably estimated that more than 70 percent of all credit granted by licensed small loan companies in the United States is for such purposes.

It need not be pointed out to you that for more than 30 years the Pennsylvania Small Loan Act has limited such loans to $300 and says the borrower shall have 18 months to repay if he needs that much time. Regulation W cut the loan period to 12 months. That meant that often the money needed to tide over a crisis could not be granted because the family income would not allow for the installment payments. The average loan in Pennsylvania last year, under regulation W and the Pennsylvania small loan law, was less than $175, and the average balance December 31 was only $143. But the number of loans granted indicates that more than one out of every five families in Pennsylvania required help of such nature during the year. Even if this type of credit were inflationary in character, the total national volume would be of insignificant importance.

The small-loan law was originally adopted to make it possible for honorable businessmen to provide adequate and legitimate credit for low-income groups. As a result, there are today over 500 such small business establishments serving Pennsylvania communities in that capacity. The secretary of banking bears testimony that they are keeping faith with the public. The Honorable D. Emmert Brumbaugh, speaking in Philadelphia on November 12, 1947, said that not one complaint had been registered with the department against a licensee since he had been in office. Why subject them again to double policing?

It is of these hundreds of small business people and their thousands of humble customers that I request you to think when you are urged to help reimpose Federal controls over consumer installment credit.

Respectfully yours,

CURTIS A. WILLIAMS.

Fuel Oil Shortage

EXTENSION OF REMARKS

OF

HON. MARGARET CHASE SMITH

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Friday, December 19, 1947

Mrs. SMITH of Maine. Mr. Speaker, war machines run on oil. Oil is the war fuel. Consequently, the most intensive search for oil in history is under way, reaching into almost every part of the world. In this international race for scarce petroleum, drilling rigs are boring for oil in at least 45 countries. In the few areas where oil lands are still untouched, governments and private companies are competing for the right to exploit new fields.

In my recent trip I saw the American oil operations in Saudi Arabia. United

States firms are exploring for oil in Panama, Ecuador, Saudi Arabia, Italy, and Denmark. New oil discoveries have been made in Alaska, Chile, Sweden, Japan, Austria, and Morocco. International exploration is being conducted in Canada, the Bahamas, Venezuela, Britain, the Netherlands, Egypt, New Guinea, the Middle East, and Australia. Government exploration is predominant in countries in which oil is nationalized—Mexico, Brazil, Argentina, Turkey, and Russia. Fortunately for us, Americans are far in the lead in this world-wide search for a vital fuel.

The subject of oil is of great current interest to New Englanders, especially those of Maine, who are faced with a shortage of fuel oil during the cold winter season. Like all of the rest of the New England delegation, I have been working very hard on this matter which seems to center in getting more oil tankers assigned to this area. I have taken the matter up with the Maritime Commission and the major oil companies. In addition to this my Armed Services Committee is making an investigation and bringing pressure for action. Some encouraging results have been obtained as the Maritime Commission announced on December 15 that it had completed arrangements for putting into operation all of its idle tankers which are commercially usable. However, Maritime Commissioner Raymond S. McKeough stated the next day to the House Commerce Committee that the Maritime Commission has no tankers that could be used to ease fuel shortages on the east coast. It appears that the real reasons for this lack of oil tankers for the east coast are: First, that too many of them have already been sold to foreign countries; and second, that the United States oil companies simply will not assign more of their tankers to carry oil to the east coast.

The assistant to the President of the Standard Oil Co. of New Jersey states that there is no shortage in Maine at present. The Bureau of Mines reports that Maine will use approximately 1,590,000 barrels of heating oil for approximately 44,500 units during the current year. With these conflicting reports, I am convinced all the more that the best authorities as to whether a fuel oil shortage actually exists in Maine are the Maine people themselves.

Under unanimous consent, I include with my remarks an editorial from the Portland Press Herald, December 18, concerning "surplus" tankers:

MORE BLUNDERING

The Maritime Commission has announced that it has no surplus tankers to put into the oil supply service along the eastern seaboard. All its tankers have been sold, it says, to domestic and foreign buyers, or promised for delivery. No fewer than 83 of the ships have gone abroad and there would be breach of contracts and so forth were the United States to renege on the transactions.

But the Commission also says that the last of these 83 tankers was sold last Friday—surely an amazing admission when everybody has known and has been talking for weeks about the current and growing scarcity of oil along the east coast particularly, where tanker service is accepted as the answer to supply problems. That seems to argue either indifference to the situation or so complete a lack of knowledge of it as to impeach either the integrity or the intelligence of this Government agency.

But it is not the Maritime Commission alone which is to blame: It says that the 83 tankers were sold abroad upon specific recommendation of the President and Cabinet. That plainly fastens responsibility upon the administration which is convicted of blundering.

Why it blundered is probably clear enough; it was willing to pour out American resources (and for a song) to aid Europe to get back on its feet, and it did aid Europe in this case with a burst of emotional bigheartedness, having no thought for the realities of the domestic situation. That would be more of the fuzzy thinking that has too often characterized the formation and execution of recent American policy. No doubt it was pleasing to the Wallaces, but it is not good for the country.

More and more, sentiment seems to be crystallizing in Washington and elsewhere that we have a duty to keep America strong; not only a duty to ourselves, but a duty to the democratic world which looks to us for protection, and even for life. The Congress, which proposes to pare some $88,000,000 off the stopgap aid appropriation, seems more than likely to whittle down the Marshall plan proposals themselves when they come up next January. It is possible that considerable reduction in the suggested appropriations can and will be made, not because of reasons of stinginess, or lack of sympathy, or even disregard of the necessity of building strength abroad to restore economic security under freedom, but to maintain the full power of the United States without essential impairment.

That, many people will think, is a proper motive, provided the Congress does not fall into the error of offering too little too late—of sending a boy to do a man's work; and it is a reasonable prophecy that common sense will prevent that kind of congressional shortsightedness.

At any rate, sale of the entire tanker fleet by the Maritime Commission is an instance of erratic planning of which it is necessary now to repent. A cold America is a less strong America. Representative FRANK FELLOWS of Maine's Third District said in Washington the other day that the number of oil burners in Maine increased 29.4 percent in 1946. Presumably a similar additional percentage of installations has been made this year; yet fuel is to be 20 percent or more short for the long, hard winter ahead. If the country had those 83 tankers or even a fraction of them it would not be shivering in apprehension of shivering in actuality during the months ahead.

We seem to get in Washington one blunder after another. Could the reason be what the United States News reports—that the Presidential advisers shoo away good and able men from Mr. Truman, and keep him more or less uninformed about affairs?

Brief History of "The Builders"

EXTENSION OF REMARKS

OF

HON. CHARLES K. FLETCHER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, December 19, 1947

Mr. FLETCHER. Mr. Speaker, it is my honor and privilege to call to the attention of the Members of Congress and to insert into the Appendix of the RECORD a brief history of The Builders, a Masonic corps of officers composed of Masonic employees of the district headquarters, public works department, Eleventh Naval District, San Diego, Calif.:

A meeting of John D. Spreckels Lodge, F. and A. M., No. 657, was convened early in February 1946 for the purpose of conferring the third degree of Masonry upon Walter Nowak, an employee of the Navy District Headquarters Public Works Department, San Diego, Calif. Joseph M. Kendall and Theodore R. Miller, each a Past Master of South West Lodge No. 283, and employees of the Navy Public Works Department, were invited to sit in the East and West, respectively, at the conferring of this degree. Immediately following the closing of the meeting, at a small gathering of visiting Masons, all employees of the Public Works Department, it was urged that a degree team or Masonic Corps of Officers be formed by the Public Works Masonic personnel for the purpose of conferring degrees and to afford local residents belonging to distant lodges as well as local Masonic Public Works employees an opportunity to learn Masonic degree work, confer degrees, and to individually and collectively participate in the work of Masonry in general.

A meeting was called for the purpose of organization on the 14th day of February 1946, there being present approximately 25 Public Works employees and also the Senior Inspector of the 110th Masonic District of the State of California, J. Bertrum McLees. After considerable discussion as to the purposes of the proposed organization, authority to proceed was granted by the Senior Inspector.

Since that date and immediately after close of work each Thursday afternoon these employees have convened at the San Diego Masonic Temple for rehearsal purposes. None, other than the two Past Masters, had previously had experience in the various stations nor held office in any Masonic lodge. Starting from scratch, under the coaching of the two Past Masters, the ritual of the third degree was soon mastered and, on invitation, was conferred by the Builders at East San Diego Lodge No. 561, the candidate being William H. Moser, employee of the Public Works Department. As of this writing The Builders have raised approximately 50 candidates to the Sublime Degree of Master Mason, thus assisting not only the lodges where they have officiated, each of which has been unusually active these past several years, but also assisting Masonry in general and the members of The Builders in particular. Today after 20 months of sincere study, rehearsals in the lodge room and evening meetings at the residences of various members, supported by the fine cooperation on the part of each individual, a majority of the members can on a moment's notice fill any station in the lodge as required for conferring the third degree, including the stations of the three principal offices, the lecture and the charge.

Arlo Thomas suggested that the name of "The Builders" be adopted as the name by which this Masonic Corps of officers should be known. Joseph M. Kendall, then acting secretary, was requested to set forth in writing the reasons therefor and on completion of this writing titled it "The Builders Creed". Thus the thoughts and practices of the members became in fact their creed.

Provisional bylaws have been adopted for the guidance of the organization including the omission of the payment of dues. Because of this omission no member need feel that he is delinquent nor be absent from meetings due to being in arrears. When funds are required for assistance to others or for general expenses, the "box" is passed and the required amounts are thus obtained, no member knowing the amount contributed by

the others. In this manner all financial requirements have been met.

On several Saturdays, there being no work at the Public Works Department, The Builders have conferred 5 third degrees in the one day, starting at 13:30 and completing the work for that day at approximately 22:30. On these occasions all stations are filled by The Builders, no member duplicating in the same station during the entire session. This is mentioned to emphasize how thoroughly the various members have learned the ritual of the many stations.

Members having held or now holding office in "The Builders" are as follows:

First year: Theodore R. Miller, president; Russell Lumley, first vice president; Ernest W. Holzhey, second vice president; Wilson D. Lorenzen, secretary; Joseph M. Kendall (during organization), acting secretary, director.

Present, second year: Joseph M. Kendall, president; Russell Lumley, first vice president; William Elkins, second vice president; Ernest W. Holzhey, secretary; Theodore R. Miller, acting secretary, director.

It is the keen desire of the members that in the not too distant future a way may be found through proper Masonic channels to establish additional chapters of "The Builders" in those districts where naval public-works departments are to be found in order that Government Masonic civilian employees may meet upon a common ground, perfect themselves in Masonic ritual, promote loyalty to their Government, and enhance enthusiasm and faithfulness to their daily governmental occupations.

November 7, 1947.

JOSEPH M. KENDALL,
President.

SAN DIEGO, CALIF.

Also, Mr. Speaker, I include in the Appendix of the RECORD, "The Builder's Creed," which, if taken to the hearts of men and adhered to in our daily lives, would make this a far better world in which to live:

THE BUILDER'S CREED

We, a Masonic corps of officers, employees of the public works department of the eleventh naval district headquarters, San Diego, Calif., duly organized this 14th day of February 1946 under authority granted by the senior inspector of the one hundred and tenth Masonic district of California do hereby adopt as the name by which this organization shall be known, that of The Builders.

Among the many departments of the United States Navy, the public works department, staffed by officers of the Civil Engineer Corps, is responsible for the fabrication of structures ashore necessary for the operation and preservation of our great Nation. It is theirs to convert the raw materials of nature into structures of strength, service, and beauty.

We therefore deem it appropriate that we, as Masonic employees of the public works department, influenced by the objectives of our employers and in pattern of that great ancient architect and master builder, should, in commemoration of his example, commit ourselves to the noble and glorious purpose of building character among mankind, founded upon those noble virtues of brotherly love, relief, and truth.

To this end we do hereby pledge ourselves, knowing that by so doing the great moral benefits thus derived will directly and indirectly be distributed among ourselves, our homes, our State, and our Nation.

Signed this 14th day of February 1946.

THE BUILDERS,
THEODORE R. MILLER,
Past Master.
JOSEPH M. KENDALL,
Past Master.

Detroit Citizens Plead for Loans, Credits, and Relief for Poland

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, December 19, 1947

Mr. SADOWSKI. Mr. Speaker, I have received the following resolution, together with a petition, signed by prominent citizens of the city of Detroit in professions and business, and actively engaged as civic leaders, addressed to you and requesting that I submit it to you and to the Members of the House.

As I understand it, this petition comes not as the result of any pressure by any organized group, but comes spontaneously from these citizens as patriotic Americans of Polish extraction, requesting that the Polish Nation and the Polish people receive a square deal. They cannot understand why billions of dollars are being appropriated as outright gifts to nations and people who have been our enemies, and the Polish Nation and the Polish people, who have always been on our side in every struggle, are being ignored and discriminated against. They request specifically that the Polish Nation and the Polish people receive loans and credits on a business basis, and some relief aid for the needy and destitute.

We must not drop the iron curtain on the Polish people who have always been our loyal friends. We should not shunt them aside and deny them even commercial loans that they desperately need in their struggle for reconstruction. Poland today has trade agreements with practically every nation in Europe. Today two-thirds of Polish coal export is going to Scandinavian countries, France, Italy, Austria, and other western Europe nations. Poland is making a real contribution to the recovery of Europe. Polish needs should not be ignored.

The resolution and the petition which are addressed to you, Mr. Speaker, I am herewith including as a part of my remarks:

President Truman by proclamation has called Congress to meet in special session on November 17 to appropriate funds for emergency relief to Europe. Congress will be asked by the President to act immediately on emergency aid for Europe before taking up equally important domestic questions confronting the American people.

We are of the opinion that Poland is in dire need of economic aid and should be considered for a loan and relief.

Our reasons for making this appeal on behalf of the Polish Nation and its people are as follows:

First. As the first nation to fall victim to the terrible attacks of the German aggressors in 1939 Poland suffered untold spiritual and material damage over a period of 6 years. No other country underwent such an ordeal—invasion, a long period of occupation, and, finally, methodical destruction by the retreating German armies.

Second. Polish coal, exported on a steadily increasing scale, has become a very important factor in the reconstruction of the countries of Europe. The number of economic agreements between Poland and other European countries serves as an example of the sincere economic cooperation in existence. But, new and modern mining equipment is needed in the near future if Poland is to continue to contribute to her own swift recovery and that of Europe. Certainly a loan would contribute significantly in this respect.

As Americans of Polish descent, we are in favor of this special session of Congress also considering the merits of a loan to Poland as an essential and most necessary part of the proposal to aid European recovery. The Polish people are deserving of the most careful consideration of this matter.

We know that the American people have humanitarian and warm feelings for the Polish people. We know that a loan to Poland will receive the overwhelming support of the people of this country.

Therefore, we urge you to make this appeal heard upon the floor of Congress, and that your fullest cooperation be given toward this most urgent matter.

Hon. JOSEPH MARTIN,
Speaker of the House of Representatives, Washington, D. C.

HONORABLE SIR: The enclosed memorandum expresses the views of the undersigned on the vital need for an American loan and relief to Poland as an essential part of the program to aid European recovery.

We urge you to give this memorandum your kind consideration and support.

Long-Range Agricultural Program

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, December 19, 1947

Mr. TEAGUE. Mr. Speaker, the Agricultural and Mechanical College of Texas has played a very important part in training agriculturists for Texas and for the world. This land-grant institution has been instrumental in improving farm conditions and increasing efficiency in farming. Thousands of young men trained at Texas A. & M. are actively engaged in farming operations or in training others to utilize better agricultural methods.

The House Committee on Agriculture conducted hearings in Texas on the long-range agricultural program on November 1, 1947, and I was very interested in the report submitted by D. W. Williams, vice president for agriculture, A. & M. College of Texas. With the present food shortage existing in the world today, better methods of farming will have to be practiced not only in this country but in all other countries throughout the world.

Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the report of D. W. Williams on the long-range agricultural program which is now being considered by the House Committee on Agriculture:

LONG-RANGE AGRICULTURAL PROGRAM

(By D. W. Williams)

The Agricultural and Mechanical College of Texas, the land-grant institution for Texas, appreciates the invitation from the Committee on Agriculture of the House of Representatives to have members of its staff attend this regional hearing and participate in the discussion centering on a long-range program for American agriculture.

AGRICULTURAL-NONAGRICULTURAL INTERDEPENDENCE

A basic principle of a long-range program for agriculture is the close relationship of agricultural and nonagricultural industries in our economic system. Farm problems cannot be solved in agriculture alone. Neither can industry be prosperous without satisfactory conditions in agriculture. If agriculture is to continue to produce an abundance of food, fiber, and materials for the whole economy, a continued high level of production and employment for nonagricultural industry is imperative. Consumers must earn if they purchase the food and other goods and services which they need and want. To earn they must be productively employed. A high level of industrial employment becomes increasingly important as improved technological developments make it possible for fewer and fewer people to produce our agricultural requirements.

PRODUCTION POLICIES

Efficiency in production: A better standard of living for all is dependent upon a constantly increasing efficiency in farming, in terms of greater output per man engaged in farming, and improved quality of the products.

A continuing and essential rise in efficiency through technological developments in farm equipment, improvements in crops and livestock, control of diseases and insects, and improvements in other farm management practices can best be provided through broader and more intensive research and educational programs.

Production adjustments: In the long run we should try to eliminate man-made scarcity on both the agricultural and industrial fronts. Scarcity hurts the consumer and curtails employment.

Full use of all resources, without exploitation, is the only way to provide the higher level of living we wish to attain. We need to remind ourselves often that limiting output makes us poorer, not richer. Restricted production should be employed only as a last resort and recognized as a temporary expedient.

Soil and water conservation: The best foundation for continued prosperity and independence is that of building and maintaining a productive soil and developing an adequate water supply.

Soil and water conservation are not something apart from good farm-management practices. They are not an end, but a means to an end. They are an essential consideration of wise land use aimed at better long-time profits from the farm business and more security in the homes of the Nation.

In this connection, we need more information about surface and underground waters. We need to know much more about the factors affecting water supplies and their effect upon the welfare of the people. We need to know more about the dynamic processes in the management of soils.

Farm forests: The United States is rich in potential forest resources. Year by year through research, we are learning how to maintain commercial timber areas, how to restore the cut-over lands, and how to use many species of wood that were first thought unsuited for commercial purposes. Our aim is continuous forest production on all potentially productive forest land.

Working together, producers, processors, and the public institutions and agencies need to develop still better cutting practices, utilization of the harvested timber, protection of the forest against fire and other destructive agents, improved methods of forest land taxation, and better land-use classification.

FAMILY LIVING POLICIES

Tenure: A satisfactory long-range program for agriculture should include provision for a more effective system of tenure. Among the more important objectives of such a program are stability of tenure, improved landlord-tenant relationships, conservation of farm resources, and a greater opportunity to achieve ownership.

Living at home: Whether in prosperity or depression, we urge that emphasis continue to be placed on living at home. By the very nature of farm living, families need to utilize the land in their farmsteads for adapted fruit, vegetables, and livestock products. Farm families will continue to need educational assistance in the arts and crafts necessary to care for their farm and home facilities.

Level of consumption: Agricultural surpluses should be handled, insofar as possible, by encouraging consumption rather than by restricting production.

Should the situation become so acute as to require financial aid, we suggest subsidizing the expansion of food consumption, and aiding producers in making needed production adjustments rather than destroying agricultural commodities or restricting their production.

Substantial progress has been made and is being made in educating people as to proper dietary requirements. We must continue our attack on inadequate diets so that all people may enjoy the health which scientific findings are showing us how to attain.

DISTRIBUTION POLICIES

The market: A great amount of research and extension work with reference to the present distribution system is needed. We need to correlate more effectively through the distribution system the needs of consumers on the one hand and the output of producers on the other.

Attention should be focused on both the distribution of agricultural commodities and the distribution of supplies and services agriculture needs for efficient production and good family living.

Further refinement in market news and in standardization, closer grading and inspection of products, some regulation of trade practices, and open competition in the distributive channels are necessary if farmers are to receive their rightful share of what the consumer pays.

Cooperatives: True agricultural cooperatives provide one of the basic ways of doing business in a free enterprise, capitalistic system. These business units are tremendously important to farm people. They are helping farm families raise their standard of living. They are giving them a voice in the selling of their products, and in the buying of their supplies. They provide a means of increased responsibility and participation in the distribution system. In view of these facts greater encouragement should be given farmers to help themselves through cooperative effort.

International trade: American farmers, as do all American people, have a big stake in the role our country plays in international relations. The international market affects some agricultural enterprises, such as wool directly, and others indirectly through the degree of industrial prosperity we may have in this country.

In view of the security measures being imposed by most countries and the different levels of industrialization found, it is not realistic to expect the world to embark upon free trade immediately. Yet, with intelligent cooperation of business and government, we can aim at selling commodities which we produce to advantage and buying from other countries those products which they produce to an advantage.

It is still true that exports over a long-time period can be paid for only with imports. Grants and loans and allied financial arrangements only delay the ultimate recognition of this fact.

FINANCIAL POLICIES

Prices: Governmental determination and artificial stimulation or contraction of agricultural prices are inferior substitutes for strong consumer markets in a long-range program.

It does not follow, however, that the Government should not step in during temporary emergencies to exert its influence upon such conditions as serious inflationary tendencies or desirable major shifts in production in particular enterprises. For the most part, Government policies can be more effective if directed toward the improvement of the competitive marketing of farm products rather than the attempt to adjust supply-demand conditions on the market.

The use of a parity concept is sound as a means of adjusting the relationships between agriculture and other segments of the economy, however, the present formula needs considerable revision. There is no reason to restrict our study of this problem to price parity. The concept of parity income needs careful consideration.

We do not believe that a return to price ceilings in the transition years ahead will solve the high-price problem between agriculture and other segments of the economy. America has a tremendously complicated economic machine and as a result it is almost impossible to fairly reflect the many price-cost relationships that have to be considered in a price-control program. As an alternative, we suggest that the Government be more aggressive in securing larger farm and industrial production, in helping to secure better distribution of present supplies of food and other goods, and in using its present fiscal and monetary powers to this end.

Credit and finance: Commodity loans, farm real estate and operating credit, crop insurance, assistance in rural housing, rural electrification, and the like, should continue to be encouraged by the Government as part of its national policy. The role Government has played in Federal housing should be fitted more closely to rural housing projects. We need to encourage better homes by providing credit terms in accordance with the make-up of their farming system.

Farmers who have maintained their property well and practiced good husbandry in the face of serious price declines and other misfortunes beyond their control should be protected against loss of their farms.

Health, recreation, and service facilities: Extensions of rual electrification, rural telephones, and farm-to-market roads are still needed. Local roads are often limiting factors in agriculture production and farm living. Furthermore, aditional recreational and health facilities are needed in rural areas and should receive the support of adequate funds at the county, State, and Federal levels.

FEDERAL-STATE RELATIONS

American farm families have the right to demand that the land-grant colleges and other agricultural agencies seek full cooperation of all persons and groups, private or public, who have contributions to make to agriculture.

Increased responsibility has been placed in the land-grant college system through increasing appropriations during the past 50 years. We hope to merit a continuation and expansion of this confidence and support.

Congress and the State legislatures are supporting many agencies now working on the agricultural front. We question the wisdom of creating overlapping agencies with the resultant duplication of effort and overhead and the confusion among the farmers served as to the function of each agency. We earnestly recommend that all Federal agricultural agencies be coordinated by the United State Department of Agriculture and that they be channeled through existing State agencies. This will result in a simplification of administration, greatly reduce overhead expense, eliminate overlapping agencies, and avoid the confusion now existing among farmers as to the functions of each agency. It is important that the return to more State responsibility be made as soon as possible.

Our farm people recently have gone through two very trying experiences; the severe depression of the early thirties and the devastating World War II just ended. What our people want now above everything else is an opportunity to build a more satisfactory and secure life. Our farm people want more permanence, stability, security, and dependability in their agriculture. To this end there is real need for increased unity of purpose and effort among rural people and in all agencies working with agriculture.

Views of International Association of Machinists on Marshall Plan and Inflation Control

EXTENSION OF REMARKS
OF
HON. BRIEN McMAHON
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES

Friday, December 19 (legislative day of Thursday, December 4), 1947

Mr. McMAHON. Mr. President, the International Association of Machinists has a reputation among workingmen of being one of the soundest and most progressive trade-unions in the country. With its membership of more than 600,000 working in every State and Territory in the Nation, this union's views on the Marshall plan and the President's program for inflation controls will be of interest to every Member of Congress. The IAM attitude on these vital questions is expressed in an editorial published this week in the Machinist, the union's official weekly newspaper. I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A MARSHALL PLAN FOR AMERICA, TOO

The principal political question in the world today is whether the working people of Europe are going to support communism or democracy. We believe that communism, like fascism, is a philosophy of despair. It only attracts working people when they have given up hope of feeding and clothing their families under a free, democratic system.

To rebuild democracy in western Europe, the working people need food, clothing, and tools. Without these minimum essentials, they can have no hope of rebuilding a free system.

If we can, through the Marshall plan, give hope to the long-suffering peoples of western Europe, there is no question that they will support a democratic system under which they are free to develop their own labor organizations, independent of government domination and control.

On these grounds we endorse the Marshall plan wholeheartedly and urge its enactment by Congress.

We do not believe, however, that the United States can undertake such a gigantic project of European aid without placing certain safeguards on our own economy at home. We can afford to rush the necessary aid to Europe only if we are prepared, at the same time, to protect our own people from the deprivation and suffering that a runaway price inflation is sure to bring.

Mindful of this danger, the President of the United States has asked for the power to restore price controls and rationing wherever and whenever such drastic measures are required to protect our own citizens from the consequences of an inflation that already has reached the danger stage. Already, the third round of postwar price increases is well advanced, despite the fact that third round wage increases have not yet been proposed.

The only alternative to price control and rationing, we believe, is a system of profit control through the reimposition of excess-profit taxes on business, in this way to remove some of the incentives for excessively high prices. We urge that Congress consider the reenactment of excess-profits taxes, such as those in effect during the war.

The Marshall plan cannot succeed unless adequate safeguards are placed on our own economy. If Congress votes for the Marshall plan on the one hand, and refuses to vote an American plan at the same time, it will be guilty of gross neglect of its first duty—looking after the welfare of Americans.

We believe that Congress must vote both the Marshall plan and inflation controls or neither.

Summary of Legislation of the Session

EXTENSION OF REMARKS
OF
HON. WALLACE H. WHITE, JR.
OF MAINE
IN THE SENATE OF THE UNITED STATES

Friday, December 19 (legislative day of Thursday, December 4), 1947

Mr. WHITE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a summary, which has been prepared by the senior Senator from Ohio [Mr. TAFT], of legislation passed by the Congress during the special session of the Eightieth Congress.

The PRESIDENT pro tempore. Is there objection? The Chair hears none, and it is so ordered.

SENATOR TAFT'S STATEMENT ON ACCOMPLISHMENTS OF THE NOVEMBER-DECEMBER CONTINUATION OF THE EIGHTIETH CONGRESS, FIRST SESSION

Congress reconvened November 17, 1947, on call of the President to consider the immediate need for the relief of foreign countries and to deal with domestic inflation.

By general agreement, matters not immediately concerned with the President's program were deferred until the regular session. Prompt consideration was given by committees and by Congress to the proposal for increased aid to provide essential food, fuel, and other commodities to the people of Austria, China, France, and Italy suffering from short crops and a reduced production of coal. Authorizations and appropriations were provided for all immediate needs.

The problem of high prices and other points contained in the program submitted by the President were considered by numerous committees of the House and Senate.

The question of the restoration of wartime controls was postponed for consideration at the regular session.

Various matters considered by the committees, however, were consolidated in a bill which (a) extended export controls for another year, (b) extended control of transportation facilities for another year, (c) authorized a campaign for the conservation of food and feed, (d) authorized the stimulation of production of food in foreign countries, and (e) authorized the President to approve the

making of voluntary agreements in various industries providing for priority allocation and limitation of inventories.

In the field of the operation of distilleries, where industry agreement had proved to be impossible, the bill authorized the Secretary of Agriculture to impose limitations on the use of grain in distilling.

The Senate considered and agreed to the ratification of the Inter-American Treaty of Reciprocal Assistance for the Common Defense of the American Republics. This treaty, providing a definition of aggression and eliminating the veto power, was recognized as the most important step ever taken to preserve the security and peace of the Western Hemisphere, and set an example which the world may follow.

FOREIGN AID ACT OF 1947

(Public Law 389, 80th Cong., 1st sess.)

This act provides immediate aid urgently needed by Austria, China, France, and Italy. Food, medical supplies, fibers, fuel, petroleum, and petroleum products, fertilizer, and seed, will be delivered in the recipient countries. Appropriations of $597,000,000 are authorized. Each country receiving aid shall first agree to give full publicity to the source and amount of commodities received and to make such commodities available to the people at reasonable prices.

INCREASED AID FOR RESIDENTIAL CONSTRUCTION

(Public Law 394, 80th Cong., 1st sess.)

Amends the National Housing Act by authorizing the Federal Housing Administrator to immediately increase by $250,000,000 the amount of insurance available for new residential construction. An additional $500,000,000 may be made available at the discretion of the President.

ECONOMIC STABILIZATION

(Public Law 395, 80th Cong., 1st sess.)

The President is authorized to continue export controls, to allocate transportation facilities, to encourage the greater production and conservation of food and agricultural commodities, and to encourage the making of voluntary agreements in industry, business, and agriculture for the purpose of stabilizing the economy of the United States.

COMMODITY EXCHANGE ACT AMENDMENT OF 1947

(Public Law 392, 80th Cong., 1st sess.)

Amends section 8 of the Commodity Exchange Act to authorize the Secretary of Agriculture to make public the names of traders on the boards of trade on the commodity markets and to direct them to supply such names to congressional committees upon request.

COMMISSION ON REORGANIZATION OF THE EXECUTIVE BRANCH OF THE GOVERNMENT

(Public Law 391, 80th Cong., 1st sess.)

Relieves disabilities of law preventing the employment of experts and specialists required in the work of the Commission on the Reorganization of the Executive Branch of the Government.

INTER-AMERICAN TREATY OF RECIPROCAL AID

(Executive II, 80th Cong., 1st sess.)

This treaty provides for positive and unified action in the event of armed attack against any American state; consultation and the machinery for consultation is provided, not only with respect to armed attack but also when any situation might arise to endanger peace. A special hemisphere security area is defined as well as political, economic, and military measures to be employed against an aggressor. Provision is included for effective integration of inter-American peace machinery into the United Nations.

Notes on a Trip to Europe

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Friday, December 19, 1947

Mr. WOODRUFF. Mr. Speaker, I have been privileged to read Notes on a Trip to Europe, by Ernest T. Weir, chairman of National Steel Corp., Pittsburgh, Pa. Mr. Weir is one of the most brilliant and sound businessmen of this country. For years he has kept constantly in touch with conditions in foreign countries. He returned from a trip to Europe on September 9, 1947, and has submitted his observations while there by notes dictated recently. They contain not only his impressions of the countries visited but also some conclusions which were arrived at "only after careful thought and study." The notes follow:

NOTES ON A TRIP TO EUROPE

(By Ernest T. Weir, chairman of National Steel Corp., Pittsburgh, Pa.)

On a trip abroad, starting August 1 and ending in New York on September 9, 1947, I spent 1 week in London, 5 days in Switzerland, and the balance of the time in France. My purpose in making the trip was to compare present conditions in the countries visited with my recollection of conditions in the same countries on previous visits before the war and to check by personal observation the impressions I have gained on international matters from my reading of newspapers, magazines, and books. No one, of course, can make a thorough study of wide areas in 1 month's time. There are, however, certain general aspects which become immediately apparent and lead to conclusions which would not be changed materially by any amount of time and study. It is such aspects, in the main, that these notes deal.

In addition to numerous informal contacts with people of all sorts I had extensive interviews with a group of outstanding men in industry and finance in the countries visited. These men are all important, practical business leaders whose observations were based on an intimate knowledge of the conditions applying in Europe generally as well as in their respective countries. In all cases their discussions with me were without reserve. They spoke freely and frankly on all questions raised. Although the opinions of these men are represented in these notes, I am not at liberty to identify them because it was understood that our discussions were in confidence.

For convenience and simplicity my impressions of each country are presented separately.

FRANCE

Basically the country looks good, with the exception of the cities and districts in Normandy, which suffered heavy war destruction. The country districts have been well cultivated and appear just about the same as the last time I was in France.

In Paris there is no outward evidence of distress. The city is well kept and looks the same as before the war, there being no destruction in the Paris district. The streets were full of people, stores seemed normal, and people dressed about the same as I have always seen them in Paris, with no surface evidence of malnutrition. In restaurants the food is up to the normal standard and plentiful, and this also applies in the hotels.

Businessmen are very critical of the Government and apparently have no confidence in it, considering it without leadership and entirely political. Too many people are employed by the Government and the budget is out of balance. The rank and file of people with whom I talked—all types—feel the same as businessmen regarding their Government and have the same lack of confidence.

The most serious thing in France is the black market in money. The Government maintains an official rate for the franc of 125 to the dollar, or eight-tenths of a cent. The actual value in the black market is 250 francs to the dollar, or four-tenths of a cent. The black market is universal. You can buy this money in hotels and from certain headquarters. There are runners on the streets who will tell you the headquarters to go to. There is really no reason for any visitor paying the official rate for francs, except that on passports and any purchases you may want to take out of France a check is made as to where the money comes from. Consequently, you do have to buy a limited amount of francs at the official rate.

All Government employees—which constitute a great number—and the workers in many plants are paid on the basis of the official rate. As against this, the cost of practically everything now has gone away up on account of the black-market value of the franc, so that the working people are poorly paid in relation to the real purchasing power of their wages and, consequently, are in a bad condition. The important food products are rationed, which creates a further black market in food. If the Government would meet the situation fairly and squarely and devalue the franc, say, to the basis of 250 to the dollar, it would be a great factor in improving conditions in France and helping the mass of workers; also, it would stimulate buying on the part of Americans who visit France and would improve the country's dollar supply. Why the Government does not take this course is hard to understand.

I find the businessmen mentioned, above all, apparently have great confidence in the French people and believe that they would work their way out of this difficulty if they could get leadership and better government which would establish conditions providing adequate incentives. As it is now, the people, in general, work only 40 hours per week and make no special effort to sustain production.

They are, of course, short of coal because they are not able to import from England and the Ruhr production is away below normal.

Taking it as a whole, the great problems in France are bad government, encouragement of the people to believe that they can live without working, and the consequent failure of the people generally to produce.

Businessmen believe that France must work out its own solution by correction of the above weaknesses, and that if the United States continues to feed money into France under the present conditions it will not be helpful to them and will actually delay the return to normalcy in production.

France has the advantage over England in being able to produce practically sufficient food to support the Nation, and this, of course, is of basic importance.

It is the opinion of businessmen that the influence of communism is definitely declining, and certainly this opinion is shared by many of the rank and file of people with whom I talked.

SWITZERLAND

This country is in marvelous condition. People are working actively; it is clean, well kept, and well cultivated; and I have never seen greater order in any country. It is evident that there is great contentment among the people. Swiss money is at a premium

as against that of the United States—this being the only place in the world where this applies.

ENGLAND

The country looks well and this applies to both the rural districts and the cities. Where bombing has taken place, as in London and other districts, the debris has all been cleaned up and in the cities brick walls have been run along the pavements which hide the destruction to a considerable extent. People go about their business, paying no attention to this condition, apparently having become accustomed to it.

In London the streets are full of people, dressed about the same as I have seen them in the past, with no evidence whatsoever of being inadequately fed. Stores are all open and have a good appearance. The theaters have capacity audiences all the time; in fact, it is said that they are having the greatest theatrical season in the history of London. Restaurants are full and the hotels are well patronized. We had no trouble securing ample food, although the variety is not very great, but England has never been noted for good food, as is France.

There is an absolute lack of confidence in the Labor-Socialist government. Every businessman I talked with endorsed this thinking. The men in charge of government, mainly labor leaders and impractical thinkers, are considered incompetent as individuals and inefficient as a group, and this is borne out by the record of ineffective governmental operation thus far.

These businessmen were a unit in saying that England must work out its own salvation. Better government and more work must be had to bring about the necessary greater production. They say that the United States cannot solve their problems by pouring more money into England and, in fact, that this would be harmful. The loan of almost $4,000,000,000 has been largely wasted, and there is no doubt that if this large amount of money had not been available, England would have faced her problems much earlier. As it is, they have drifted along and wasted both time and money. In the Government as it exists today there is a battle between the radical side and the more conservative group, and this situation does not, of course, improve their efficiency. The same lack of confidence exists among the rank and file of people, outside of the workers who are in labor unions. The latter are so pampered and encouraged by the leadership that they think they are better off, and are not worrying about the general conditions. Outside of this particular group, I would say there is no faith whatsoever in the British Government today.

There is no black market in England in money such as there is in France, but there is a black market in the day-by-day goods needed by people, which is natural considering the Government's restrictions and controls. As an example of restrictions and controls, the manager of a fair-sized, middle-class restaurant in Richmond told me they had to struggle with 1,227 orders and regulations and they did not know how long they could keep going. All business is handicapped in every way through this type of control.

There is no apparent evidence anywhere confirming the statement, reiterated in our administration's propaganda, that there is danger of a crisis and collapse—and just what is meant by collapse I have never been able to understand. The problem in England is the same as in France—the need for better government, more hard work, and greater production. What England needs basically is more coal, and yet they are producing much less than before the war. The prewar production of coal was about 240,000,000 tons a year, which gave the country an ample domestic supply and allowed a surplus for export. Compared with this, they will probably produce only about 180,000,000 tons of usable coal this year. This Government, like others of the same type, completely misrepresents the true situation when it puts out statistics. For instance, they publish estimates of 200,000,000 tons of coal this year, but do not show that this figure contains 10 percent waste, which would have to be deducted to put the 1947 output on the same basis as production before the war, which was after this 10 percent deduction. England has ample reserves of coal, and although their mines are not all modernized yet, there is no reason—if they work sufficiently hard—why their production should not come up to what it was before the war, at least. The additional coal tonnage would enable them to increase their own general production and also furnish coal to other countries in Europe, including France, bringing in a large revenue from this source. But now the miners work only 5 days a week as against 6 before the war. The recent coal strike, which was a severe blow to their over-all production, I consider the result of bad management and poor thinking on the part of the Government, which now, of course, owns and operates the mines.

In England there is still a great amount of wealth, business ability, technical knowledge, and producing property. With intelligent support on the part of the leaders of the people all of this could be used effectively to bring England back to where it can again take care of itself.

GERMANY

There is universal agreement on the part of English businessmen that Germany must be rehabilitated and a great increase in production brought about by allowing the German people full liberty in the reconstruction of their country. I do not believe we can ever have a going Europe until this is started. The Morgenthau plan as applied in Germany by our country was one of the great crimes of history.

The report of Mr. Hoover, which was endorsed by the group of American businessmen that was sent to Germany, showed plainly what must be done. The administration in Washington stated some time ago that they were putting this into effect. This is a complete misrepresentation to the people of this country because nothing has been done, so far as I can find. The slightly amended Morgenthau plan is still in control. This is one thing that Congress must take steps to accomplish—that is, a proper program for the rehabilitation of Germany. We, of course, will have to advance money to Germany to bring that about, but I believe it is one of the safest places in Europe to put funds for reconstruction under a proper plan.

GENERAL

I am fully convinced that the United States must discontinue at once the practice of loaning or giving money to foreign countries without the most critical investigation of their program for the use of the money. This investigation must not be left in the hands of regular officials of our Government, whether from the State Department or others. On the contrary, it should be put in the hands of industrialists and other practical men—according to the problem involved—who can make intelligent decisions, based on experience, and free from political or diplomatic pressures.

I came back fully convinced that in France and England there is not the slightest danger of communism. I am also convinced there is no danger of ultimate communism in the United States. In my opinion, communism, as exemplified by Russia, can only be applied in a country such as Russia, where people are of low standard as a result of centuries of mistreatment. In England, France, and the United States people are very individualistic, and they will never stand for any government which destroys their individual freedom and keeps the iron heel of control on their necks. In my opinion, the bugaboo put out by our administration, namely, that unless we finance countries they will go communistic, is without the slightest justification. People who will stand for communism will go in that direction, irrespective of what we may do to the contrary. I think Greece is an outstanding example of a waste of our money without in any way bringing into that country peace and stability.

I am more convinced than ever that this country must keep itself strong and active, with high production, improving standards of living for all the people, and a normal prosperity that will be a great example to the balance of the world as to the values of our type of government. Nobody can visit European countries with problems resulting directly from their form of government and low production without coming back to the United States with a deep appreciation of its fundamental values and of the great things it has done to improve the standards of living of all of the people.

In England this has not been the case in the past, nor in France—in fact, none of the European countries has offered opportunities for better living such as we have here.

The conservative government that controlled England practically up to the time of the last war operated on the old-fashioned basis of wealth for a comparative few. At the end of the Victorian period, England was a great power and the richest country in the world. Wealth from all sections of the world flowed into England. But productive enterprises of all kinds were largely controlled by rich families and, unfortunately, the younger generations of these families lost interest in work. In the main, they were interested only in the income of the properties left to them, such as coal mines, steel works, textile plants, and others, and made no effort to maintain and improve them. As a result, English industry as a whole is not modern.

In England the cartel system controlled industry. That is, manufacturers would get together, establish uniform prices, and then submit them to the Government for approval. The result was uniform prices that were high enough to allow the most inefficient operations to make good profits. These profits were largely paid out in dividends and very little was put back into the properties. This is the principal reason why England's coal mines, steel works, and other operations are to a considerable extent antiquated as compared with similar operations in the United States. Our standards have been constantly improved as a result of extreme competition which has forced the reinvestment of a great part of the earnings as well as new money. A competitive economy is the only one that can bring progress in any country, in my opinion, and this has not applied in England or in France but must apply if they are to progress in the future. Even today in both England and France, corporations are having large earnings and paying out large dividends, in both cases greater than we do in this country. In fact, some bankers and businessmen admitted to me that industry was making more money than it was actually entitled to.

In Europe generally friendly relationships between countries are made extremely difficult by the rigid customs methods. You are carefully checked when you go into these countries by the customs officials and also when you leave. There is an atmosphere of

suspicion and criticism which certainly does not promote good feeling. How anybody could ever expect a one-world situation with these critical checks at the borders of each country is beyond me.

The net result of all this is that, interested as the United States is and must be in the conditions of foreign countries, the ultimate solution must be in their own hands and not in ours, and the quicker we realize this as a country the better off we will all be, both here and abroad. We have put great sums of money into China over the past 10 years and yet the recent report of General Wedemeyer shows that China is still being operated on the same old basis with bad government, graft, starvation, and a growing strength of communism.

I recommend the reading of an article by David Lawrence in the September 12 issue of the United States News, and also the statement by Henry Hazlitt, How Can America Rescue the World? which has just been completed. I think both of these strongly support the conclusions I have outlined above.

I am convinced that socialistic governments such as exist in England today, and in France to a considerable extent, can never succeed in bringing about prosperity and in giving the people higher standards of living. Invariably in this type of government authority is exercised by too many impractical and inexperienced people. One control leads to another until the whole economy is in a state of confusion. This failure to succeed brings about increasing discord within the government organization.

For relations with foreign countries—outside of the field of formal diplomacy—we must bring into government practical and trained men of affairs who will earnestly and honestly give their time and best efforts to building up good organizations, putting in effective methods and systems, and freeing producing elements within the country from the multiplicity of government controls. In other words, we must restore freedom of thought and action to the people, both within government and without.

Our so-called diplomats in foreign countries are now being put in charge of matters involving practical production for which they are in no way trained. Their reports on situations are not to be depended upon as a result. Too much propaganda is used within government to support theories that come out of the discussions in which these diplomats sit in authority.

The great necessity here in the United States is that Congress and the people get the real facts, based on practical, thorough, and time-taking investigations by men who know, and not simply the opinions of theoreticians.

The situation in Europe is highly complex and, naturally, there is no one simple answer to the problems of the various countries. My definite impression, however, is that Europe is by no means doing all that it can do to help itself. The various countries have great resources and manpower, and the margin between the present and the potential utilization of these advantages would far surpass any conceivable help that the United States can extend. Whatever help we give can do no more than palliate. The genuine recovery of Europe will start on the day that the people there roll up their sleeves and go to work—and not before. The great bulk of their needs can be filled only through their own production. In view of the statements of the English and French Governments that their countries are in a serious condition, it bewilders the visitor to see those countries operating on the basis of a 40-hour week and numerous holidays. Why don't they adopt a 6-day week, which, of course, would greatly increase the production of all materials? Given the right kind of leadership and adequate incentives, there is no question in the minds of persons with whom I talked that the peoples of Europe would work harder and more productively. Certainly, if there is an emergency, a 6-day week will harm no one.

Hon. Charles L. Gifford

EXTENSION OF REMARKS

OF

HON. SAM HOBBS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, November 17, 1947

Mr. HOBBS. Mr. Speaker, 9 months ago Hon. Charles L. Gifford was presiding as Speaker of the House when I had the privilege of making these remarks as a tribute to two outstanding departed Members of our body, Representatives Foss and Treadway:

Mr. HOBBS. Mr. Speaker, this occasion should not pass without an expression of tributes that rise today from every heart to the stricken State of Massachusetts and its sorrowing delegation. Ever since the Boston Tea Party, America has looked to Massachusetts for leadership, and has uniformly found it.

Two of such leaders, who served so long and so well in this body, we mourn upon this occasion because of their passing to higher service. We join those two bereaved families in their tears, tinged with pride and gratitude because these two great Americans kept the faith. Thank God we looked to them, and not in vain. Thank God that the proud tradition of leadership and ability and dedication to the public service still obtains. So we from every other State join our worthy colleagues from Massachusetts, bow to pay tribute to both past and present of Massachusetts.

Speaking as an humble Member of this House to the present distinguished Speaker of this body, until recently the minority leader, and to the distinguished minority whip now, formerly the majority leader, we remember again, as we did through the years when they were protagonists in leadership par excellence, that whenever a Member of the House referred to either he said, "The gentleman from Massachusetts." With those gentlemen from Massachusetts, the distinguished dean of the Massachusetts delegation who is just now presiding, and with every other Member from that great State, all of us join in paying this tribute of love, admiration, and respect to the memory of these two great servants of mankind, and of their great State, and of this great Nation.

Now the grim reaper has knocked at his door and he has joined the galaxy of stars that compose the constellation shining in the sky of service representing Massachusetts.

None of us who had the privilege of serving with him has ever failed to appreciate the high quality of his service, the pungency of his humor, his devotion to his constituents, his State and Nation, nor who has failed to form an affectionate regard for him, both as man and public servant.

The universal sorrow pervading this Chamber by reason of his passing has erased the center aisle.

Packages Are Helping Europeans Save Themselves

EXTENSION OF REMARKS

OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Friday, December 19, 1947

Mr. BUFFETT. Mr. Speaker, several Members of the House and Senate have introduced bills providing temporary exemption from postage on relief parcels to Europe.

I want to raise my voice in support of this proposal. I believe it would be a most constructive step in helping the people of Europe.

It has long been my conviction that successful relief and charity must be either individual or, if collective, under the auspices of private or church organizations. All recent experiences in this field seem to support this view.

Recently the Thanksgiving message to America from Rev. Martin Niemoeller gave striking testimony on the results and on the importance of individual parcels. The following is quoted from his letter:

You know that I have met with considerable criticism by recommending to you that you might give your helping hand by establishing in the first line, personal contacts instead of by organizing a general relief work.

Today I am absolutely convinced that this way is not only the right one, but the only one to get real results and to soften unhappy and hardened souls. * * *

During the last months again and again I have been visited by people who had received a letter or a parcel or both from some unknown friend in America, and it seemed to me that those people in some way had come back to human life again. To be sure, a package from abroad does not mean very much for a long period. It may do for just 1 week, and yet people feel rich as they experience that there are other people who think of them, and suddenly are willing again to share with others what they personally have been presented with.

I think that this sort of individual help outweighs many bad and hardening influences * * * that people are made better by it and, so to speak, more human. * * *

Mr. Speaker, if the heavy postal charges on relief packages to Europe were eliminated, that action would stimulate this voluntary outpouring of help by Christians to their brethren in Europe.

Aside from saving lives and souls, gifts from American people to individuals in Europe are the most potent antidote to poison spread from the east.

St. Paul once wrote to his brethren at Corinth:

And though I bestow all my goods to feed the poor * * * and have not charity, it profiteth me nothing. (I Corinthians: ch. 13, verse 3.)

Mr. Speaker, voluntary package and parcel relief to Europe is the best contribution America can make toward saving Christian civilization in Europe. Congress might well encourage that movement by providing temporary postage exemption for this charity.

Anti-Inflation Bill

EXTENSION OF REMARKS
OF
HON. JOHN A. CARROLL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Friday, December 19, 1947

Mr. CARROLL. Mr. Speaker, passage of the improperly labeled anti-inflation bill does not in any way accomplish the purpose for which the Congress was called into special session by President Truman.

To meet the present emergency as an anti-inflation measure this bill is a fraud and sham, and it is commonly regarded in the Halls of Congress as a political hoax. It will neither fix prices at their present level nor prevent the continuing increase in the cost of living, which in a few months undoubtedly will reach even more serious proportions.

The bill, however, does give power to the President to continue some control over exports, transportation facilities, and the allocation of grain for distilling purposes. It also provides for the use of the old political expedient, often used but never successful—voluntary cooperation of industry.

I voted for the bill because I believe the continuation of these powers given to the President is necessary. It has been said that half a loaf is better than none, but I am afraid the Republican leadership has provided only a thin slice of a real program against inflation.

Republican leaders have stated that, if this legislation does not prove effective in curbing prices, they will set up more rigid controls. In my judgment, the cost of living will continue to increase, and our time is running out in the battle against inflation. Continuous debate should have been given this tremendously important subject, if necessary, through the entire holiday season.

President Truman has pointed out that, even if Congress should act now in accordance with his wishes, a reasonable time must elapse before he can set up the necessary machinery to act should the situation become more desperate.

I stated publicly on many occasions in 1946 that premature removal of price controls would be gambling with our economy. That unfortunate gamble has resulted in the loss of billions of dollars to consumers of the Nation to date. A continuation of that type of desperate gambling, as evidenced by actions of the Republican leadership during this session, will bring further suffering and hardship to the people, and may very well lead to the catastrophic collapse of our present economy.

Present Conditions in France

EXTENSION OF REMARKS
OF
HON. GEORGE MacKINNON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, December 19, 1947

Mr. MACKINNON. Mr. Speaker, under leave to extend my remarks, I include a letter from a citizen of France to his sister in this country, which I am sure will be helpful in bringing about an understanding of conditions in that country. The letter, with identifying features eliminated, as translated, reads:

NOVEMBER 16, 1947.

MY DEAR ———: Your letter of October 25 gave us great pleasure and we understood it perfectly * * *, because we are making great progress in English. Your letters are the best teachers for us.

* * * I am going to try to give you some information on our economic and political situation. The economic information I have been able to gather myself—it is not a question of more or less exact official statistics. But before beginning the details it is, I believe, necessary to go back several years in order to understand the situation of France the day after the defeat of June 1940:

Our country seemed then definitely crushed, the Government had accepted the treaty with the Germans which imposed on us very heavy burdens of the armistice, much too heavy for us to carry out. This was, moreover, a great mistake on the part of Hitler. We found ourselves thus apparently alone before the colossal, inhuman German, and all hope seemed to us useless. Even old Marshal Petain preached resignation to us. But a voice made itself heard on the waves of our radios. A general, unknown to many French people, spoke to us from London and told us not to despair. He, De Gaulle, announced to us already in June 1940 that some day quite soon the great democracy of the United States of America would be with England and us to repulse the German invader from our soil. And it is thanks to him that, little by little during our terrible years of occupation, resistance against the Germans was organized. And from that moment it is necessary to understand the sacrifices that we had to agree to each day. In order to destroy the enemy, to hinder him from making our country a base of operations against Great Britain, the French were obliged to destroy themselves the assets which constituted a great part of our national wealth (railroads, power and electric plants, steel factories, etc.). In every part of the country the duty of the French was to break the Germans. The nearer the hour of the Allied invasion approached the more numerous these destructions, and often we had to destroy inestimable wealth. But never did we ask ourselves how we could ever rebuild. In acting thus the French knew that they were contributing powerfully to the final and common victory. The Germans at that point were so thwarted by our actions that they tried every means of combating them. Over 30,000 patriots were shot and innumerable others were deported, of which number many never returned. The American chiefs, and especially Eisenhower, realized how very useful the French "Forces of the Interior" were to the actions of the Allied troops.

To all these voluntary destructions one must add those occasioned by the Allied bombardments during the entire war, certainly necessary bombardments and against which we never protested, since we recognized the necessity of them. But it is none the less true that with us the destructions accumulated and ruins covered our country—and war returning again on our territory in 1944 caused ruin of entire regions. The Germans in their flight spared us no desolation—St. Dié is a typical example of this. That is why the day after victory, exhausted France found herself in a state of complete collapse.

Our railroads, which we didn't want to give to the Germans, were cut, our bridges blown up, our locomotives destroyed, thousands of cars out of commission, our canals dry because it had been necessary to do that in blowing up their banks. Today all our bridges are rebuilt, our railroads and canals all in good condition. The trains whistle again in the countryside, not as numerous as before the war because we lack coal. The restrictions on traffic pertain only to passenger trains, because the movement of freight trains is intense and the number of loaded cars exceeds sometimes that of prewar days. Here are some examples of work of reconstruction completed these past years.

Near Paris the great viaduct of Nogent-sur-Marne, over which passes the Paris-Mulhouse Railroad, had been destroyed. At first it was temporarily repaired. Now it is definitely repaired and open to travel.

Between St. Dié and St. Marie-aux-Mines is a tunnel which the Germans had transformed into a subterranean factory to manufacture V1's and V2's Before their surrender they blew up this tunnel, destroying everything. Now all is repaired and the trains pass through it again, connecting les Vosges and Alsace. The same is true of the tunnel from Saales to Provencheres, which was destroyed in 1944, and is entirely rebuilt.

Right now our Bureau of Bridges and Roads is rebuilding the bridges over the Rhine. As we lack material we are using the scrap material in the temporary parts which in Normandy were used in the Allied landings. In a little while the bridge of Neuf-Brisach (near Colmar) can be used again. It will not be beautiful, but very solid and useful.

In the regions of the battle grounds (Lorraine, Alsace, Nord) our mines were flooded and our surface installations destroyed. Today the output has returned to the regular rhythm of prewar days, but our equipment is worn out because during the war no repairs could be made. It was necessary after liberation to repair it hastily with the best means at hand.

In the mining region of Mulhouse the potassium mines were the theater for bloody and destructive combats. During some months work was impossible, but today it has begun again and production will soon reach prewar standards. In that same region numerous textile factories were greatly damaged by war, but are now in full production. I can cite:

Dolfuss & Noack: Felt and technical cloth factory—500 workers. The factory was in 1944–45 for several weeks on the line of fire between French and German troops. Two hundred millions in destruction; buildings and machines entirely destroyed. Today new buildings rise in the place of walls blackened by fire, and work has begun in the temporary locations.

Gluck & Co.: Manufacturers of combed wool material. Destroyed by Allied bombardments—500 workers. Material and buildings 90 percent destroyed. The new buildings will be finished in a month or two and for over a year work has been going on in some repaired buildings with the means at hand.

Schaeffer & Co.: Large factory of cloth printing and dyeing—1,500 workers. More than six hundred million lost in destruction. For 2 years work has been going on in locations half in ruins. Production 70 percent of that in 1938. This firm has been able to carry on again its exports of dyed and printed materials.

Machine manufacturing of Haut-Rhin: Big business of construction equipment—1,000 workers; two hundred and fifty millions in destruction. In full line of fire November–December 1944. Received more than 500 bombs of all kinds. Has functioned since March 1945 and taken up the manufacture of machines, tools, etc. I knew this firm especially well, whose board of directors named me as expert.

Loos Printing Co. at St. Dié: Medium-sized business—entirely burned by the Germans. * * * The present business surpasses that of prewar days. It was on that press that the book was printed which you must have, St. Dié Terre Brulée. My cousin was, moreover, deported to Germany. Happily he came back.

Kembs Factory-Electric Power Co. of the Rhine: A very important factory on the Rhine producing electricity. Its eight generators were destroyed by the Germans. I visited the factory one and one-half years ago. Three generators were already functioning. Now the eight are in operation.

Those are a few exact cases, but I suppose that in America people are not ignorant of the fact that our large ports (Le Havre, Bordeaux, Marseilles), which suffered so much from the war, have taken up their activities again.

It is not an exaggeration to say that the French have begun to aid themselves. They have even done a little more. But while from 1940–44 all the countries were able to work actively for their war effort, increasing their efficiency, it must not be forgotten that ours was paralyzed by the Germans and that our duty was to sabotage before working. We had to destroy our industrial resources in order that they could not serve the designs of the enemy. If all the resources of France and French industry had been at the service of Germany, it is certain that victory would have been still more difficult to achieve. We have, therefore, a great delay in rehabilitation, and I ask myself if people understand us well on this point. The aid that we are asking should permit us to take up again, little by little, our place in the court of great nations, and our country, taking up its former activities, will surely be an excellent customer for trade.

As to the political question, it is also very difficult to understand. In June 1940 many Frenchmen thought, and justly, that the situation was lost definitely. It was not easy to believe that England would resist Hitler, because the United States was not yet on its side. Only De Gaulle gave us a ray of hope, but we asked ourselves truly where he got his hope. With untiring patience, he organized from London the French resistance. Certain ones reproached him for a while for not having earned distinction as a resistance leader and for clearly understanding all the great Communist movement. He could very well believe that the latter had ceased to take orders from Moscow, before the current danger in France, and had decided to return to the bosom of the nation. If one cares to recall, he could not have done otherwise, because a single danger absorbed him at the moment—the danger of Germany. But, after the liberation, the Communists took up again their old habits and more than ever were at the command of the Soviets, and it is these who now say that De Gaulle is a Fascist. If he were a Fascist, he would have been able so easily to keep the power in 1944–45. No one could have risen against him. You are lucky in the United States to have only two great parties whose methods of government are not so different. On the other hand, the President of the United States has some real power which hinders abuses, while with us the parties commit themselves to a bargain purely demagogic, losing sight of the best interests of the country because they see only the interests of the party. They make all kinds of promises to their electors, promising them the moon and stars, leisure without end, and almost without work. With us the word "democratic" has lost its meaning and has become the synonym for "let slide," "lack of discipline," etc. The word "liberty" has lost its meaning and become a synonym for disorder. The French have felt that a change was necessary, that the situation could not last, and they turned to De Gaulle once more. * * * which had a socialistic municipal government because it is a city entirely of working men, voted an overwhelming majority for De Gaulle. We want order and that is the explanation for the last municipal election; there is no other. We have seen too much of fascism here to desire it. According to his statements, De Gaulle would like a constitution like the United States. Do you think that is the idea of a Fascist? Are they Fascist ideas which wish to keep our country from falling under the yoke of Moscow? I am sure, no; De Gaulle wishes direct cooperation with the United States of America because he feels that in the past France has been as far from the Russian conceptions as much as the United States itself, and, after all, what difference is there between Russian communism and German Hitlerism? I wish you could read in the French communistic newspapers everything that is said against the United States of America, where even the shipments of American wheat, which is so indispensable to us, are criticized. If America sends us 10 boatloads of wheat, it is nothing but a desire to take over our country, while if Russia sends us a single sack, it is magnificent and we all must thank the great Stalin. We are certainly going to assist with the formation of several governments here which, with different methods, will try to get us out of the ruts where we find ourselves. Partisan spirit will prevent, I believe, all constructive possibility and the day will come when, in the face of their impotence, our miserable governments will turn toward De Gaulle, to whom they will leave a wretched France. The day cannot come too soon.

My letter is long, but I would be happy, dear Mary, if it is able to give you an appreciation of our situation. I think France deserves that because I am sure that her mission in the world is not ended.

Jacques.

Hon. Raymond S. Springer

EXTENSION OF REMARKS
OF
HON. SAM HOBBS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, November 17, 1947

Mr. HOBBS. Mr. Speaker, a truly great servant of the Republic he loved has passed to his reward in the full tide of his power. As private citizen, in the practice of his profession, as jurist, soldier, statesman, he set an example for all who would live to serve and to bless their fellow man.

The love we had for him unified us, and permitted no partisan division.

Many other Members have spoken of his career, the richness of his endowment, of his devotion to duty in peace and in war, as lawyer, judge, and statesman. No further attempt to praise is in order. But as a member of a different party from his, who served with him on the Judiciary Committee, one cannot refrain from voicing a simple tribute to his faithfulness and to his service which rose above partisanship and contributed so splendidly to the causes and the general welfare of the Nation he loved.

Georgia Apologizes to Hon. Joe Hendricks, of Florida, for Jail Incident

EXTENSION OF REMARKS
OF
HON. JOE HENDRICKS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Friday, December 19, 1947

Mr. HENDRICKS. Mr. Speaker, I am inserting a news story from the Orlando Morning Sentinel, Thursday, December 18, 1947, which is a clear explanation of the incident which occurred at Darien, Ga., on my way home in October. The reason I insert this article is because the press reports were so very brief that they did not actually explain the situation. I was almost compelled to explain this matter 15 to 20 times a day. Therefore, in order that the Members of the House may be able to know exactly what happened I am inserting this article:

GEORGIA APOLOGIZES TO HENDRICKS FOR JAIL INCIDENT—GOVERNOR SORRY ABOUT INCONVENIENCE

(By W. S. (Preacher) Allen, city editor, Orlando Morning Sentinel)

Gov. M. E. Thompson and Deputy Sheriff Thomas H. Poppell, of McIntosh County, Ga., have apologized to Congressman JOE HENDRICKS for the inconvenience caused Florida's Fifth District Representative as a result of an arrest for speeding near Darien, Ga.

The two apologies were in reply to HENDRICKS' charges that gestapo methods were used by Poppell in holding him for several hours in a cell in the McIntosh County jail October 23, after he (HENDRICKS) had posted $15 bond on the speeding charge.

The apologies were received by HENDRICKS after he had informed Thompson that if an apology was not forthcoming from Poppell, he intended legally to attempt "to obtain redress for false arrest, violation of my civil liberties, mental pain and suffering, physical pain and suffering, and humiliation."

HENDRICKS said yesterday, in revealing correspondence between Thompson, Poppell, and himself, that "I do not publicize the incident for the purpose of embarrassing officials in Darien, or anyone else, but simply because I know there are many citizens not as well informed in regard to the law as I am.

"My only hope is that this publicity will inform those who might have had or who might in the future have such an incident occur, of their rights."

In a letter to Thompson, HENDRICKS said he had not denied charges of exceeding the Georgia speed limit because he did not know how fast he was traveling nor was he protesting against a speed trap, but did resent the rough treatment at the hands of the Darien officer and the fact that he was held in jail without charge after settling the speeding charge.

HENDRICKS said his second arrest followed a remark he made as he started to leave the jail after posting bond. HENDRICKS quoted himself as "jokingly and facetiously" saying, "I think it is a dirty trick to drive a patrol car without identification."

HENDRICKS said the second arrest was made by Poppell, who was lounging in the jail. He said he had not previously spoken to Poppell and the officer did not identify himself in any manner.

He did not resist when Poppell "seized me by the arm and began pushing me and shoving and forcing me violently without reason. He shoved me up two flights of stairs to a cell.

"All the time I was entreating him to wait and let us discuss the matter," HENDRICKS

continued. "He was so violently angry and without reason, that he kept shoving and yelling incoherently until we reached the cell."

HENDRICKS said he attempted to show Poppell his card identifying him as a Member of Congress, but the officer "did not want to see anything" and after locking the cell remarked, "You will stay in there until you know you have been in Georgia."

HENDRICKS then quoted the deputy as yelling downstairs, "File another charge against him."

Later, when the deputy appeared with food for a prisoner, HENDRICKS said he asked for a lawyer and a doctor, the latter because of a stomach ailment. The deputy promised to send both, but neither appeared.

Still later, HENDRICKS said, he was taken downstairs where he was questioned by another officer, apparently a county or State road patrolman, who appeared surprised when told about the speeding charge and posting of bond.

However, the patrolman, after hearing HENDRICKS' explanation, said, "I don't want to hear any more about it," and left the room.

HENDRICKS said he inquired of Poppell what charges the officer intended to make, and upon being informed that several charges could be made, he (HENDRICKS) inquired about additional bond.

HENDRICKS said he was informed that it would be $100, but Poppell "made no move to file a charge nor any move to release me. Two or three times I insisted on his making a charge or releasing me and he neither charged me nor did he give consent for me to leave."

A few minutes later, a Mrs. A. D. Poppell informed him that she was a deputy sheriff and told him to leave, HENDRICKS said, adding that he replied that, "Mr. Poppell had put me in jail and I wanted him to say what he was going to do."

At that point, HENDRICKS said, "Mrs. Poppell began shoving me toward the door and shoved me out, handed me the keys to my car and told me to get in it and leave.

"I left without ever being informed of why I was arrested and jailed and without having been charged with anything, but speeding and that was settled before I was jailed."

In his reply of apology, Thompson chided HENDRICKS about the matter, reminding the Congressman that he made the first mistake, but that the second mistake was made "when young Poppell being offended and subsequently embarrassed because of your charges, further precipitated the matter.

"I do not know that there is anything that can be done by the Governor," Thompson said. "Certainly, I deplore the incident and apologize to you for the inconvenience and trouble while visiting our State.

"I know the members of the Poppell family personally and know that they are extremely fine people and I am sure they join me in regretting this unpleasant incident.

"Recently, at the Southern Governors' Conference in Asheville, N. C., I delivered an address on the State's responsibility in reducing traffic accidents and specifically called attention to the State's responsibility in eliminating speed traps and other undesirable and unnecessary delays and embarrassment to the traveling public."

DAYTONA BEACH, FLA.,
November 21, 1947.

Mr. THOMAS H. POPPELL,
Deputy Sheriff, Darien, Ga.

DEAR MR. POPPELL: I am enclosing a copy of a letter which I have today addressed to Hon. M. E. Thompson, Governor of the State of Georgia, in reply to a letter which I received from him and also enclosing a copy of a letter which I addressed to him on October 30 in regard to the very unpleasant and unnecessary incident which occurred when you lost complete control of your judgment and put me in jail in Darien for no good reason.

Governor Thompson, even though chiding me, apologizes for your actions and goes on to state that he is sure that you join him in regretting this unpleasant incident and further that he hopes that this matter may be satisfactorily adjusted. You will note from my letter that I informed the Governor that if you did join him then you could take concrete steps to settle the matter by writing me a letter of apology. This is no demand because I do not use such methods. It has been my job to protect people's rights and not to violate them. However, I will say that if I receive a letter of apology within 10 days, I will consider the incident settled. Otherwise I expect to file suit against the office of the sheriff and against you personally for damages for false arrest in a substantial sum. I have discussed this matter with two Georgia attorneys and one Florida attorney and the three of them advise me that I have a clear case against you for false arrest.

In conclusion, I want to assure you that if such an incident happens to you in my State, I shall be glad personally to defend you to see that your rights are not violated. For the sake of the general public as well as for my own protection, I cannot let this incident pass.

Very sincerely yours,

JOE HENDRICKS,
Member of Congress.

[Enclosure.]

Poppell wrote HENDRICKS, "I have read your comments to the Governor on the matter of the incident at Darien a short time ago when you were placed in jail.

"I want you to know that I regret this incident very much and on any of your future trips through this county I will extend to you every courtesy my office will permit."

Anti-Inflation Bill

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, December 19, 1947

Mr. MILLER of California. Mr. Speaker, I am opposed to this resolution. I shall vote against it. This is a meaningless thing that those in control of the Congress would foist on the American people.

When President Truman called the Congress back in special session he asked it to do two things: First, that it pass a bill providing for stopgap aid to the war-stricken countries of the world and, second that it pass the necessary stopgap legislation to put the brakes on the runaway inflation that is demoralizing the American people.

We acceded to the President's request for foreign relief. The Congress made available about $522,000,000 or in excess of 87 percent of the sum he recommended. We were generous—and rightfully so—in caring for the unfortunate in other parts of the world. This was our plain Christian charity.

Is this resolution the answer to the relief we propose on the domestic front? Is this wishy-washy meaningless thing the relief we offer the American people against high prices that are sapping up their savings and driving them to cashing the War bonds they so patriotically purchased?

This is not stopgap aid, this is "sopgap" aid. It is a sop thrown out to the people in the hope that they will accept it and go meekly on their way.

The President recommended a 10-point program to halt inflation. It was a well-thought-out program—a bold program. It would have required sacrifices of the American people—sacrifices they realize are necessary in the grim fight to maintain the American way of life and sacrifices they are prepared and willing to make. The people know there is no easy way out of our difficulties—they want constructive action not pious phrases and this Senate joint resolution, coming to us with the blessing of the leader of the majority party in that body, is just a conglomeration of pious, meaningless phrases that would lull the people to sleep and win the favor of the big-money boys that profit by the exploitation of the American people.

We are asked to pass this resolution under a gag rule. A parliamentary situation is deliberately created whereby it is impossible to offer amendments to this bill. It is a case of take it or leave it.

Those of us who want a real piece of legislation to meet a real situation—Mr. Speaker, if you think the present inflated prices are not real just ask any housewife who tries to make ends meet—are jockied into the position of take it or leave it. We have been told this by no less than the distinguished Republican floor leader. If those of us who cannot stomach this wretched proposal vote against it we will be charged with voting against controls. I, for one, Mr. Speaker, am ready to meet this challenge head on and take full responsibility for my action.

I will willingly face my constituents on this issue. It gives them no relief from the sorry plight into which they have been unwillingly plunged.

What does this bill do for those who work for a living? It offers nothing to the white-collar workers, the skilled mechanic, or unskilled worker. It does nothing to soften the shock for the elderly people on pensions. How can they live on $35.99 a month and that is the national average; incidentally, there is a discharge petition at the Clerk's desk that would bring H. R. 16 to the floor of the House. This is the Business, Employment, and Security Insurance Act. It needs about a hundred signatures. It would materially assist the honored aged.

What of the GI? Can a veteran continue his or her education on $65 a month? What of the veterans who made the big sacrifice—those who were wounded or physically handicapped? And what of the widows and orphans of veterans with fixed meagerly allowances? This resolution does nothing for them. It leaves them sunk in the black pit of economic despair. I want none of this. It leaves the farmer and the small independent businessman with no assurance that the future will be brighter than today and today neither of them is making money. They are both caught in the nutcracker of high prices.

Most Members coming to the House for the first time are prone to resent the rules that have been worked out for its guidance; they seem undemocratic. Then the old-timers tell them this truism: That whenever a majority of the Members of the House wants to work its will there is no rule or combination of rules that can stop it. New Members soon learn to recognize this is a true statement of fact. The majority can work its will.

Mr. Speaker, the party in power has a substantial majority in this House. It can work its will—if it chooses to do so. It must, therefore, take full responsibility for this piece of deceit handed the American people.

This proposed resolution is a quibbling mockery that denies to the "little people" of America redress to which they are entitled.

I will not be a party to it.

Will Old "Oregon" Ever Come Home?

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, December 19, 1947

Mr. ANGELL. Mr. Speaker, the old battleship *Oregon*, which performed so gallantly in the Spanish-American War, bearing the name of my State, has come to a rather ignominious end and is rusting away in the far Pacific.

The old battleship was given into the loving care and protection of the State of Oregon when she was decommissioned and the State and her people made her a shrine for patriotism and loyalty to our country. Hundreds of thousands of school children, veterans, and other loyal Americans visited the old ship during her stay in the Portland harbor. During the last war the Federal Government took the old ship away on the theory that the scrap metal in the ship was needed in the prosecution of the war. However, this apparently was a hoax, and the ship was turned over for junk but, for the most part, never contributed to the carrying on of the war. The hull is now rusting in the far Pacific.

I include as part of my remarks an article by Marilla R. Whitmore, which appeared in the Oregon Journal of Sunday, December 7, 1947, as follows:

WILL OLD "OREGON" EVER COME HOME?

(By Marilla R. Whitmore)

On December 7, 1942, the famous battleship *Oregon* was taken over by the Navy. In February 1943 it was sold at Kalama, Wash., to Edwin M. Ricker & Co. Before it was towed away, the old battleship was stripped.

The contents of the famous museum were placed at Failing School, which was allotted for that purpose. The school is so far from the center of things that the museum seldom has visitors. Mrs. Cora Thompson, for many years curator and administrative secretary of the commission, passed away this year.

The engines of the old ship were used by the Russians. The dismantled hull lies somewhere near Guam. Not so long ago, the Navy Department submitted a plan to restore the *Oregon* and bring it back to Portland. The superstructure would be reproduced and the two lower decks used for museum space.

But all schemes and plans to return her to Portland seem to die a-borning—at least no one has given the go-ahead signal.

The battleship *Oregon* made history in the days when there was no radio, wireless, or huge air fleets.

Dubbed the Pacific Fleet of the Navy, she patrolled the Pacific coast until the beginning of 1898. The news of the sinking of the *Maine* in the harbor of Habana brought her commander, Capt. Alexander McCormick, orders to sail.

Captain McCormick was very ill and ordered to the hospital. His place was taken by Capt. Charles Clark from the monitor *Monterey*.

On March 18, 1898, the *Oregon* sailed from what had been her home port and where she had been christened to steam away on a renowned cruise.

The *Oregon* covered a distance of 14,500 miles from Bremerton, Wash., to Jupiter Inlet, Fla., using 4,000 tons of coal and maintaining an average speed of 11.6 knots per hour.

She reached Santiago on the morning of June 1.

On the Sunday morning of July 3 the ships lay at anchor in waters as calm as an inland lake. Officers and men alike, clad in spotless white, were ready for the general muster to listen to the reading of the Articles of War, a customary rule in the Navy on the first Sunday of every month.

Suddenly there was a clanging of gongs and men and officers alike rushed for their stations.

Shouts and cheers rang out. "There they are. There they are." Caps were waved and shouts rose higher as the *Maria Theresa*, one of the most powerful battleships in the world at that time, led the Spanish fleet through the narrow channel and swept majestically from the harbor of Santiago.

Cervera's fleet was making for the open sea when Commodore Schley, on the *Brooklyn*, ordered the Atlantic squadron to close in. The first ship had scarcely cleared the harbor when a shot was made from one of the *Oregon's* 6-pounders, fired by Private O'Shay, of the gun crew.

The *Oregon* had been ready and waiting for this time to come. Chief Engineer Milligan had sufficient steam up to give the vessel a speed of 10 knots, while the other ships started from 5 or 6.

Full speed ahead went the old *Oregon*. She ranged up near the *Maria Theresa*, which was already afire from bursting shells of the *Indiana* and *Iowa*, and raked the Spanish ship until she ran ashore on the rocks, 6 miles from Santiago.

Then the *Oregon* charged after the *Almirante Oquindo*, which beached in a mass of flames 10 minutes after the Spanish flagship had run on the rocks.

By now the *Oregon* had worked her speed up to 16 knots and when about 3,000 yards from the *Viscaya*, which had swung off shore and headed across the *Oregon's* bow, launched a furious broadside. On fire, she, too, headed for shore 10 miles from Morro Castle.

Commodore Schley of the *Brooklyn* signaled, "*Oregon*, well done." The only one of the Spanish fleet that had escaped from the harbor was the *Colon*. The *Brooklyn* and *Oregon* shortened the 6-mile lead in short order. From the *Oregon's* 13-pounder, shells struck under the *Colon's* stern. And the last shot of July 3 had been fired.

The commander of the *Colon* dropped her colors at the foot of the flagstaff. A boat from the *Brooklyn* was sent, under cover of the guns of the *Oregon*, to receive the surrender of the *Colon*. Bugles sounded "Cease firing."

The thunder of the heavy guns stopped. The band on the deck played the Star-Spangled Banner and followed it by There's a Hot Time.

The crew of the *Oregon*, 500 strong, bare to the waist, begrimed with powder and coal dust, danced and cheered with joy. They cheered their captain rousingly. The *Brooklyn* signaled: "Congratulations upon a glorious victory."

On the following morning the *Oregon* sailed back over the route of the victory to see what was left of the pride and glory of Spain piled in burning wreckage for miles along the Cuban coast.

The reception given on that Fourth of July to the *Oregon* will never be forgotten. Commodore Schley's greeting signal of "Welcome back, brave *Oregon*," will be remembered as long as there is a history to record the events of those days.

Captain Clark, who had undergone a terrific strain, was ordered to a hospital. Capt. A. S. Barker was again given command of his old ship on August 7 and later the *Oregon* was assigned to the eastern raiding squadron.

For the following 2 years the ship remained in and around the waters of the Philippines.

The *Oregon* was returned to the United States in 1906 and was out of commission for 3 years. On October 27, 1911, she was again placed in commission with Capt. Charles Owens in command and joined the Pacific Fleet which was cruising home waters.

In 1916 the old ship was chosen as reviewing ship for the entire Pacific Fleet at the San Francisco Exposition.

Then came World War I and the *Oregon* was ordered to the Bremerton Navy Yard to be overhauled and remodeled at a cost of $1,000,000. She was then used as a coast-defense boat and as a training ship for officers and men leaving the west coast for the war zone.

At the close of World War I, under the disarmament treaty, the *Oregon* was scheduled to be used as a target for modern ships.

Cries of protest arose from patriotic organizations of the entire Nation. United voices were raised against such an outrage.

The State of Oregon petitioned the Navy Department to have the ship preserved as a memorial and placed in the harbor at Portland, Oreg.

The petition was granted by the Navy Department, with the proviso that the State of Oregon create an acceptance fund to keep the ship conditioned for visitors coming aboard.

Flying the old homeward-bound pennant, she was berthed at the east end of the Broadway Bridge in Portland. Then she was officially accepted from the Navy Department on July 3, 1925, the anniversary of the Battle of Santiago, July 3, 1898.

A National War Museum was established aboard, with Mrs. Cora A. Thompson in charge of the work. It was through Mrs. Thompson's untiring efforts that the museum grew into the pride of the community. Although it was difficult to go aboard when the ship was anchored at the Broadway Bridge, thousands visited her.

Four or five thousand visitors a month was no novelty aboard the historic ship.

With the coming of World War II, the old *Oregon* was offered to the Navy by the Governor of Oregon to be used for coast defense or in any capacity deemed best.

What really happened to the ship was an anticlimax and she now lies bobbing around on a faraway ocean of use to no one.

War hysteria, or call it what you will, suffered Portland to lose one of her historic landmarks. How much more fitting it would have been if the grand old ship had been taken out and sunk as so many of her sister ships were—it is hard to think of the storms and high seas beating at what remains of the old *Oregon*.

An Honest Inflation Control Program Is Necessary

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, December 19, 1947

Mr. BLATNIK. Mr. Speaker, public opinion polls show that the chief concern of the people today is the present high and inflated cost of living. The present inflationary situation—with its spiraling prices and living costs—is most certainly cause for alarm. Since the OPA program was destroyed in June 1946, the cost of living has increased by about 30 percent; retail food prices have gone up by 50 percent; clothing prices have risen by one-third; and fuel costs 13 percent more today than it did a year ago.

President Truman summed up the situation in his November 17 message to Congress when he said:

> The housewife who goes to buy food today must spend $10 to buy what $7 bought a year and a half ago.

To make matters worse, the cost of living is still rising at a rate of 16 percent a year, as increased wholesale prices are translated into higher retail prices. Dun & Bradstreet predict that this inflationary trend will continue for some months to come.

INFLATION HITS EVERYONE

The impact of this inflationary spiral upon our economy is clear. Its effect is felt by workers, farmers, and small businessmen alike. The real wages of the worker were reduced as the value of the 1939 dollar fell to about 50 cents in 1947. Although farm prices are high, the real income of the average farmer is lower today than it was a year ago. Small businessmen are being squeezed by rising costs.

The over-all effect of inflation, which was set off by the scuttling of price control, has been a general lowering of the living standards of the American people. People are consuming less because their shrunken dollars will not buy more, and as high prices turn essential items into luxury items. Millions of people are being forced to spend their wartime savings, or resort to credit buying because their pay checks will not purchase the necessities of life.

To make the picture still darker, the inflationary trend is paving the way toward business depression and economic collapse. Every inflationary period of the past has been followed by a sharp deflation, and experience tells us that this inflationary boom will be followed by a bust in which prices will crash downward so fast that businessmen will be ruined, workers will be unemployed, and farmers will lose their farms. This is what happened in 1929, and this is what will happen again unless prices are stabilized in the very near future.

THE $64 QUESTION

The American people are beginning to ask the question: Who is responsible for this inflationary situation? They have a right to the answer to this question.

There can be no doubt as to the identity of the guilty. Responsibility for inflation rests squarely upon the shoulders of those who destroyed price controls—the National Association of Manufacturers and other selfish lobby groups, and those Members of Congress who yielded to their pressure in June 1946. We must not forget the NAM campaign against the OPA during 1946, in which that organization spent about $3,000,000 for full-page newspaper advertisements to convince the public that if price controls were removed, then free competition would bring prices down.

Everyone knows that the NAM misled the people; that the ending of price control has meant higher prices and not lower ones. This is proof that the NAM campaign against OPA was one of the greatest frauds in the Nation's history—the National Association of Manufacturers sacrificed the living standards of the people on the altar of corporate profits.

Now, the same forces who destroyed price control in 1946 have the effrontery to come forward with this so-called inflation-control measure—Senate Joint Resolution 167—which will be of no value whatsoever in checking inflation. Instead of adopting President Truman's sound anti-inflation program, the Republican leadership offers this measure containing four very weak provisions which will be meaningless in practice.

GOP PROGRAM MEANINGLESS

Just what does Senate Joint Resolution 167 propose? It provides for the extension of export controls and the allocation of transport facilities, two provisions which are meaningless at this time because such controls are already in effect. This act merely extends them from February 29, 1948, to February 28, 1949. Another provision provides limited control over credit, and will have no immediate effect upon prices.

The most important provision of this joint resolution is the relaxation of the antitrust laws to permit the President to enter into agreements with big business for the purpose of allocating transport facilities and other scarce commodities. The President is also authorized to put into effect a voluntary food-saving program.

Mr. Speaker, this measure—Senate Joint Resolution 167—is a fraud and a hoax on the American people. I am opposed to it and am going to vote against it for two major reasons:

In the first place, I am against this measure because it will not accomplish one thing toward the solution of the inflation problem—its provisions are too weak and anemic to check further price rises. I am not in favor of hoodwinking the public, and I refuse to support this measure which is designed to fool the public into believing that something constructive has been accomplished in solving this major problem which is uppermost in their minds.

ANTITRUST LAWS THREATENED

My second objection to this measure is its provisions to relax the antitrust laws to permit Big Business to get together and work out agreements to allocate scare commodities on a voluntary basis. This provision is bound to have a most serious effect upon the future of small business. As the report of the Kefauver committee points out, the most serious threat to small business in America has been the long continued growth of monopoly power. This trend toward the concentration of economic power in the hands of fewer and larger corporations has reached the point where 250 large corporations now control over two-thirds of the Nation's manufacturing facilities, and 8 Wall Street banking houses control about half of these same 250 corporations.

The report also points out that these monopolies and chain stores are slowly destroying small-business enterprise in America. Some 500,000 small-business firms folded up during Warld War II, and there are some 160,000 fewer small firms in operation today than there were in 1941. According to a Wall Street journal, the rate of bankruptcy for small business is rapidly increasing, and this rate is expected to increase still more in 1948.

In my opinion, small business is the foundation of free capitalist enterprise. Since I am very much concerned over the future of small business, I object to the Republican effort to weaken the antitrust laws and thus strip the small businessman of his last protection against the rapacity and greed of monopoly interest.

Mr. Speaker, I protest against the enactment of this do-nothing resolution, which will have no effect on the present skyrocketing cost of living. The adoption of this measure will amount to only an empty gesture on the part of Congress, and a confession of failure to cope with the problem of rising prices. I maintain that only a strong price-control law will achieve that objective, and insist that Congress should remain in session until such a bill is enacted into law.

Foreign-Aid Bill

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 18, 1947

Mr. SHORT. Mr. Speaker, it is most regrettable that I caused my friend from North Carolina [Mr. COOLEY] any worry over the stand that I have taken on the foreign-aid bill. I do not mind causing strong men worry, but it is very dangerous to little minds. With his narrow outlook and partisan training, it is no wonder that he is amazed at the position I have taken. In all the years that I have served with him, he has never been worrried by his own inconsistencies or by the irreconcilable contradictions of the New Deal. Little boys in glass houses should not throw rocks.

The one thing that is annoying and irritating to all of us is that, having visited years ago, and seen most of these countries many different times at our

own expense, is to have some recent prophet at a late date come forth trying to tell us what to do.

Mr. Speaker, for many years some of us have been fighting communism—both in and out of our country, and it would be amusing if it were not tragic to hear some of these Johnny-Come-Lately converts come forth to tell us the solution of the world's problems. At long last they have decided that it is a bad thing to have Communists in our own Government. Is that not a marvelous discovery—after some of us have been preaching it for the past 14 years?

"A noble confession is good for the soul." I confess, Mr. Speaker, that I do not possess the oracular wisdom and that I cannot speak with the air of dogmatic finality that some Members of this House do. Frankly, I am still confused and bewildered and do not have the answer to all the world's problems. One must turn to the gentleman from North Carolina, the foreign-born, foreign-decorated, and foreign-minded Henry Luce, and the simon-pure international, know-it-all newspaper, the New York Herald Tribune for these answers. At least my views are not influenced by advertisers with vast holdings and investments abroad.

All that I have to say is what I once said to a former Member from Kentucky: "I have been farther back under the barn hunting for eggs than some of you peckerwoods have been away from home."

Mr. Speaker, for many years I studied in colleges and universities in different sections of this country, before I ever saw Europe. Afterward I studied, traveled, and observed some things that were going on in Europe, but I never acquired an Oxford accent and I never forgot America. I do not have to be lectured, talked and preached to, about my responsibility. Perhaps I give more of my own personal earnings according to my ability, to help the poor and distressed in this and other countries than all my critics combined. These world uplifters and do-gooders would not be so generous with their own money as they are with the taxpayers'. It is easy to give away other people's substance.

Members of Congress, I shall ask only a few questions and I would like each one definitely and specifically answered.

Is our vote for this stopgap aid or interim relief to be construed as committing us to the so-called Marshall plan? Is this the prelude to a long-range program? Is this but the first installment of a seventeen to twenty-two billion dollar aid to Europe over a 5-year period?

The bill specifically states that it is not, but this is merely a sop to get votes. All the news commentators, all the testimony in the hearings, and all the speeches on this floor indicate that this is merely the beginning. We let the camel's nose under the tent by this vote and soon he will be running around the ring in full-fledged style. I predict that within the next fortnight we shall be called upon by the administration to vote billions of dollars for aid to other nations which have repeatedly repudiated their debts to us—and at a time that we can least afford it.

Mr. Speaker, are there any assurances that these funds will be justly, equitably, and efficiently spent? We do not have a Herbert Hoover to dispense this aid in a fair, equitable, and impartial manner, as was the aid we voted following the First World War. Billions were then spent without the ugly finger of suspicion ever being raised about its honest and equitable distribution. Judging from our past sad experience through the bungling of Lehman and LaGuardia in UNRRA, we can reasonably expect that many of these funds and supplies will be diverted into dangerous channels and that the aid we send abroad will be used as a whetstone to sharpen the knife to cut our own throat.

This so-called relief is not to feed the hungry, clothe the naked, and help the needy of Europe, but is to play power politics in foreign affairs. Just as the old WPA was used in a vicious and ignoble attempt to purge good Americans from office.

In 1936 the late but not lamented, Harry Hopkins, who wanted "to tax and tax, spend and spend, elect and elect," put 4,500 idle miners in my district on the pay roll 3 weeks before the election, and the third day after the election he cut them all off. He tried to purge me, but did not. This administration, like the previous one, is trying to continue the same thing—get back to office under the cry of emergency. The people are tired of it and Republicans should get wise.

Of course, everyone knows that the New Deal has lived on emergencies for 16 long years. It feeds and fattens on them. Truman's first emergency was the Greek-Turkish loan, or gift, last spring. His second emergency is the stopgap aid bill now before us. It would be safe to bet that when these funds soon run out, there will be a third emergency next spring, and then the big fourth emergency will come about the first of next October, a month before the election when it will be argued that the American people dare not "swap horses in the middle of the stream"—the same old bait dangled before the people by F. D. R.

Mr. Speaker, only a small part of the money called for in this measure will be spent for relief. Much of it will be spent for fertilizer, farm machinery, weapons of war, and in administrative expenses. There is no limit in this bill placed upon the number of personnel, the salaries and expenses paid to them, by the President. A whole army of political parasites can be set up to sap the funds only to work for the reelection of those in power. There is nothing bipartisan about it, though we have a Republican Congress. Read section 3 of the bill. Those of us who want to help the starving abroad cannot under that cry vote to feed the greedy politicians at home.

May I ask, sir, if continued and increased export of short American materials will not increase the cost of all these articles and materials to our people at home? How can I ship something I want and that I need to some other country without having to pay more for it here? I want fertilizer, but it has been shipped to France. I want a tractor, but it has been shipped to Italy. I want electrical appliances, but they have gone to Austria. I want grain with which to feed my family and livestock, but it has been sent to 16 different countries in Europe and to 2 or 3 in Asia. Many of these countries carry on their experiments in socialism, and I must finance their plan.

O, Mr. Speaker, it does not make sense. Do I love them? Yes. Do I want to help them? Of course. But I still feel that I must take care of my own first, and I do not like for them to sneer or laugh at my stupidity.

Mr. Speaker, you cannot continue to export commodities in short supply from America to Europe without raising the price at home. You ship from our shores things that we need and you will put our people here in greater need.

It is noble to share our wealth with others, but not when they go on strike against their own government. During the past 3 or 4 days France has lost three times as much by strikes as will be given her under the provisions of this measure. If they do not work, why should we help them? This should apply to our own country as well as to others. The trouble is, we have gone screwball in this whirling dervish of Washington.

Finally, Mr. Speaker, it has been made clear during the debate on this particular bill that if we are to carry out its provisions and especially the long-range Marshall plan, it will be necessary once more to saddle controls upon the American people. Before taking this last trip to Europe, the Near East, and north Africa, I stated that after our return from abroad each Member should be required to go over his own State and district to find out the desires and needs of his own people. That, I have done—though altogether too hurriedly. Immediately after my return from abroad I felt that we should do everything in our power to help suffering humanity from the pangs of hunger and cold. Between the times I spoke on the floor of the House on November 25, and again on December 10, I read the full hearings before the House Committee on Foreign Affairs, I read the particular provisions of this specific bill, which was not available when I first spoke, and I have listened with interest, and I trust with some profit, to practically all the debate.

I said in the beginning, and I repeat now, that if this interim or stopgap aid—which I want to favor—is to be used as an excuse, first, to commit us to the long-range Marshall plan, which, in my opinion, would lead us to bankruptcy; and, second, to clamp bureaucratic governmental controls once more upon us, it would reduce production, destroy our economy, and lead inevitably to the loss of our freedom; I could not, and would not, support it. For these reasons I shall, with reluctance, vote against this measure—not because I do not love the people of Europe but because I love the people in the United States of America more. America is still God's last chance to make a world. If we sap our strength and go under, all is gone.

Mr. Speaker, under leave heretofore granted, I include the following recent editorial from the Joplin (Mo.) Globe, in my congressional district:

SPEAKING OF RABBLE ROUSING

Henry Luce's news magazine, Time, prints a picture of rabble-rousing Representative DEWEY SHORT, of this district, and lambasts him editorially for rising in the House of Representatives at Washington one day recently to exclaim: "There are times when one must be cruel to be kind. * * * The more you give people the more they will curse you for not giving them more. Instead of bleeding ourselves white we had better keep ourselves strong."

It may surprise Mr. Luce—though it probably won't—to learn that very few of Representative SHORT's constituents back in Missouri consider there was anything reprehensible in the statement quoted. Mr. Luce, who was born in China of American parents and who has a Legion of Honor decoration from the French Government, is a thirty-third degree internationalist. He has a right to be, of course. But there are a good many million Americans who don't share his conviction that Uncle Sam is able and should be glad of the opportunity to hand out such largesse to other nations as no sane person a few years back would have dreamed of doing.

Concerning the remark made by Representative SHORT, Time slyly seeks to make capital out of his statement that "sometimes one must be cruel." But cruelty that has kindness as an objective is not cruelty at all, and that is the kind of cruelty Mr. SHORT was talking about. As for the remainder, we are simpletons indeed if we think mere charity can buy real friendship, and what American patriot is going to resent a common-sense warning that if we give away our substance to the point of weakening ourselves we may live to regret it most desperately?

Down in this part of the United States we agree that generous help should be extended to the hungry and cold of Europe. But we also have a distinct impression that unless there is some restraining talk and influence on the job at Washington, Congress could make a colossal fool of itself—and of us. There is nothing criminal about realism, practicality, and common sense. Some of the most pretentious rabble-rousing just now is being conducted by the 100-percent internationalists.

Mr. Speaker, under leave to include a second newspaper article I include the recent editorial from the Washington News, because it simply, but pointedly states that if the Marshall plan is carried out without our receiving much needed supply in return, we will face disaster in another world war.

Why should we continue to give away to other countries the things we need most here at home? Let our internationalists ponder this brief but timely editorial:

OUR WORST SHORTAGE

Our Government is falling down on the program for stock-piling strategic materials. Unless the Defense Department, the Munitions Board, and Congress put more energy into this preparedness measure we will not be able to win a war if one is forced upon us.

The present paper program is not being carried out. We are supposed to be buying up these short supplies at a rate of $360,000,000 a year for 5 years. The actual total during the last 2 years has been less than $275,000,000, instead of $720,000,000.

Even if we reached present quotas, we still would be short. Some of the experts, including Bureau of Mines officials, estimate that about $6,000,000,000 worth of strategic materials would be required for another war lasting as long as World War II. That would mean a stock pile three times as large as the current blueprint, and almost tenfold the present acquisition rate.

Our need extends to 67 different minerals and materials. Most of them are produced by countries seeking Marshall plan aid or by their colonies. Certainly those countries should repay us in these materials to the limit of their capacity.

But not even that prospect is excuse for further months of delay. If we buy all we can as soon as we can, with this late start it will be virtually impossible to build adequate stock piles within the next few years.

Mr. Speaker, late in July of this year, just before the last regular session of Congress adjourned, both Houses of Congress, by an overwhelming majority, passed a bill to stimulate exploration, development, and production from domestic mines by private enterprise. That bill, H. R. 1602, provided for $70,000,000 in premium payments on copper, lead, manganese, and zinc over a 2-year period. President Truman vetoed that measure, which is one reason for the shortages in our stock pile today. It would seem that the President is unwilling to help the miners in my district and other sections of the United States but is perfectly willing to give almost $600,000,000 to the people in France, Italy, and Austria, to be followed by billions of dollars more to other countries in Europe.

Many of us are gravely concerned over the present state of affairs. While this administration asks for billions with which to combat communism it continues to ship to Russia oil, steel, tools, and heavy machinery, just as the previous Roosevelt administration shipped petroleum and scrap iron to Japan, which was hurled back at us at Pearl Harbor. Mr. Truman has had the wartime powers, and still has them, to stop these shipments of strategic materials and supplies to Russia, but he has not done it. Why he has not, I do not know, but I think the voters of America are entitled to and will demand an answer before next November.

Mr. Speaker, in order for my own people to get the full story and a true picture of Europe's condition and of this legislation, I am having not only this speech reprinted but also the ones I delivered on the floor of the House on November 25, 1947, and on December 10, 1947.

B'nai B'rith Lodges of Alameda County, Calif., Commemorate One Hundred and Sixtieth Anniversary of the Formation of United States Constitution

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, December 19, 1947

Mr. MILLER of California. Mr. Speaker, on September 4, 1947, I was privileged to attend a dinner given by the three B'nai B'rith lodges, Berkeley-Eden-Oakland, of Alameda County, Calif., commemorating the one hundred and sixtieth anniversary of the formation of the Constitution of the United States. The Honorable Monroe Friedman, P. G. P., acted as chairman of the evening.

At this dinner citations were presented to Gen. Mark Wayne Clark, United States Army; Dr. Robert Gordon Sproul, president of the University of California; and to the Honorable Phil Sheridan Gibson, chief justice, Supreme Court of California.

The address of the evening was delivered by the beloved Dr. Monroe E. Deutsch, former vice president and provost of the University of California.

Because I know that all thinking men are interested in what a great man had to say on an occasion at which other great men were honored, I ask unanimous consent to extend my remarks and to include Mr. Friedman's introduction and the inspiring address of Dr. Deutsch:

Mr. FRIEDMAN. Many years ago, when I first entered the University of California, I took a course in Latin. My instructor was more than a good scholar, he was a fine man. I don't know if I learned much Latin, but I learned a lot of other valuable things just by being around him. Later, that Latin instructor became the vice president and provost of the University of California, a position which he held until his retirement last month. He is a member of the board of governors of the Commonwealth Club of California. He is a trustee of Mills College. He is the president of the board of trustees for the Rosenberg Foundation. He is the president of the northern California branch of the American Association for the United Nations. He is president of the World Affairs Council of Northern California, an organization devoted to fostering good will and understanding among nations and nationalities.

Little men need long introductions. For a really big man, a short introduction suffices. It is with the greatest of pleasure that I now present as the speaker of the evening a man of our own religious faith, a great scholar, a fine character, loved and respected by all of us—Dr. Monroe E. Deutsch.

[Entire assembly arose and applauded.]

Dr. MONROE E. DEUTSCH. On September 17, 1787, the Constitution under which we have happily lived since our Government was established, was signed by 39 members of the 42 present at the Constitutional Convention and it was sent to the States for ratification. This is therefore, as has been set forth, the one hundred and sixtieth anniversary of the document which, whatever its imperfections, is not wholly undeserving of the tribute paid to it by the English statesman, William Ewart Gladstone: "The American Constitution is, so far as I can see, the most wonderful work ever struck off at a given time by the brain and purpose of man." When one considers the circumstances under which it was drafted, he can only marvel that a Constitution drawn up 160 years ago for a population totaling 4,000,000 persons and residing along a narrow strip of coast by the Atlantic, should have been capable of governing this broad continent stretching from Atlantic to Pacific, containing 140,000,000 individuals, and in a wholly different form of society. It has been modified by amendment to meet changed conditions but in its essence it is unchanged. It is indeed the bulwark of protection for the rights of the inhabitants of this land of ours. Well it is that we should pause at this time briefly to recall the blessings that are ours in this Nation under the shield of the Constitution.

How many millions throughout the world yearn to come to this land, and how deeply would they treasure what is ours. The desperate poverty in which the masses of the world's population are now living, the misery of the hundreds of thousands of displaced persons, the manifold restrictions under which so many nations are confined—all these make American citizenship the pearl of great price, the great jewel for which multitudes across the seas would make the utmost of sacrifices.

We have all of us been given privileges—privileges so great that it is hard to put them into a few brief words—not the vote nor the passport, nor even the opportunity to secure such work as may be open only to citizens—but the very greatest blessing that mankind can be given—freedom; freedom to go where we will, to read what we will, to say what we will, to choose those who shall govern us, to have public—not secret—trial, to assemble as we will, and to worship God as our heart impels. Here are no dictators (no Führer or Duce), no secret police, no State our master—we are freemen, with heads erect, bodies our own, and minds and consciences under our control and that of the God above us—a God who has named no people as warlike bearers of superior culture.

Remember, too, that when once a man or a woman has attained our citizenship, he is, in the fullest sense of the term, an American, regardless of his ancestry, his color, his creed, or his place of birth. We are a people mingled from the most diverse strains, and I, for one, am proud that to the making of our national character so many stocks have contributed. What is an American name? I reply that it is the name of any American, be it Byrnes or Baruch, Krueger or Vandenberg, Sarnoff or Marshall. Assuredly, in all our wars we have seen how men of different racial stocks, ancestries, and births have fought side by side in our Nation's cause and have laid down their lives for their country. Go through the cemeteries in which our war dead lie, and you will see there names which sprang from every quarter of the globe—but each (regardless of the land from which his ancestors came) revealed himself a loyal American by making the supreme sacrifice for the land which had granted him citizenship. And nothing prevented men from giving their lives for their country, whether their skins were dark or yellow, whether their ancestors came from China, the Philippines, or even Japan. This was the acid test of patriotism, and many a man whose forebears came from remote lands faced that test with heroism.

We are Americans, proud of what our Nation has given us. But every privilege brings with it responsibilities great. First of all, we must remember that a democracy cannot exist unless it rests upon an intelligent citizenry. This requires that we should each of us be keenly alert to all the problems facing us as a nation, as well as locally. Our representatives are always rightly influenced by the thinking of people they represent. In the second place, we must without fail, use the right given us and vote at each and every election. Learn what the issues are, who the various candidates are, and then vote, actuated solely by the best interest of the Nation, the State, and the community. In the third place, if at any time our country summons any of us to serve it in time of war (which we pray will not come to pass), remember that to answer this call is a solemn duty owed the Nation, and indeed, that acceptance of citizenship pledges one to this service. Then, too, as I have already urged, treat every American with equal fairness and friendship, for we are citizens of a democracy. Cast aside prejudices of all kinds, and work side by side with your fellow American (be he Catholic, Protestant, or Jew, be he of Irish, Italian, or Chinese ancestry, be he colored or white), to make this a more perfect democracy.

We realize that, much as has been accomplished in this land, there is still much to be done before we attain our goal as a people. Proper housing for all is certainly something we all agree is essential; slums do not afford the opportunities which Americans have a right to expect. Men and women, and above all, children cannot live their best lives in such surroundings. We must, too, seek to make our democracy more perfect by breaking down every vestige of prejudice and discrimination. The Declaration of Independence (you will recall) stated: "We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness." Our first independent utterance was, therefore, a declaration of human equality. To attain that goal means not only the vote throughout our land for all qualified American citizens, but treatment in the fullest sense as an equal, in offices and on trains, in schools and in factories. Discrimination in any form is the enemy of democracy, and he who preaches it against those of another color, creed, or ancestry is a traitor to the ideals of our Nation and its great leaders. Read again Lincoln's Gettysburg Address. You will find that the theme that runs through it is liberty and equality. In his very opening sentence, he speaks of our "Nation conceived in liberty and dedicated to the proposition that all men are created equal." I bid you be good Americans by letting your acts show that you believe in the words of the Declaration of Independence, those of Abraham Lincoln, and, indeed, of all the great leaders of our democracy. And think what a glorious thing it would be if every person in our land were given the opportunity to live up to the fullness of his capacity. It would mean that our national life would be enriched by the contributions to it that many a citizen cannot make today, through some form of prejudice directed against him. We may be depriving ourselves of who knows what important advances in our national life by closing doors that should be left open to every man of talent and ability.

We must never forget, however, that we are not merely a part of the world, but today the most important part of it. This means that we have special responsibilities which we cannot ignore. In Europe, as a result of the havoc of war, there are now 1,000,000 individuals bearing the name "displaced person." Of this number, some 300,000 are Jews; the remainder come from various lands and are of different faiths. All in common are unable to return to their former homes or dread the thought of a return. For more than 2 years they have lived forsaken by the world, unable to begin to live normal lives, to establish homes, to make a living, to rear their children properly. It is one of the greatest disgraces of our time that mankind has not had either the wisdom or the humanity to solve this problem. It is not exclusively the problem of any one nation, but is a world problem. And I firmly believe that it is the duty of every nation to accept its appropriate share of those who through no fault of their own, have suffered so dreadfully as the result of this World War. I am not now discussing the solution of the Palestine problem; whether the most recent recommendations will be put into effect, we do not yet know. In any event if they are, it is not likely that all the displaced Jews will be able to gain entrance to Palestine for 2 years at the earliest, and if free choice were offered them, doubtless some would prefer to go to other lands. And besides this, the 700,000 displaced persons who are not Jews will not be aided one whit through opening the doors of Palestine. And as human beings, our sympathy goes out to all, regardless of creed.

President Truman has urged Congress to support the Stratton bill pending before it which would open our doors to 100,000 displaced persons a year for 4 years. It has been pointed out this total of 400,000 is far less than one-half of the unused immigration quota during the years of the war. In other words, if the number of immigrants permitted by law had come in each year during the war, there would have been admitted 800,000 persons—and many more—in addition to those who actually entered. To put it somewhat differently, the acceptance of these 400,000 would still mean than the admission quota during the years of the war had been far from filled. And what we should do, all other nations should likewise do. If we are not willing to do this, we should tear down the Statue of Liberty and cast it in the sea. Perhaps most of you recall the words carved on its base; they are written by Emma Lazarus and read as follows:

"Not like the brazen giant of Greek fame,
With conquering limbs astride from land to land;
Here at our sea-washed, sunset gates shall stand
A mighty woman with a torch, whose flame
Is the imprisoned lightning, and her name
Mother of Exiles. From her beacon-hand
Glows world-wide welcome; her mild eyes command
The air-bridged harbor that twin cities frame.
'Keep, ancient lands, your storied pomp!' cries she
With silent lips. 'Give me your tired, your poor,
Your huddled masses yearning to breathe free,
The wretched refuse of your teeming shore,
Send those, the homeless, tempest-tossed to me,
I lift the lamp beside the golden door.'"

Can we imagine any folk more deserving of the words—"exiles, tired, poor, huddled masses yearning to breathe free, homeless, tempest-tossed"? Assuredly, unless we play our part in granting shelter to our fair share of these unfortunates, we are faithless to our heritage. At the time of the fiftieth anniversary of the Statue of Liberty in 1935, President Franklin D. Roosevelt said these striking words: "I like to think of the men and women who, with the break of dawn off Sandy Hook, have strained their eyes to the west for the first glimpse of the New World. They came to us speaking many tongues—but a single language, the universal language of human aspiration. How well their hopes were justified is proved by the record of what they achieved. They not only found freedom in the New World, but by their effort and devotion, they made the New World's freedom safer, richer, more far-reaching, more capable of growth." You and I can take pride in those words, for he was speaking of our parents and our grandparents who made their way to this land and who became loyal citizens, contributing to its well-being and its prosperity.

If any should claim, however, that those who might come to us now, are different from the earlier immigrants, I should like to call his attention to a book entitled Refugees in America by M. R. Davie. You will find there not only the fact that America gained 12 Nobel prize winners in the group that has already come to us, as well as great authors and musicians, but that the proportions of Americans among the employees of "refugee business enterprises" is over two-thirds. In other words, through these refugees large numbers of native Americans have found it possible to secure employment. And, Mr. Davie asks: "Can the United States justly urge other nations of the world to accept refugees unless it accepts a share of the burden itself?" Assuredly if the United States is true to its ideals, it will not lock its doors against these unfortunates.

You have, each one of you, studied the Constitution of these United States. The preamble of that document sets forth the purposes with which it was written, and, indeed, the aims with which our Government came into being. It states clearly what the duties of each of us are. First of all was the aim "to form a more perfect Union;" this calls upon all of us to stand steadfast against every effort to break up that Union, to split our Nation into two or more parts. We are pledged to that Union, and dedicated to defend it against any who may seek to destroy it. Next is the purpose to "establish justice." We are committed to fair dealing with all our fellow Americans: no selfish advantage should ever lead us to treat anyone unjustly. Nor should we tolerate the continuance in office of one who breaks his oath and perjures himself by selling verdicts or yielding to pressure in despite of justice. The Constitution then seeks to "insure domestic tranquillity." You who are pledged to its support must stand firmly against those seeking to overthrow it by force or revolt; they are faithless to their duty as citizens and are using the freedom which has been so generously granted them to bring about its destruction. Guard this democracy of ours with fidelity; its overthrow would indisputably result in the loss of the freedom which we prize. We are then asked to "provide for the common defense," and assuredly our Government has the right to call upon every citizen to spring to its defense, should it be assailed from without or within. This is a keystone in the temple of democracy; if its citizens do not willingly protect it, our Government cannot possibly endure. We rejoice that our people, a truly peace-loving folk, has never hesitated to take up arms at our Nation's call. And this spirit must be maintained, or aggressors would easily seize possession of this land of ours. There follows the aim "to promote the general welfare." Note that our Government was not established for the benefit of any one State or region, for any one class, but to "promote the general welfare." And in everything you do strive to recall that aim of our Government—let your acts seek the good and well-being of all, not of any community or class—but of these United States as a whole.

Finally, comes the aim which is the climax—"to secure the blessings of liberty to ourselves and our posterity." The freedom which is ours and which we prize has been earned by the blood and tears of the generations that have preceded us. We think of those who first settled in this land, who had to contend with the forces of nature and the natives residing on our shores. Again and again did brave and bold men and women push out to the frontier, ever moving farther West. And among the courageous pioneers were those who crossed the interminable plains to make their way to this Pacific coast. We must, too, not forget those who fought in the Revolutionary War, the various succeeding wars, that between the States (which securely forged our Union), and the two World Wars. Liberty must be won repeatedly; it is not secured once for all. To all those we are indebted for the land and liberty which we enjoy. We must ever be on the alert to defend it for "our posterity" (as the Constitution states). We have inherited this great treasure; we must guard it so that our descendants on into the distant future may also enjoy it.

It is a great honor to participate in this banquet at which we join in paying tribute to three of our distinguished fellow citizens who in different fields have alike maintained and defended our Constitution. Gen. Mark Clark deserves well of this Nation for the services he rendered as commander of our forces in Italy in the struggle which freed mankind from the horrors of German nazism and Italian fascism. And General Clark showed himself a true humanitarian in his attitude toward the refugees whom the tides of war swept in his path. Chief Justice Phil Gibson has held office as California's director of finance, as associate justice, and now chief justice of the supreme court. He has not only served the State well on its highest judicial tribunal, but has proved himself a liberal in the truest sense of the term. The third whom you have honored, Robert Gordon Sproul, is a man with whom I have been most closely associated in an official capacity for 17 years, and who has been my friend for a full four decades. I might speak at length of Dr. Sproul as an administrator, but I prefer to stress the fact that he has always opposed intolerance and discrimination. He has proved himself a true democrat (with a small d), and as proof of it I offer myself as exhibit A. The B'nai B'rith lodges of this county do well in honoring three men who have contributed so ably to our State and our Nation.

I have spoken of those who built up and protected this Nation of ours. We have a debt to them. In addition, each of us has a debt to our own ancestors or it may even be our own parents, who came to this land and gave us this great boon of American citizenship. They, too, were men and women of courage. They cut themselves off from their old homes in lands across the seas; they tore up their lives by the roots and turned their faces toward a new and untried country. Usually, even the language was unknown to them. They came in tiny vessels, often in the steerage, to make a home for themselves and their children in this new land. They wanted a chance—a chance to go to a land where people could breathe freely, where poverty would not bar their children from going as far as their capacities permitted—mainly they sought escape, escape from meager economic opportunities, from persecution, from tyranny. They took the chances and, through them, we have been given our chances. We owe a great debt to them, and we can repay it by keeping the doors of opportunity open for the generations still to come. For the great lift which we have received, with all the opportunities that this land offers, we are called upon to make a return—to render ourselves faithful, intelligent searchers for the best solution of our National and State problems, resolved to make the wisest selection of persons to receive public office, determined to requite our country by thinking solely of its good—the good of all—not of selfish advantage to ourselves or any other person or group, ever loyal to this Nation and its form of government, resolute to defend it with body, with heart, and with soul.

This is a land of freemen. For that freedom we must be ready to give our Nation the protection that she has given us. If any among you fled from tyranny and persecution in foreign lands, you understand so well what the blessed air of freedom is because you have seen the spiritual black-out in other lands, a black-out infinitely worse than the physical. We should ever be grateful for that which has come to us with so little effort on our part—membership in this democracy of ours, a share in the freedom and opportunity that America offers. And in return I charge each of you that to this land and that for which it stands you ever be faithful, be loyal, be true. For it is upon our loyalty, our good faith, our unselfishness, and our wisdom, that our national future depends.

[Assembly arose with loud and prolonged applause.]

Mr. FRIEDMAN. Thank you, Dr. Deutsch, for your splendid address. Thank you, General Clark, Dr. Sproul, and Mr. Justice Gibson. Mr. Jones will now lead us in the singing of God Bless America.

[The assembly arose and sang God Bless America.]

Please remain standing while Father Hammond gives the benediction, after which the meeting will be adjourned.

Rt. Rev. RICHARD H. HAMMOND. We give Thee thanks almighty and eternal God, giver of all good gifts, for all the benefits and favors Thou hast bestowed upon us this night. We beg of Thee, O heavenly Father, to protect and preserve this, our Nation, that was founded under Thee, and dedicated to defend liberty and equality, and the rights of man. We beseech You to shower upon our fellow citizens Your every blessing; especially the blessing of love and understanding, that through these graces, we may be enabled to live in unity, in harmony, and in that peace which the world cannot give. Your ways are the ways of love; Your path is the path to peace. "Lord, God of hosts, be with us yet, lest we forget, lest we forget."

Mr. FRIEDMAN. The meeting is adjourned.

Third Party Handicaps

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, December 19, 1947

Mr. ANGELL. Mr. Speaker, I include as an extension of my remarks the following editorial from the Oregonian, which appeared December 19, 1947, as follows:

THIRD PARTY HANDICAPS

The supporters of Henry Wallace for President are split on campaign strategy. One element wants him to head a third party; another element wants him to try, first at least, for the Democratic nomination, but probably with the background idea that defeat there, which is generally forecast, would be preliminary to a third-party movement.

In California, among Progressive Citizens of America, whose national executive committee proposes that Wallace be invited to lead a third party, a national vice president is opposed to Wallace. Another Californian, Robert A. Kenny, national cochairman of PAC, again declares his support of Wallace but talks confidently of Wallace's ability to corral the Democratic convention delegates in California and other States of the West. He names Oregon as one of them. And there is a newly formed Independent Progressive Party in California boosting Wallace.

The foregoing is offered as prelude to a discussion of the handicaps that Oregon election laws set up against election of Presidential candidates by newly formed third parties. Oregon laws, moreover, are said to be more liberal in that regard than are laws of some other States.

In Oregon, Presidential electors presumably may be nominated under the provisions of a law permitting nominations for office by an assembly of 250 voters. But thus nominated they could go on the ballot only as independents or nonpartisans. To obtain for them a political-party label it would be necessary to organize a new party by petition of voters constituting 5 percent of the number of votes cast for Members of Congress in the last election. The number of names required is 16,734. The new party's label could not embrace the word Democratic or Republican.

But there remains an unexplored phase of Oregon election law. It forbids a candidate for nomination who has lost out in the primary of his party to become the candidate of any other party in the ensuing general election, or to run therein as an independent. Whether this inhibition applies to a candidate who has sought a party's preferential vote for President is a question that

has never been raised. It is one with plausible arguments pro and con.

It poses the question as to whether, should Wallace enter the Democratic preferential primary and be defeated, he could thereafter get on the general-election ballot as the Presidential candidate of a third party or as an independent. It is true that we do not vote directly for President, but vote for a number of Presidential electors equal to our representation in the House and Senate who thereafter cast their votes for their party's Presidential candidate. But the election laws also provide that the names of a party's candidates for President and Vice President shall be printed on the official ballot preceding the names of its candidates for elector.

This phase will be considered by the local Wallace supporters if they are wise, and if a national third party be organized it better be careful, if it wants to get on the Oregon ballot, not to call itself "Liberal Democratic" party or otherwise make any title use of the name of the old party.

Opinions of the Folks at Home

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Friday, December 19, 1947

Mr. MILLER of Nebraska. Mr. Speaker, since I have the greatest confidence in the judgment of the people in my district I am asking them for an expression of their views on matters of the utmost importance that will come before the second session of the Eightieth Congress. This is the letter I am writing them:

DEAR FRIEND: You have many times, no doubt, felt like writing your Congressman to express your opinion on matters of importance to our country. Here is your opportunity to do so without much trouble.

It has always been my opinion that the folks at home are far enough away from Washington and the confusion here to think through and to form solid opinions on vital questions that come before the Congress. Today, the Congress is besieged by highly organized minorities to pass legislation for their own particular benefit. Indeed, the most persistent one is the Government lobby. The bureaus pour out propaganda and emotional appeals for support of their own particular bureau or for the administration as a whole, which far surpasses in volume that put out by all other lobbies. The purpose, of course, is to insure the continuance of a huge Federal bureaucracy.

Here are some of the questions Congress will be called upon to answer. I know you will have been thinking about them. I will appreciate the help you can give me by indicating your reaction to them. Please check and return this card with any comments you may want to make. I will publish the results of this poll.

1. Should there be tax reduction for all groups? Yes —. No —.

2. Are you for the Marshall plan? Yes —. No —.

3. Are you for compulsory military training? Yes —. No —.

4. Are you for Federal aid to education? Yes —. No —.

5. Do you want to return to rationing and price control? Yes —. No —.

6. Your occupation _____.

Americans By and Large Did Not Want Government Controls Restored

EXTENSION OF REMARKS
OF
HON. HUBERT S. ELLIS
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, December 19, 1947

Mr. ELLIS. Mr. Speaker, I submit to the House for its consideration an editorial by Mr. H. R. Pinckard, editor of the Herald-Advertiser, published in Huntington, W. Va. I believe you will find it to be an interesting observation on a very timely subject.

The editorial follows:

COMPULSORY CONTROLS NEVER HAD A CHANCE

It was a foregone conclusion that Congress would adjourn its special session without giving the President authority to reimpose rationing or wage-and-price controls. Effectiveness of the alternative plan adopted by Congress, for self-disciplinary agreements in business, industry, and agriculture, remains to be proved, but the compulsory controls requested by Mr. Truman never had a chance.

Americans, by and large, did not want Government controls restored. They are by nature suspicious of such devices and figured that in a Presidential-election year they might be used where they would be politically effective regardless of their economic usefulness.

Specifically, there was widespread resentment over the Government's crack-down on the American distilling industry, which was high-pressured into a 60-day shut-down for grain conservation, while Canadian and British distilleries continued to run full blast. Workers in the industry were indignant when they learned that foreign distillers had rejected a United States Department of State request to join in the 2-month holiday.

Most people figure that merchandise at inflated prices is preferable to no merchandise at controlled prices. As long as shelves are well stocked, they can at least look their fill and buy at their own discretion.

This, of course, is a reflection of the self-confidence in the American character. Your typical United States citizen may not do an expert job on his personal budget, but he doesn't take kindly to Government intervention, even though it is for his own good. Besides, he points out, where frugal budgets are concerned, how can the Government pose as an authority?

Food Conservation

EXTENSION OF REMARKS
OF
HON. AUGUST H. ANDRESEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, December 19, 1947

Mr. AUGUST H. ANDRESEN. Mr. Speaker, every American has interested himself of late in the matter of sharing our abundant food supply with hungry nations abroad. It is commendable when entire industries commit themselves to vigorous food conservation at home and to encouraging aid to less-favored countries.

The following extracts from a statement made by Howard F. Dugan, president of the American Hotel Association, contains suggestions that every American will find practical:

A SPECIAL MESSAGE TO THE AMERICAN HOTEL ASSOCIATION

(By Howard F. Dugan)

I have something to discuss with you that is close to my heart; something which, after you have heard me through, I hope you too will take close to your heart; something that I believe is vital to all of us Americans.

I think that we, as individuals and as an association, should adopt a more realistic attitude on the question of food conservation. Up to this point we have been too complacent; too willing to let the other fellow carry our share of the load—and probably he is doing the same thing.

And what can we, as hotel men, do to protect the future of our free America?

The leaders of industry, our Government, and the powerful media of press, radio, magazines, films, and outdoor displays, have pooled their forces and objectives into a well-planned and well-thought-out campaign to fight hunger. And we and our industry cannot afford to not join forces in this three-pronged campaign which is to (1) save wheat; (2) save meat; and (3) save the peace.

This, of course, means that we as an industry must help to achieve the conservation objectives of the campaign. It means using eggs and egg dishes in moderation and it means using less expensive kinds of meat such as chuck, ribs, spareribs, rump, shoulder, breast, flank, brisket, bottom round, shank, sausage, frankfurters, shank end of ham, and canned meats.

To save wheat, hotel kitchens can make a tremendous contribution by doing less making of foods in which flour is the main ingredient—just for one example—one-crust pies should be given preference. And let's plan to use dry bread wherever possible as an ingredient in main dishes and desserts, such as cheese fondue, bread pudding, casserole dishes, and as crumbs in scalloped dishes. There are many other things we can do which I need not cover in this discussion.

And to be realistic and practical about it—we cannot talk to our customers about eating less. We know, too, that our customers are tiring of meatless days and eggless days. Failure of the public to cooperate in observing these days becomes more apparent all the time. We can, however, use foods that are in plentiful supply and above all we can watch and eliminate waste.

So let's save that extra roll, match the portions served with the appetite of the guest, watch the plates coming back from the dining rooms, and if need be, cut down the portions. Let's encourage our employees to give the guest only what he wants and no more, let's forget some of the standard practices of so many slices of bread per guest, or so many rolls per guest—and here's what I have in mind. When I travel I usually have breakfast in my room. I like one slice of toast for breakfast—or more preferable, a half slice of toast. When I telephone room service, one of two things always happens—I am either told "Yes, you can have one slice of toast"—or I get an explanation that the standard portion is two or three slices of toast. When the breakfast reaches my room, there is never any doubt as to what happens—I usually get the standard portion, the result being that one or two slices of toast are wasted. And as a general rule, the crust trimmed from the slice of toast is wasted in the kitchen.

This is only one small example. There are many other examples which might be cited. Banquets provide a wonderful opportunity for saving food. Take an hour off and watch the shocking amount of food that must go into your garbage cans as the plates are brought back from the tables.

And now, what can we do as individuals? One way is to interest ourselves in the organization called the Cooperative American Remittance to Europe—more commonly known as CARE. For a relatively small sum they will send a package of food to anyone you may designate, or to a worthy person if you do not specify a particular person. They have branches in most cities. You can secure forms for sending CARE packages from your local bank, Western Union offices, YWCA's, the Red Cross, American Railway Express agencies, etc. If blanks are not available, write your order on a piece of paper and send it to CARE, 50 Broad Street, New York, N. Y.

And we can interest ourselves in the overseas work being done by American Red Cross or similar organizations. We can encourage our employees to do likewise; and by all means remind—and make it easy—for our guests to buy packages for these organizations to send abroad. We can stir up interest in our city and encourage others to do likewise. Notice the tremendous response received by the food trains and how people are willing to cooperate, once the need is driven home to them. Take an example from the town of Dunkirk, N. Y., where they have raised huge sums to help overseas cities.

I think our position as individuals, the position of our industry, can best be summed up in the recent statement of Secretary of State Marshall on the food program, when he said: "The connection between the individual American and world affairs is unmistakably clear—our foreign policy has entered the American home and taken a seat at the family table."

Let us welcome that guest—our silent guest.

Stop Communism Now

EXTENSION OF REMARKS
OF

HON. HUBERT S. ELLIS

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, December 19, 1947

Mr. ELLIS. Mr. Speaker, today I submit for the consideration of my colleagues excerpts from an address by Mrs. E. Wyatt Payne on the subject of national defense before the West Virginia DAR conference.

Mrs. Payne is a gifted speaker and by experience and training is well qualified to discuss the subject she so ably handles in this statement. I am quite sure you will find her remarks forthright and interesting.

The excerpts from Mrs. Payne's address follow:

EXCERPTS FROM THE TALK ON NATIONAL DEFENSE, WEST VIRGINIA DAR CONFERENCE, HUNTINGTON, OCTOBER 11, 1947, BY MRS. E. WYATT PAYNE, HUNTINGTON, W. VA.

Do you remember "way back when" everybody was happy because they were Americans? Somehow we just took it for granted that we lived in a wonderful country and quietly set out to make the most of the greatest opportunities provided. Before the modern propaganda technique was so generally used on people and things American was "first" in the hearts of her countrymen, and it wouldn't have occurred to us in a million years to question the foresight and wisdom of the founding fathers, much less take their honored name and good works in vain. This state of mind, individually and collectively, might seem naive to the modern "pinks," but we became the greatest Nation under its beneficient influence and we must get back to this fundamental Americanism.

With this in mind may I speak to you about a phase of national defense which is rarely discussed and seldom considered in these hectic days. One of the most serious problems confronting the American people today is the obvious and rapid disappearance of real patriotism, and it's high time we found out what happened to "the Spirit of '76" because without it we cannot save our great Republic. Where shall we turn to recapture this lost element which made us "one Nation, indivisable"? Right where we lost it—in the public schools and universities. We won't solve the problem by being shocked by this statement, we will solve it by a thorough investigation, and reinstating in the public schools the values which made and kept us a Nation. Please do not misinterpret my meaning, most of our teachers are good Americans and deserve all honor for their great work, however, in spite of these good teachers, something is happening in and to the American schools.

We must remember when Hitler wanted to establish a new philosophy he immediately took over the schools and changed the textbooks to meet his need. Russia did the same thing. Do we have a parallel in this country? Yes! Communism got a dignified start in some of our larger universities and spread to our land's remotest border, even to the Little Red Schoolhouse. I have sat as student or auditor in many of the great schools from coast to coast and I know this is true. I saw the symbols of Americanism disappear—patriotic pictures, songs, the pledge, the flag in each classroom. This was the beginning. Now let's see how it works. Communists do not knock on your front door or appear on the lecture platforms with their fellow traveler insignia, oh, no; they have far more subtle and effective devices. With an ever-increasing crescendo of sentences, paragraphs, radio scripts, movies, and columnists, they have tried to unsell us on our way of life.

We find race trouble here and other trouble there, and trouble, trouble everywhere—all signs of the divide and conquer campaign.

Let's take one example. We hear it over and over again that disaster, slums, and insecurity breed communism. This is not so: For over 150 years this Nation continued its progress toward the goal of the greatest good for the greatest number. During these years we experienced the whole gamut of human vicissitudes—fire, drought, floods, and depressions, but it didn't even occur to us to turn to communism for solace. Why? Because Americans have always been equipped with two impervious armors, faith in God and faith in our country with its freedom and opportunity; two factors by the way unknown to Russia or her satellites. We did not turn to communism because every American under the Stars and Stripes had his own ladder of opportunity; some were short and some were tall, "according to his several abilities," in the parable of the talents, but the ladder was his and it had a top; he was free to scale it.

Another danger signal: Under the guise of social progress the older American histories which inculcated in us the love of country, the flag, and things American, have been replaced by new books dealing with the objective, comparative, and scientific approach. Some of them imply that in comparison with other countries our system of government has failed and point with pride to the 5-year plan in Russia. Even more damage is done to the national morale and patriotism through books on social problems and political science, some of which present a conglomerate group of case studies and data which prove nothing and leaves the student in a state of confusion worse confounded. Whether the teacher realizes it or not, this is just where the Communists want him. Then, adding fuel to the fire, progressive education comes along and advises us to leave the children alone; don't cramp their style by telling them right from wrong. Just leave them alone and they'll come home, wagging their confusion behind them!

Perhaps you are wondering how you as a parent can tell when your children are being indoctrinated—the answer is easy—if your child comes home from school or college questioning the success of our form of government and "debunking" our glorious history—if he is confused about everything in general and the American way in particular, you may be sure he has had the wrong teacher, textbook, or both.

What practical steps can we as parents and teachers take to stop communism now? First of all, let's apportion the proper work to the proper authorities; let's leave the treaty making and foreign policy to the statesmen; let's leave the atom bomb and its future to the physicists then let's get busy on our own job of cleaning up the home front. We must learn to recognize the "symptoms" of communism and teach our children the difference in their philosophy and ours. One doesn't have to be a Communist to aid and abet their growth and prestige, we can by default lose our way of life. The point is that the Communist minority which is trying to undermine our form of government is guilty of the sin of commission but the far greater danger is that the majority of us are guilty of the sin of omission. We have failed to stop their insidious propaganda in the homes, the schools, and the churches. History records that as long as we loved and lived our American heritage, individually and collectively, we prospered as a people and became the greatest nation; when we began to doubt the wisdom of the American way we started the downward trek toward state socialism and communism.

We must teach our children to love their country as they love their family.

If the schools are to continue to preserve our liberties and freedom (and who said this was not their basic function) they must teach and practice Americanism—the unadulterated kind which sends that intangible elixir of national unity up our individual spines when the Stars and Stripes appear. Let's don't be fooled by the silly propaganda that being better Americans will make us isolationists. Does loving and protecting one's own family first keep us from helping the community and the world? It is axiomatic that "The light that shines farthest shines brightest at home." If our school authorities think this patriotic pedagogy is old-fashioned we'd better look twice because this indictment is one of the Communists' most successful techniques. What will it profit the child to gain all knowledge and lose the opportunity to say with Paul "I was free-born."

Fathers and mothers should have the old-fashioned courage to fight this communistic trend in their own community. Let's demand that our schools again become the citadel of American liberty; let's demand that every school put back the symbols; let's demand that textbooks and teachers emphasize what is right about America, thus giving students faith in the future and courage to correct what is wrong; let's demand that American history be taught with reverance because its unfoldment in the hearts and minds of every child is the only safeguard against serfdom. Keep America American. There's only one way to do this, elect school officials and hire teachers who believe in this philosophy themselves.

The Freedom Train running all over the country is a poor substitute for that self-sacrificing patriotism which flowed in the veins of our forefathers.

Whether we call it a priori reasoning or horse sense, let's be practical. Just as we do not outgrow the Sermon on the Mount or the Ten Commandments in our spiritual progress, we cannot continue to demonstrate the American standard of freedom and free enterprise unless and until we are

continually renewed in our gratitude for and adherence to the Constitution and the Bill of Rights. These principles should be taught in the schools. Progress lies in both directions and the most progress the Prodigal Son ever made was when he decided (because of failure, disillusion, and disaster) to go back to his father. There is a lesson here for Americans everywhere. What shall we do about it, parents and teachers? It's our job.

May we remember at all times that our greatest contribution to the world is to keep the light of liberty and freedom burning in America. If we fail here, the light of the whole world dies. "Lord God of Hosts be with us yet, lest we forget."

Eightieth Congress, During Its Special Session, Added Major Accomplishments to Its Constructive, Forward-Looking Record

EXTENSION OF REMARKS
OF

HON. CHARLES A. HALLECK

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, December 19, 1947

Mr. HALLECK. Mr. Speaker, the Eightieth Congress, during its special session that ended December 19, 1947, chalked up major accomplishments.

Passed were measures to:

First. Combat high prices through Government-approved voluntary agreements to allocate scarce materials fairly for necessary purposes and to control inventories; through statutory authority for the Government to regulate speculative trading on the commodity exchanges; through extension of export and transportation controls; through voluntary conservation efforts, and through temporary authority to limit the use of grain for production of distilled spirits.

Second. Provide $522,000,000 for relief from distress in France, Italy, and Austria, plus $18,000,000 for China and funds for areas in Germany occupied by our forces and under joint allied control.

Third. Increase the Federal Housing Administrations' mortgage insurance fund by $250,000,000, and give discretionary authority to add $500,000,000 more to the fund. This will help maintain the momentum in the home-construction field.

Fourth. Provide supplemental funds totaling $31,939,000 for far western reclamation projects; $650,000 for relief to needy Navajo and Hopi Indians, and $176,000 for the Seward, Alaska, sanatorium for tubercular patients.

The House of Representatives created a special committee to investigate causes of high prices, including ill-timed and reckless buying by the Government from our country's short supplies for export to other countries. Other House committees and committees of the Senate are also in motion on the matter of high prices.

At the beginning of the session on November 17, President Truman presented recommendations for combatting high prices of commodities and for aid to Europe.

True to the record of the present administration, his recommendations were in general terms and lacked the spadework that the country should expect and has a right to expect from the executive branch of the Government.

The lack of coordination and focus by the administration can be properly charged to an overwhelming desire to play politics with the high cost of living that the years of New Deal-Democrat misrule have generated.

The American people witnessed abundant evidence of the confusion and utter incompetence of the Truman administration through the conflicting testimony of the highest administration officials before congressional committees.

The Eightieth Congress, in line with the record made during its first session, made gallant efforts to chase the will-o'-the-wisp proposals on prices that popped out of the administration branch. In an effort to force a focusing on important details, we asked the administration to reduce its vague proposals to bill form.

And these bills were still pouring into the hoppers of Congress after congressional leaders had met with the President at the White House and it was agreed that the session should end on December 19.

Only 4 days before adjournment, on December 15, we received an omnibus recommendation in bill form signed by the Secretaries of Agriculture, Commerce, Interior, and Labor Departments.

Of course, the Republican majority in the Congress and the country knew by this time that the Truman administration was floundering and simply talking about high prices, and had no comprehensive plan, except to seek broad, generalized power to regiment the American people.

The people demanded action, constructive action such as was taken by the Eightieth Congress during its first session. And the Republican majority, despite hamstringing tactics by the President's own party members on Capitol Hill, did act and cause to pass a bill that will, if properly administered, do much to adjust unduly high prices.

An exhibition of obstruction tactics on the subject of prices was given by the Democrat Members of the House of Representatives on December 15. Although it was well known that the adjournment date had been set for December 19, the Democrat Members present unanimously, and with the urging of their leaders, prevented passage of the Republican-backed anti-inflation bill.

Four days later most of these Democrat Members "ate crow" and voted for passage of the Senate-approved measure, which was substantially the same as the bill that had been presented by the House Republican majority—the Wolcott bill—on December 15.

In doing so, some of the Democrat speakers showed their politics-filled hand by scoffing at the bill and by all but urging the people not to join wholeheartedly in making it do the job intended.

The administration, in presenting the so-called Marshall plan, describes it as a program of American aid "to help Europe help itself" prevent its own economic and political collapse. There is much talk by administration spokesmen about "cooperative enterprise" abroad. Its essence, we are told, is voluntary action.

We in America, too, are afflicted by high prices. The President tells us that we are threatened by an economic catastrophe. There has been a ring of defeatism in the President's proposals for preventing such a disaster. He appears to have lost faith in the American voluntary way of life.

The American people have not lost faith in voluntary self-help. They have faith and confidence in our historic American way—the way of competitive enterprise—the way that has produced the goods for which the world pleads, and which the President is so eager to give away for years to come, with its resulting impact upon prices and taxes that our people have to pay.

As I write this the President has not yet signed the anti-inflation bill passed by the special session of the Congress. I anticipate that he will sign it into law. Already industries are preparing to give their cooperation to the Government.

We do not want the philosophy of Marx, Lenin, and Stalin. We know that the OPA was a tragic failure after the war. We know that it stifled production and brought us black markets.

And yet Democrat leaders in the Senate and House of Representatives offered amendments to the Republican-backed Anti-Inflation Act that would have given the President absolute power to order all or any of the businessmen and farmers to do what the act says shall be done voluntarily.

Let us be frank about it. In those amendments was the road to regimentation, control by busybody bureaucrats, shortages, and black markets.

It was never asserted by the supporters of the Anti-Inflation Act passed at the special session of the Congress that it was a complete remedy for high prices.

Everyone must now know, in spite of administration propaganda to the contrary, that one of the major causes of high prices is the enormous amount of goods that is being exported to foreign countries.

Much of the goods we are giving away is going to countries said to be in dire need and it is said that by doing this we shall restrain communistic aggression.

Large amounts of goods also have been going to other countries that have been permitted to draw upon our extremely short supplies, even though the administration has had authority to curtail these exports.

Much of the tremendous shipments of goods to foreign countries is the direct result of failures of the New Deal administration in the conduct of our foreign affairs.

And in the equally disastrous loose fiscal policies of the administration is a basic cause of currently high prices.

Thus, failures of the administration abroad and incompetence on domestic affairs have fired the boilers of inflation and definitely fixed responsibility for

high prices upon the New Deal Democrat administration.

The Congress, during its session beginning January 6, 1948, will add to the mosaic of solid foundations for prosperity. The work so well advanced during the first session of the Eightieth Congress in reducing the outrageously high cost of government will continue.

The American people at long last are entitled to tax reduction. Taxes comprise a large part of the cost of everything we buy. Lower taxes for people in the smaller income brackets is absolutely necessary. Lower taxes mean more take-home pay. Lower taxes will encourage investment in productive enterprises.

The country knows from the record of the Eightieth Congress that it is not a "rubber stamp" Congress like those we had during the New Deal era. We shall give the Marshall plan a thorough examination just as we did the interim-aid recommendations of the Truman administration. We know our country's resources are limited.

We shall do all we can prudently to help other friendly countries, and in so doing we shall undertake to see that our assistance is consistent with our own self-interests to the end that our own economic stability is not jeopardized.

The American people in the 1946 congressional elections said they had enough of New Deal radicalism. Every Republican House vacancy that has been filled since 1946 has been filled by a Republican. That means the people approve the sound, forward-looking record of the Eightieth Congress.

This issue in 1946 was radical New Dealism and government regimentation as opposed to the American way of competitive enterprise under just laws fairly administered.

That is the paramount issue today. It will be the over-all issue in the 1948 elections, when the people will elect a Republican President who will cooperate with a Repubican Congress in carrying out the program so well advanced by the Eightieth Congress during 1947.

During the special session of the Eightieth Congress we continued our relentless pressure to drive Communists and other disloyal persons out of the Executive branch of the Government. We are busy exposing Communists wherever they may be in our country.

One of the first actions of the House of Representatives during the special session was to cite for contempt of the Congress 10 men connected with the film industry, because of their refusal to state whether they were Communists.

The American people know well that it has been the Republican Party through the years that has been vigilant in scotching Communists and communism. During the next session of the Congress we shall continue this patriotic program.

While President Truman assails communistic aggression abroad, his administration coddles radical New Dealers at home.

The accomplishments of the Eightieth Congress are like a beacon to the whole world. I do not have the slightest doubt of the support of the American people for this kind of government during the dawning New Year and the years to come.

Down a Rat Hole

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, December 19, 1947

Mr. HOFFMAN. Mr. Speaker, "pouring it down a rat hole" is a terse statement that money is being wasted. "You can't have your cake and eat it, too" is just another way of saying that a dollar or a tool cannot be used in two places at the same time. We cannot send a dollar abroad and use it to buy food here.

Long ago, it was said that a house built upon the sand cannot endure. Then there was the question, "And why beholdest thou the mote that is in thy brother's eye, but considerest not the beam that is in thine own eye?"

We were frightened into the First World War by propaganda based on the assumption that, war being destructive, we should end all war by winning that one. It did not turn out that way. It did cost the lives of thousands of young Americans; gave us a huge national debt, an enormous pension bill and many, many maimed and crippled young men.

Warmongers and international financiers, after failing to frighten us into the Second World War by telling us that our national existence depended upon the British Navy and British arms, dragged us into the war while distracting our attention by propaganda which attempted to convince us that, unless we went to Britain's aid, she would be destroyed, Hitler would overrun America and the black night of the Dark Ages would descend upon us.

That war saved the wasters, the planners, the New Dealers, by creating a false prosperity which may, in spite of all our efforts—and in my humble judgment will, unless we change our ways—be followed by a depression as disastrous as any we ever suffered through.

It was not enough that our resources and the fighting, enduring courage of our youth won the war. Immediately we were threatened with a third world war. We are told that, after our arms were the deciding factor in the defeat of Hitler and after, during the war, we built up Russia, communism, and Stalin, it is necessary, in order to prevent Russia and her communism from taking over the world, including our Nation, we continue to pour billions of dollars and tons of natural resources into war-torn Europe.

Well, although the fighting against the Japs ended on August 14, 1945, and the Germans surrendered on May 6, 1945, we have been doing just that. Instead of giving war-torn Europe essential help and telling her to go to work, we have been wet-nursing the whole outfit.

The New Dealers' old dodge of using relief money to buy votes here at home through the WPA has developed into a world-wide WPA, where your living costs are hiked by using your tax dollars to compete against you in the home markets; pay a horde of Federal employees, who, it is hoped, in the 1948 elections will support the administration; and to curry the favor and approbation of kings, queens, princelings, and industrialists and multimillionaires both here and abroad.

We have been pouring our money and our resources down a rat hole. We put millions upon millions into China to keep the Communists out. Marshall went over, came back, and in effect, said the task was hopeless. The Wedemeyer report, which is denied the public, will show the money was wasted. The money we sent to Europe has been used to fatten the pocketbooks of the speculators and the officials in many countries.

Our ships carrying food, coal, and other necessities to France are tied up in their harbors because of strikes. The people of England, of France, and of other countries just will not work. Many are on strike. They will not dig coal. They ask us to ship it to them. The American taxpayer is asked to dig in, provide the common people in those countries with the necessities—yes; the comforts—of life, and the upper ruling class with luxuries.

Many of the countries to which our aid is going have a political philosophy in which we have no confidence. Their governments are built upon "sand"—communism, socialism, the police state, planned economy. It matters not what kind of a superstructure our dollars and materials build upon that kind of a foundation. It cannot endure.

While we are yelling about stopping communism abroad it has been eating into the very heart of America, and with the tacit approval of the Roosevelt outfit. The time is long past when we should think exclusively of reforming the world. It is time that we consider the beam that is in our own eye instead of looking for the mote in the foreign eye. It is time that we set our own house in order.

The President asks for rationing, for price control, for regimentation. Under disguising words he asks to be made a dictator, while, at the same time, insisting that we weaken ourselves, perhaps fatally, by aiding little dictators abroad, who, we are told, are fighting the schemes and the plots of the big dictator, Stalin.

This brings the conclusion that—my country claims, to it I owe, my first allegiance. Extend necessary aid to the suffering? Yes. But I will not, under the guise of aiding the people of Europe to defeat communism, either speak or act for, or go along with, the drive to establish a dictatorship—price control and rationing—here.
